Croce, GIOVANNI, composer, b. at Chioggia near Venice in 1557; d. 15 May, 1609. Under the tutelage at Venice of Gioseffo Zarlini, Croce became one of the most noted composers of the Venetian School. After entering the priesthood he was attached to the church of Santa Maria Formosa. In 1593 he was given charge of the choir boys at San Marco with the title of vice-director. On the death of Baltazzaro Donati, 13 July, 1603, Croce became his successor as choirmaster. He wrote a great deal of secular music in the forms particularly cultivated in his time, such as the madrigal and the canzonetta, but his chief productions are those destined for the Church. Their characteristics are clarity of form and a devotional spirit. Many of his compositions form part of Proske's "Musica Divina" and Lueck's collection contains three motets; "O sacrum convivium", "Cantate Domino", and "Exaudi Deus".

Croia, a titular see of ALBANIA. Croia (pronounced Kruya, Albanian, "Spring") stands on the site of Eriboë, a town mentioned by Ptolemy (III, xiii, 13, 41). Georgius Acropolites (Ixix) mentions it as a fortress in 1251. A decree of the Venetian senate gave it in 1343 to Marco Barbarigo and his wife. In 1395 it was held by the Castriots (Mas-Latrie, *Treſor de chronologie*, 1773), and it was the birthplace of the Lion of Albania, the national hero, George Castriota or Scanderbeg (d. 17 Jan., 1468). It was captured by Mohammed II 14 June, 1478, and the whole population was slaughtered together with the Venetian garrison, except the few who embraced Mohammedanism. Since the thirteenth century Croia has been a Latin suffragan of Dyrrachium (Durazzo). Farlati (*Illyricum sacrum*, VII, 411-432) mentions fourteen bishops from 1286 to 1694 (Gams, 404; Lequien, III, 955, incomplete); Eubel (I, 224; II, 156) adds four names and corrects some data. Croia is to-day the chief town of a kaimakamlik in the vilayet of Scutari, with about 10,000 inhabitants, all Mussulmans. The Venetian citadel, 1500 feet above the sea, is still preserved together with Turkish guns and bells dating from the days of Skanderbeg. Croia is renowned among the Bektashi dervishes for the tombs of many of their saints.

S. PÉTRIDÈS.

Croiset, JEAN, ascetical writer, b. at Marseilles, 1656; d. at Avignon, 31 January, 1738. He entered the Society of Jesus in 1677, and was for a long time rector of the novitiate at Avignon, which he governed with great wisdom. He became famous as a director of consciences, and as a writer of many spiritual books which have been translated into several languages. His "Devotion to the Sacred Heart" appears to have been the first of his publications. He wrote also: "Retreats for Each Day of the Month"; "The Lives of the Saints for Each Day of the Year", in eighteen volumes, in the last of which is "The Life of Our Lord" and "The Life of the Blessed Virgin"; "The Model of Youth"; "Spiritual Illusions"; "Dialogues on Worldly Dangers"; "Parallel of the Morals of Our Age, with the Morality of Christ", etc. He also published collections of prayers. De Backer accuses Lamennais of having plagiarized from Croiset in his little work called "Guide du jeune âge". Feller attributes a book of meditations also to Croiset. He is regarded as one of the great masters of the spiritual life.

T. J. CAMPBELL.

Croke, THOMAS WILLIAM, Archbishop of Cashel, Ireland, b. near Mallow, Co. Cork, 24 May, 1824; d. at Thurles, 22 July, 1902. His early studies were made at the Irish College, Paris, and his theological course was completed at Rome. Returning to Ireland he was made one of the professors at St. Patrick's College, Carlow, and then did mission work at Charleville in his native diocese from 1849 to 1858. They were the years of misery following the great famine, and the suffering of the people from their economic and political misfortunes intensified the national leanings that were a marked characteristic of his whole career and which made him to his fellow-countrymen the ideal of the patriot priest. He was a zealous follower of O'Connell in the Repeal Era, and when the prestige of The Liberator waned, sided with the Young Ireland party.

Appointed president of St. Colman's College, Fermoy, in 1858, Dr. Croke administered this office satisfactorily for seven years, followed by five equally successful years as pastor of Doneraile, and was then appointed Bishop of Auckland, Australia. He was consecrated in Rome by Cardinal Cullen and took part in the concluding sessions of the Vatican Council. Returning to Ireland for a brief visit, he went by way of the United States to take possession of his See of Auckland. During the succeeding four years his government of the diocese was marked by great spiritual and material progress. In 1874 Archbishop Leahy of Cashel died, and at the request of the Irish hierarchy Bishop Croke was appointed to fill the vacancy. His return to Ireland gave the greatest satisfaction to the people, who immediately hailed him as the unquestioned and safe ecclesiastical leader in national politics that Archbishop MacHale of Tuam had been for the previous generation. He at once resumed his former active interest in political affairs and became a strong supporter of the Home Rule movement under the leadership of Isaac Butt. In the more advanced agrarian projects of the Land League days he was side by side with Charles Stewart Parnell in popular leadership, and was the main restraining influence when the ultra-radical element, infuriated by the new coercion laws of British officialism, broke out with the "No Rent" and other revolutionary manifestos. He made several visits to Rome in defence of the popular cause and to oppose the attempts of British diplomacy to enlist the direct intervention of the influence of the Vatican against the Irish Nationalists, the justice of whose efforts he vigorously championed. After the fall of Parnell and the confusion and factional strife

that followed he withdrew in a measure from active participation in politics, but never lost his enthusiasm for the cause of Irish national regeneration.

THOMAS F. MEEHAN.

Crolly, WILLIAM, Archbishop of Armagh, b. at Ballykilbeg, near Downpatrick, 8 June, 1780; d. 6 April, 1849. At fourteen he was sent to a classical school in Downpatrick, conducted by Rev. Mr. Nelson, a Unitarian minister, as there were no Catholic schools in the north of Ireland. In November, 1801, he went to Maynooth, and obtained first place in dogmatic theology in 1806. At Pentecost of the same year he was ordained priest by Dr. Troy, Archbishop of Dublin, and for six years lectured in logic, metaphysics, and ethics. In 1812 he took charge of the parish of Belfast, which comprised not only the entire town but also a district more than thirty miles in extent. On being appointed Bishop of Down and Connor in 1825, he induced the Holy See to change the episcopal parish from Downpatrick to Belfast, the real centre of the diocese. During the ten years he spent as bishop of this see he built a large church in almost every parish, and founded St. Malachy's Seminary. Owing to the dearth of Catholic schools, Dr. Crolly was obliged to allow Catholic children to attend Protestant schools, a course of action which caused a fierce controversy after his death. In 1835 he was appointed to the archdiocese of Armagh. Up to his time no primate had been allowed to reside in that town, but he lived alternately there and in Drogheda, where most of the primates had dwelt in penal times. His first care was to found St. Patrick's Seminary in Armagh, which was opened in 1838. His great work however, was the foundation of the cathedral, which was not completed till twenty-four years after his death. Having with great difficulty acquired a site on an historic hill by the side of the town, he laid the foundation stone on St. Patrick's Day, 1840, amid a vast assemblage of clergy and laity. The work of construction went steadily on until the famine years, and the primate visited several cities in Ireland, making an appeal in person. The famine, however, stopped the progress of the work. When the question of the Queen's colleges arose, the primate was one of those bishops who looked favourably on the project. It is certain, however, that if he had lived till the Synod of Thurles, in which these colleges were formally condemned as pernicious to the Faith, he would have laid aside his own private opinions on this subject, and submitted to the decision of the Holy See. He died in Drogheda of the cholera, on Good Friday (6 April), 1849, and was buried on Easter Sunday in the centre of the choir of the still unfinished cathedral of Armagh. A collection of the "Select Sermons" of the primate was published shortly after his death.

A. COLEMAN.

Cromer, MARTIN. See KROMER.

Cronan, name of several Irish saints.—I. SAINT CRONAN MOCHUA, founder of the See of Balla, subsequently merged into that of Tuam, Ireland, flourished in the period 596-637, d. 30 March, 637, but his Acts are more or less of a legendary character. However, it would appear that he was educated at Bangor, under St. Comgall, and founded a monastery at Gael, among the Feara Rois of Louth and Monaghan, whence he migrated to Fore and Tehilly. Passing through Hy Many, he journeyed to Connacht, in 616, and founded the church and Abbey of Balla, of which he was first abbot-bishop. Numerous miracles are recorded of St. Cronan Mochua, and

are minutely described in his Irish life. His feast is celebrated on 30 March, though, through a misconception, his Acts are given by the Bollandists under date of 1 January.

COLGAN, *Acta SS. Hib.* (Louvain, 1645); BUTLER, *Lives of the Saints; Acta Sanctorum*, Jan. I and III; TODD and REEVES, *Martyrology of Donegal* (Dublin, 1864); O'HANLON, *Lives of the Irish Saints* (Dublin, 1875), III; KNOX, *Notes on the Dioceses of Tuam* (1904); WHITLEY STOKES, *Anecdota Ozonien.* (1890).

II. SAINT CRONAN, Abbot-Bishop and Patron of Roscrea, a see afterwards incorporated in that of Killybeg, Ireland; b. in the territory of Ely O'Carroll; d. 28 April, 640. After spending his youth in Connacht, he returned to his native district about the year 610 and founded the Abbey of Roscrea, where he established a famous school. Previously he settled at a place known as *Sean ros* or Loch Cre, a wooded morass far from the haunts of men; in fact, it was utterly wild, so much so, that St. Cronan abandoned it and moved to the wood of Cre, that is *Ros cre*, County Tipperary. Like those of so many other Irish saints the Acts of St. Cronan abound in miracles. The most surprising, perhaps, is the legend as to the transcribing of the Four Gospels by one of his monks, named Dimma. It appears that Dimma could only undertake one day's task, from sunrise to sunset. St. Cronan, however, bade him write, and then Dimma set to work, never ceasing till he had finished the Four Gospels, the sun continuing to shine for the space of forty days and forty nights—the scribe himself being unconscious that the work had occupied more than a day. Whatever may be thought of this legend, it is certain that a magnificent *Évangeliarium*, known as the "Book of Dimma", was for centuries preserved in St. Cronan's Abbey at Roscrea, and is now in the library of Trinity College, Dublin. The scribe, Dimma MacNathi, signs his name at the conclusion of each of the Gospels, and he has been identified with Dimma, subsequently Bishop of Connor, who is mentioned with St. Cronan in the letter of Pope John IV in 640, in regard to Pelagianism in Ireland, but this identification cannot be sustained. The case containing the "Book of Dimma" was richly gilt by order of O'Carroll, Lord of Ely, in the twelfth century. Notwithstanding the conflicting statements arising from the number of contemporary Irish saints bearing the name of Cronan, it is more than probable that St. Cronan of Roscrea, as les Petits Bollandistes say, lived as late as the year 640, and his death occurred on 28 April of that year. His feast is celebrated on 28 April and as such is included in all the Irish calendars, as also in the Kalendar of Drummond. *Acta SS.*, III, 28 April; BUTLER, *Lives of the Saints*, IV; O'HANLON, *Lives of the Irish Saints* (Dublin, 1875), IV; GILBERT, *National Manuscripts of Ireland* (1884); *Les Petits Bollandistes* (Paris, 1880), V; LANGAN, *Ecclesiastical History of Ireland* (Dublin, 1829), III; HEALY, *Ireland's Ancient Schools and Scholars* (4th ed., Dublin, 1902).

A number of other saints of this name find a place in Irish calendars. The three most important are St. Cronan Mochua, of Clashmore (10 February); St. Cronan, Abbot of Clonmacnoise (18 July); and St. Cronan, Abbot of Moville (7 Sept.). Another saint frequently quoted as of this name is really St. Cuaran (Cuaranus Sapiens), whose feast occurs on 9 February. There is also a St. Cronan Mochua of Sliabh Eibhleam (4 May).

W. H. GRATTAN-FLOOD.

Crosier (or PASTORAL STAFF), THE, is an ecclesiastical ornament which is conferred on bishops at their consecration and on mitred abbots at their investiture, and which is used by these prelates in performing certain solemn functions. It is sometimes stated that archbishops do not use the crosier. This is not so, the truth being that in addition to the pastoral staff they have also the right to have the archiepiscopal cross borne before them within the territory of their juris-

diction. According to present-day usage the Roman pontiff does not use the crosier. That this practice is a departure from primitive discipline is now thoroughly established, for in the early representations of the popes found on tablets, coins, and other monuments, the crosier is to be seen (Kraus, *Geschichte der christlichen Kunst*, II, 500). But in the eleventh century this custom must have disappeared, since Innocent III (d. 1216) intimates that it no longer prevailed (*Epistola ad Patr. Const.*). As a reason why the pope does not use a crosier symbolists allege the giving by St. Peter of his staff to one of his disciples in order to raise a dead companion to life. The pastoral staff will here be treated under: (1) the symbolism of the crosier; (2) its origin and antiquity; (3) early forms and subsequent artistic development.

(1) *Symbolism.*—

The crosier is a symbol of authority and jurisdiction. This idea is clearly expressed in the words of the Roman Pontifical with which the staff is presented to the bishop elect: "*Accipe baculum pastoralis officii; et sis in corrigendis vitiis pie saviens, iudicium sine ira tenens, in fovendis virtutibus auditorum animos mulcens, in tranquillitate severitatis censuram non deserens*" (*Pont. Rom.*, 77). It is then, as Durandus (*Rationale Divin. Off.*, III, xv) says, borne by prelates to signify their authority to correct vices, stimulate piety, administer punishment, and thus rule and govern with a gentleness that is tempered with severity. The same author goes on to say that, as the rod of Moses was the seal and emblem of his Divine commission as well as the instrument of the miracles he wrought, so is the episcopal staff the symbol of that doctrinal and disciplinary power of bishops in virtue of which they may sustain the weak and faltering, confirm the wavering in faith, and lead back the erring ones into the true fold. Barbosa (*Pastoralis Sollicitudinis*, etc., Tit. I, ch. v) alluding to the prevalent form of the staff, says that the end is sharp and pointed wherewith to prick and goad the slothful, the middle is straight to signify righteous rule, while the head is bent or crooked in order to draw in and attract souls to the ways of God. Bona (*Rerum liturgic.*, I, xxiv) says the crosier is to bishops what the sceptre is to kings. In deference to this symbolism bishops always carry the crosier with the crook turned outwards, while inferior prelates hold it with the head reversed. Moreover, the crosiers of abbots are not so large as episcopal crosiers, and are covered with a veil when the bishop is present.

CROSIER OF GIULIO DE' MEDICI
(AFTERWARDS CLEMENT VII)
(Pitti Palace, Florence)

(2) *Origin*.—The origin of the pastoral staff is at times associated with the shepherd's crook. Whether the usage was borrowed from this source is doubtful. Some writers trace an affinity with the *lituus*, or rod used by the Roman augurs in their divinations, while others again see in the crosier an adaptation of the ordinary walking-sticks which were used for support on journeys and in churches before the introduction of seats (Catalani, *Pont. Rom.*, *Proleg.*, xx). At all events, it came at a very early date to be one of the principal insignia of the episcopal office. Just how soon is not easily determined, since in the early passages of the Fathers in which the word occurs it cannot be ascertained whether it is to be taken literally or metaphorically (see I Cor., iv, 21), or whether it designates an ecclesiastical ornament at all. In liturgical usage it probably goes back to the fifth century (*Kirchenlex.*, s. v. *Hirtenstab*). Mention of it is made

in a letter of Pope Celestine I (d. 432) to the Bishops of Vienne and Narbonne. Staffs have indeed been found in the catacombs that date from the fourth century but their ceremonial character has not been established. The first unequivocal reference to the crosier as a liturgical instrument occurs in the twenty-seventh canon of the Council of Toledo (633). At present it is employed by bishops whenever they perform solemn pontifical functions, by right in their own dioceses and by privilege outside, and by inferior prelates whenever they are privileged to exercise pontifical functions.

(3) *Form and Development*.—The evolution of the staff is of interest. Ecclesiologists distinguish three early forms. The first was a rod of wood bent or crooked at the top and pointed at the lower end. This is the oldest form and was known as the *pedum*. The second had, instead of the crook, a knob which was often surmounted by a cross, and was called the *ferula* or *cambuta*. It was sometimes borne by popes. In the third form the top consisted of a *crux decussata*, or Greek T, the arms of the cross being often so twisted as to represent two serpents opposed. This, known as the *crocia*, was borne by abbots and bishops of the Eastern Rite. The original material was generally cypress-wood, often cased or inlaid with gold or silver. Later on the staffs were made of solid ivory, gold, silver, and enamelled metal. From the many specimens preserved in old churches as well as from the representations in old sculptures, paintings, and miniatures, some idea may be formed of the artistic development of the staff and of the perfection it attained. In the cathedral of Bruges is preserved the crosier of St. Malo, a bishop of the sixth century. The staff consists of several pieces of ivory jointed together by twelve copper strips; but the volute is modern (Reusens, *Elém. d'arch. chrét.*, I, 504). The eleventh and twelfth centuries witness an elaborate display of most exquisite ornamentation bestowed on the head

of the staff. The volute often terminated in a dragon impaled by a cross, or in some other allegorical figure, whilst a wealth of floral decoration filled up the curve. In the thirteenth century the spaces between the spirals of the crocketed volute were filled with religious subjects, statues of saints, and scenes from the animal and vegetable kingdoms, while in those of the Gothic form the knob was set in precious stones and embellished with a wreath of allegorical ornamentation. Quite a number of these rich and valuable efforts of artistic skill have come down to us, and one or more may be seen in almost every old cathedral of England and the Continent. Oxford possesses three very old and interesting patterns, that preserved at New College having belonged to William of Wykeham. St. Peter's staff is said to be preserved in the cathedral of Trier. The legend may be seen in Barbosa (*Pastoralis Sollicitudinis*, etc., Tit. I, ch. v). As to the crosier of an abbees see article ABBEES.

Gewänder* (Bonn, 1856-62), II, 218 sq.; CAHIER, *Mélanges d'archéol.* (Paris, 1856), IV, 139.

PATRICK MORRISROE.

CROSIER OF AN ABBOT—CELLINI (Abbey of Monte Cassino, Italy)

Crosiers (or CANONS REGULAR OF THE HOLY CROSS), THE, a religious order, founded by Théodore de Celles, who, after following the Emperor Frederick Barbarossa on the Crusade, obtained a canonry in the Cathedral of St. Lambert at Liège. On the feast of the Exaltation of the Holy Cross (14 Sept., 1211), Théodore with four of his fellow-canons pronounced his religious vows before the Bishop of Liège. Having received from him the church of St. Theobald at Clair-Lieu, near Huy, de Celles founded there the first convent of the order. Pope Innocent III verbally approved the new order in 1215, and Pope Honorius III gave his written approbation, which was confirmed by Innocent IV on the feast of the Finding of the Holy Cross (3 May, 1248). The new institution soon extended to France, the Netherlands, Germany, and also to England. The Canons of the Holy Cross preached to the Albigenses with St. Dominic. Albert, Bishop of Prague, took several Crosiers and other monks with him to Livonia, where a great many of them gained the glory of martyrdom (1246). Some other Fathers accompanied St. Louis on his journey to the Holy Land in 1248. After returning, he enabled them to build the main convent of the order in Paris. The Canons of the Holy Cross practise both interior and exterior self-denial, in order to imitate the Saviour crucified. Contemplating Christ's Passion they try to sanctify themselves, and, preaching the mysteries of the Cross, they endeavour to save others, inducing them to follow in the footsteps of the Man of Sorrows.

The order formerly possessed about ninety convents, nineteen of which were in England. These latter were destroyed during the troublesome times of the sixteenth century. The Dutch houses were despoiled at the time of the Reformation. Only two of them were spared. Finally, the French Revolution expelled the Crosiers from France and Belgium. The two remaining convents in Holland (at St. Agatha and Uden in North Brabant) were likewise doomed to extinction by King William, who ordered them not to admit novices. His successor, however, retracted this interdict (14 Sept., 1840), and, from that time, the order commenced to flourish again. From these convents three large branches were founded in Belgium, at Diest (1845); at Maeseyck (1854); at Hannut (1904); while the convent of Uden has been totally renewed (1905), and the mother-house at St. Agatha

restored (1907). In 1857 the master general of the order sent some missionaries to Bay Settlement, Wisconsin, U. S. A., but the undertaking failed on account of insuperable difficulties. Pope Urban VIII gave to the master general, August Neerius, and his successors, the privileges of purple, crosier-staff, mitre, and pontificalia, together with some other exceptional favours (1630). Pope Leo X added the special faculty of blessing rosaries or chaplets, so that on a rosary indulgenced by Crosiers 500 days of indulgence are to be gained each time a Pater or Ave is said. The Indulgence is also applicable to the souls in purgatory (Gregory XVI, decrees of 15 Sept., 1842; 13 July, 1845; Pius IX, 9 Jan., 1848). Pope Pius X decreed that both the Crosier and the Dominican Indulgences may be gained together on condition that a whole chaplet is said.

After one year of probation the Crosier novice enters into the order by a simple but perpetual profession; the solemn profession follows three years thereafter. The priests and the professed clerics wear a white tunic, over which is a black scapular; a short black mantle (*mozetta*) and a hood of the same colour complete their costume. Upon the breast of the scapular a cross is sewed, the upright bar of which is red, and the cross-bar white. A prior presides over each convent and the order is governed by a master general, elected for life, fifty-two having ruled from the foundation to 1908. As their particular patroness the Crosiers venerate St. Odilia, a companion of St. Ursula, who is said to have appeared in Paris to a lay brother of the order, named Jean de Novellan (1387), after which her relics were found at Cologne and brought to the mother-house at Huy. A great many pilgrims visit the churches of the Crosiers during the octave of St. Odilia's Feast (18 July), in order to obtain her protection, and to be cured from ophthalmia, and water blessed in honour of St. Odilia is sent on request by the Crosiers all over the world. The life of the Crosier Fathers is both contemplative and active. They give missions, retreats, and assist the secular clergy when asked. They also educate young men aspiring to the priesthood in their colleges.

Cross and Crucifix, the.—For greater clearness and convenience the article under this general heading will be divided, to correspond as nearly as possible with three broad aspects of the subject, into three principal sections, each of which will again be divided into subsections, as follows:—

I. **ARCHÆOLOGY OF THE CROSS:** (1) *Primitive Cruciform Signs*; (2) *The Cross as an Instrument of Punishment in the Ancient World*; (3) *The Crucifixion of Jesus Christ*; (4) *Gradual Development of the Cross in Christian Art*; (5) *Later Development of the Crucifix*.

II. **THE TRUE CROSS AND REPRESENTATIONS OF IT AS OBJECTS OF DEVOTION:** (1) *Growth of the Christian Cult*; (2) *Catholic Doctrine on the Veneration of the Cross*; (3) *Relics of the True Cross*; (4) *Principal Feasts of the Cross*.

III. **CROSS AND CRUCIFIX IN LITURGY:** (1) *Material Objects in Liturgical Use*; (2) *Liturgical Forms Connected with Them*; (3) *Festivals Commemorative of the Holy Cross*; (4) *Rite of the "Adoration"*; (5) *The Cross as a Manual Sign of Blessing*; (6) *Dedications of Churches, etc. to the Holy Cross*; (7) *The Cross in Re-*

ligious Orders and in the Crusades; (8) *The Cross outside of the Catholic Church*.

I. **ARCHÆOLOGY OF THE CROSS.**—(1) *Primitive Cruciform Signs.*—The sign of the cross, represented in its simplest form by a crossing of two lines at right angles, greatly antedates, in both the East and the West, the introduction of Christianity. It goes back to a very remote period of human civilization. In fact, some have sought to attach to the widespread use of this sign, a real ethnographic importance. It is true that in the sign of the cross the decorative and geometrical concept, obtained by a juxtaposition of lines pleasing to the sight, is remarkably prominent; nevertheless, the cross was originally not a mere means or object of ornament, and from the earliest times had certainly another—i. e. a symbolico-religious—significance. The primitive form of the cross seems to have been that of the so-called "gamma" cross (*crux gammata*), better known to Orientalists and students of prehistoric archaeology by its Sanskrit name,  *swastika*. The commonest form of this sign is

At successive periods this was modified, becoming curved at the extremities, or adding to them more complex lines or ornamental points, which latter also meet at the central intersection. The swastika is a sacred sign in India, and is very ancient and widespread throughout the East. It has a solemn meaning among both Brahmins and Buddhists, though the elder Burnouf ("Le lotus de la bonne loi, traduit du sanscrit", p. 625; Journ. Asiatic Soc. of Great Britain, VI, 454) believes it more common among the latter than among the former. It seems to have represented the apparatus used at one time by the fathers of the human race in kindling fire; and for this reason it was the symbol of living flame, of sacred fire, whose mother is Maia, the personification of productive power (Burnouf, *La science des religions*). It is also, according to Milani, a symbol of the sun (Bertrand, *La religion des Gaulois*, p. 159), and seems to denote its daily rotation. Others have seen in it the mystic representation of lightning or of the god of the tempest, and even the emblem of the Aryan pantheon and the primitive Aryan civilization. Emile Burnouf (op. cit., p. 625), taking the Sanskrit word literally, divided it into the particles *su-asti-ka*, equivalents of the Greek *εὐ-εστία-κη*. In this way, especially through the adverbial particle, it would mean "sign of benediction", or "of good omen" (*swasti*), also "of health" or "life". The particle *ka* seems to have been used in a causative sense (Burnouf, *Dictionnaire sanscrit-français*, 1866). The swastika sign was very widespread throughout the Orient, the seat of the oldest civilizations. The Buddhist inscriptions carved in certain caves of Western India are usually preceded or closed by this sacred sign (Thomas Edward, "The Indian Swastika", 1880; Philip Greg, "On the Meaning and Origin of the Fylfot and Swastika"). The celebrated excavations of Schliemann at Hissarlik on the site of ancient Troy brought to light numerous examples of the swastika: on spindle-racks, on a cube, sometimes attached to an animal, and even cut upon the womb of a female idol, a detail also noticeable on a small statue of the goddess Athis. The swastika sign is seen on Hittite monuments, e. g. on a cylinder ("The monuments of the Hittites" in "Transactions of the Soc. of Bibl. Archaeology", VII, 2, p. 259. For its presence on Galatian and Bithynian monuments, see Guillaume and Perrot, "Exploration archéologique de la Galatie et de la Bithynie", Atlas, Pl. IX). We find it also on the coins of Lycia and of Gaza in Palestine. In the Island of Cyprus it is found on earthenware vessels. It originally represents, as again at Athens and Mycenæ, a flying bird. In Greece we have specimens of it on urns and vases of Boeotia, on an Attic vase representing a Gorgon, on coins of Corinth (Raoul-Rochette, "Mém. de l'acad. des inscr.", XVI, pt. II, 302 sqq.; "Hercule assyrien", 377-380; Minervini in "Bull.

arch. Napolit.", Ser. 2, II, 178-179), and in the treasury of Orchomenus. It seems to have been unknown in Assyria, in Phœnicia, and in Egypt. In the West it is most frequently found in Etruria. It appears on a cinerary urn of Chiusi, and on the fibula found in the famous Etruscan tomb at Cere (Grifi, *Mon. di Cere*, Pl. VI, no. 1). There are many such emblems on the urns found at Capanna di Corneto, Bolsena, and Vetulonia; also in a Samnite tomb at Capua, where it appears in the centre of the tunic of the person there depicted (Minervini, *Bull. arch. Napolit.*, ser. 2, Pl. II, 178-179). This sign is also found in Pompeian mosaics, on Italo-Grecian vases, on coins of Syracuse in Sicily (Raoul-Grochette, "Mém. de l'acad. des inser." Pl. XVI, pt. II, 302 sqq.; Minervini, "Bull. arch. Nap.", ser. 2, Pl. II, p. 178-179); finally, among the ancient Germans, on a rock-carving in Sweden, on a few Celtic stones in Scotland, and on a Celtic stone discovered in the County of Norfolk, England, and now in the British Museum. The swastika appears in an epitaph on a pagan tombstone of Tebessa in Roman Africa (*Annuaire de la Société de Constantine*, 1858-59, 205, 87), on a mosaic of the *ignispicium* (Ennio Quirino Visconti, *Opere varie*, ed. Milan, I, 141, sqq.), and in a Greek votive inscription at Porto. In this last monument the swastika is imperfect in form, and resembles a Phœnician letter. We shall explain below the value and symbolical meaning of this *crux gammata* when found on Christian monuments. But the swastika is not the only sign of this kind known to antiquity. Cruciform objects have been found in Assyria. The statues of Kings Asumazirpal and Samsirauman, now in the British Museum, have cruciform jewels about the neck (Layard, *Monuments of Nineveh*, II, pl. IV). Cruciform earrings were found by Father Delattre in Punic tombs at Carthage.

Another symbol which has been connected with the cross is the ansated cross (*crux ansata*) of the ancient Egyptians.  wrongly called the "ansated key of the Nile".  It often appears as a symbolic sign in the hands of the goddess Sekhet. From the earliest times also it appears among the hieroglyphic signs symbolic of life or of the living, and was transliterated into Greek as *Ανση* (*Ansa*). But the meaning of this sign is very obscure (De Morgan, *Recherches sur les origines de l'Égypte*, 1896-98); perhaps it was originally, like the swastika, an astronomical sign. The ansated cross is found on many and various monuments of Egypt (Prisse d'Avennes, *L'art Égyptien*, 404). In later times the Egyptian Christians (Copts), attracted by its form, and perhaps by its symbolism, adopted it as the emblem of the cross (Gayet, "Les monuments coptes du Musée de Boulaq" in "Mémoires de la mission française du Caire", VIII, fasc. III, 1889, p. 18, pl. XXXI-XXXII and LXX-LXXI). (For further information regarding the resemblance between the cross and the oldest symbolic signs see G. de Mortillet, "Le signe de la croix avant le christianisme", Paris, 1866; Letronne, "La croix ansée égyptienne" in "Mémoires de l'académie des inscriptions", XVI, pt. II, 1846, p. 236-84; L. Müller, "Ueber Sterne, Kreuze und Kränze als religiöse Symbole der alten Kulturvölker", Copenhagen, 1865; W. W. Blake, "The Cross, Ancient and Modern", New York, 1888; Ansault, "Mémoire sur le culte de la croix avant Jésus-Christ", Paris, 1891.) We may add that some have claimed to find the cross on Grecian monuments in the letter X (*chi*), which, sometimes in conjunction with P (*rho*), represented on coins the initial letters of the Greek word χρυσός, "gold", or other words indicative of the value of the coin, or the name of the coiner (Madden, "History of Jewish Coinage", London, 1864, 83-87; Eckhel, "Doctrina nummorum", VIII, 89; F. X. Kraus, "Real-Encyclopädie der christlichen Alterthümer", II, 224-225). We shall return, later on, to these letters.

In the bronze age we meet in different parts of

Europe a more accurate representation of the cross, as conceived in Christian art, and in this shape it was soon widely diffused. This more precise characterization coincides with a corresponding general change in customs and beliefs. The cross is now met with, in various forms, on many objects: fibulas, cinctures, earthenware fragments, and on the bottom of drinking vessels. De Mortillet is of opinion that such use of the sign was not merely ornamental, but rather a symbol of consecration, especially in the case of objects pertaining to burial. In the proto-Etruscan cemetery of Golasecca every tomb has a vase with a cross engraved on it. True crosses of more or less artistic design have been found in Tiryns, at Mycenæ, in Crete, and on a fibula from Vulci. These pre-Christian figures of the cross have misled many writers to see in them types and symbols of the manner in which Jesus Christ was to expiate our sins. Such inferences are unwarranted, being contrary to the just rules of criticism and to the exact interpretation of ancient monuments.

(2) *The Cross as an Instrument of Punishment in the Ancient World.*—The crucifixion of living persons was not practised among the Hebrews; capital punishment among them consisted in being stoned to death, e. g. the protomartyr Stephen (Acts, vi, 57, 58). But when Palestine became Roman territory the cross was introduced as a form of punishment, more particularly for those who could not prove their Roman citizenship; later on it was reserved for thieves and malefactors (Josephus, *Antiq.*, XX, vi, 2; *Bell. Jud.*, II, xii, 6; XIV, 9; V, xi, 1). Though not infrequent in the East, it was but rarely that the Greeks made use of it. It is mentioned by Demosthenes (c. Mid.) and by Plato (*Rep.*, II, 5; also Gorgias). The stake and the gibbet were more common, the criminal being suspended on them or bound to them, but not nailed. Certain Greeks who had befriended the Carthaginians were crucified near Motya by order of Dionysius of Syracuse (Diodor. Sic., XIV, 53). Both in Greece and in the East the cross was a customary punishment of brigands (Hermann, *Grundsätze und Anwendung des Strafrechts*, Göttingen, 1885, 83). It was at Rome, however, that from early republican times the cross was most frequently used as an instrument of punishment, and amid circumstances of great severity and even cruelty. It was particularly the punishment for slaves found guilty of any serious crime. Hence in two places (*Pro Cluent.*, 66; *I Philipp.*, ii), Cicero calls it simply "servile supplicium"—the punishment of slaves—more explicitly (*In Verr.*, 66), "servitutis extremum summumque supplicium"—the final and most terrible punishment of slaves. Hüsckke, however (*Die Multa*), does not admit that it was originally a servile punishment. It was inflicted also, as Cicero tells us (*XIII Phil.*, xii; *Verr.*, V, xxvii), on provincials convicted of brigandage. It is certain, however, that it was absolutely forbidden to inflict this degrading and infamous punishment on a Roman citizen (*Cic.*, *Verr. Act.*, I, 5; II, 3, 5; III, 2, 24, 26; IV, 10 sqq.; V, 28, 52, 61, 66); moreover, an illegal application of this punishment would have constituted a violation of the *leges sacratæ*. Concerning a slave, the master might act in one of two ways; he might condemn the slave arbitrarily (Horace, *Sat.* iii; Juvenal, *Sat.* vi, 219), or he might turn him over to the *triumvir capitalis*, a magistrate whose duty it was to look after capital punishment.

The legal immunity of the Roman citizen was somewhat modified when the poorer citizens (*humiliores*) were declared subject to the punishment of the cross (Paul., "Sent.", V, xxii, 1; Sueton., "Galba", ix; Quintil., VIII, iv). The punishment of the cross was regularly inflicted for such grave crimes as highway robbery and piracy (Petron., lxxii; Flor., III, xix), for public accusation of his master by a slave (*delatio domini*),

CRUCIFIXION PERUGINO

SANTA MARIA MADDALENA DEI PAZZI, FLORENCE

or for a vow made against his master's prosperity (*de salute dominorum*). See Capitolin., Pertinax, ix; Herodian, V, ii; Paul., "Sent.", V, xxi, 4), for sedition and tumult (Paul., Fr. xxxviii; Digest, "De poenis", xlviii, 19, and "Sent.", V, 221; Dion., V, 52; Josephus, "Antiq.", XIII, xxii, and "Bell. Jud.", II, iii), for false witness, in which case the guilty party was sometimes condemned to wild beasts (*ad bestias*, Paul., "Sent.", V, xxxii, 1), and on fugitive slaves, who were sometimes burned alive (Fr. xxxviii, S. 1; Digest, "De poenis", XLVIII, xix). According to Roman custom, the penalty of crucifixion was always preceded by scourging (*virgis cedere*, Prud., "Enchirid.", xli, 1); after this preliminary punishment, the condemned person had to carry the cross, or at least the transverse beam of it, to the place of execution (Plut., "Tard. dei vind.", ix, "Artemid.", II, xli), exposed to the gibes and insults of the people (Joseph., "Antiq.", XIX, iii; Plaut., "Most.", I, 1, 52; Dion., VII, 69). On arrival at the place of execution the cross was uplifted (Cic., Verr., V, lxvi). Soon the sufferer, entirely naked, was bound to it with cords (Plin., "Hist. Nat.", XXVIII, iv; Auson., "Id.", VI, 60; Lucan, VI, 543, 547), indicated in Latin by the expressions *agere, aere, ferre, or tollere in crucem*. He was then, as Plautus tells us, fastened with four nails to the wood of the cross ("Lact.", IV, 13; Senec., "Vita beat.", 19; Tert., "Adv. Jud.", x; Justus Lipsius "De Cruce", II, vii; xli-ii). Finally, a placard called the *titulus*, bearing the name of the condemned man and his sentence, was placed at the top of the cross (Euseb., "Hist. Eccl.", V, 1; Suet., "Caligula", xxxviii and "Domit.", x; Matt., xxvii, 37; John, xix, 19). Slaves were crucified outside of Rome in a place called *Sessorium*, beyond the Esquiline Gate; their execution was entrusted to the *caruifex servorum* (Tacit., "Ann.", II, 32; XV, 60; XIV, 33; Plut., "Galba", ix; Plaut., "Pseudol.", 13, V, 98). Eventually this wretched locality became a forest of crosses (Loiseleur, Des peines), while the bodies of the victims were the prey of vultures and other rapacious birds (Horace, "Epod.", V, 99, and thescholia of Crispius; Plin., "Hist. Nat.", XXXVI, evii). It often happened that the condemned man did not die of hunger or thirst, but lingered on the cross for several days (Isid., V, 27; Senec., Epist. ci). To shorten his punishment, therefore, and lessen his terrible sufferings, his legs were sometimes broken (*crurifragium, crura frangere*; Cic., XIII Philipp., xii). This custom, exceptional among the Romans, was common with the Jews. In this way it was possible to take down the corpse on the very evening of the execution (Tert., "Adv. Jud.", x; Isid., V, xxvii; Lactant., IV, xvi). Among the Romans, on the contrary, the corpse could not be taken down, unless such removal had been specially authorized in the sentence of death. The corpse might also be buried if the sentence permitted (Valer. Max., vi, 2; Senec., "Controv.", VIII, iv; Cic., "Tusc.", I, 43; Catull., cvi, 1; Horace, "Epod.", I, 16-48; Prudent., "Peristephanon", I, 65; Petron., lxi sqq.).

The punishment of the cross remained in force throughout the Roman Empire until the first half of the fourth century. In the early part of his reign Constantine continued to inflict the penalty of the cross (*affigere patibulo*) on slaves guilty of *delatio domini*, i. e. of denouncing their masters (Cod. Th. ad leg. Jul. magist.). Later on he abolished this infamous punishment, in memory and in honour of the Passion of Jesus Christ (Eus., "Hist. Eccl.", I, viii; Schol. Juvenal., XIV, 78; Niceph., VII, 46; Cassiod., "Hist. Trip.", I, 9; Codex Theod., IX, 5, 18). Thereafter, this punishment was very rarely inflicted (Eus., "Hist. Eccl.", IV, xxxv; Pacat., "Paneg.", xlv). Towards the fifth century the *furca*, or gibbet, was substituted for the cross (Pio Franchi de' Cavalieri, "Della forca sostituita alla croce" in "Nuovo bullettinio di archeologia cristiana", 1907, nos. 1-3, 63 sqq.).

The penalty of the cross goes back probably to the *arbor infelix*, or unhappy tree, spoken of by Cicero (Pro Rabir., iii sqq.) and by Livy, apropos of the condemnation of Horatius after the murder of his sister. According to Hüsche (Die Multa, 190) the magistrates known as *duoviri perduellionis* pronounced this penalty (cf. Liv., I, 266), styled also *infelix lignum* (Senec., Ep. ci; Plin., XVI, xxvi; XXIV, ix; Macrob., II, xvi). This primitive form of crucifixion on trees was long in use, as Justus Lipsius notes ("De cruce", I, ii, 5; cf. Tert., "Apol.", VIII, xvi; and "Martyrol. Paphnut.", 25 Sept.). Such a tree was known as a cross (*crux*). On an ancient vase we see Prometheus bound to a beam which serves the purpose of a cross. A somewhat different form is seen on an ancient cist at Præneste (Palestrina), upon which Andromeda is represented nude, and bound by the feet to an instrument of punishment like a military yoke, i. e. two parallel, perpendicular stakes, surmounted by a transverse bar. Certain it is, at any rate, that the cross originally consisted of a simple vertical pole, sharpened at its upper end. Mæcenas (Seneca, Epist. xvii, 1, 10) calls it *acuta crux*; it could also be called *crux simplex*. To this upright pole a transverse bar was afterwards added to which the sufferer was fastened with nails or cords, and thus remained until he died, whence the expression *cruci figere* or *affigere* (Tac., "Ann.", XV, xlv; Petron., "Satyr.", iii). The cross, especially in the earlier times, was generally low. It was elevated only in exceptional cases, particularly when it was desired to make the punishment more exemplary, or when the crime was exceptionally serious. Suetonius (Galba, ix) tells us that Galba did this in the case of a certain criminal for whom he caused to be made a very high cross painted white—"multo præter cæteras altiore et dealbatam statui crucem jussit".

Lastly, we may note, in regard to the material form of the cross, that somewhat different ideas prevailed in Greece and Italy. The cross, mentioned even in the Old Testament, is called in Hebrew, *עץ*, i. e. "wood", a word often translated *crux* by St. Jerome (Gen., xl, 19; Jos., viii, 29; Esther, v, 14; viii, 7; ix, 25). In Greek it is called *σταυρός*, which Burnouf would derive from the Sanskrit *stāvora*. The word was, however, frequently used in a broad sense. Speaking of Prometheus nailed to Mount Caucasus, Lucian uses the substantive *σταυρός* and the verbs *ἀνασταυρός* and *ἀνασταυροῦν*, the latter being derived from *στέλλω*, which also signifies a cross. In the same way the rock to which Andromeda was fastened is called *crux*, or cross. The Latin word *crux* was applied to the simple pole, and indicated directly the nature and purpose of this instrument, being derived from the verb *crucio*, "to torment", "to torture" (Isid., Or., V, xvii, 33; Forellini, s. vv. Crucio, Crux). It is also to be noted that the word *furca* must have been at least partially equivalent to *crux*. In fact the identification of these two words is constant in the legal diction of Justinian (Fr. xxviii, 15; Fr. xxxviii, S. 2; Digest, "De poenis", xlviii, 19).

(3) *The Crucifixion of Jesus Christ.*—Among the Romans the cross never had the symbolical meaning which it had in the ancient Orient; they regarded it solely as a material instrument of punishment. There are in the Old Testament clear allusions to the Cross and Crucifixion of Jesus Christ. Thus the Greek letter T (*tau* or *thau*) appears in Ezechiel (ix, 4), according to St. Jerome and other Fathers, as a solemn symbol of the Cross of Christ—"Mark Thau upon the foreheads of the men that sigh". The only other symbol of crucifixion indicated in the Old Testament is the brazen serpent in the Book of Numbers (xxi, 8-9). Christ Himself thus interpreted the passage: "As Moses lifted up the serpent in the desert, so must the Son of man be lifted up" (John, iii, 14). The Psalmist predicts the piercing of the hands and the feet (Ps. xxi, 17). This was a true prophecy, inasmuch

as it could not be conceived from any custom then existing; the practice of nailing the condemned to a T-shaped cross being, as we have seen, at that time exclusively Western.

The cross on which Jesus Christ was nailed was of the kind known as *immissa*, which means that the vertical trunk extended a certain height above the transverse beam; it was thus higher than the crosses of the two thieves, his crime being judged a graver one, according to St. John Chrysostom (Homil. v, c. i., on I Corinth.). The earliest Christian Fathers who speak of the Cross describe it as thus constructed. We gather as much from St. Matthew (xxvii, 37), where he tells us that the *titulus*, or inscription containing the cause of His death, was placed *ἐπάνω*, "over", the head of Jesus Christ (cf. Luke, xxiii, 38; John, xix, 19). St. Irenæus (Adv. Haer., II, xxiv) says that the Cross had five extremities: two in its length, two in its breadth, and the fifth a projection (*habitus*) in the middle—"Fines et summities habet quinque, duas in longitudine, duas in latitudine, unam in medio". St. Augustine agrees with him: "Erat latitudo in qua porrectæ sunt manus; longitudo a terrâ surgens, in qua erat corpus infixum; altitudo ab illo divexo ligno sursum quod imminet" (Enarr. in Ps. ciii; Serm. i, 44) and in other passages quoted by Zöckler (Das Kreuz, 1875, pp. 430, 431).

Nonnus confirms the statement that Jesus Christ was crucified on a quadrilateral cross (*ἐς δόρυ τετρά-πλευρον*). St. Irenæus, in the passage cited above says that the Cross had a fifth extremity, on which the Crucified One was seated. St. Justin calls it a horn, and compares it to the horn of a rhinoceros (Dialogus cum Tryphone, xci). Tertullian calls it *sedilis excessus*, a projecting seat, or shelf (Ad. Nat., I, xii). This little seat (*equuleus*) prevented the weight of the body from completely tearing the nail-pierced hands, and it helped to support the sufferer. It has never been indicated, however, in representations of the Crucifixion. On the Cross of Christ was placed the *titulus*, as to the wording of which the Four Evangelists do not agree. St. Matthew (xxvii, 37) gives, "This is Jesus the King of the Jews"; St. Mark (xv, 26), "The King of the Jews"; St. Luke (xxiii, 38), "This is the King of the Jews"; St. John, an eyewitness (xix, 19), "Jesus of Nazareth, the King of the Jews". In representations of the Crucifixion there often appears beneath the feet a wooden support (*ὑποπόδιον, suppedaneum*); that it ever existed is very doubtful. The first express mention of it occurs in Gregory of Tours (De Gloriâ Martyrum, vi). St. Cyprian, Theodoret, and Rufinus hint at it.

A microscopic examination of the fragments of the Cross scattered through the world in the form of relics reveals the fact that it was made from a pine-tree (Rohault de Fleury, "Mémoire sur les instruments de la Passion", Paris, 1870, 63). According to an ancient, but somewhat dubious, tradition the Cross of Jesus Christ measured in length very nearly 189 inches (4.80 metres), from 90½ to 102½ inches (2.30 to 2.60 metres). As noted by the Evangelists, two thieves were crucified, one on either side of Christ. Their crosses must have resembled the one on which He suffered; in Christian art and tradition they generally appear lower (St. John Chrysostom, Hom. i, xxvi, on I Cor.; on Rom., v, 5). A large portion of the cross of the good thief (traditionally known as Dismas) is preserved at Rome in the altar of the Chapel of the Relics at Santa Croce in Gerusalemme.

The historical narrative of the Passion and Crucifixion of Jesus Christ, as found in the Four Gospels, agrees exactly with all we have set down above concerning this form of punishment. Jesus Christ was condemned for the crime of sedition and tumult, as were also some of the Apostles (Malalas, "Chronogr.", X, p. 256). His Crucifixion was preceded by the Scourging. He then bore His Cross to the place of punishment. Fi-

nally the legs of Jesus would have been broken, according to the custom of Palestine, in order to permit of burial that very evening, had not the soldiers, on approaching Him, seen that He was already dead (John, xix, 32, 33). Besides, in ancient Christian art and tradition, the Crucifixion of Christ appears as done with four nails, not with three, according to the usage of the more recent Christian art (see below).

(4) *Gradual Development of the Cross in Christian Art.*—Since by His holy sacrificial death upon the Cross Christ sanctified this former instrument of shame and ignominy, it must have very soon become in the eyes of the faithful a sacred symbol of the Passion, consequently a sign of protection and defence (St. Paulinus of Nola, "Carm. in Natal. S. Felicis", XI, 612; Prudent., "Adv. Symm.", I, 486). It is not, therefore, altogether strange or inconceivable that, from the beginning of the new religion, the cross should have appeared in Christian homes as an object of religious veneration, although no such monument of the earliest Christian art has been preserved. Early in the third century Clement of Alexandria ("Strom.", VI, in P. G., IX, 305) speaks of the Cross as τοῦ Κυριακοῦ σημείου τούτου, i. e. *signum Christi*, "the symbol of the Lord" (St. Augustine, Tract. cxvii, "In Joan."; De Rossi, "Bull. d'arch. crist.", 1863, 35, and "De titulis christianis Carthaginiensibus" in Pitra, "Spicilegium Solesmense", IV, 503). The cross, therefore, appears at an early date as an element of the liturgical life of the faithful, and to such an extent that in the first half of the third century Tertullian could publicly designate the Christian body as a "crucis religiosi", i. e. devotees of the Cross (Apol., c. xvi, P. G., I, 365-66). St. Gregory of Tours tells us (De Miraculis S. Martini, I, 80) that in his time Christians habitually had recourse to the sign of the cross. St. Augustine says that by the sign of the cross and the invocation of the Name of Jesus all things are sanctified and consecrated to God. In the earliest Christian life, as can be seen from the metaphorical language of the primitive faithful, the cross was the symbol of the principal Christian virtue, i. e. mortification or victory over the passions, and suffering for Christ's sake and in union with Him (Matt., x, 38; xvi, 24; Mark, viii, 34; Luke, ix, 23; xiv, 27; Gal., ii, 19; vi, 12, 14; v, 24). In the Epistles of St. Paul the cross is synonymous with the Passion of Christ (Ephes., ii, 16; Heb., xii, 2) even with the Gospel, and with religion itself (I Cor., i, 18; Phil., iii, 18). Very soon the sign of the cross was the sign of the Christian. It is, moreover, very probable that reference to this sign is made in the Apocalypse (vii, 2): "And I saw another angel ascending from the rising of the sun, having the sign of the living God."

It is from this original Christian worship of the cross that arose the custom of making on one's forehead the sign of the cross. Tertullian says: "Frontem crucis signaculo terimus" (De Cor. mil., iii), i. e. "We Christians wear out our foreheads with the sign of the cross." The practice was so general about the year 200, according to the same writer, that the Christians of his time were wont to sign themselves with the cross before undertaking any action. He says that it is not commanded in Holy Scripture, but is a matter of Christian tradition, like certain other practices that are confirmed by long usage and the spirit of faith in which they are kept. A certain Scriptural authority for the sign of the cross has been sought by some in a few texts rather freely interpreted, especially in the above-mentioned words of Ezechiel (ix, 4), "Mark Thau upon the foreheads of the men that sigh, and mourn for all the abominations that are committed in the midst thereof", also in several expressions of the Apocalypse (vii, 3; ix, 4; xiv, 1). It would seem that in very early Christian times the sign of the cross was made with the thumb of the right hand (St. John Chrys., Hom. ad pop. Antioch. xi; St. Jerome, Ep. ad Eustochium; a practice still in use among the faithful

during Mass, e. g. at the reading of the Gospel), and generally on the forehead; gradually, by reason of its symbolism, this sign was made on other parts of the body, with particularized intention (St. Ambrose, *De Isaac et animâ*, Migne, P. L., XIV, 501-34). Afterwards these different signs of the cross were united in one large sign such as we now make. In the Western Church the hand was carried from the left to the right shoulder; in the Eastern Church, on the contrary, it was brought from the right shoulder to the left, the sign being made with three fingers. This apparently slight difference was one of the (remote) causes of the fatal Eastern Schism.

It is probable, though we have no historical evidence for it, that the primitive Christians used the cross to distinguish one another from the pagans in ordinary social intercourse. The latter called the Christians "cross-worshippers", and ironically added, "id colunt quod merentur", i. e. they worship that which they deserve. The Christian apologists, such as Tertullian (*Apol.*, xvi; *Ad. Nationes*, xii) and Minucius Felix (*Octavius*, lx, xii, xxviii), felicitously replied to the pagan taunt by showing that their persecutors themselves adored cruciform objects. Such observations throw light on a peculiar fact of primitive Christian life, i. e. the almost total absence from Christian monuments of the period of persecutions of the plain, unadorned cross (E. Reusens, "Éléments d'archéologie chrétienne", 1st ed., 110). The truculent sarcasms of the heathens prevented the faithful from openly displaying this sign of salvation. When the early Christians did represent the sign of the cross on their monuments, nearly all sepulchral in character, they felt obliged to disguise it in some artistic and symbolical way.

One of the oldest of these symbols of the cross is the anchor, sometimes carved thus  and sometimes thus . The latter is found most generally on the stone slabs of the oldest sections of the Roman catacombs, especially in the cemeteries of Callistus, Domitilla, Priscilla, and others. The anchor, originally a symbol of hope in general, takes on in this way a much higher meaning: that of hope based on the Cross of Christ. The similarity of the anchor to the cross made the former an admirable Christian symbol. Another cruciform symbol of the early Christians, though not very common, and of a somewhat later date, is the trident  some examples of which are seen on sepulchral slabs in the cemetery of Callistus. In one inscription from that cemetery the symbolism of the trident is even more subtle and evident, the instrument standing erect as the mainmast of a ship entering port, symbolical of the Christian soul saved by the Cross of Christ. We must note, too, the use of this peculiar symbol in the third century in the region of Tauric Chersonesus (the Crimea) on coins of Totoses, King of the Bosphorus, dated 270, 296, and 303 (De Hochen, "Description du musée Kotschoubey", II, 348, 360, 416; Cavedoni, "Appendice alle ricerche critiche intorno alle med. Costantiniane, 18, 19—an extract from the "Opuscoli litterari e religiosi di Modena" in "Bull. arch. Napolit.", ser. 2, anno VII, 32). We shall speak again of this sign apropos of the dolphin. On a picture in the Crypts of Lucina, artistically unique and very ancient, there seems to be an allusion to the Cross. Turned towards the altar are two doves gazing at a small tree. The scene appears to represent an image of souls loosed from the bonds of the body and saved by the power of the Cross (De Rossi, *Roma Sotterranea Cristiana*, I, Pl. XII).

Before passing to the study of other, more or less disguised, forms of the cross, e. g. various monograms of the name of Christ, it may be well to say a word of various known forms of the cross on primitive monuments of Christian art, some of which we shall meet with in our early study of the said monograms.—The

crux decussata  or decussated cross, so called from its resemblance  to the Roman *decussis*, or symbol for the numeral 10, is in shape like the Greek letter *chi*; it is also known as St. Andrew's Cross, because that Apostle is said to have suffered martyrdom on such a cross, his hands and feet bound to its four arms (Sandini, *Hist. Apostol.*, 130). The *crux commissa*, or gallows-shaped cross, is, according to some, the one on which Jesus Christ died. In order to explain the traditional longitudinal extension of the Cross, which makes it resemble the *crux immissa*, it is asserted that this extension is only apparent, and is really only the *titulus crucis*, the inscription mentioned in the Gospels. This form of the cross (*crux commissa*) is probably represented by the Greek letter *tau* (T), and is identical with the "sign" mentioned in the text of Ezechiel (ix, 4) already quoted. Tertullian comments (*Contra Marc.*, III, xxii) as follows on this text: "The Greek letter T and our Latin letter T are the true form of the cross, which, according to the Prophet, will be imprinted on our foreheads in the true Jerusalem." Specimens of this veiled form of the cross are met with on the monuments of the Roman catacombs, a very fine one, e. g., in an epitaph of the third century found in the cemetery of St. Callistus, which reads IRE T NE (De Rossi, "Bulletino d'archeologia cristiana", 1863, 35). In the same cemetery a sarcophagus exhibits clearly the gallows-cross formed by the intersection of the letters T and V in the monogram of a proper name carved in the centre of the *cartella*, or label. This second letter (V) was also figurative of the cross, as is evident from the inscriptions scratched on rock-surfaces at Mount Sinai (Lenormant, "Sur l'origine chrétienne des inscriptions sinaïtiques", 26, 27; De Rossi, loc. cit.). A monogram of a proper name (perhaps Marturius), discovered by Armellini on the Via Latina, shows the *crux commissa* above the intersection of the letters. Other monograms show similar forms, such as  (De Rossi, "Bulletino d'archeologia cristiana", 1867, page 13, fig. 10, and page 14). It has been attempted to establish a connexion between this form and the *crux ansata* of the Egyptians, mentioned above; but we see no reason for this (cf. *Lectronne, Matériaux pour l'histoire du christianisme en Egypte, en Nubie, et en Abyssinie*). It would seem that St. Anthony bore a cross in the form of *tau* on his cloak, and that it was Egyptian in origin. Such a cross is still used by the Antonine monks of Vienne in Dauphiny, and appears on their churches and on the monuments of art belonging to the order. St. Zeno of Verona, who in the second half of the fourth century was bishop of that city, relates that he caused a cross in form of a *tau* to be placed on the highest point of a basilica. There was also another motive for choosing the letter T as symbolical of the cross. As, in Greek, this letter stands for 300, that number in Apostolic times was taken as a symbol of the instrument of our salvation. The symbolism was carried farther, and the number 318 became a symbol of Christ and His Cross: the letter I (*iota*) being equal to 10, and H (*eta*) to 8 in Greek (Allard, "Le symbolisme chrétien d'après Prudence" in "Revue de l'art chrétien", 1885; Hefele, *Ed. Ep. St. Barnabæ*, ix).

The cross most commonly referred to and most usually depicted on Christian monuments of all ages is that called the *crux immissa*, or *crux capitata* (i. e. the vertical trunk extending beyond the transverse beam). It was on a cross such as this that Christ actually died, and not, as some would maintain, on a *crux commissa*. And this opinion is largely supported by the testimony of the writers we have quoted. The *crux immissa* is that which is usually known as the Latin cross, in which the transverse beam is usually set two-thirds of the way up the vertical. The equilateral, or Greek cross, adopted by the East and by Russia, has the transverse set half-way up the vertical.

Both the Latin and Greek crosses play an important part in the architectural and decorative styles of church buildings during the fourth and subsequent centuries. The church of Santa Croce at Ravenna is in the form of a Latin cross; and on the pillars of a church built by Bishop Paulinus at Tyre in the fourth century the cross is carved in the Latin way. The façade of the *Catholicon* at Athens shows a large Latin cross. And this style of cross was adopted by West and East until the schism occurred between the two churches. Indeed, at Constantinople the church of the Apostles, the first church of S. Sophia, consecrated by Constantine, those of the monastery of St. John at Studium, of St. Demetrius at Salonica, of St. Catherine on Mount Sinai, as well as many churches at Athens, are in the form of the Latin cross; and it appears in the decorations of capitals, balustrades, and mosaics. In the far-off lands of the Picts, the Bretons, and the Saxons, it was carved on stones and rocks, with elaborate and complex Runic decorations. And even in the *Catholicon* at Athens, crosses no less lavishly ornamented are to be found. In out-of-the-way places in Scotland, too, it has been discovered (cf. *Dictionnaire de l'Académie des Beaux-Arts*, V, 38).

The Greek cross appears at intervals and rarely on monuments during the early Christian centuries. The Crypts of Lucina, in the Catacomb of St. Callistus, yield an inscription which had been placed on a double grave or sepulchre, with the names POTΦINA: EIPHNH. Beneath this is seen the equilateral cross

— a disguised image of the gibbet on which the Redeemer died (De Rossi, *Rom. Sott.*, I, p. 333, Pl. XVIII). It is to be found also painted into the mantle of Moses in a fresco from the Catacomb of St. Saturninus on the Via Salaria Nuova (Perret, *Cat. de Rome*, III, Pl. VI). In later times it is to be seen in a mosaic of a church at Paris built in the days of King Childebert (Lenoir, *Statistique monumentale de Paris*) and carved on the pedestals of the columns in the basilica of Constantine in the Agro Verano; also on the roofs and pillars of churches, to denote their consecration. More often, as we might expect, we find it on the façades of the Byzantine basilicas and in their adornments, such as altars, iconostases, sacred curtains for the enclosure, thrones, amboes and sacerdotal vestments. When the Emperor Justinian erected the church of Santa Sophia at Constantinople, with the aid of the architects Artemius of Tralles, and Isidore of Miletus, a new architectural type was created which became the model for all churches subsequently built within the Byzantine Empire, and the Greek cross inscribed in a square thus became their typical ground-plan. Perhaps, too, the church of the Twelve Apostles may have been built upon this plan, as a famous epigram of St. Gregory Nazianzen would seem to indicate. There are other forms of cross, such as the *crux gammata*, the *crux florida*, or flowering cross, the pectoral cross, and the patriarchal cross. But these are noteworthy rather for their various uses in art and liturgy than for any peculiarity of style.

The complete and characteristic form  of Christ's monogram is obtained by the superposition of the two initial Greek letters, *chi* and *rho*, of the name ΧΡΙΣΤΟΣ. This is inexactly called the Constantinian monogram, although it was in use before the days of Constantine. It gained this name, however, because in his day it came much into fashion, and derived a triumphal signification from the fact that the emperor placed it on his new standard, i. e. the Labarum (Marucchi, "Di una pregevole ed inedita iscrizione cristiana" in "Studi in Italia", anno VI, II, 1883). Older, but less complete, forms of this monogram are made up of the *crux decussata* accompanied by a defective letter T, differing only slightly from the letter I, or encircled by a crown. These

forms, which were used principally in the third century, present a striking resemblance to a cross, but all of them are manifest allusions or symbols.

Another symbol largely employed during the third and fourth centuries, the *swastika* already spoken of at some length, still more closely resembles the cross. On monuments dating within the Christian Era it is known as the *crux gammata*, because it is made by joining four *gammata* at their bases. Many fantastic significations have been attached to the use of this sign on Christian monuments, and some have even gone so far as to conclude from it that Christianity is nothing but a descendant of the ancient religions and myths of the people of India, Persia, and Asia generally; then these theorists go on to point out the close relationship that exists between Christianity, on the one hand, and Buddhism and other Oriental religions, on the other. At the very least they insist upon seeing some relation between the symbolical concepts of the ancient religions and those of Christianity. Such was the opinion held by Emile Burnouf (cf. *Revue des Deux Mondes*, 15 August, 1868, p. 874). De Rossi ably refuted this opinion, and showed the real value of this symbol on Christian monuments (*Bull. d' arch. crist.*, 1868, 88-91). It is fairly common on the Christian monuments of Rome, being found on some sepulchral inscriptions, besides occurring twice, painted, on the Good Shepherd's tunic in an arcosolium in the Catacomb of St. Generosa in the Via Portuensis, and again on the tunic of the *fossor* Diogenes (the original epitaph is no longer extant) in the Catacomb of St. Domitilla in the Via Ardeatina. Outside of Rome it is less frequent. There is one example in an inscription found at Chiusi (see Cavedoni, *Ragguaglio di due antichi cimiteri di Chiusi*). A stone in the museum at Bergamo bears the monogram joined to the *gamma* cross, but it would seem to be of Roman origin. Another in the Mannheim Museum, with the name of a certain Hugdulfus, belongs to the fifth or sixth century. In a sarcophagus at Milan belonging to the fourth century it is repeated over and over again, but evidently as a mere ornamental motive (see Allegranza, *Mon. di Milano*, 74).

De Rossi (*Rom. Sott. Crist.*, II, 318) made researches into the chronology of this symbol, and the examples of it to be found in the catacombs at Rome, and he observed that it was seldom or never used until it took the place of the anchor, i. e. about the first half of the third century, whence he inferred that, not being of ancient tradition, it came into fashion as the result of studied choice rather than as a primitive symbol linking the beginnings of Christianity with Asiatic traditions. Its genesis is reflex and studied, not primitive and spontaneous. It is well known how anxiously the early Christians sought out means whereby they could at once portray and conceal the Cross of Christ. That in this way they should have discovered and adopted the *crux gammata*, is easily intelligible, and it is explained not merely by what has already been said, but also by the similarity between the Greek character *gamma* (Γ) and the Phœnician character *tan*. The latter has been famous since Apostolic times as a symbol of the Cross of Christ and of the Redemption (cf. Barnabæ Epist., ix, 9).

On the *crux gammata* (swastika) on Christian monuments and its relation to similar signs on pre-Christian monuments in the East: MÜLLER, *Sinnbilder der alten Christen*, 73-85; LE-TRONNE, *Annali dell' Ist. di Corr. Arch.* (1843), 122; ROCHETTE, *Mém. de l'académie des inscriptions*, pl. II, 302 sq.; MINERVINI, *Bull. Arch. Nap.*, Ser. 2, II, 178, 179; CAVEDONI, *Ragguaglio di due antichi cimiteri di Chiusi*, 70; GARRUCCI, *Vetr.* (2d ed.), 242, 243; MÜNZ, *Archäologische Bemerkungen über das Kreuz*, 25, 26.

The so-called Constantinian monogram prevailed during the whole of the fourth century, assuming various forms, and combining with the apocalyptic letters A and Ω (see ALPHA and OMEGA), but ever approaching more and more closely to the form of the cross pure

THE APPARITION OF THE CROSS TO CONSTANTINE
EXECUTED BY PUPILS OF RAPHAEL, SALA DI COSTANTINO, VATICAN

and simple. In the latter part of that century what is known as the "monogrammatic cross"  makes its appearance; it closely resembles the plain cross, and foreshadows its complete triumph in Christian art. The early years of the fifth century are of the highest importance in this development, because it was then that the undisguised cross first appears. As we have seen, such was the diffidence induced, and the habit of caution enforced, by three centuries of persecution, that the faithful had hesitated all that time to display the sign of Redemption openly and publicly. Constantine by the Edict of Milan had given definitive peace to the Church; yet, for another century the faithful did not judge it opportune to abandon the use of the Constantinian monogram in one or other of its many forms. But the fifth century marks the period when Christian art broke away from old fears, and, secure in its triumph, displayed before the world, now become Christian also, the sign of its redemption. To bring about so profound a change in the artistic traditions of Christianity, besides the altered condition of the Church in the eyes of the Roman State, two facts of great importance played a part: the miraculous apparition of the Cross to Constantine and the finding of the Holy Wood.

Constantine having declared war on Maxentius had invaded Italy. During the campaign which ensued he is said to have seen in the heavens one day a luminous cross together with the words EN·TOTTONIKA (In this conquer.) During the night that followed that day, he saw again, in sleep, the same cross, and Christ, appearing with it, admonished him to place it on his standards. Thus the Labarum took its origin, and under this glorious banner Constantine overcame his adversary near the Milvian Bridge, on 28 October, 312 (see CONSTANTINE THE GREAT). The second event was of even greater importance. In the year 326 the mother of Constantine, Helena, then about 80 years old, having journeyed to Jerusalem, undertook to rid the Holy Sepulchre of the mound of earth heaped upon and around it, and to destroy the pagan buildings that profaned its site. Some revelations which she had received gave her confidence that she would discover the Saviour's Tomb and His Cross. The work was carried on diligently, with the co-operation of St. Macarius, bishop of the city. The Jews had hidden the Cross in a ditch or well, and covered it over with stones, so that the faithful might not come and venerate it. Only a chosen few among the Jews knew the exact spot where it had been hidden, and one of them, named Judas, touched by Divine inspiration, pointed it out to the excavators, for which act he was highly praised by St. Helena. Judas afterwards became a Christian saint, and is honoured under the name of Cyriacus. During the excavation three crosses were found, but because the *titulus* was detached from the Cross of Christ, there was no means of identifying it. Following an inspiration from on high, Macarius caused the three crosses to be carried, one after the other, to the bedside of a worthy woman who was at the point of death. The touch of the other two was of no avail; but on touching that upon which Christ had died the woman got suddenly well again. From a letter of St. Paulinus to Severus inserted in the Breviary of Paris it would appear that St. Helena herself had sought by means of a miracle to discover which was the True Cross; and that she caused a man already dead and buried to be carried to the spot, whereupon, by contact with the third cross, he came to life. From yet another tradition, related by St. Ambrose, it would seem that the *titulus*, or inscription, had remained fastened to the Cross.

After the happy discovery, St. Helena and Constantine erected a magnificent basilica over the Holy Sepulchre, and that is the reason why the church bore the name of St. Constantinus. The precise spot of the finding was covered by the atrium of the basilica, and

there the Cross was set up in an oratory, as appears in the restoration executed by de Vogüé. When this noble basilica had been destroyed by the infidels, Arculfus, in the seventh century, enumerated four buildings upon the Holy Places around Golgotha; and one of them was the "Church of the Invention" or "of the Finding". This church was attributed by him and by topographers of later times to Constantine. The Frankish monks of Mount Olivet, writing to Leo III, style it St. Constantinus. Perhaps the oratory built by Constantine suffered less at the hands of the Persians than the other buildings, and so could still retain the name and style of *Martyrium Constantinianum*. (See De Rossi, *Bull. d' arch. crist.*, 1865, 88.)

A portion of the True Cross remained at Jerusalem enclosed in a silver reliquary; the remainder, with the nails, must have been sent to Constantine, and it must have been this second portion that he caused to be enclosed in the statue of himself which was set on a porphyry column in the Forum at Constantinople; Socrates, the historian, relates that this statue was to make the city impregnable. One of the nails was fastened to the emperor's helmet, and one to his horse's bridle, bringing to pass, according to many of the Fathers, what had been written by Zacharias the Prophet: "In that day that which is upon the bridle of the horse shall be holy to the Lord" (*Zach.*, xiv, 20). Another of the nails was used later in the Iron Crown of Lombardy, preserved in the treasury of the cathedral of Monza. Eusebius in his life of Constantine, describing the work of excavating and building on the site of the Holy Sepulchre, does not speak of the True Cross. In the story of a journey to Jerusalem made in 333 (*Itinerarium Burdigalense*) the various tombs and the basilica of Constantine are referred to, but no mention is made of the True Cross. The earliest reference to it is in the "Catecheses" of St. Cyril of Jerusalem (P. G., XXXIII, 468, 686, 776), written in the year 348, or at least twenty years after the supposed discovery.

In this tradition of the "Invention", or discovery, of the True Cross, not a word is said as to the smaller portions of it scattered up and down the world. The story, as it has reached us, has been admitted, since the beginning of the fifth century, by all ecclesiastical writers, with, however, many more or less important variations. By many critics the tradition of the finding of the Cross through the work of St. Helena in the vicinity of Calvary has been held to be a mere legend, without any historical reality, these critics relying chiefly upon the silence of Eusebius, who tells of all else that St. Helena did in Jerusalem, but says nothing about her finding the Cross. Still, however difficult it may be to explain this silence, it would be unsound to annihilate with a negative argument a universal tradition dating from the fifth century. The wonders related in the Syriac book "*Doctrina Addai*" (sixth century) and in the legend of the Jew Cyriacus, who is said to have been inspired to reveal to St. Helena the place where the Cross was buried, are responsible at least in part for the common beliefs of the faithful on this matter. These beliefs are universally held to be apocryphal. (See Duchesne, *Lib. Pont.*, I, p. cviii.) However that may be, the testimony of Cyril, Bishop of Jerusalem from 350 or 351, who was on the spot a very few years after the event took place, and was a contemporary of Eusebius of Cæsarea, is explicit and formal as to the finding of the Cross at Jerusalem during the reign of Constantine; this testimony is contained in a letter to the Emperor Constantius (P. G., XXXIII, 52, 1167; and cf. 686, 687). It is true that the authenticity of this letter is questioned, but without solid grounds. St. Ambrose (*De obit. Theod.*, 45-48 in P. L., XVI, 401) and Rufinus (*Hist. eccl.*, I, viii in P. L., XXI, 476) bear witness to the fact of the finding. Silvia of Aquitaine (*Peregrinatio ad loca sancta*, ed. Gamurrini, Rome 1888, p. 76) assures us that in her time

the feast of the Finding was commemorated on Calvary, that event having naturally become the occasion of a special feast under the name of "The Invention of the Holy Cross". The feast dates from very early times at Jerusalem, and it was gradually introduced into other Churches. Papebroch (*Acta SS.*, 3 May) tells us that it did not become general until about the year 720. In the Latin Church it is kept on the 3rd of May; the Greek Church keeps it on the 14th of September, the same day as the Exaltation, another feast of very remote origin, supposed to have been instituted at Jerusalem to commemorate the dedication of the basilica of the Holy Sepulchre (335) and thence introduced at Rome.

Constantine's vision of the Cross, and perhaps another apparition which took place in Jerusalem in 346, would seem to have been commemorated in this same feast. But its chief glory is its connexion with the restoration of the True Cross to the Church of Jerusalem, after it had been carried away by the Persian king, Chosroes (Khusrau) II, the conqueror of Phocas, when he captured and sacked the Holy City. This Chosroes was afterwards vanquished by the Emperor Heraclius II and in 628 was assassinated by his own son Siroes (Shirva), who restored the Cross to Heraclius. It was then carried in triumph to Constantinople and thence, in the spring of the year 629, to Jerusalem. Heraclius, who wished to carry the Holy Cross upon his own shoulders on this occasion, found it extremely heavy, but when, upon the advice of the Patriarch Zacharias, he laid aside his crown and imperial robes of state, the sacred burden became light, and he was able to carry it to the church. In the following year Heraclius was conquered by the Mahomedans, and in 647 Jerusalem was taken by them.

In reference to this feast the Paris Breviary associates with the memory of Heraclius that of St. Louis of France, who, on 14 September, 1241, barefoot and divested of his royal robes, carried the fragment of the Holy Cross sent to him by the Templars, who had received it as a pledge from Baldwin. This fragment escaped destruction during the Revolution and is still preserved at Paris. There, also, is preserved the incombustible cross left to the abbey of Saint-Germain-des-Prés by the Princess Anna Gonzaga, together with two portions of the Nails. Very soon after the discovery of the True Cross its wood was cut up into small relics and quickly scattered throughout the Christian World. We know this from the writings of St. Ambrose, of St. Paulinus of Nola, of Sulpicius Severus, of Rufinus, and, among the Greeks, of Socrates, Sozomen, and Theodoret (cf. Duchesne, "*Lib. Pont.*", I, p. cvii; Marucchi, "*Basiliques de Rome*", 1902, 348 sq.; Pennacchi, "*De Inventâ Ierosolymis Constantino magno Imp. Cruce D. N. I. C.*", Rome, 1892; Baronius, "*Annales Eccl.*", *ad an.* 336, Lucca, 1739, IV, 178). Many portions of it are preserved in Santa Croce in Gerusalemme at Rome, and in Notre-Dame at Paris (cf. Rohault de Fleury, "*Mémoire*", 45-163; Gosselin, "*Notice historique sur la Sainte Couronne et les autres Instruments de la Passion de Notre-Dame de Paris*", Paris, 1828; Sauvage, "*Documents sur les reliques de la Vraie Croix*", Rouen, 1893). St. Paulinus in one of his letters refers to the redintegration of the Cross, i. e. that it never grew smaller in size, no matter how many pieces were detached from it. And the same St. Paulinus received from Jerusalem a relic of the Cross enclosed in a golden tube, but so small that it was almost an atom, "*in segmento pene atomo hastulæ brevis munimentum præsentis et pignus æternæ salutis*" (Epist. xxxi ad Severum).

The historical detail we have been considering sufficiently accounts for the appearance of the cross on monuments dating from the end of the fourth and the beginning of the fifth century. In an arcosolium in the Catacomb of St. Callistus a cross composed of flowers and foliage with two doves at its base is still

partially disguised, but begins to be more easily recognizable (cf. De Rossi, *Rom. Sott.*, III, Pl. XII). Especially in Africa, where Christianity had made more rapid progress, the cross began to appear openly during the course of the fourth century. The most ancient text we have relating to a carved cross dates from later than A.D. 362. The cross was used on the coinage of Christian princes and peoples with the superscription, *Salus Mundi*. The "adoration" of the Cross, which up to this time had been restricted to private cult, now began to assume a public and solemn character. At the end of the fourth century Christian poets were already writing, "*Flecte genu lignumque Crucis venerabile adora*". The second Council of Nicæa, among other precepts that deal with images, lays down that the Cross should receive an adoration of honour, "*honorarium adorationem*". (See Section II of this article.) To the pagans who taunted them with being as much idolaters as they accused the pagans of being towards their gods, they replied that they took their stand on the nature of the cult they gave: that it was not *latría*, but a relative worship, and that the material symbol only served to raise their minds to the Divine Type, Jesus Christ Crucified (cf. Tert., "*Apol.*", xvi; Minucius Felix, "*Octav.*", ix-xii). Wherefore St. Ambrose, speaking on the veneration of the Cross, thought it opportune to explain the idea: "Let us adore Christ, our King, who hung upon the wood, and not the wood" (*Regem Christum qui pependit in ligno . . . non lignum*).—"In obit. Theodosii", xlvi). The Western Church observes the solemn public veneration (called the "Adoration") on Good Friday. In the Gregorian Sacramentary we read: "*Venit Pontifex et adoratam deseculatur*". In the Eastern Church the special veneration of the Cross is performed on the Third Sunday in Lent (*Κυριακή τῆς σταυροπροσκυνήσεως*, "Sunday of the Cross-veneration") and during the week that follows it. The gradual spread of the devotion to the Cross incidentally occasioned abuses in the piety of the faithful. Indeed, we learn from the edicts of Valentinian and Theodosius that the cross was at times set up in very unseemly places. The evil-minded, the ignorant, and all those who practised spells, charms, and other such superstitions perverted the widespread devotion to their own corrupt uses. To deceive the faithful and turn their piety into lucre, these people associated the sign of the cross with their superstitious and magical symbols, winning thereby the confidence and trust of their dupes. To all this corruption of the religious idea the teachers of the Church opposed themselves, exhorting the faithful to true piety, and to beware of superstitious talismans (cf. St. John Chrysostom, *Hom. vii in Epist. ad Coloss.*, vii, and elsewhere; De Rossi, "*Bull. d'archeol. crist.*", 1869, 62-64).

The distribution of portions of the wood of the Cross led to the making of a remarkable number of crosses from the fourth century onwards, many of which have come down to us. Known under the names of *encolpía* and pectoral crosses they often served to enclose fragments of the True Cross; they were merely crosses worn on the breast out of devotion—"To wear upon the breast a cross, hung from the neck, with the Sacred Wood, or with relics of saints, which is what they call an *encolpium*." (Anastasius Bibliothecarius on Act. V of VIII Dec. Counc.). On the origin and use of pectoral crosses see Giovanni Scandella, "*Considerazioni sopra un encolpio eneo rinvenuto in Corfu*" (Trieste, 1854). St. John Chrysostom, in his polemic against Jews and Gentiles, wherein he panegyricizes the triumph of the Cross, testifies that whosoever, man or woman, possessed a relic of it had it enclosed in gold and wore it around the neck (St. John Chrysostom, ed. Montfaucon, I, 571). St. Macrina (d. 379), sister of St. Gregory Nazianzen, wore an iron cross on her breast; we do not really know its shape; perhaps it was the monogrammatic one taken by her brother from

pope warmly recommended his clergy to make this sign with care, else their blessing would be fruitless. The action was accompanied by the solemn formula, "In nomine Patris, etc." Another use of the cross was in the solemn dedication of churches (see ALPHABET; CONSECRATION). The bishop who performed the ceremony wrote the alphabet in Latin and Greek on the floor of the church along two straight lines crossing in the form of the Roman *decussis*. The letter X, which in the land-plottings of the Roman augurs represented, with its two component lines, the *cardo maximus* and the *decumanus maximus*, was the same *decussis* used by the Roman *agrimensores*, in their surveys of farms, to indicate boundaries. This sign was appropriate to Christ by its cruciform shape and by its identity in shape with the initial letter of His name, Χριστός, in Greek. For this reason it was one of the genuine forms of the *signum Christi*.

The use of the cross became so widespread in the fifth and following centuries that anything like a complete enumeration of the monuments on which it appears is wellnigh impossible. Suffice it to say that there is hardly a remnant of antiquity dating from this century, whether lowly and mean or noble and grand, which does not bear the sign. In proof of this we shall give here a cursory enumeration. It is quite frequent on sepulchral monuments, on the imperial urns at Constantinople, on the plaster of the *loculi* (resting-places) in the catacombs, especially of Rome, in a painting in a Christian cemetery at Alexandria in Egypt, on a mosaic at Boville near Rome, on an inscription for a tomb made in the form of a cross and now in the museum at Marseilles, on the interior walls of sepulchral chambers, on the front of marble sarcophagi dating from the fifth century. In these last instances it is common to see the cross surmounted by the monogram and surrounded by a laurel wreath (e. g. the sarcophagi at Arles, and in the Lateran Museum). A very fine specimen was found recently in excavations in St. Domitilla's Catacomb on the Ostian Way; it is a symbolical picture of souls freed from the trammels of the body, and saved by means of the Cross, which has two doves on its arms, while armed guards are asleep at its base. Lastly, in England, crosses have been found on sepulchral monuments. So universal was its use by the faithful that they put it even on household utensils, on medals of devotion, on pottery lamps, spoons, cups, plates, glassware, on clasps dating from Merovingian times, on inscriptions and votive offerings, on seals made in the form of a cross, on toys representing animals, on ivory combs, on the seals of wine-jars, on reliquary boxes, and even on water-pipes. In objects of liturgical use we meet it on Biblical codices, on vestments, pallia, on leaden thongs inscribed with exorcising formulae, and it was signed on the foreheads of catechumens and candidates for confirmation. The architectural details of churches and basilicas were ornamented with crosses; the façades, the marble slabs, the transoms, the pillars, the capitals, the keystones of arches, the altar-tables, the bishops' thrones, the diptychs, and the bells were also ornamented in the same way. In the artistic monuments the so-called cruciform nimbus around Our Saviour's head is well known. The cross appears over His head, and near that of the orante, as in the oil-stocks of Santo Menna. It is also to be met with on monuments of a symbolical nature: on the rocks whence flow the four celestial rivers the cross finds its place; on the vase and on the symbolical ship, on the head of the tempting serpent, and even on the lion in Daniel's den.

When Christianity had become the official religion of the empire, it was natural that the cross should be carved on public monuments. In fact it was from the first used to purify and sanctify monuments and temples originally pagan; it was prefixed to signatures and to inscriptions placed on public work; it

was borne by consuls on their sceptres, the first to do so being Basil the Younger (A.D. 541—cf. Gori, *Thes. diptych.*, II, Pl. XX). It was cut in marble quarries and in brickyards, and on the gates of cities (cf. de Vogüé, *Syrie Centrale; Architecture du VII^e siècle*). At Rome there is still to be seen on the Gate of St. Sebastian the figure of a Greek cross surrounded by a circle with the invocations: ΑΓΙΕ · ΚΟΝΟΝ · ΑΓΙΕ · ΓΕΩΡΓΙ. In and around Bologna it was usual to set the sign of salvation in the public streets. According to tradition, these crosses are very ancient, and four of them date from the time of St. Petronius. Some of them were restored in the ninth and tenth centuries (cf. Giovanni Gozzadini, *Delle croci monumentali che erano nelle vie di Bologna nel secolo xiii*).

The cross also played an important part in heraldry and diplomatic science. The former does not directly come within our scope; of the second we shall give the briefest outlines. Crosses are to be found on documents of early medieval times and, being placed at the head of a deed, were equivalent to an invocation of heaven, whether they were plain or ornamental. They were at times placed before signatures, and they have even been equivalent to signatures in themselves. Indeed, from the tenth century we find, under contracts, roughly-made crosses that have all the appearance of being intended as signatures. Thus did Hugh Capet, Robert Capet, Henry I, and Philip I sign their official documents. This usage declined in the thirteenth century and appeared again in the fifteenth. In our own day the cross is reserved as the attestation-mark of illiterate people. A cross was characteristic of the signature of Apostolic notaries, but this was carefully designed, not rapidly written. In the early Middle Ages crosses were decorated with even greater magnificence. In the centre were to be seen medallions representing the Lamb of God, Christ, or the saints. Such is the case in the Velletri cross and that which Justin II gave to St. Peter's, mentioned above, and again in the silver cross of Agnello at Ravenna (cf. Ciampini, *Vet. mon.*, II, Pl. XIV). All this kind of decoration displays the substitution of some more or less complete symbol for the figure of Christ on the cross, of which we are about to speak.

It may be well to give here a list of works bearing on the departments of the subject just treated, and containing illustrations which it has not been opportune to quote in the foregoing part of the article: STOCKBAUER, *Kunstgeschichte des Kreuzes* (Schaffhausen, 1870); GRIMOARD DE SAINT-LAURENT, *Iconographie de la Croix et du Crucifix in Ann. archéol.*, XXVI, XXVII; MARTIGNY, *Dictionnaire des antiquités chrétiennes*, s. v. Crucifix; BAYET, *Recherches pour servir à l'histoire de la peinture en orient* (Paris, 1879); MÜNZ, *Les mosaïques chrétiennes de l'Italie (Oratoire de Jean VII) in Rev. archéol.*, 1877, II; LABARTE, *Histoire des arts industriels*, II; KRAUS, *Real-Encyclopädie der christlich. Alterthümer* (Freiburg, 1882).

(5) *Later Development of the Crucifix.*—We have seen the progressive steps, artistic, symbolical, and allegorical, through which the representation of the Cross passed from the first centuries down to the Middle Ages; and we have seen some of the reasons which prevented Christian art from making an earlier display of the figure of the cross. Now the cross, as it was seen during all this time was only a symbol of the Divine Victim and not a direct representation. We can thus more easily understand, then, how much more circumspection was necessary in proceeding to a direct portrayal of the Lord's actual Crucifixion. Although in the fifth century the cross began to appear on public monuments, it was not for a century afterwards that the figure on the cross was shown; and not until the close of the fifth, or even the middle of the sixth, century, did it appear without disguise. But from the sixth century onward we find many images—not allegorical, but historical and realistic—of the crucified Saviour. To proceed in order, we will first examine the rare allusions, as it were, to the Crucifixion in Christian art down to the sixth century,

and then look at the productions of that art in the later period.

Seeing that the cross was the symbol of an ignominious death, the repugnance of the early Christians to any representation of Christ's torments and ignominy is easily understood. On a few sarcophagi of the fifth century (e.g. one in the Lateran, no. 171) scenes from the Passion are shown, but so treated as to show none of the shame and horror attaching to that instrument of death which was, as St. Paul says, "to the Jews a scandal, and to the Gentiles foolishness". Yet, from the first ages Christians were loth to deprive themselves altogether of the image of their crucified Redeemer, though, for the reasons already stated and because of the "Discipline of the Secret" (q. v.), they could not represent the scene openly. The Council of Elvira, c. 300, decreed that what was to be adored ought not to be used in mural decoration. Wherefore recourse was had to allegory and to veiled forms, as in the case of the cross itself. (Cf. Bréhier, *Les origines du Crucifix dans l'art religieux*, Paris, 1904.) One of the most ancient allegories of the Crucifixion is considered to be that of the lamb lying at the foot of the anchor—symbols respectively of the Cross and of Christ. A very ancient inscription in the Crypt of Lucina, in the Catacombs of St. Callistus, shows this picture, which is otherwise somewhat rare (cf. De Rossi, *Rom. Sott. Christ.*, I, Pl. XX). The same symbol was still in use at the end of the fourth and beginning of the fifth century. In the description of the mosaics in the basilica of St. Felix at Nola, St. Paulinus shows us the same cross in connexion with the mystical lamb, evidently an allusion to the Crucifixion, and he adds the well-known verse: "Sub cruce sanguine nivescunt stat Christus in agno".

We saw above that the trident was a veiled image of the cross. In the Catacomb of St. Callistus we have a more complicated study: the mystical dolphin is twined around the trident—a very expressive symbol of the Crucifixion. The early Christians in their artistic labours did not disdain to draw upon the symbols and allegories of pagan mythology, as long as these were not contrary to Christian faith and morals. In the Catacomb of St. Callistus a sarcophagus, dating from the third century, was found, the front of which shows Ulysses tied to the mast while he listens to the song of the Sirens; near him are his companions, who with ears filled with wax, cannot hear the alluring song. All this is symbolical of the Cross, and of the Crucified, who has closed against the seductions of evil the ears of the faithful during their voyage over the treacherous sea of life in the ship which will bring them to the harbour of salvation. Such is the interpretation given by St. Maximus of Turin in the homily read on Good Friday (S. Maximi opera, Rome, 1874, 151. Cf. De Rossi, *Rom. Sott.*, I, 344–345, Pl. XXX, 5). A very important monument belonging to the beginning of the third century shows the Crucifixion openly. This would seem to contradict what we have said above, but it should be remembered that this is the work of pagan, and not of Christian, hands (cf. De Rossi, *Bull. d'arch. crist.*, 1863, 72, and 1867, 75), and therefore it has no real value as a proof among purely Christian works. On a beam in the *Pædagogium* on the Palatine there was discovered a *graffito* on the plaster, showing a man with an ass's head, and clad in a perizoma (or short loin-cloth) and fastened to a *crux immissa* (regular Latin cross). Near by there is another man in an attitude of prayer with the legend *Ἀλεξάμενος σέβεται θεόν*, i. e., Alexamenos adores God. This *graffito* is now to be seen in the Kircherian Museum in Rome, and is but an impious caricature in mockery of the Christian Alexamenos, drawn by one of his pagan comrades of the *pædagogium*. (See Ass.) In fact Tertullian tells us that in his day, i. e. precisely at the time when this caricature was made, Christians were accused of adoring an ass's

head, "Somnatis caput asinum esse Deum nostrum" (Apol., xvi; Ad Nat., I, ii). And Minucius Felix confirms this (Octav., ix). The Palatine *graffito* is also important as showing that the Christians used the crucifix in their private devotions at least as early as the third century. It would not have been possible for Alexamenos' companion to trace that *graffito* of a crucified person clad in the perizoma (which was contrary to Roman usage) if he had not seen some such figure made up of by the Christians. Professor Haupt sought to identify it as a caricature of a worshipper of the Egyptian god Seth, the Typho of the Greeks, but his explanation was refuted by Kraus. Recently, a similar opinion has been put forth by Wunsch, who takes his stand on the letter Y which is placed near the crucified figure, and which has also been found on a tablet relating to the worship of Seth; he therefore concludes that Alexamenos of the *graffito* belonged to the Sethian sect. (With reference to the Alexamenos *graffito*, which certainly has a bearing on the crucifix and its use by the early Christians, see Raffaele Garucci, "Un crocifisso graffito da mano pagana nella casa dei Cesari sul Palatino", Rome, 1857; Ferdinand Becker, "Das Spott-Crucifix der römischen Kaiserpaläste", Breslau, 1866; Kraus, "Das Spott-Crucifix vom Palatin", Freiburg im Breisgau, 1872; Visconti, "Di un nuovo graffito palatino relativo al cristiano Alessameno", Rome, 1870; Visconti and Lanciani, "Guida del Palatino", 1873, p. 86; De Rossi, "Rom. Sott. Crist.", 1877, pp. 353–354; Wunsch, ed., "Setianische Verfluchungstafeln aus Rom", Leipzig, 1898, p. 110 sqq.; Vigouroux, "Les livres saints et la critique rationaliste", I, 94–102.) The crucifix and representations of the Crucifixion became general after the sixth century, on manuscripts, then on private monuments, and finally even on public monuments. But its appearance on monuments up to about the eighth century surely indicates such monuments to be works of private zeal and devotion, or, at least, not clearly and decidedly public. As a matter of fact, it is noteworthy that, in the year 692, i. e. at the end of the seventh century the Quinisext Council of Constantinople, called the Trullan, ordered the symbolical and allegorical treatment to be laid aside. The earliest MS. bearing a representation of Christ crucified is in a miniature of a Syriac codex of the Gospels dating from A. D. 586 (*Codex Syriacus*, 56), written by the scribe Rabula, and which is in the Laurentian Library at Florence. Therein the figure of Christ is robed (Assemani, *Biblioth. Laurent. Medic. catalog.*, Pl. XXXIII, p. 194). Other images of the crucifix belong to the sixth century. Gregory of Tours, in his work "De Gloriâ Martyrum", I, xxv, speaks of a crucifix robed in a colobium, or tunic, which in his day was publicly venerated at Narbonne in the church of St. Genesius, and which he considered a profanation—so far was the public cult of the crucifix from having become general up to that time. A cross belonging to the sixth century is to be found in the treasury at Monza, on which the image of the Saviour is wrought in enamel (cf. Mozzoni, "Tavole cronologiche-critiche della stor. eccl. secolo VII", 79), and which seems to be identical with that given by St. Gregory the Great to Theodolinda, Queen of the Lombards. We know also that he gave a cross to Recared, King of the Visigoths, and to others (cf. S. Gregorii Lib. III, Epist. xxxii; Lib. IX, Epist. cxxii; Lib. XIII, Epist. xlii; Lib. XIV, Epist. xii).

It is certain, then, that the custom of displaying the Redeemer on the Cross began with the close of the sixth century, especially on *encolpia*, yet such examples of the crucifix are rare. As an example, we have a Byzantine *encolpion*, with a Greek inscription, which was erroneously thought to have been discovered in the Roman Catacombs in 1662, and about which the renowned Leo Allatius has written learnedly (cf. "Codice Chigiano", VI; Fea, "Miscellanea

filol. critica", 282). The little metal vases preserved at Monza, in which was carried to Queen Theodolinda the oil from the Holy Places, show clearly how the repugnance to effigies of Christ lasted well into the sixth century. In the scene of the Crucifixion thereon depicted, the two thieves alone are seen with arms extended, in the attitude of crucifixion, but without a cross, while Christ appears as an orante, with a nimbus, ascending among the clouds, and in all the majesty of glory, above a cross hidden under a decoration of flowers. (Cf. Mozzoni, op. cit., 77, 84.) In the same manner, on another monument, we see the cross between two archangels while the bust of

Christ is shown above. Another very important monument of this century, and perhaps dating even from the preceding one, is the Crucifixion carved on the wooden doors at S. Sabina on the Aventine Hill, at Rome. The Crucified Christ, stripped of His garments, and on a cross, but not nailed to the cross, and between two thieves, is shown as an orante, and the scene of the Crucifixion is, to a certain extent, artistically veiled. The carving is roughly done, but the work has become of great importance, owing to recent studies thereon, wherefore we shall briefly indicate the various writings dealing with it: Grisar, "Analecta Romana", 427 sqq.; Berthier, "La Porte de Sainte-Sabine à Rome; Etude archéologique" (Fribourg, Switzerland, 1892); Pératé, "L'Archéologie chrétienne" in "Bibliothèque de l'enseignement des beaux arts" (Paris, 1892, pp. 330-36); Bertram, "Die Thüren von Sta. Sabina in Rom: das Vorbild der Bernwards Thüren am Dom zu Hildesheim (Fribourg, Switzerland, 1892); Ehrhard, "Die altchristliche Prachtthüre der Basilika Sta. Sabina in Rom" in "Der Katholik", LXXII (1892), 444 sqq., 538 sqq.; "Civiltà Cattolica", IV (1892), 68-89; "Römische Quartalschrift", VII (1893), 102; "Analecta Bollandiana", XIII (1894), 53; Forrer and Müller, "Kreuz und Kreuzigung Christi in ihrer Kunstentwicklung" (Strasburg, 1894), 15, Pl. II and Pl. III; Strzygowski, "Das Berliner Mosesrelief und die Thüren von Sta. Sabina in Rom" in "Jahrbuch der königl. preussischen Kunstsammlungen XVI (1893), 65-81; Ehrhard, "Prachtthüre von S. Sabina in Rom und die Domthüre von Spalato" in "Ephemeris Spalatensis" (1894), 9 sqq.; Grisar, "Kreuz und Kreuzigung auf der altchristl. Thüre von S. Sabina in Rom (Rome, 1894); Dobbert, "Zur Entstehungsgeschichte des Crucifixes" in "Jahrb. der preuss. Kunstsammlungen", I (1880), 41-50.

To this same period belongs a crucifix at Mount Athos (see Smith's "Dictionary of Christian Antiquities", London, 1875, I, 514), as well as an ivory in the British Museum. Christ is shown wearing only a loin-cloth: He appears as if alive, and not suffering physical pain. To the left, Judas is seen hanged, and below is the purse of money. In the following century the Crucifixion is still sometimes represented with the restrictions we have noticed, for instance, in the mosaic made in 642 by Pope Theodore in S. Stefano Rotondo, Rome. There, between Sts. Primas and Felician, the cross is to be seen, with the bust of the Saviour just above it. In the same seventh

century, also, the scene of the Crucifixion is shown in all its historic reality in the crypt of St. Valentine's Catacomb on the Via Flaminia (cf. Marucchi, *La cripta sepolcrale di S. Valentino*, Rome, 1878). Bosio saw it in the sixteenth century, and it was then in a better state of preservation than it is to-day (Bosio, *Roma Sott.*, III, lxxv). Christ crucified appears between Our Lady and St. John, and is clad in a long, flowing tunic (*colobium*), and fastened by four nails, as was the ancient tradition, and as Gregory of Tours teaches: "Clavorum ergo dominicorum gratia quod quatuor fuerint hæc est ratio: duo sunt affixi in palmis, et duo in plantis" ("De Gloriâ Martyrum", I, vi, in P. L., XXI, 710).

The last objections and obstacles to the realistic reproduction of the Crucifixion disappeared in the beginning of the eighth century. In the oratory built by Pope John VII in the Vatican, A. D. 705, the crucifix was represented realistically in mosaic.

But the figure was robed, as we may learn from the drawings made by Grimaldi in the time of Paul V, when the oratory was pulled down to make room for the modern façade. Part of such a mosaic still exists in the grottoes at the Vatican similar in treatment to that of John VII. Belonging to the same century, though dating a little later, is the image of the Crucified discovered a few years ago in the apse of the old church of S. Maria Antiqua in the Roman Forum. This remarkable picture, now happily recovered, was visible for a little while in the month of May, 1702, and is mentioned in the diary of Valesio. It dates from the time of Pope St. Paul I (757-768), and stands in a niche above the altar. The figure is draped in a long tunic of a greyish-blue colour, is very lifelike, and has wide-open eyes. The soldier Longinus is in the act of wounding the side of Christ with the lance. On

THE CRUCIFIXION—GUIDO RENI
(Church of S. Lorenzo in Lucina, Rome)

either hand are Mary and John; between them and the Cross stands a soldier with a sponge and a vessel filled with vinegar; above the Cross the sun and moon dim their rays.

Another interesting picture is that in the crypt of SS. Giovanni e Paolo at Rome, in their dwelling-house on the Celian Hill. It is Byzantine in style and shows the crucifix. In the ninth century the crucifix of Leo IV is of importance (840-847). It is a stripped figure, with a perizoma, and four nails are used. A similar figure is in the paintings of S. Stefano alla Cappella. To the same century belongs a diptych from the monastery of Rambona of about the year 898, and now in the Vatican Library (Buonarroti, "Osservazioni sopra alcune frammenti di vetro", Florence, 1716, 257-283, and P. Germano da S. Stanislao, "La casa celimontana dei SS. Giovanni e Paolo", Rome, 1895). To bring this list to a close we may mention an eleventh-century diptych in the cathedral of Tournai, a twelfth-century Roman cross preserved at the Porte de Halle, at Brussels, and an enamelled crucifix in the Spitzer collection.

Here we bring our researches to an end, the field of Christian archaeology not extending further. In the artistic treatment of the crucifix there are two periods: the first, which dates from the sixth to the twelfth and thirteenth centuries; and the second, dating from that time to our own day. We shall here treat only of the former, touching lightly on the latter. In the first period the Crucified is shown adhering to the cross, not hanging forward from it; He is alive and shows no signs of physical suffering; He is clad in a long, flowing, sleeveless tunic (*colobium*), which reaches the knees. The head is erect, and surrounded by a nimbus, and bears a royal crown. The figure is fastened to the wood with four nails (cf. Garrucci, "Storia dell' arte crist.", III, fig. 139 and p. 61; Marucci, op. cit., and "Il cimitero e la basilica di S. Valentino", Rome, 1890; Forrer and Müller, op. cit., 20, Pl. III, fig. 6). In a word, it is not Christ suffering, but Christ triumphing and glorious on the Cross. Moreover, Christian art for a long time objected to stripping Christ of his garments, and the traditional *colobium*, or tunic, remained until the ninth century. In the East the robed Christ was preserved to a much later date. Again, in miniatures from the ninth century the figure is robed, and stands erect on the cross and on the *suppedaneum*.

The scene of the Crucifixion, especially after the eighth century, includes the presence of the two thieves, the centurion who pierced Christ's side, the soldier with the sponge, the Blessed Virgin and St. John. Mary is never shown weeping and afflicted, as became the custom in later ages, but standing erect near the cross, as St. Ambrose says, in his funeral oration on Valentinian: "I read of her standing; I do not read of her weeping." Moreover, on either side of the Cross the sun and the moon, often with human faces, veil their brightness, being placed there to typify the two natures of Christ; the sun, the Divine, and the moon, the human (cf. St. Gregory the Great, Homily ii in Evang.). At the foot of the Cross the female figures are symbolical of the Church and the Synagogue, the one receiving the Saviour's blood in a cup, the other veiled and dis-crowned, holding in her hand a torn banner. With the tenth century realism began to play a part in Christian art, and the *colobium* becomes a shorter garment, reaching from the waist to the knees (*perizoma*). In the "Hortus deliciarum" in the "album" belonging to the Abbess Herrada of Landsberg in the twelfth the *colobium* is short, and approaches the form of the perizoma. From the eleventh century in the East, and from the Gothic period in the West, the head droops onto the breast (cf. Borgia, *De Cruce Veliternâ*, 191), the crown of thorns is introduced, the arms are bent back, the body is twisted, the face

is wrung with agony, and blood flows from the wounds. In the thirteenth century complete realism is reached by the substitution of one nail in the feet, instead of two, as in the old tradition, and the resulting crossing of the legs. All this was done from artistic motives, to bring about a more moving and devotional pose. The living and triumphant Christ gives place to a Christ dead, in all the humiliation of His Passion, the agony of His death being even accentuated. This manner of treatment was afterwards generalized by the schools of Cimabue and Giotto. In conclusion it may be noted that the custom of placing the crucifix over the altar does not date from earlier than the eleventh century. (See Section III of this article.)

Works of reference on the crucifix and its various forms in general: JUSTUS LIPSIVS, *De Cruce libri tres* (Antwerp, 1595); GREYER, *De Cruce Christi rebusque ad eam pertinentibus* (Ingoldstadt, 1595-1605); BOSIUS, *Cruce triumphans et gloriosa* (Antwerp, 1617, folio); BARTHOLINUS, *De Cruce Christi hypomnemata* (Copenhagen, 1651); ALGER, *History of the Cross* (Boston, 1858); MÜNZ, *Archäologische Bemerkungen über das Kreuz Christi* (Frankfurt, 1867); STOCKBAUER, *Kunstgeschichte des Kreuzes* (Schaffhausen, 1870); ZÖCKLER, *Das Kreuz Christi* (Gütersloh, 1875).

Orazio Marucci.

II. THE TRUE CROSS AND REPRESENTATIONS OF IT AS OBJECTS OF DEVOTION.—(1) *Growth of the Christian Cult.*—The Cross to which Christ had been nailed, and on which He had died, became for Christians, quite naturally and logically, the object of a special respect and worship. St. Paul says, in I Cor., i, 17: "For Christ sent me not to baptize, but to preach the gospel: not in wisdom of speech, lest the cross of Christ should be made void"; in Gal., ii, 19: "With Christ I am nailed to the cross"; in Eph., ii, 16: Christ . . . "might reconcile both to God in one body by the cross"; in Phil., iii, 18: "For many walk . . . enemies of the cross of Christ"; in Col., ii, 14: "Blotting out the handwriting of the decree that was against us, which was contrary to us. And he hath taken the same out of the way, fastening it to the cross"; and in Gal., vi, 14: "But God forbid that I should glory, save in the cross of our Lord Jesus Christ; by whom the world is crucified to me, and I to the world".

It seems clear, therefore, that for St. Paul the Cross of Christ was not only a precious remembrance of Christ's sufferings and death, but also a symbol closely associated with His sacrifice and the mystery of the Passion. It was, moreover, natural that it should be venerated and become an object of a cult with the Christians who had been saved by it. Of such a cult in the Primitive Church we have definite and sufficiently numerous evidences. Tertullian meets the objection that Christians adore the cross by answering with an *argumentum ad hominem*, not by a denial. Another apologist, Minucius Felix, replies to the same objection. Lastly we may recall the famous caricature of Alexamenos, for which see the article Ass. From all this it appears that the pagans, without further consideration of the matter, believed that the Christians adored the cross; and that the apologists either answered indirectly, or contented themselves with saying that they do not adore the cross, without denying that a certain form of veneration was paid to it.

It is also an accepted belief that in the decorations of the catacombs there have been found, if not the cross itself, at least more or less veiled allusions to the holy symbol. A detailed treatment of this and other historical evidence for the early prevalence of the cult will be found in Section I of this article.

This cult became more extensive than ever after the discovery of the Holy Places and of the True Cross. Since the time when Jerusalem had been laid waste and ruined in the wars of the Romans, especially since Hadrian had founded upon the ruins his colony of Ælia Capitolina, the places consecrated by the Pas-

sion, Death, and Burial of Christ had been profaned and, it would seem, deserted. Under Constantine, after peace had been vouchsafed to the Church, Macarius, Bishop of Jerusalem, caused excavations to be made (about A. D. 327, it is believed) in order to ascertain the location of these holy sites. That of Calvary was identified, as well as that of the Holy Sepulchre; it was in the course of these excavations that the wood of the Cross was recovered. It was recognized as authentic, and for it was built a chapel, or oratory, which is mentioned by Eusebius, also by St. Cyril of Jerusalem, and Silvia (Etheria). From A. D. 347, that is to say, twenty years after these excavations, the same St. Cyril, in his discourses (or *catecheses*) delivered in these very places (iv, 10; x, 14; xiii, 4) speaks of this sacred wood. An inscription of A. D. 359, found at Tixter, in the neighbourhood of Sétif in Mauretania, mentions in an enumeration of relics, a fragment of the True Cross (Roman Miscellanies, X, 441). For a full discussion of the legend of St. Helena, see Section I of this article; see also HELENA, SAINT. Silvia's recital (Peregrinatio Etherie), which is of indisputable authenticity, tells how the sacred wood was venerated in Jerusalem about A. D. 380. On Good Friday, at eight o'clock in the morning, the faithful and the monks assemble in the chapel of the Cross (built on a site hard by Calvary), and at this spot the ceremony of the adoration takes place. The bishop is seated on his chair; before him is a table covered with a cloth; the deacons are standing around him. The silver-gilt reliquary is brought and opened, and the sacred wood of the Cross, with the Title, is placed on the table. The bishop stretches out his hand over the holy relic, and the deacons keep watch with him while the faithful and catechumens defile, one by one, before the table, bow, and kiss the Cross; they touch the Cross and the Title with forehead and eyes, but it is forbidden to touch them with the hands. This minute watchfulness was not unnecessary, for it has been told in fact how one day one of the faithful, making as though to kiss the Cross, was so unscrupulous as to bite off a piece of it, which he carried off as a relic. It is the duty of the deacons to prevent the repetition of such a crime. St. Cyril, who also tells of this ceremony, makes his account much more brief, but adds the important detail, that relics of the True Cross have been distributed all over the world. He adds some information as to the silver reliquary which contained the True Cross. (See Cabrol, *La Peregrinatio ad loca sancta*, 105.) In several other passages of the same work Silvia (also called Egeria, Etheria, Eiheria, and Etheria) speaks to us of this chapel of the Cross (built between the basilicas of the Anastasis and the Martyrion) which plays so great a part in the paschal liturgy of Jerusalem.

A law of Theodosius and of Valentinian III (Cod. Justin., I, tit. vii) forbade under the gravest penalties any painting, carving, or engraving of the cross on pavements, so that this august sign of our salvation might not be trodden under foot. This law was revised by the Trullian Council, A. D. 691 (canon lxxii). Julian the Apostate, on the other hand, according to St. Cyril of Alexandria (Contra Julian., vi, in Opp., VI), made it a crime for Christians to adore the wood of the Cross, to trace its form upon their foreheads, and to engrave it over the entrances of their homes. St. John Chrysostom more than once in his writings makes allusion to the adoration of the cross; one citation will suffice: "Kings removing their diadems take up the cross, the symbol of their Saviour's death; on the purple, the cross; in their prayers, the cross; on their armour, the cross; on the holy table, the cross; throughout the universe, the cross. The cross shines brighter than the sun." These quotations from St. Chrysostom may be found in the authorities to be named at the end of this article. At

the same time, pilgrimages to the holy places became more frequent, and especially for the purpose of following the example set by St. Helena in venerating the True Cross. Saint Jerome, describing the pilgrimage of St. Paula to the Holy Places, tells us that "prostrate before the Cross, she adored it as though she had seen the Saviour hanging upon it" (Ep. cviii). It is a remarkable fact that even the Iconoclasts, who fought with such zeal against images and representations in relief, made an exception in the case of the cross. Thus we find the image of the cross on the coins of the Iconoclastic emperors, Leo the Isaurian, Constantine Copronymus, Leo IV, Nicephorus, Michael II, and Theophilus (cf. Banduri, Numism. Imperat. Rom., II). Sometimes this cult involved abuses. Thus we are told of the Staurologers, or those who adore the cross; the Chazingarii (from *chazus*, cross), a sect of Armenians who adore the cross. The Second Council of Nicæa (A. D. 787), held for the purpose of reforming abuses and putting an end to the disputes of Iconoclasm, fixed, once for all, the Catholic doctrine and discipline on this point. It defined that the veneration of the faithful was due to the form "of the precious and vivifying cross", as well as to images or representations of Christ, of the Blessed Virgin, and of the saints. But the council points out that we must not render to these objects the cult of *latría*, "which, according to the teaching of the faith, belongs to the Divine nature alone. . . . The honour paid to the image passes to the prototype; and he who adores the image, adores the person whom it represents. Thus the doctrine of our holy fathers obtains in all its force: the tradition of the Holy Catholic Church which from one end of the earth to the other has received the gospel." This decree was renewed at the Eighth Œcumenical Council, at Constantinople, in 869 (can. iii). The council clearly distinguishes between the "salutation" (*ἀσπασμὸς*) and "veneration" (*προσκύνησις*) due to the cross, and the "true adoration" (*ἀληθινὴ λατρεία*), which should not be paid to it. Theodore the Studite, the great adversary of the Iconoclasts, also makes a very exact distinction between the *adoratio relativa* (*προσκύνησις σχετικὴ*) and adoration properly so called.

(2) *Catholic Doctrine on the Veneration of the Cross.*—In passing to a detailed examination of the Catholic doctrine on this subject of the cult due to the Cross, it will be well to notice the theories of Brock, the Abbé Ansault, le Mortillet, and others, who pretend to have discovered that cult among the pagans before the time of Christ. For a demonstration of the purely Christian origin of the Christian devotion the reader is referred to Section I of this article. See also the works of de Harlay, Lafargue, and others cited at the end of this section. With reference, in particular, to the ansated cross of Egypt, Letronne, Raoul-Rochette, and Lajard discuss with much learning the symbolism of that simple hieroglyphic of life, in which the Christians of Egypt seem to have recognized an anticipatory revelation of the Christian Cross, and which they employed in their monuments. According to the text of the Second Council of Nicæa cited above, the cult of the Cross is based upon the same principles as that of relics and images in general, although, to be sure, the True Cross holds the highest place in dignity among all relics. The observation of Petavius (XV, xiii, 1) should be noted here: that this cult must be considered as not belonging to the substance of religion, but as being one of the *ἀδιάφορα*, or things not absolutely necessary to salvation. Indeed, while it is of faith that this cult is useful, lawful, even pious and worthy of praise and of encouragement, and while we are not permitted to speak against it as something pernicious, still it is one of those devotional practices which the Church can encourage, or restrain, or stop, according to circumstances. This explains how the veneration

of images was forbidden to the Jews by that text of Exodus (xx, 4 sqq.), which has been so grossly abused by Iconoclasts and Protestants: "Thou shalt not make to thyself a graven thing, nor the likeness of any thing that is in heaven above, or in the earth beneath, nor of those things that are in the waters under the earth. Thou shalt not adore them, nor serve them: I am the Lord thy God," etc. It also explains the fact that in the first ages of Christianity, when converts from paganism were so numerous, and the impression of idol-worship was so fresh, the Church found it advisable not to permit the development of this cult of images; but later, when that danger had disappeared, when Christian traditions and Christian instinct had gained strength, the cult developed more freely. Again, it should be noted that the cult of images and relics is not that of *latría*, which is the adoration due to God alone, but is, as the Second Council of Nicæa teaches, a relative veneration paid to the image or relic and referring to that which it represents. Precisely this same doctrine is repeated in Sess. XXV of the Council of Trent: "Images are not to be worshipped because it is believed that some divinity or power resides in them and that they must be worshipped on that account, or because we ought to ask anything of them, or because we should put our trust in them, as was done by the gentiles of old who placed their hope in idols; but because the honour which is shown to them is referred to the prototypes which they represent; so that through the images which we kiss, and before which we kneel, we may adore Christ, and venerate the saints, whose semblances they bear." (See also IMAGES.)

This clear doctrine, which cuts short every objection, is also that taught by Bellarmine, by Bossuet, and by Petavius. It must be said, however, that this view was not always so clearly taught. Following Bl. Albertus Magnus and Alexander of Hales, St. Bonaventure, St. Thomas, and a section of the Schoolmen who appear to have overlooked the Second Council of Nicæa teach that the worship rendered to the Cross and the image of Christ is that of *latría*, but with a distinction: the same worship is due to the image and its exemplar, but the exemplar is honoured for Himself (or for itself), with an absolute worship; the image because of its exemplar, with a relative worship. The object of the adoration is the same, though it be primary in regard to the exemplar and secondary in regard to the image. To the image of Christ, then, we owe a worship of *latría* as well as to His Person. The image, in fact, is morally one with its prototype, and, thus considered, if a lesser degree of worship be rendered to the image, that worship must reach the exemplar lessened in degree. Against this theory an attack has recently been made in "The Tablet", the opinion attributed to the Thomists being sharply combated. Its adversaries have endeavoured to prove that the image of Christ should be venerated but with a lesser degree of honour than its exemplar. The cult paid to it, they say, is simply analogous to the cult of *latría*, but in its nature different and inferior. No image of Christ, then, should be honoured with the worship of *latría*, and, moreover, the term "relative *latría*", invented by the Thomists, ought to be banished from theological language as equivocal and dangerous.—Of these opinions the former rests chiefly upon considerations of pure reason, the latter upon ecclesiastical tradition, notably upon the Second Council of Nicæa and its confirmation by the Fourth Council of Constantinople and upon the decree of the Council of Trent.

(3) *Relics of the True Cross.*—The testimony of Silvia (Etheria) proves how highly these relics were prized, while St. Cyril of Jerusalem, her contemporary, testifies as explicitly that "the whole inhabited earth is full of relics of the wood of the Cross". In 1889 two French archæologists, Letaille and Audollent,

discovered in the district of Sétif an inscription of the year 359 in which, among other relics, is mentioned the sacred wood of the Cross (*de ligno crucis et de terrâ promissionis ubi natus est Christus*). Another inscription, from Rasgunia (Cape Matifu), somewhat earlier in date than the preceding, mentions another relic of the Cross ("*sancto ligno salvatoris adlato*").—See Duchesne in *Acad. des inscr.*, Paris, 6 December, 1889; Morel, "*Les missions catholiques*", 25 March, 1890, p. 156; Catech. iv in P. G., XXXIII, 469; cf. also *ibid.*, 800; Procopius, "*De Bello Persico*", II, xi). St. John Chrysostom tells us that fragments of the True Cross are kept in golden reliquaries, which men reverently wear upon their persons. The passage in the "*Peregrinatio*" which treats of this devotion has already been cited. St. Paulinus of Nola, some years later, sends to Sulpicius Severus a fragment of the True Cross with these words: "Receive a great gift in a little [compass]; and take, in [this] almost atomic segment of a short dart, an armament [against the perils] of the present and a pledge of everlasting safety" (Epist. xxxi, n. 1, P. L., LXI, 325). About 455 Juvenal, Patriarch of Jerusalem, sends to Pope St. Leo a fragment of the precious wood (S. Leonis Epist. cxxxix, P. L., LIV, 1108). The "*Liber Pontificalis*", if we are to accept the authenticity of its statement, tells us that, in the pontificate of St. Sylvester, Constantine presented to the Sessorian basilica (Santa Croce in Gerusalemme) in Rome a portion of the True Cross (Duchesne, *Liber Pontif.*, I, 80; cf. 78, 178, 179, 195). Later, under St. Hilary (461–68) and under Symmachus (498–514) we are again told that fragments of the True Cross are enclosed in altars (op. cit., I, 242 sq. and 261 sq.). About the year 500 Avitus, Bishop of Vienne, asks for a portion of the Cross from the Patriarch of Jerusalem (P. L., LIX, 236, 239).

It is known that Radegunda, Queen of the Franks, having retired to Poitiers, obtained from the Emperor Justin II, in 569, a remarkable relic of the True Cross. A solemn feast was celebrated on this occasion, and the monastery founded by the queen at Poitiers received from that moment the name of Holy Cross. It was also upon this occasion that Venantius Fortunatus, Bishop of Poitiers, and a celebrated poet of the period, composed the hymn "*Vexilla Regis*" which is still sung at feasts of the Cross in the Latin Rite. St. Gregory I sent, a little later, a portion of the Cross to Theodolinda, Queen of the Lombards (Ep. xiv, 12), and another to Recared, the first Catholic King of Spain (Ep. ix, 122). In 690, under Sergius I, a casket was found containing a relic of the True Cross which had been sent to John III (560–74) by the Emperor Justin II (cf. Borgia, "*De Cruce Vaticanâ*", Rome, 1779, p. 63, and Duchesne, "*Liber Pontificalis*", I, 374, 378). We will not give in detail the history of other relics of the Cross (see the works of Gretser and the articles of Kraus and Bäumer quoted in the bibliography). The work of Rohault de Fleury, "*Mémoire sur les instruments de la Passion*" (Paris, 1870), deserves more prolonged attention; its author has sought out with great care and learning all the relics of the True Cross, drawn up a catalogue of them, and, thanks to this labour, he has succeeded in showing that, in spite of what various Protestant or Rationalistic authors have pretended, the fragments of the Cross brought together again would not only not "be comparable in bulk to a battleship", but would not reach one-third that of a cross which has been supposed to have been three or four metres in height, with a transverse branch of two metres (see above, under I), proportions not at all abnormal (op. cit., 97–179). Here is the calculation of this savant: Supposing the Cross to have been of pine-wood, as is believed by the savants who have made a special study of the subject, and giving it a weight of about seventy-five kilograms, we find that the volume of this cross was

178,000,000 cubic millimetres. Now the total known volume of the True Cross, according to the finding of M. Rohault de Fleury, amounts to above 4,000,000 cubic millimetres, allowing the missing part to be as big as we will, the lost parts or the parts the existence of which has been overlooked, we still find ourselves far short of 178,000,000 cubic millimetres, which should make up the True Cross.

(4) *Principal Feasts of the Cross.*—The feast of the Cross, like so many other liturgical feasts, had its origin at Jerusalem, and is connected with the commemoration of the Finding of the Cross and the building, by Constantine, of churches upon the sites of the Holy Sepulchre and Calvary. In 335 the dedication of these churches was celebrated with great solemnity by the bishops who had assisted at the Council of Tyre, and a great number of other bishops. This dedication took place on the 13th and 14th of September. This feast of the dedication, which was known by the name of the *Encenia*, was most solemn; it was on an equal footing with those of the Epiphany and Easter. The description of it should be read in the "Peregrinatio", which is of great value upon this subject of liturgical origins. This solemnity attracted to Jerusalem a great number of monks, from Mesopotamia, from Syria, from Egypt, from the Thebaid, and from other provinces, besides laity of both sexes. Not fewer than forty or fifty bishops would journey from their dioceses to be present at Jerusalem for the event. The feast was considered as of obligation, "and he thinks himself guilty of a grave sin who during this period does not attend the great solemnity". It lasted eight days. In Jerusalem, then, this feast bore an entirely local character. It passed, like so many other feasts, to Constantinople and thence to Rome. There was also an endeavour to give it a local feeling, and the church of "The Holy Cross in Jerusalem" was intended, as its name indicates, to recall the memory of the church at Jerusalem bearing the same dedication.

The feast of the Exaltation of the Cross sprang into existence at Rome at the end of the seventh century. Allusion is made to it during the pontificate of Sergius I (687-701), but, as Dom Bäumer observes, the very terms of the text (Lib. Pontif., I, 374, 378) show that the feast already existed. It is, then, inexact, as has often been pointed out, to attribute the introduction of it to this pope. The Gallican churches, which, at the period here referred to, do not yet know of this feast of the 14th September, have another on the 3rd of May, of the same signification. It seems to have been introduced there in the seventh century, for ancient Gallican documents, such as the Lectionary of Luxeuil, do not mention it; Gregory of Tours also seems to ignore it. According to Mgr. Duchesne, the date seems to have been borrowed from the legend of the Finding of the Holy Cross (Lib. Pontif., I, p. cviii). Later, when the Gallican and Roman Liturgies were combined, a distinct character was given to each feast, so as to avoid sacrificing either. The 3rd of May was called the feast of the Invention of the Cross, and it commemorated in a special manner Saint Helena's discovery of the sacred wood of the Cross; the 14th of September, the feast of the Exaltation of the Cross, commemorated above all the circumstances in which Heraclius recovered from the Persians the True Cross, which they had carried off. Nevertheless, it appears from the history of the two feasts, which we have just examined, that that of the 13th and 14th of September is the older, and that the commemoration of the Finding of the Cross was at first combined with it.

The Good Friday ceremony of the Adoration of the Cross also had its origin in Jerusalem, as we have seen, and is a faithful reproduction of the rites of Adoration of the Cross of the fourth century in Jerusalem which have been described above, in accordance with the

description given by the author of the "Peregrinatio". This worship paid to the Cross in Jerusalem on Good Friday soon became general. Gregory of Tours speaks of the Wednesday and Friday consecrated to the Cross—probably, the Wednesday and Friday of Holy Week. (Cf. Greg., De Gloriâ Mart. I, v.) The most ancient adoration of the Cross in the Roman Church is described in the "Ordo Romanus" generally attributed to Saint Gregory. It is performed, according to this "Ordo", just as it is nowadays, after a series of responsory prayers. The cross is prepared before the altar; priests, deacons, subdeacons, clerics of the inferior grades, and lastly the people, each one comes in his turn; they salute the cross, during the singing of the anthem, "Ecce lignum crucis in quo salus mundi pependit. Venite, adoremus" (Behold the wood of the cross on which the salvation of the world did hang. Come, let us adore) and then Ps. cxviii. (See Mabillon, Mus. Ital., Paris, 1689, II, 23.) The Latin Church has kept until to-day the same liturgical features in the ceremony of Good Friday, added to it is the song of the *Improperia* and the hymn of the Cross, "Pange, lingua, gloriosi lauream certaminis".

Besides the Adoration of the Cross on Good Friday and the September feast, the Greeks have still another feast of the Adoration of the Cross on the 1st of August as well as on the third Sunday in Lent. It is probable that Gregory the Great was acquainted with this feast during his stay in Constantinople, and that the station of Santa Croce in Gerusalemme, on Lætare Sunday (the fourth Sunday in Lent), is a souvenir, or a timid effort at imitation, of the Byzantine solemnity.

On the *theology* of the subject, St. THOMAS, *Summa Theol.*, III, Q. xxv, aa. 3 and 4, with which cf. *Idolatry*, the controversy in *The Tablet* from 22 June to 21 Sept., 1907. FERNAND CABROL.

III. THE CROSS AND CRUCIFIX IN LITURGY.—(1) *Material Objects in Liturgical Use.*—A. The Altar-Cross.—As a permanent adjunct to the altar, the cross or crucifix can hardly be traced farther back than the thirteenth century. The third canon of the Second Council of Tours (567), "ut corpus Domini in altario non in imaginario ordine sed sub crucis titulo componatur", which has sometimes been appealed to to prove the early existence of an altar-cross, almost certainly refers to the arrangement of the particles of the Host upon the corporal. They were to be arranged in the form of a cross and not according to any fanciful idea of the celebrant (see Hefele, *Concilien-geschichte*). On the other hand, Innocent III at the beginning of the thirteenth century in his treatise on the Mass says plainly, "a cross is set upon the altar, in the middle between two candlesticks", but even this probably refers only to the actual duration of the Holy Sacrifice. From the ninth to the eleventh century the rule is several times repeated: "Let nothing be placed on the altar except a chest with relics of saints or perhaps the four gospels or a pyx with the Lord's Body for the viaticum of the sick" (cf. Thiers, *Sur les principaux autels des églises*, 129 sqq.). This no doubt was understood to exclude even the crucifix from the altar, and it is certain that in various liturgical ivory carvings of the eighth, ninth, and tenth centuries no cross is shown. At the same time it should be noted that the ciborium, or canopy over the altar, was often surmounted by a plain cross, and also that the coronæ, or ornamental circular frames which were suspended from the inner side of the ciborium, frequently had a cross hanging down in their midst. Some such coronæ are explicitly referred to in the "Liber Pontificalis" during the ninth century. The best-known existing example is the corona of Recesvinthus now at the Musée de Cluny, Paris, in which the pendent cross is set with large gems. The papal chronicle just referred to also mentions a silver cross which was erected not over, but close beside, the high altar of St. Peter's in the time of Leo III (795-816): "There also he made the cross of purest silver, gilded, which stands beside the high altar, and which weighs 22 pounds" (Lib. Pont., Leo III, c. lxxxvii). It is probable that when the cross was first introduced as an ornament for the altar it was most commonly plain and without any figure of Our Saviour. Such is the cross which a well-known Anglo-Saxon manuscript represents King Cnut as presenting to Hyde Abbey, Winchester. But the association of the figure of Christ with the cross was familiar in England as early as 678, when Benedict Biscop brought a painting of the Crucifixion from Rome (Bede, *Hist. Abb.*, §9), and we can hardly doubt that a people capable of producing such sculptural work as the stone crosses at Ruthwell and Bewcastle, or

the Franks' casket, would soon have attempted the same subject in the solid. We know at any rate that a gold crucifix was found in the tomb of St. Edward the Confessor, and a crucifix is mentioned in one of the later Lives of St. Dunstan. That such objects were sometimes used for the altar seems highly probable. Still, Innocent III speaks only of a cross, and it is certain that for several centuries later neither cross nor crucifix were left upon the altar except at Mass time. Even so late as the beginning of the sixteenth century an engraving in the *Giunta "Corpus Juris"* shows the altar-crucifix being carried in at high Mass by the celebrant, while in many French dioceses this or some similar custom lasted down to the time of Claude de Vert (*Explication*, IV, 31). At present the "Cærimoniale Episcoporum" assumes the permanency of the crucifix on the altar, with its attendant candlesticks [see ALTAR-CRUCIFIX, under ALTAR (IN LITURGY)].

(1) B. The Processional Cross.—When Bede tells us that St. Augustine of England and his companions came before Ethelbert "carrying a silver cross for a standard" (*veniebant crucem pro vexillo ferentes argenteam*) while they said the litanies, he probably touches upon the fundamental idea of the processional cross. Its use seems to have been general in early times and it is so mentioned in the Roman "Ordines" as to suggest that one belonged to each church. An interesting specimen of the twelfth century still survives in the Cross of Cong, preserved in the museum of the Royal Irish Academy, Dublin. This is made of oak covered with copper plates, but much decoration is added in the form of gold filigree work. It lacks most of the shaft, but is two feet six inches high, and one foot six inches across the arms. In the centre is a boss of rock crystal, which formerly enshrined a relic of the True Cross, and an inscription tells us that it was made for Turloch O'Conor, King of Ireland (1123). It seems never to have had any figure of Christ, but other processional crosses of the thirteenth and fourteenth centuries are for the most part true crucifixes. In a great number of cases the shaft was removable, and the upper portion could be set in a stand to be used as an altar-cross. Indeed it seems not improbable that this was the actual origin of the altar-cross employed during Mass (Rohault de Fleury, *La Messe*, V, 123-140). Just as the seven candlesticks carried before the pope in Rome were deposited before or behind the altar, and probably developed into the six altar-candlesticks (seven, it will be remembered, when a bishop celebrates) with which we are now familiar, so the processional cross seems also to have first been left in a stand near the altar and ultimately to have taken its place upon the altar itself. To this day the ritual books of the Church seem to assume that the handle of the processional cross is detachable, for in the funeral of infants it is laid down that the cross is to be carried without its handle. All Christians are supposed to be the followers of Christ, hence in procession the crucifix is carried first, with the figure turned in the direction in which the procession is moving.

(1) C. Archiepiscopal and Papal Cross.—It is not easy to determine with certainty at what period the archiepiscopal cross came into separate use. It was probably at first only an ordinary processional cross. In the tenth "Ordo Romanus" we read of a subdeacon who is set aside to carry the *crux papalis*. If this specially papal cross had been in existence for some time it is likely that it was imitated by patriarchs and metropolitans as a mark of dignity which went with the pallium. In the twelfth century the archbishop's cross was generally recognized, and in the dispute regarding the primacy between the Archbishops of Canterbury and York the right to carry their cross before them played a prominent part. In 1125 Pope Honorius II admonished the Southern bishops of England that they should allow Archbishop Thurstan

of York *crucem ante se deferre juxta antiquam consuetudinem*. In all ecclesiastical functions an archbishop in his own province has a right to be preceded by his cross-bearer with cross displayed. Hence an archbishop when solemnly giving his blessing gives it with head uncovered out of reverence for the cross which is held before him. An ordinary bishop, who is not privileged to have such a cross, blesses the people with his mitre on. As regards form, both the papal and the archiepiscopal cross consists in practice of a simple crucifix mounted upon a staff, the material being silver or silver gilt. The crosses with double and triple bars, which are sometimes termed distinctively archiepiscopal, patriarchal, or papal crosses, have for the most part only a heraldic existence (see Barbier de Montault, *La croix à deux croisillons*, 1883). An archiepiscopal cross is borne with the figure turned towards the archbishop.

(1) D. Pectoral Crosses.—These objects seem originally to have been little more than costly ornaments upon which much artistic skill was lavished and which usually contained relics. A jewel of this kind which belonged to Queen Theodelinda at the end of the sixth century is still preserved in the treasury of Monza. Another of much later date, but wrought with wonderful enamels, was found in the tomb of Queen Dagmar and is at Copenhagen. When the present Queen Alexandra came to England in 1863 to marry the then Prince of Wales, she was presented with a facsimile of this jewel containing, among other relics, a fragment of the True Cross. Such *encolpia* were probably at first worn by bishops not as insignia of rank, but as objects of devotion. For example, a famous and beautiful jewel of this kind was found in the tomb of St. Cuthbert and is now at Durham. When they contained relics they often came later on to be enclosed in processional crosses. This no doubt was the case with the Cross of Cong, mentioned above, upon which we read in Irish characters the Latin verse: *Hac cruce crux tegitur qua passus conditor orbis*.—See Journ. Soc. Antiq. Ireland, vol. XXXI (1901). As a liturgical cross, and part of the ordinary episcopal insignia, the pectoral cross is of quite modern date. No word is said regarding it in the first edition of the "Cæremoniale Episcoporum" of 1600, but later editions speak of it, and its liturgical character is fully recognized by all modern rubricians. It is worn by all bishops at Mass and solemn functions, and also forms part of their ordinary walking-dress. It is usually a plain Latin cross of gold suspended round the neck by a gold chain or a cord of silk and gold. Its use seems gradually to have been introduced during the seventeenth and eighteenth centuries in imitation of the pectoral cross which we know to have been regularly worn by the popes from a much earlier date. Certain metropolitans (e. g. the Patriarch of Lisbon and the Archbishop of Armagh) are accustomed to wear a cross with two bars or transoms (Anal. Jur. Pont., 1896, 344). The privilege of wearing a pectoral cross has also been conceded to certain canons.

(1) E. Consecration Crosses.—These are the twelve crosses, usually merely painted on the wall, which mark the places where the church walls have been anointed with chrism in a properly consecrated church. A candle-bracket should be inserted immediately below. Some of these consecration crosses are even yet distinguishable on the walls of old churches which go back to the Romanesque period. The Carolingian oratory in Nimeguen preserves, perhaps, the most ancient known example. In other cases, e. g. at Fürstenfeld, some of the old Romanesque candle-brackets also remain. Owing to the number of unctions, it was not infrequently the custom to place these consecration crosses on shields, each borne by one of the twelve Apostles. In the Sainte Chapelle at Paris, built by St. Louis in the thirteenth century, we find twelve statues of the Apostles carrying discs

used for this purpose. In England it was the custom to mark twelve consecration crosses on the outside walls of the church as well as twelve on the inside. The Roman Pontifical only prescribes the latter. (See CONSECRATION.) Salisbury cathedral still preserves some remarkable examples of consecration crosses. At Ottery St. Mary, Devon, the old crosses are carved in high relief on shields borne by angels within moulded panels, a quatrefoil in a square. Those inside have marks of the remains of iron brackets for candles or a lamp. (See, on English examples, Middleton in "Archæologia", XLVIII, 1885.)

(1) F. Churchyard or Monumental Crosses.—In the contemporary life of St. Willibald (born c. 700) we have a significant mention of the Anglo-Saxon custom of erecting a cross instead of a church as a rendezvous for prayer. Many ancient stone crosses still surviving in England are probably witnesses to the practice, and the conjecture of Prof. Baldwin Browne (Arts in Anglo-Saxon England), that the cross and graveyard often preceded the church in date, has much to recommend it. Certain it is that the earliest known forms for blessing a cemetery (q. v.) contain five blessings pronounced at the four points of the compass and one in the centre, thus forming a cross, while crosses were later on planted in the ground at each of these places. Throughout the Middle Ages, both in England and on the Continent, there seems always to have been one principal churchyard cross. This was commonly an object of great importance in the Palm Sunday procession, when it was saluted with prostrations or genuflexions by the whole assembly. There was also a scattering of boughs and flowers, and the cross was often decorated with garlands of yew or box. For this reason it was often called *crux buxata* (cf. Gasquet, Parish Life, 1906, pp. 171-4). Many beautiful churchyard crosses are still preserved in England, France, and Germany; the most remarkable English examples being perhaps those of Ampney Crucis, near Cirencester, and Bag Enderby, Lincolnshire. The famous ancient Northumbrian crosses at Bewcastle and Ruthwell (which English scholars still assign to the seventh and eighth centuries, despite the plea for a much later date put forward by Prof. A. S. Cook of Yale) may possibly have been principal churchyard crosses. The fact that they were probably memorial crosses as well does not exclude this. When St. Aldhelm died in 709, his body had to be transported fifty miles to Malmesbury, and at each stage of seven miles, where the body rested for the night, a cross was afterwards erected. These crosses were still standing in the twelfth century (William of Malmesbury, *Gesta Pont.*, 383). An even more famous example of such memorial crosses, but of much later date, is supplied by the removal of the body of Eleanor, Queen of Edward I, from Lincoln to London. Several of these crosses in a more or less mutilated form exist at the present day. The most famous of the series, however, Charing (? *Chère Reine*) Cross in London, is a modern reconstruction. The route followed by the body of St. Louis of France on its way to St. Denis was similarly honoured, and it seems probable that a large number of wayside crosses originated in this manner. No stronger testimony of the early connexion of the cross with the cemetery could be desired than the directions given by St. Cuthbert for his own burial: "Cum autem Deus susceperit animam meam, sepelire me in hac mansione juxta oratorium meum ad meridiem, contra orientalem plagam sanctæ crucis quam ibidem erexi" (Bede, Vita S. Cuthberti).

(1) G. Rood, Rood-Screen, and Rood-Loft.—From very early times it seems to have been not unusual to introduce a plain cross in such a way into the mosaics of the apse or of the main arch (*Triumphbogen*) as to dominate the church. Notable examples may be found at S. Apollinare in Classe at Ravenna, at S. Pudenziana

in Rome, and at the Lateran basilica. There are also, as already noticed, incontestable examples both of crosses surmounting the ciborium over the altar, and of the large crosses suspended, with or without a corona, from the under side of the ciborium. It must, however, be pronounced very doubtful whether the rood, which in so many churches of the fourteenth and fifteenth centuries occupied the great arch, can be regarded as a development of this idea. This point will be more fully treated under ROOD-SCREEN. It will be sufficient to notice here that in the thirteenth century a practice grew up of screening off the choir from the nave of the greater churches by a structure broad enough to admit a narrow bridge or gallery spanning the chancel arch and most commonly adorned by a great crucifix with the figures of Our Lady and St. John. The rood-loft of the cathedral of Sens, as described by J. B. Thiers (*Traité sur les jubés*) affords a valuable hint of how this process was effected. It consisted, he tells us, of two stone pulpits quite separate from each other, supported by columns, and with a crucifix between them, each having an entrance on the choir side and an exit down into the nave, on either side of the principal door of the choir. From this it seems probable that the two ambos (q. v.) from which the Gospel and Epistle were sung in earlier times, became gradually connected by a continuous gallery upon which was erected a great crucifix, and that in this way we may trace the development of the rood-loft, or *jube*, which was so conspicuous a feature in later medieval architecture. There can at least be no doubt that this loft was used on certain occasions of ceremony for reading the Epistle and Gospel and for making announcements to the people. The great rood above the rood-screen was saluted by the whole procession, as they re-entered the church on Palm Sunday, with the words: *Ave Rex noster*.

(1) H. Absolution Crosses.—These have already been spoken of in the article BURIAL, CHRISTIAN. They seem for the most part to have been rude crosses of lead laid upon the breast of the corpse. It is only in some few examples, of which the most important is that of Bishop Godfrey of Chichester (1088), that a formula of absolution is found inscribed upon them entire. We may infer that the practice in the West was always in some measure irregular, and it is only the absolution paper, which is uniformly placed in the hand or on the breast of the corpse in the Eastern Church, which explains them and gives them a certain importance as a liturgical development.

(1) J. Crosses on Vestments, etc.—Rubricallaw now requires that most of the vestments, as well as some other objects more immediately devoted to the service of the altar, should be marked with a cross. Speaking generally, this is a comparatively modern development. For example, the great majority of the stoles and maniples of the Middle Ages do not exhibit this feature. At the same time Dr. Wickham Legg goes much too far when he says without qualification that such crosses were not used in pre-Reformation times. For example, the stole of St. Thomas of Canterbury preserved at Sens has three crosses, one in the middle and one at each extremity, just as a modern stole would have. That the archiepiscopal pallium, like the Greek *omophorion* (see CONSTANTINOPLE, RITE OF) was always marked with crosses, is not disputed. The large cross conspicuous upon most modern chasubles, which appears behind in the French type and in front in the Roman, does not seem to have been originally adopted with any symbolic purpose. It probably came into existence accidentally for sartorial reasons, the orphreys having been so arranged in a sort of Y-cross to conceal the seams. But the idea, once suggested to the eye, was retained, and various symbolical reasons were found for it. In somewhat of the same way a cross was marked in the Missal before the Canon, and this the priest was directed to kiss when

beginning this portion of the Mass; probably this cross first arose from an illumination of the initial T, in the words: *Te igitur clementissime Pater*. As Innocent III writes, "Et forte divinâ factum est providentiâ ut ab eâ literâ T [*tau*] canon inciperet quæ sui formâ signum crucis ostendit et exprimit in figurâ"; and Belet further comments, "Unde profecto est, quod iste crucis imago adpingi debeat" (See Ebner, Quellen und Forschungen, 445 sqq.). The tradition is perpetuated in the picture of the Crucifixion which precedes the Canon in every modern Missal. The five crosses commonly marked on altar-stones depend closely on the rite of the consecration of an altar.

(1) K. Crosses for Private Devotion.—These may all be held to wear a liturgical aspect in so far as the Church, in the "Rituale," provides a form for their blessing, and presupposes that such a cross should be placed in the hands of the dying. The crosses which surmount the Stations of the Cross, and to which the Indulgences are directly attached may also be noticed. In the Greek Church a little wooden cross is used for the blessing of holy water, and is dipped into it in the course of the ceremony.

(2) Liturgical Forms connected with the Material Objects.—A. Blessing of Consecration Crosses.—The "Pontificale Romanum" directs that towards the close of the dedication ceremony the twelve consecration crosses previously marked upon the walls of the church, three upon each wall, are to be each anointed by the bishop with chrism, the following form of words being spoken over each: "May this Temple be hallowed + and consecrated + in the name of the Father + and of the Son + and of the Holy Ghost + in honour of God and the glorious Virgin Mary and of all the Saints, to the name and memory of Saint N. Peace be to thee." This is prescribed in practically identical terms in English pontificals of the tenth century; and the Pontifical of Egbert (?768) describes the anointing of the walls, though it does not give the words of the form. What is more, an analogous ceremony must have existed in the Celtic Church from a very early date, for a liturgical fragment in the Leabar Breac describes how the bishop with two priests is to go round the outside of the church marking crosses upon the "tel-columns" with his knife, while the three other priests do the same within (see Olden in "Trans. St. Paul's Eccles. Soc.", IV, 103). In this case, however, the use of chrism is not mentioned. From this Celtic practice the Anglo-Saxon and Sarum uses seem to have derived the custom of affixing consecration crosses outside the church as well as within.

(2) B. In the consecration of an altar, also, crosses are to be marked in chrism upon the altar-slab with almost the same form of words as that used for the walls. This practice may equally claim Celtic analogues, whose antiquity is shown by the fact that the altar to be consecrated must have been of wood. The Tract in the "Leabar Breac" says: "The bishop marks four crosses with his knife on the four corners of the altar, and he marks three crosses over the middle of the altar, a cross over the middle on the east to the edge, and a cross over the middle on the west to the edge, and a cross exactly over the middle." This makes seven crosses, but the Roman usage for many centuries has provided five only.

(2) C. Pontifical Blessings of Crosses.—The consecration crosses on the walls of churches and on altars are clearly not substantive and independent objects of cultus; the blessing they receive is only a detail in a longer ceremony. But the "Pontificale Romanum" supplies a solemn form of episcopal blessing for a cross, under the title, *Benedictio novæ Crucis*, which, besides containing several prayers of considerable length, includes a consecratory preface and is accompanied with the use of incense. At the conclusion of the ceremony we find the rubric: "Tum Pontifex, flexis ante crucem genibus, ipsam devote adorât et osculatur." This

rite is of great antiquity, and many of the prayers occur in identical terms in pontificals of the tenth century or earlier, e. g. in the Benedictional of Archbishop Robert (Henry Bradshaw Soc.). But in the ancient ceremony the cross was first washed with holy water and then anointed with chrism precisely as in the form for the blessing of bells (see BELLS). For cemetery crosses in this connexion, see CEMETERY.

(2) D. Blessings of Crosses in the Ritual.—The “*Rituale Romanum*” (tit. VIII, cap. xxiv) supplies an ordinary blessing for a cross which may be used by any priest. It consists only of a short prayer, with a second prayer whose use is optional, and only holy water is used; but the same rubric directing the priest to kneel and “devoutly adore and kiss the cross” is added, which we have just noticed in the solemn episcopal benediction. Furthermore, the Ritual, in an appendix, reprints the longer form from the Pontifical under the heading: “*Benedictiones reservatæ, ab episcopo vel sacerdotibus facultatem habentibus faciendæ*.” It may be noted that St. Louis, King of France, regarded it as unseemly that crosses and statues should be set up for veneration without being previously blessed. He accordingly ordered search to be made for a form of blessing in the ancient episcopal ceremonials. The form was found and duly used first of all in St. Louis’ own private chapel; but the incident seems to suggest that the practice of blessing such objects had partly fallen into desuetude. (See Galfridus, *De Bello Loco*, cap. xxxvi.)

(2) E. Blessings of Crosses for Indulgences, etc.—The indulgences most commonly attached to crosses, crucifixes, etc., are: first, the so-called “Apostolic Indulgences”, which are the same as those attached to objects blessed by the Holy Father in person. These are numerous and, amongst other things, entitle the possessor who has habitually worn or used such a cross to a plenary indulgence at the hour of death; secondly, the indulgences of the Stations of the Cross, which under certain conditions may be gained by the sick and others unable to visit a church upon the recitation of twenty Paters, Aves, and Glorias before the indulgenced cross which they must hold in their hand; thirdly, the so-called “*Bona Mors*” indulgence for the use of priests, enabling the priest by the use of this cross to communicate a plenary indulgence to any dying person who is in the requisite dispositions to receive it. Special faculties are needed to communicate such indulgences to crosses, etc., though in the case of the “Apostolic Indulgences” these faculties are easily obtained. The only blessing required is the making of a simple sign of the cross over the crucifix or other object with the intention of imparting the indulgence. For further details, the reader must be referred to the article INDULGENCES and to such treatises upon indulgences as those of Beringer, “*Les Indulgences*”, or of Mocchegiani, “*Collectio Indulgentiarum*” (Quaracchi, 1897). (See also BLESSINGS.)

(3) *Festivals of the Holy Cross*.—A. The Invention of the Holy Cross.—This is now kept by the Western Church upon 3 May, but so far as our somewhat uncertain data allow us to judge, the real date of St. Helena’s discovery was 14 September, 326. Upon this same day, 14 September, took place the dedication of Constantine’s two churches, that of the Anastasis and that of Golgotha *Ad Crucem*, both upon Calvary, within the precincts of the present church of the Holy Sepulchre. The portion of the Holy Cross preserved in Jerusalem afterwards fell into the hands of the Persians, but was recovered by the Emperor Heraclius, and, if we may trust our authorities, was solemnly brought back to Jerusalem on 3 May, 629. This day, strangely enough, seems to have attracted special attention among Celtic liturgists in the West and, though disregarded in the East, has passed through Celtic channels (we meet it first in the Lec-

tionary of Silos and in the Bobbio Missal) into general recognition under the mistaken title of “Invention of the Cross”. Curiously enough the Greek Church keeps a feast of the apparition of the Cross to St. Cyril of Jerusalem on 7 May, though that of 3 May is unknown in the East.

(3) B. The Feast of the Exaltation of the Cross, 14 September, though apparently introduced into the West somewhat later than the so-called “Invention”, on 3 May, seems to preserve the true date of the discovery of the Cross by St. Helena. This festival has always been kept in the East, and especially at Jerusalem, on that day, under the name of *ἑψώσις*, i. e. “elevation”, which probably meant originally the “bringing to light”.

(3) C. Other Feasts of the Cross.—We might in some sense regard such a festival as that of the Holy Lance and Nails as a festival of the Cross, but it should perhaps rather be grouped with feasts of the Passion. In the East, however, we find other celebrations strictly connected with the Cross. For example, on 1 August the Greeks commemorate the taking of the relic of the Holy Cross from the palace in Constantinople to the church of St. Sophia, and on 7 May, as we have seen, they recall an apparition of the Cross to St. Cyril of Jerusalem. The Armenians, on the other hand, observe one principal feast of the Cross, under the name *Chatz*, which occurs in autumn almost immediately after the feast of the Assumption. It is counted as one of the seven principal feasts of the year, is preceded by a week’s fast, and followed by an octave or its Armenian equivalent. See also above under I.

(4) *The “Adoration”*.—From a theological standpoint this is treated above under Section II. (See also LATRIA.) As a liturgical function the veneration of the Cross on Good Friday must no doubt be traced back, as Amalarius already in the ninth century correctly divined, to the practice of honouring the relic of the True Cross at Jerusalem which is described in detail in the “*Pilgrimage of Etheria*”, c. 380 (see Section II of this article). The ceremony came to prevail everywhere where relics of the True Cross existed, and by a very natural development, where relics failed any ordinary cross supplied their place as an object of cultus. As Amalarius again sensibly remarks, “although every church cannot have such a relic, still the virtue of the Holy True Cross is not wanting in those crosses which are made in imitation of it.” Neither was this veneration, in the case, at any rate, of relics of the True Cross, confined to Good Friday. St. Gregory of Tours uses language which may possibly imply that in Jerusalem the True Cross was honoured every Wednesday and Friday. It is certain that at Constantinople a Sunday in Mid-Lent, the first of August, and the 14th of September were similarly privileged. Even from early times there was no hesitation about using the word *adoratio*. Thus, St. Paulinus of Nola, writing of the great Jerusalem relic (c. 410), declares that the bishop offered it to the people for worship (*crucem quotannis adorandam populo promit*), and first adored it himself. (See P. L., LXI, 325.) A curious practice was also introduced of anointing the cross, or, on occasion, any image or picture, with balm (*balsamo*) before presenting it for the veneration of the faithful. This custom was transferred to Rome, and we hear much of it in connexion with the very ancient reliquary of the True Cross and also the supposed miraculous portrait of Our Saviour (*acheiropoieta*, i. e. not made by the hand of man) preserved in the Sancta Sanctorum of the Lateran, both of which recently, together with a multitude of other objects, have been examined and reported on by papal permission (see Grisar, *Die römische Kapelle Sancta Sanctorum und ihr Schatz*, Freiburg, 1908, 91, 92). The objects mentioned were completely covered in part with solidified balm. Pope

Adrian I, in vindicating the veneration of images to Charlemagne, mentions this use of balm and defends it (Mansi, Concilia, XIII, 778). The ceremony of the adoration of the Cross on Good Friday must have spread through the West in the seventh and eighth centuries, for it appears in the Gelasian Sacramentary and is presupposed in the Gregorian Antiphonarium. Both in Anglo-Saxon England and in the England of the later Middle Ages the "Creeping to the Cross" was a ceremony which made a deep impression on the popular mind. St. Louis of France and other pious princes dressed themselves in haircloth and crept to the cross barefoot. At present, instead of creeping to the cross on hands and knees, three profound double genuflexions are made before kissing the feet of the crucifix, and the sacred ministers remove their shoes when performing the ceremony. The collection now commonly made on this occasion for the support of the Holy Places seems also to date from medieval times.

(5) For the *Figure of the Cross as a Manual Sign of Blessing* the reader must be referred to the article SIGN OF THE CROSS, also subtitles (4) of Section I and (1) of Section II in this article.

(6) *Dedications of Churches, etc. to the Holy Cross.*—Possibly one of the earliest dedications to the Cross, if we put aside Constantine's church upon Calvary known in Etheria's time as *Ad Crucem* and also the Sessorian basilica which was its Roman counterpart, was the monastery erected at Poitiers by St. Rhadegund in the sixth century. In behalf of this foundation the saint begged and obtained a relic of the True Cross from the Emperor Justin II at Constantinople. The bringing of the relic to Poitiers was the occasion of the composition of the two famous hymns by Venantius Fortunatus, "*Vexilla regis*" and "*Pange, lingua, gloriosi prælum certaminis*". In England perhaps the most famous monastery bearing this dedication was the Holy Cross Abbey at Waltham, founded by King Harold. At present about sixty ancient English churches are dedicated to the Holy Cross, while twenty more bear the same dedication in the distinctively English form of "Holy Rood". The famous Holyrood Palace in Edinburgh, once occupied by Mary Queen of Scots, derives its name from a monastery of the Holy Rood upon the site of which it was erected, and its church, now in ruins, was originally the church of the monks.

(7) *The Cross in Religious Orders and in the Crusades.*—Although the older orders were earnest in conforming to the general usage of the Church as regards the veneration of the Cross, no distinctive cultus seems to be attributable to the monasteries. The practice of carrying a crucifix as part of the ordinary religious habit seems to be of comparatively modern date. It is significant that, although in most modern congregations of nuns the bestowal of the crucifix is a prominent feature of the ceremony of profession, the service in the Roman Pontifical, "*De Benedictione et Consecratione Virginum*", knows nothing of it. It provides for the giving of rings and crosses but not of crucifixes. Probably much of the stimulus given to devotion to the crucifix may be traced ultimately to Franciscan influences, and it is not mere coincidence that the development in art of the agonized and thorn-crowned type of figure upon the Cross coincides more or less exactly with the great Franciscan revival of the thirteenth century. Somewhat earlier than the time of Francis an Italian Order of *crociiferi* (cross-bearers), distinguished by carrying as part of their costume a plain cross of wood or metal, was founded in the neighbourhood of Bologna to tend the sick, and several other orders, particularly one established shortly afterwards in the Netherlands and still surviving, have since borne the same or a similar name. In the case of the Military Orders, for example, that of St. John of Jerusalem or Knights Hospitallers, the cross impressed upon their habit has gradually become distinctive of the order. It seems

to have been originally only the badge of the crusaders, who wore a red cross upon their right shoulders as a token of the obligation they had taken upon themselves. The Roman Pontifical still contains the ceremonial for the blessing and imposition of the cross upon those who set out for the aid and defence of the Christian Faith or for the recovery of the Holy Land. After the cross has been blessed the bishop imposes it upon the candidate with the words: "Receive the sign of the cross, in the Name of the Father + and of the Son + and of the Holy Ghost + in token of the Cross, Passion, and Death of Christ, for the defence of thy body and thy soul, that by the favour of the Divine Goodness when thy journey is accomplished thou mayest return to thy family safe and amended [*salvus et emendatus*]. Through Christ Our Lord, Amen." The crosses conferred by sovereigns in connexion with various orders of knighthood may probably be traced to the same idea.

The various types of cross have rather to do with heraldry or art than with the history of Christianity. The names and shapes of the more common varieties can best be gathered from the annexed table. For the vast majority the form is purely conventional and artificial. Their divergence from the normal type is a mere freak of fancy and corresponds to no attempt to reproduce the shape of the gibbet on which Our Saviour died, or to convey any symbolical meaning. The *crux ansata*, or cross with a handle, and the *crux gammata*, or "fylfot", are much more ancient than Christianity. (See in Section I of this article, (1) *Primitive Cruciform Signs*.) The *chrismos*, or *chi-rho*, has already been mentioned as the earliest forms in which the cross appears in Christian art [Section I (4)]. The forms which it took varied considerably and it is difficult to classify them chronologically. With regard to the great Celtic stone crosses, particularly in Ireland, we may note the tendency conspicuous in so many specimens to surround the cross with a circle. It is just conceivable that there is foundation for regarding this circle as derived from the loop of the Egyptian *crux ansata*.

(8) *The Cross outside of the Catholic Church.*—In the Russian Church the conventional form in which the cross is usually shown is in fact a three-barred cross, like this  of which the upper bar represents the title of the cross, the second the arms, and the lowest, which is always inclined at an angle, the *suppedaneum* or foot-rest. In England it may be said that in the early years of Elizabeth's reign a clean sweep was made of the crosses so long venerated by the people. All the roods were ordered to be pulled down, and the crosses were removed from the altars, or rather the communion-tables which replaced the altars. The only check in this movement was the fact that the queen herself, for some rather obscure reason, insisted at first on retaining the crucifix in her own private chapel. The presence of a crucifix or even a plain cross upon the altar was long held to be illegal in virtue of the "Ornaments Rubric". In recent years, however, there has been a notable reaction, and crosses, or even crucifixes, are quite commonly seen upon the altar of Anglican churches. Again, in the reredos recently erected in St. Paul's Cathedral in London a large crucifix, with the figures of St. Mary and St. John, forms the most conspicuous feature. In Lutheran churches there has always been much tolerance for the crucifix either upon or behind the altar.

It would not be easy to provide an adequate bibliography for the very wide field covered by this article. A few works may be mentioned of a more general kind.—BAUMER in *Kirchenlex.*, VII, 1054-1088; QUILLIET in *Dict. de théol. cath.*, III, 2339-2363; HOPPENOT, *Le crucifix dans l'histoire* (Lille, 1900); SEYMOUR, *The Cross in Tradition, History and Art* (New York, 1898).—Both these last works are very comprehensive in scope, but unfortunately quite uncritical.—STEVENS, *The Cross in the Life and Literature of the Anglo-Saxons* (New York, 1904); ROUAULT DE FLEURY, *Le Mœse* (Paris, 1885), specially valuable for its illustrations of liturgical crosses; KRAUS, *Geschichte der christlichen Kunst* (Freiburg, 1895-1908); COX AND

Cross-Bearer, the cleric or minister who carries the processional cross, that is, a crucifix provided with a long staff or handle. An archbishop's cross is borne with the figure of the crucifix towards the prelate, but in all other cases the figure should be turned forward. The cross-bearer should, whenever possible, be a cleric (Council of Milan, seventeenth century), but in lay processions the most worthy of the laity should be selected for the office. In the more solemn processions such as those of the Blessed Sacrament, Palm Sunday, and Candlemas Day, the cross should be borne by a subdeacon vested in amice, alb, and tunic; on less solemn occasions by a clerk in surplice. The staff is held with both hands so that the figure is well above the head. The cross-bearer and the two acolytes by whom he is accompanied on the more solemn occasions should walk at the head of the procession, except when thethurifer is there, and should not make any reverence whilst engaged in this function.

PATRICK MORRISROE.

Cross of Jesus, BROTHERS OF THE, a congregation founded in 1820 at Lyons, France, by Father C. M. Bochart, Doctor of the Sorbonne, Vicar-General of the Diocese of Lyons. Father Bochart was the first superior general (1820-34). He had as successors the Rev. Father Corsiaín (1834-65) and the Rev. Father Bernard (1865-74). Until then the direction of the principal houses was entrusted to Fathers who were members of the congregation. In 1873 Bishop Richard of Belley, afterwards Cardinal and Archbishop of Paris, employed the Fathers as parish priests and the congregation was henceforward composed of Brothers only. The superiors general, from this epoch, have been the Reverend Bros. Pierre-Joseph (1873-85), Lucien (1885-98), and Firmin (1898-).

The name of the congregation indicates its distinctive spirit. It grew during the nineteenth century in eastern France and in Switzerland, until the persecution of 1903, which destroyed nearly all its establishments. Brother Firmin, Superior General, sent Brother Evariste with 32 religious to establish a province in North America, under the patronage of the Right Rev. A. A. Blais, Bishop of Rimouski, Canada. The institution, incorporated in Canada by a bill of the Legislative Assembly of Quebec (May, 1905), possesses at Rimouski, a "house of formation" (novitiate and scholasticate), where the young members of the congregation are taught all the high-school branches and the commercial courses both English and French. At the request of the Most Rev. L. P. A. Langevin, Archbishop of St. Boniface, Manitoba, the institution has opened, since 1904, the colleges of St-Jean-Baptiste and of St-Pierre, Joly, Manitoba.

BROTHER CHARLES.

Crotus, JOHANN (properly JOHANNES JÄGER, hence often called VENATOR, "hunter", but more commonly, in greized form, CROTUS, "archer"), German Humanist, b. at Dornheim, in Thuringia, c. 1480; d. probably at Halle, c. 1539. From the name of his birthplace he received the latinized appellation Rubianus and is generally known as Crotus Rubianus. At the age of eighteen he went to the University of Erfurt, then the chief centre of German Humanism, where he obtained his baccalaureate degree in 1500. Friendship with Conrad Mutianus and Ulrich von Hutten led him from being an upholder of Scholasticism to become an enthusiastic partisan of Humanism and a violent opponent of the older learning. In 1505 he induced von

Hutten to leave the monastery of Fulda, but in 1506 came back with the latter from Cologne to Erfurt, where in 1508 Crotus obtained the degree of Master of Arts. After this he was absent from Erfurt for a short time as tutor to Count von Henneberg, but by 1509 he had again returned to his studies and in 1510 was the head of the monastery school at Fulda. He now formed close relations with Reuchlin and Reuchlin's supporters in Cologne; about 1514 he was for a short time in Cologne but soon returned to Fulda where he was ordained priest and obtained a small benefice. About 1515 he wrote the larger part of the "Epistolæ Obscurorum Virorum"; the letters composed by him are the most violent in character, full of venom and stinging scorn against Scholasticism and monasticism. In 1517 he settled in Bologna as tutor of the Fuchs brothers, and during his stay at this city, up to 1519, he studied successively jurisprudence and theology. Before leaving Italy he went in company with Eoban Hesse to Rome (1519) in order to observe for himself the "see of corruption". While in Bologna he had become acquainted with Luther's writings and actions, learned of the violent stand he had taken and approved it as the beginning of a greatly needed reform of the Church; apparently also he had a share in the anonymous broadsides which appeared in Germany. From 1520 he was again in Erfurt where he was made rector of the university, and here in 1521 he gave Luther a warm greeting when the latter passed through Erfurt on his way to Worms. Soon after this Crotus returned to Fulda where Melancthon visited him in 1524. In the same year Crotus entered the service of Duke Albrecht of Prussia at Königsberg and endeavoured to justify the duke's withdrawal from the old Faith in a pamphlet directed against the new master of the Teutonic Order entitled "Christliche Vermahnung" (1526).

Weary of his position at Königsberg as early as 1529, he went first, in 1530, to Leipzig, and soon afterwards to Halle; here Crotus accepted service under Cardinal Albrecht of Brandenburg as councillor and received a canonry. As a genuine Humanist Crotus had for a long time felt disgusted with the public disturbance and the bitter polemics that resulted from the Lutheran movement; he was still more dissatisfied with the grave disorder in morals and religion. Thus in Halle, probably through the influence of its canons, he positively returned to Catholicism, which he seems, however, never to have abandoned consciously. The first clear notice of this change of views is the "Apologia, qua respondetur temeritati calumniatorum non verentium confictis criminibus in populare odium protrahere reverendissimum in Christo patrem et dominum Albertum" (Leipzig, 1531). The "Apologia" contained a positive denial of the accusations made by Alexander Crosner or Luther that Cardinal Albrecht, in the persecution of the new doctrine and in his opposition to granting the cup to the laity, had acted with extreme cruelty and lack of consideration. Crotus showed that the Reformation had resulted in the sanctioning of all kinds of immorality and blasphemy, and that where the "Antipopes" ruled, those of other beliefs were cruelly oppressed, denounced by spies, and persecuted. Various pamphlets, chiefly anonymous, were issued in reply to the "Apologia" and the author was violently attacked by Justus Jonas and other of his former friends. After this Luther always gave the name of Dr. Kröte (toad) to his one-time adherent, the dreaded opponent in former days of Scholasticism and monasticism. Suspicion was even thrown on the motives for the inner change in Crotus. His connexion with the Church was attributed to desire for princely favour and greed of gain. But there can be no doubt that his resolution was a deliberate one and that he belonged to Luther's party only so long as he hoped in this way to attain a reform of the Church.

As soon as there was a formal break with the Church, and the pretended reform movement produced only anarchy in religion and morals, he turned his back on it without giving a thought to the hatred of his friends of earlier days. In a letter dated 1532 to Duke Albrecht he states his religious views clearly: "with the help of God he intends to remain in communion with the Church and allow all innovations to pass over like a disagreeable smoke". Crotus appears to have spent the last years of his life entirely at Halle, but nothing positive is known on the subject. Most probably Georg Witzel urged him at different times to write again in defence of the Church, and he seems, indeed, to have made an effort to do this. But afterwards we hear that the position, "unworthy of a man", in which he was placed, did not permit him to take up his pen on behalf of religion. It is not entirely certain whether his canonry or his character of official in the service of Cardinal Albrecht laid these limitations on him. Yet he apparently had an important influence on the writings of others as, e. g. on those of Witzel. Crotus himself, as a Humanist of strong intellectual tastes, preferred above all the quiet of his study. It may be that the revolutionary tumult in religious and social life took from him both the desire and the strength to use the pen which had formerly so unmercifully scourged the weaknesses of his opponents. He seems, however, to have influenced the religious demeanour of his master, Cardinal Albrecht, in the cardinal's later years. The last scanty information concerning Crotus reaches to the year 1539; his death occurred, if not in this year, certainly not much later.

Crown, FRANCISCAN (or SERAPHIC ROSARY); a rosary consisting of seven decades in commemoration of the seven joys of the Blessed Virgin (the Annunciation, Visitation, Birth of Our Lord, Adoration of the Magi, Finding of the Child Jesus in the Temple, the Resurrection of Our Lord, and the Assumption of the Blessed Virgin and her Coronation in heaven), in use among the members of the three orders of St. Francis. The Franciscan Crown dates back to the year 1422. Wadding tells us that a young novice who had that year been received into the Franciscan Order had, previous to his reception, been accustomed to adorn a statue of the Blessed Virgin with a wreath of fresh and beautiful flowers as a mark of his piety and devotion. Not being able to continue this practice in the novitiate, he decided to return to the world. The Blessed Virgin appeared to him and prevented him from carrying out his purpose. She then instructed him how, by reciting daily a rosary of seven decades in honour of her seven joys, he might weave a crown that would be more pleasing to her than the material wreath of flowers he had been wont to place on her statue. From that time the practice of reciting the crown of the seven joys became general in the order. The manner of reciting the Franciscan Rosary is as follows: The Apostles' Creed, the Our Father, and three Hail Marys having been said as usual, the mystery to be meditated upon is introduced after the word Jesus of the first Hail Mary of each decade, thus: "Jesus, whom thou didst joyfully conceive", "Jesus, whom thou didst joyfully carry to Elizabeth", and so on for the remaining five decades, which are given in most manuals of Franciscan devotion. At the end of the seventh decade two Hail Marys are added to complete the number of years (72) that the Blessed Virgin is said to have lived on earth. There are other ways of

reciting the Crown but the one given seems to be in more general use. The plenary Indulgence attached to the recitation of the Franciscan Crown, and applicable to the dead, may be gained as often as the crown is recited. It is not required that the beads be blessed, or in fact that beads be used at all, since the Indulgence is not attached to the material rosary, but to the recitation of the prayers as such. In 1905 Pope Pius X, in response to the petition of the Procurator General of the Friars Minor, enriched the Franciscan Crown with several new Indulgences that may be gained by all the faithful. Those who assist at a public recitation of the Franciscan Crown participate in all the Indulgences attached to the Seraphic Rosary that are gained by the members of the Franciscan Order. It is required, however, that beads be used and that they be blessed by a priest having the proper faculties. A translation of the pontifical Brief is given in "St. Anthony's Almanac" for 1909.

Crown of Thorns.—Although Our Saviour's Crown of Thorns is mentioned by three Evangelists and is often alluded to by the early Christian Fathers, such as Clement of Alexandria, Origen, and others, there are comparatively few writers of the first six centuries who speak of it as a relic known to be still in existence and venerated by the faithful. It is remarkable that St. Jerome, who expatiates upon the Cross, the Title, and the Nails discovered by St. Helen (Tobler, *Itinera Hierosolym.*, II, 36), says nothing either of the Lance or of the Crown of Thorns, and the silence of Andreas of Crete in the eighth century is even more surprising. Still there are some exceptions. St. Paulinus of Nola, writing after 409, refers to "the thorns with which Our Saviour was crowned" as relics held in honour along with the Cross to which He was nailed and the pillar at which He was scourged (Ep. ad Macar. in Migne, P. L., LXI, 407). Cassiodorus (c. 570), when commenting on Ps. lxxxvi, speaks of the Crown of Thorns among the other relics which are the glory of the earthly Jerusalem. "There", he says, "we may behold the thorny crown, which was only set upon the head of Our Redeemer in order that all the thorns of the world might be gathered together and broken" (Migne, P. L., LXX, 621). When Gregory of Tours ("De gloriâ mart." in "Mon. Germ. Hist.: Scrip. Merov.", I, 492) avers that the thorns in the Crown still looked green, a freshness which was miraculously renewed each day, he does not much strengthen the historical testimony for the authenticity of the relic, but the "Breviarium", and the "Itinerary" of Antoninus of Piacenza, both of the sixth century, clearly state that the Crown of Thorns, was at that period shown in the church upon Mount Sion (Geyer, *Itinera Hierosolymitana*, 154 and 174). From these fragments of evidence and others of later date—the "Pilgrimage" of the monk Bernard shows that the relic was still at Mount Sion in 870—it is certain that what purported to be the Crown of Thorns was venerated at Jerusalem for several hundred years.

If we may adopt the conclusions of M. de Mély, the whole Crown was only transferred to Byzantium about 1063, although it seems that smaller portions must have been presented to the Eastern emperors at an earlier date. In any case Justinian, who died in 565, is stated to have given a thorn to St. Germanus, Bishop of Paris, which was long preserved at Saint-Germain-des-Prés, while the Empress Irene, in 798 or 802, sent Charlemagne several thorns which were deposited by him at Aachen. Eight of these are known to have been there at the consecration of the basilica of Aachen by Pope Leo III, and the subsequent history of several of them can be traced without difficulty. Four were given to Saint-Corneille of Compiègne in 877 by Charles

the Bald. One was sent by Hugh the Great to the Anglo-Saxon King Athelstan in 927 on the occasion of certain marriage negotiations, and eventually found its way to Malmesbury Abbey. Another was presented to a Spanish princess about 1160, and again another was taken to Anechdis in Germany in the year 1200.

In 1238 Baldwin II, the Latin Emperor of Constantinople, anxious to obtain support for his tottering empire, offered the Crown of Thorns to St. Louis, King of France. It was then actually in the hands of the Venetians as security for a heavy loan, but it was redeemed and conveyed to Paris where St. Louis built the Sainte-Chapelle (completed 1248) for its reception. There the great relic remained until the Revolution, when, after finding a home for a while in the Bibliothèque Nationale, it was eventually restored to the Church and was deposited in the Cathedral of Notre-Dame in 1806. Ninety years later (in 1896) a magnificent new reliquary of rock crystal was made for it, covered for two-thirds of its circumference with a silver case splendidly wrought and jewelled. The Crown thus preserved consists only of a circlet of rushes, without any trace of thorns. Authorities are agreed that a sort of helmet of thorns must have been platted by the Roman soldiers, this band of rushes being employed to hold the thorns together. It seems likely according to M. de Mély, that already at the time when the circlet was brought to Paris the sixty or seventy thorns, which seem to have been afterwards distributed by St. Louis and his successors, had been separated from the band of rushes and were kept in a different reliquary. None of these now remain at Paris. Some small fragments of rush are also preserved apart from the *sainte Couronne* at Paris, e. g. at Arras and at Lyons. With regard to the origin and character of the thorns, both tradition and existing remains suggest that they must have come from the bush botanically known as *Zizyphus spina Christi*, more popularly, the jujube-tree. This reaches the height of fifteen or twenty feet and is found growing in abundance by the wayside around Jerusalem. The crooked branches of this shrub are armed with thorns growing in pairs, a straight spine and a curved one commonly occurring together at each point. The relic preserved in the Capella della Spina at Pisa, as well as that at Trier, which though their early history is doubtful and obscure, are among the largest in size, afford a good illustration of this peculiarity.

That all the reputed holy thorns of which notice has survived cannot by any possibility be authentic will be disputed by no one. M. de Mély has been able to enumerate more than 700 such relics. The statement in one medieval obituary that Peter de Averoio gave to the cathedral of Angers "unam de spinis quæ fuit apposita coronæ spinæ nostri Redemptoris" (de Mély, p. 362), meaning seemingly a thorn which has touched the real Crown of Thorns, throws a flood of light upon the probable origin of many such relics. Again, even in comparatively modern times it is not always easy to trace the history of these objects of devotion, which were often divided and thus multiplied. Two "holy thorns" are at present venerated, the one at St. Michael's church in Ghent, the other at Stonyhurst College, both professing, upon what seems quite satisfactory evidence, to be the thorn given by Mary Queen of Scots to Thomas Percy Earl of Northumberland (see "The Month", April, 1882, 540-556). Finally, it should be pointed out that the appearance of the Crown of Thorns in art, notably upon the head of Christ in representations of the Crucifixion, is posterior to the time of St. Louis and the building of the Sainte-Chapelle. Some archaeologists have professed to discover a figure of the Crown of Thorns in the circle which sometimes surrounds the *chi-rho* emblem $\chi\rho$ on early Christian sarcophagi, but it seems to be χ quite as probable that this is only meant for a laurel-wreath.

The most recent and authoritative study of the whole subject is that of de Mély, forming the third volume of *RIANT, *Études Constantinopolitaines* (Paris, 1904). See also: DE MÉLY, *La**

HERBERT THURSTON.

Croyland (or CROWLAND), ABBEY OF, a monastery of the Benedictine Order in Lincolnshire, sixteen miles from Stamford and thirteen from Peterborough. It was founded in memory of St. Guthlac, early in the eighth century, by Ethelbald, King of Mercia, but was entirely destroyed and the community slaughtered by the Danes in 866. Refounded in the reign of King Edred, it was again destroyed by fire in 1091, but rebuilt about twenty years later by Abbot Joffrid. In 1170 the greater part of the abbey and church was once more burnt down and once more rebuilt, under Abbot Edward. From this time the history of Croyland was one of growing and almost unbroken prosperity down to the time of the Dissolution. Richly endowed by royal and noble visitors to the shrine of

ABBAY OF CROYLAND

St. Guthlac, it became one of the most opulent of East Anglian abbeys; and owing to its isolated position in the heart of the fen country, its security and peace were comparatively undisturbed during the great civil wars and other national troubles. The first abbot (in Ethelbald's reign) is said to have been Kenulph, a monk of Evesham; and one of the most notable was Ingulphus, who ruled from 1075 to 1109, and whose pseudo-chronicle was long considered the chief authority for the history of the abbey, though it is now acknowledged to be a compilation of the fifteenth century. At the time of the Dissolution the abbot was John Welles, or Bridges, who with his twenty-seven monks subscribed to the Royal Supremacy in 1534, and five years later surrendered his house to the king. The revenue of the abbey at this time has been variously estimated at £1083 and £1217. The site and buildings were granted in Edward VI's reign to Edward Lord Clinton, and afterwards came into the possession of the Hunter family. The remains of the abbey were fortified by the Royalists in 1643, and besieged and taken by Cromwell in May of that year. The abbey church comprised a nave of nine bays with aisles, 183 feet long by 87 wide, an apsidal choir of five bays 90 feet long, a central tower and detached bell-tower at the east end. The existing remains consist of the north aisle, still used (as it was from the earliest times) as the parish church; the splendid west front, the lower (twelfth century) and the upper part (fourteenth century) elaborately decorated with arcading and statues, it is thought in imitation of Wells cathedral; and a few piers and arches of the nave. Much careful restoration and repair has been carried out since 1860, under Sir Gilbert Scott, Mr. J. L. Pearson, and other eminent architects.

Cruelty to Animals.—The first ethical writers of pagan antiquity to advocate the duty of kindness towards the brute creation were Pythagoras and Empedocles. Holding the doctrine of metempsychosis, or the transmigration of human souls into the bodies of lower animals after death, these philosophers taught that animals share in human rights, and that it is a crime to kill them. These ideas, together with an appreciation of the services rendered by domestic animals to man, found some expression in early Roman legislation. The error of ascribing human rights to animals is condemned by Cicero (*De Finibus*, bk. III, xx). The Old Testament inculcates kindness towards animals. The Jews were forbidden to muzzle the ox that treadeth out the corn (*Deut.*, xxv, 4) or to yoke together an ox and an ass (*ibid.*, xxii, 10). Some other texts which are frequently quoted as instances are not so much to recommend kind treatment of animals as to insist upon duties of neighbourly goodwill. The prohibition against seething the kid in its mother's milk, a process in which there is no cruelty at all, and the one against taking a mother-bird with her young, seem to have a religious rather than a humanitarian significance.

The New Testament is almost silent on this subject. Even when St. Paul cites the Mosaic prohibition against muzzling the ox, he brushes aside the literal in favour of a symbolic signification (*I Cor.*, ix, 9 sq.). The Fathers of the Church insist but little on this point of duty. Nevertheless, Christian teaching and practice from the beginning reflect in a general way the Scriptural ideal of righteousness which is expressed in the words: "The just regardeth the lives of his beasts: but the bowels of the wicked are cruel" (*Prov.*, xii, 10). The hagiological literature of monastic life in the Middle Ages, which so largely formed and guided the moral sentiment of the Christian world, as Lecky sets forth with ample evidence, "represents one of the most striking efforts made in Christendom to inculcate a feeling of kindness and pity towards the brute creation" (*History of European Morals from Augustus to Charlemagne*, II, 161 sq.). This considerate feeling was a characteristic of many holy personages, even before St. Francis of Assisi and some of his followers carried it to a degree that seems almost incredible.

The scholastic theologians condemn the infliction of needless suffering on animals, chiefly because of the injurious effects on the character of the perpetrator. Thus St. Thomas, in his "*Summa Contra Gentiles*" (bk. II, cxii), after refuting the error that it is not lawful to take the lives of brutes, explains the import of the above-mentioned texts of Scripture. He says that these prohibitions are issued either "lest anyone by exercising cruelty towards brutes may become cruel also towards men; or, because an injury to brutes may result in loss to the owner, or on account of some symbolic signification". Elsewhere (*Summa Theologica*, I-II, Q. cii, a. 6, ad 8^{um}) he states that God's purpose in recommending kind treatment of the brute creation is to dispose men to pity and tenderness for one another. While the scholastics rest their condemnation of cruelty to animals on its demoralizing influence, their general teaching concerning the nature of man's rights and duties furnishes principles which have but to be applied in order to establish the direct and essential sinfulness of cruelty

to the animal world, irrespective of the results of such conduct on the character of those who practise it.

Catholic ethics has been criticized by some zoophiles because it refuses to admit that animals have rights. But it is indisputable that, when properly understood and fairly judged, Catholic doctrine, though it does not concede rights to the brute creation, denounces cruelty to animals as vigorously and as logically as do those moralists who make our duty in this respect the correlative of a right in the animals. In order to establish a binding obligation to avoid the wanton infliction of pain on the brutes, it is not necessary to acknowledge any right inherent in them. Our duty in this respect is part of our duty towards God. From the juristic standpoint, the visible world with which man comes in contact is divided into persons and non-persons. For the latter term the word "things" is usually employed. Only a person, that is, a being possessed of reason and self-control, can be the subject of rights and duties; or, to express the same idea in terms more familiar to adherents of other schools of thought, only beings who are ends in themselves, and may not be treated as mere means to the perfection of other beings, can possess rights. Rights and duties are moral ties which can exist only in a moral being, or person. Beings that may be treated simply as means to the perfection of persons can have no rights, and to this category the brute creation belongs. In the Divine plan of the universe the lower creatures are subordinated to the welfare of man. But while these animals are, in contradistinction to persons, classed as things, it is none the less true that between them and the non-sentient world there exists a profound difference of nature which we are bound to consider in our treatment of them. The very essence of the moral law is that we respect and obey the order established by the Creator. Now, the animal is a nobler manifestation of His power and goodness than the lower forms of material existence. In imparting to the brute creation a sentient nature capable of suffering—a nature which the animal shares in common with ourselves—God placed on our dominion over them a restriction which does not exist with regard to our dominion over the non-sentient world. We are bound to act towards them in a manner conformable to their nature. We may lawfully use them for our reasonable wants and welfare, even though such employment of them necessarily inflicts pain upon them. But the wanton infliction of pain is not the satisfaction of any reasonable need, and, being an outrage against the Divinely established order, is therefore sinful. This principle, by which, at least in the abstract, we may solve the problem of the lawfulness of vivisection and other cognate questions, is tersely put by Zigliara: "The service of man is the end appointed by the Creator for brute animals. When, therefore, man, with no reasonable purpose, treats the brute cruelly he does wrong, not because he violates the right of the brute, but because his action conflicts with the order and the design of the Creator" (*Philosophia Moralis*, 9th ed., Rome, p. 136). With more feeling, but with no less exactness, the late Cardinal Manning expressed the same doctrine: "It is perfectly true that obligations and duties are between moral persons, and therefore the lower animals are not susceptible of the moral obligations which we owe to one another; but we owe a seven-fold obligation to the Creator of those animals. Our obligation and moral duty is to Him who made them; and if we wish to know the limit and the broad outline of our obligation, I say at once it is His nature and His perfections, and among these perfections one is, most profoundly, that of Eternal Mercy. And therefore, although a poor mule or a poor horse is not, indeed, a moral person, yet the Lord and Maker of the mule is the highest Lawgiver, and His nature is a law unto Himself. And in giving a dominion over His creat-

ures to man, He gave it subject to the condition that it should be used in conformity to His perfections which is His own law, and therefore our law" (The Zoophilist, London, 1 April, 1887). While Catholic ethical doctrine insists upon the merciful treatment of animals, it does not place kindness towards them on the same plane of duty as benevolence towards our fellow-men. Nor does it approve of unduly magnifying, to the neglect of higher duties, our obligations concerning animals. Excessive fondness for them is no sure index of moral worth; it may be carried to un-Christian excess; and it can coexist with grave laxity in far more important matters. There are many imitators of Schopenhauer, who loved his dog and hated his kind.

JAMES J. FOX.

Cruet, a small vessel used for containing the wine and water required for the Holy Sacrifice of the Mass. Two are always employed. The Roman Missal (Rubricæ Gen., XX) directs that they should be made of glass. This is the most suitable material because easily cleaned, and its transparency obviates danger of confounding the water and wine. Other materials, however, are used, such as gold, silver, and other precious metals. In this case it is advisable to have a V (*Vinum*) on the wine and an A (*aqua*) on the water cruet, so that one may be easily distinguished from the other. In shape nothing is prescribed, but the vessels should have a good firm base on which to stand securely and a fairly wide neck so as to admit of being easily cleansed. They should have a cover to keep away flies and insects. Formerly the wine for the Holy Sacrifice was brought by the faithful in a jar-shaped vessel. It was then received by the deacon and poured into the chalice, a vestige of which custom is still observable at the consecration of a bishop.

VAN DER STAPPEN, *De Missæ Celebratione* (Mechlin, 1902), 88; FUGIN, *Glossary of Ecclesiastical Ornaments* (London, 1868).

PATRICK MORRISROE.

Crusade, **BULL OF THE**, a Bull granting indulgences to those who took part in the wars against the infidels. These indulgences were similar to those which, as far back as the eleventh century, had been granted to the faithful of the Spanish Mark who took part in the work of building churches and monasteries, or who gave alms to be devoted to this purpose. The first of these Crusade Bulls which concerned Spain was that of Urban II to the Counts Berenguer Ramón de Barcelona and Armengal de Besalú in 1089 at the time of the reconquest of Tarragona, and that of Gelasius II to Alfonso I of Aragon, when he undertook to reconquer Saragossa in 1118. Clement IV in 1265 issued a general Bull for the whole of Spain, when the Kings of Aragon and Castile joined in the expedition against Murcia. In the course of time these pontifical concessions became more and more frequent; in the reign of the Catholic kings alone they were granted in 1478, 1479, 1481, 1482, 1485, 1494, 1503, and 1505, and were continued during the following reigns, that granted by Gregory XIII in 1573 being renewed by his successors.

The alms given by the faithful in response to this Bull, which were at first used exclusively for carrying on the war against the infidels, were afterwards used for the construction and repair of churches and other pious works; sometimes they were also used to defray expenses of the State. The Cortes of Valladolid of 1523 and that of Madrid of 1592 petitioned that this money should not be used for any other purpose than that for which it had originally been intended by the donors, but, notwithstanding the provisions made by

Philip III in compliance with this request, the abuse already mentioned continued. After 1847 the funds derived from this source were devoted to the endowment of churches and the clergy, this disposition being ratified by a law in 1849 and in the Concordat of 1851, still in force.

In virtue of the concessions granted by this Bull, the faithful of the Spanish dominions who had fulfilled the necessary conditions could gain the plenary indulgence, granted to those who fought for the reconquest of the Holy Land and to those who went to Rome in the year of Jubilee, provided they went to confession and received Holy Communion. They enjoyed also the privilege of being absolved twice of sins and censures reserved to the Holy See and the ordinary, except open heresy, and others concerning ecclesiastics; to have vows which could not be fulfilled without difficulty commuted by their confessor, unless failure to fulfil them would be to the disadvantage of another; also simple vows of perpetual chastity, of religious profession, and of pilgrimage to the Holy Land. Those who visited five churches or altars, or the same altar five times, and prayed for the intentions of the Crusade, could gain the indulgences granted to those who visited the stations in Rome. The Bull, moreover, permitted the faithful of the Spanish dominions to eat meat on all the days of Lent and other days of fast and abstinence, except Ash Wednesday, the Fridays of Lent, the last four days of Holy Week, and the vigils of the feasts of the Nativity, Pentecost, the Assumption, and Sts. Peter and Paul.

Crusades.—The Crusades were expeditions undertaken, in fulfilment of a solemn vow, to deliver the Holy Places from Mohammedan tyranny. The origin of the word may be traced to the cross made of cloth and worn as a badge on the outer garment of those who took part in these enterprises. Medieval writers use the terms *crux* (*pro cruce transmarina*, Charter of 1284, cited by Du Cange s. v. *crux*), *croisement* (Joinville), *croiserie* (Monstrelet), etc. Since the Middle Ages the meaning of the word *crusade* has been extended to include all wars undertaken in pursuance of a vow, and directed against infidels, i.e. against Mohammedans, pagans, heretics, or those under the ban of excommunication. The wars waged by the Spaniards against the Moors constituted a continual crusade from the eleventh to the sixteenth century; in the north of Europe crusades were organized against the Prussians and Lithuanians; the extermination of the Albigensian heresy was due to a crusade, and, in the thirteenth century, the popes preached crusades against John Lackland and Frederick II. But modern literature has abused the word by applying it to all wars of a religious character, as, for instance, the expedition of Heraclius against the Persians in the seventh century and the conquest of Saxony by Charlemagne. The idea of the crusade corresponds to a political conception which was realized in Christendom only from the eleventh to the fifteenth century; this supposes a union of all peoples and sovereigns under the direction of the popes. All crusades were announced by preaching. After pronouncing a solemn vow, each warrior received a cross from the hands of the pope or his legates, and was thenceforth considered a soldier of the Church. Crusaders were also granted indulgences and temporal privileges, such as exemption from civil jurisdiction, inviolability of persons or lands, etc. Of all these wars undertaken in the name of Christendom, the most important were the Eastern Crusades, which are the only ones treated in this article.

PRESENT KNOWLEDGE OF THE CRUSADES.—A history of the Crusades was begun in France in the seven-

teenth century by the Benedictines of the Congregation of St-Maur. (Bongars had previously published the first collection of texts bearing upon the Latin Orient, under the title of "Gesta Dei per Francos", Hanover, 1611, fol.) The publication of original Oriental texts prepared by Berthreau in the eighteenth century was prevented by the French Revolution, but in the nineteenth century the Academy of Inscriptions and Belles-Lettres adopted the Benedictine plan and, in 1841, began to issue a "Collection de l'histoire des Croisades"—Western historians, 5 vols.; Eastern or Arabian historians, 4 vols.; Greek, 2 vols.; Armenian documents, 2 vols.; laws, 2 vols.

The historic revival that followed the Restoration of 1815, produced works of a romantic character like those of Michaud (*Histoire des Croisades*, 1st ed., 3 vols., Paris, 1812-17; and 7 vols. 8vo, 1824-29); Wilken (*Gesch. der Kreuzzüge*, Leipzig, 7 vols., 8vo, 1807-32); and Mills (*History of the Crusades*, 2 vols., London, 1820). Between 1839 and 1842 King Louis Philippe established in the Versailles Museum the Halls of the Crusades, decorated with the armorial bearings of families whose ancestors had taken part in the Holy Wars. At this time was brought to light the unduly famous Courtois collection, consisting of receipts for advance-money loaned to French knights by Italian bankers and which, upon being compared with authentic texts, was found to contain a large number of forgeries. (See L. Delisle, "Bibliothèque de l'Ecole des Chartes", 1888, 304; Cartellieri, "Philipp II August", Leipzig, 1906, II, 302 sqq.) It is only within the last thirty years that the history of the Crusades has been studied in a truly scientific manner, thanks to the Société de l'Orient Latin founded by Count Riant in 1875 (principal seats at Paris and Geneva). Its publications were at first divided into geographical and historical series, the former containing the itineraries of pilgrims and the latter, chronicles, letters, and charters. The "Archives de l'Orient Latin" were published in 1881 (2 vols., Paris), but since 1893 the publications have been included in the "Revue de l'Orient Latin", a periodical bibliography of the history of the Crusades. Moreover, in all European countries national collections of documents ("Monumenta Germaniae"; "Société de l'histoire de France"; "Rerum britannicarum mediæ ævi scriptores"; "Fontes rerum austriacarum", etc.) have done much toward providing us with sources of the history of the Crusades. Owing to these labours the student of the Crusades may now consult:

(1) *Documents in Archives*.—Röhricht's "Regesta regni hierosolymitani, 1097-1291" (Innsbruck, 1893), and Delaville-Leroulx's "Cartulaire général des Hospitaliers de St. Jean de Jérusalem", 4 vols., fol. (Paris, 1894). The correspondence of the popes, preserved in the Vatican archives, is one of the most important sources for the history of the Crusades. After these archives were made accessible to scholars by order of Leo XIII in 1881, the Ecole Française of Rome inaugurated the publication of the registers of the popes of the thirteenth century (Library of the Ecole Française de Rome)—Gregory IX (Auvray, ed.); Innocent IV (E. Berger, ed.); Alexander IV (de la Roncière, ed.); Urban IV (Guiraud, ed.); Clement IV (Jordan, ed.); Gregory X and John XXI (Guiraud and Cardier, ed.); Nicholas III (Gay, ed.); Martin IV (Soehnle, ed.); Honorius IV (Prou, ed.); Nicholas IV (Langlois, ed.); Boniface VIII (Faucon, ed.); Benedict XI (Grandjean, ed.). To these must be added the registers of Honorius III (Pressuti, ed.; Rome, 1888) and Clement V (Benedictines, ed.; Rome, 1885-88). For the other popes see Migne's "Patrologia Latina" and the "Annales Ecclesiastici" of Baronius and Raynaldi (Mansi, ed., Lucca, 1738-59). The archives of the Italian states of Venice, Genoa, and Naples have also been of great value for throwing new light on the history of the Crusades, e. g. Tafel and

Thomas, "Urkunden zur älteren Handels- und Staatsgeschichte der Republik Venedig" (Fontes rerum austriacarum, XII-XIV, Venice, 1856-57); Thomas, "Diplomatarium Veneto-Levantinum" (Venice, 1880).

(2) *Judicial Documents*.—Such are the "Assises de Jérusalem" (Beugnot, ed., 2 vols., Paris, 1841) and the "Règle du Temple" (Curzon, ed., Paris, 1886).

(3) *Chronicles*.—These have not yet been gathered into a single collection. The reader should consult chiefly the "Collection de l'histoire des Croisades", published by the Académie des Inscriptions, and the "Série Historique" of the Société de l'Orient Latin. The most detailed account of the Christian states is that in the chronicle of William, Archbishop of Tyre (d. 1190). It comprises twenty-three books (1095-1184) and, from 1143, has the value of an original source (Historiens Occidentaux, I). This work was translated into French under the title of "Livre d'Eracles", the translation being continued until 1229 by Ernoul and until 1231 by Bernard, Treasurer of Saint-Pierre de Corbie.

(4) *Accounts of Pilgrimages and Itineraries, Especially in the Latin Orient*.—The following are important: a geographical series from the fourth to the thirteenth century, issued by the Palestine Pilgrims' Text Society (London, 1884—); "Recueil de voyages et mémoires", published by the Société de Géographie (Paris, 1824-66); "Recueil de voyages et de documents pour servir à la géographie" (Paris, 1890—).

(5) *Oriental Research*.—The history of the Crusades has profited by the progress made in the study of the Byzantine, Arabian, Armenian, and Mongolian Orient (Collection de l'histoire des Croisades: Greek historians, 2 vols., 1875; Arabian historians, 4 vols., since 1872; and Armenian documents, 2 vols., since 1869).

(6) *Archæology*.—Finally, archæological exploration has added new elements to our knowledge of the Latin Orient. The castles of the crusaders in Palestine and the churches in French style throughout Cyprus and Syria have been discussed by Rey in his "Études sur les monuments de l'architecture militaire des croisés" (Paris, 1871) and by Enlart in "L'art gothique et la Renaissance en Chypre" (Paris, 1899); for coins and seals see Schlumberger's "Numismatique de l'Orient Latin" (Paris, 1878). The history of the Crusades becomes henceforth a special field of study. However, many sources of information still remain unpublished, and those that have been published are scattered through numerous collections as yet but little known.

DIVISION.—It has been customary to describe the Crusades as eight in number: the first, 1095-1101; the second, headed by Louis VII, 1145-47; the third, conducted by Philip Augustus and Richard Cœur-de-Lion, 1188-92; the fourth, during which Constantinople was taken, 1204; the fifth, which included the conquest of Damietta, 1217; the sixth, in which Frederick II took part (1228-29); also Thibaud de Champagne and Richard of Cornwall (1239); the seventh, led by St. Louis, 1249-52; the eighth, also under St. Louis, 1270. This division is arbitrary and excludes many important expeditions, among them those of the fourteenth and fifteenth centuries. In reality the Crusades continued until the end of the seventeenth century, the crusade of Lepanto occurring in 1571, that of Hungary in 1664, and the crusade of the Duke of Burgundy to Candia, in 1669. A more scientific division is based on the history of the Christian settlements in the East; therefore the subject will be considered in the following order: I. Origin of the Crusades; II. Foundation of Christian states in the East; III. First destruction of the Christian states (1144-87); IV. Attempts to restore the Christian states and the crusade against Saint-Jean d'Acre (1192-98); V. The crusade against Constantinople (1204); VI. The thirteenth-century crusades (1217-52); VII. Final loss of the Christian colonies of the East (1254-91); VIII. The fourteenth-century crusade

and the Ottoman invasion; IX. The crusade in the fifteenth century; X. Modifications and survival of the idea of the crusade.

I. ORIGIN OF THE CRUSADES.—The origin of the Crusades is directly traceable to the moral and political condition of Western Christendom in the eleventh century. At that time Europe was divided into numerous states whose sovereigns were absorbed in tedious and petty territorial disputes while the emperor, in theory the temporal head of Christendom, was wasting his strength in the quarrel over Investitures. The popes alone had maintained a just estimate of Christian unity; they realized to what extent the interests of Europe were threatened by the Byzantine Empire and the Mohammedan tribes, and they alone had a foreign policy whose traditions were formed under Leo IX and Gregory VII. The reform effected in the Church and the papacy through the influence of the monks of Cluny had increased the prestige of the Roman pontiff in the eyes of all Christian nations; hence none but the pope could inaugurate the international movement that culminated in the Crusades. But despite his eminent authority the pope could never have persuaded the Western peoples to arm themselves for the conquest of the Holy Land had not the immemorial relations between Syria and the West favoured his design. Europeans listened to the voice of Urban II because their own inclination and historic traditions impelled them towards the Holy Sepulchre. From the end of the fifth century there had been no break in their intercourse with the Orient. In the early Christian period colonies of Syrians had introduced the religious ideas, art, and culture of the East into the large cities of Gaul and Italy. The Western Christians in turn journeyed in large numbers to Syria, Palestine, and Egypt, either to visit the Holy Places or to follow the ascetic life among the monks of the Thebaid or Sinai. There is still extant the itinerary of a pilgrimage from Bordeaux to Jerusalem, dated 333; in 385 St. Jerome and St. Paula founded the first Latin monasteries at Bethlehem. Even the Barbarian invasion did not seem to dampen the ardour for pilgrimages to the East. The Itinerary of St. Silvia (Etheria) shows the organization of these expeditions, which were directed by clerics and escorted by armed troops. In the year 600, St. Gregory the Great had a hospice erected in Jerusalem for the accommodation of pilgrims, sent alms to the monks of Mount Sinai ("Vita Gregorii" in "Acta SS.", March II, 132), and, although the deplorable condition of Eastern Christendom after the Arab invasion rendered this intercourse more difficult, it did not by any means cease.

As early as the eighth century Anglo-Saxons underwent the greatest hardships to visit Jerusalem. The journey of St. Willibald, Bishop of Eichstätt, took seven years (722-29) and furnishes an idea of the varied and severe trials to which pilgrims were subject (Itiner. Latina, I, 241-283). After their conquest of the West, the Carolingians endeavoured to improve the condition of the Latins settled in the East; in 762 Pepin the Short entered into negotiations with the Caliph of Bagdad. In Rome, on 30 November, 800, the very day on which Leo III invoked the arbitration of Charlemagne, ambassadors from Haroun al-Raschid delivered to the King of the Franks the keys of the Holy Sepulchre, the banner of Jerusalem, and some precious relics (Einhard, "Annales", *ad an.* 800, in "Mon. Germ. Hist.: Script.", I, 187); this was an acknowledgment of the Frankish protectorate over the Christians of Jerusalem. That churches and monasteries were built at Charlemagne's expense is attested by a sort of a census of the monasteries of Jerusalem dated 808 ("Commemoratio de Casis Dei" in "Itiner. Hierosol.", I, 209). In 870, at the time of the pilgrimage of Bernard the Monk (Itiner. Hierosol., I, 314), these institutions were still very prosperous, and it has been abundantly proved that alms were sent regularly

from the West to the Holy Land. In the tenth century, just when the political and social order of Europe was most troubled, knights, bishops, and abbots, actuated by devotion and a taste for adventure, were wont to visit Jerusalem and pray at the Holy Sepulchre without being molested by the Mohammedans. Suddenly, in 1009, Hakem, the Fatimite Caliph of Egypt, in a fit of madness ordered the destruction of the Holy Sepulchre and all the Christian establishments in Jerusalem. For years thereafter Christians were cruelly persecuted. (See the recital of an eye-witness, Iahjâ of Antioch, in Schlumberger's "Épopée byzantine", II, 442.) In 1027 the Frankish protectorate was overthrown and replaced by that of the Byzantine emperors, to whose diplomacy was due the reconstruction of the Holy Sepulchre. The Christian quarter was even surrounded by a wall, and some Amalfi merchants, vassals of the Greek emperors, built hospices in Jerusalem for pilgrims, e. g. the Hospital of St. John, cradle of the Order of Hospitaliers.

Instead of diminishing, the enthusiasm of Western Christians for the pilgrimage to Jerusalem seemed rather to increase during the eleventh century. Not only princes, bishops, and knights, but even men and women of the humbler classes undertook the holy journey (Radulphus Glaber, IV, vi). Whole armies of pilgrims traversed Europe, and in the valley of the Danube hospices were established where they could replenish their provisions. In 1026 Richard, Abbot of Saint-Vannes, led 700 pilgrims into Palestine at the expense of Richard II, Duke of Normandy. In 1065 over 12,000 Germans who had crossed Europe under the command of Günther, Bishop of Bamberg, while on their way through Palestine had to seek shelter in a ruined fortress, where they defended themselves against a troop of Bedouins (Lambert of Hersfeld, in "Mon. Germ. Hist.: Script.", V, 168). Thus it is evident that at the close of the eleventh century the route to Palestine was familiar enough to Western Christians who looked upon the Holy Sepulchre as the most venerable of relics and were ready to brave any peril in order to visit it. The memory of Charlemagne's protectorate still lived, and a trace of it is to be found in the medieval legend of this emperor's journey to Palestine (Gaston Paris in "Romania", 1880, p. 23). The rise of the Seljukian Turks, however, compromised the safety of pilgrims and even threatened the independence of the Byzantine Empire and of all Christendom. In 1070 Jerusalem was taken, and in 1091 Diogenes, the Greek emperor, was defeated and made captive at Mantzikert. Asia Minor and all of Syria became the prey of the Turks. Antioch succumbed in 1084, and by 1092 not one of the great metropolitan sees of Asia remained in the possession of the Christians. Although separated from the communion of Rome since the schism of Michael Cæsaricius (1054), the emperors of Constantinople implored the assistance of the popes; in 1073 letters were exchanged on the subject between Michael VII and Gregory VII. The pope seriously contemplated leading a force of 50,000 men to the East in order to re-establish Christian unity, repulse the Turks, and rescue the Holy Sepulchre. But the idea of the crusade constituted only a part of this magnificent plan. (The letters of Gregory VII are in P. L., CXLVIII, 300, 325, 329, 386; cf. Riant's critical discussion in *Archives de l'Orient Latin*, I, 56.) The conflict over the Investitures in 1076 compelled the pope to abandon his projects; the Emperors Nicephorus Botaniates and Alexius Comnenus were unfavourable to a religious union with Rome; finally war broke out between the Byzantine Empire and the Normans of the Two Sicilies. It was Pope Urban II who took up the plans of Gregory VII and gave them more definite shape. A letter from Alexius Comnenus to Robert, Count of Flanders, recorded by the chroniclers, Guibert de Nogent ("Historiens Occidentaux des Croisades", ed.

by the Académie des Inscriptions, IV, 131) and Hugues de Fleury (in "Mon. Germ. Hist.: Script.", IX, 392), seems to imply that the crusade was instigated by the Byzantine emperor, but this has been proved false (Chalandon, *Essai sur le règne d'Alexis Comnène*, appendix), Alexius having merely sought to enroll five hundred Flemish knights in the imperial army (Anna Comnena, *Alexiad.*, VII, iv). The honour of initiating the crusade has also been attributed to Peter the Hermit, a recluse of Picardy, who, after a pilgrimage to Jerusalem and a vision in the church of the Holy Sepulchre, went to Urban II and was commissioned by him to preach the crusade. However, though eyewitnesses of the crusade mention his preaching, they do not ascribe to him the all-important rôle assigned him later by various chroniclers, e. g. Albert of Aix and especially William of Tyre. (See Hagenmeyer, *Peter der Eremita Leipzig*, 1879.) The idea of the crusade is chiefly attributed to Pope Urban II (1095), and the motives that actuated him are clearly set forth by his contemporaries: "On beholding the enormous injury that all, clergy or people, brought upon the Christian Faith . . . at the news that the Rumanian provinces had been taken from the Christians by the Turks, moved with compassion and impelled by the love of God, he crossed the mountains and descended into Gaul" (Foucher de Chartres, I, in "Histoire des Crois.", III, 321). Of course it is possible that in order to swell his forces, Alexius Comnenus solicited assistance in the West; however, it was not he but the pope who agitated the great movement which filled the Greeks with anxiety and terror.

II. FOUNDATION OF CHRISTIAN STATES IN THE EAST.—After travelling through Burgundy and the south of France, Urban II convoked a council at Clermont-Ferrand, in Auvergne. It was attended by fourteen archbishops, 250 bishops, and 400 abbots; moreover a great number of knights and men of all conditions came and encamped on the plain of Chantoîn, to the east of Clermont, 18-23 November, 1095. On 27 November, the pope himself addressed the assembled multitudes, exhorting them to go forth and rescue the Holy Sepulchre. Amid wonderful enthusiasm and cries of "God wills it!" all rushed towards the pontiff to pledge themselves by vow to depart for the Holy Land and receive the cross of red material to be worn on the shoulder. At the same time the pope sent letters to all Christian nations, and the movement made rapid headway throughout Europe. Preachers of the crusade appeared everywhere, and on all sides sprang up disorganized, undisciplined, penniless hordes, almost destitute of equipment, who, surging eastward through the valley of the Danube, plundered as they went along and murdered the Jews in the German cities. One of these bands, headed by Folkmar, a German cleric, was slaughtered by the Hungarians. Peter the Hermit, however, and the German knight, Walter the Pennyless (Gautier Sans Avoir), finally reached Constantinople with their disorganized troops. To save the city from plunder Alexius Comnenus ordered them to be conveyed across the Bosphorus (August, 1096); in Asia Minor they turned to pillage and were nearly all slain by the Turks. Meanwhile the regular crusade was being organized in the West and, according to a well conceived plan, the four principal armies were to meet at Constantinople. (1) Godfrey of Bouillon, Duke of Lower Lorraine, at the head of the people of Lorraine, the Germans, and the French from the north, followed the valley of the Danube, crossed Hungary, and arrived at Constantinople, 23 December, 1096. (2) Hugh of Vermandois, brother of King Philip I of France, Robert Courte-Heuse, Duke of Normandy, and Count Stephen of Blois, led bands of French and Normans across the Alps and set sail from the ports of Apulia for Dyrrachium (Durazzo), whence they took

the "Via Egnatia" to Constantinople and assembled there in May, 1097. (3) The French from the south, under the leadership of Raymond of Saint-Gilles, Count of Toulouse, and of Adhemar of Montpelier, Bishop of Puy and papal legate, began to fight their way through the longitudinal valleys of the Eastern Alps and, after bloody conflicts with the Slavonians, reached Constantinople at the end of April, 1097. (4) Lastly, the Normans of Southern Italy, won over by the enthusiasm of the bands of crusaders that passed through their country, embarked for Epirus under the command of Bohemond and Tancred, one being the eldest son, the other the nephew, of Robert Guiscard. Crossing the Byzantine Empire, they succeeded in reaching Constantinople, 26 April, 1097. The appearance of the crusading armies at Constantinople raised the greatest trouble, and helped to bring about in the future irremediable misunderstandings between the Greeks and the Latin Christians. The unsolicited invasion of the latter alarmed Alexius, who tried to prevent the concentration of all these forces at Constantinople by transporting to Asia Minor each Western army in the order of its arrival; moreover, he endeavoured to extort from the leaders of the crusade a promise that they would restore to the Greek Empire the lands they were about to conquer. After resisting the imperial entreaties throughout the winter, Godfrey of Bouillon, hemmed in at Pera, at length consented to take the oath of fealty. Bohemond, Robert Courte-Heuse, Stephen of Blois, and the other crusading chiefs unhesitatingly assumed the same obligation; Raymond of St-Gilles, however, remained obdurate.

Transported into Asia Minor, the crusaders laid siege to the city of Nicaea, but Alexius negotiated with the Turks, had the city delivered to him, and prohibited the crusaders from entering it (1 June, 1097). After their victory over the Turks at the battle of Dorylaeum on 1 July, 1097, the Christians entered upon the high plateaux of Asia Minor. Constantly harassed by a relentless enemy, overcome by the excessive heat, and sinking under the weight of their leathern armour covered with iron scales, their sufferings were wellnigh intolerable. In September, 1097, Tancred and Baldwin, brothers of Godfrey of Bouillon, left the bulk of the army and entered Armenian territory. At Tarsus a feud almost broke out between them, but fortunately they became reconciled. Tancred took possession of the towns of Cilicia, whilst Baldwin, summoned by the Armenians, crossed the Euphrates in October, 1097, and, after marrying an Armenian princess, was proclaimed Lord of Edessa. Meanwhile the crusaders, revictualled by the Armenians of the Taurus region, made their way into Syria and on 20 October, 1097, reached the fortified city of Antioch, which was protected by a wall flanked with 450 towers, stocked by the Ameer Jagi-Sian with immense quantities of provisions. Thanks to the assistance of carpenters and engineers who belonged to a Genoese fleet that had arrived at the mouth of the Orontes, the crusaders were enabled to construct battering-machines and to begin the siege of the city. Eventually Bohemond negotiated with a Turkish chief who surrendered one of the towers, and on the night of 2 June, 1098, the crusaders took Antioch by storm. The very next day they were in turn besieged within the city by the army of Kerbûga, Ameer of Mosul. Plague and famine cruelly decimated their ranks, and many of them, among others Stephen of Blois, escaped under cover of night. The army was on the verge of giving way to discouragement when its spirits were suddenly revived by the discovery of the Holy Lance, resulting from the dream of a Provençal priest named Pierre Barthélémy. On 28 June, 1098, Kerbûga's army was effectually repulsed, but, instead of marching on Jerusalem without delay, the chiefs spent several months in a quarrel due to the rivalry of Raymond of Saint-Gilles and Bohemond,

CORONATION OF BALDWIN I, KING OF JERUSALEM BY ENRICO DANDOLO, DOGE
OF VENICE

VASSILACCHI (L'ALIENSE), DOGE'S PALACE, VENICE

both of whom claimed the right to Antioch. It was not until April, 1099, that the march towards Jerusalem was begun, Bohemond remaining in possession of Antioch while Raymond seized on Tripoli. On 7 June the crusaders began the siege of Jerusalem. Their predicament would have been serious, indeed, had not another Genoese fleet arrived at Jaffa and, as at Antioch, furnished the engineers necessary for a siege. After a general procession which the crusaders made barefooted around the city walls amid the insults and incantations of Mohammedan sorcerers, the attack began 14 July, 1099. Next day the Christians entered Jerusalem from all sides and slew its inhabitants regardless of age or sex. Having accomplished their pilgrimage to the Holy Sepulchre, the knights chose as lord of the new conquest Godfrey of Bouillon, who called himself "Defender of the Holy Sepulchre". They had then to repulse an Egyptian army, which was defeated at Ascalon, 12 August, 1099. Their position was nevertheless very insecure. Alexius Comnenus threatened the principality of Antioch, and in 1100 Bohemond himself was made prisoner by the Turks, while most of the cities on the coast were still under Mohammedan control. Before his death, 29 July, 1099, Urban II once more proclaimed the crusade. In 1101 three expeditions crossed Europe under the leadership of Count Stephen of Blois, Duke William IX of Aquitaine, and Welf IV, Duke of Bavaria. All three managed to reach Asia Minor, but were massacred by the Turks. On his release from prison Bohemond attacked the Byzantine Empire, but was surrounded by the imperial army and forced to acknowledge himself the vassal of Alexius. On Bohemond's death, however, in 1111, Tancred refused to live up to the treaty and retained Antioch. Godfrey of Bouillon died at Jerusalem 18 July, 1100. His brother and successor, Baldwin of Edessa, was crowned King of Jerusalem in the Basilica of Bethlehem, 25 December, 1100. In 1112, with the aid of Norwegians under Sigurd Jorsalafari and the support of Genoese, Pisan, and Venetian fleets, Baldwin I began the conquest of the ports of Syria, which was completed in 1124 by the capture of Tyre. Ascalon alone kept an Egyptian garrison until 1153.

At this period the Christian states formed an extensive and unbroken territory between the Euphrates and the Egyptian frontier, and included four almost independent principalities: the Kingdom of Jerusalem, the Countship of Tripoli, the Principality of Antioch, and the Countship of Rohez (Edessa). These small states were, so to speak, the common property of all Christendom and, as such, were subordinate to the authority of the pope. Moreover, the French knights and Italian merchants established in the newly conquered cities soon gained the upper hand. The authority of the sovereigns of these different principalities was restricted by the fief-holders, vassals, and under-vassals who constituted the Court of Lieges, or Supreme Court. This assembly had entire control in legislative matters; no statute or law could be established without its consent; no baron could be deprived of his fief without its decision; its jurisdiction extended over all, even the king, and it controlled also the succession to the throne. A "Court of the Burghesses" had similar jurisdiction over the citizens. Each fief had a like tribunal composed of knights and citizens, and in the ports there were police and mercantile courts (see ASSIZES OF JERUSALEM). The authority of the Church also helped to limit the power of the king; the four metropolitan sees of Tyre, Caesarea, Bessan, and Petra were subject to the Patriarch of Jerusalem, similarly seven suffragan sees and a great many abbeys, among them Mount Sion, Mount Olivet, the Temple, Josaphat, and the Holy Sepulchre. Through rich and frequent donations the clergy became the largest property-holders in the kingdom; they also received from the crusaders important

estates situated in Europe. In spite of the aforesaid restrictions, in the twelfth century the King of Jerusalem had a large income. The customs duties established in the ports and administered by natives, the tolls exacted from caravans, and the monopoly of certain industries were a fruitful source of revenue. From a military point of view all vassals owed the king unlimited service as to time, though he was obliged to compensate them, but to fill the ranks of the army it was necessary to enroll natives who received a life annuity (*fief de soudée*). In this way was recruited the light cavalry of the "Turcoples", armed in Saracenic style. Altogether these forces barely exceeded 20,000 men, and yet the powerful vassals who commanded them were almost independent of the king. So it was that the great need of regular troops for the defence of the Christian dominions brought about the creation of a unique institution, the religious orders of knighthood, viz.: the Hospitallers, who at first did duty in the Hospital of St. John founded by the aforesaid merchants of Amalfi, and were then organized into a militia by Gérard du Puy that they might fight the Saracens (1113); and the Templars, nine of whom in 1118 gathered around Hugues de Payens and received the Rule of St. Bernard. These members, whether knights drawn from the nobility, bailiffs, clerks, or chaplains, pronounced the three monastic vows, but it was chiefly to the war against the Saracens that they pledged themselves. Being favoured with many spiritual and temporal privileges, they easily gained recruits from among the younger sons of feudal houses and acquired both in Palestine and in Europe considerable property. Their castles, built at the principal strategic points, Margat, Le Crac, and Tortosa, were strong citadels protected by several concentric enclosures. In the Kingdom of Jerusalem these military orders virtually formed two independent commonwealths. Finally, in the cities, the public power was divided between the native citizens and the Italian colonists, Genoese, Venetians, Pisans, and also the Marseillais who, in exchange for their services, were given supreme power in certain districts wherein small self-governing communities had their consuls, their churches, and on the outskirts their farm-land, used for the cultivation of cotton and sugar-cane. The Syrian ports were regularly visited by Italian fleets which obtained there the spices and silks brought by caravans from the Far East. Thus, during the first half of the twelfth century the Christian states of the East were completely organized, and even eclipsed in wealth and prosperity most of the Western states.

III. FIRST DESTRUCTION OF THE CHRISTIAN STATES (1144-87).—Many dangers, unfortunately, threatened this prosperity. On the south were the Caliphs of Egypt, on the east the Seljuk Ameer of Damascus, Hamah and Aleppo, and on the north the Byzantine emperors, eager to realize the project of Alexius Comnenus and bring the Latin states under their power. Moreover, in the presence of so many enemies the Christian states lacked cohesion and discipline. The help they received from the West was too scattered and intermittent. Nevertheless these Western knights, isolated amid Mohammedans and forced, because of the torrid climate, to lead a life far different from that to which they had been accustomed at home, displayed admirable bravery and energy in their efforts to save the Christian colonies. In 1137 John Comnenus, Emperor of Constantinople, appeared before Antioch with an army, and compelled Prince Raymond to do him homage. On the death of this potentate (1143), Raymond endeavoured to shake off the irksome yoke and invaded Byzantine territory, but was hemmed in by the imperial army and compelled (1144) to humble himself at Constantinople before the Emperor Manuel. The Principality of Edessa, completely isolated from the other Christian states, could

not withstand the attacks of Imad-ed-Din, the prince, or *atabek*, of Mosul, who forced its garrison to capitulate 25 December, 1144. After the assassination of Imad-ed-Din, his son Nour-ed-Din continued hostilities against the Christian states. At news of this, Louis VII of France, Queen Eleanor of Aquitaine, and a great number of knights, moved by the exhortations of St. Bernard, enlisted under the cross (Assembly of Vézelay, 31 March, 1146). The Abbot of Clairvaux became the apostle of the crusade and conceived the idea of urging all Europe to attack the infidels simultaneously in Syria, in Spain, and beyond the Elbe. At first he met with strong opposition in Germany. Eventually Emperor Conrad III acceded to his wish and adopted the standard of the cross at the Diet of Spire, 25 December, 1146. However, there was no such enthusiasm as had prevailed in 1095. Just as the crusaders started on their march, King Roger of Sicily attacked the Byzantine Empire, but his expedition merely checked the progress of Nour-ed-Din's invasion. The sufferings endured by the crusaders while crossing Asia Minor prevented them from advancing on Edessa. They contented themselves with besieging Damascus, but were obliged to retreat at the end of a few weeks (July, 1148). This defeat caused great dissatisfaction in the West; moreover, the conflicts between the Greeks and the crusaders only confirmed the general opinion that the Byzantine Empire was the chief obstacle to the success of the Crusades. Nevertheless, Manuel Comnenus endeavoured to strengthen the bonds that united the Byzantine Empire to the Italian principalities. In 1161 he married Mary of Antioch, and in 1167 gave the hand of one of his nieces to Amalric, King of Jerusalem. This alliance resulted in thwarting the progress of Nour-ed-Din, who, having become master of Damascus in 1154, refrained thenceforth from attacking the Christian dominions.

King Amalric profited by this respite to interpose in the affairs of Egypt, as the only remaining representatives of the Fatimite dynasty were children, and two rival viziers were disputing the supreme power amid conditions of absolute anarchy. One of these disputants, Shawer, being exiled from Egypt, took refuge with Nour-ed-Din, who sent his best general, Shîrkûh, to reinstate him. After his conquest of Cairo, Shîrkûh endeavoured to bring Shawer into disfavour with the caliph; Amalric, taking advantage of this, allied himself with Shawer. On two occasions, in 1164 and 1167, he forced Shîrkûh to evacuate Egypt; a body of Frankish knights was stationed at one of the gates of Cairo, and Egypt paid a tribute of 100,000 *dînârs* to the Kingdom of Jerusalem. In 1168 Amalric made another attempt to conquer Egypt, but failed. After ordering the assassination of Shawer, Shîrkûh had himself proclaimed Grand Vizier. At his death on 3 March, 1169, he was succeeded by his nephew, Salah-ed-Dîn (Saladin). During that year Amalric, aided by a Byzantine fleet, invaded Egypt once more, but was defeated at Damietta. Saladin retained full sway in Egypt and appointed no successor to the last Fatimite caliph, who died in 1171. Moreover, Nour-ed-Din died in 1174, and, while his sons and nephews disputed the inheritance, Saladin took possession of Damascus and conquered all Mesopotamia except Mosul. Thus, when Amalric died in 1173, leaving the royal power to Baldwin IV, "the Leprous", a child of thirteen, the kingdom of Jerusalem was threatened on all sides. At the same time two factions, led respectively by Guy de Lusignan, brother-in-law of the king, and Raymond, Count of Tripoli, contended for the supremacy. Baldwin IV died in 1184, and was soon followed to the grave by his nephew Baldwin V. Despite lively opposition, Guy de Lusignan was crowned king, 20 July, 1186. Though the struggle against Saladin was already under way, it was unfortunately conducted without

order or discipline. Notwithstanding the truce concluded with Saladin, Renaud de Châtillon, a powerful feudatory and lord of the trans-Jordanic region, which included the fief of Montréal, the great castle of Karak, and Ailet, a port on the Red Sea, sought to divert the enemy's attention by attacking the holy cities of the Mohammedans. Careless vessels were brought to Ailet on the backs of camels in 1182, and a fleet of five galleys traversed the Red Sea for a whole year, ravaging the coasts as far as Aden; a body of knights even attempted to seize Medina. In the end this fleet was destroyed by Saladin's, and, to the great joy of the Mohammedans, the Frankish prisoners were put to death at Mecca. Attacked in his castle at Karak, Renaud twice repulsed Saladin's forces (1184-86). A truce was then signed, but Renaud broke it again and carried off a caravan in which was the sultan's own sister. In his exasperation Saladin invaded the Kingdom of Jerusalem and, although Guy de Lusignan gathered all his forces to repel the attack, on 4 July, 1187, Saladin's army annihilated that of the Christians on the shores of Lake Tiberias. The king, the grand master of the Temple, Renaud de Châtillon, and the most powerful men in the realm were made prisoners. After slaying Renaud with his own hand, Saladin marched on Jerusalem. The city capitulated 17 September, and Tyre, Antioch, and Tripoli were the only places in Syria that remained to the Christians.

IV. ATTEMPTS TO RESTORE THE CHRISTIAN STATES AND THE CRUSADE AGAINST SAINT-JEAN D'ACRE.—The news of these events caused great consternation in Christendom, and Pope Gregory VIII strove to put a stop to all dissensions among the Christian princes. On 21 January, 1188, Philip Augustus, King of France, and Henry II, Plantagenet, became reconciled at Gisors and took the cross. On 27 March, at the Diet of Mainz, Frederick Barbarossa and a great number of German knights made a vow to defend the Christian cause in Palestine. In Italy, Pisa made peace with Genoa, Venice with the King of Hungary, and William of Sicily with the Byzantine Empire. Moreover, a Scandinavian fleet consisting of 12,000 warriors sailed around the shores of Europe; when passing Portugal, it helped to capture Alvor from the Mohammedans. Enthusiasm for the crusade was again wrought up to a high pitch; but, on the other hand, diplomacy and royal and princely schemes became increasingly important in its organization. Frederick Barbarossa entered into negotiations with Isaac Angelus, Emperor of Constantinople, with the Sultan of Iconium, and even with Saladin himself. It was, moreover, the first time that all the Mohammedan forces were united under a single leader; Saladin, while the holy war was being preached, organized against the Christians something like a counter-crusade. Frederick Barbarossa, who was first ready for the enterprise, and to whom chroniclers attribute an army of 100,000 men, left Ratisbon, 11 May, 1189. After crossing Hungary he took the Balkan passes by assault and tried to outflank the hostile movements of Isaac Angelus by attacking Constantinople. Finally, after the sack of Adrianople, Isaac Angelus surrendered, and between 21 and 30 March, 1190, the Germans succeeded in crossing the Strait of Gallipoli. As usual, the march across Asia Minor was most arduous. With a view to replenishing provisions, the army took Iconium by assault. On their arrival in the Taurus region, Frederick Barbarossa tried to cross the Selef (Kalykadnos) on horseback and was drowned. Thereupon many German princes returned to Europe; the others, under the emperor's son, Frederick of Swabia, reached Antioch and proceeded thence to Saint-Jean d'Acre. It was before this city that finally all the crusading troops assembled. In June, 1189, King Guy de Lusignan, who had been released from captivity, appeared there

with the remnant of the Christian army, and, in September of the same year, the Scandinavian fleet arrived, followed by the English and Flemish fleets, commanded respectively by the Archbishop of Canterbury and Jacques d'Avesnes. This heroic siege lasted two years. In the spring of each year reinforcements arrived from the West, and a veritable Christian city sprang up outside the walls of Acre. But the winters were disastrous to the crusaders, whose ranks were decimated by disease brought on by the inclemency of the rainy season and lack of food. Saladin came to the assistance of the city, and communicated with it by means of carrier pigeons. Missile-hurling machines (*pierrières*), worked by powerful machinery, were used by the crusaders to demolish the walls of Acre, but the Mohammedans also had strong artillery. This famous siege had already lasted two years when Philip Augustus, King of France, and Richard Cœur de Lion, King of England, arrived on the scene. After long deliberation they had left Vézelay together, 4 July, 1190. Richard embarked at Marseilles, Philip at Genoa, and they met at Messina. During a sojourn in this place, lasting until March, 1191, they almost quarrelled, but finally concluded a treaty of peace. While Philip was landing at Acre, Richard was shipwrecked on the coast of Cyprus, then independent under Isaac Comnenus. With the aid of Guy de Lusignan, Richard conquered this island. The arrival of the Kings of France and England before Acre brought about the capitulation of the city, 13 July, 1191. Soon, however, the quarrel of the French and English kings broke out again, and Philip Augustus left Palestine, 28 July. Richard was now leader of the crusade, and, to punish Saladin for the non-fulfilment of the treaty conditions within the time specified, had the Mohammedan hostages put to death. Next, an attack on Jerusalem was meditated, but, after beguiling the Christians by negotiations, Saladin brought numerous troops from Egypt. The enterprise failed, and Richard compensated himself for these reverses by brilliant but useless exploits which made his name legendary among the Mohammedans. Before his departure he sold the Island of Cyprus, first to the Templars, who were unable to settle there, and then to Guy de Lusignan, who renounced the Kingdom of Jerusalem in favour of Conrad of Montferrat (1192). After a last expedition to defend Jaffa against Saladin, Richard declared a truce and embarked for Europe, 9 October, 1192, but did not reach his English realm until he had undergone a humiliating captivity at the hands of the Duke of Austria, who avenged in this way the insults offered him before Saint-Jean d'Acre.

While Capetians and Plantagenets, oblivious of the Holy War, were settling at home their territorial disputes, Emperor Henry VI, son of Barbarossa, took in hand the supreme direction of Christian politics in the East. Crowned King of the Two Sicilies, 25 December, 1194, he took the cross at Bari, 31 May, 1195, and made ready an expedition which, he thought, would recover Jerusalem and wrest Constantinople from the usurper Alexius III. Eager to exercise his imperial authority he made Amaury de Lusignan King of Cyprus and Leo II King of Armenia. In September, 1197, the German crusaders started for the East. They landed at Saint-Jean d'Acre and marched on Jerusalem, but were detained before the little town of Tibnin from November, 1197, to February, 1198. On raising the siege, they learned that Henry VI had died, 28 September, at Messina, where he had gathered the fleet that was to convey him to Constantinople. The Germans signed a truce with the Saracens, but their future influence in Palestine was assured by the creation of the Order of the Teutonic Knights. In 1143, a German pilgrim had founded a hospital for his fellow-countrymen; the religious who served it moved to Acre and, in 1198, were organized in imitation of

the plan of the Hospitallers, their rule being approved by Innocent III in 1199.

V. THE CRUSADE AGAINST CONSTANTINOPLE (1204).—In the many attempts made to establish the Christian states the efforts of the crusaders had been directed solely toward the object for which the Holy War had been instituted; the crusade against Constantinople shows the first deviation from the original purpose. For those who strove to gain their ends by taking the direction of the crusades out of the pope's hands, this new movement was, of course, a triumph, but for Christendom it was a source of perplexity. Scarcely had Innocent III been elected pope, in January, 1198, when he inaugurated a policy in the East which he was to follow throughout his pontificate. He subordinated all else to the recapture of Jerusalem and the reconquest of the Holy Land. In his first Encyclicals he summoned all Christians to join the crusade and even negotiated with Alexius III, the Byzantine emperor, trying to persuade him to re-enter the Roman communion and use his troops for the liberation of Palestine. Peter of Capua, the papal legate, brought about a truce between Philip Augustus and Richard Cœur de Lion, January, 1199, and popular preachers, among others the parish priest Foulques of Neuilly, attracted large crowds. During a tournament at Ecry-sur-Aisne, 28 November, 1199, Count Thibaud de Champagne and a great many knights took the cross; in southern Germany, Martin, Abbot of Pairis, near Colmar, won many to the crusade. It would seem, however, that, from the outset, the pope lost control of this enterprise. Without even consulting Innocent III, the French knights, who had elected Thibaud de Champagne as their leader, decided to attack the Mohammedans in Egypt and in March, 1201, concluded with the Republic of Venice a contract for the transportation of troops on the Mediterranean. On the death of Thibaud the crusaders chose as his successor Boniface, Marquis of Montferrat, and cousin of Philip of Swabia, then in open conflict with the pope. Just at this time the son of Isaac Angelus, the dethroned Emperor of Constantinople, sought refuge in the West and asked Innocent III and his own brother-in-law, Philip of Swabia, to reinstate him on the imperial throne. The question has been raised whether it was pre-arranged between Philip and Boniface of Montferrat to turn the crusade towards Constantinople, and a passage in the "*Gesta Innocentii*" (83, in P. L., CCXIV, CXXXII) indicates that the idea was not new to Boniface of Montferrat when, in the spring of 1202, he made it known to the pope. Meanwhile the crusaders assembled at Venice could not pay the amount called for by their contract, so, by way of exchange, the Venetians suggested that they help recover the city of Zara in Dalmatia. The knights accepted the proposal, and, after a few days' siege, the city capitulated, November, 1202. But it was in vain that Innocent III urged the crusaders to set out for Palestine. Having obtained absolution for the capture of Zara, and despite the opposition of Simon of Montfort and a part of the army, on 24 May, 1203, the leaders ordered a march on Constantinople. They had concluded with Alexius, the Byzantine pretender, a treaty whereby he promised to have the Greeks return to the Roman communion, give the crusaders 200,000 marks, and participate in the Holy War. On 23 June the crusaders' fleet appeared before Constantinople; on 7 July they took possession of a suburb of Galata and forced their way into the Golden Horn; on 17 July they simultaneously attacked the sea walls and land walls of the Blachernæ. The troops of Alexius III made an unsuccessful sally, and the usurper fled, whereupon Isaac Angelus was released from prison and permitted to share the imperial dignity with his son, Alexius IV. But even had the latter been sincere he would have been powerless to keep the promises made to the crusaders. After some months

of tedious waiting, those of their number cantoned at Galata lost patience with the Greeks, who not only refused to live up to their agreement, but likewise treated them with open hostility. On 5 February, 1204, Alexius IV and Isaac Angelus were deposed by a revolution, and Alexius Murzuphla, a usurper, undertook the defence of Constantinople against the Latin crusaders who were preparing to besiege Constantinople a second time. By a treaty concluded in March, 1204, between the Venetians and the crusading chiefs, it was pre-arranged to share the spoils of the Greek Empire. On 12 April, 1204, Constantinople was carried by storm, and the next day the ruthless plundering of its churches and palaces was begun. The masterpieces of antiquity, piled up in public places and in the Hippodrome, were utterly destroyed. Clerics and knights, in their eagerness to acquire famous and priceless relics, took part in the sack of the churches. The Venetians received half the booty; the portion of each crusader was determined according to his rank of baron, knight, or bailiff, and most of the churches of the West were enriched with ornaments stripped from those of Constantinople. On 9 May, 1204, an electoral college, formed of prominent crusaders and Venetians, assembled to elect an emperor. Dandolo, Doge of Venice, refused the honour, and Boniface of Montferrat was not considered. In the end, Baldwin, Count of Flanders, was elected and solemnly crowned in St. Sophia. Constantinople and the empire were divided among the emperor, the Venetians, and the chief crusaders; the Marquis of Montferrat received Thessalonica and Macedonia, with the title of king; Henry of Flanders became Lord of Adramyttion; Louis of Blois was made Duke of Nicæa, and fiefs were bestowed upon six hundred knights. Meanwhile, the Venetians reserved to themselves the ports of Thrace, the Peloponnese, and the islands. Thomas Morosini, a Venetian priest, was elected patriarch.

At the news of these most extraordinary events, in which he had had no hand, Innocent III bowed as in submission to the designs of Providence and, in the interests of Christendom, determined to make the best of the new conquest. His chief aim was to suppress the Greek schism and to place the forces of the new Latin Empire at the service of the crusade. Unfortunately, the Latin Empire of Constantinople was in too precarious a condition to furnish any material support to the papal policy. The emperor was unable to impose his authority upon the barons. At Nicæa, not far from Constantinople, the former Byzantine Government gathered the remnant of its authority and its followers. Theodore Lascaris was proclaimed emperor. In Europe, Joannitsa, Tsar of the Wallachians and Bulgarians, invaded Thrace and destroyed the army of the crusaders before Adrianople, 14 April, 1205. During the battle the Emperor Baldwin fell. His brother and successor, Henry of Flanders, devoted his reign (1206-16) to interminable conflicts with the Bulgarians, the Lombards of Thessalonica, and the Greeks of Asia Minor. Nevertheless, he succeeded in strengthening the Latin conquest, forming an alliance with the Bulgarians, and establishing his authority even over the feudatories of Morea (Parliament of Ravennika, 1209); however, far from leading a crusade into Palestine, he had to solicit Western help, and was obliged to sign treaties with Theodore Lascaris and even with the Sultan of Iconium. The Greeks were not reconciled to the Church of Rome; most of their bishops abandoned their sees and took refuge at Nicæa, leaving their churches to the Latin bishops named to replace them. Greek convents were replaced by Cistercian monasteries, commanderies of Templars and Hospitaliers, and chapters of canons. With a few exceptions, however, the native population remained hostile and looked upon the Latin conquerors as foreigners. Having failed in all his attempts to induce the barons of the Latin Empire

to undertake an expedition against Palestine, and understanding at last the cause of failure of the crusade in 1204, Innocent III resolved (1207) to organize a new crusade and to take no further notice of Constantinople. Circumstances, however, were unfavourable. Instead of concentrating the forces of Christendom against the Mohammedans, the pope himself disbanded them by proclaiming (1209) a crusade against the Albigenses in the south of France, and against the Almohades of Spain (1213), the pagans of Prussia, and John Lackland of England. At the same time there occurred outbursts of mystical emotion similar to those which had preceded the first crusade. In 1212 a young shepherd of Vendôme and a youth from Cologne gathered thousands of children whom they proposed to lead to the conquest of Palestine. The movement spread through France and Italy. This "Children's Crusade" at length reached Brindisi, where merchants sold a number of the children as slaves to the Moors, while nearly all the rest died of hunger and exhaustion. In 1213 Innocent III had a crusade preached throughout Europe and sent Cardinal Pelagius to the East to effect, if possible, the return of the Greeks to the fold of Roman unity. On 25 July, 1215, Frederick II, after his victory over Otto of Brunswick, took the cross at the tomb of Charlemagne at Aachen. On 11 November, 1215, Innocent III opened the Fourth Lateran Council with an exhortation to all the faithful to join the crusade, the departure being set for 1217. At the time of his death (1216) Pope Innocent felt that a great movement had been started.

VI. THE THIRTEENTH-CENTURY CRUSADES (1217-52).—In Europe, however, the preaching of the crusade met with great opposition. Temporal princes were strongly averse to losing jurisdiction over their subjects who took part in the crusades. Absorbed in political schemes, they were unwilling to send so far away the military forces on which they depended. As early as December, 1216, Frederick II was granted a first delay in the fulfilment of his vow. The crusade as preached in the thirteenth century was no longer the great enthusiastic movement of 1095, but rather a series of irregular and desultory enterprises. Andrew II, King of Hungary, and Casimir, Duke of Pomerania, set sail from Venice and Spalato, while an army of Scandinavians made a tour of Europe. The crusaders landed at Saint-Jean d'Acre in 1217, but confined themselves to incursions on Mussulman territory, whereupon Andrew of Hungary returned to Europe. Receiving reinforcements in the spring of 1218, John of Brienne, King of Jerusalem, resolved to make an attack on the Holy Land by way of Egypt. The crusaders accordingly landed at Damietta in May, 1218, and, after a siege marked by many deeds of heroism, took the city by storm, 5 November, 1219. Instead of profiting by this victory, they spent over a year in idle quarrels, and it was not until May, 1221, that they set out for Cairo. Surrounded by the Saracens at Mansurah, 24 July, the Christian army was routed. John of Brienne was compelled to purchase a retreat by the surrender of Damietta to the Saracens. Meanwhile Emperor Frederick II, who was to be the leader of the crusade, had remained in Europe and continued to importune the pope for new postponements of his departure. On 9 November, 1225, he married Isabelle of Brienne, heiress to the Kingdom of Jerusalem, the ceremony taking place at Brindisi. Completely ignoring his father-in-law, he assumed the title of King of Jerusalem. In 1227, however, he had not yet left for Palestine. Gregory IX, elected pope 19 March, 1227, summoned Frederick to fulfil his vow. Finally, 8 September, the emperor embarked but soon turned back; therefore, on 29 September, the pope excommunicated him. Nevertheless, Frederick set sail again 18 June, 1228, but instead of leading a crusade he played a game of diplomacy. He won over Malek-

el-Khamil, the Sultan of Egypt, who was at war with the Prince of Damascus, and concluded a treaty with him at Jaffa, February, 1229, according to the terms of which Jerusalem, Bethlehem, and Nazareth were restored to the Christians. On 18 March, 1229, without any religious ceremony, Frederick assumed the royal crown of Jerusalem in the church of the Holy Sepulchre. Returning to Europe, he became reconciled to Gregory IX, August, 1230. The pontiff ratified the Treaty of Jaffa, and Frederick sent knights into Syria to take possession of the cities and compel all feudatories to do him homage. A struggle occurred between Richard Filangieri, the emperor's marshal, and the barons of Palestine, whose leader was Jean d'Ibelin, Lord of Beirut. Filangieri vainly attempted to obtain possession of the Island of Cyprus, and, when Conrad, son of Frederick II and Isabelle of Brienne, came of age in 1243, the High Court, described above, named as regent Alix of Champagne, Queen of Cyprus. In this way German power was abolished in Palestine.

In the meantime Count Thibaud IV of Champagne had been leading a fruitless crusade in Syria (1239). Similarly the Duke of Burgundy and Richard of Cornwall, brother of the King of England, who had undertaken to recover Ascalon, concluded a truce with Egypt (1241). Europe was now threatened with a most grievous disaster. After conquering Russia, the Mongols under Jenghiz Khan appeared in 1241 on the frontiers of Poland, routed the army of the Duke of Silesia at Liegnitz, annihilated that of Bela, King of Hungary, and reached the Adriatic. Palestine felt the consequences of this invasion. The Mongols had destroyed the Mussulman Empire of Khazim in Central Asia. Fleeing before their conquerors, 10,000 Khazimians offered their services to the Sultan of Egypt, meanwhile seizing Jerusalem as they passed by, in September, 1244. The news of this catastrophe created a great stir in Europe, and at the Council of Lyons (June-July, 1245) Pope Innocent IV proclaimed a crusade, but the lack of harmony between him and the Emperor Frederick II foredoomed the pontiff to disappointment. Save for Louis IX, King of France, who took the cross in December, 1244, no one showed any willingness to lead an expedition to Palestine. On being informed that the Mongols were well-disposed towards Christianity, Innocent IV sent them Giovanni di Pianocarpini, a Franciscan, and Nicolas Ascelin, a Dominican, as ambassadors. Pianocarpini was in Karakorum 8 April, 1246, the day of the election of the great khan, but nothing came of this first attempt at an alliance with the Mongols against the Mohammedans. However, when St. Louis, who left Paris 12 June, 1248, had reached the Island of Cyprus, he received there a friendly embassy from the great khan and, in return, sent him two Dominicans. Encouraged, perhaps, by this alliance, the King of France decided to attack Egypt. On 7 June, 1249, he took Damietta, but it was only six months later that he marched on Cairo. On 19 December, his advance-guard, commanded by his brother, Robert of Artois, began imprudently to fight in the streets of Mansurah and were destroyed. The king himself was cut off from communication with Damietta and made prisoner 5 April, 1250. At the same time, the Ajobuite dynasty founded by Saladin was overthrown by the Mameluke militia, whose ameers took possession of Egypt. St. Louis negotiated with the latter and was set at liberty on condition of surrendering Damietta and paying a ransom of a million gold bezants. He remained in Palestine until 1254; bargained with the Egyptian ameers for the deliverance of prisoners; improved the equipment of the strongholds of the kingdom, Saint-Jean d'Acre, Casarea, Jaffa, and Sidon; and sent Friar William of Rubruquis as ambassador to the great khan. Then, at the news of the death of his mother, Blanche of Castile, who had been

acting as regent, he returned to France. Since the crusade against Saint-Jean d'Acre, a new Frankish state, the Kingdom of Cyprus, had been formed in the Mediterranean opposite Syria and became a valuable point of support for the crusades. By lavish distribution of lands and franchises, Guy de Lusignan succeeded in attracting to the island colonists, knights, men-at-arms, and civilians; his successors established a government modelled after that of the Kingdom of Jerusalem. The king's power was restricted by that of the High Court, composed of all the knights, vassals, or under-vassals, with its seat at Nicosia. However, the fiefs were less extensive than in Palestine, and the feudatories could inherit only in a direct line. The Island of Cyprus was soon populated with French colonists who succeeded in winning over the Greeks, upon whom they even imposed their language. Churches built in the French style and fortified castles appeared on all sides. The Cathedral of St. Sophia in Nicosia, erected between 1217 and 1251, was almost a copy of a church in Champagne. Finally, commercial activity became a pronounced characteristic of the cities of Cyprus, and Famagusta developed into one of the busiest of Mediterranean ports.

VII. FINAL LOSS OF THE CHRISTIAN COLONIES OF THE EAST (1254-91).—No longer aided by funds from the West, and rent by internal disorders, the Christian colonies owed their temporary salvation to the changes in Mussulman policy and the intervention of the Mongols. The Venetians drove the Genoese from Saint-Jean d'Acre and treated the city as conquered territory; in a battle where Christians fought against Christians, and in which Hospitallers were pitted against Templars, 20,000 men perished. In revenge the Genoese allied themselves with Michael Palæologus, Emperor of Nicæa, whose general, Alexius Strategopulos, had now no trouble in entering Constantinople and overthrowing the Latin Emperor, Baldwin II, 25 July, 1261. The conquest of the Caliphate of Bagdad by the Mongols (1258) and their invasion of Syria, where they seized Aleppo and Damascus, terrified both Christians and Mohammedans; but the Mameluke ameer, Bibars the Arbelester, defeated the Mongols and wrested Syria from them in September, 1260. Proclaimed sultan in consequence of a conspiracy, in 1260, Bibars began a merciless war on the remaining Christian states. In 1263 he destroyed the church at Nazareth; in 1265 took Casarea and Jaffa, and finally captured Antioch (May, 1268). The question of a crusade was always being agitated in the West, but except among men of a religious turn of mind, like St. Louis, there was no longer any earnestness in the matter among European princes. They looked upon a crusade as a political instrument, to be used only when it served their own interests. To prevent the preaching of a crusade against Constantinople, Michael Palæologus promised the pope to work for the union of the Churches; but Charles of Anjou, brother of St. Louis, whom the conquest of the Two Sicilies had rendered one of the most powerful princes of Christendom, undertook to carry out for his own benefit the Eastern designs hitherto cherished by the Hohenstaufen. While Mary of Antioch, granddaughter of Amaury II, bequeathed him the rights she claimed to have to the crown of Jerusalem, he signed the treaty of Viterbo with Baldwin II (27 May, 1267), which assured him eventually the inheritance of Constantinople. In no wise troubled by these diplomatic combinations, St. Louis thought only of the crusade. In a parliament held at Paris, 24 March, 1267, he and his three sons took the cross, but, despite his example, many knights resisted the exhortations of the preacher Humbert de Romans. On hearing the reports of the missionaries, Louis resolved to land at Tunis, whose prince he hoped to convert to Christianity. It has been asserted that St. Louis was led to Tunis by Charles of Anjou, but instead of encouraging his

brother's ambition the saint endeavoured to thwart it. Charles had tried to take advantage of the vacancy of the Holy See between 1268 and 1271 in order to attack Constantinople, the negotiations of the popes with Michael Palæologus for religious union having heretofore prevented him. St. Louis received the embassy of the Greek emperor very graciously and ordered Charles of Anjou to join him at Tunis. The crusaders, among whom was Prince Edward of England, landed at Carthage 17 July, 1270, but the plague broke out in their camp, and on 25 August, St. Louis himself was carried off by the scourge. Charles of Anjou then concluded a treaty with the Mohammedans, and the crusaders reembarked. Prince Edward alone, determined to fulfil his vow, and set out for Saint-Jean d'Acre; however, after a few *razzias* on Saracenic territory, he concluded a truce with Bibars.

The field was now clear for Charles of Anjou, but the election of Gregory X, who was favourable to the crusade, again frustrated his plans. While the emissaries of the King of the Two Sicilies traversed the Balkan peninsula, the new pope was awaiting the union of the Western and Eastern Churches, which event was solemnly proclaimed at the Council of Lyons, 6 July, 1274; Michael Palæologus himself promised to take the cross. On 1 May, 1275, Gregory X effected a truce between this sovereign and Charles of Anjou. In the meantime Philip III, King of France, the King of England, and the King of Aragon made a vow to go to the Holy Land. Unfortunately the death of Gregory X brought these plans to nought, and Charles of Anjou resumed his scheming. In 1277 he sent into Syria Roger of San Severino, who succeeded in planting his banner on the castle of Acre and in 1278 took possession of the principality of Achaia in the name of his daughter-in-law Isabelle de Villehardouin. Michael Palæologus had not been able to effect the union of the Greek clergy with Rome, and in 1281 Pope Martin IV excommunicated him. Having signed an alliance with Venice, Charles of Anjou prepared to attack Constantinople, and his expedition was set for April, 1283. On 30 March, 1282, however, the revolt known as the Sicilian Vespers occurred, and once more his projects were defeated. In order to subdue his own rebellious subjects and to wage war against the King of Aragon, Charles was at last compelled to abandon his designs on the East. Meanwhile Michael Palæologus remained master of Constantinople, and the Holy Land was left defenceless. In 1280 the Mongols attempted once more to invade Syria, but were repulsed by the Egyptians at the battle of Hims; in 1286 the inhabitants of Saint-Jean d'Acre expelled Charles of Anjou's seneschal and called to their aid Henry II, King of Cyprus. Kelaoun, the successor of Bibars, now broke the truce which he had concluded with the Christians, and seized Margat, the stronghold of the Hospitaliers. Tripoli surrendered in 1289, and on 5 April, 1291, Malek-Aschraf, son and successor of Kelaoun, appeared before Saint-Jean d'Acre with 120,000 men. The 25,000 Christians who defended the city were not even under one supreme commander; nevertheless they resisted with heroic valour, filled breaches in the wall with stakes and bags of cotton and wool, and communicated by sea with King Henry II, who brought them help from Cyprus. However, 28 May, the Mohammedans made a general attack and penetrated into the town, and its defenders fled in their ships. The strongest opposition was offered by the Templars, the garrison of whose fortress held out ten days longer, only to be completely annihilated. In July, 1291, the last Christian towns in Syria capitulated, and the Kingdom of Jerusalem ceased to exist.

VIII. THE FOURTEENTH CENTURY CRUSADE AND THE OTTOMAN INVASION.—The loss of Saint-Jean d'Acre did not lead the princes of Europe to organize a new crusade. Men's minds were indeed, as usual,

directed towards the East, but in the first years of the fourteenth century the idea of a crusade inspired principally the works of theorists who saw in it the best means of reforming Christendom. The treatise by Pierre Dubois, law-officer of the crown at Coutances, "*De Recuperatione Terræ Sanctæ*" (Langlois, ed., Paris, 1891), seems like the work of a dreamer, yet some of its views are truly modern. The establishment of peace between Christian princes by means of a tribunal of arbitration, the idea of making a French prince hereditary emperor, the secularization of the Patrimony of St. Peter, the consolidation of the Orders of the Hospitaliers and Templars, the creation of a disciplined army the different corps of which were to have a special uniform, the creation of schools for the study of Oriental languages, and the intermarriage of Christian maidens with Saracens were the principal ideas it propounded (1307). On the other hand the writings of men of greater activity and wider experience suggested more practical methods for effecting the conquest of the East. Persuaded that Christian defeat in the Orient was largely due to the mercantile relations which the Italian cities Venice and Genoa continued to hold with the Mohammedans, these authors sought the establishment of a commercial blockade which, within a few years, would prove the ruin of Egypt and cause it to fall under Christian control. For this purpose it was recommended that a large fleet be fitted out at the expense of Christian princes and made to do police duty on the Mediterranean so as to prevent smuggling. These were the projects set forth in the memoirs of Fidentius of Padua, a Franciscan (about 1291, *Bibliothèque Nationale*, Latin MSS., 7247); in those of King Charles II of Naples (1293, *Bib. Nat.*, Frankish MSS., 6049); Jacques de Molay (1307, Baluze, ed., *Vitæ paparum Avinion.*, II, 176-185); Henry II, King of Cyprus (Mas-Latrie, ed., *Histoire de Chypre*, II, 118); Guillaume d'Adam, Archbishop of Sultanieh (1310, Kohler, ed., *Collect. Hist. of the Crusades, Armenian Documents*, II); and Marino Sanudo, the Venetian (Bongars, ed., *Secreta fidelium Crucis*, II). The consolidation of the military orders was also urged by Charles II. Many other memoirs, especially that of Hayton, King of Armenia (1307, ed. *Armenian Documents*, I), considered an alliance between the Christians and the Mongols of Persia indispensable to success. In fact, from the end of the thirteenth century many missionaries had penetrated into the Mongolian Empire; in Persia, as well as in China, their propaganda flourished. St. Francis of Assisi and Raymond Lully had hoped to substitute for the warlike crusade a peaceable conversion of the Mohammedans to Christianity. Raymond Lully, born at Palma, on the Island of Majorca, in 1235, began (1275) his "*Great Art*", which, by means of a universal method for the study of Oriental languages, would equip missionaries to enter into controversies with the Mohammedan doctors. In the same year he prevailed upon the King of Majorca to found the College of the Blessed Trinity at Miramar, where the Friars Minor could learn the Oriental languages. He himself translated catechetical treatises into Arabic and, after spending his life travelling in Europe trying to win over to his ideas popes and kings, suffered martyrdom at Bougie, where he had begun his work of evangelization (1314). Among the Mohammedans this propaganda encountered insurmountable difficulties, whereas the Mongols, some of whom were still members of the Nestorian Church, received it willingly. During the pontificate of John XXII (1316-34) permanent Dominican and Franciscan missions were established in Persia, China, Tatar, and Turkestan, and in 1318 the Archbishopric of Sultanieh was created in Persia. In China Giovanni de Monte Corvino, created Archbishop of Cambaluc (Peking), organized the religious hierarchy, founded monasteries, and converted to Christianity

men of note, possibly the great khan himself. The account of the journey of Blessed Orderic de Porde-none (Cordier, ed.) across Asia, between 1304 and 1330, shows us that Christianity had gained a foothold in Persia, India, Central Asia, and Southern China.

By thus leading up to an alliance between Mongols and Christians against the Mohammedans, the crusade had produced the desired effect; early in the fourteenth century the future development of Christianity in the East seemed assured. Unfortunately, however, the internal changes which occurred in the West, the weakening of the political influence of the popes, the indifference of temporal princes to what did not directly affect their territorial interests rendered unavailing all efforts towards the re-establishment of Christian power in the East. The popes endeavoured to insure the blockade of Egypt by prohibiting commercial intercourse with the infidels and by organizing a squadron for the prevention of smuggling, but the Venetians and Genoese defiantly sent their vessels to Alexandria and sold slaves and military stores to the Mamelukes. Moreover, the consolidation of the military orders could not be effected. By causing the suppression of the Templars at the Council of Vienne in 1311, King Philip the Fair dealt a cruel blow to the crusade; instead of giving to the Hospitallers the immense wealth of the Templars, he confiscated it. The Teutonic Order having established itself in Prussia in 1228, there remained in the East only the Hospitallers. After the capture of Saint-Jean d'Acre, Henry II, King of Cyprus, had offered them shelter at Limasol, but there they found themselves in very straitened circumstances. In 1310 they seized the Island of Rhodes, which had become a den of pirates, and took it as their permanent abode. Finally, the contemplated alliance with the Mongols was never fully realized. It was in vain that Argoun, Khan of Persia, sent the Nestorian monk, Raban Sauma, as ambassador to the pope and the princes of the West (1285-88); his offers elicited but vague replies. On 23 December, 1299, Cazan, successor to Argoun, inflicted a defeat upon the Christians at Hims, and captured Damascus, but he could not hold his conquests, and died in 1304 just as he was preparing for a new expedition. The princes of the West assumed the cross in order to appropriate to their own use the tithes which, for the defrayal of crusade expenses, they had levied upon the property of the clergy. For these sovereigns the crusade had no longer any but a fiscal interest. In 1336 King Philip VI of France, whom the pope had appointed leader of the crusade, collected a fleet at Marseilles and was preparing to go to the East when the news of the projects of Edward III caused him to return to Paris. War then broke out between France and England, and proved an insurmountable obstacle to the success of any crusade just when the combined forces of all Christendom would have been none too powerful to resist the new storm gathering in the East. From the close of the thirteenth century a band of Ottoman Turks, driven out of Central Asia by Mongol invasions, had founded a military state in Asia Minor and now threatened to invade Europe. They captured Ephesus in 1308, and in 1326 Othman, their sultan, established his residence at Broussa (Prusa) in Bithynia; under Ourkhan, moreover, they organized the regular foot-guards of janizaries against whom the undisciplined troops of Western knights could not hold out. The Turks entered Nicomedia in 1328 and Nicæa in 1330; when they threatened the Emperors of Constantinople, the latter renewed negotiations with the popes with a view towards the reconciliation of the Greek and Roman Churches, for which purpose Barlaam was sent as ambassador to Avignon, in 1339. At the same time the Egyptian Mamelukes destroyed the port of Lajazzo, commercial centre of the Kingdom of Armenia Minor, where the remnants of the Christian colonies

had sought refuge after the taking of Saint-Jean d'Acre (1337). The commercial welfare of the Venetians themselves was threatened; with their support Pope Clement VI in 1344 succeeded in reorganizing the maritime league whose operations had been prevented by the war between France and England. Genoa, the Hospitallers, and the King of Cyprus all sent their contingents, and, on 28 October, 1344, the crusaders seized Smyrna, which was confided to the care of the Hospitallers. In 1345 reinforcements under Humbert, Dauphin of Viennois, appeared in the Archipelago, but the new leader of the crusade was utterly disqualified for the work assigned him; unable to withstand the piracy of the Turkish ameer, the Christians concluded a truce with them in 1348. In 1356 the Ottomans captured Gallipoli and intercepted the route to Constantinople.

The cause of the crusade then found an unexpected defender in Peter I, King of Cyprus, who, called upon by the Armenians, succeeded in surprising and storming the city of Adalia on the Cilician coast in 1361. Urged by his chancellor, Philippe de Mézières, and Pierre Thomas, the papal legate, Peter I undertook a voyage to the West (1362-65) in the hope of reviving the enthusiasm of the Christian princes. Pope Urban V extended him a magnificent welcome, as did also John the Good, King of France, who took the cross at Avignon, 20 March, 1363; the latter's example was followed by King Edward III, the Black Prince, Emperor Charles IV, and Casimir, King of Poland. Everywhere King Peter was tendered fair promises, but when, in June, 1365, he embarked at Venice he was accompanied by hardly any but his own forces. After rallying the fleet of the Hospitallers, he appeared unexpectedly before the Old Port of Alexandria, landed without resistance, and plundered the city for two days, but at the approach of an Egyptian army his soldiers forced him to retreat, 9-16 October, 1365. Again in 1367 he pillaged the ports of Syria, Tripoli, Tortosa, Laodicea, and Jaffa, thus destroying the commerce of Egypt. Later, in another voyage to the West, he made a supreme effort to interest the princes in the crusade, but on his return to Cyprus he was assassinated, as the result of a conspiracy. Meanwhile the Ottomans continued their progress in Europe, taking Philippopolis in 1363 and, in 1365, capturing Adrianople, which became the capital of the sultans. At the solicitation of Pope Urban V, Amadeus VII, Count of Savoy, took the cross and on 15 August, 1366, his fleet seized Gallipoli; then, after rescuing the Greek emperor, John V, held captive by the Bulgarians, he returned to the West. In spite of the heroism displayed during these expeditions, the efforts made by the crusaders were too intermittent to be productive of enduring results. Philippe de Mézières, a friend and admirer of Pierre de Lusignan, eager to seek a remedy for the ills of Christendom, dreamed of founding a new militia, the Order of the Passion, an organization whose character was to be at once clerical and military, and whose members, although married, were to lead an almost monastic life and consecrate themselves to the conquest of the Holy Land. Being well received by Charles V, Philippe de Mézières established himself at Paris and propagated his ideas among the French nobility. In 1390 Louis II, Duke of Bourbon, took the cross, and at the instigation of the Genoese went to besiege el-Mahadia, an African city on the coast of Tunis. In 1392 Charles VI, who had signed a treaty of peace with England, appeared to have been won over to the crusade project just before he became deranged. But the time for expeditions to the Holy Land was now passed, and henceforth Christian Europe was forced to defend itself against Ottoman invasions. In 1369 John V, Palæologus, went to Rome and abjured the schism; thereafter the popes worked valiantly for the preservation of the remnants of the Byzantine Empire

and the Christian states in the Balkans. Having become master of Serbia at the battle of Kosovo in 1389, the Sultan Bajazet imposed his sovereignty upon John V and secured possession of Philadelphia, the last Greek city in Asia Minor. Sigismund, King of Hungary, alarmed at the progress of the Turks, sent an embassy to Charles VI, and a large number of French lords, among them the Count of Nevers, son of the Duke of Burgundy, enlisted under the standard of the cross and, in July, 1396, were joined at Buda by English and German knights. The crusaders invaded Serbia, but despite their prodigies of valour Bajazet completely routed them before Nicopolis, 25 September, 1396. The Count of Nevers and a great many lords became Bajazet's prisoners and were released only on condition of enormous ransoms. Notwithstanding this defeat, due to the misguided ardour of the crusaders, a new expedition left Aiguemortes in June, 1399, under the command of the Marshal Boucicault and succeeded in breaking the blockade which the Turks had established around Constantinople. Moreover, between 1400 and 1402, John Palæologus made another voyage to the West in quest of reinforcements.

IX. THE CRUSADE IN THE FIFTEENTH CENTURY.—An unlooked-for event, the invasion by Timur and the Mongols, saved Constantinople for the time being. They annihilated Bajazet's army at Ancyra, 20 July, 1402, and, dividing the Ottoman Empire among several princes, reduced it to a state of vassalage. The Western rulers, Henry III, King of Castile, and Charles VI, King of France, sent ambassadors to Timur (see the account by Ruy Gonçalves de Clavijo, Madrid, 1779), but the circumstances were not favourable, as they had been in the thirteenth century. The national revolt of the Chinese that overthrew the Mongol dynasty in 1368 had resulted in the destruction of the Christian missions in Farther Asia; in Central Asia the Mongols had been converted to Mohammedanism, and Timur showed his hostility to the Christians by taking Smyrna from the Hospitalers. Marshal Boucicault took advantage of the defection into which the Mongol invasion had thrown the Mohammedan powers to sack the ports of Syria, Tripoli, Beirut, and Sidon in 1403, but he was unable to retain his conquests; while Timur, on the other hand, thought only of obtaining possession of China and returned to Samarkand, where he died in 1405. The civil wars that broke out among the Ottoman princes gave the Byzantine emperors a few years' respite, but Murad II, having re-established the Turkish power, besieged Constantinople from June to September in 1422, and John VIII, Palæologus, was compelled to pay him tribute. In 1430 Murad took Thessalonica from the Venetians, forced the wall of the Hexamilion, which had been erected by Manuel to protect the Peloponnesus, and subdued Serbia. The idea of the crusade was always popular in the West, and, on his death-bed, Henry V of England regretted that he had not taken Jerusalem. In her letters to Bedford, the regent, and to the Duke of Burgundy, Joan of Arc alluded to the union of Christendom against the Saracens, and the popular belief expressed in the poetry of Christine de Pisan was that, after having delivered France, the Maid of Orleans would lead Charles VII to the Holy Land. But this was only a dream, and the civil wars in France, the crusade against the Hussites, and the Council of Constance, prevented any action from being taken against the Turks. However, in 1421 Philip the Good, Duke of Burgundy, sent Gilbert de Lannoy, and in 1432, Bertrand de la Brocquière, to the East as secret emissaries to gather information that might be of value for a future crusade. At the same time negotiations for the religious union which would facilitate the crusade were resumed between the Byzantine emperors and the popes. Emperor John VIII came in person to attend the council convoked

by Pope Eugene IV at Ferrara, in 1438. Thanks to the good will of Bessarion and of Isidore of Kiev, the two Greek prelates whom the pope had elevated to the cardinalate, the council, which was transferred to Florence, established harmony on all points, and on 6 July, 1439, the reconciliation was solemnly proclaimed. The reunion was received in bad part by the Greeks and did not induce the Western princes to take the cross. Adventurers of all nationalities enrolled themselves under the command of Cardinal Giuliano Cesarini and went to Hungary to join the armies of János Hunyady, Waywode of Transylvania, who had just repulsed the Turks at Hermanstadt, of Wladislaus Jagello, King of Poland, and of George Brankovitch, Prince of Serbia. Having defeated the Turks at Nish, 3 November, 1443, the allies were enabled to conquer Serbia, owing to the defection of the Albanians under George Castrioti (Scanderbeg), their national commander. Murad signed a ten years' truce and abdicated the throne, 15 July, 1444, but Giuliano Cesarini, the papal legate, did not favour peace and wished to push forward to Constantinople. At his instigation the crusaders broke the truce and invaded Bulgaria, whereupon Murad again took command, crossed the Bosphorus on Genoese galleys, and destroyed the Christian army at Varna, 10 November, 1444. This defeat left Constantinople defenceless. In 1446 Murad succeeded in conquering Morea, and when, two years later, János Hunyady tried to go to the assistance of Constantinople he was beaten at Kosovo. Scanderbeg alone managed to maintain his independence in Epirus and, in 1449, repelled a Turkish invasion. Mohammed II, who succeeded Murad in 1451, was preparing to besiege Constantinople when, 12 December, 1452, Emperor Constantine XII decided to proclaim the union of the Churches in the presence of the papal legates. The expected crusade, however, did not take place; and when, in March, 1453, the armed forces of Mohammed II, numbering 160,000, completely surrounded Constantinople, the Greeks had only 5000 soldiers and 2000 Western knights, commanded by Justiniani of Genoa. Notwithstanding this serious disadvantage, the city held out against the enemy for two months, but on the night of 28 May, 1453, Mohammed II ordered a general assault, and after a desperate conflict, in which Emperor Constantine XII perished, the Turks entered the city from all sides and perpetrated a frightful slaughter. Mohammed II rode over heaps of corpses to the church of St. Sophia, entered it on horseback, and turned it into a mosque.

The capture of "New Rome" was the most appalling calamity sustained by Christendom since the taking of Saint-Jean d'Acre. However, the agitation which the news of this event caused in Europe was more apparent than genuine. Philip the Good, Duke of Burgundy, gave an allegorical entertainment at Lille in which *Holy Church* solicited the help of knights who pronounced the most extravagant vows before God and a pheasant (*sur le faisan*). Æneas Sylvius, Bishop of Siena, and St. John Capistran, the Franciscan, preached the crusade in Germany and Hungary; the Diets of Ratisbon and Frankfort promised assistance, and a league was formed between Venice, Florence, and the Duke of Milan, but nothing came of it. Pope Callistus III succeeded in collecting a fleet of sixteen galleys, which, under the command of the Patriarch of Aquileia, guarded the Archipelago. However, the defeat of the Turks before Belgrade in 1457, due to the bravery of János Hunyady, and the bloody conquest of the Peloponnesus in 1460 seemed finally to revive Christendom from its torpor. Æneas Sylvius, now pope under the name of Pius II, multiplied his exhortations, declaring that he himself would conduct the crusade, and towards the close of 1463 bands of crusaders began to assemble at Ancona.

The Doge of Venice had yielded to the pope's entreaties, whereas the Duke of Burgundy was satisfied with sending 2000 men. But when, in June, 1464, the pope went to Ancona to assume command of the expedition, he fell sick and died, whereupon most of the crusaders, being unarmed, destitute of ammunition, and threatened with starvation, returned to their own countries. The Venetians were the only ones who invaded the Peloponnesus and sacked Athens, but they looked upon the crusade merely as a means of advancing their commercial interests. Under Sixtus IV they had the presumption to utilize the papal fleet for the seizure of merchandise stored at Smyrna and Adalia; they likewise purchased the claims of Catherine Cornaro to the Kingdom of Cyprus. Finally, in 1480, Mohammed II directed a triple attack against Europe. In Hungary Matthias Corvinus withstood the Turkish invasion, and the Knights of Rhodes, conducted by Pierre d'Aubusson, defended themselves victoriously, but the Turks succeeded in gaining possession of Otranto and threatened Italy with conquest. At an assembly held at Rome and presided over by Sixtus IV, ambassadors from the Christian princes again promised help; but the condition of Christendom would have been critical indeed had not the death of Mohammed II occasioned the evacuation of Otranto, while the power of the Turks was impaired for several years by civil wars among Mohammed's sons. At the time of Charles VIII's expedition into Italy (1492) there was again talk of a crusade; according to the plans of the King of France, the conquest of Naples was to be followed by that of Constantinople and the East. For this reason Pope Alexander VI delivered to him Prince Djem, son of Mohammed II and pretender to the throne, who had taken refuge with the Hospitallers. When Alexander VI joined Venice and Maximilian in a league against Charles VIII, the official object of the alliance was the crusade, but it had become impossible to take such projects as seriously meant. The leagues for the crusade were no longer anything but political combinations, and the preaching of the Holy War seemed to the people nothing but a means of raising money. Before his death, Emperor Maximilian took the cross at Metz with due solemnity, but these demonstrations could lead to no satisfactory results. The new conditions that now controlled Christendom rendered a crusade impossible.

X. MODIFICATIONS AND SURVIVAL OF THE IDEA OF THE CRUSADE.—From the sixteenth century European policy was swayed exclusively by state interests; hence to statesmen the idea of a crusade seemed antiquated. Egypt and Jerusalem having been conquered by Sultan Selim, in 1517, Pope Leo X made a supreme effort to re-establish the peace essential to the organization of a crusade. The King of France and Emperor Charles V promised their co-operation; the King of Portugal was to besiege Constantinople with 300 ships, and the pope himself was to conduct the expedition. Just at this time trouble broke out between Francis I and Charles V; these plans therefore failed completely. The leaders of the Reformation were unfavourable to the crusade, and Luther declared that it was a sin to make war upon the Turks because God had made them His instruments in punishing the sins of His people. Therefore, although the idea of the crusade was not wholly lost sight of, it took a new form and adapted itself to the new conditions. The *Conquistadores*, who ever since the fifteenth century had been going forth to discover new lands, considered themselves the auxiliaries of the crusade. The Infante Don Henrique, Vasco da Gama, Christopher Columbus, and Albuquerque wore the cross on their breast and, when seeking the means of doubling Africa or of reaching Asia by routes from the East, thought of attacking the Mohammedans in the rear; besides, they calculated on the alliance of a fabulous sovereign said to be a Christian, Prester John.

The popes, moreover, strongly encouraged these expeditions. On the other hand, among the Powers of Europe the House of Austria, which was mistress of Hungary, where it was directly threatened by the Turks, and which had supreme control of the Mediterranean, realized that it would be to its advantage to maintain a certain interest in the crusade. Until the end of the seventeenth century, when a diet of the German princes was held at Ratisbon, the question of war against the Turks was frequently agitated, and Luther himself, modifying his first opinion, exhorted the German nobility to defend Christendom (1528–29). The war in Hungary always partook of the character of a crusade and, on different occasions, the French nobles enlisted under the imperial banner. Thus the Duke of Mercœur was authorized by Henry IV to enter the Hungarian service. In 1664 Louis XIV, eager to extend his influence in Europe, sent the emperor a contingent which, under the command of the Count of Coligny, repulsed the Turks in the battle of St. Gothard. But such demonstrations were of no importance because, from the time of Francis I, the kings of France, to maintain the balance of power in Europe against the House of Austria, had not hesitated to enter into treaties of alliance with the Turks. When, in 1683, Kara Mustapha advanced on Vienna with 30,000 Turks or Tatars, Louis XIV made no move, and it was to John Sobieski, King of Poland, that the emperor owed his safety. This was the supreme effort made by the Turks in the West. Overwhelmed by the victories of Prince Eugene at the close of the seventeenth century, they became thenceforth a passive power.

On the Mediterranean, Genoa and Venice beheld their commercial monopoly destroyed in the sixteenth century by the discovery of new continents and of new water-routes to the Indies, while their political power was absorbed by the House of Austria. Without allowing the crusaders to deter them from their continental enterprises, the Hapsburgs dreamed of gaining control of the Mediterranean by checking the Barbary pirates and arresting the progress of the Turks. When, in 1571, the Island of Cyprus was threatened by the Ottomans, who cruelly massacred the garrisons of Famagusta and Nicosia, these towns having surrendered on stipulated terms, Pope Pius V succeeded in forming a league of maritime powers against Sultan Selim, and secured the co-operation of Philip II by granting him the right to tithes for the crusade, while he himself equipped some galleys. On 7 October, 1571, a Christian fleet of 200 galleys, carrying 50,000 men under the command of Don Juan of Austria, met the Ottoman fleet in the Straits of Lepanto, destroyed it completely, and liberated thousands of Christians. This expedition was in the nature of a crusade. The pope, considering that the victory had saved Christendom, by way of commemorating it instituted the feast of the Holy Rosary, which is celebrated on the first Sunday of October. But the allies pushed their advantages no further. When, in the seventeenth century, France superseded Spain as the great Mediterranean power, she strove, despite the treaties that bound her to the Turks, to defend the last remnants of Christian power in the East. In 1669 Louis XIV sent the Duke of Beaufort with a fleet of 7000 men to the defence of Candia, a Venetian province, but, notwithstanding some brilliant sallies, he succeeded in putting off its capture for a few weeks only. However, the diplomatic action of the kings of France in regard to Eastern Christians who were Turkish subjects was more efficacious. The regime of "Capitulations", established under Francis I in 1536, renewed under Louis XIV in 1673, and Louis XV in 1740, ensured Catholics religious freedom and the jurisdiction of the French ambassador at Constantinople; all Western pilgrims were allowed access to Jerusalem and to the Holy Sepulchre, which was con-

fided to the care of the Friars Minor. Such was the *modus vivendi* finally established between Christendom and the Mohammedan world.

Notwithstanding these changes it may be said that, until the seventeenth century, the imagination of Western Christendom was still haunted by the idea of the Crusades. Even the least chimerical of statesmen, such as Père Joseph de Tremblay, the confidential friend of Richelieu, at times cherished such hopes, while the plan set forth in the memorial which Leibniz addressed (1672) to Louis XIV on the conquest of Egypt was that of a regular crusade. Lastly, there remained as the respectable relic of a glorious past the Order of the Knights of St. John of Jerusalem, which was founded in the eleventh century and continued to exist until the French Revolution. Despite the valiant efforts of their grand master, Villiers de l'Isle Adam, the Turks had driven them from Rhodes in 1522, and they had taken refuge in Italy. In 1530 Charles V presented them with the Isle of Malta, admirably situated from a strategic point of view, whence they might exercise surveillance over the Mediterranean. They were obliged to promise to give up Malta on the recovery of Rhodes, and also to make war upon the Barbary pirates. In 1565 the Knights of Malta withstood a furious attack by the Turks. They also maintained a squadron able to put to flight the Barbary pirates. Recruited from among the younger sons of the noblest families of Europe, they owned immense estates in France as well as in Italy, and when the French Revolution broke out, the order quickly lost ground. The property it held in France was confiscated in 1790, and when, in 1798, the Directory undertook an expedition to Egypt, Bonaparte, in passing, seized the Isle of Malta, whose knights had placed themselves under the protection of the Czar, Paul I. The city of Valetta surrendered at the first summons, and the order disbanded; however, in 1826 it was reorganized in Rome as a charitable association.

The history of the Crusades is therefore intimately connected with that of the popes and the Church. These Holy Wars were essentially a papal enterprise. The idea of quelling all dissensions among Christians, of uniting them under the same standard and sending them forth against the Mohammedans, was conceived in the eleventh century, that is to say, at a time when there were as yet no organized states in Europe, and when the pope was the only potentate in a position to know and understand the common interests of Christendom. At this time the Turks threatened to invade Europe, and the Byzantine Empire seemed unable to withstand the enemies by whom it was surrounded. Urban II then took advantage of the veneration in which the holy places were held by the Christians of the West and entreated the latter to direct their combined forces against the Mohammedans and, by a bold attack, check their progress. The result of this effort was the establishment of the Christian states in Syria. While the authority of the popes remained undisputed in Europe, they were in a position to furnish these Christian colonies the help they required; but when this authority was shaken by dissensions between the priesthood and the empire, the crusading army lost the unity of command so essential to success. The maritime powers of Italy, whose assistance was indispensable to the Christian armies, thought only of using the Crusades for political and economic ends. Other princes, first the Hohenstaufen and afterwards Charles of Anjou, followed this precedent, the crusade of 1204 being the first open rebellion against the pontifical will. Finally, when, at the close of the Middle Ages, all idea of the Christian monarchy had been definitively cast aside, when state policy was the sole influence that actuated the Powers of Europe, the crusade seemed a respectable but troublesome survival. In the fifteenth century Europe permitted the Turks to seize Constantinople, and princes were far less con-

cerned about their departure for the East than about finding a way out of the fulfilment of their vow as crusaders without losing the good opinion of the public. Thereafter all attempts at a crusade partook of the nature of political schemes. Notwithstanding their final overthrow, the Crusades hold a very important place in the history of the world. Essentially the work of the popes, these Holy Wars first of all helped to strengthen pontifical authority; they afforded the popes an opportunity to interfere in the wars between Christian princes, while the temporal and spiritual privileges which they conferred upon crusaders virtually made the latter their subjects. At the same time this was the principal reason why so many civil rulers refused to join the Crusades. It must be said that the advantages thus acquired by the popes were for the common safety of Christendom. From the outset the Crusades were defensive wars and checked the advance of the Mohammedans who, for two centuries, concentrated their forces in a struggle against the Christian settlements in Syria; hence Europe is largely indebted to the Crusades for the maintenance of its independence. Besides, the Crusades brought about results of which the popes had never dreamed, and which were perhaps the most important of all. They re-established traffic between the East and West, which, after having been suspended for several centuries, was then resumed with even greater energy; they were the means of bringing from the depths of their respective provinces and introducing into the most civilized Asiatic countries Western knights, to whom a new world was thus revealed, and who returned to their native land filled with novel ideas; they were instrumental in extending the commerce of the Indies, of which the Italian cities long held the monopoly, and the products of which transformed the material life of the West. Moreover, as early as the end of the twelfth century, the development of general culture in the West was the direct result of these Holy Wars. Finally, it is with the Crusades that we must couple the origin of the geographical explorations made by Marco Polo and Oderic of Pordenone, the Italians who brought to Europe the knowledge of continental Asia and China. At a still later date, it was the spirit of the true crusader that animated Christopher Columbus when he undertook his perilous voyage to the then unknown America, and Vasco da Gama when he set out in quest of India. If, indeed, the Christian civilization of Europe has become universal culture, in the highest sense, the glory redounds, in no small measure, to the Crusades.

LOUIS BRÉHIER.

Crutched Friars (or **CROSSED FRIARS**), an order of mendicant friars who went to England in the thirteenth century from Italy, where they had existed for some time, and where they were called "*Frates Cruciferi*" (see below). Their first appearance in England was at a synod of the Diocese of Rochester in 1244, when they presented documents from the pope and asked to be allowed to settle in the country (Matthew Paris). Each friar carried in his hand a wooden staff surmounted by a cross and had also a cross of red cloth upon his habit, from which circumstances originated the name by which they became commonly known. Their rule was that of St. Augustine and their habit, originally brown or black, was later on changed to blue by Pope Pius II. They established eight or nine houses in England, the first being either at Colchester (according to Dugdale), or at Reigate (according to Reynier), founded in 1245. They settled in London in 1249, where they gave their name to the locality, near Tower Hill, still called "Crutched Friars". Other houses were at Oxford (1348), York, Great Waltham (Suffolk), Barham (a cell to Gt. Waltham), Wotton-under-Edge (Gloucestershire), Brackley (Northants), and Kildale (Yorkshire).

FRATRES CRUCIFERI.—The origin of these friars is somewhat uncertain. They claimed to have been founded in the East, in the first century, by St. Cletus, and to have been reconstituted by St. Cyriacus, Patriarch of Jerusalem, in the fourth. It is not known when they came to Italy, but they were certainly there in the twelfth century, for in 1169 Pope Alexander III

gave them constitutions and a rule of life similar to that of the Augustinians. Pope Pius II prescribed for them a blue habit and substituted a small silver cross for the larger wooden one they had hitherto been accustomed to carry in their hands. It was from this custom that they obtained their name. Their monasteries were at one time numerous in Italy, numbering two hundred and eight, divided into five provinces: Bologna, Venice, Rome, Milan, and Naples. The priory of S. Maria di Morella at Bologna was made the chief house of the order by Pope Clement IV, and it was from this that the English Crutched Friars came. In later times corruptions were allowed to creep in, and from that and other causes their numbers dwindled down to not more than fifty houses in 1656, when the order was suppressed by Pope Alexander VII. A similar order of friars, known by the same name and like them claiming to come from the East, also existed in France and the Low Countries, having been introduced or organized in 1211 by Théodore de Celles. Hélyot says their houses were numerous, but the order suffered extinction in the French Revolution. These friars wore a black habit with a red cross upon it. Other *Frates Cruciferi* were also to be found in Bohemia in the thirteenth century and some are said to have existed in Ireland, but there is practically no reliable information to be obtained about them.

G. CYPRIAN ALSTON.

Cruz, RAMÓN DE LA, a poet, b. at Madrid, Spain, 28 March, 1731; d. in the same city, 4 November, 1795. He was for a time a clerk in the Ministry of Finance, and was a member of the Royal Academy of Seville and of the Arcadians of Rome. Very little is known of his life. He wrote more than three hundred pieces for the stage, many of which were improvised. It was his custom to go to the Prado in the evening and there, seated on one of the stone benches, work out some theme suggested by the scene before him. This he wrote the next day. The theatre anxiously awaited the improvisation, and it was produced within two or three days. In this way he wrote "*La Casa de Tócame Roque*", which won immediate favour, and has continued to be a favourite almost to the present day. Cruz at first wrote in the several known styles of dramatic composition, including tragedies, *zarzuelas*, and comedies, but it is as the inventor of a new form of dramatic writing that he is best remembered. This is the *sainete*, a short farcical sketch of city life and manners, especially of the middle and lower classes. As a writer of these he has never been equalled. They abound in exuberant humour, jokes, and puns, and describe faithfully the customs and manners of the time. His pictures of the middle and lower classes were produced with such exactness, vivacity, grace, and colouring, that for these qualities rather than for any literary merit they might possess his plays won public favour, and many of them continued to be presented with but slight changes, almost down to our own times. His best *sainetes* are "*La Casa de Tócame Roque*", just mentioned, "*El Prado por la Noche*", "*Las Tertulias de Madrid, ó el Por qué de las Tertulias*", and "*La Comedia de Maravillas*". There are several editions of the works of Cruz, among which may be mentioned "*Ramón de la Cruz, Sainetes*" (1 vol., Madrid, 1877), "*La Biblioteca Universal*" (XXXV), and "*Teatro selecto de don Ramón de la Cruz*" (1 vol., Madrid, 1882).

VENTURA FUENTES.

Crúz, SAN JUAN DE LA. See JOHN OF THE CROSS, SAINT.

Crypt (or LOWER CHURCH).—The word originally meant a hidden place, natural or artificial, suitable for the concealment of persons or things. When visits to the burial-places without the walls of Rome fell into disuse there ensued a curious change. The Church, no longer able to go out to honour the martyrs, brought the martyrs within the walls, and instead of building churches above the tombs, dug tombs under the churches in which the precious relics were deposited. This was the origin, first, of the *confessio* of the basilicas, and, at a later period, of the crypt, which answered the same purpose in the churches of the early Middle Ages. In this way the Romanesque crypt is the direct descendant of the *hypogæum* or excavation of the early Christian catacomb. The term crypt is sometimes used to signify the lower story of a two-storied building, e. g. the lower chapel of the Sainte-Chapelle at Paris, and of the church of San Francesco at Assisi; and in England the over-ground crypt of St. Ethelreda's Chapel in London, which is all that remains of the great episcopal palace called Ely Place.

The crypt has a long and venerable history. What was done at Rome set a precedent for Christendom in general. There is an early example of a crypt at Ravenna, at Sant' Apollinare in Classe (534). At first crypts were sometimes as deep-sunk as the *cubicula* of the catacombs themselves, e. g. in Saint-Germain, at Auxerre, and in the Chartres cathedral. Or they were but partly above ground, and were lighted by small windows placed in their side walls, e. g. Ernulph's crypt at Canterbury. Occasionally their floor was but little below the surface of the ground, as in the eastern crypt at Canterbury; or it was on a level with the pavement of the nave, as in San Miniato, Florence. In these latter cases the crypt practically became a second or lower church, e. g. St. Faith's, under Old St. Paul's, London. Such a crypt, however, entailed a raised choir; hence it is that one ascends high flights of steps to such choirs as those of San Miniato, Rochester, Canterbury, etc. Almost all the crypts now found in England were built during the Norman period, or very early, in the pointed style. That at Glasgow, however, belongs to the perfected style of the thirteenth century. Here the crypt extends under and beyond the whole choir. Had there been an opening in the centre of the vault (and it is by no means clear that one was not originally intended), it would be more like a German double church than anything found in England. The earliest crypts in England are those of Hexham and Ripon. In the eleventh, twelfth, and thirteenth centuries crypts developed into magnificent churches, like those of Gloucester, Rochester, Worcester, Winchester, St. Peter's at Oxford, Bayeux, Chartres, Saintes, Bourges, Holy, Trinity at Caen, Padua, Florence, Pavia, Palermo, and Modena.

THOMAS H. POOLE.

Csanád, DIOCESE OF, includes the counties of Temes, Torontál, Krassó-Szörény, Arad, Csanád, and a part of Csongrád and Békés, Hungary, an area of 13,713 square miles. It is suffragan of Kalocsa, and has a population of 2,030,000 souls, of whom 824,000 are Catholics and 56,000 Uniat Greeks. The diocese has a cathedral chapter, 8 regular and 6 titular canonries, 8 titular abbeys, 1 provostship, 3 titular provostships, 6 archdeaneries, 24 subordinate deaneries, 236 parish

churches, 1099 filial churches, 231 parish priests, 122 chaplains, 28 other ecclesiastics, 54 clerics, 8 retired ecclesiastics, 8 priests outside of the diocese. The male orders and congregations have 11 houses and 91 members, divided as follows: Piarists (who also conduct 3 gymnasia), 3 houses; Franciscans, 2; Minorites, 4; Brothers of Charity, 1, and priests of the Order of the Divine Saviour, 1. The School Sisters of Notre-Dame, Sisters of Charity of St. Vincent de Paul, and Holy Cross Sisters have 28 convents and 484 members in the diocese. There is a seminary for priests (with a lyceum), a preparatory one for boys, and two training-schools, for male and female teachers. The cathedral built in barocco style, 1736-54, is dedicated to St. George. The residence of the bishop is at Temesvar. Csanád is one of the oldest sees of Hungary. It was created by King Stephen in 1035 and its first bishop was the Italian Abbot Gerardus, the tutor of Stephen's son, Emmerich. In the thirteenth century the diocese suffered greatly from the invasion of the Mongols; in the fourteenth century, after the Turkish con-

CATHEDRAL OF CSANÁD.

quest of Serbia, from the immigration of schismatic Serbs called Rascians into Hungary; in the sixteenth century from the rebellion of the peasants (1514). By order of Dózsa, the leader of the peasants, Bishop Nicholas Csáky was impaled. After the battle of Mohács (1526) in which Bishop Franz Csaholy (1514-26) was killed, almost the entire diocese fell into the hands of Zápolya, the ally of the Turks. When in 1552 Temesvar also was taken by the Turks the diocese was nearly ruined. The see had henceforth merely a nominal existence and the residence of the bishop was transferred in 1574 to Szegedin. It was only after the Treaty of Passarowitz (1718) freed the land from the yoke of the Turks that Bishop Ladislaus Nádasdy (1710-30) re-entered the diocese; the depopulated territory was largely settled anew by German colonists. During the Revolution of 1848 Bishop Joseph Lonovics von Krivina (1834-48) was driven into exile; later the Hungarian minister of worship, Michael Horvath, was appointed bishop but was not consecrated. During the episcopate of Ladislaus Köszeghy (1800-28) the seminary for priests was founded; during that of Alexander Csajághy (1851-60) the School Sisters of Notre-Dame were brought into the diocese, and during the administration of Alexander Bonnaz (1860-89) the seminary for boys was erected.

JOSEPH LINS.

Cuba, "The Pearl of the Antilles", is the largest and westernmost island of the West Indies. Its extent, geographical position, the great number of its ports, the fertility of its soil, and its climate make it one of the most interesting countries in the New World. It

lies at the entrance to the Gulf of Mexico, between 19° and 23° N. latitude, and 74° and 85° W. longitude. Its western extremity, Cape San Antonio, approaches to within 130 miles of Yucatan, and its easternmost point, Cape Maisí, is within 50 miles of Haiti, the Windward Passage separating the two islands, while the southern end of Florida is less than 100 miles from the northern coast of Cuba. The island thus occupies a very important strategic position, commanding, as it does, the entrances to the Gulf of Mexico. It has a length of almost 750 miles from east to west, and its width varies from 100 miles, at the eastern end, to 30 miles in the western portion. Its area is about 45,000 square miles, including the Isle of Pines, which lies immediately south of its western extremity. It is therefore a little less in size than the State of Virginia and about the size of England. It is divided politically into six provinces in the following order from west to east: Pinar del Río, Havana, Matanzas, Santa Clara, Puerto Príncipe (Camagüey), and Santiago de Cuba.

NATURAL CHARACTERISTICS.—The coast line, especially along the southern shore, is dotted with numerous small islands, while both the north and south coasts have many excellent bays and harbours; those of Bahía Honda, Havana, Matanzas and Cárdenas, on the north coast, and Batabanó, Cienfuegos, Santiago de Cuba, and Guantánamo, on the south, being accessible to ships of deep draught. The principal feature in the physical geography of Cuba is a range of mountains which, more or less broken, runs through the central portion of the island from one end to the other. From this backbone the rivers run generally north and south, in short courses, to the sea. For the most part, low tracts intervene between the central elevation and the sea. The forests are noted for a great variety and abundance of hardwoods, some of which are unsurpassed for their special qualities. Among these are *lignum-vitæ*, cocoa-wood, which somewhat resembles it, mahogany of superior quality and very abundant, and cedar. Though the forests are extensive and almost impenetrable, there are no large wild animals. There are more than two hundred species of birds, many of them of exceedingly beautiful plumage. The varieties of fish are even more abundant. Insects are extremely numerous and of many troublesome kinds, the most to be feared being the tarantula and scorpion; the most beautiful, the large fire-flies or *cucuyos*, which emit a mild, steady light. Although the mineral riches of Cuba have not as yet been fully explored, it is known not to be deficient in this respect. The precious metals have been found, but not in sufficient quantities to repay the cost of working. There are abundant deposits of copper, alum, iron, marble, and manganese.

Lying just within the tropical zone, Cuba enjoys a warm climate throughout the year. This is tempered, during the summer months, by the cool north-east trade-winds which blow almost every day in the year from early morning until sunset, and also by the rains which are most frequent during those months. The year is divided between the hot, wet season, and the cool, dry season. From May to October rain and thunder are of almost daily occurrence; from November to April is the dry season, during which period the rainfall is comparatively light. The temperature at Havana during the hottest month, August, averages 82° F. fluctuating between a maximum and a minimum of 88° F. and 72° F. During January, the coldest month, the average temperature is 72° F., the maximum 78° F., and the minimum 58° F. The average for the year is about 77° F. In the interior, and especially in the higher portions of the island, the thermometer occasionally drops to the freezing-point, and thin ice may be seen on the surface of pools. Snow, however, is unknown throughout the island. There are no diseases specially endemic to the island. Yellow fever was formerly very common and virulent, es-

pecially in Havana and other seacoast towns, though unknown in the interior. During the American occupation, however, such vigorous and thorough sanitary measures were adopted that Havana, from being a plague spot and a menace to the ports of the United States, became one of the cleanest cities in the world.

HISTORY.—Cuba was discovered by Columbus during his first voyage, on the 28th of October, 1492. He took possession in the name of the Catholic monarchs of Spain, and named it *Juana* in honour of the Infante Don Juan. He again visited the island in 1494, and in 1502, and on each occasion explored part of the coast. He then believed that Cuba was part of the mainland, and it was not until 1508 that Sebastian Ocampo, by order of the king, circumnavigated it, and proved it to be an island. In 1511, Captain Diego Velásquez, who had accompanied Columbus on his second voyage, was sent to Cuba to subjugate and colonize the island. He landed near Cape Maisí, the eastern extremity, and there was founded Baracoa, the first colony in Cuba. In 1514 Velásquez founded Trinidad and Santiago de Cuba on the south coast, Sancti Spiritus, Remedios, and Puerto Príncipe in the central portion; and, on the site of the present city of Batabanó, towards the western extremity of the south coast, San Cristóbal de la Habana; this last name, however, was given, in 1519, to a settlement existing on the present site of Havana. The same year Baracoa was raised to the dignity of a city and a bishopric, and was made the capital, as it continued to be until 1522, when both the capital and bishopric were transferred to Santiago de Cuba. Havana became the capital in 1552, and has remained so ever since.

Upon the death of Ferdinand, 23 January, 1516, Velásquez changed the name of the island to *Fernandina* in honour of that monarch. Later, the name was changed to *Santiago* in honour of Spain's patron saint, and still later, to *Aze Maria* in honour of the Blessed Virgin. During all these official changes, however, the island continued to be known by its original name of *Cuba*, given it by the natives, and it has retained that name to the present day. The aborigines (Siboneys) whom the Spaniards found in Cuba, were a mild, timid, inoffensive people, entirely unable to resist the invaders of their country, or to endure the hardships imposed upon them. They lived under nine independent *caciques* or chiefs, and possessed a simple religion devoid of rites and ceremonies, but with a belief in a supreme being, and the immortality of the soul. They were reduced to slavery by the white settlers, among whom, however, the energetic and persevering Father Bartolomé de Las Casas, "The Protector of the Indians", as he was officially called, earned a high reputation in history by his philanthropic efforts. (See CASAS, BARTOLOMÉ DE LAS.) In 1524, the first cargo of negro slaves was landed in Cuba. Then began the iniquitous traffic in African slaves upon which corrupt officials fattened for many years thereafter. The negroes were subjected to great cruelties and hardships, their natural increase was checked, and their numbers had to be recruited by repeated importations. This traffic constantly increased, until at the beginning of the nineteenth century, slaves were being imported at the rate of over 10,000 per year.

In 1538, Havana was reduced to ashes by the French, and was destroyed a second time in 1554. In 1762, the city was taken by the English, but within a year, under the terms of the Treaty of Paris, which ended the Seven Years War, it was returned to Spain in exchange for Florida. From this time the progress of Cuba was rapid. Luis de Las Casas, who was sent to Cuba as captain general, was especially energetic in instituting reforms, and he did much for the prosperity and advancement of the island. During the nineteenth century, however, Cuba was governed by a succession of captains general, some of whom were hon-

ourable in their administration, while others seemed to regard their office solely as the means of acquiring a fortune. Various oppressive measures instituted by some of these governors, such as depriving the native Cubans of political and civil liberty, excluding them from public office, and burdening them with taxation, gave rise to the deadly hatred between the Cubans and the Spaniards, which manifested itself from time to time in uprisings for greater privileges and freedom. Of this kind were the conspiracy of the "Black Eagle" (1829), the insurrection of the black population (1844), and the conspiracy of Narciso López (1849-51), all of which gave occasion to repressive measures of great cruelty. The rebellion of 1868-78, however, compelled Spain to promise the Cubans representation in the Cortes, together with other needed reforms. She failed to keep many of her promises, and the general discontent continued, with the result that in 1895, a new and formidable revolt broke out. The insurgents, under able leaders, were able to keep the field, in spite of the extremely energetic and even cruel measures that were adopted to crush them. They were able to maintain the semblance of a government, and their heroic resistance, as well as the conduct of Spain, aroused great sympathy for them throughout the United States.

From the time that Florida became a part of the United States, this government had taken a deep interest in Cuba, fearing that the island might pass from Spain to other hands, especially England or France. In 1848, President Polk had authorized the American minister at Madrid to offer \$100,000,000 for the purchase of Cuba, but Spain rejected the offer. The subject had been revived in 1854, following the Ostend Manifesto, but again it came to nothing. During the last uprising of the Cuban people, already mentioned, not only the United States government, but the entire American people were watching the struggle with intense interest, when, on the night of 15 February, 1898, a terrific explosion destroyed the United States battleship *Maine* in Havana harbour, whither she had gone on a friendly visit by invitation of the Spanish Government. Relations between the two governments became strained, and they finally went to war in April of the same year. The war was of only a few months duration, and as a result of it, under the terms of the Treaty of Paris, (10 December, 1898), Spain relinquished her hold on Cuba, which she had held for over 400 years. Beginning 1 January, 1899, the United States occupied the island and appointed a military governor, pending the formation of a native government. This was eventually installed with the inauguration as president of Don Tomás Estrada Palma (20 May, 1902), and the American occupation formally and definitely ceased on that day. Cuba now seemed to be entering upon an era of peace and prosperity, but it was to be of short duration. Differences between the Moderate and Liberal parties occasioned by the second presidential election, in 1905, culminated, in July, 1906, in a revolutionary movement started by the Liberal leaders. The Government soon lost control of the situation, so that in September, 1906, the United States was forced to intervene. A provisional government was then established under authority from Washington, with Charles E. Magoon at its head. During 1907, a new census was undertaken, upon which to base new elections for president and members of Congress.

AGRICULTURE.—For two hundred and fifty years after the discovery of the island, cattle raising seems to have been the principal industry, and very little attention was paid to agriculture. Now, however, Cuba is essentially an agricultural country. The principal agricultural products are sugar, tobacco, and fruits. As for coffee, little more is grown than is needed for domestic consumption, although the soil and climate of the eastern portion of the island are adapted to the cultivation of a superior quality of coffee. Oranges,

limes, lemons, olives, pineapples, and many other fruits are also grown, as well as all kinds of vegetables, which grow almost the year around. The Cuban orange is noted for its exquisite taste, and its cultivation was an important Cuban industry until Californian and Floridan competition impaired its value. Bananas are grown throughout the island, but the best come from the central and eastern portions. The most important of all the products, however, are sugar and tobacco. The former was introduced into Cuba by its first governor, Velásquez, and from a small beginning the industry grew, with improved methods of cultivation and the introduction of improved machinery, until, just before the last insurrection (1895), the annual output amounted to over 1,000,000 tons. The product next in importance to sugar is tobacco. This, unlike the former, is indigenous in Cuba, and was in use by the natives when the Spaniards first visited the island. Cuban tobacco is universally admitted to be the finest in the world, especially that grown in a section of the province of Pinar del Río known as Vuelta Abajo. Many attempts have been made to reproduce the tobacco of this region in other parts of the world, and even in other parts of Cuba, but always without success, the superiority of the Vuelta Abajo product being probably due to peculiar conditions of soil and climate, and especially to the peculiar topography of the country. In 1894-95, the season in which the best crop was grown previous to the last census (1899), the production for the island amounted to 62,000,000 lbs. valued at \$22,000,000.

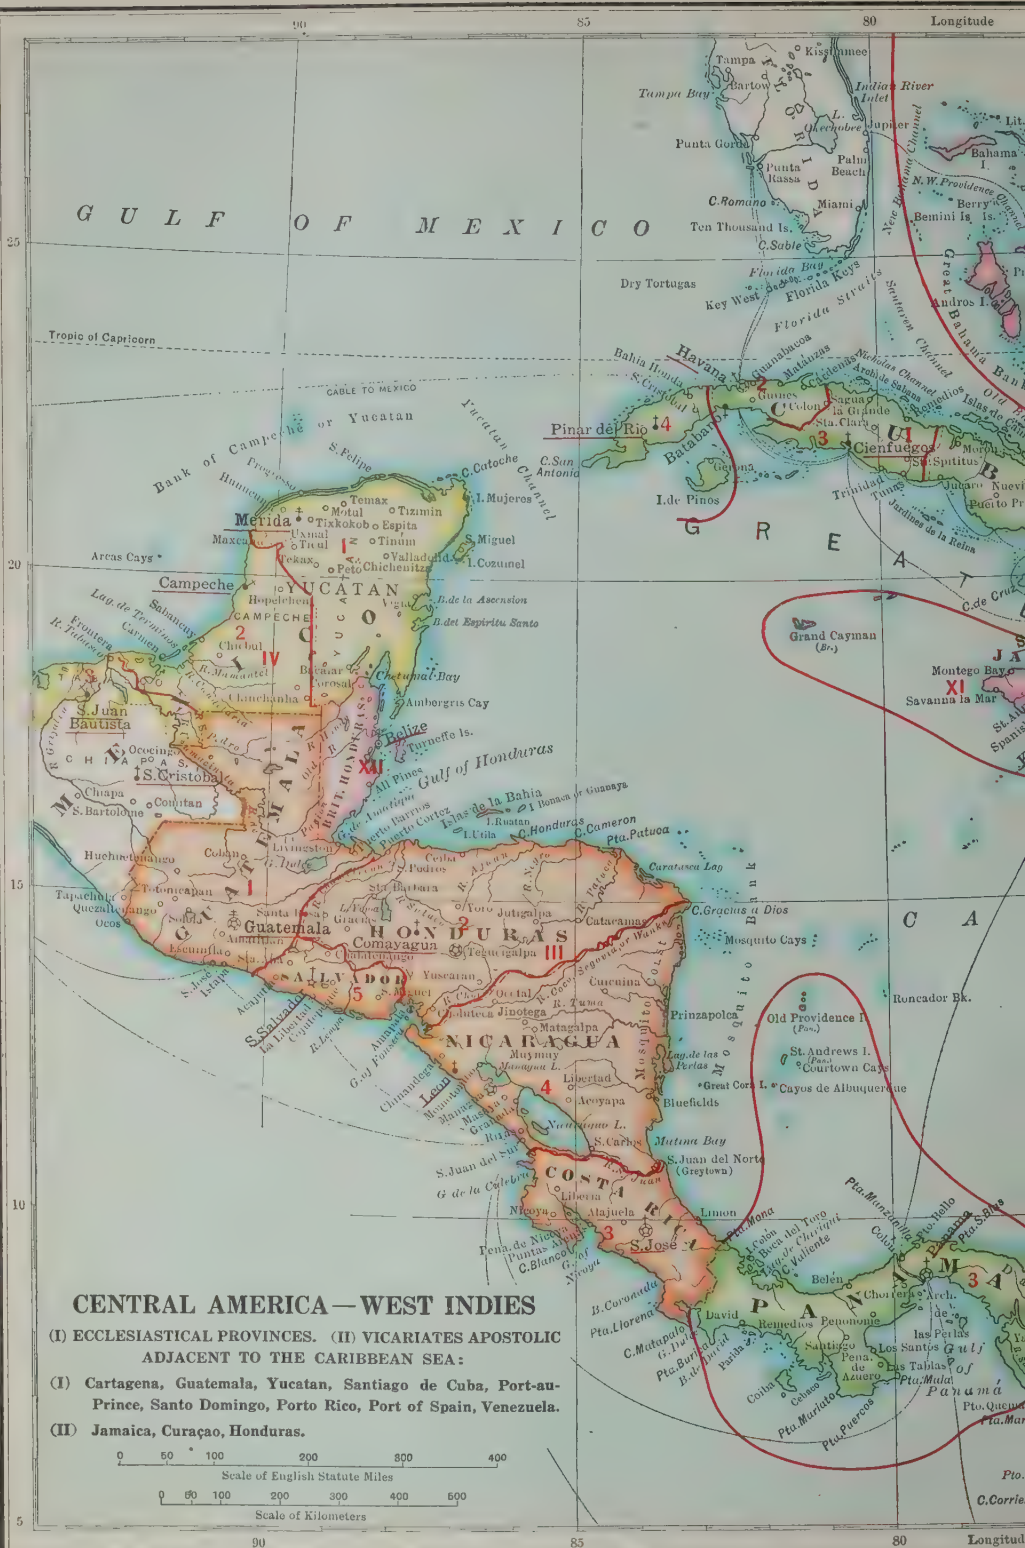

TRANSPORTATION.—Cuba had very few railroads until within recent years, when there has been great activity in building new lines and extending old ones. The completion of the road running through the centre of the island, and connecting Havana with Santiago de Cuba, marks the realization of a long-felt commercial need and the attainment of a political end of great importance.

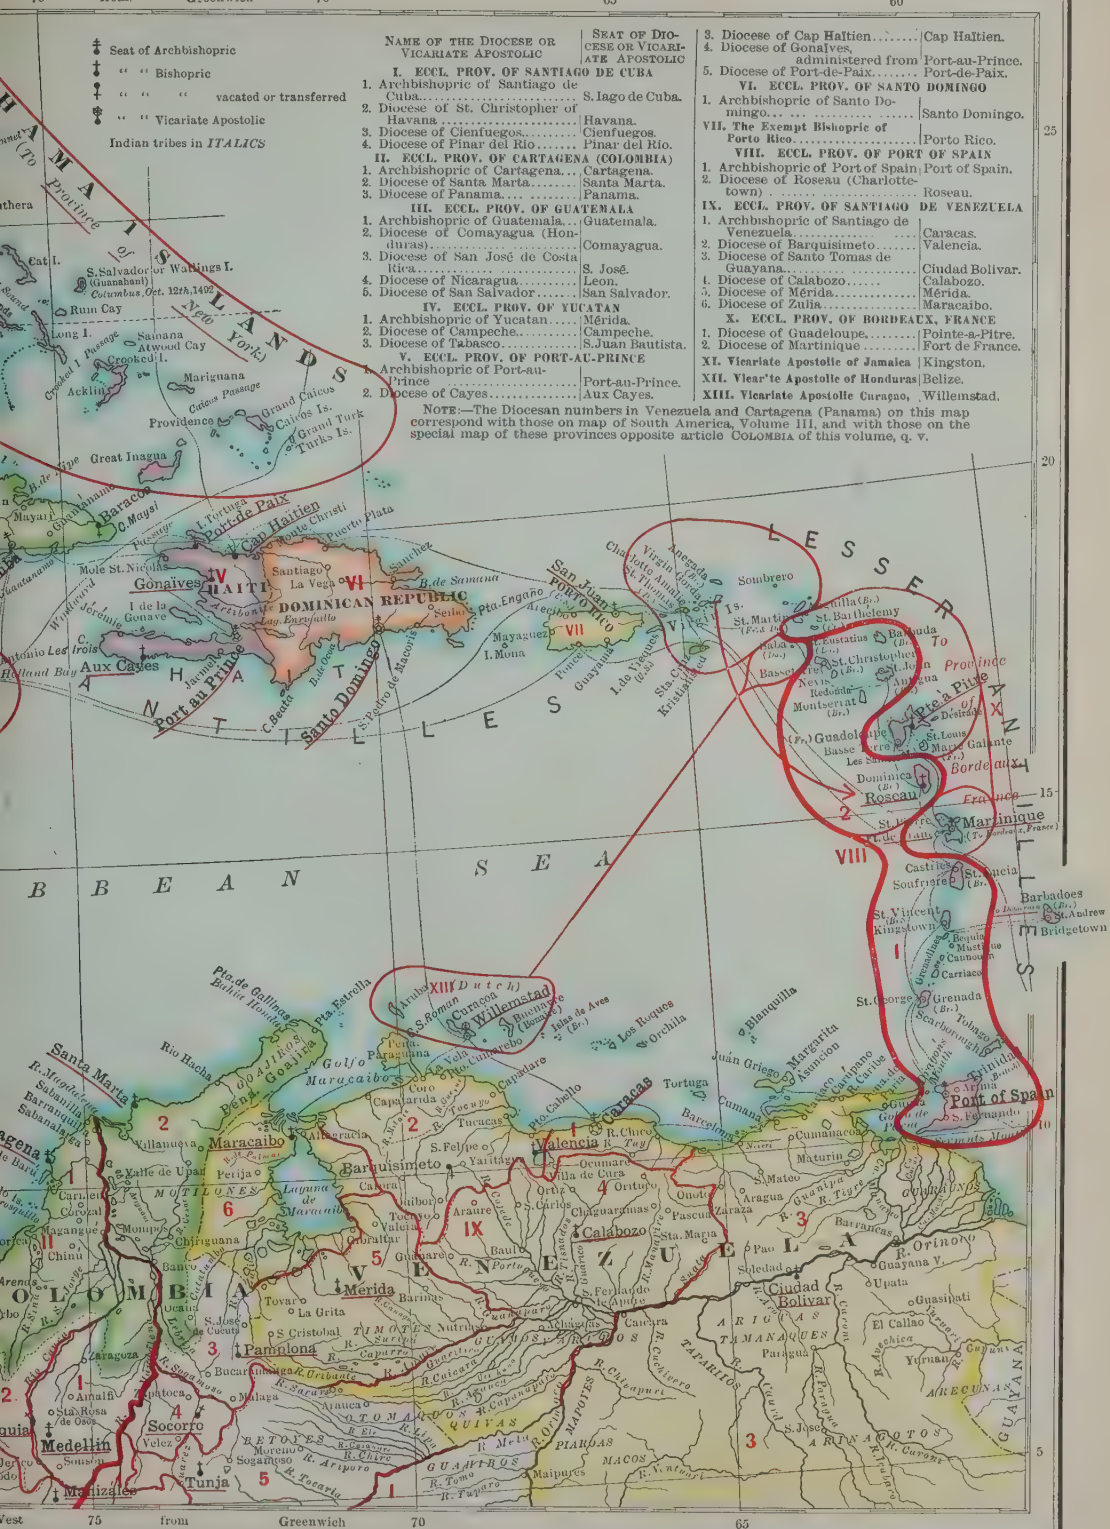

POPULATION.—The official census of 1899 showed a total population of 1,572,797 divided by provinces as follows:—

Havana.....	424,804
Matanzas	202,444
Pinar del Río	173,064
Puerto Príncipe	88,234
Santa Clara.....	356,536
Santiago de Cuba.....	327,715

Of the inhabitants 1,400,262 are natives, and 172,535 foreign-born. The white population constitutes 68 per cent. of the total, the remaining 32 per cent. being made up of negroes, mixed elements, and Chinese. The native white population are nearly all descendants of the Spaniards. Although since the evacuation of Cuba by the Spaniards there has been entire freedom of worship, the population is almost exclusively Catholic. Spanish is the official language of Cuba, though it is characterized by certain slight local peculiarities of pronunciation.

RELIGION.—In 1518, Leo X established the Diocese of all Cuba, which included also the Spanish possessions of Louisiana and Florida. The see was established at Baracoa in Santiago de Cuba, and in 1522, by a Bull of Adrian VI, it was transferred to the city of Santiago de Cuba, where it has remained to the present day. Prior to the nineteenth century, there appears to have been no question regarding the titles of property held by the Church in Spain or in Cuba. But in the beginning of that century, the property held by the Church in Spain was confiscated by the State. This confiscation however, related only to the Church possessions in Spain and did not affect her insular possessions. In 1837, Captain General Tacón sought to make this Spanish confiscation act applicable to the holdings of the monastic orders in Cuba, and in 1841, Valdés, who was then governor, actually seized these

properties and diverted them to the uses of the State. Among these seizures were the convent of the Franciscans, which has been used since then as the Custom House; the convent of the Dominicans, used for a time by the University of Havana; the convent of the Augustinians, used as the Academy of Sciences; the convent of San Ysidro, used by the Spaniards as military barracks, and later, by the Americans, as a relief station. Up to the time of the American occupation these and other valuable properties, formerly held by the Catholic Church, had been held by Spain, subject to the results of a long series of negotiations between the Crown of Spain and the Holy See. The Spanish Government also held a large amount of *censos*, or mortgages, upon property in different parts of the island which had been given to the Church for religious purposes, but which had been taken over by the State for purposes of administration. The Crown, however, annually paid the Church a large sum for its maintenance. With the American occupation these annual payments ceased, and the American Government continued to use the property for the same governmental purposes to which it had been put by the Spaniards. The Church thereupon claimed the right to take back the property. This gave rise to a long discussion and investigation, until the whole matter was finally referred to a judicial commission in 1902. This commission decided in favour of the claims of the Church, and the matter was adjusted to the satisfaction of all. The Government of Intervention agreed to pay a rental of 5 per cent. upon the appraised value of the property, which amounted to about \$2,000,000, with a five years' option to the Government of Cuba, when organized, to buy the property at the appraised value, receiving credit against the purchase price for 25 per cent. of the rental paid; and the matter of the *censos* was adjusted by the Government of Intervention taking them at 50 cents on the dollar and permitting the debtors to take them up at the same rate.

The island at present is divided ecclesiastically into one archdiocese and three suffragan dioceses as follows: the Archdiocese of Santiago de Cuba, created as such in 1804, comprising the civil province of the same name and that of Puerto Príncipe; the Diocese of Havana, established in 1788, comprising the civil provinces of Havana and Matanzas; the Diocese of Cienfuegos, established in 1903, which includes the province of Santa Clara; the diocese of Pinar del Río, established at the same time as the preceding in 1903, and comprising the civil province of the same name and the Isle of Pines. In 1899 the remains of Christopher Columbus, which had been brought from Santo Domingo in 1796 and had since then been preserved in the cathedral of Havana, were once more removed, this time to Seville in Spain. The Archbishop of Santiago de Cuba is metropolitan of the island. Francisco Barnaba Aguilar, the first native incumbent of this metropolitan see, was consecrated by Archbishop Chapelle, 2 July, 1899. Under Spanish rule all the bishops, as well as most of the priests of the island were appointed from Madrid. An Apostolic Delegate for Cuba and Porto Rico now resides at Havana. He is not accredited to the Cuban Government, and Cuba has no official representative at the Vatican. The first delegate was Archbishop Chapelle of New Orleans, who was sent by Leo XIII to look after the interests of the Church in Cuba during the American occupation. There are in the island 199 secular, and 129 regular priests. Of institutions conducted by religious orders, there are 13 colleges for boys, 17 schools and academies for girls, 5 orphan asylums, 1 reform school, 2 houses of the Good Shepherd, 2 asylums for the aged, and 2 hospitals. The clergy are exempt from military service and jury duty. There are no chapels in the prisons; wills and inheritances are subject only to civil laws; cemeteries are owned in some instances by the municipalities, in others, as at Havana, by the Church. Church property is held in the

name of "the Roman Catholic Church". Both civil and religious marriages are legal and binding, and persons may be married according to either or both. Divorce is not legally recognized.

EDUCATION.—During the early history of Cuba, the clergy seemed to have been the principal if not the only agents of education. By the Bull of Adrian VI (28 April, 1522), the Scholatria was established at Santiago de Cuba for giving instruction in Latin. In 1689, the College of San Ambrosio was founded in Havana under control of the Jesuits, for the purpose of preparing young men for the priesthood. The foundation of another Jesuit college in Havana was the next step that gave a fresh impulse to education; this was opened in 1724 under the name of the College of San Ignacio. The old College of San Ambrosio was then united with it, although it still retained its character as a foundation-school for the Church. As early as 1688, the city council of Havana petitioned the royal Government to establish a university in that city, in order that young men desirous of pursuing the higher studies might not be compelled to go to Europe to do so. This was not immediately granted, but finally, by a letter of Innocent XIII (12 September, 1721), the fathers of the Convent of San Juan de Letran were authorized to open the institution desired, and, after some years of preparation, the present University of Havana was founded in 1728. The rectors, vice-rectors, counsellors, and secretaries were to be Dominicans. In 1793, under the administration of Don Luis de las Casas, who is always gratefully remembered by the Cubans, was founded La Sociedad Económica de la Habana, which has always been the prime mover in the educational advancement of the island.

Not until the last century was well advanced, was there a free institution in all Cuba where children could be taught to read and write. The first opened was that of the Bethlehemite Fathers in Havana, and that through the generosity of a private citizen.

In 1899, the date of the American occupation, private schools abounded in Cuba, but the benefits of these could be enjoyed only by the children of the rich. The children of the poorer classes who attended the so-called municipal schools, received only a rudimentary education. But soon after the American intervention the wonderful work of reconstruction was begun. Adequate school buildings were provided, the number of teachers was rapidly increased, and measures were adopted to compel children to attend the classes. When the Cuban government assumed control, it continued the good work along the same lines, so that now it can be said that the public schools are equal, if not superior to the private ones, at least as to furniture and teaching apparatus. Primary education, according to the Constitution, is gratuitous and compulsory. The expenses are paid by the municipality or, in any case of municipal inability to pay, by the Federal Government. Secondary and higher education are controlled by the State. The children of the public schools receive religious instruction in what are known as *doctrinas*, of which there is one in every parish, and at the head of it is the parish priest. These *doctrinas* are like Sunday schools, except that sessions are held on Saturday instead of Sunday. The teachers are all volunteers, and are usually ladies who live in the parish. According to the census of 1899, the proportion of illiteracy was about 60 per cent. But with the extraordinary increase in the number of schools and facilities for teaching, this proportion is (in 1908) rapidly decreasing.

Recently the University has been divided into three faculties: Letters and Sciences; Medicine and Pharmacy; Law. The faculty of Letters and Sciences consists of the schools of letters and philosophy, of pedagogy, of sciences, of engineering, electricity, of architecture, and of agriculture. The faculty of Medicine and Pharmacy consists of the schools of medicine, of pharmacy, of dental surgery, and of veterinary sur-

gery. The faculty of Law consists of the schools of civil law, of public law, and of notarial law. There are also in Havana a normal school, a school of painting and sculpture, and a school of arts and trades.

Cuenca (CONCA IN INDIIS) DIOCESE OF, a suffragan of Quito, in the Republic of Ecuador, South America, created 13 June, 1779. The episcopal city, which has 30,000 inhabitants, is situated 7700 feet above the sea, in a broad plain of the province of Azuay, about seventy-five miles south-east of Guayaquil. Peruvian antiquities abound in the vicinity. Cuenca is the second see in importance of the Ecuadorian provinces. It includes the civil divisions of Azuay, of which Cuenca is the capital, and Canar, the capital of which is Azogues. The first missions were centred in the eastern portion of the republic owing to the slow progress of civilization elsewhere. The Jesuits were first in the field followed by the Franciscans, Fathers of Mercy, Dominicans, and some secular priests. In 1599 the Jesuit Rafael Ferrer penetrated to Cofanes, and his associates in the Society of Jesus, Lucas de la Cueva and Gaspar Cujia, later organized the work that went on with so much success for religion and civilization during 130 years, until the Society was expelled in 1767. A mission, under the Salesian Fathers, is now in operation in the Vicariate of Gualaquiza, east of Cuenca. To this diocese belonged the Franciscan Vicente Solano (1790-1865), famous as a Catholic controversialist.

The first bishop of the see was José Carrión y Marfil, consecrated in 1786, and he has had nine successors, during whose administrations the faith of the people has been loyally preserved in spite of all difficulties. The organization of the diocese is mainly due to that excellent administrator, Bishop Toral (1861-1883), who also assisted at the Vatican Council. Devotion to the Blessed Sacrament has been so notable a characteristic of the diocese that Cuenca has won the title of the "Eucharistic City". A special Eucharistic feast known as "The Cuenca Septenary" is kept with great fervour. Owing to the domination of radicalism in national politics the Church is not now able to make very special progress in the republic, and the secular spoliation of ecclesiastical property has given rise to scandalous usurpations of her rights. The effects of continual civil strife have been as disastrous to religious progress as they have been debilitating and destructive to commercial and industrial prosperity. The appointment by the Holy See, after a vacancy of seven years, on 11 January, 1907, of Bishop Manuel Maria Polit has had beneficial results.

STATISTICS.—Parishes, 60; priests, secular 130, seminarians 18, regular 60; lay brothers 25; Congregations of women, contemplative 70, active 140, novices 50; 1 college, 120 students; 2 literary academies, 40 pupils; 2 schools, Christian Brothers, 1300 pupils; 55 parish schools (boys), 1500 pupils; 48 (girls), 785 pupils; 2 hospitals; 1 home for aged, 20 inmates, 1 orphan asylum, 15 inmates; 1 House of Good Shepherd, 14 penitents; 1 asylum, 50 children. Catholic population 200,000.

TOMÁS ALVARADO.

Cuenca (CONCA), DIOCESE OF, in Spain, suffragan of Toledo. The episcopal city (10,756) is also the capital of the civil province of the same name, and the diocese includes, in addition, a portion of the provinces of Guadalajara and Albacete. Cuenca was made a diocese in 1183 by Lucius III, shortly after its reconquest from the Moors by Alfonso IX (1177). The first bishop was Juan Yanez. Among its famous prelates were (1577) the great jurisconsult Diego de Covarruvias y Leyva (q. v.), Isidoro de Carvajal y Lancaster (1760), and (1858) Cardinal Miguel Payá, Archbishop of Santiago, one of the most distinguished prelates of the Vatican Council. The cathedral of Cuenca is a magnificent Gothic edifice begun at the end of the twelfth and finished in the thirteenth century. One of its chapels bears the name and was built at the expense of the Albornoz family to which belonged the great cardinal Gil de Albornoz (q. v.). The church of Santa Maria de Gracia, once a synagogue, is remarkable for its fine sculptures.

EDUARDO DE HINOJOSA.

Cuernavaca, DIOCESE OF (CUERNAVACENSIS), erected 23 June, 1891, comprises all the State of Morelos in the Republic of Mexico, and is bounded on the north and the west by the Archdiocese of Mexico, on the east by the Archdiocese of Puebla, and on the south by the Bishopric of Chilapa. It has an area of 7184 square kilometers, with a population of 161,697. The Gospel was first preached in the territory of the present diocese by the Franciscans who founded the convent of Cuernavaca in 1526. In 1529 the Dominicans established themselves at Oaxtepec, and the Augustinians in 1534 at Ocuituco. Motolinía, the Franciscan historian, asserts that in 1536 all the inhabitants of this region had been converted to the Faith. In the eighteenth century the churches founded by the religious of these three orders were secularized, that of Cuautla alone remaining to the Dominicans, but this also finally passed into the hands of the secular clergy. The diocese is now enjoying a period of peace. Agriculture, the manufacture of alcohol, and the sugar industry, form the principal means of livelihood for the inhabitants. The non-Catholics, who are about 500 in number, form small communities and are permitted absolute freedom.

The first bishop, Fortino Hipólito Vera was consecrated 29 July, 1894. He died 23 September, 1898, and was succeeded by Francisco Plancarte y Navarrete, consecrated first Bishop of Campeche, 16 September, 1896, and translated to the vacant see of Cuernavaca, 28 November, 1898. He took possession 16 February, 1899.

The diocese is divided into 34 parishes and has 42 secular and 6 regular priests, who have charge of the seminary. Eight Marist Brothers have charge of the schools for boys, and 20 sisters (Hijas de María Inmaculada de Guadalupe) those for the girls. There are 12 parochial schools with an attendance of more than one thousand, boys and girls. Besides these there are in the episcopal city a seminary with about 36 boarders, a college for boys attended by 262 students, both boarders and day scholars, an orphan asylum with 40 regular inmates and 274 girls who attend classes there, and a Catholic hospital supported by the Society of St. Vincent de Paul. The "Boletín Oficial y Revista Eclesiástica del Obispado de Cuernavaca", published fortnightly, is the only Catholic publication in the diocese. The episcopal residence is in the city of Cuernavaca, whose foundation antedates the thirteenth century.

It has a population of 9564. Conquered by the Aztecs about the middle of the fifteenth century, it was taken by the Spaniards in April, 1521. It was the favourite residence of Hernán Cortés and of the unfortunate Emperor Maximilian. Since 1870 it has been the capital of the new State of Morelos.

FRANCISCO PLANCARTE Y NAVARRETE.

Cueva, JUAN DE LA, poet and dramatist, b. of a noble family at Seville, Spain, in 1550; d. in 1607. Little is known of his life save that in his later years he visited the West Indies and lived for some time in Portugal. It is as a dramatic writer that Cueva merits notice. He was a prolific writer for the stage, yet but few of his plays have been preserved. They were represented in 1579 and the years following, and are important because most of them are historical. He must be given credit also for his dramatic initiative, for he ignored Greek and Latin traditions, and developed his plots, characters, incidents, and situations with little regard for "the unities" of the classical model. He was thus one of the first to forsake the classical for the romantic drama. In addition he reduced the number of *jornadas*, or acts, from five to four, and introduced a number of metrical forms hitherto unknown upon the stage. Several of the plays are on national subjects, such as "La Libertad de España por Bernardo del Carpio" and "Los Siete Infantes de Lara". Among those dealing with ancient history may be mentioned "La Muerte de Ajax", "Telamón Sobre las Armas de Aquiles", and "La Muerte de Virginia y Apio Claudio". One of them, "El Saco de Roma y Muerte de Borbón", deals with a great event which was then recent, and describes the Italian triumphs of Charles V. Another, "El Infamador", foreshadows in one of its characters, Leucino, the type of libertine which Tirso de Molina afterwards immortalized with his Don Juan.

These plays are somewhat crude in structure, and a noticeable fault is that the author makes all the characters, whether of high or low degree, talk in the same lofty vein. Again, he involves his characters in difficulties and situations whence escape seems impossible, and then, without regard to plausibility, grasps the first solution that presents itself, such as a murder or some supernatural intervention. Among his non-dramatic works are: a collection of lyric poems and sonnets, published under the title "Obras de Juan de la Cueva" (Seville, 1582); "Coro Febeo de Romances historiales", a collection of one hundred romances (1587), of which A. Duran has reproduced sixty-three in his "Romancero"; and an epic poem in twenty-four cantos, "La Conquista de la Bética" (Seville, 1603), describing the conquest of Seville by the King Saint Ferdinand.

Cujas, JACQUES. See LAW.

Culdees, a word so frequently met with in histories of the mediæval Churches of Ireland and Scotland, and so variously understood and applied, that a well-informed writer (Reeves) describes it as the best-abused word in Scotch church-history. The etymology of the term, the persons designated by it, their origin, their doctrines, the rule or rules under which they lived, the limits of their authority and privileges have all been matters of controversy; and on these questions much learning and ability has been shown, and not a little partisan zeal. In the Irish language the word was written *Ceile-De*, meaning companion, or even spouse, of God, with the Latin equivalent in the plural, *Colidei*, anglicized into *Culdees*; in Scot-

land it was often written *Kelidei*. All admit that, in the beginning at all events, the Culdees were separated from the mass of the faithful, that their lives were devoted to religion, and that they lived in community. But the Scotch writers, unwilling to trace the name to an Irish source, prefer to derive it from "cultores Dei", worshippers of God, or from *civil*, a shelter, or from *kil*, a church. The Irish derivation, however, is the easiest and the most natural, and the one now generally accepted. From *Ceile-De* the transition is easy to *Colideus* and *Culdee*; and in the Irish annals the epithet *Ceile-De* is appropriately given to St. John, one of the twelve Apostles, to a missionary from abroad whose coming to Ireland is recorded in the Four Masters at the year 806, and to Aengus (q.v.), the well-known monk and author of Tallaght, whose penances and mortifications, whose humility, piety, and religious zeal, would specially mark him out as the companion of God.

Taking him as an example of the class to which he belonged, probably the highest example which could be given, when we remember the character of his life, we find that the Culdees were holy men who loved solitude and lived by the labour of their hands. Gradually they came together in community, still occupying separate cells, still much alone and in communion with God, but meeting in the refectory and in the church, and giving obedience to a common superior. St. Maelruan, under whom Aengus lived, and who died as early as 792, drew up a rule for the Culdees of Tallaght which prescribed the time and manner of their prayers, fasts, and devotions, the frequency with which they ought to go to confession, the penances to be imposed for faults committed. But we have no evidence that this rule was widely accepted even in the other Culdean establishments. Nor could the Culdees at any time be said to have attained to the position of a religious order, composed of many houses, scattered over many lands, bound by a common rule, revering the memory and imitating the virtues of their founder, and looking to the parent house from which they sprang, as the children of Columbanus looked to Luxeuil or Bobbio, or the Columban monks looked to Iona. After the death of Maelruan Tallaght is forgotten, and the name *Ceile-De* disappears from the Irish annals until 919, when the Four Masters record that Armagh was plundered by the Danes, but that the houses of prayer, "with the people of God, that is *Ceile-De*", were spared. Subsequent entries in the annals show that there were Culdees at Clonmacnoise, Clondalken, and Clones, at Monahinch in Tipperary, and at Scatterry Island.

To those of the eighth century, such as were represented by Aengus, were soon added secular priests who assumed the name of Culdees, lived in community, subjected themselves to monastic discipline, but were not bound by monastic vows. Such an order of priests had, in the middle of the eighth century, been founded at Metz. As they lived according to rules and canons of councils, they came to be called secular canons and were usually attached to collegiate or cathedral churches. They became popular and quickly extended even to Ireland, and it is significant that in the accounts given of the Culdee establishments at Clones, Devenish, and Scatterry Island, *Culdee* and *canon* are taken as convertible terms. The Danish wars, which brought ruin on so many proud monastic establishments, easily effected the destruction of the Culdee houses with their feeble resisting powers. Some, such as Clondalken and Clones, disappeared altogether, or dragged out a miserable existence which differed little from death. At Clonmacnoise, as early as the eleventh century, the Culdees were laymen and married, while those at Monahinch and Scatterry Island, being utterly corrupt and unable, or unwilling, to reform, gave way to the regular canons, with their

purser morals and stricter discipline. (See CANONS AND CANONESSES REGULAR.)

Those at Armagh were more tenacious of existence. Like their brethren throughout Ireland, they had felt the corrupting influence of the Danish wars; and while lay abbots ruled at Armagh the Culdees had so far departed from their primitive piety that in the twelfth century regular canons were introduced into the cathedral church and henceforth took precedence of the Culdees. But the latter, six in number, a prior and five vicars, still continued a corporate existence at Armagh. They were specially charged with the celebration of the Divine offices and the care of the church building, had separate lands, and sometimes had charge of parishes. When a chapter was formed, about 1160, the prior usually filled the office of precentor, his brethren being vicars choral, and himself ranking in the chapter next to the chancellor. He was elected by his brother Culdees and confirmed by the primate, and had a voice in the election of the archbishop by virtue of his position in the chapter. As Ulster was the last of the Irish provinces to be brought effectually under English rule, the Armagh Culdees long outlived their brethren throughout Ireland. By the end of Elizabeth's reign, however, they had died out, and in 1628 a new body was incorporated by Charles I—the "Prior and Vicars Choral" of the cathedral church of Armagh—to which were transferred the lands formerly held by the Culdees. Five years later, the Catholic primate, O'Reilly, announced to Rome that he had been elected "Prior of the College of the Culdees", and he wanted to know if in assuming the title he had acted in accordance with canon law. We do not know what was the nature of the answer he received, but this is the last mention made of the Irish Culdees.

At York was their only English establishment, where they performed in the tenth century the double duty of officiating in the cathedral church and of relieving the sick and poor. When a new cathedral arose under a Norman archbishop, they ceased their connexion with the cathedral, but, with resources augmented by many donations, they continued to relieve the destitute. The date at which they finally disappeared is unknown. Nor do we know the fate of the single Culdean house in Wales, which existed at Bardsey in the days of Giralduus Cambrensis. In Scotland they were more numerous even than in Ireland. No less than thirteen monastic establishments were peopled by them, eight of which were in connexion with cathedral churches. National pride induced some of the Scotch writers to assert that the Culdees were Scotch and not Irish. But the influence of Ireland on the primitive Christian Church of Scotland was so overwhelming, and facts to show this are so many, that the ablest among the Scotch historians, such as Pinkerton, Innes, and Hill-Burton, are compelled to admit that the first Culdees were Irish, and that from Ireland they spread to Scotland. They were not, however, Columban monks, for there is no mention of any Culdees at any Columban monastery, either in Ireland or in Scotland, until long after Columba was in his grave; nor was it till 1164 that Culdees are mentioned as being in Iona, and then only in a subordinate position. Appearing, then, first in Ireland, they subsequently appeared in Scotland, and in both countries their history and fate are almost identical. Attached to cathedral or collegiate churches, living in monastic fashion, though not taking monastic vows, the Scotch, like the Irish Culdees, were originally men of piety and zeal. The turbulence of the times and the acquisition of wealth sowed the seeds of decay, zeal gave way to indolence and neglect, a celibate community to married men, church property was squandered or alienated, even the altar offerings, grasped by avarice, were diverted to personal uses, and by the end of the thirteenth century

the Scotch Culdee houses had in almost every case disappeared. Some, like Dunkeld and Abernethy, were superseded by regular canons; others, like Brechin and Dunblane, were extinguished with the introduction of cathedral chapters; and one at least, Monifieth, had passed into the hands of laymen. At St. Andrews they lived on, side by side with the regular canons, and still clung to their ancient privilege of electing the archbishop. But their claim was disallowed at Rome, and in 1273 they were debarred even from voting. Before the Reformation they had finally disappeared, and in 1616 the lands they once held were annexed to the See of St. Andrews.

E. A. D'ALTON.

Cullen, PAUL, Cardinal, Archbishop of Dublin, b. at Prospect, Co. Kildare, Ireland, 29 April, 1803; d. at Dublin, 24 October, 1878. His first school days were passed at the Shackleton School in the neighbouring village of Ballytore. He entered Carlow College as alumnus in 1816, and proceeded, in 1820, to the College of Propaganda in Rome where his name is registered on the roll of students under date of 29 November, 1820. At the close of a distinguished course of studies he was selected to hold a public disputation in the halls of Propaganda on the 11th of September, 1828, in 224 theses from all theology and ecclesiastical history. This theological tournament was privileged in many ways, for Leo XII, attended by his court, presided on the occasion, while no fewer than ten cardinals assisted at it, together with all the élite of ecclesiastical Rome. The youthful Abbate Pecci, the future Leo XIII, was present at the disputation, and referring to it at a later period declared that it made an indelible impression upon him, and that he was filled with admiration for the brilliant talent and singular modesty of the Irish student. During his course of studies, Paul Cullen had acquired a profound knowledge of the classical and Oriental languages, and it was a novel thing to see a young Irish priest immediately on his ordination appointed to the chairs of Hebrew and Sacred Scripture in the schools of Propaganda, and receiving at the same time the charge of the famed printing establishment of the Sacred Congregation. This latter charge he resigned in 1832, when appointed rector of the Irish College in Rome, but during the short term of his administration he published a standard edition of the Greek and Latin Lexicon of Hedericus, which still holds its place in the Italian colleges; he also edited the Acta of the Congregation of Propaganda in seven quarto volumes, and other important works.

While rector of the Irish College (1832-1850) he was admitted to the intimate friendship of Gregory XVI and Pius IX. He profited by the influence which he thus enjoyed to safeguard the interests of the Irish Church, and to unmask the intrigues of the British agents who at this period were untrusting in their attempts to force their political views upon the Vatican, and to forge fetters for Catholic Ireland. During the troubled period of the Roman Revolution, Dr. Cullen, at the request of the Sacred Congregation, accepted the responsible position of rector of the College of Propaganda, retaining, however, the charge of Rector of the Irish College. Soon after his appointment the Revolutionary Triumvirate in the frenzy of their triumph issued orders that within a few hours the College of Propaganda was to be dissolved and the

buildings to be appropriated for government purposes. Without a moment's delay the rector appealed to Lewis Cass, the United States minister, for the protection of the citizens of the United States who were students of the college. Within an hour the American flag was floating over the Propaganda College. The mandate of the Triumvirs was withdrawn, and a decree was issued to the effect that the Propaganda should be maintained as an institution of world-wide fame of which Rome was justly proud. Thus through the Irish rector and the American flag the venerable college was saved from confiscation.

Dr. Cullen was promoted to the primatial See of Armagh on 19 December, 1849, and was consecrated by the Cardinal Prefect of Propaganda at the church of the Irish College, Rome, 24 February, 1850. A wider field was assigned to his zeal and piety when he was transferred to the See of Dublin 1 May, 1852. He was elevated to the cardinalate as Cardinal Priest of San Pietro in Montorio in 1867, being the first Irish bishop on whom that high dignity was ever conferred.

The first great duty which as Delegate of the Apostolic See devolved on the newly appointed Archbishop of Armagh was to convene the Synod of Thurles (1850), the first national synod held with due public solemnity in Ireland since the beginning of the Reformation period. The main purpose of the synod was to restore the vigour of ecclesiastical discipline in Ireland, and this was in the fullest measure attained. Twenty-five years later, Cardinal Cullen, once more as Apostolic Delegate, presided at the national synod held at Maynooth in 1875. This second synod added a crowning grace to the manifold blessings that had accrued to the Irish Church from the First Plenary Synod. Throughout his episcopate it was his most anxious care to check proselytism, to promote the beauty of the House of God, and to multiply institutions of enlightenment, charity, and benevolence. In all this his efforts were admirably seconded by the clergy and the various sisterhoods whose devotion to the sacred cause of religion was beyond all praise.

He was particularly intent on bringing the blessings of religious education within reach of the poorest Catholics in the land. The system of national education adopted by the Government for Ireland in 1832 was a great improvement on the proselytising systems hitherto carried on by anti-Catholic agencies receiving government aid. The working of the system, however, was for many years practically left in the hands of the Protestant Archbishop of Dublin (Dr. Whately) and his Presbyterian ally, Rev. James Carlile, both of whom were unceasing in unscrupulous efforts to make it an engine of attack on the Catholic faith of the Irish people. Dr. Cullen from the beginning of his episcopate till its closing hour never relaxed his endeavours, on the one hand to counteract those proselytising agencies and to remove all dangers to the faith of the Catholic children, and on the other to bring gradually the literature and methods of the system into harmony with the national traditions and social requirements of Ireland. His evidence on the national system of education in Ireland, given before the Earl Powis' Royal Commission in 1869, has been pronounced by experts to be a most complete statement of the Catholic claims in the matter of primary education. The national system of to-day is no longer what it was in 1849, and almost all the improvements that have been made are on the lines suggested in the evidence of Cardinal Cullen.

From the first days of his episcopate Archbishop Cullen had set his heart on the erection of a Catholic university for Ireland. The project was hailed with enthusiasm by the Irish race at home and abroad, and the beginnings of the institution in Dublin gave promise of success. Countless difficulties, however, arose over which the Archbishop had no control, and hence the Catholic University of Ireland was attended with

only partial success (see IRELAND). Throughout his whole episcopate he continued to extend his patronage to it. He used often to repeat: "No one can question the justice of Ireland's claim to a Catholic University". Even when its fortunes were at the lowest ebb, he would say: "We must keep the flag flying", being assured of final triumph. Another project most dear to him was a diocesan seminary for Dublin. The great ecclesiastical College of Holy Cross which he erected at Clonliffe in the immediate suburbs of the city will long remain a conspicuous monument to his munificence and a crown of immortal glory to the holy prelate who raised it.

In political matters Cardinal Cullen was quite heedless of popularity, and he made it a rule to support every measure from whatever political party it came that he considered conducive to the interests of Ireland. He condemned the Young Irelanders as sowers of dissension, and a source of ruin to the Irish cause. He highly esteemed the literary merit of many of the writers for "The Nation", but he felt so convinced that some of those connected with that newspaper were in the secret pay of the British Government that he would have no communication with them, and he regarded them as the worst enemies of Ireland. For the same reasons he relentlessly opposed the Fenian movement. It was his constant endeavour to bring together all the friends of Ireland so as to form a united phalanx in order to redress by constitutional means the wrongs of centuries and thus lift up Ireland from her oppressed and prostrate condition. His policy was attended with success. The Protestant Church in Ireland was disestablished, the condition of the poor in the workhouses was ameliorated, the Industrial Schools' Act was passed, the laws affecting land tenure were amended, and in many other matters victory after victory crowned the constitutional campaign of Ireland's friends.

One of the accusations most frequently repeated to stir up popular prejudice against the cardinal was to the effect that he was a frequent visitor at the viceregal castle in search of favours for himself or friends. As a matter of fact the only such visit he paid was toward the close of 1867. The Fenian leader, General Thomas F. Burke, had been sentenced to death and every effort to obtain a reprieve had been made in vain. He had fought with distinction in the Civil War of the United States, and the British Government was determined to deter other skilled military leaders from enlisting their services in aid of the Irish cause. The orders for execution from London were peremptory. The scaffold was already erected and the next morning General Burke was to be hanged. Through information received from the Archbishop of New York and other American friends the cardinal was convinced of the upright character of the accused who had been betrayed by false reports to engage in the Fenian enterprise, impelled by the sole motive of love of his native land. At noon on the vigil of the day fixed for the execution, the cardinal accompanied by his private secretary and Monsignor Forde, his vicar-general, set out for the viceregal castle on the forlorn errand to obtain a reprieve for the brave man. The interview with the viceroy lasted for more than an hour. The cardinal on personal grounds justified his right to be heard in the case, since none had in public or private more strenuously opposed Fenianism than himself. He insisted that the execution of such a brave man would only add fuel to the flame, while the exercise of clemency would serve to open men's eyes to the recklessness of the whole Fenian enterprise. The viceroy listened to the cardinal's reasoning with due respect, but at the same time was quite inexorable. He telegraphed, however, the whole matter to headquarters in London. Late at night the response came. The reprieve was granted and the life of the brave man was spared. This was the first and last visit of Cardi-

nal Cullen to the viceregal castle to petition for personal favours.

He paid frequent visits to Rome. He took part in the solemn celebrations connected with the definition of the dogma of the Immaculate Conception of the Blessed Virgin Mary in 1854, and with the centenary of the martyrdom of Sts. Peter and Paul in 1867. On these and similar occasions he took up his residence at the Irish College. From the opening of the Vatican Council, Cardinal Cullen took an active part in its deliberations. His first discourse in defence of the prerogatives of the Holy See, mainly on historical grounds, in reply to the Bishop of Rottenburg, was regarded as one of the ablest discourses delivered in the council. At its close the hall resounded with applause, and during the afternoon about eighty bishops called at the Irish College to present their congratulations. Pius IX in token of appreciation of the singular ability of the discourse forwarded to the cardinal a gift of a very fine Carrara marble *rilievo* representing St. Paul addressing the Areopagus. This work of art now adorns a side chapel in the church attached to the diocesan seminary of Dublin. Towards the close of the sessions of the council at the express wish of the Central Commission, conveyed in person through its secretary, Archbishop Franchi, Cardinal Cullen proposed the precise and accurate formula for the definition of Papal Infallibility. It was a matter of great delicacy, as promoters of the definition were split up into various sections, some anxious to assign a wider range to the pope's decisions, while others would set forth in a somewhat indefinite way the papal prerogative. All accepted the form of definition proposed by Cardinal Cullen, and thus it became the privilege of the Irish Church to have formulated for all time the solemn definition of this great article of Faith.

The condition of the Catholic Church in Ireland, in 1878, in contrast with what it was in 1850, affords abundant proof of the fruitfulness of Cardinal Cullen's zeal and of the beneficent results achieved during his episcopate. Those twenty-eight years marked a continuous period of triumphant progress in all matters connected with religion, discipline, education and charity. The eloquent Dominican Father Thomas N. Burke (q. v.) wrote in 1878: "The guiding spirit animating, encouraging and directing the wonderful work of the Irish Catholic Church for the last twenty-eight years was Paul, Cardinal Cullen, and history will record the events of his administration as, perhaps, the most wonderful and glorious epoch in the whole ecclesiastical history of Ireland. The result of his labours was the wonderful revival of Catholic devotion and piety which in our day has restored so much of our ancient glory of sanctity to the land once called the 'Island of Saints'." No other Church in Christendom during the same period achieved grander religious results or yielded in richer abundance the choicest fruit of genuine Catholic piety. His remains rest beneath the apse of the Church attached to the diocesan seminary at Clonliffe.

PATRICK FRANCIS CARDINAL MORAN.

Culm, DIOCESE OF, a bishopric in the north-eastern part of Prussia, founded in 1234, suffragan to Gnesen. The territory on the Vistula and Baltic, which the Teutonic Order had obtained partly by gift and partly by conquest, was divided in this year by the papal legate, William Bishop of Modena, into the four dioceses of Culm, Ermland, Pomesanien, and Samland; in 1255 the Archbishop of Riga became the metropolitan of these dioceses. The Bishopric of Culm embraced the province of Culm, that is, the land between the Vistula, Drewenz, and Ossa rivers, and in addition, the city of Löbau and its surrounding district. Pope Innocent IV consecrated as first bishop the Dominican, Heidenreich (1245; d. 1263). Originally the seat of the diocese was Culmsee, where Heidenreich began

in 1254 the construction of a cathedral. The bishop possessed the highest authority, both spiritual and secular, in his diocese; he was the ruler of the land, but was in some measure dependent on the Teutonic Order. During the episcopate of the first bishop, the cathedral chapter, founded in 1251, followed the Rule of St. Augustine, but the second bishop, Friedrich of Hausen (1264-74), allowed the chapter to enter the Teutonic Order, taking its endowment with it. Not only was Friedrich a member of the Teutonic Order but most of his successors in the episcopal office until 1466 also belonged to it. Under the powerful protection of the Knights rapid progress was made in cultivating the soil and in Christianizing the inhabitants. Many flourishing communities and numerous schools and churches were founded, an excellent system of courts was provided, and the Dominican, Franciscan, and Cistercian orders were introduced. As early as the reign of the seventh bishop, Otto (1324-49), who was a secular priest, there were 113 parishes and 538 priests. The most celebrated schools of the diocese were the "Johannes" school at Thorn and the cathedral school at Culm; the latter was changed in 1473 into a *studium particulare* and had celebrated professors, among whom were Johannes Dantiscus, Eobanus Hessus, etc.

On account of its close connexion with the Teutonic Knights, the diocese was involved in the disputes of the order with Poland. By the second Treaty of Thorn, 1466, the order was obliged to cede the province of Culm, with other territories, to Poland. The bishopric was now reconstructed as a secular diocese, the bishops were named by the kings of Poland, and nobles only were appointed as members of the cathedral chapter. The heresies of Hus and Wyclif found many adherents in the Diocese of Culm in the fifteenth century, and thus the ground was prepared for the religious revolution of the sixteenth. In the larger towns especially, such as Danzig, Elbing, and Thorn, the doctrines of Luther won numerous supporters, against whom the bishop, Johannes IV Konopacki (1508-30), showed himself lacking in moral force. It was only through the exertions of the Dominicans, who had remained loyal, that King Sigismund I took more severe measures against the innovations. The zealous and spiritual-minded Johann V von Höfen, generally called Dantiscus (1530-38), laboured to maintain the Catholic Faith, as did also Tiedemann Giese (1538-49), the friend of Copernicus, and Stanislaus Hosius (1549-51), who, after an episcopate of two years, was transferred to the See of Ermland. Nevertheless Protestantism took firm root in Thorn, Graudenz, Marienburg, and other towns. Peter I Kostka (1574-95) was the reformer of the diocese; through his efforts a provincial council was held at Gnesen at which the Diocese of Culm was placed under the metropolitan control of Gnesen, the Archbishopric of Riga having been suppressed in 1566. Kostka also held a diocesan synod at Culm in 1583, promulgated the decrees of the Council of Trent, reformed the monasteries of the diocese, and introduced the Jesuits in 1593. The preservation of Catholicism in the diocese, as well as the reconquest of many souls that had gone astray, was due to the effective labours of the Jesuits and of the orders which were successfully re-established.

The fall of the Kingdom of Poland brought the diocese into new relations. In 1772, in consequence of the first Partition of Poland, it came under the control of Prussia, to which, with a short interruption (1807-15), it has ever since belonged. Under Prussian auspices Protestantism again increased largely in the diocese; in 1772 the possessions of the bishop, the cathedral chapter, and many monasteries were confiscated, and Protestant colonists were settled throughout the province. In this way, and also on account of the confusion of the Napoleonic era, the diocese

fell into decay. For lack of a proper residence, the forty-ninth bishop, Franz Xaver Count Wrba-Rydzynski, was only once in his diocese. After his death the see was vacant for ten years, and the diocese was administered by the coadjutor bishop, Nalecz Wilkxycki. The Bull "De salute animarum", 1821, which provided for the reorganization of the Prussian dioceses, gave Culm new boundaries; to the old diocese were added parts of the Dioceses of Leslau, Gnesen, Plock, and of the former Diocese of Pomesanien. In 1824 the seat of the bishop and the chapter was fixed at Pelplin, where it still remains. The new diocese suffered above all from the lack of priests, the suppression of the monasteries, and the poverty of the Catholic population. Bishop Ignatius Matthy (1824-32) bent all his energies to the founding of a seminary for priests. Anastasius Sedlag (1834-56) made it his aim to give the diocese a uniform administration, to safeguard the property still remaining to the Church after its great losses, to promote the development of a capable clergy, and to increase the number of priests. In the same way Johannes Nepomuk von der Marwitz (1857-86) devoted his entire attention to the founding of new cures and the reorganization of the old parishes. Unfortunately the diocese suffered greatly during the ecclesiastical struggle (*Kulturkampf*) with the Prussian Government. After peace had been restored the bishopric prospered again under Leo Redner (1886-98) and Augustinus Rosentreter (consecrated 9 July, 1899). In this period the diocese in some measure recovered from its losses; the suppressed monasteries have been partly refilled with religious, and new institutions of learning under the supervision of the Church have been founded. However, it still suffers from the effects of its earlier losses, and from the lack of labourers in the vineyard of the Lord.

STATISTICS.—The present Diocese of Culm includes the Prussian province of West Prussia with the exception of five Government districts; it also includes two districts of East Prussia, two of Pomerania, and that of Bromberg belonging to Posen. The see embraces altogether 409 square miles. In 1900 it had a Catholic population of 769,166 souls; in 1907, 780,000. The cathedral chapter is composed of two dignitaries, the cathedral provost and the cathedral dean, and eight prebends. In 1907 there were 4 episcopal commissariats, 27 deaneries, 275 parishes, 476 priests, 275 parish churches, 77 dependent churches, 9 other churches, and 37 chapels. Institutions of learning under religious control are: the episcopal seminary for priests at Pelplin with 5 professors; the episcopal seminary for boys at Pelplin with 12 ecclesiastical teachers; the episcopal houses of studies at Culm, Konitz, and Neustadt. In the three towns just mentioned the gymnasia are Catholic in character. The diocese also possesses 4 Catholic seminaries for teachers, and 2 higher schools for girls. Orders for men have not existed in the diocese since the religious struggle (*Kulturkampf*) with the Government. The orders and congregations for women devote their attention almost exclusively to the care of the sick, the poor, and the children; but they are not permitted to give elementary instruction. In 1906 the orders and congregations of female religious were: Sisters of Mercy of St. Vincent de Paul, 6 houses with 102 religious; Sisters of Mercy of St. Charles Borromeo, 2 houses with 39 religious; Sisters of St. Elizabeth, 12 houses with 103 religious; Sisters of St. Francis, 2 houses with 22 religious. These religious have under their care 11 hospitals and asylums, 8 day-nurseries, 1 housekeeping school, 1 needle-work school, 1 institution for sick and old religious, 1 home for servants, 1 reform institution for girls, 4 orphanages, and 12 stations for visiting nurses.

The cathedral, formerly a Cistercian abbey church,

is the most important church building of the diocese; it is a brick Gothic structure with three naves, was erected in the fourteenth century, and completely restored, 1894-99. Other churches of note are: the parish church of Culmsee, built 1254-94 and used as the cathedral until 1824; the parish church of Culm, built in 1223; the churches of St. John, St. James, and St. Mary, all three erected in the thirteenth or fourteenth century. The most frequented places of pilgrimage are Maria-Lonk near Neumark (the miraculous picture of the Mother of God is now in the parish church of Neumark), and Mount Calvary near Neustadt with twenty-four chapels.

Schematismus des Bistums Culm mit dem Bischofssitze in Pelplin (Pelplin, 1904) gives exhaustive statistics of the diocese and lists of the bishops of Culm, Pomesanien, and Cujavien (Leslau); WOLKY, *Katalog der Bischöfe von Culm* (Braunsberg, 1878); IDEM, *Urkundenbuch des Bistums Culm* (Danzig, 1884-87), II; FANKIEJSKI, *Die untergegangenen Kirchen und Kapellen der Diocese Culm* (in Polish 1880); FREDRYCHOWICZ, *Die Culmer Weichbischöfe* (Danzig, 1905); *Consignatio totius Cleri secularis, Sororum piarum Congregationum*, etc. (Gedani, 1907); *Zeitschrift des westpreussischen Geschichtsvereins* (Danzig, 1880-); PAWLOWSKI, *Karte der Diöcesen Culm und Ermland* (Graudenz, 1890); for an account of the cathedral church see FREDRYCHOWICZ, *Geschichte der Cistercienserkloster Pelplin und ihre Bau- und Kunstdenkmäler* (Düsseldorf, 1907); for the churches in general see *Bau- und Kunstdenkmäler der Provinz Westpreussen* (Danzig, 1884-).

Cummings, JEREMIAH WILLIAMS, publicist, b. in Washington, U. S. A., April, 1814; d. at New York, 4 January, 1866. His father's death caused his mother to move to New York in his boyhood, and he was there accepted as an ecclesiastical student by Bishop Dubois, who sent him to the College of the Propaganda at Rome to make his theological studies. He displayed much ability, and after winning his doctor's degree returned to New York, where he was assigned as one of the assistants at St. Patrick's Cathedral. He there proved himself an accomplished linguist, writer, and musician, and an interesting and popular preacher and lecturer. In 1848 Bishop Hughes selected him to found St. Stephen's parish, New York, and to erect a church. Dr. Cummings was then, and had been for several years previously, the intimate friend and disciple of Orestes A. Brownson, the philosopher and reviewer. He was instrumental in having Brownson change his residence from Boston to New York, took charge of his lecture arrangements, and wrote frequent contributions for the "Review". "It was often complained of in Brownson", says his son (Middle Life, Detroit, 1899, p. 132), "that he was lacking in policy, and no doubt he was in the habit of plain speaking; but Cummings was more so, and some of the most violent attacks on the editor and his 'Review' were occasioned by unpalatable truths plainly stated by Cummings".

Cummings was one of the leading spirits in a little club of priests and laymen, who were opposed to what they called the "Europeanizing" of the Church in the United States by the foreign-born teachers, to the system of teaching in vogue in the Catholic colleges and seminaries, and who were in favour of conciliating those outside the Church by the use of milder polemics. In an article on "Vocations to the Priesthood" that Dr. Cummings contributed to "Brownson's Review" of October, 1860, he severely criticized the management and mode of instruction in Catholic colleges and seminaries which he styled "cheap priest-factories". This aroused a bitter controversy, and brought out one of the noted essays by Archbishop Hughes, his "Reflections on the Catholic Press".

Under the administration of Dr. Cummings St. Stephen's, which he had completed in March, 1854, became the most fashionable and most frequented church in New York, its sermons and music making

it a local attraction. He continued its pastor till his death, which followed a long illness that incapacitated him for active service. Besides his articles in "Brownson's Review" he was also a contributor to "Appleton's Encyclopedia" and published in New York: "Italian Legends" (1859); "Songs for Catholic Schools" (1862); "Spiritual Progress" (1865); "The Silver Stole".

THOMAS F. MEEHAN.

Cuncolim, MARTYRS OF.—On Monday, 25 July, 1583 (N. S.), the village of Cuncolim in the district of Salcete, territory of Goa, India, was the scene of the martyrdom of five religious of the Society of Jesus: Fathers Rudolph Acquaviva, Alphonsus Pacheco, Peter Berno, and Anthony Francis, also Francis Aranha, lay brother. Rudolph Acquaviva was born 2 October, 1550, at Atri in the Kingdom of Naples. He was the fifth child of the Duke of Atri, and nephew of Claudius Acquaviva, the fifth General of the Society of Jesus, while on his mother's side he was a cousin of St. Aloysius Gonzaga. Admitted into the Society 2 April, 1568, he landed in Goa 13 September, 1578. Shortly after his arrival he was selected for a very important mission to the court of the Great Mogul Akbar, who had sent an embassy to Goa with a request that two learned missionaries might be sent to Fatehpur-Sikri, his favourite residence near Agra. After spending three years at the Mogul court, he returned to Goa, much to the regret of the whole Court and especially of the emperor. On his return to Goa, he was appointed superior of the Salcete mission, which post he held until his martyrdom. Alphonsus Pacheco was born about 1551, of a noble family of New Castile, and entered the Society on 8 September, 1567. In September, 1574, he arrived in Goa, where he so distinguished himself by his rare prudence and virtue that in 1578 he was sent to Europe on important business. Returning to India in 1581, he was made rector of Rachol. He accompanied two punitive expeditions of the Portuguese to the village of Cuncolim, and was instrumental in destroying the pagodas there. Peter Berno was born of humble parents in 1550 at Ascona, a Swiss village at the foot of the Alps. After being ordained priest in Rome, he entered the Society of Jesus in 1577, arrived in Goa in 1579, and was soon appointed to Salcete. He accompanied the expeditions to Cuncolim, and assisted in destroying the pagan temples, destroyed an ant-hill which was deemed very sacred, and killed a cow which was also an object of pagan worship. He used to say constantly that no fruit would be gathered from Cuncolim and the hamlets around it till they were bathed in blood shed for the Faith. His superiors declared that he had converted more pagans than all the other fathers put together.

Anthony Francis, born in 1553, was a poor student of Coimbra in Portugal. He joined the Society in 1571, accompanied Father Pacheco to India in 1581, and was shortly afterwards ordained priest in Goa. It is said that whenever he said Mass, he prayed, at the Elevation, for the grace of martyrdom; and that on the day before his death, when he was saying Mass at the church of Orlim, a miracle prefigured the granting of this prayer.

Brother Francis Aranha was born of a wealthy and noble family of Braga in Portugal, about 1551, and went to India with his uncle, the first Archbishop of Goa, Dom Gaspar. There he joined the Society of Jesus, 1 November, 1571. Being a skilled draughtsman and architect, he built several fine chapels in Goa.

These five religious met in the church of Orlim on

the 15th of July, 1583, and thence proceeded to Cuncolim, accompanied by some Christians, with the object of erecting a cross and selecting ground for building a church. Seeing an opportunity of doing away with these enemies of their pagodas, the pagan villagers, after holding a council, advanced in large numbers, armed with swords, lances, and other weapons, towards the spot where the Christians were. Gonçalo Rodrigues, one of the party, levelled his gun, but Father Pacheco stopped him, saying: "Come, come, Senhor Gonçalo, we are not here to fight." Then, speaking to the crowd, he said in Konkani, their native language, "Do not be afraid." The pagans then fell upon them; Father Rudolph received five cuts from a scimitar and a spear and died praying God to forgive them, and pronouncing the Holy Name. Father Berno was next horribly mutilated, and Father Pacheco, wounded with a spear, fell on his knees extending his arms in the form of a cross, and praying God to forgive his murderers and send other missionaries to them. Father Anthony Francis was pierced with arrows, and his head was split open with a sword. Brother Aranha, wounded at the outset by a scimitar and a lance, fell down a deep declivity into the thick crop of a rice-field, where he lay until he was discovered. He was then carried to the idol, to which he was bidden to bow his head. Upon his refusal to do this, he was tied to a tree and, like St. Sebastian, was shot to death with arrows. The spot where this tree stood is marked with an octagonal monument surmounted by a cross, which was repaired by the Patriarch of Goa in 1885.

The bodies of the five martyrs were thrown into a well, the water of which was afterwards sought by people from all parts of Goa for its miraculous healing properties. The bodies themselves, when found, after two and a half days, showed no signs of decomposition. They were solemnly buried in the church of Our Lady of the Snows at Rachol, and remained there until 1597, when they were removed to the college of St. Paul in Goa, and in 1862 to the cathedral of Old Goa. Some of these relics have been sent to Europe at various times. All the bones of the entire right arm of Blessed Rudolph were taken to Rome in 1600, and his left arm was sent from Goa as a present to the Jesuit college at Naples. In accordance with the request of the Pacheco family, an arm and leg of Blessed Alphonsus were sent to Europe in 1609. The process of canonization began in 1600, but it was only in 1741 that Benedict XIV declared the martyrdom proved. On the 16th of April, 1893, the solemn beatification of the five martyrs was celebrated at St. Peter's in Rome. It was celebrated in Goa in 1894, and the feast has ever since then been kept with great solemnity at Cuncolim, even by the descendants of the murderers. The Calendar of the Archdiocese of Goa has fixed 26 July as their feast-day.

Along with the five religious were also killed Gonçalo Rodrigues, a Portuguese, and fourteen native Christians. Of the latter, one was Dominic, a boy of Cuncolim, who was a student at Rachol, and had accompanied the fathers on their expeditions to Cuncolim and pointed out to them the pagan temples. His own heathen uncle dispatched him. Alphonsus, an altar-boy of Father Pacheco, had followed him closely, carrying his breviary, which he would not part with. The pagans therefore cut off his hands and cut through his knee-joints to prevent his escape. In this condition he lived till the next day, when he was found and killed. This boy, a native of either Margao or Verna, was buried in the church of the Holy Ghost at Margao. Francis Rodrigues, who was also murdered, used to say, when he was reproached by the fathers for slight faults, that he hoped to atone for them by shedding his blood as a martyr. Paul da Costa, another of those who died at the hands of the pagans, was an inhabitant of Rachol, and had been

distinguished by his desire of dying for the Faith. Speaking of these fifteen courageous Christians, Father Goldie says: "For reasons which we have now no means of judging, the Cause of these companions of the five Martyrs was not brought forward before the Archbishop of the time; nor since then has any special cultus, or the interposition of God by miracle, called the attention of the Church to them. But we may hope that their blood was in the odour of sweetness before God".

Cunegundes, BLESSED, Poor Clare and patroness of Poland and Lithuania; b. in 1224; d. 24 July, 1292, at Sandeck, Poland. She was the daughter of King Bela IV and niece of St. Elizabeth of Hungary, and from her infancy it pleased God to give tokens of the eminent sanctity to which she was later to attain. With extreme reluctance she consented to her marriage with Boleslaus II, Duke of Cracow and Sandomir, who afterwards became King of Poland. Not long after their marriage, the pious couple made a vow of perpetual chastity in the presence of the Bishop of Cracow; and Cunegundes, amidst the splendour and pomp of the royal household, gave herself up to the practice of the severest austerities. She often visited the poor and the sick in the hospitals, and cared even for the lepers with a charity scarcely less than heroic. In 1279, King Boleslaus died, and Cunegundes, despite the entreaties of her people that she should take in hand the government of the kingdom, sold all her earthly possessions for the relief of the poor and entered the monastery of the Poor Clares at Sandeck. The remaining thirteen years of her life she spent in prayer and penance, edifying her fellow religious by her numerous virtues, especially by her heroic humility. She never permitted anyone to refer to the fact that she had once been a queen and was foundress of the community at Sandeck.

The cultus of Blessed Cunegundes was approved by Pope Alexander VIII in 1690; in 1695 she was made chief patroness of Poland and Lithuania by a decree of the Congregation of Rites, confirmed by Clement XI. Her feast is kept in the Order of Friars Minor on the 27th of July.

Acta SS., July, V, 661-783; LEO, *Lives of the Saints and Blessed of the Three Orders of St. Francis* (Taunton, 1886), II, 523-529.

Cuneo, DIOCESE OF (CUNEENSIS), suffragan to Turin. Cuneo is the capital of the province of that name in Piedmont, Northern Italy, agreeably situated on a hill between the Rivers Stura and the Gesso. Originally the city belonged to the Diocese of Mondovì. In 1817 Pius VII made it an episcopal see. The cathedral is very ancient and beautiful, remodelled, however, in the sixteenth century. The painting over the main altar representing St. John the Baptist and St. Michael is the work of the Jesuit Father Pozzi, who painted also at Rome the ceiling of the great Church of St. Ignatius. The first bishop of Cuneo was Amadeo Bruno di Samone. The diocese has a population of 111,200, with 61 parishes, 190 churches and chapels, 220 secular and 20 regular priests, 3 religious houses of men, 27 of women, and 13 educational institutions.

Cuoq, ANDRÉ-JEAN, philologist, b. at LePuy, France, 1821; d. at Oka near Montreal, 1898. Jean Cuoq entered the Company of Saint-Sulpice in 1844,

and two years later was sent to Canada. In 1847 he was put in charge of the mission at the Lac des Deux-Montagnes. So ambitious was he to fulfil well the duties of his ministry that in a short time he acquired a perfect knowledge of the Iroquois and the Algonquin dialects. His numerous works, all published at Montreal, gained him admission to many scientific societies of Europe and America. We have from his pen: "Le Livre des sept nations" (1861); "Jugement erroné de M. Ernest Renan sur les langues sauvages" (1864); "Etudes philosophiques sur quelques langues sauvages" (1866); "Quels étaient les sauvages que rencontra Jacques Cartier sur les rives du S.-Laurent?" in "Annales de philosophie chrétienne" (1869); "Lexique de la langue iroquoise" (1882); "Lexique de la langue algonquienne" (1886); "Grammaire de la langue algonquienne, insérée dans les mémoires [IX-X] de la société royale du Canada" (1891-92); "Annot. Kekon" (ibid., 1893); "Nouveau manuel algonquin" (1893). He wrote also many other works destined to further the christianization of the Indians.

A. FOURNET.

Cupola.—A spherical ceiling, or a bowl-shaped vault, rising like an inverted cup over a circular, square, or multangular building or any part of it. The term, properly speaking, is confined to the under side, or ceiling, of a dome, and is frequently on a different plane from the dome which surrounds it outside. It is also sometimes applied to the dome (but for this there is no authority), and to a small room, either circular or polygonal, standing on the top of a dome, which is called by some a lantern. A cupola does not necessarily presuppose a dome, and the latter is often found surmounting flat surfaces. The significance of the term is in its form and has nothing to do either with the material used or with its method of construction. According to Lindsay, the cupola of San Vitale, at Ravenna, became the model of all those executed in Europe for several centuries. This cupola is of remarkable construction, being built wholly of hollow earthen pots, laid spirally in cement, a light construction common in the East from early times. The cupolas of the Pantheon at Rome, the cathedral at Florence, the churches of St. Peter at Rome, and Santa Sophia at Constantinople are of solid construction, and the support of the cup-shaped vault is either by pendentives or by a drum. In some cases, however, the cupola is of masonry, and the outer shell of the cupola is of wood covered with lead, as at St. Paul's, London, and at St. Mark's, Venice, the five masonry cupolas have the outer shell of wood and metal. The dome of the Invalides, in Paris, has a wood and metal covering above two inner structures of stone. In the later Byzantine buildings of Greece and other parts of the Levant, many of the cupolas have singularly lofty drums, which are pierced with windows, and the cupola proper becomes a mere roof to a tall cylindrical shaft. Cupolas in modern construction are generally of wrought iron, and the space filled in with some tile formation. The term is sometimes applied to a small roof structure, used for a look out or to give access to the roof.

THOMAS H. POOLE.

Curacao, VICARIATE APOSTOLIC OF, includes the islands of the Dutch West Indies: CURAÇAO, Bonaire, and Aruba; Saba, St. Eustatius, and the Dutch part of St. Martin (Leeward Islands). These islands are

situated in the Caribbean Sea, the former off the Venezuelan coast, 12° N. lat. and 69° W. long., the latter about 621 miles north-east of the former, in 18° N. lat. and 63° W. long. The former were discovered by Alonzo de Ojeda in 1499. The first missionaries were Spanish Hieronymites (Order of St. Jerome) from Santo Domingo, whose names have been forgotten. Until 1634 Curaçao remained subject to Spain, and Spanish priests attended the mission. Two churches, one at Santa Barbara the other at Groot-Kwartier, bore witness to their zeal.

In 1634 Curaçao came into the possession of the Dutch West-Indian Company, which forbade, under severe penalties, the practice of the Catholic religion. A few Jesuits, among them Father Michael Alexius Schnabel, continued to work with success from 1701 to 1742. In 1772 Curaçao received its first prefect Apostolic, Arnold de Bruin, a secular priest. In 1776 Fathers Pirovani and Schenck, Dutch Franciscans, took up the work, but were obliged to leave it on account of the small number of priests in Holland. The last of these priests died in 1821. In 1824 M. J. Nieuwindt (d. 1860), in every respect a great man, was appointed prefect Apostolic. In 1842 Curaçao was made a vicariate Apostolic, the first vicar Apostolic being Monsignor Nieuwindt. In the same year a Catholic sisterhood came to the mission. In 1868 the vicariate was confided to the care of the Dutch Dominicans. Nine-tenths of the people, especially the lower classes, are Catholics, principally because in the past the slaves were not allowed to have the same religion as their masters (Dutch Protestants); as they had to profess some religion, they were allowed to become Catholics. The relations between Catholics and Protestants are most peaceful. Monsignor Nieuwindt (consecrated 1843) was succeeded as vicar Apostolic by J. F. A. Kistemaker (1860); P. H. J. A. van Ewyk (1869); C. H. J. Reynen (1886); H. A. M. Joosten (1887), and J. J. A. van Baars (1897). The Catholic population of the vicariate is about 45,000; the Protestants number 7000 and the Jews 850. There are in the vicariate 35 priests, 3 seculars and 32 regulars, principally Dominicans; 27 brothers; 191 sisters. The parochial schools number 29, with 2626 boys and 2625 girls. There are 17 churches and 11 chapels.

The institutions under religious direction are: a college for young ladies with 70 pupils; a hospital for the insane, 114 patients; a leper hospital, 19 patients; 2 orphan asylums, 87 orphans; a hospital, 166 patients. The theological seminary for Venezuela (Merida) is at present closed. There are 2 Catholic newspapers, the "Amigo de Curaçao", a Dutch weekly, founded in 1883, and "La Cruz", a weekly in the Papiamento dialect of the island, founded in 1900.

J. J. A. VAN BAARS.

Curate (Lat. *curatus*, from *cura*, care), literally, one who has the cure (care) or charge of souls, in which sense it is yet used by the Church of England, "All Bishops and Curates". In France, also, the cognate *curé* (Spanish, *cura*) is used to denote the chief priest of a parish. In English-speaking countries, however, the word *curate* has gradually become the title of those priests who are assistants to the rector, or parish priest, in the general parochial work of the parish or mission to which they are sent by the bishop of the diocese or his delegate. Technically speaking the curate is the one who exercises the cure of souls, and his assistants are vicars and coadjutors; but in this article the word *curate* is used in its accepted English sense, viz. assistant priest, and corresponds, in a general way, to the *vicarius temporalis*, *auxiliaris presbyter*, *coadjutor parochi*.

In the first three centuries of the Church there was but one church in each diocese, located generally in the principal city, i. e. in the city where the bishop resided. To this church the faithful of the city and the surrounding villages went on Sundays and feasts to assist at Mass and receive the sacraments. When the faithful became more numerous as the Church developed, the number of churches was increased not only in the city but also in the surrounding country, and services were performed in these churches by priests, who, however, were not permanently appointed; i. e. the bishop remained the only parish priest, but had a certain number of priests to assist him in the administration of the sacraments in his *parochia*, or diocese (Lesêtre, *La Paroisse*, Paris, 1906; Duchesne, *The Origin of Christian Worship*, London, 1906, 11-13). After the fourth century parishes began to be formed in the rural districts, but it was not until after the year 1000 that they were formed in episcopal cities (Lupi, *De parochia ante annum millesimum*, Bergamo, 1788; Vering, *Kirchenrecht*, 3d ed., 1893, p. 598). From this it will be seen that just as the bishop found his diocese too large for individual ministrations and care, so the parish priest, in the course of time, found it necessary to secure the aid of other priests in attending to the spiritual needs of his people.

In English-speaking countries, also in a number of European states, at the present day, the curate holds his faculties directly from the bishop, but exercises them according to the wish and direction of the parish priest or rector. This applies not only in the case of a true parish priest or a missionary rector (both irremovable), but also in the case of a simple rector, who by the authority of the bishop governs a given area styled a mission. Curates are, in general, removable at the will of the bishop. Nevertheless, this power of the bishop ought to be exercised with prudence and charity, and in such a way that the curate shall suffer no loss of reputation, e. g. by being sent without just and reasonable cause from one mission to another, such arbitrary change being legitimately interpreted by common consent as tantamount to a punishment. In such a case, if the curate feels that he has been unfairly treated, he has (in England) the right of appeal to the Commission of Investigation, which exists in each diocese. Meanwhile he must obey the order of the bishop. The form of investigation and trial is the same for curates as for rectors and parish priests (see Wernz, op. cit. below, II, 1052). It is to be noted that the Commission of Investigation provided for the United States by a degree of Propaganda (20 July, 1878; cf. Acta et Decr. Conc. Balt. III, 292-96) was abrogated by the Propaganda Instruction of "Cum Magnopere" of 1884, which provides in each diocese for a summary, but substantially just, process in all criminal and disciplinary causes of ecclesiastics (Conc. plen. Balt. III, cap. III, 308-66. cf. Acta et Decreta, 287-92). This Instruction obtains in Scotland, and has lately been extended to England for the larger dioceses (Taunton, p. 220).

The general law of the Church with regard to curates is mainly concerned with their appointment and their right to proper support. By common ecclesiastical law the appointment of curates belongs to the parish priest and not to the bishop (c. 30, X, 3, 5; Council of Trent, Sess. XXI, cap. iv, de Ref.). But the bishop can oblige the parish priest to accept a curate when the former cannot do his work, either on account of physical or mental weakness or on account of ignorance; and it belongs to the bishop, and not to the parish priest, to judge whether one or more curates are necessary, also to provide for their examination, approbation, and the issuing of faculties to them. In English-speaking countries, also in France, Spain, Germany, and Austria, curates are appointed by the bishop (or vicar-general), who

determines their salary and may remove them from one mission to another. By a particular reply of the Congregation of the Council, 14 August, 1863, it is expressly provided that this custom, derogatory to the common law, shall be observed until the Apostolic See makes other provision.

The bishop can assign to the curate a salary from the income of the church. If the income of the church is not sufficient the parish priest is not to suffer; but according to the common opinion, the bishop, as far as he can, must provide from other sources for the curate. By common law the stole fees (q. v.) belong to the parish priest, therefore the bishop cannot make them part of the salary of the curate. Still, the Council of Trent says that the bishop can assign a salary from the fruits of the benefice, or otherwise provide; hence it seems to some that he might use the stole fees as part of the salary of the curate. The custom of each diocese is a sure guide on this point; in any case, there is always the opportunity of appeal to Rome in a case of more than ordinary difficulty. The authority of the curate is gathered from his letter of appointment, the diocesan statutes, and legitimate custom. Its actual limitations may also be gathered from the manuals of canon law most used in the various Catholic countries. As a general rule, curates are not moved without good reason from the churches which they serve; such a reason should be the promotion of the curate, the good of a particular parish, or the general good of the diocese. This latter is fairly comprehensive and gives the bishop a wide discretion. Bishops are advised to act as far as possible, in a manner agreeable to the parish priest or rector.

In England the synods of Westminster provide that in each mission one priest is appointed to be the first (*primus*), with the duty of attending to the cure of souls and the administration of the church or congregation. Alms given for Masses are the property of each individual priest. Stole fees are not always dealt with in the same way in each mission. It is recommended that a course be followed which is most conducive to lightening the burdens of the mission. Curates ought to inform the head priest as often as they are absent from the presbytery, even for a day; they should not be absent for a Sunday or a Holy Day of obligation without the leave of the bishop or vicar-general, except in case of urgency, in which case the curate, on leaving home, ought as soon as possible to inform the bishop of said urgency, and should leave a suitable priest to supply his place. Curates must not consider that they are freed from work merely because they are not charged with the administration of a mission. It is their duty, under the rector, to help him by preaching, by hearing confessions, by teaching children the catechism, by visiting the sick and administering to them the sacraments, and by fulfilling all the other duties of a missionary. Rarely should curates take meals elsewhere than in the presbytery at the common table; much less should this become habitual. In Ireland the synods of Maynooth forbid any curate to incur a debt of over £20; should he do so, he is liable to censure. If disputes arise between the parish priest and the curate, the matter is to be referred to the bishop, and in the meantime the curate is to abide by the decision of the parish priest. Every week the curate is to meet the parish priest in order to receive from him instructions as to the arrangements for the coming week (it is to be noted that in some parts of Ireland the curate resides apart from the parish priest). Absence from the parish, even for one night is to be notified to the parish priest; absence for three days is to be notified to the bishop. Absence for five days requires the written permission of the bishop, as does also absence on Sunday or a Holy Day of obligation. Certain other statutes are incorporated in the synods of

Maynooth which apply equally to curates and parish priests. Thus, no person is to be declared excommunicated unless the bishop has given his written authority for such proceedings. Priests are on no account to make personal remarks about their parishioners in church. All parochial moneys received are to be entered in a book which is kept by the parish priest. Sick priests, before they receive the Sacrament of Extreme Unction, are to hand over to the vicar forane or other responsible priest, the pyx, holy oil vessel, registers, and all other things which pertain to the church; should the priest die, his colleagues are to take the utmost care that all papers, letters, etc. are locked up and so safeguarded against the danger of falling into the hands of unauthorized lay people.

The Second Council of Quebec deals in detail with the ecclesiastical status (rights and duties) of curates in French Canada (see *Discipline du Diocèse de Québec*, Québec, 1895, pp. 211, 252, and Gignac, *Compend. jur. eocl. ad usum Cleri Canad.*, *ibid.*, 1901, De personis, 398 sqq.). In the United States also, and in other English-speaking countries, the statutes of various dioceses and the legislation of some provincial synods (e. g. Fifth New York, 1886) regulate in similar detail the duties of a curate, e. g. the continuous residence that his office calls for (see *RESIDENCE, OBLIGATION OF*) and other statutory priestly obligations. Apropos of the relations between parish priests and their curates, many modern diocesan and provincial synods repeat with insistence the immemorial principles that govern the exercise of ecclesiastical authority in all that pertains to the cure of souls (*cura animarum*), viz.: on the part of the parish priest, paternal benevolence and mildness of direction, due recognition of the priestly character of his assistants, equitable distribution of the parochial duties and burdens, good example in religious zeal and works, wise counsel of the young and inexperienced, practical guidance in all that pertains to the spiritual and even the temporal welfare of the parish; on the part of the curate, willing obedience to his superior, due consultation in all matters of importance, filial co-operation, respect for the parish priest's office and priestly reputation, a peaceful and even patient attitude when the curate seems wronged, and recourse to the diocesan authority only when charity has exhausted her suggestions (Synod of Münster, 1897, 147 sqq., in Laurentius, *op. cit.* below, pp. 170-71). Similar advice and suggestions are found in many modern writings on the priesthood (e. g. the works of Cardinals Manning, Gibbons, Vaughan, and those of Mach, Keating, etc.). (See *COMPETENCY; CONGRUA; PARISH; PARISH PRIEST; VICAR; CHAPLAIN; PRIEST.*)

DAVID DUNFORD.

Curator (Lat. *curare*), a person legally appointed to administer the property of another, who is unable to undertake its management himself, owing to age or physical incompetence, bodily or mental. Curators are often confounded with tutors, but they differ in many respects. Tutors are appointed principally for the guardianship of persons, and only secondarily for the care of property; while curators are deputed mainly and sometimes solely for temporal concerns and only incidentally as guardians of persons. Besides, a tutor is appointed for minors, while a curator

may have charge of incompetent persons of any age. Finally, a tutor cannot be commissioned for a particular or determined duty, though a curator may receive such an appointment. When the ward of a tutor has reached his majority, the tutor may become curator until the ward is twenty-five years of age, but he cannot be compelled to undertake such a charge. Curators, according to law, are to be constituted for those who are mentally weak, for prodigals, and those addicted inordinately to gambling. The administration of property cannot, however, be taken from a person merely because he lives luxuriously. Curators may also be appointed for captives, for the absent, and the deaf and dumb. A husband may not be constituted curator for his wife.

Before the curator enters upon the administration of property, he is obliged to give proper bond for his fidelity. Whatever salary he receives must be determined by a judge. If he did not demand a salary at the beginning of his administration, but later requests one, the judge is to fix the amount of such salary only for the future, not for the past. The obligation of a curator to render an account of his administration after the time of wardship has past constitutes an ecclesiastical impediment to entrance into the religious state until such obligation has been duly discharged. As regards the administration of property, curators are obliged to take such care of it as would a diligent parent. They are therefore to see that the rents are collected, that the yearly income be not lessened, that less useful goods be sold, and that money be not allowed to lie idle. In case the property of the ward suffer by the administration of the curator, the latter is obliged in conscience to make restitution, if the deterioration was caused by culpable negligence on his part.

FERRARIS, *Bibl. Canon.*, s. v. *Tutela* (Rome, 1891), VII; ANDRÉ-WAGNER, *Dict. du droit can.* (Paris, 1901).

WILLIAM H. W. FANNING.

Curé d'Ars. See JEAN-BAPTISTE VIANNEY, BLESSED.

Cure of Souls (Lat. *cura animarum*), technically, the exercise of a clerical office involving the instruction, by sermons and admonitions, and the sanctification, through the sacraments, of the faithful in a determined district, by a person legitimately appointed for the purpose. Those specially having cure of souls are the pope for the entire Church, the bishops in their dioceses, and the parish priests in their respective parishes. Others may likewise have part in the cure of souls in subordination to these. Thus in missionary countries where episcopal sees have not yet been erected, those who labour for the salvation of souls are in a special manner sharers of the particular responsibility of the Vicar of Christ for those regions. In like manner, a parish priest may have curates who attend to the wants of a particular portion of the parish, subordinate to himself. The object of the cure of souls is the salvation of men, and hence it is a continuation of Christ's mission on earth. As the Redeemer established a church which was to govern, teach, and sanctify the world, it necessarily follows that those who are to assist in the work of the Church must obtain their mission from her alone. "How shall they preach, unless they be sent?" (Rom., x, 15).

The canonical mission of a priest is derived from the Apostolic succession in the Church. This succession is twofold: Holy orders and authority. The first is perpetuated by means of bishops; the latter by the living magistracy of the Church, of which the head is the pope, who is the source of jurisdiction. Both elements enter into the mission of him who has cure of souls: Holy orders, that he may offer sacrifice and administer the sacraments, which are the ordinary channels of sanctification employed by the Holy Ghost; and jurisdiction, that he may teach correct

doctrine, free his subjects from sins and censures, and govern them in accordance with the canons of the Church. The power of Holy orders is radically common to all priests by virtue of their valid ordination, but the power of jurisdiction is ordinary only in pope, bishops, and parish priests, and extraordinary or delegated in others. It is plain, then, that while valid orders may exist outside the Catholic Church, jurisdiction cannot, as its source is the Vicar of Christ and it is possessed only so far as he confers it or does not limit it. The duties of those who have cure of souls are all carefully defined in the sacred canons. (See POPE; BISHOP; PARISH PRIEST.)

We have here touched only upon what is common to the idea of a pastor of the faithful. It is plain that the closer the bond existing between the subordinate members of the hierarchy and their superiors, and between pastors and their people, the more effective will be the work done for the salvation of souls. If the pastor be earnest in preaching and admonishing, unremitting in the tribunal of penance and visitation of the sick, charitable to the poor, kind yet firm in his dealings with all the members of his flock, observant of the regulations of the Church as to his office and particularly that of dwelling among his people (see RESIDENCE, ECCLESIASTICAL), that he may know them and bring them succour at all times; and if, on the other hand, the people be truly desirous for their own salvation, obedient towards their pastor, zealous to obtain and employ the means of sanctification, and mindful of their obligations as members of a parish to enable their pastor to institute and improve the parochial institutions necessary for the proper furtherance of the object of the Church, we shall have the true idea of the cure of souls as intended by Christ and as legislated for in the canons of His Church.

F. M. RUDGE.

Curium, a titular see of Cyprus, suppressed in 1222 by the papal legate, Pelagius. Kourous, son of Kinyras, is said to have founded Kourion on the southwest coast of Cyprus, west of Cape Kourias (now Gata), and to have settled a colony of Argives there in 1595 B. C. The city became the capital of one of the kingdoms in the island. On the site of the ruins is the modern village of Episkopi (Ἐπισκοπή), near the sea, on the right bank of the Lykos; it was here that Cesnola discovered the many precious antiquities now in the Metropolitan Museum, New York City. In the Middle Ages Episkopi belonged first to the Ibelin family, counts of Jaffa, and later to the Venetian family of Cornaro, who owned valuable sugarcane plantations there. It is still the centre of a very fertile district. The tomb of St. Hermogenes and his

relics are preserved in the church. Only two bishops of Curium are recorded: Zeno, present at the Council of Ephesus (431), and Michael, in 1051. Ricaut (*The Present State of the Greek and Armenian Churches*, London, 1679, p. 94) mentions a Bishop Cosmas who resided there, who was, however, probably a titular or a superannuated bishop.

S. PÉTRIDÈS.

Curley, JAMES, astronomer, b. at Athleague, County Roscommon, Ireland, 26 October, 1796; d. at Georgetown, District of Columbia, U. S., 24 July, 1889. His early education was limited, though his talent for mathematics was discovered, and to some extent developed, by a teacher in his native town. He left Ireland in his youth, arriving in Philadelphia, 10 October, 1817. Here he worked for two years as a book-keeper and then taught mathematics at Frederick, Maryland. In 1826 he became a student at the old seminary in Washington, intending to prepare himself for the priesthood, and at the same time taught one of its classes. The seminary, however, which had been established in 1820, was closed in the following year and he entered the Society of Jesus, 29 September, 1827. After completing his novitiate he again taught in Frederick and was sent (1831) to teach natural philosophy at Georgetown College. He also studied theology and was ordained priest on 1 June, 1833. His first Mass was said at the Visitation Convent, Georgetown, where he afterwards acted as chaplain for fifty years. He spent the remainder of his life at Georgetown, where he taught natural philosophy and mathematics for forty-eight years. He planned and superintended the building of the Georgetown Observatory in 1844 and was its first director, filling this position for many years. One of his earliest achievements was the determination of the longitude of Washington. His results did not agree with those obtained at the Naval Observatory, and it was not until after the laying of the first transatlantic cable in 1858 that his determination was found to be near the truth. The coincidence, however, was partly accidental, as the method which he employed was not susceptible of very great precision. Father Curley was also much interested in botany. He is best remembered, however, as a teacher. He wrote "Annals of the Observatory of Georgetown College, D. C., containing the description of the Observatory and the description and use of the transit instrument and meridian circle" (New York, 1852).

Woodstock Letters, XVIII, 3; SHEA, *History of Georgetown College* (Washington, 1891); McLAUGHLIN, *College Days at Georgetown* (Philadelphia, 1899).

H. M. BROCK.

Curr, JOSEPH, priest, controversialist, and martyr of charity, b. at Sheffield, England, in the last quarter of the eighteenth century; d. at Leeds, 29 June, 1847. He was educated at Crook Hall, County Durham, and Ushaw College, was ordained a priest and served for some years the missions in Rook Street and Granby Row, Manchester, where he engaged in controversy with the Protestant Bible Association. Later, after a retirement to La Trappe in France, he returned to Ushaw, going thence to Callaly, Northumberland. About 1840 he was at St. Albans, Blackburn, with Dr. Sharples, until the latter was consecrated Bishop of Samaria *in partibus*. Father Curr then went to Whitby, remaining there until about 1846, when he was appointed to Sheffield. During the typhus fever epidemic of 1847, Leeds was almost bereft of priests; Father Curr volunteered for service there, and fell a victim to the disease. His principal works are: "The Instructor's Assistant", long used in Manchester Sunday Schools; "Visits to the Blessed Sacrament and to the Blessed

Virgin", from the Italian of Liguori (Manchester); "Spiritual Retreat", adapted from Bourdaloue; "Familiar Instructions in Catholic Faith and Morality" (Manchester, 1827). There remain two sermons, also several pamphlets and newspaper letters of a controversial character.

Orthodox Journal (1835), 36, 40; GILLOW, *Bibl. Dict. of Eng. Cath.*, I, 608.

PATRICK RYAN.

Curry, JOHN, doctor of medicine and Irish historian; b. in Dublin in the first quarter of the eighteenth century; d. there, 1780. He studied medicine at Paris and Reims and returned to Dublin to practise his profession. He was an ardent Catholic and, to refute the calumnies levelled against his coreligionists, published in London, in 1747, a "Brief Account from the most authentic Protestant Writers of the Irish Rebellion, 1641". This was bitterly attacked by Walter Harris in a volume published in Dublin, 1752, and in reply Curry published his "Historical Memoirs", afterwards enlarged and published (1775) under the title "An Historical and Critical Review of the Civil Wars in Ireland". This is his best work; a new edition of it, enlarged from Curry's manuscript, was published by Charles O'Connor of Belnagare, in 2 vols. (Dublin, 1786), and in one vol. (Dublin, 1810). In this work, after a brief glance over the developments in Ireland after the invasion of Henry II, he takes up the real history at the reign of Elizabeth and carries it down to the Settlement under William III. Curry took a prominent part in the struggle of the Irish Catholics for the repeal of the Penal Laws, and was one of the founders of the (Irish) Catholic Committee which met in Essex Street, 1760. Besides the works already mentioned, he published "An Essay on Ordinary Fevers" (London, 1743) and "Some Thoughts on the Nature of Fevers" (London, 1774).

Memoir by CHARLES O'CONNOR in the editions of *Historical Review* published at Dublin, 1786, 1810; WYSE, *Sketch of the Catholic Association* (London, 1829); WEBB, *Compendium of Irish Biography* (Dublin, 1878).

JAMES MACCAFFREY.

Cursing.—In its popular acceptance cursing is often confounded, especially in the phrase "cursing and swearing", with the use of profane and insulting language; in canon law it sometimes signifies the ban of excommunication pronounced by the Church. In its more common Biblical sense it means the opposite of blessing (cf. Num., xxiii, 27), and is generally either a threat of the Divine wrath, or its actual visitation, or its prophetic announcement, though occasionally it is a mere petition that calamity may be visited by God on persons or things in requital for wrongdoing. Thus among many other instances we find God cursing the serpent (Gen., iii, 14), the earth (Gen., iii, 17), and Cain (Gen., iv, 11). Similarly Noe curses Chanaan (Gen., ix, 25); Josue, him who should build the city of Jericho (Jos., vi, 26-27); and in various books of the Old Testament there are long lists of curses against transgressors of the Law (cf. Lev., xxvi, 14-25; Deut., xxvii, 15, etc.). So, too, in the New Testament, Christ curses the barren fig-tree (Mark, xi, 14), pronounces his denunciation of woe against the incredulous cities (Matt., xi, 21), against the rich, the worldling, the scribes and the Pharisees, and foretells the awful malediction that is to come upon the damned (Matt., xxv, 41). The word *curse* is also applied to the victim of expiation for sin (Gal., iii, 13), to sins temporal and eternal (Gen., ii, 17; Matt., xxv, 41).

In moral theology, to curse is to call down evil upon God or creatures, rational or irrational, living or dead. St. Thomas treats of it under the name *maledictio*, and says that imprecation may be made either efficaciously and by way of command, as when made by

God, or inefficaciously and as a mere expression of desire. From the fact that we find many instances of curses made by God and his representatives, the Church and the Prophets, it is seen that the act of cursing is not necessarily sinful in itself; like other moral acts it takes its sinful character from the object, the end, and the circumstances. Thus it is always a sin, and the greatest of sins, to curse God, for to do so involves both the irreverence of blasphemy and the malice of hatred of the Divinity. It is likewise blasphemy, and consequently a grievous sin against the Second Commandment, to curse creatures of any kind precisely because they are the work of God. If, however, the imprecation be directed towards irrational creatures not on account of their relation to God, but simply as they are in themselves, the guilt is no greater than that which attaches to vain and idle words, except where grave scandal is given, or the evil wished to the irrational creature cannot be separated from serious loss to a rational creature, as would be the case were one to wish the death of another's horse, or the destruction of his house by fire, for such wishes involved serious violation of charity.

Curses which imply rebellion against Divine Providence, or denial of His goodness or other attributes, such as curses of the weather, the winds, the world, the Christian Faith, are not generally grievous sins, because the full content and implication of such expressions is seldom realized by those who use them. The common imprecations against animate or inanimate objects which cause vexation or pain, those against enterprises which fail of success, so, too, the imprecations that spring from impatience, little outbreaks of anger over petty annoyances, and those spoken lightly, inconsiderately, under sudden impulse or in joke, are, as a rule, only venial sins,—the evil being slight and not seriously desired. To call down moral evil upon a rational creature is always illicit, and the same holds good of physical evil, unless it be desired not as evil, but only in so far as it is good, for example, as a punishment for misdeeds, or a means to amendment, or an obstacle to commission of sin; for in such cases the principal intention, as St. Thomas says, is directed *per se* towards what is good. When, however, evil is wished another precisely because it is evil and with malice prepense, there is always sin, the gravity of which varies with the seriousness of the evil; if it be of considerable magnitude, the sin will be grievous, if of trifling character, the sin will be venial. It is to be noted that merely verbal curses, even without any desire of fulfilment, become grievous sins when uttered against and in the presence of those who are invested with special claims to reverence. A child, therefore, would sin grievously who should curse father, mother, or grandfather, or those who hold the place of parents in his regard, provided he does so to their very face, even though he does this merely with the lips and not with the heart. Such an act is a serious violation of the virtue of piety. Between other degrees of kindred verbal curses are forbidden only under pain of venial sin. To curse the devil is not of itself a sin; to curse the dead is not ordinarily a grievous sin, because no serious injury is done them, but to curse the saints or holy things, as the sacraments, is generally blasphemy, as their relation to God is generally perceived.

J. H. FISHER.

Cursores Apostolici, Latin title of the ecclesiastical heralds or pursuivants pertaining to the papal court. Their origin is placed in the twelfth century, and they fulfilled for the pontifical government the duties entrusted to heralds by civil states. From the

sixteenth century onward they formed part of the Roman Curia in its broader sense, and are at present reckoned members of the pontifical family. Their number is fixed at nineteen, and they are subject to the major-domo. The principal duties of the cursores are to invite those who are to take part in consistories and functions in the papal chapel; to act as servitors in the pontifical palace and as doorkeepers of the conclave; to affix papal rescripts to the doors of the greater Roman basilicas; to issue the summons for attendance at canonizations, the funerals of cardinals, etc. As the cursores are representatives of the pope, they must be received with the respect becoming the personage in whose name they speak, and their invitation has the force of a judicial summons. In the early ages of the Church, an institution somewhat similar to that of the cursores is found in messengers, chosen from among the clergy, to carry important tidings from one bishop to another or from the bishop to his flock. They were much used in times of persecution and they are frequently referred to in the writings of the Fathers as *præcones*, *internuntii*, etc. As guardians of the assemblies of the faithful, they were called *vigilie*. Despite these resemblances to the modern cursores, however, it seems evident that the latter took their rise from the employment of heralds by civil states, rather than from the *præcones* of the early Church. Episcopal courts have likewise cursores or apparitors among their officials.

CHAILLON, *Man. jur. can.* (Paris, 1899), IV; ANDRÉ-WAGNER, *Dict. du droit can.* (Paris, 1901).

WILLIAM H. W. FANNING.

Cursor Mundi (THE RUNNER OF THE WORLD), a Middle-English poem of nearly 30,000 lines containing a sort of summary of universal history. From the large number of manuscripts in which it is preserved, it must have been exceptionally popular. It was originally written, as certain peculiarities of construction and vocabulary clearly show, somewhere in the north of England, but of the author nothing can be learnt except the fact, which he himself tells us, that he was a cleric. He must have lived at the close of the thirteenth and at the beginning of the fourteenth century, and his poem is conjecturally assigned to about the year 1300. In form it is written in eight-syllabled couplets, but in his account of the Passion of Christ the author adopts a new metre of lines of eight and six syllables rhyming alternately. Although the poem deals with universal history, the author contrives to give some sort of unity to his work by grouping it around the theme of man's redemption. He explains in an elaborate prologue how folk desire to read old romances relating to Alexander, Julius Cæsar, Troy, Brutus, Arthur, Charlemagne, etc., and how only those men are esteemed that love "paramours". But earthly love is vain and full of disappointments.

Therefore bless I that paramour [i. e. Our Lady]
That in my need does me soccure
That saves me on earth from sin
And heaven bliss me helps to win.

Mother and mayden never-the-less
Therefore of her took Jesu flesh.

He goes on to say that his book is written in honour of Mary and purposes to tell about the Old and the New Law and all the world, of the Trinity, the fall of the Angels, of Adam, Abraham, and the patriarchs, then of Christ's coming, of His birth, and of the three kings, etc., of His public life and of His Passion and Crucifixion, and of the "Harrowing of Hell". Thence he will go on to the Resurrection and Ascension, the Assumption of Our Lady, the Finding of the Cross, and then to Antichrist and to the Day of Doom. As a sort of devotional appendix he also proposes to deal

with Mary's mourning beneath the Cross and of her Conception. This work he has undertaken.

In to English Tongue to rede
For the love of English lede [people]
English lede of England
For the common [folk] to understand.

This ambitious programme is faithfully carried out with considerable literary skill and a devotional feeling quite out of the common. The author shows himself to have been a man of wide reading. Although his main authority is the "Historia Scholastica" of Peter Comestor he has made himself acquainted with a number of other books in English, French, and Latin, and his work may be regarded as a storehouse of legends not all of which have been traced to their original sources. Special prominence is given throughout the work to the history of the Cross which for some reason (possibly because St. Helena, the mother of Constantine, was reputed to have been of British birth) was always exceptionally popular in England.

After commending the author's "keen eye for the picturesque", a recent critic, in the "Cambridge History of English Literature", remarks, "The strong humanity which runs through the whole work is one of its most attractive features and shows that the writer was full of sympathy for his fellow-men."

The main authority upon the *Cursor Mundi* is the elaborate edition of the poem edited by DR. RICHARD MORRIS for the Early English Text Society (1874-1893, 3 vols.), with appendices and critical appreciations by several other scholars. The *Cursor Mundi* also receives full attention in all modern histories of English literature, of which the best is the *Cambridge History*, edited by A. W. WARD, (Cambridge, 1907). See also especially KALUZA in *Englische Studien*, Vol. XI.

HERBERT THURSTON.

Curubis, a titular see of Africa Proconsularis. The town was fortified about 46 B. C. by P. Attius Varus and C. Considius Longus, generals of Pompey, and proclaimed by Cæsar a Roman colony under the name of Colonia Julia Curubis. It is mentioned in Pliny, Ptolemy, "The Itinerary of Antoninus", etc. In 257 St. Cyprian was exiled to Curubis for refusing to sacrifice to the gods (Vita Pontii, c. xii, ed. Hartel, III, and the year following he was called thence to Carthage to be put to death. Four bishops are known (one Donatist), from 411 to 646 (Morcelli, Africa christiana, I, 149). Curubis is to-day Kourba, a little village on the coast, east of Tunis, between Cape Mustapha and Ras Mamoura. The region is hilly and woody; it has always been inhabited by more or less savage people, for which reason the Christians were often exiled there. S. VAILLÉ.

Cusack, THOMAS F. See NEW YORK, ARCHDIOCESE OF.

Cusæ, a titular see of Egypt. The Coptic name of this town was Kōskō; in Greek it becomes Kousos, Akouasa, Akoussa, Kousis, Kousai, Khousai; in Latin we find Cussa, Cusæ, Chusæ, etc. It is now the fellah-town, El-Kousiyyet (Alquoussiah, Al-Kussjje, El-Kusjye, Qossieh), on the western bank of the Nile, inland between the railway stations Dêrût esh-Sherîf and Mont-falût. Near it stands Deir-el-Moharag, the largest, richest, and most peopled of the seven great Coptic monasteries; the Holy Family is said to have sojourned there and it is the centre of an important pilgrimage. The city figures in the "Synecdemus" of Hierocles (730, 9), Georgius Cyprîus (764), and Parthey's "Notitia Prima" (about 840). It was a saffragan of Antioch in Thebais Prima. Lequien (II, 597) mentions two bishops, Achilles, a Meletian, in 325, and Theonas, present at Constantinople in 553. Cusæ is to be distinguished from Kysis in the southern part of the Great Oasis, now Dûsh el-Kal'a.

BRUGSCH, *Geogr. des alten Aegyptens*, I, 222; BAEBEKER, *Aegypten* (1891), part II, 45; JULLIEN, *L'Égypte, Souvenirs bibliques et chrétiens* (Lille, 1896), 249.

S. PÉTRIDÈS.

Cush (son of Cham; D. V. Chus), like the other names of the ethnological table of Genesis, x, is the name of a race, but it has generally been understood to designate also an individual, the progenitor of the nations and tribes known in the ancient world as Cushites. The list of those descendants of Cush is given in Gen., x, 7-8. The country known to the Greeks as Ethiopia is called Cush (Heb. *Kûš*) in the Bible. In its broadest extension the term designated the region south of Assuan, on the Upper Nile, now known as Nubia, Senaar, Kardofan, and Northern Abyssinia. This region is referred to in Egyptian inscriptions as *Keš* or *Kaš*. More often, however, the name *Cush* was given to a part of the territory just mentioned, called by the Greeks the Kingdom of Meroë, at the confluence of the Nile and the Astaboras (now Tacassî). It is from this kingdom that came the eunuch of Candace, Queen of Ethiopia (Acts, viii, 26-40). Cush was long a powerful nation. In the course of the eighth century, B. C., its Kings became rulers of Egypt. Shabîtku, one of them, was the principal opponent of the great Sennacherib, King of Assyria. It was in vain that Isaias warned his people not to place their trust in such princes (Is., xviii, 1; xx, 3, 5).

The African Cush is best known; but there were Cushites in Asia. The "land of Cush" of Gen., ii, 13 (Heb. text), watered by the Gehon, one of the four rivers of Paradise, was doubtless in Asia. Regma, Saba, and Dadan (Gen., x, 7) were in Arabia. The Medianite wife of Moses, Sephora, is called a Cushite (Ex., ii, 16, 21; Num., xii, 1—Heb. text). Nemrod, son of Cush, rules over cities in the valleys of the Euphrates and Tigris (Gen., x, 8-12). This text points to the foundation of the first empire in this region by Cushites. It is chiefly the relics of a Semitic civilization that have been brought to light by archaeological discoveries. But traces are not lacking, according to competent scholars, of an older civilization.

RAWLINSON, *Five Great Monarchies* (London, 1879), I, iii; MASPERO, *Histoire ancienne des peuples de l'Orient* (Paris, 1905).

W. S. REILLY.

Cuspinian (properly SPIESHAYM or SPIESHAM), JOHANNES, distinguished humanist and statesman, b. at Schweinfurt, Lower Franconia, in 1473; d. at Vienna, 19 April, 1529. In 1490 he matriculated at the University of Leipzig, went to the University of Vienna (1493) to continue his humanistic studies, and in 1494 entered there on a course of medicine. At this early age he edited the "Liber Hymnorum" of Prudentius, and made a reputation by his lectures on Virgil, Horace, Sallust, and Cicero. He was acquainted with Emperor Frederick III. In 1493, in reward for a panegyric on the life of St. Leopold of Austria, he was crowned as poet laureate and received the title of Master of Arts from Maximilian. Soon after this he was made a doctor of medicine, and in 1500 rector of the university. Maximilian made him his confidential councillor and appointed him curator of the university for life. Cuspinian also received the position of chief librarian of the Imperial Library, and superintendent of the archives of the imperial family. As curator of the university he exercised great influence on its development, although he was not able to prevent the decline caused by the political and religious disturbances of the second decade of the sixteenth century. He was on terms of friendship with the most noted humanists and scholars; the calling of his friend Celtes (q. v.) to Vienna is especially due to him. Celtes and he were the leading spirits of the literary association called the "Sodalitas Litterarum Danubiana". In 1515 Cuspinian was prefect of the city of Vienna. Emperor Maximilian, also Charles V at a later date, sent him on numerous diplomatic missions to Hungary, Bohemia, and Poland. He brought about a settlement of the disputed succession between

the Hapsburg line and the King of Hungary and Bohemia; another of his missions was to accompany Bona Sforza, the bride of King Sigismund of Poland, to Cracow. His literary activity covered the most varied domains. Although his poetical writings are of little importance, and his manuscript "Collectanea medicin." of no great value, nevertheless he attained a high reputation as a collector and, to some degree, as an editor of ancient and medieval manuscripts. Among other publications, he edited in 1511 L. Florus, in 1515 the "Libellus de lapidibus" of Marbodius, and the medieval chronicler Otto of Freising. Important as a contribution to the study of ancient history is the publication which first appeared, after his death in 1553, namely, the "Fasti consulares", with which were united the "Chronicle" of Cassiodorus and the "Breviarium" of Sextus Rufus. Another valuable work of Cuspinian is the "History of the Roman Emperors", prepared during the years 1512-22 (in Latin, 1540, and in German, 1541). For a long time, especially after the battle of Mohács, he busied himself with the Turkish question and printed both political and historical writings on the subject, the most important of which is his "De Turcarum origine, religione et tyrannide". His best work is "Austria, sive Commentarius de rebus Austriae" etc., edited by Brusch in 1553 with critical notes. A kind of diary (1502-27), which throws much light on his political activity, was published in "Fontes rerum austriacarum" (1885), I, 1 sqq. A life of Cuspinian, not always reliable, is found in the complete edition of his works by Gerbelius (Commentationes Cusp., Strasburg, 1540); a more complete edition of his works appeared at Frankfurt in 1601.

Allg. deutsche Biogr., IV, 662 sqq.; HASELBACH, *Cuspinian als Staatsmann und Gelehrter* (Vienna, 1867); ASCHBACH, *Gesch. der Universität Wien* (1877), II, 284-309; BAUTCH, *Die Reception des Humanismus in Wien* (1903), 48 sqq.

JOSEPH SAUER.

CUSTOM (IN CANON LAW) is an unwritten law introduced by the continuous acts of the faithful with the consent of the legitimate legislator. Custom may be considered as a fact and as a law. As a fact, it is simply the frequent and free repetition of acts concerning the same thing; as a law, it is the result and consequence of that fact. Hence its name, which is derived from *consuesco* or *consuefacio* and denotes the frequency of the action. (Cap. Consuetudo v, Dist. i.)

I. DIVISION.—(a) Considered according to extent, a custom is universal, if received by the whole Church; or general (though under another aspect, particular), if observed in an entire country or province; or special, if it obtains among smaller but perfect societies; or most special (*specialissima*) if among private individuals and imperfect societies. It is obvious that the last-named cannot elevate a custom into a legitimate law. (b) Considered according to duration, custom is prescriptive or non-prescriptive. The former is subdivided, according to the amount of time requisite for a custom of fact to become a custom of law, into ordinary (i. e. ten or forty years) and immemorial. (c) Considered according to method of introduction, a custom is judicial or extrajudicial. The first is that derived from forensic usage or precedent. This is of great importance in ecclesiastical circles, as the same prelates are generally both legislators and judges, i. e. the pope and bishops. Extrajudicial custom is introduced by the people, but its sanction becomes the more easy the larger the number of learned or prominent men who embrace it. (d) Considered in its relation to law, a custom is according to law (*iuxta legem*) when it interprets or confirms an existing statute; or beside the law (*præter legem*) when no written legislation on the subject exists; or contrary to law (*contra legem*) when it derogates from or abrogates a statute already in force.

II. CONDITIONS.—The true efficient cause of an ec-

clesiastical custom, in as far as it constitutes law, is solely the consent of the competent legislating authority. All church laws imply spiritual jurisdiction, which resides in the hierarchy alone, and, consequently, the faithful have no legislative power, either by Divine right or canonical statute. Therefore, the express or tacit consent of the church authority is necessary to give a custom the force of an ecclesiastical law. This consent is denominated legal when, by general statute and antecedently, reasonable customs receive approbation. Ecclesiastical custom differs, therefore, radically from civil custom. For, though both arise from a certain conspiracy and accord between the people and the lawgivers, yet in the Church the entire juridical force of the custom is to be obtained from the consent of the hierarchy while in the civil state, the people themselves are one of the real sources of the legal force of custom. Custom, as a fact, must proceed from the community, or at least from the action of the greater number constituting the community. These actions must be free, uniform, frequent, and public, and performed with the intention of imposing an obligation. The usage, of which there is question, must also be of a reasonable nature. Custom either introduces a new law or abrogates an old one. But a law, by its very concept, is an ordination of reason, and so no law can be constituted by an unreasonable custom. Moreover, as an existing statute cannot be revoked except for just cause, it follows that the custom which is to abrogate the old law must be reasonable, for otherwise the requisite justice would be wanting. A custom, considered as a fact, is unreasonable when it is contrary to Divine law, positive or natural; or when it is prohibited by proper ecclesiastical authority; or when it is the occasion of sin and opposed to the common good.

A custom must also have a legitimate prescription. Such prescription is obtained by a continuance of the act in question during a certain length of time. No canonical statute has positively defined what this length of time is, and so its determination is left to the wisdom of canonists. Authors generally hold that for the legalizing of a custom in accordance with or beside the law (*iuxta* or *præter legem*) a space of ten years is sufficient; while for a custom contrary (*contra*) to law many demand a lapse of forty years. The reason given for the necessity of so long a space as forty years is that the community will only slowly persuade itself of the opportuneness of abrogating the old and embracing the new law. The opinion, however, which holds that ten years suffices to establish a custom even contrary to the law may be safely followed. It is to be noted, however, that in practice the Roman Congregations scarcely tolerate or permit any custom, even an immemorial one, contrary to the sacred canons. (Cf. Gasparri, *De Saer. Ordin.*, n. 53, 69 sq.) In the introduction of a law by prescription, it is assumed that the custom was introduced in good faith, or at least through ignorance of the opposite law. If, however, a custom be introduced through connivance (*viâ conniventie*), good faith is not required, for, as a matter of fact, bad faith must, at least in the beginning, be presupposed. As, however, when there is question of connivance, the proper legislator must know of the formation of the custom and yet does not oppose it when he could easily do so, the contrary law is then supposed to be abrogated directly by the tacit revocation of the legislator. A custom which is contrary to good morals or to the natural or Divine positive law is always to be rejected as an abuse, and it can never be legalized.

III. FORCE OF CUSTOM.—The effects of a custom vary with the nature of the act which has caused its introduction, i. e. according as the act is in accord with (*iuxta*), or beside (*præter*), or contrary (*contra*) to, the written law. (a) The first (*iuxta legem*) does not constitute a new law in the strict sense of the word;

its effect is rather to confirm and strengthen an already existing statute or to interpret it. Hence the axiom of jurists: Custom is the best interpreter of laws. Custom, indeed, considered as a fact, is a witness to the true sense of a law and to the intention of the legislator. If, then, it bring about that a determinate sense be obligatorily attached to an indeterminate legal phrase, it takes rank as an authentic interpretation of the law and as such acquires true binding-force. Wernz (*Jus Decretalium*, n. 191) refers to this same principle as explaining why the oft-recurring phrase in ecclesiastical documents, "the existing discipline of the Church, approved by the Holy See", indicates a true norm and an obligatory law. (b) The second species of custom (*præter legem*) has the force of a new law, binding upon the entire community both in the internal and external forum. Unless a special exception can be proved, the force of such a custom extends to the introduction of prohibitive, permissive, and preceptive statutes, as well as to penal and nullifying enactments. (c) Thirdly, a custom contrary (*contra*) to law has the effect of abrogating, entirely or in part, an already existing ordinance, for it has the force of a new and later law. As regards penal ecclesiastical legislation, such a custom may directly remove an obligation in conscience, while the duty of submission to the punishment for transgressing the old precept may remain, provided the punishment in question be not a censure nor so severe a chastisement as necessarily presupposes a grave fault. On the other hand, this species of custom may also remove the punishment attached to a particular law, while the law itself remains obligatory as to its observance. Immemorial custom, provided it be shown that circumstances have so changed as to make the custom reasonable, has power to abrogate or change any human law, even though a clause had been originally added to it forbidding any custom to the contrary. To immemorial custom is also attached the unusual force of inducing a presumption of the existence of an Apostolic privilege, provided the said privilege be not reckoned among abuses, and the holder of the presumed privilege be a person legally capable of acquiring the thing in question without first obtaining a special and express Apostolic permission for it (cf. Wernz, *op. cit.*, who has been followed particularly in this paragraph). Ferraris notes that no immemorial custom, if it be not confirmed by Apostolic privilege, express or presumptive, can have any force for the abrogation of ecclesiastical liberties or immunities, inasmuch as both canon and civil law declare such custom to be unreasonable by its very nature. In general, it may be said that a valid custom, in both the constitution and the abrogation of laws, produces the same effects as a legislative act.

IV. CONCERNING TRIDENTINE DECREES.—A special question has been raised by some canonists as to whether the laws of the Council of Trent may be changed or abrogated by custom, even if immemorial, or whether all such contrary customs should not be rejected as abuses. Some of these writers restrict their denial of the value of contrary customs to ordinary, some also to immemorial ones (cf. Lucidi, *De Vis. Sac. Lim.*, I, ch. iii, n. 111). It is unquestionably a general principle in canon law, that custom can change the disciplinary statutes even of œcumenical councils. The main reason for rejecting this principle in favour of the Tridentine enactments in particular is that any contrary custom would certainly be unreasonable and therefore unjustifiable. It is by no means evident, however, that all such contrary customs must necessarily be unreasonable, as is plain from the fact that some authors allow and others deny the value of immemorial customs in the premises, even when they agree in reprobating the force of ordinary customs. As a matter of fact, there is no decree of the Sacred Congregation of the Council which declares, abso-

lutely and generally, that all customs contrary to the laws of the Council of Trent are invalid. Moreover, the Tribunal of the Rota has allowed the force of immemorial customs contrary to the disciplinary decrees of Trent, and the Sacred Congregation of the Council has at least tolerated them in secondary matters. A salient instance of the Roman official view is the statement of the Holy Office (11 March, 1868) that the Tridentine decree on clandestine marriages, even after promulgation, was abrogated in some regions by contrary custom (*Collect. S. C. de Prop. Fid.*, n. 1408). The confirmation of the Council of Trent by Pope Pius IV (26 Jan., 1564; 17 Feb., 1565) abolishes, it is true, all contrary existing customs, but the papal letters contain nothing to invalidate future customs. Owing to the comparatively recent date of the Council of Trent and the urgency of the Holy See that its decrees be observed, it is not easy for a contrary custom to arise, but whenever the conditions of a legitimate custom are fulfilled, there is no reason why the Tridentine decrees should be more immune than those of any other œcumenical council (cf. Laurentius, *op. cit.*, below, n. 307).

V. CESSATION OF CUSTOMS.—Any custom is to be rejected whose existence as such cannot be proved legally. A custom is a matter of fact, and therefore its existence must be tested in the same way as the existence of other alleged facts is tested. In this particular, the decrees of synods, the testimony of the diocesan ordinary and of other persons worthy of credence are of great value. Proofs are considered the stronger the more closely they approximate public and official monuments. If there be a question of proving an immemorial custom, the witnesses must be able to affirm that they themselves have been cognizant of the matter at issue for a space of at least forty years, that they have heard it referred to by their progenitors as something always observed, and that neither they nor their fathers have ever been aware of any fact to the contrary. If the fact of the existence of an alleged custom is not sufficiently proved, it is to be rejected as constituting a source of law. Customs may be revoked by a competent ecclesiastical legislator, in the same way and for the same reasons as other ordinances are abrogated. A later general law contrary to a general custom will nullify the latter, but a particular custom will not be abrogated by a general law, unless a clause to that effect be inserted. Even such a nullifying clause will not be sufficient for the abrogation of immemorial customs. The latter must be mentioned explicitly, for they are held not to be included in any general legal phrase, however sweeping its terms may be. Customs may likewise be abrogated by contrary customs, or they may lose their legal force by the mere fact that they fall into desuetude. Finally, an authentic declaration that a custom is absolutely contrary to good morals (*rumpens nervum disciplinæ*) and detrimental to the interests of the hierarchy or of the faithful deprives it of its supposed legal value.

WILLIAM H. W. FANNING.

Custos (1), an under-sacristan. (See SACRISTAN.) (2) A superior or an official in the Franciscan Order. The word has various acceptations in ancient as well as in modern Franciscan legislation. Nor do the three great existing branches of the order—the Friars Minor, Conventuals, and Capuchins—attach the same meaning to the term at the present day. Saint Francis sometimes applies the word to any superior in the order—guardians, provincials, and even to the general (see Rule, IV and VIII, and Testament). Sometimes he restricts it to officials presiding over a certain number of convents in the larger provinces of the

order with restricted powers and subject to their respective provincials. It is in this latter sense that he refers (Rule, VIII) to the *custodes* as having power, conjointly with the provincials, to elect and to depose the minister general.

The convents over which a *custos* (in this latter sense) presided were collectively called a *custodia*. The number of *custodias* in a province varied according to its extent. Already at an early period it was deemed expedient that only one of the several *custodes* of a province should proceed to the general chapter with his respective provincial for the election of the minister general, although the rule accorded the right of vote to each *custos*. This custom was sanctioned by Gregory IX in 1230 ("Quo elongati", Bull. Rom., III, 450, Turin edition) and by other popes, evidently with the view to prevent unnecessary expense. The *custos* thus chosen was called *Custos custodum*, or, among the Observantines until the time of Leo X ("Ite et vos", Bull. Rom., V, 694), *discretus discretorum*. This ancient legislation, which has long since ceased in the Order of Friars Minor, still obtains in the Order of Friars Minor Conventuals, as may be seen from their constitutions confirmed by Urban VIII (see below). The present-day legislation on the point among the Capuchins and Friars Minor may be briefly summed up as follows: In the Capuchin Order there are two kinds of *custodes*—*custodes* general and *custodes* provincial. Two *custodes* general are elected every three years at the provincial chapters. The first of these has a right to vote at the election of the minister general should a general chapter be held during his term of office. Besides, he has the obligation of presenting to the general chapter an official report on the state of his province. The provincial *custodes*, on the contrary, have no voice in the general chapters, and their rights and duties are much restricted and unimportant. In the constitutions of the Order of Friars Minor there is also mention of two kinds of *custodes*—one called *custos provincie*, the other *custos regiminis*. The former is elected at the provincial chapter and holds office for three years. Besides having a voice in all capitular acts of his province he takes part in the general chapter, should his provincial be impeded. The *custos regiminis* is a prelate who rules over a custody, or small province. He possesses ordinary jurisdiction and has all the rights and privileges of a provincial. The number of convents in a *custodia regiminis* ranges from four to eight.

GREGORY CLEARY.

Cuthbert, SAINT, Bishop of Lindisfarne, patron of Durham, b. about 635; d. 20 March, 687. His emblem is the head of St. Oswald, king and martyr, which he is represented as bearing in his hands. His feast is kept in Great Britain and Ireland on the 20th of March, and he is patron of the Diocese of Hexham and Newcastle, where his commemoration is inserted among the Suffrages of the Saints. His early biographers give no particulars of his birth, and the accounts in the "Libellus de ortu", which represent him as the son of an Irish king named Muriadach, though recently supported by Cardinal Moran and Archbishop Healy, are rejected by later English writers as legendary. Moreover St. Bede's phrase, *Britannia . . . genuit* (Vita Metrica, c. i.), points to his English birth. He was probably born in the neighbourhood of Mailros (Melrose) of lowly parentage, for as a boy he used

to tend sheep on the mountain-sides near that monastery. While still a child living with his foster-mother Kenswith his future lot as bishop had been foretold by a little play-fellow, whose prophecy had a lasting effect on his character. He was influenced, too, by the holiness of the community at Mailros, where St. Eata was abbot and St. Boisil prior. In the year 651, while watching his sheep, he saw in a vision the soul of St. Aidan carried to heaven by angels, and inspired by this became a monk at Mailros. Yet it would seem that the troubled state of the country hindered him from carrying out his resolution at once. Certain it is that at one part of his life he was a soldier, and the years which succeeded the death of St. Aidan and Oswin of Deira seem to have been such as would call for the military service of most of the able-bodied men of Northumbria, which was constantly threatened at this time by the ambition of its southern neighbour, King Penda of Mercia. Peace was not restored to the land until some four years later, as the consequence of a great battle which was fought between the Northumbrians and the Mercians at Winwidfield. It was probably after this battle that Cuthbert found himself free to turn once more to the life he desired. He arrived at Mailros on horse-back and armed with a spear. Here he soon became eminent for holiness and learning, while from the first his life was distinguished by supernatural occurrences and miracles. When the monastery at Ripon was founded he went there as guest-master, but in 661 he, with other monks who adhered to the customs of Celtic Christianity, returned to Mailros owing to the adoption at Ripon of the Roman Usage in celebrating Easter and in other matters. Shortly after his return he was struck by a pestilence which then attacked the community, but he recovered, and became prior in place of St. Boisil, who died of the disease in 664. In this year the Synod of Whitby decided in favour of the Roman Usage, and St. Cuthbert, who accepted the decision, was sent by St. Eata to be prior at Lindisfarne, in order that he might introduce the Roman customs into that house. This was a difficult matter which needed all his gentle tact and patience to carry out successfully, but the fact that one so renowned for sanctity, who had himself been brought up in the Celtic tradition, was loyally conforming to the Roman use, did much to support the cause of St. Wilfrid. In this matter St. Cuthbert's influence on his time was very marked. At Lindisfarne he spent much time in evangelizing the people. He was noted for his devotion to the Mass, which he could not celebrate without tears, and for the success with which his zealous charity drew sinners to God.

At length, in 676, moved by a desire to attain greater perfection by means of the contemplative life, he retired, with the abbot's leave, to a spot which Archbishop Eyre identifies with St. Cuthbert's Island near Lindisfarne, but which Raine thinks was near Howburn, where "St. Cuthbert's Cave" is still shown. Shortly afterwards he removed to Farne Island, opposite Bamborough in Northumberland, where he gave himself up to a life of great austerity. After some years he was called from this retirement by a synod of bishops held at Twyford in Northumberland, under St. Theodore, Archbishop of Canterbury. At this meeting he was elected Bishop of Lindisfarne, as St. Eata was now translated to Hexham. For a long time he withstood all pressure and only yielded after a long struggle. He was consecrated at York by St. Theodore in the presence of six bishops, at Easter, 685. For two years he acted as bishop, preaching and labouring without intermission, with wonderful results. At Christmas, 686, foreseeing the near approach of death, he resigned his see and returned to his cell on Farne Island, where two months later he was seized with a fatal illness. In his last days, in

March, 687, he was tended by monks of Lindisfarne, and received the last sacraments from Abbot Herefrid, to whom he spoke his farewell words, exhorting the monks to be faithful to Catholic unity and the traditions of the Fathers. He died shortly after midnight, and at exactly the same hour that night his friend St. Herbert, the hermit, also died, as St. Cuthbert had predicted.

St. Cuthbert was buried in his monastery at Lindisfarne, and his tomb immediately became celebrated for remarkable miracles. These were so numerous and extraordinary that he was called the "Wonder-worker of England". In 698 the first transfer of the relics took place, and the body was found incorrupt. During the Danish invasion of 875, Bishop Eardulf and the monks fled for safety, carrying the body of the saint with them. For seven years they wandered, bearing it first into Cumberland, then into Galloway and back into Northumberland. In 883 it was placed in a church at Chester-le-Street, near Durham, given to the monks by the converted Danish king, who had a great devotion to the saint, like King Alfred, who also honoured St. Cuthbert as his patron and was a benefactor to this church. Towards the end of the tenth century, the shrine was removed to Ripon, owing to fears of fresh invasion. After a few months it was being carried back to be restored to Chester-le-Street, when, on arriving at Durham a new miracle, tradition says, indicated that this was to be the resting-place of the saint's body. Here it remained, first in a chapel formed of boughs, then in a wooden and finally in a stone church, built on the present site of Durham cathedral, and finished in 998 or 999. While William the Conqueror was ravaging the North in 1069, the body was once more removed, this time to Lindisfarne, but it was soon restored. In 1104, the shrine was transferred to the present cathedral, when the body was again found incorrupt, with it being the head of St. Oswald, which had been placed with St. Cuthbert's body for safety—a fact which accounts for the well-known symbol of the saint.

From this time to the Reformation the shrine remained the great centre of devotion throughout the North of England. In 1542 it was plundered of all its treasures, but the monks had already hidden the saint's body in a secret place. There is a well-known tradition, alluded to in Scott's "Marmion", to the effect that the secret of the hiding-place is known to certain Benedictines who hand it down from one generation to another. In 1827 the Anglican clergy of the cathedral found a tomb alleged to be that of the saint, but the discovery was challenged by Dr. Lingard, who showed cause for doubting the identity of the body found with that of St. Cuthbert. Archbishop Eyre, writing in 1849, considered that the coffin found was undoubtedly that of the saint, but that the body had been removed and other remains substituted, while a later writer, Monsignor Consett, though not expressing a definite view, seems inclined to allow that the remains found in 1827 were truly the bones of St. Cuthbert. Many traces of the former widespread devotion to St. Cuthbert still survive in the numerous churches, monuments, and crosses raised in his honour, and in such terms as "St. Cuthbert's patrimony", "St. Cuthbert's Cross", "Cuthbert ducks" and "Cuthbert down". The centre of modern devotion to him is found at St. Cuthbert's College, Ushaw, near Durham, where the episcopal ring of gold, enclosing a sapphire, taken from his finger in 1537, is preserved, and where under his patronage most of the priests for the northern counties of England are trained. His name is connected with two famous early copies of the Gospel text. The first, known as the Lindisfarne or Cuthbert Gospels (now in the British Museum, Cotton MSS. Nero D 4), was written in the eighth century by Eadfrid, Bishop of Lindisfarne. It contains the four

gospels and between the lines a number of valuable Anglo-Saxon (Northumbrian) glosses; though written by an Anglo-Saxon hand it is considered by the best judges (Westwood) a noble work of old-Irish calligraphy and illumination, Lindisfarne as is well known being an Irish foundation. The manuscript, one of the most splendid in Europe, was originally placed by its scribe as an offering on the shrine of Cuthbert, and was soon richly decorated by monastic artists (Ethelwold, Bilfrid) and provided by another (Aldred) with the aforesaid interlinear gloss (Karl Bouterwek, *Die vier Evangelien in altnordhumbrischer Sprache*, 1857). It has also a history scarcely less romantic than the body of Cuthbert. When in the ninth century the monks fled before the Danes with the latter treasure, they took with them this manuscript, but on one occasion lost it in the Irish Channel. After three days it was found on the seashore at Whithern, unhurt save for some stains of brine. Henceforth in the inventories of Durham and Lindisfarne it was known as "Liber S. Cuthberti qui demersus est in mare" (the book of St. Cuthbert that fell into the sea). Its text was edited by Stevenson and Warring (London, 1854-65) and since then by Kemble and Hardwick, and by Skeat (see LINDISFARNE). The second early Gospel text connected with his name is the seventh-century Gospel of St. John (now in possession of the Jesuit College at Stonyhurst, England) found in 1105 in the grave of St. Cuthbert.

BEDE, *Liber de Vitâ et Miraculis S. Cuthberti; Vita S. Cuthberti Metrica*.—Both these lives are printed in *P. L.*, XCIV, also in *Acta SS. O. S. B.* (Paris, 1669); *Opera Hist. Minora*, ed. STEVENSON (Eng. Hist. Soc., 1838, and in the various collected editions of BEDE's works). The prose life is printed with notes in *Acta SS.*, IX, Mar. 20. BEDE, *Hist. Eccl. Gentis Anglorum*, IV, xxvii-xxxi; ANON., *Vita S. Cuthberti* (by a monk of Lindisfarne, written between 698-705. This was the foundation of BEDE's life and contains details omitted by him. It is printed in *Acta SS.*, IX, Mar. 20, and by STEVENSON, op. cit.), tr. by FORBES-LEITH (Edinburgh, 1888); SYMEON OF DURHAM, *Historia de Sancto Cuthberto*; *Id. Historia Translationis Sancti Cuthberti* (included among Symeon's works, though not written by him. Surtees Soc., LI, London, 1868). See also *Brevis Relatio de S. Cuthberto*, *ibid.*, 223-233. The *Historia Translationis* was printed by the BOLLANDISTS (*loc. cit.*) and STEVENSON from an imperfect and erroneous copy, and must be used with caution, their version being superseded by the Surtees edition and that printed in the Rolls Series. EDWIN BURTON.

Cuthbert, ABBOT OF WEARMOUTH, a pupil of the Venerable Bede (d. 735). He was a native of Durham, but the dates of his birth and death are unknown. Becoming a monk at Jarrow, he studied under St. Bede and acted as his secretary, writing various works from his dictation. Bede dedicated to him his work "De Arte Metricâ". He was present when Bede died, and wrote to Cuthwin, one of his fellow-pupils, a detailed account of all that happened.

After the death of Huitbert, who succeeded Ceolfred as Abbot of Wearmouth, Cuthbert was elected in his place. His correspondence with Lullus, the disciple and successor of St. Boniface, Archbishop of Mainz, is still preserved. He is also supposed to have written many other letters now lost. Priscus mentions a manuscript bearing his name which contains an addition to Bede's Ecclesiastical History. His letter describing Bede's death is also worthy of note because of the mention therein of the Rogation procession with the relics of the saints.

G. E. HIND.

Cuthbert, Archbishop of Canterbury, date of birth not known; d. 25 October, 758. He is first heard of as Abbot of Liminge, Kent. Consecrated bishop by Archbishop Nothelm, he succeeded Wahlstod in the See of Hereford in 736 and was translated to Canterbury about 740. Journeying to Rome he received the pallium, and on his return assisted at the Council of Cloveshoe in 742. At this council Ethelbald, King of Mercia, confirmed many privileges to churches and monasteries. His friendship with St. Boniface, Archbishop of Mainz, accounts for the intimate knowledge that St. Boniface had of the evil life of Ethelbald, which prompted the saint to correspond with the king in the hope of inducing him to reform. Cuthbert, in obedience to the wish of Pope Zachary, called a second Council of Cloveshoe, in 747, which formulated many canons for the guidance of monastic life and the duties of bishops and priests. It especially insisted on catechetical instruction being given in the English tongue. The proceedings of this council were sent to St. Boniface and prompted him to act similarly in Germany. Some have thought that St. Boniface took the initiative and not Cuthbert, but most now admit that the proceedings in Germany for promoting a greater union with Rome took place after this council of Cloveshoe and in imitation of it.

Cuthbert brought about a great change with regard to the precedence of the Cathedral Church of Canterbury. Christ Church, Canterbury, was considered inferior in dignity to the Church of Sts. Peter and Paul where all the archbishops were interred. The pope granted his request for the interment of the archbishops at Christ Church and King Eadbert confirmed this. A chapel was then built at the east end of the cathedral dedicated to St. John the Baptist to serve as the baptistery, the court of the archbishops and their place of burial. Fearing opposition from the monks of Sts. Peter and Paul's church Cuthbert was stealthily buried in the new chapel several days before his death was generally known. From that time until the Conquest at least, every Archbishop of Canterbury

except one was buried at Christ Church. A letter of his to Lullus, Archbishop of Mainz, is still extant and also two short poems preserved by William of Malmesbury. Leland speaks of a volume of his epigrams in the library of Malmesbury Abbey. This volume is now lost.

Cuthbert, COLLEGE OF SAINT. See USHAW.

Cuyabá, DIOCESE OF (CUYABENSIS), suffragan of São Sebastião (Rio de Janeiro), Brazil. The city, founded by miners about 1720, became the capital of the province of Matto Grosso in 1840. The present population is somewhat over 18,000. The prelature of Cuyabá, erected by Bull of Benedict XIV, "Candor lucis aeternae" (6 Dec., 1745), was raised to the rank of a bishopric (Senhor Bom Jesus de Cuyabá) by Bull of Leo XII, "Sollicita catholici gregis" (15 July, 1826). The diocese embraces the province of Matto Grosso, an area of 532,705 sq. miles, and has a Catholic population of 100,700, with 17 parishes, 20 churches, 12 secular priests and 10 regular.

Cuyo. See SAN JUAN DE CUYO.

Cuzco, DIOCESE OF (CUZCENSIS), suffragan of Lima, Peru. The city of Cuzco, capital of the department of the same name, is located on the eastern end of the Knot of Cuzco, 11,000 feet above sea-level. The original Inca city, said to have been founded in the eleventh century, was destroyed by Pizarro in 1535. There are still remains, however, of the palace of the Incas, the Temple of the Sun, and the Temple of the Virgins of the Sun. Among the most noteworthy buildings of the city is the cathedral of Santo Domingo. The diocese, erected by Paul III (5

Sept., 1536), comprises the departments of Cuzco and Apurimac, an area of 21,677 sq. m., containing a Catholic population of 480,000, with 106 parishes, 650 churches and chapels, 150 priests, a seminary, and schools.

F. M. RUDGE.

Cybistra, a titular see of Cappadocia in Asia Minor. Ptolemy (5, 7, 7) places this city in Lycaonia; Strabo (12, 535) in Cilicia; Cicero (Epist. ad fam., 15, 2, 4) in *Cappadocia extrema*, near the boundary of Cilicia and not far from Taurus. It is mentioned as a suffragan of Tyana, metropolis of Cappadocia Secunda,

CHURCH OF SANTO DOMINGO, CUZCO, PERU
(On Inca Foundation of the Temple of the Sun)

CLOISTER OF LA MERCED, CUZCO

in the "Synecdemus" of Hierocles (700), and in some early "Notitiæ episcopatum". It was captured by Harun in 805, and by Almamun in 832. Afterwards, probably in the eleventh century, it was made an independent archbishopric (Parthey's *Notitia*, 10 and 11); it still remained a Byzantine possession after a great part of Cappadocia had passed into Turkish hands. From the eighth to the eleventh centuries we hear often of a fortress Heracleia, now known to have been near Cybistra and united with it in one bishopric (*Notitia*, 10). The name of this fortress has been preserved in the modern form, Eregli, a poor village and the centre of a *caza* in the vilayet of Konia. Five bishops are quoted by Lequien (I, 403); the first was present at Nicæa in 325, the last at Constantinople at the end of the twelfth century.

RAMSAY, *Hist. Geogr. of Asia Minor*, 341.

S. PÉTRIDÈS.

Cyclades, a group of islands in the Ægean Sea. The ancients called by this name only Delos and eleven neighbouring islands, Andros, Tenos, Mykonos, Siphnos, Seriphos, Naxos, Syros, Paros, Kythmos, Keos, and Gyaros. According to mythology they were nymphs metamorphosed into rocks for having refused to sacrifice to Poseidon. They are in fact remains of an ancient continent that disappeared in the tertiary epoch. Successively Cretan, Dorian, and Ionian colonies, they were made subject to Athens by Miltiades. Under Byzantine rule the Dodekanesoi (twelve islands) were included in the fifth European theme. Plundered by the Saracens in the seventh and eighth centuries, they became, after the Fourth Crusade, a duchy belonging to the Venetian families of Sanudo and Crispo. The Turks conquered them in the sixteenth century. The Cyclades are now a *nomos*, or department, of Greece, but under this name are comprised also Melos, Kimolos, Sikinos, Amorgos (birthplace of Simonides), Thera or Santorin, Ios, Anaphe, and other islands between them. The population is about 130,000. Silk, wine, cotton, fruit, sponges, marble (Paros), and emery (Naxos), are the chief products. There is also a coasting trade; Hermoupolis in Syros is an important port.

There were in the Cyclades many Greek sees suffragan to Rhodes. Under the Frankish rule, Latin sees were also established at Naxos, Andros, Keos, Syros, Tenos, Mykonos, Ios, Melos, and Thera, as suffragans of Rhodes and Athens, later only of Naxos. The Archdiocese of Naxos includes also Paros and Antiparos. It has 500 Catholics, some 10 churches or chapels, and 10 priests. Among the latter are Capuchins, and Oblates of St. Francis de Sales; Ursuline nuns conduct the schools. Naxos and Paros were Greek bishoprics early united under the name of Paronaxia. It was a metropolitan see in 1088, and its episcopal list is in Lequien (I, 937). Several of its metropolitans united with Rome from the fourteenth to the eighteenth century. The list of the Latin archbishops is in Lequien (III, 1001), Gams (448), and Eubel (I, 375, II, 221). The See of Naxos is now confided to the Archbishop of Athens as administrator Apostolic. Andros was likewise a Greek see; its episcopal list is in Lequien (I, s. v.). The Latin list is found there also (III, 859), in Gams (449), and more complete in Eubel (I, 89, II, 99). From 1702 the see was administered by a vicar-Apostolic dependent directly on Propaganda; and in 1824 it was confided to the Bishop of Tenos.

Melos (Milo) is famous for the statue of Venus found there; it has thermal springs and solfataras, and there are ruins of the ancient city. The Greek episcopal list is in Lequien (I, 945). The Latin list is also in Lequien (III, 1055), and Gams (449); see also Eubel (I, 355, II, 211). In 1700 the see was united with Naxos and in 1830 with Thera. The list of the Latin bishops of Keos (Cea, Zea) is in Lequien (III, 867),

Gams (449), Eubel (I, 194, II, 143). Ios (Nio, Nea), according to tradition the site of Homer's death, had a series of Latin bishops (see Lequien, III, 1135, and Gams, 448). As to Mykonos (Micone) we know only that the see was united with Tenos as early as 1400. (See SYROS, TENOS, and THERA.)

Cycle. See CALENDAR.

Cycle (DIONYSIAN). See CHRONOLOGY.

Cydonia, a titular see of Crete. According to old legends Cydonia (or Kydonia) was founded by King Kydon, on the northwest shore of Crete. It was afterwards occupied by the Achæans and Æolians, but remained one of the chief cities of the island till it was taken by Q. C. Metellus (A. D. 69). The Venetians rebuilt and fortified it in 1252; it was taken by the Turks in 1645. The Arabs called it Rabdh el-Djebn, the modern Greeks and Turks Khamia, the Western peoples Canea. Lequien (II, 272) knows of only two Greek bishops: Sebon, in 458, and Nicetas, in 692. Gams (404) adds Meliton, in 787. After the Frank occupation there was in Crete a Latin see, Agriensis, or Agiënsis, which must have been the same as that of Cydonia, or Canea. Lequien (III, 923-928) knows of sixteen Latin bishops, from 1310 to 1645. Eubel (I, 76; II, 93) numbers seventeen for the period from about 1300 to 1481 (see also *ibid.*, II, 312). The last occupant retired to Italy when the city had been taken by the Turks. The population of Canea is now about 20,000, mostly Greeks, with 200 Latins. It was the residence of the Latin Bishop of Candia, after the see had been re-established by Pius IX. The Catholic parish is held by Capuchins. There are some Christian Brothers and Sisters of St. Joseph de l'Apparition, with two schools and an orphanage. Canea still remains a Greek see. (See CANEA; CANDIA.)

S. PÉTRIDÈS.

Cyme, a titular see of Asia Minor. Kyme (Doric, Kyma) was a port on the Kymaios Kolpos (Tchandarli Bay), the most important city of Æolis, and was founded by the Æolians about the eleventh or the thirteenth century B. C., according to old traditions, by Pelops on his return from Greece. After defeating Oenomanos and expelling the native inhabitants, he gave to the city the name of the Amazon Kyme. Another uncommon name was Phrykonis. Cyme is mentioned in the "Synecdemus" of Hierocles and in the "Notitiæ episcopatum" as late as the thirteenth or fourteenth century. Five bishops are mentioned in Lequien (I, 729), from 431 to 787. There was another, John, in 1216. Cyme is identified with the small village of Lamourt, in the vilayet of Smyrna. The name is sometimes transcribed Cume, or even Cumæ, possibly a source of confusion with Cumæ in Italy. There was also a Cyme in Ægyptus Secunda, a suffragan of Cabasa.

S. PÉTRIDÈS.

Cynewulf.—That certain Anglo-Saxon poems still extant were written by one Cynewulf is beyond dispute, for the author has signed his name in them by spelling it out in runic letters which may be so read as to make sense in the context of the poem. It is, however, quite uncertain who this Cynewulf was. Despite strong expressions of opinion to the contrary, there seems good reason for identifying him with Cynewulf, Bishop of Lindisfarne, though Professor A. S. Cook of Yale advocates the claims of a certain Cynulf, an ecclesiastic whose signature is attached to the Decrees of the Council of Clovesho in 803, and who may have been a priest of the Diocese of Dunwich. In any case it has been conclusively shown of late that Professor

Cook's chief reason for rejecting the bishop's claim, viz. the supposed dependence of some of Cynewulf's poems on Alcuin's "De Trinitate", written about 802, is baseless. (See C. F. Brown in *Pub's. of Mod. Lang. Ass'n. of N. Am.*, XVIII, 308.) Apart from conjecture our only certain knowledge about Cynewulf is derived from what he tells us of himself in the four runic passages. He had received gifts in a hall amid scenes of revelry, which may mean that he had been in youth a sort of gleeman or minstrel. He was converted, and had since then devoted himself to sacred song but now in old age he still dreaded the punishment of past sins. Four poems, the "Christ", the "Elene", the "Juliana" and the "Fates of the Apostles" may be attributed to Cynewulf with certainty in virtue of their runic signatures. The "Christ", as it is preserved in "The Exeter Book", the only manuscript containing it, is a glorification of three themes, the Advent of Christ, the Ascension, and His second coming upon Doomsday. As in all the other poems the writer shows literary gifts of a very high order and he must evidently, from his knowledge of earlier writers, especially St. Gregory, have been a man of considerable learning. In the "Christ" he paraphrases several of the anthems, known as the great O's, in the Advent liturgy and in doing so introduces passages of much beauty breathing the most intense devotion to Our Blessed Lady (cf. ll. 33-49, 71-103, etc.), and differing little in feeling from the tone of such verses as those of Lydgate, six hundred years later. The poem also contains a remarkable testimony (ll. 1307-1326) to the practice of confession. "Juliana", also preserved to us in "The Exeter Book", is a poetical version of the Acts of the martyrdom of St. Juliana. The "Elene", with those next mentioned, became known only in 1836 upon the discovery of the Vercelli codex, an Anglo-Saxon manuscript in prose and verse, which for some unknown reason had found its way to Vercelli in Italy. The "Elene" is generally reputed Cynewulf's masterpiece. It contains a narrative based on earlier Latin legends of the discovery of the true Cross by St. Helen. The "Fates of the Apostles" is a fragment chiefly important as forming a connecting link between Cynewulf who signs it, and the kindred poem "Andreas" in the same manuscript. This also is consequently by most authorities assigned to Cynewulf, though Knapp, its latest editor (Boston, 1906), regards it as the work of an imitator and possibly disciple of Cynewulf. Of the remaining works conjecturally attributed to this poet the beautiful "Dream of the Rood" is the most important. Some verses apparently derived from this allegory and engraved upon the famous Ruthwell Cross have led to much controversy regarding both the date of the monument and the authorship of the poem. Other doubtful works sometimes attributed to Cynewulf are the "Guthlac", the "Phoenix" and certain riddles in "The Exeter Book." It is safe to say that unless fresh evidence comes to light the authorship can never be settled.

It is impossible to indicate more than a few of the immense number of essays and editions which of late years have been consecrated to CYNEWULF's poems, and to the controversies centering round his name. A good account and a full bibliography is supplied by the *Cambridge History of English Literature* (Cambridge, 1907), I, 49-64 and 430-432; cf. also COOK, *The Christ of Cynewulf* (Boston, 1900); IDEM, *The Dream of the Rood* (Oxford, 1905); GOLLANCZ, *Cynewulf's Christ* (London, 1892); KNAPP, *Andreas and the Fates of the Apostles* (Boston, 1906); HOLTHAUSEN, *Cynewulf's Elene* (Heidelberg, 1905); TRAUTMANN, *Cynewulf der Bischof und Dichter* (Bonn, 1898); BROOKE, *Early English Literature* (London, 1892); STUBBS, *The Christ of English Poetry* (London, 1906).

HERBERT THURSTON.

Cynic School of Philosophy.—The Cynic School, founded at Athens about 400 B. C., continued in existence until about 200 B. C. It sprang from the ethical doctrine of Socrates regarding the necessity of moderation and self-denial. With this ethical element it combined the dialectical and rhetorical meth-

ods of the Eleatics and the Sophists. Both these influences, however, it perverted from their primitive uses; the Socratic ethics was interpreted by the Cynics into a coarse and even vulgar depreciation of knowledge, refinement, and the common decencies, while the methods of the Eleatics and the Sophists became in the hands of the Cynics an instrument of contention (Eristic Method) rather than a means of attaining truth. The Cynic contempt for the refinements and conventions of polite society is generally given as the reason for the name *dogs* (*kúves*) by which the first representatives of the school were known. According to some authorities, however, the name *Cynic* arose from the fact that the first representatives of the school were accustomed to meet in the gymnasium of Cynosarges.

The founder of the school was Antisthenes, an Athenian who was born about 436 B. C., and was a pupil of Socrates. The best known among his followers are Diogenes of Sinope, Crates, Menedemus, and Menippus. Antisthenes himself seems to have been a serious thinker and a writer of ability. In his theory of knowledge he advocated individualistic sensism as opposed to Plato's intellectualistic theory of ideas; that is to say, he taught that the sense-perceived individual alone exists and that there are no universal objects of knowledge. In ethics he maintained that virtue is the only good and that pleasure is always and under all conditions an evil. Self-control, he said, is the essence of virtue, and a wise man will learn above all things to despise material needs and the artificial comforts in which worldly men find happiness.

Diogenes, generally referred to as "Diogenes the Cynic", is one of the most striking figures in Greek history; at least, his personality with its eccentricities, its coarse humour, its originality, and its defiance of the commonplace, has appealed with extraordinary force to the popular imagination. His interview with Alexander, of which the simplest version is to be found in Plutarch, was greatly exaggerated by subsequent tradition. The followers of Diogenes, namely, Crates, Menedemus, and Menippus, imitated all his eccentricities and so exaggerated the anti-social elements in the Cynic system that the school finally fell into disrepute. Nevertheless, there were in the Cynic philosophy elements, especially the ethical element, which later became a source of genuine inspiration in the Stoic School. This element, combined with the broader Stoic idea of the usefulness of intellectual culture and the more enlightened Stoic concept of the scope of logical discussion, reappeared in the philosophy of Zeno and Cleanthes, and was the central ethical doctrine of the last great system of philosophy in Greece.

WILLIAM TURNER.

Cyprian, SAINT, Bishop of Toulon, b. at Marseilles in 476; d. 3 Oct., 546. He was the favourite pupil of St. Cæsarius of Arles by whom he was trained, and who, in 506, ordained him to the diaconate, and, in 516, consecrated him Bishop of Toulon. St. Cyprian appears to have been present in 524 at the Synod of Arles and in the following years to have attended a number of councils. At all these assemblies he showed himself a vigorous opponent of Semipelagianism. Soon after the death of Cæsarius (d. 543) Cyprian wrote a life of his great teacher in two books, being moved to the undertaking by the entreaty of the Abbess Cæsaria the Younger, who had been the head of the convent at Arles since 529. The life is one of the most valuable biographical remains of the sixth century. Cyprian was aided in his task by the two bishops, Firminus and Viventius, friends of Cæsarius,

as well as by the priest Messianus and the deacon Stephen. The main part of the work up to the fortieth chapter of the first book was most probably written by Cyprian himself. Within the last few years another writing of his has become known, a letter to Bishop Maximus of Geneva, which discusses some of the disputed theological questions of that age. The feast of St. Cyprian falls on 3 October.

Acta SS., Oct., II, 164-178; *Hist. litt. de la France*, III, 237-241; WAWRA gives the letter to Maximus in *Theolog. Quartalsschrift* (Tübingen, 1903), LXXXV, 576-594; *Mon. Germ. Hist.: Epist.*, III, 434-436, also gives the letter; the life of St. Cæsarius can be found in the following collections: *Acta SS.*, Aug., VI, 64-75; *P. L.*, LXVII, 1001-1042; and *Mon. Germ. Hist.: Krusch, Scriptores Meroving.*, III, 457-501.

GABRIEL MEIER.

Cyprian, SAINT, and JUSTINA, SAINT, Christians of Antioch who suffered martyrdom during the persecution of Diocletian at Nicomedia, 26 September, 304, the date in September being afterwards made the day of their feast. Cyprian was a heathen magician of Antioch who had dealings with demons. By their aid he sought to bring St. Justina, a Christian virgin, to ruin; but she foiled the threefold attacks of the devils by the sign of the cross. Brought to despair Cyprian made the sign of the cross himself and in this way was freed from the toils of Satan. He was received into the Church, was made pre-eminent by miraculous gifts, and became in succession deacon, priest, and finally bishop, while Justina became the head of a convent. During the Diocletian persecution both were seized and taken to Damascus where they were shockingly tortured. As their faith never wavered they were brought before Diocletian at Nicomedia, where at his command they were beheaded on the bank of the river Gallus. The same fate befell a Christian, Theoctistus, who had come to Cyprian and had embraced him. After the bodies of the saints had lain unburied for six days they were taken by Christian sailors to Rome where they were interred on the estate of a noble lady named Rufina and later were entombed in Constantine's basilica. This is the outline of the legend or allegory which is found, adorned with diffuse descriptions and dialogues, in the unreliable "Symeon Metaphrastes", and was made the subject of a poem by the Empress Eudocia II. The story, however, must have arisen as early as the fourth century, for it is mentioned both by St. Gregory Nazianzen and Prudentius; both, nevertheless, have confounded our Cyprian with St. Cyprian of Carthage, a mistake often repeated. It is certain that no Bishop of Antioch bore the name of Cyprian. The attempt has been made to find in Cyprian a mystical prototype of the Faust legend; Calderon took the story as the basis of a drama: "El magico prodigioso". The legend is given in Greek and Latin in *Acta SS.* September, VII. Ancient Syriac and Ethiopic versions of it have been published within the last few years.

GABRIEL MEIER.

Cyprian of Carthage (THASCIUS CÆCILIVS CYPRIANVS), SAINT, bishop and martyr. Of the date of the saint's birth and of his early life nothing is known. At the time of his conversion to Christianity he had, perhaps, passed middle life. He was famous as an orator and pleader, had considerable wealth, and held, no doubt, a great position in the metropolis of Africa. We learn from his deacon, St. Pontius, whose life of the saint is preserved, that his mien was dignified without severity, and cheerful without effusiveness. His gift of eloquence is evident in his writings. He was not a thinker, a philosopher, a theologian, but

eminently a man of the world and an administrator, of vast energies, and of forcible and striking character. His conversion was due to an aged priest named Cæcilianus, with whom he seems to have gone to live. Cæcilianus in dying commended to Cyprian the care of his wife and family. While yet a catechumen the saint decided to observe chastity, and he gave most of his revenues to the poor. He sold his property, including his gardens at Carthage. These were restored to him (*Dei indulgentiâ restituti*, says Pontius), being apparently bought back for him by his friends; but he would have sold them again, had not the persecution made this imprudent. His baptism probably took place c. 246, presumably on Easter eve, 18 April.

Cyprian's first Christian writing is "Ad Donatum", a monologue spoken to a friend, sitting under a vine-clad pergola. He tells how, until the grace of God illuminated and strengthened the convert, it had seemed impossible to conquer vice; the decay of Roman society is pictured, the gladiatorial shows, the theatre, the unjust law-courts, the hollowness of political success; the only refuge is the temperate, studious, and prayerful life of the Christian. At the beginning should probably be placed the few words of Donatus to Cyprian which are printed by Hartel as a spurious letter. The style of this pamphlet is affected and reminds us of the bombastic unintelligibility of Pontius. It is not like Tertullian, brilliant, barbarous, uncouth, but it reflects the preciosity which Apuleius made fashionable in Africa. In his other works Cyprian addresses a Christian audience; his own fervour is allowed full play, his style becomes simpler, though forcible, and sometimes poetical, not to say flowery. Without being classical, it is correct for its date, and the cadences of the sentences are in strict rhythm in all his more careful writings. On the whole his beauty of style has rarely been equalled among the Latin Fathers, and never surpassed except by the matchless energy and wit of St. Jerome.

Another work of his early days was the "Testimonia ad Quirinum", in two books. It consists of passages of Scripture arranged under headings to illustrate the passing away of the Old Law and its fulfilment in Christ. A third book, added later, contains texts dealing with Christian ethics. This work is of the greatest value for the history of the Old Latin version of the Bible. It gives us an African text closely related to that of the Bobbio MS. known as *k* (Turin). Hartel's edition has taken the text from a MS. which exhibits a revised version, but what Cyprian wrote can be fairly well restored from the MS. cited in Hartel's notes as *L*. Another book of excerpts on martyrdom is entitled "Ad Fortunatum"; its text cannot be judged in any printed edition. Cyprian was certainly only a recent convert when he became Bishop of Carthage c. 248 or the beginning of 249, but he passed through all the grades of the ministry. He had declined the charge, but was constrained by the people. A minority opposed his election, including five priests, who remained his enemies; but he tells us that he was validly elected "after the Divine judgment, the vote of the people and the consent of the bishops".

THE DECIAN PERSECUTION.—The prosperity of the Church during a peace of thirty-eight years had produced great disorders. Many even of the bishops were given up to worldliness and gain, and we hear of worse scandals. In October, 249, Decius became emperor with the ambition of restoring the ancient virtue of Rome. In January, 250, he published an edict against Christians. Bishops were to be put to death, other persons to be punished and tortured till they recanted. On 20 January Pope Fabian was martyred, and about the same time St. Cyprian retired to a safe place of hiding. His enemies continually reproached him with this. But to remain at Carthage

was to court death, to cause greater danger to others, and to leave the Church without government; for to elect a new bishop would have been as impossible as it was at Rome. He made over much property to a confessor priest, Rogatian, for the needy. Some of the clergy lapsed, others fled; Cyprian suspended their pay, for their ministrations were needed and they were in less danger than the bishop. From his retreat he encouraged the confessors and wrote eloquent panegyrics on the martyrs. Fifteen soon died in prison and one in the mines. On the arrival of the proconsul in April the severity of the persecution increased. St. Mappalicius died gloriously on the 17th. Children were tortured, women dishonoured. Numidicus, who had encouraged many, saw his wife burnt alive, and was himself half burnt, then stoned and left for dead; his daughter found him yet living; he recovered and Cyprian made him a priest. Some, after being twice tortured, were dismissed or banished, often begged.

But there was another side to the picture. At Rome terrified Christians rushed to the temples to sacrifice. At Carthage the majority apostatized. Some would not sacrifice, but purchased *libelli*, or certificates, that they had done so. Some bought the exemption of their family at the price of their own sin. Of these *libellatici* there were several thousands in Carthage. Of the fallen some did not repent, others joined the heretics, but most of them clamoured for forgiveness and restoration. Some, who had sacrificed under torture, returned to be tortured afresh. Castus and Æmilius were burnt for recanting, others were exiled; but such cases were necessarily rare. A few began to perform canonical penance. The first to suffer at Rome had been a young Carthaginian, Celerinus. He recovered, and Cyprian made him a lector. His grandmother and two uncles had been martyrs, but his two sisters apostatized under fear of torture, and in their repentance gave themselves to the service of those in prison. Their brother was very urgent for their restoration. His letter from Rome to Lucian, a confessor at Carthage, is extant, with the reply of the latter. Lucian obtained from a martyr named Paul before his passion a commission to grant peace to any who asked for it, and he distributed these "indulgences" with a vague formula: "Let such a one with his family communicate". Tertullian speaks in 197 of the "custom" for those who were not at peace with the Church to beg this peace from the martyrs. Much later, in his Montanist days (c. 220), he urges that the adulterers whom Pope Callistus was ready to forgive after due penance would now get restored by merely imploring the confessors and those in the mines. Correspondingly we find Lucian issuing pardons in the name of confessors who were still alive, a manifest abuse. The heroic Mappalicius had only interceded for his own sister and mother. It seemed now as if no penance was to be enforced upon the lapsed, and Cyprian wrote to remonstrate.

Meanwhile official news had arrived from Rome of the death of Pope Fabian, together with an unsigned and ungrammatical letter to the clergy of Carthage from some of the Roman clergy, implying blame to Cyprian for the desertion of his flock, and giving advice as to the treatment of the lapsed. Cyprian explained his conduct (Ep. xx), and sent to Rome copies of thirteen of the letters he had written from his hiding-place to Carthage. The five priests who opposed him were now admitting at once to communion all who had recommendations from the confessors, and the confessors themselves issued a general indulgence, in accordance with which the bishops were to restore to communion all whom they had examined. This was an outrage on discipline, yet Cyprian was ready to give some value to the indulgences thus improperly granted, but all must be done in submission to the bishop. He proposed that *libellatici* should be re-

stored, when in danger of death, by a priest or even by a deacon, but that the rest should await the cessation of persecution, when councils could be held at Rome and at Carthage, and a common decision be agreed upon. Some regard must be had for the prerogative of the confessors, yet the lapsed must surely not be placed in a better position than those who had stood fast, and had been tortured, or beggared, or exiled. The guilty were terrified by marvels that occurred. A man was struck dumb on the very Capitol where he had denied Christ. Another went mad in the public baths, and gnawed the tongue which had tasted the pagan victim. In Cyprian's own presence an infant who had been taken by its nurse to partake at the heathen altar, and then to the Holy Sacrifice offered by the bishop, was as though in torture, and vomited the Sacred Species it had received in the holy chalice. A lapsed woman of advanced age had fallen in a fit, on venturing to communicate unworthily. Another, on opening the receptacle in which, according to custom, she had taken home the Blessed Sacrament for private Communion, was deterred from sacrilegiously touching it by fire which came forth. Yet another found nought within her pyx save cinders. About September, Cyprian received promise of support from the Roman priests in two letters written by the famous Novatian in the name of his colleagues. In the beginning of 251 the persecution waned, owing to the successive appearance of two rival emperors. The confessors were released, and a council was convened at Carthage. By the perfidy of some priests Cyprian was unable to leave his retreat till after Easter (23 March). But he wrote a letter to his flock denouncing the most infamous of the five priests, Novatus, and his deacon Felicissimus (Ep. xliii). To the bishop's order to delay the reconciliation of the lapsed until the council, Felicissimus had replied by a manifesto, declaring that none should communicate with himself who accepted the large alms distributed by Cyprian's order. The subject of the letter is more fully developed in the treatise "De Ecclesiæ Catholicæ Unitate," which Cyprian wrote about this time (Benson wrongly thought it was written against Novatian some weeks later).

This celebrated pamphlet was read by its author to the council which met in April, that he might get the support of the bishops against the schism started by Felicissimus and Novatus, who had a large following. The unity with which St. Cyprian deals is not so much the unity of the whole Church, the necessity of which he rather postulates, as the unity to be kept in each diocese by union with the bishop; the unity of the whole Church is maintained by the close union of the bishops who are "glued to one another", hence whosoever is not with his bishop is cut off from the unity of the Church and cannot be united to Christ; the type of the bishop is St. Peter, the first bishop. Protestant controversialists have attributed to St. Cyprian the absurd argument that Christ said to Peter what He really meant for all, in order to give a type or picture of unity. What St. Cyprian really says is simply this, that Christ, using the metaphor of an edifice, founds His Church on a single foundation which shall manifest and ensure its unity. And as Peter is the foundation, binding the whole Church together, so in each diocese is the bishop. With this one argument Cyprian claims to cut at the root of all heresies and schisms. It has been a mistake to find any reference to Rome in this passage (De Unit., 4).

CHURCH UNITY.—About the time of the opening of the council (251), two letters arrived from Rome. One of these, announcing the election of a pope, St. Cornelius, was read by Cyprian to the assembly; the other contained such violent and improbable accusations against the new pope that he thought it better to pass it over. But two bishops, Caldonius and Fortunatus, were dispatched to Rome for further infor-

mation, and the whole council was to await their return—such was the importance of a papal election. Meantime another message arrived with the news that Novatian, the most eminent among the Roman clergy, had been made pope. Happily two African prelates, Pompeius and Stephanus, who had been present at the election of Cornelius, arrived also, and were able to testify that he had been validly set “in the place of Peter”, when as yet there was no other claimant. It was thus possible to reply to the re-primination of Novatian’s envoys, and a short letter was sent to Rome, explaining the discussion which had taken place in the council. Soon afterwards came the report of Caldonius and Fortunatus together with a letter from Cornelius, in which the latter complained somewhat of the delay in recognizing him. Cyprian wrote to Cornelius explaining his prudent conduct. He added a letter to the confessors who were the main support of the antipope, leaving it to Cornelius whether it should be delivered or no. He sent also copies of his two treatises, “De Unitate” and “De Lapsis” (this had been composed by him immediately after the other), and he wishes the confessors to read these in order that they may understand what a fearful thing is schism. It is in this copy of the “De Unitate” that Cyprian appears most probably to have added in the margin an alternative version of the fourth chapter. The original passage, as found in most MSS. and as printed in Hartel’s edition, runs thus:

“If any will consider this, there is no need of a long treatise and of arguments. The Lord saith to Peter: ‘I say unto thee that thou art Peter, and upon this rock I will build My Church, and the gates of hell shall not prevail against it; to thee I will give the keys of the kingdom of heaven, and what thou shalt have bound on earth shall be bound in heaven, and what thou shalt have loosed shall be loosed in heaven.’ Upon one He builds His Church, and though to all His Apostles after His resurrection He gives an equal power and says: ‘As My Father hath sent Me, even so send I you: Receive the Holy Ghost, whosoever sins you shall have remitted they shall be remitted unto them, and whosoever sins you shall have retained they shall be retained’, yet that He might make unity manifest, He disposed the origin of that unity beginning from one. The other Apostles were indeed what Peter was, endowed with a like fellowship both of honour and of power, but the commencement proceeds from one, that the Church may be shown to be one. This one Church the Holy Ghost in the person of the Lord designates in the Canticle of Canticles, and says, One is My Dove, My perfect one, one is she to her Mother, one to her that bare her. He that holds not this unity of the Church, does he believe that he holds the Faith? He who strives against and resists the Church, is he confident that he is in the Church?” The substituted passage is as follows: “. . . bound in heaven. Upon one He builds His Church, and to the same He says after His resurrection, ‘feed My sheep’. And though to all His Apostles He gave an equal power yet did He set up one chair, and disposed the origin and manner of unity by his authority. The other Apostles were indeed what Peter was, but the primacy is given to Peter, and the Church and the chair is shown to be one. And all are pastors, but the flock is shown to be one, which is fed by all the Apostles with one mind and heart. He who holds not this unity of the Church, does he think that he holds the faith? He who deserts the chair of Peter, upon whom the Church is founded, is he confident that he is in the Church?”

These alternative versions are given one after the other in the chief family of MSS. which contains them, while in some other families the two have been partially or wholly combined into one. The combined version is the one which has been printed in many edi-

tions, and has played a large part in controversy with Protestants. It is of course spurious in this conflated form, but the alternative form given above is not only found in eighth- and ninth-century MSS., but it is quoted by Bede, by Gregory the Great (in a letter written for his predecessor Pelagius II), and by St. Gelasius; indeed, it was almost certainly known to St. Jerome and St. Optatus in the fourth century. The evidence of the MSS. would indicate an equally early date. Every expression and thought in the passage can be paralleled from St. Cyprian’s habitual language, and it seems to be now generally admitted that this alternative passage is an alteration made by the author himself when forwarding his work to the Roman confessors. The “one chair” is always in Cyprian the episcopal chair, but in Rome that chair was the chair of Peter, and Cyprian has been careful to emphasize this point, and to add a reference to the other great Petrine text, the Charge in John, xxi. The assertion of the equality of the Apostles as Apostles remains, and the omissions are only for the sake of brevity. The old contention that it is a Roman forgery is at all events quite out of the question. Another passage is also altered in all the same MSS. which contain the “interpolation”; it is a paragraph in which the humble and pious conduct of the lapsed “on this hand” (*hic*) is contrasted in a long succession of parallels with the pride and wickedness of the schismatics “on that hand” (*illic*), but in the delicate manner of the treatise the latter are only referred to in a general way. In the “interpolated” MSS. we find that the lapsed, whose cause had now been settled by the council, are “on that hand” (*illic*), whereas the references to the schismatics—meaning the Roman confessors who were supporting Novatian, and to whom the book was being sent—are made as pointed as possible, being brought into the foreground by the repeated *hic*, “on this hand”.

NOVATIANISM.—The saint’s remonstrance had its effect, and the confessors rallied to Cornelius. But for two or three months the confusion throughout the Catholic Church had been terrible. No other event in these early times shows us so clearly the enormous importance of the papacy in East and West. St. Dionysius of Alexandria joined his great influence to that of the Carthaginian primate, and he was very soon able to write that Antioch, Cæsarea, and Jerusalem, Tyre and Laodicea, all Cilicia and Cappadocia, Syria and Arabia, Mesopotamia, Pontus, and Bithynia, had returned to union and that their bishops were all in concord (Eusebius, Hist. Eccl., VII, v). From this we gauge the area of disturbance. Cyprian says that Novatian “assumed the primacy” (Ep. lxix, 8) and sent out his new apostles to very many cities; and where in all provinces and cities there were long established, orthodox bishops, tried in persecution, he dared to create new ones to supplant them, as though he could range through the whole world (Ep. lv, 24). Such was the power assumed by a third-century antipope. Let it be remembered that in the first days of the schism no question of heresy was raised and that Novatian only enunciated his refusal of forgiveness to the lapsed after he had made himself pope. Cyprian’s reasons for holding Cornelius to be the true bishop are fully detailed in Ep. lv to a bishop, who had at first yielded to Cyprian’s arguments and had commissioned him to inform Cornelius that “he now communicated with him, that is with the Catholic Church”, but had afterwards wavered. It is evidently implied that if he did not communicate with Cornelius he would be outside the Catholic Church. Writing to the pope, Cyprian apologizes for his delay in acknowledging him; he had at least urged all those who sailed to Rome to make sure that they acknowledged and held the womb and root of the Catholic Church (Ep. xlviii, 3). By this is probably meant “the womb and root which is the Catholic Church”,

but Harnack and many Protestants, as well as many Catholics, find here a statement that the Roman Church is the womb and root. Cyprian continues that he had waited for a formal report from the bishops who had been sent to Rome, before committing all the bishops of Africa, Numidia, and Mauretania to a decision, in order that, when no doubt could remain, all his colleagues "might firmly approve and hold your communion, that is the unity and charity of the Catholic Church". It is certain that St. Cyprian held that one who was in communion with an anti-pope held not the root of the Catholic Church, was not nourished at her breast, drank not at her fountain.

So little was the rigorism of Novatian the origin of his schism, that his chief partisan was no other than Novatus, who at Carthage had been reconciling all the lapsed indiscriminately without penance. He seems to have arrived at Rome just after the election of Cornelius, and his adhesion to the party of rigorism had the curious result of destroying the opposition to Cyprian at Carthage. It is true that Felicissimus fought manfully for a time; he even procured five bishops, all excommunicated and deposed, who consecrated for the party a certain Fortunatus in opposition to St. Cyprian, in order not to be outdone by the Novatian party, who had already a rival bishop at Carthage. The faction even appealed to St. Cornelius, and Cyprian had to write to the pope a long account of the circumstances, ridiculing their presumption in "sailing to Rome, the primal Church (*ecclesia principalis*), the Chair of Peter, whence the unity of the Episcopate had its origin, not recollecting that these are the Romans whose faith was praised by St. Paul (Rom., i, 8), to whom unfaith could have no access". But this embassy was naturally unsuccessful, and the party of Fortunatus and Felicissimus seems to have melted away.

THE LAPSED.—With regard to the lapsed the council had decided that each case must be judged on its merits, and that *libellatici* should be restored after varying, but lengthy, terms of penance, whereas those who had actually sacrificed might after life-long penance receive Communion in the hour of death. But any one who put off sorrow and penance until the hour of sickness must be refused all Communion. The decision was a severe one. A recrudescence of persecution, announced, Cyprian tells us, by numerous visions, caused the assembling of another council in the summer of 252 (so Benson and Nelke, but Ritschl and Harnack prefer 253), in which it was decided to restore at once all those who were doing penance, in order that they might be fortified by the Holy Eucharist against trial. In this persecution of Gallus and Volusianus, the Church of Rome was again tried, but this time Cyprian was able to congratulate the pope on the firmness shown; the whole Church of Rome, he says, had confessed unanimously, and once again its faith, praised by the Apostle, was celebrated throughout the whole world (Ep. lx). About June 253, Cornelius was exiled to Centumcellæ (Civitavecchia), and died there, being counted as a martyr by Cyprian and the rest of the Church. His successor Lucius was at once sent to the same place on his election, but soon was allowed to return, and Cyprian wrote to congratulate him. He died 5 March, 254, and was succeeded by Stephen, 12 May, 254.

REBAPTISM OF HERETICS.—Tertullian had characteristically argued long before, that heretics have not the same God, the same Christ with Catholics, therefore their baptism is null. The African Church had adopted this view in a council held under a predecessor of Cyprian, Agrippinus, at Carthage. In the East it was also the custom of Cilicia, Cappadocia, and Galatia to rebaptize Montanists who returned to the Church. Cyprian's opinion of baptism by heretics was strongly expressed: "Non abluuntur illic homines, sed potius sordidantur, nec purgantur delicta

sed immo cumulantur. Non Deo nativitas illa sed diabolo filios generat" ("De Unit.", xi). A certain bishop, Magnus, wrote to ask if the baptism of the Novatians was to be respected (Ep. lxiix). Cyprian's answer may be of the year 255; he denies that they are to be distinguished from any other heretics. Later we find a letter in the same sense, probably of the spring of 255 (autumn, according to d'Alès), from a council under Cyprian of thirty-one bishops (Ep. lxx), addressed to eighteen Numidian bishops; this was apparently the beginning of the controversy. It appears that the bishops of Mauretania did not in this follow the custom of Proconsular Africa and Numidia, and that Pope Stephen sent them a letter approving their adherence to Roman custom.

Cyprian, being consulted by a Numidian bishop, Quintus, sent him Ep. lxx, and replied to his difficulties (Ep. lxxi). The spring council at Carthage in the following year, 256, was more numerous than usual, and sixty-one bishops signed the conciliar letter to the pope explaining their reasons for rebaptizing, and claiming that it was a question upon which bishops were free to differ. This was not Stephen's view, and he immediately issued a decree, couched evidently in very peremptory terms, that no "innovation" was to be made (this is taken by some moderns to mean "no new baptism"), but the Roman tradition of merely laying hands on converted heretics in sign of absolution must be everywhere observed, under pain of excommunication. The letter was evidently addressed to the African bishops, and contained some severe censures on Cyprian himself. Cyprian writes to Jubaianus that he is defending the one Church, the Church founded on Peter—Why then is he called a prevaricator of the truth, a traitor to the truth? (Ep. lxxiii, 11). To the same correspondent he sends Epp. lxx, lxxi, lxxii; he makes no laws for others, but retains his own liberty. He sends also a copy of his newly written treatise "De Bono Patientiæ". To Pompeius, who had asked to see a copy of Stephen's rescript, he writes with great violence: "As you read it, you will note his error more and more clearly; in approving the baptism of all the heresies, he has heaped into his own breast the sins of all of them; a fine tradition indeed! What blindness of mind, what depravity!"—"ineptitude", "hard obstinacy"—such are the expressions which run from the pen of one who declared that opinion on the subject was free, and who in this very letter explains that a bishop must never be quarrelsome, but meek and teachable. In September, 256, a yet larger council assembled at Carthage. All agreed with Cyprian; Stephen was not mentioned; and some writers have even supposed that the council met before Stephen's letter was received (so Ritschl, Grisar, Ernst, Bardenhewer). Cyprian did not wish the responsibility to be all his own. He declared that no one made himself a bishop of bishops, and that all must give their true opinion. The vote of each was therefore given in a short speech, and the minutes have come down to us in the Cyprianic correspondence under the title of "Sententiæ Episcoporum". But the messengers sent to Rome with this document were refused an audience and even denied all hospitality by the pope. They returned incontinently to Carthage, and Cyprian tried for support from the East. He wrote to the famous Bishop of Caesarea in Cappadocia, Firmilian, sending him the treatise "De Unitate" and the correspondence on the baptismal question. By the middle of November Firmilian's reply had arrived, and it has come down to us in a translation made at the time in Africa. Its tone is, if possible, more violent than that of Cyprian. (See *FIRMILIAN*.) After this we know no more of the controversy.

Stephen died on 27 August, 257, and was succeeded by Sixtus II, who certainly communicated with Cyprian, and is called by Pontius "a good and peace-loving bishop". Probably when it was seen at Rome

that the East was largely committed to the same wrong practice, the question was tacitly dropped. It should be remembered that, though Stephen had demanded unquestioning obedience, he had apparently, like Cyprian, considered the matter as a point of discipline. St. Cyprian supports his view by a wrong inference from the unity of the Church, and no one thought of the principle afterwards taught by St. Augustine, that, since Christ is always the principal agent, the validity of the sacrament is independent of the unworthiness of the minister: *Ipse est qui baptizat*. Yet this is what is implied in Stephen's insisting upon nothing more than the correct form, "because baptism is given in the name of Christ", and "the effect is due to the majesty of the Name". The laying on of hands enjoined by Stephen is repeatedly said to be *in penitentiam*, yet Cyprian goes on to argue that the gift of the Holy Ghost by the laying on of hands is not the new birth, but must be subsequent to it and implies it. This has led some moderns into the notion that Stephen meant confirmation to be given (so Duchesne), or at least that he has been so misunderstood by Cyprian (d'Alès). But the passage (Ep. lxxiv, 7) need not mean this, and it is most improbable that confirmation was even thought of in this connexion. Cyprian seems to consider the laying on of hands in penance to be a giving of the Holy Ghost. In the East the custom of rebaptizing heretics had perhaps arisen from the fact that so many heretics disbelieved in the Holy Trinity, and possibly did not even use the right form and matter. For centuries the practice persisted, at least in the case of some of the heresies. But in the West to rebaptize was regarded as heretical, and Africa came into line soon after St. Cyprian. St. Augustine, St. Jerome, and St. Vincent of Lérins are full of praise for the firmness of Stephen as befitting his place. But Cyprian's unfortunate letters became the chief support of the puritanism of the Donatists. St. Augustine in his "De Baptismo" goes through them one by one. He will not dwell on the violent words *quæ in Stephanum irritatus effudit*, and expresses his confidence that Cyprian's glorious martyrdom will have atoned for his excess.

APPEALS TO ROME.—Ep. lxxviii was written to Stephen before the breach. Cyprian has heard twice from Faustinus, Bishop of Lyons, that Marcianus, Bishop of Arles, has joined the party of Novatian. The pope will certainly have been already informed of this by Faustinus and by the other bishops of the province. Cyprian urges: "You ought to send very full letters to our fellow-bishops in Gaul, not to allow the obstinate and proud Marcianus any more to insult our fellowship. . . . Therefore send letters to the province and to the people of Arles, by which, Marcianus having been excommunicated, another shall be substituted in his place . . . for the whole copious body of bishops is joined together by the glue of mutual concord and the bond of unity, in order that if any of our fellowship should attempt to make a heresy and to lacerate and devastate the flock of Christ, the rest may give their aid. . . . For though we are many shepherds, yet we feed one flock." It seems incontestable that Cyprian is here explaining to the pope why he ventures to interfere, and that he attributes to the pope the power of deposing Marcianus and ordering a fresh election. We should compare his witness that Novatian usurped a similar power as antipope.

Another letter dates perhaps somewhat later. It emanates from a council of thirty-seven bishops, and was obviously composed by Cyprian. It is addressed to the priest Felix and the people of Legio and Asturica, and to the deacon Elius and the people of Emerita, in Spain. It relates that the bishops Felix and Sabinus had come to Carthage to complain. They had been legitimately ordained by the bishops

of the province in the place of the former bishops, Basilides and Martialis, who had both accepted *libelli* in the persecution. Basilides had further blasphemed God in sickness, had confessed his blasphemy, had voluntarily resigned his bishopric, and had been thankful to be allowed lay communion. Martialis had indulged in pagan banquets and had buried his sons in a pagan cemetery. He had publicly attested before the *procurator duценarius* that he had denied Christ. Wherefore, says the letter, such men are unfit to be bishops, the whole Church and the late Pope Cornelius having decided that such men may be admitted to penance but never to ordination; it does not profit them that they have deceived Pope Stephen, who was afar off and unaware of the facts, so that they obtained to be unjustly restored to their sees; nay, by this deceit they have only increased their guilt. The letter is thus a declaration that Stephen was wickedly deceived. No fault is imputed to him, nor is there any claim to reverse his decision or to deny his right to give it; it is simply pointed out that it was founded on false information, and was therefore null. But it is obvious that the African council had heard only one side, whereas Felix and Sabinus must have pleaded their cause at Rome before they came to Africa. On this ground the Africans seem to have made too hasty a judgment. But nothing more is known of the matter.

MARTYRDOM.—The empire was surrounded by barbarian hordes who poured in on all sides. The danger was the signal for a renewal of persecution on the part of the Emperor Valerian. At Alexandria St. Dionysius was exiled. On 30 Aug., 257, Cyprian was brought before the Proconsul Paternus in his *secretarium*. His interrogatory is extant and forms the first part of the "Acta proconsularia" of his martyrdom. Cyprian declares himself a Christian and a bishop. He serves one God to Whom he prays day and night for all men and for the safety of the emperors. "Do you persevere in this?" asks Paternus. "A good will which knows God cannot be altered." "Can you, then, go into exile at Curubis?" "I go." He is asked for the names of the priests also, but replies that delation is forbidden by the laws; they will be found easily enough in their respective cities. On September he went to Curubis, accompanied by Pontius. The town was lonely, but Pontius tells us it was sunny and pleasant, and that there were plenty of visitors, while the citizens were full of kindness. He relates at length Cyprian's dream on his first night there, that he was in the proconsul's court and condemned to death, but was relieved at his own request until the morrow. He awoke in terror, but once awake he awaited that morrow with calmness. It came to him on the very anniversary of the dream. In Numidia the measures were more severe. Cyprian writes to nine bishops who were working in the mines, with half their hair shorn, and with insufficient food and clothing. He was still rich and able to help them. Their replies are preserved, and we have also the authentic Acts of several African martyrs who suffered soon after Cyprian.

In August, 258, Cyprian learned that Pope Sixtus had been put to death in the catacombs on the 6th of that month, together with four of his deacons, in consequence of a new edict that bishops, priests, and deacons should be at once put to death; senators, knights, and others of rank are to lose their goods, and, if they still persist, to die; matrons to be exiled; Cæsarians (officers of the *fiscus*) to become slaves. Galerius Maximus, the successor of Paternus, sent for Cyprian back to Carthage, and in his own gardens the bishop awaited the final sentence. Many great personages urged him to fly, but he had now no vision to recommend this course, and he desired above all to remain to exhort others. Yet he hid himself rather than obey the proconsul's summons to Utica, for he

declared it was right for a bishop to die in his own city. On the return of Galerius to Carthage, Cyprian was brought from his gardens by two *principes* in a chariot, but the proconsul was ill, and Cyprian passed the night in the house of the first *principes* in the company of his friends. Of the rest we have a vague description by Pontius and a detailed report in the proconsular Acts. On the morning of the 14th a crowd gathered "at the villa of Sextus", by order of the authorities. Cyprian was tried there. He refused to sacrifice, and added that in such a matter there was no room for thought of the consequences to himself. The proconsul read his condemnation and the multitude cried, "Let us be beheaded with him!" He was taken into the grounds, to a hollow surrounded by trees, into which many of the people climbed. Cyprian took off his cloak, and knelt down and prayed. Then he took off his dalmatic and gave it to his deacons, and stood in his linen tunic in silence awaiting the executioner, to whom he ordered twenty-five gold pieces to be given. The brethren cast cloths and handkerchiefs before him to catch his blood. He bandaged his own eyes with the help of a priest and a deacon, both called Julius. So he suffered. For the rest of the day his body was exposed to satisfy the curiosity of the pagans. But at night the brethren bore him with candles and torches, with prayer and great triumph, to the cemetery of Macrobius Candidianus in the suburb of Mapalia. He was the first Bishop of Carthage to obtain the crown of martyrdom.

WRITINGS.—The correspondence of Cyprian consists of eighty-one letters. Sixty-two of them are his own, three more are in the name of councils. From this large collection we get a vivid picture of his time. The first collection of his writings must have been made just before or just after his death, as it was known to Pontius. It consisted of ten treatises and seven letters on martyrdom. To these were added in Africa a set of letters on the baptismal question, and at Rome, it seems, the correspondence with Cornelius, except Ep. xlviii. Other letters were successively aggregated to these groups, including letters to Cyprian or connected with him, his collections of Testimonies, and many spurious works. To the treatises already mentioned we have to add a well-known exposition of the Lord's Prayer; a work on the simplicity of dress proper to consecrated virgins (these are both founded on Tertullian); "On the Mortality", a beautiful pamphlet, composed on the occasion of the plague which reached Carthage in 252, when Cyprian, with wonderful energy, raised a staff of workers and a great fund of money for the nursing of the sick and the burial of the dead. Another work, "On Almsgiving", its Christian character, necessity, and satisfactory value, was perhaps written, as Watson has pointed out, in reply to the calumny that Cyprian's own lavish gifts were bribes to attach men to his side. Only one of his writings is couched in a pungent strain, the "ad Demetrianum", in which he replies in a spirited manner to the accusation of a heathen that Christianity had brought the plague upon the world. Two short works, "On Patience" and "On Rivalry and Envy", apparently written during the baptismal controversy, were much read in ancient times. St. Cyprian was the first great Latin writer among the Christians, for Tertullian fell into heresy, and his style was harsh and unintelligible. Until the days of Jerome and Augustine, Cyprian's writings had no rivals in the West. Their praise is sung by Prudentius, who joins with Pacian, Jerome, Augustine, and many others in attesting their extraordinary popularity.

DOCTRINE.—The little that can be extracted from St. Cyprian on the Holy Trinity and the Incarnation is correct, judged by later standards. On baptismal regeneration, on the Real Presence, on the Sacrifice of the Mass, his faith is clearly and repeatedly expressed, especially in Ep. lxiiv on infant baptism, and in Ep.

lxiii on the mixed chalice, written against the sacrilegious custom of using water without wine for Mass. On penance he is clear, like all the ancients, that for those who have been separated from the Church by sin there is no return except by an humble confession (*exomologesis apud sacerdotes*), followed by *remissio facta per sacerdotes*. The ordinary minister of this sacrament is the *sacerdos* par excellence, the bishop; but priests can administer it subject to him, and in case of necessity the lapsed might be restored by a deacon. He does not add, as we should at the present day, that in this case there is no sacrament; such theological distinctions were not in his line. There was not even a beginning of canon law in the Western Church of the third century. In Cyprian's view each bishop is answerable to God alone for his action, though he ought to take counsel of the clergy and of the laity also in all important matters. The Bishop of Carthage had a great position as honorary chief of all the bishops in the provinces of Proconsular Africa, Numidia, and Mauretania, who were about a hundred in number; but he had no actual jurisdiction over them. They seem to have met in some numbers at Carthage every spring, but their conciliar decisions had no real binding force. If a bishop should apostatize or become a heretic or fall into scandalous sin, he might be deposed by his comprovincials or by the pope. Cyprian probably thought that questions of heresy would always be too obvious to need much discussion. It is certain that where internal discipline was concerned he considered that Rome should not interfere, and that uniformity was not desirable—a most unpractical notion. We have always to remember that his experience as a Christian was of short duration, that he became a bishop soon after he was converted, and that he had no Christian writings besides Holy Scripture to study but those of Tertullian. He evidently knew no Greek, and probably was not acquainted with the translation of Irenaeus. Rome is to him the centre of the Church's unity; it was inaccessible to heresy, which had been knocking at its doors for a century in vain. It was the See of Peter, who was the type of the bishop, the first of the Apostles. Difference of opinion between bishops as to the right occupant of the Sees of Arles or Emerita would not involve breach of communion, but rival bishops at Rome would divide the Church, and to communicate with the wrong one would be schism. It is controverted whether chastity was obligatory or only strongly urged upon priests in his day. The consecrated virgins were to him the flower of his flock, the jewels of the Church, amid the profligacy of paganism.

SPURIA.—A short treatise, "Quod Idola dii non sint", is printed in all editions as Cyprian's. It is made up out of Tertullian and Minucius Felix. Its genuineness is accepted by Benson, Monceaux, and Bardenhewer, as it was anciently by Jerome and Augustine. It has been attributed by Haussleiter to Novatian, and is rejected by Harnack, Watson, and von Soden. "De Spectaculis" and "De bono pudicitiae" are, with some probability, ascribed to Novatian. They are well-written letters of an absent bishop to his flock. "De Laude martyrii" is again attributed by Harnack to Novatian; but this is not generally accepted. "Adversus Iudaeos" is perhaps by a Novatianist, and Harnack ascribes it to Novatian himself. "Ad Novatianum" is ascribed by Harnack to Pope Sixtus II. Ehrhard, Benson, Nelke, and Weyman agree with him that it was written in Rome. This is denied by Jülicher, Bardenhewer, Monceaux. Rombold thinks it is by Cyprian. "De Rebaptismate" is apparently the work attributed by Gennadius to a Roman named Ursinus, c. 400. He was followed by some earlier critics, Routh, Oudin, and lately by Zahn. But it was almost certainly written during the baptismal controversy under Stephen. It comes from Rome (so Harnack and

others) or from Mauretania (so Ernst, Monceaux, d'Alès), and is directed against the view of Cyprian. The little homily "De Aleatoribus" has had quite a literature of its own within the last few years, since it was attributed by Harnack to Pope Victor, and therefore accounted the earliest Latin ecclesiastical writing. The controversy has at least made it clear that the author was either very early or not orthodox. It has been shown to be improbable that he was very early, and Harnack now admits that the work is by an antipope, either Novatianist or Donatist. References to all the brochures and articles on the subject will be found in Ehrhard, in Bardenheuer, and especially in Harnack (*Chronol.*, II, 370 sqq.).

"De Montibus Sina et Sion" is possibly older than Cyprian's time (see Harnack, and also Turner in *Journal of Theol. Studies*, July, 1906). "Ad Vigilium Episcopum de Judaica incredulitate" is by a certain Celsus, and was once supposed by Harnack and Zahn to be addressed to the well-known Vigilius of Thapsus, but Macholz has now convinced Harnack that it dates from after the persecution of Valerian or that of Maximian. The two "Orationes" are of uncertain date and authorship. The tract "De Singularitate clericorum" has been attributed by Dom Morin and by Harnack to the Donatist Bishop Macrobius in the fourth century. "De duplici Martyrio ad Fortunatum" is found in no MS., and was apparently written by Erasmus in 1530. "De Pascha computus" was written in the year preceding Easter, 243. All the above *spuria* are printed in Hartel's edition of Cyprian. The "Exhortatio de penitentia" (first printed by Trombelli in 1751) is placed in the fourth or fifth century by Wunderer, but in Cyprian's time by Monceaux. Four letters are also given by Hartel; the first is the original commencement of the "Ad Donatum". The others are forgeries; the third, according to Mercati, is by a fourth-century Donatist. The six poems are by one author, of quite uncertain date. The amusing "Cena Cypriani" is found in a large number of Cyprianic MSS. Its date is uncertain; it was re-edited by Blessed Rhabanus Maurus. On the use of it at pagants in the early Middle Ages, see Mann, "History of the Popes", II, 289.

The principal editions of the works of St. Cyprian are: Rome, 1471 (the *ed. princeps*), dedicated to Paul II; reprinted, Venice, 1471, and 1483; Memmingen, c. 1477; Deventer, c. 1477; Paris, 1500; ed. by Rembolt (Paris, 1512); by Erasmus (Basle, 1520 and frequently; the ed. of 1544 was printed at Cologne). A careful critical edition was prepared by Latino Latini, and published by Manutius (Rome, 1563). Morel also went to the MSS. (Paris, 1564); so did Pamèle (Antwerp, 1568), but with less success; Rigault did somewhat better (Paris, 1648, etc.). John Fell, Bishop of Oxford and Dean of Christ Church, published a well-known edition from MSS. in England (Oxford, 1682). The dissertations by Dodwell and the "Annales Cyprianici" by Pearson, who arranged the letters in chronological order, make this edition important, though the text is poor. The edition prepared by Étienne Baluze was brought out after his death by Dom Prudence Maran (Paris, 1726), and has been several times reprinted, especially by Migne (P. L., IV and V). The best edition is that of the Vienna Academy (C. S. E. L., vol. III, in 3 parts, Vienna, 1868-71), edited from the MSS. by Hartel. Since then much work has been done upon the history of the text, and especially on the order of the letters and treatises as witnessing to the genealogy of the codices.

A stichometrical list, probably made in 354, of the Books of the Bible, and of many works of St. Cyprian, was published in 1886 from a MS. then at Cheltenham by Mossmen, *Zur lat. Stichometrie*; *Hermes*, XXI, 142; *ibid.* (1890), XXV, 636, on a second MS. at St. Gall. See Sanday and Turner in *Studia Biblica* (Oxford, 1891), III; Turner in *Classical Review* (1892, etc.), VI, 205. On Oxford MSS., see Wordsworth in *Old Lat. Biblical Texts* (Oxford, 1886), II, 123; on Madrid MSS., Schulz, *Th. Lit. Zeitung* (1897), p. 179. On other MSS., Turner in

Journal of Th. St., III, 282, 586, 579; Ramsay, *ibid.*, III, 585, IV, 86. On the significance of the order, Chapman, *ibid.*, IV, 103; von Soden, *Die cyprianische Briefsammlung* (Leipzig, 1904). There are many interesting points in Mercati, *D'alcuni nuovi sussidi per la critica del testo di S. Cypriano* (Rome, 1899).

On the life of St. Cyprian: Pearson, *Annales Cyprianici*, ed. Fell, *Acta SS.*, 14 Sept.; Rettberg, *Th. Conc. Cyprianus* (Göttingen, 1831); Freppel, *Saint Cyprien et l'Eglise d'Afrique* (Paris, 1865, etc.); Peters, *Der hl. Cyprian v. Karth.* (Ratisbon, 1877); Freppel and Peters occasionally exaggerate in the Catholic interest. Fechter, *Der hl. Cyprian* (Münster, 1878); Ritschl, *Cyprian v. K. und die Verfassung der Kirche* (Göttingen, 1885); Benson, *Cyprian, his life, his times, his work* (London, 1897). (This is the fullest and best English life; it is full of enthusiasm, but marred by odium theologium, and quite untrustworthy where controversial points arise, whether against Nonconformists or against Catholics.) Monceaux, *Hist. litt. de l'Afrique chrét.* (Paris, 1902), I, a valuable work. Of the accounts in histories, encyclopedias, and patrologies, the best is that of Bardenheuer, *Gesch. der altkirchl. Lit.* (Freiburg, 1903), II. Pearson's chronological order of the letters is given in Hartel's edition. Rectifications are proposed by Ritschl, *De Epistulis Cyprianicis* (Halle, 1885), and Cyprian v. Karthago (Göttingen, 1885); by Nelke, *Die Chronologie der Korrresp. Cyprian.* (Thorn, 1902); by von Soden, *op. cit.*; by Benson and Monceaux. These views are discussed by Bardenheuer, *loc. cit.*, and Harnack, *Chronol.*, II. Bonaccorsi, *Le lettere di S. Cipriano in Riv. storico-critica delle scienze teol.* (Rome, 1905), I, 377; Stüpfel, *Die Behandlung der Gefallenen zur Zeit der deutschen Verfolgung in Zeitschrift für Kathol. Theol.*, 1907, XXXI, 577; Dwight, *St. Cyprian and the libellus martyrum in Amer. Cath. Qu. Rev.* (1907), XXII, 478. On the chronology of the baptismal controversy, v. Alphonse, *La question baptismale au temps de Saint-Cyprien in Rev. des Questions Hist.* (1907), p. 353.

On Cyprian's Biblical text: Corssen, *Zur Orientierung über die bisherige Erforschung des Bibeltextes Cyprians in Jahresbericht über die Fortschritte der klass. Altertumswiss.* (1899); Sanday in *Old Latin Bibl. Texts* (1886), II; Turner in *Journ. Theol. St.*, II, 600, 610; Heidenreich, *Der nlt. Text bei Cyprian* (Bamberg, 1900); Monceaux, *op. cit.*; Corssen, *Der cyprian. Text der Acta Ap.* (Berlin, 1892); Zeller, *Die Forschungen* (Erlangen, 1891), IV, 79 (on Cyprian's text of the Apoc.). A new edition (Oxford Univ. Press) is expected of the *Testimonia* by Sanday and Turner. Tentative prolegomena to it by Turner in *Journal Theological Studies* (1905), VI, 246, and (1907), IX, 62. The work has been interpolated; see Ramsay, *On early insertions in the third book of St. Cyprian's Text in Journal of Theol. St.* (1901), II, 276. Testimonies of the ancients to Cyprian in Harnack, *Gesch. der altkirchl. Lit.*, I; Götz, *Gesch. der cyprianischen Literatur bis zu der Zeit der ersten erhaltenen Handschriften* (Basle, 1891).

On the Latin of St. Cyprian an excellent essay by Watson, *The Style and Language of St. Cyprian in Stud. Bibl.* (Oxford, 1896), IV; Bayard, *Le Latin de Saint Cyprien* (Paris, 1902). The letters of Cornelius are in Vulgar Latin (see Mercati, *op. cit.*), and so are Epp. vii (anonymous) and xxi-xxiv (Celerinus, Lucian, Confessors, Caldonius); they have been edited by Miconski, *Adversus Aleatores* (Erlangen and Leipzig, 1889). On the interpolations in *De Unitate Eccl.*, see Hartel, Preface; Benson, pp. 200-21, 547-552; Chapman, *Les interpolations dans le traité de Saint Cyprien sur l'unité de l'Eglise in Revue Bénédictine* (1902), XIX, 246, 357, and (1903), XX, 26; Harnack in *Theol. Litt. Zeitung* (1903), no. 9, and in *Chronol.*, II; Watson in *Journal Theol. St.* (1904), p. 432; Chapman, *ibid.*, p. 634, etc. On particular points see Harnack in *Texte und Untersuch.*, IV, 3, VIII, 2; on the letters of the Roman clergy, Harnack in *Theol. Abhandl.*, Carl v. Weissacker, *geb.* (Freiburg, 1896).

On Cyprian's theology much has been written. Ritschl is fanciful and unsympathetic, Benson untrustworthy. Götz, *Das Christentum Cyprians* (Giessen, 1896). On his trust in visions, Harnack, *Cyprian als Enthusiast in Zeitschr. für nlt. Wiss.* (1902), III, *ibid.* On the baptismal controversy and Cyprian's excommunication, see Grisar in *Zeitschr. für kath. Theol.* (1881), V; Hoensbroech, *ibid.* (1891), XV; Ernst, *ibid.*, XVII, XVIII, XIX. Poschmann, *Die Sichtbarkeit der Kirche nach der Lehre des h. Cyprian* (Breslau, 1907); Krieger, *La genèse d'un dogme catholique et la pensée de Cyprien* (Paris, 1907). To merely controversial works it is unnecessary to refer.

The above is only a selection from an immense literature on Cyprian and the pseudo-Cyprianic writings, for which see Chevalier, *Bio-Bibl.*, and Richardson, *Bibliographical Synopsis*. Good lists in von Soden, and in Harnack, *Chronol.*, II; the very full references in Bardenheuer are conveniently classified.

JOHN CHAPMAN.

Cyprus, an island in the Eastern Mediterranean, at the entrance of the Gulf of Alexandretta. It was originally inhabited by Phœnicians and Greeks, and was famous for its temples of Aphrodite. Though long autonomous, in the sixth century B. C. dominion over it was disputed by the Egyptians and the Persians, the latter ruling it till the invasion of Alexander the Great. From the Ptolemies of Egypt it passed to the Romans (59 B. C.). Despite Moslem invasions from the seventh to the tenth century, it remained a part of the Eastern Empire until the end of the twelfth. In 1191 it was conquered by Richard the Lion-Hearted, who gave it to Guy de Lusignan, King of

Jerusalem; in 1373 it fell to the Genoese, in 1489 to the Venetians. Finally, in 1571, it became Moslem territory under Sultan Selim II. In 1878 it was occupied by England and is now administered by an English high commissioner, assisted by a board of four English members (*Statesman's Year Book*, London, 1908). The island is hilly, with few rivers, and the climate is hot. Its once famous cities have perished; the chief towns are now Larnaca (the best port), Nicosia, and Limasol. Its area is 153,584 square miles. The population in 1901 was 237,000 (51,000 Mussulmans, 1100 Maronites, 850 Latins, 300 Armenians, a few Protestants and Jews, and the rest Greeks). It produces dates, carobs, oranges and other fruits, oil, wine, and corn. It has also sponge fisheries. Gypsum is mined there and copper mines were worked in ancient times. Christianity was successfully preached in Cyprus by St. Paul, St. Barnabas (a native of the island), and St. John Mark. At Paphos the magician Elymas was blinded and the Proconsul Sergius Paulus was converted (*Acts*, xi, xiii, xv). The Byzantine "Synaxaria" mention many saints, bishops, and martyrs of this early period, e.g. St. Lazarus, St. Heraclides, St. Nicanor (one of the first seven deacons), and others. In the fourth century we find two illustrious names, that of St. Spiridon, the shepherd Bishop of Trimithus, present at the Council of Nicæa in 325 with two other Cypriot bishops, whose relics were removed to Corfù in 1460, and that of St. Epiphanius (d. 403), Bishop of Salamis, the zealous adversary of all heresies and author of many valuable theological works. The Bishop of Salamis (later Constantia) was then metropolitan of the whole island, but was himself subject to the Patriarch of Antioch. During the Arian quarrels and the Eustathian schism, the Cypriote Church began to claim its independence. Pope Innocent I stood out for the rights of the Antiochene patriarch, Alexander I. However, it was not long before the Council of Ephesus (431) in its seventh session acknowledged the ecclesiastical independence of Cyprus: the cause was gained by the metropolitan, Rheginus, who was present at Ephesus with three of his suffragans. In 488 Peter the Dyer (*Petrus Fullo*), the famous Monophysite patriarch, made an effort to recover the ancient Antiochene jurisdiction over the island. During the conflict, however, the Cypriote metropolitan, Anthimus, claimed to have learned by a revelation that the site of the sepulchre of St. Barnabas was quite near his own city of Salamis; he found there the body of the Apostle with a copy of St. Matthew's Gospel, brought the relics to Constantinople, and presented them to the Emperor Zeno. Acacius of Constantinople decided in favour of Cyprus against Antioch, since which time the ecclesiastical independence (*autocephalia*) of the island has no more been called in question, the archbishop, known as exarch, ranking immediately after the five great patriarchs.

From the fifth to the twelfth century the following Archbishops of Constantia (Salamis) are worthy of note: Acadius, biographer of St. Symeon Stylites the Younger, and an uncompromising opponent of the Ecthesis of Heraclius (q.v.); Sergius, who condemned this document in a council and sent the pertinent decree to Pope Theodore I, but became afterwards infected with the very error he had formerly condemned; George, a defender of the holy images (icons); Constantine, who played a conspicuous part in their defence at the Second Nicene Council (787); Nicholas Muzalon, appointed Patriarch of Constantinople in 1147. Another remarkable prelate is St. Demetrius, Bishop of Chytræa (ninth and tenth century). After the conquest of Cyprus by the Arabs, 632-647, the Christian population with its bishops emigrated to the mainland. Justinian II built for them, near the Hellespont, a city which he called Nea Justinianopolis; their archbishop enjoyed there the rights he had in Cyprus, besides exercising jurisdiction over the sur-

rounding country (Quinisext Council, can. xxxix, 692). After the death of Justinian II the Cypriotes returned to their island with their hierarchy. Under Nicephorus Phocas (963-969) Cyprus was freed completely from the Arabs, who had sometimes treated it more kindly than the Byzantine emperors. Christianity, however, gained by the restoration. To this period belongs the foundation of three great monasteries, Our Lady of Pity (Eleusa) of Kykkos, Machæras, and the Enceistra, the last founded in the twelfth century by the recluse Neophytus, author of several ascetical works. The Frankish rule, though at first accepted rather willingly, was finally the source of profound disturbance. In 1196 King Amaury obtained from Celestine III a Latin hierarchy for his kingdom: a resident archbishop was placed at Nicosia (Leucosia), with three suffragans at Paphos, Limasol (Temessos), and Famagusta (Ammochostos, formerly Arsinoe). Knights Templars, Carmelites, Dominicans, Franciscans, Augustinians, Benedictines, Cistercians, Carthusians, Regular Canons, Premonstratensian nuns soon had many flourishing monasteries. Splendid churches were built in the Gothic or ogival style, and many Greek churches were changed into Latin ones. Ecclesiastical revenues were assigned (in part) to the Latin clergy; the Greek clergy and the faithful were subordinated to Latin jurisdiction. In the execution of the decrees of the Fourth Lateran Council (1215) Cardinal Pelagius, legate of Innocent III, showed himself utterly intransigent. Thirteen refractory Greek monks were cruelly put to death. The Greek archbishop, Neophytus, was deposed and exiled, the Greek sees reduced to four, the bishops ordered to reside in small villages and obey the Latin archbishop (1220-1222). Innocent IV and Alexander IV were more favourable to the Greeks (Hergenröther-Kirsch, *Kirchengesch.*, 4th ed., 1904, II, 726), and the Government often defended them against the Latins. The ecclesiastical history of Cyprus during this sad period is one of conflict between the two rival communions, the Greeks being always looked on as more or less schismatic both by the Latins and by the Greek Patriarch of Constantinople. An attempted union of the two Churches in 1405 did not succeed, nor was the Union of Florence (1439) more lasting. In 1489, through the abdication of Queen Caterina Cornaro, the island became subject to Venice, whose rule was even more intolerable to the Greeks, so that, as stated, in 1571 they welcomed the Turkish conquerors as true deliverers.

Among the more conspicuous Latin Archbishops of Nicosia may be mentioned Eustorge de Montaigu (1217-1250) who died at the siege of Damietta, a stern defender of the rights of his Church and a skilful administrator; he increased the splendour of the church services, established schools, built the archiepiscopal palace and the magnificent cathedral of St. Sophia; Ugo di Fagiano (1251-1261), distinguished for his zeal and piety, but a zealous adversary of the Greeks; Gérard de Langres (1274), deposed by Boniface VIII for siding with Philip the Fair; Giovanni del Conte (1312), renowned for his charity; Cardinal Elie de Nabinals (1332), a great reformer; Andreas of Rhodes (1447), present at the Council of Florence; Filippo Mocenigo (1559), who assisted at the closing sessions of the Council of Trent, helped the Venetians against the Turks, and, after the loss of Cyprus, retired to Italy. The Latin bishops of Cyprus showed themselves generally worthy of their mission, by resisting the encroachments of the kings, sometimes also of the Latin Patriarchs of Jerusalem, and even of the pontifical legates. The only reproach they deserve is a want of tact in their behaviour towards the Greeks, and also that their clergy at certain times were guilty of moral laxity. Few saints appear in Latin Cyprus; we hear only of the saintly Franciscan, Ugo di Fagiano, and the Dominican, Pierre de La

Palu, Patriarch of Jerusalem and administrator of the See of Limasol. Blessed Pierre Thomas, a Carmelite and papal legate, who strove hard to convert the Greeks, died at the siege of Famagusta in 1366.

After frightful massacres, the Turks allowed the Greeks to reorganize their Church as they liked: viz, with an archbishop styled "Most Blessed Archbishop of Nea Justiniana [a blunder for Justinianopolis] and all Cyprus", and three bishops at Paphos, Citium, and Karpasia. In the seventeenth century the last-named see was suppressed, and its territory given to the archdiocese; on the other hand the ancient See of Kyrenia was re-established. Cyprus, like the other autocephalous orthodox Churches, has its "Holy Synod", which consists of four bishops and four priests. In the last three centuries there are few events to mention, apart from simoniacal elections and perpetual domestic quarrels. In 1663 Archbishop Nicephorus held a council against the Protestants. In 1821 the four Greek bishops, with many priests, monks, and laymen, were murdered by the Turks. After 1900 strife arose in the ancient Church of St. Barnabas, and it was found impossible to name a successor to the archbishop who died in that year. The Turkish conquest caused the ruin of the Latin Church: two bishops were then killed with many priests and monks, the churches were profaned, and the Latin Catholics left the island. However, as early as 1572, Franciscans could again reside at Larnaca; after a century they had gathered about 2000 Catholics of various rites. Since 1848 Cyprus has been ecclesiastically dependent on the new Latin Patriarchate of Jerusalem. The Franciscans have stations at Larnaca, Limasol, and Nicosia, with schools and five churches; Sisters of St. Joseph of the Apparition conduct schools in these three towns, and have a hospital and an orphanage at Larnaca.

The Maronites were very numerous during the period of Latin rule, but owing to persecutions of Greeks or Turks have mostly all departed or apostatized. The latter are called Linobambaci; some of them returned to Catholicism. Cyprus, with a part of Lebanon, still forms a Maronite diocese, with 30,000 faithful. They have in the island a few churches and four monasteries, but lack good schools (see MARONITES). Among the resident Armenians there is only an insignificant number (12) of Catholics; the rest obey the Gregorian Patriarch of Jerusalem and have two priests and a monastery. Other Christians of Eastern Rites, who lived in Cyprus during the Middle Ages, subject to their own bishops, have now completely disappeared.

Cyrenaic School of Philosophy.—The Cyrenaic School of Philosophy, so called from the city of Cyrene, in which it was founded, flourished from about 400 to about 300 B. C., and had for its most distinctive tenet Hedonism, or the doctrine that pleasure is the chief good. The school is generally said to derive its doctrines from Socrates on the one hand and from the sophist, Protagoras, on the other. From Socrates, by a perversion of the doctrine that happiness is the chief good, it derived the doctrine of the supremacy of pleasure, while from Protagoras it derived its relativistic theory of knowledge. Aristippus (flourished c. 400 B. C.) was the founder of the school, and counted among his followers his daughter Arete and his grandson Aristippus the Younger. The Cyrenaics started their philosophical inquiry by agreeing with Protagoras that all knowl-

edge is relative. That is true, they said, which seems to be true; of things in themselves we can know nothing. From this they were led to maintain that we can know only our feelings, or the impression which things produce upon us. Transferring this theory of knowledge to the discussion of the problem of conduct, and assuming, as has been said, the Socratic doctrine that the chief aim of conduct is happiness, they concluded that happiness is to be attained by the production of pleasurable feelings and the avoidance of painful ones. Pleasure, therefore, is the chief aim in life. The good man is he who obtains or strives to obtain the maximum of pleasure and the minimum of pain. Virtue is not good in itself; it is good only as a means to obtain pleasure. This last point raises the question: What did the Cyrenaics really mean by pleasure? They were certainly sensists, yet it is not entirely certain that by pleasure they meant mere sensuous pleasure. They speak of a hierarchy of pleasures, in which the pleasures of the body are subordinated to virtue, culture, knowledge, artistic enjoyment, which belong to the higher nature of man. Again, some of the later Cyrenaics reduced pleasure to a mere negative state, painlessness; and others, later still, substituted for pleasure "cheerfulness and indifference". The truth seems to be that in this, as in many other instances, sensism was satisfied with a superficial and loosely-jointed system. There was no consistency in the Cyrenaic theory of conduct; probably none was looked for. Indeed, in spite of the example of the founders of the school, the later Cyrenaics fell far below the level of what was expected from philosophers, even in Greece, and their doctrine came to be merely a set of maxims to justify the careless manner of living of men whose chief aim in life was a pleasant time. But, taken at its best, the Cyrenaic philosophy can hardly justify its claim to be considered an ethical system at all. For good and evil it substituted the pleasant and the painful, without reference, direct or indirect, to obligation or duty. In some points of doctrine the school descends to the commonplace, as when it justifies obedience to law by remarking that the observance of the law of the land leads to the avoidance of punishment, and that one should act honestly because one thereby increases the sum of pleasure. The later Cyrenaics made common cause with the Epicureans. Indeed, the difference between the two schools was one of details, not of fundamental principles.

WILLIAM TURNER.

Cyrene, a titular see of Northern Africa. The city was founded early in the seventh century B. C. by a Dorian colony from Thera and named after a spring, Kyre, which the Greeks consecrated to Apollo; it stood on the boundary of the Green Mountains (Djebel Akhaar), ten miles from its port, Apollonia (Marsa Sousa). It was the chief town of the Lydian region between Egypt and Carthage (Cyrenaica, now vilayet of Benghazi), kept up commercial relations with all the Greek cities, and reached the height of its prosperity under its own kings in the fifth century B. C. Soon after 460 it became a republic; after the death of Alexander it passed to the Ptolemies and fell into decay. Apion bequeathed it to the Romans, but it kept its self-government. In 74 B. C. Cyrene became a Roman colony. There were many Jews in the region, with their own synagogue at Jerusalem (Mat., xxvii, 32; Acts, ii, 10; vi, 9, xi, 20, sq.). who rebelled, A. D. 73, against Vespasian and in 115 against Trajan.

Cyrene is the birthplace of the philosophers Aristippus, Callimachus, Carneades, Eratosthenes, and

Synesius; the latter, a convert to Christianity, died Bishop of Ptolemais. Lequien (II, 621) mentions six bishops of Cyrene, and according to Byzantine legend the first was St. Lucius (Acts, xiii, 1); St. Theodorus suffered martyrdom under Diocletian; about 370 Philo dared to consecrate by himself a bishop for Hydra, and was succeeded by his own nephew, Philo; Rufus sided with Dioscorus at the Robber Synod (Latrocinium) of Ephesus in 449; Leontius lived about 600. Lequien (III, 1151) mentions also six Latin bishops, from 1477 to 1557. The Latin titular see was suppressed by a papal decree of 1894. The old city, ruined by the Arab invasion in the seventh century, is not inhabited, but its site is still called Qrennah (Cyrene). Its necropolis is one of the largest and best preserved in the world, and the tombs, mostly rock-hewn, are of Dorian style.

S. PÉTRIDÈS.

Cyril and Methodius (or CONSTANTINE AND METHODIUS), SAINTS, the Apostles of the Slavs, were brothers, born in Thessalonica, in 827 and 826 respectively. Though belonging to a senatorial family they renounced secular honours and became priests. They were living in a monastery on the Bosphorus, when the Khazars sent to Constantinople for a Christian teacher. Cyril was selected and was accompanied by his brother. They learned the Khazar language and converted many of the people. Soon after the Khazar mission there was a request from the Moravians for a preacher of the Gospel. German missionaries had already laboured among them, but without success. The Moravians wished a teacher who could instruct them and conduct Divine service in the Slavonic tongue. On account of their acquaintance with the language, Cyril and Methodius were chosen for the work. In preparation for it Cyril invented an alphabet and, with the help of Methodius, translated the Gospels and the necessary liturgical books into Slavonic. They went to Moravia in 863, and laboured for four and a half years. Despite their success, they were regarded by the Germans with distrust, first because they had come from Constantinople where schism was rife, and again because they held the Church services in the Slavonic language. On this account the brothers were summoned to Rome by Nicholas I, who died, however, before their arrival. His successor, Adrian II, received them kindly. Convinced of their orthodoxy, he commended their missionary activity, sanctioned the Slavonic Liturgy, and ordained Cyril and Methodius bishops. Cyril, however, was not to return to Moravia. He died in Rome, 4 Feb., 869.

At the request of the Moravian princes, Rastislav and Svatopluk, and the Slav Prince Kocel of Pannonia, Adrian II formed an Archdiocese of Moravia and Pannonia, made it independent of the German Church, and appointed Methodius archbishop. In 870 King Louis and the German bishops summoned Methodius to a synod at Ratisbon. Here he was deposed and condemned to prison. After three years he was liberated at the command of Pope John VIII and reinstated as Archbishop of Moravia. He zealously endeavoured to spread the Faith among the Bohemians, and also among the Poles in Northern Moravia. Soon, however, he was summoned to Rome again in consequence of the allegations of the German priest Wiching, who impugned his orthodoxy, and objected to the use of Slavonic in the liturgy. But John VIII, after an inquiry, sanctioned the Slavonic Liturgy, decreeing, however, that in the Mass the Gospel should be read first in Latin and then in Sla-

vonian. Wiching, in the meantime, had been nominated one of the suffragan bishops of Methodius. He continued to oppose his metropolitan, going so far as to produce spurious papal letters. The pope, however, assured Methodius that they were false. Methodius went to Constantinople about this time, and, with the assistance of several priests, he completed the translation of the Holy Scripture, with the exception of the Books of Machabees. He translated also the "Nomocanon", i. e. the Greek ecclesiastico-civil law. The enemies of Methodius did not cease to antagonize him. His health was worn out from the long struggle, and he died 6 April, 885, recommending as his successor Gorazd, a Moravian Slav who had been his disciple.

Formerly the feast of Saints Cyril and Methodius was celebrated in Bohemia and Moravia on 9 March; but Pius IX changed the date to 5 July. Leo XIII, by his Encyclical "Grande Munus" of 30 September, 1880, extended the feast to the universal Church. (See MORAVIA; SLAVONIC LITURGY; BOHEMIA; POLAND; JOHN VIII.)

L. ABRAHAM.

Cyril of Alexandria, SAINT, Doctor of the Church, has his feast in the Western Church on the 28th of January; in the Greek Menæa it is found on the 9th of June, and (together with St. Athanasius) on the 18th of January.

He seems to have been of an Alexandrian family, and was the son of the brother of Theophilus, Patriarch of Alexandria; if he is the Cyril addressed by Isidore of Pelusium in Ep. xxv of Bk. I, he was for a time a monk. He accompanied Theophilus to Constantinople when that bishop held the "Synod of the Oak" in 403 and deposed St. John Chrysostom. Theophilus died 15 Oct., 412, and on the 18th Cyril was consecrated his uncle's successor, but only after a riot between his supporters and those of his rival, Timotheus. Socrates complains bitterly that one of his first acts was to plunder and shut the churches of the Novatians. He also drove out of Alexandria all the Jews, who had formed a flourishing community there since Alexander the Great. But they had caused tumults and had massacred the Christians, to defend whom Cyril himself assembled a mob. This may have been the only possible defence, since the Prefect of Egypt, Orestes, who was very angry at the expulsion of the Jews, was also jealous of the power of Cyril, which certainly rivalled his own. Five hundred monks came down from Nitria to defend the patriarch. In a disturbance which arose, Orestes was wounded in the head by a stone thrown by a monk named Ammonius. The prefect had Ammonius tortured to death, and the young and fiery patriarch honoured his remains for a time as those of a martyr. The Alexandrians were always riotous, as we learn from Socrates (VII, vii) and from St. Cyril himself (Hom. for Easter, 419). In one of these riots, in 422, the prefect Callistus was killed, and in another was committed the murder of the female philosopher Hypatia, a highly-respected teacher of neo-Platonism, of advanced age and (it is said) of many virtues. She was a friend of Orestes, and many believed that she prevented a reconciliation between prefect and patriarch. A mob led by a lector, named Peter, dragged her to a church and tore her flesh with potsherds

till she died. This brought great disgrace, says Socrates, on the Church of Alexandria and on its bishop; but a lector at Alexandria was not a cleric (Socr., V, xxii), and Socrates does not suggest that Cyril was himself to blame. Damascius, indeed, accuses him, but he is a late authority and a hater of Christians.

Theophilus, the persecutor of Chrysostom, had not the privilege of communion with Rome from that saint's death, in 406, until his own. For some years Cyril also refused to insert the name of St. Chrysostom in the diptychs of his Church, in spite of the requests of Chrysostom's supplanter, Atticus. Later he seems to have yielded to the representations of his spiritual father, Isidore of Pelusium (Isid., Ep. I, 370). Yet even after the Council of Ephesus that saint still found something to rebuke in him on this matter (Ep. I, 310). But at that date Cyril seems to have been long since trusted by Rome.

It was in the winter of 427-28 that the Antiochene Nestorius became Patriarch of Constantinople. His heretical teaching soon became known to Cyril. Against him Cyril taught the use of the term *Theotokos* in his Paschal letter for 429 and in a letter to the monks of Egypt. A correspondence with Nestorius followed, in a more moderate tone than might have been expected. Nestorius sent his sermons to Pope Celestine, but he received no reply, for the latter wrote to St. Cyril for further information. Rome had taken the side of St. John Chrysostom against Theophilus, but had neither censured the orthodoxy of the latter, nor consented to the patriarchal powers exercised by the bishops of Constantinople. To St. Celestine Cyril was not only the first prelate of the East, he was also the inheritor of the traditions of Athanasius and Peter. The pope's confidence was not misplaced. Cyril had learnt prudence. Peter had attempted unsuccessfully to appoint a Bishop of Constantinople; Theophilus had deposed another. Cyril, though in this case Alexandria was in the right, does not act in his own name, but denounces Nestorius to St. Celestine, since ancient custom, he says, persuaded him to bring the matter before the pope. He relates all that had occurred, and begs Celestine to decree what he thinks fit (*παρατίθεμαι τὸ δέκασθαι*—a phrase which Dr. W. Bright chooses to weaken into "formulate his opinion"), and communicate it also to the bishops of Macedonia and of the East (i. e. the Antiochene Patriarchate).

The pope's reply was of astonishing severity. He had already commissioned Cassian to write his well-known treatise on the Incarnation. He now summoned a council (such Roman councils had somewhat the office of the modern Roman Congregations), and despatched a letter to Alexandria with enclosures to Constantinople, Philippi, Jerusalem, and Antioch. Cyril is to take to himself the authority of the Roman See, and to admonish Nestorius that unless he recants within ten days from the receipt of this ultimatum, he is separated from "our body" (the popes of the day have the habit of speaking of other churches as the members, of which they are the head; the body is, of course, the Catholic Church). If Nestorius does not submit, Cyril is to "provide for" the Church of Constantinople. Such a sentence of excommunication and deposition is not to be confounded with the mere withdrawal of actual communion by the popes from Cyril himself at an earlier date, from Theophilus, or, at Antioch, from Flavian or Meletius. It was the decree Cyril had asked for. As Cyril had twice written to Nestorius, his citation in the name of the pope is to be counted as a third warning, after which no grace is to be given.

St. Cyril summoned a council of his suffragans, and composed a letter to which were appended twelve propositions for Nestorius to anathematize. The epistle was not conciliatory, and Nestorius may well

have been taken aback. The twelve propositions did not emanate from Rome, and were not at all equally clear; one or two of them were later among the authorities invoked by the Monophysite heretics in their own favour. Cyril was the head of the rival theological school to that of Antioch, where Nestorius had studied, and was the hereditary rival of the Constantinopolitan would-be patriarch. Cyril wrote also to John, Patriarch of Antioch, informing him of the facts, and insinuating that if John should support his old friend Nestorius, he would find himself isolated over against Rome, Macedonia, and Egypt. John took the hint, and urged Nestorius to yield. Meanwhile, in Constantinople itself large numbers of the people held aloof from Nestorius, and the Emperor Theodosius II had been persuaded to summon a general council to meet at Ephesus. The imperial letters were despatched 19 November, whereas the bishops sent by Cyril arrived at Constantinople only on 7 December. Nestorius, somewhat naturally, refused to accept the message sent by his rival, and on the 13th or 14th of December preached publicly against Cyril as a calumniator, and as having used bribes (which was probably as true as it was usual); but he declared himself willing to use the word *Theotokos*. These sermons he sent to John of Antioch, who preferred them to the anathematizations of Cyril. Nestorius, however, issued twelve propositions with appended anathemas. If Cyril's propositions might be taken to deny the two natures in Christ, those of Nestorius hardly veiled his belief in two distinct persons. Theodore urged John yet further, and wrote a treatise against Cyril, to which the latter replied with some warmth. He also wrote an "Answer" in five books to the sermons of Nestorius.

As the fifteenth-century idea of an oecumenical council superior to the pope had yet to be invented, and there was but one precedent for such an assembly, we need not be surprised that St. Celestine welcomed the initiative of the emperor, and hoped for peace through the assembly. (See EPHESUS, COUNCIL OF.) Nestorius found the churches of Ephesus closed to him, when he arrived with the imperial commissioner, Count Candidian, and his own friend, Count Irenæus. Cyril came with fifty of his bishops. Palestine, Crete, Asia Minor, and Greece added their quotient. But John of Antioch and his suffragans were delayed. Cyril may have believed, rightly or wrongly, that John did not wish to be present at the trial of his friend Nestorius, or that he wished to gain time for him, and he opened the council without John, on 22 June, in spite of the request of sixty-eight bishops for a delay. This was an initial error, which had disastrous results.

The legates from Rome had not arrived, so that Cyril had no answer to the letter he had written to Celestine asking "whether the holy synod should receive a man who condemned what it preached, or, because the time of delay had elapsed, whether the sentence was still in force". Cyril might have presumed that the pope, in agreeing to send legates to the council, intended Nestorius to have a complete trial, but it was more convenient to assume that the Roman ultimatum had not been suspended, and that the council was bound by it. He therefore took the place of president, not only as the highest in rank, but also as still holding the place of Celestine, though he cannot have received any fresh commission from the pope. Nestorius was summoned, in order that he might explain his neglect of Cyril's former monition in the name of the pope. He refused to receive the four bishops whom the council sent to him. Consequently nothing remained but formal procedure. For the council was bound by the canons to depose Nestorius for contumacy, as he would not appear, and by the letter of Celestine to condemn him for heresy, as he had not recanted. The correspondence between

Rome, Alexandria, and Constantinople was read, and some testimonies were read from earlier writers to show the errors of Nestorius. The second letter of Cyril to Nestorius was approved by all the bishops. The reply of Nestorius was condemned. No discussion took place. The letter of Cyril and the ten anathematizations raised no comment. All was concluded at one sitting. The council declared that it was "of necessity impelled" by the canons and by the letter of Celestine to declare Nestorius deposed and excommunicated. The papal legates, who had been detained by bad weather, arrived on the 10th of July, and they solemnly confirmed the sentence by the authority of St. Peter, for the refusal of Nestorius to appear had made useless the permission which they brought from the pope to grant him forgiveness if he should repent. But meanwhile John of Antioch and his party had arrived on the 26th or 27th of June. They formed themselves into a rival council of forty-three bishops, and deposed Memnon, Bishop of Ephesus, and St. Cyril, accusing the latter of Apollinarianism and even of Eunomianism. Both parties now appealed to the emperor, who took the amazing decision of sending a count to treat Nestorius, Cyril, and Memnon as being all three lawfully deposed. They were kept in close custody; but eventually the emperor took the orthodox view, though he dissolved the council; Cyril was allowed to return to his diocese, and Nestorius went into retirement at Antioch. Later he was banished to the Great Oasis of Egypt.

Meanwhile Pope Celestine was dead. His successor, St. Sixtus III, confirmed the council and attempted to get John of Antioch to anathematize Nestorius. For some time the strongest opponent of Cyril was Theodoret, but eventually he approved a letter of Cyril to Acacius of Berrhœa. John sent Paul, Bishop of Emesa, as his plenipotentiary to Alexandria, and he patched up a reconciliation with Cyril. Though Theodoret still refused to renounce the defence of Nestorius, John did so, and Cyril declared his joy in a letter to John. Isidore of Pelusium was now afraid that the impulsive Cyril might have yielded too much (Ep. i, 334). The great patriarch composed many further treatises, dogmatic letters, and sermons. He died on the 9th or the 27th of June, 444, after an episcopate of nearly thirty-two years.

ST. CYRIL AS A THEOLOGIAN.—The principal fame of St. Cyril rests upon his defence of Catholic doctrine against Nestorius. That heretic was undoubtedly confused and uncertain. He wished, against Apollinarius, to teach that Christ was perfect man, and he took the denial of a human personality in Our Lord to imply an Apollinarian incompleteness in His Human Nature. The union of the human and Divine natures was therefore to Nestorius an unspeakably close junction, but not a union in one hypostasis. St. Cyril taught the personal, or *hypostatic*, union in the plainest terms; and when his writings are surveyed as a whole, it becomes certain that he always held the true view, that the one Christ has two perfect and distinct natures, Divine and human. But he would not admit two *φύσεις* in Christ, because he took *φύσις* to imply not merely a nature but a subsistent (i. e. personal) nature. His opponents misrepresented him as teaching that the Divine nature suffered, because he rightly taught that the Divine person suffered, in His human nature; and he was constantly accused of Apollinarianism. On the other hand, after his death Monophysitism was founded upon a misinterpretation of his teaching. Especially unfortunate was the formula "one nature incarnate of God the Word" (*μία φύσις τοῦ Θεοῦ Λόγου σεσαρκωμένη*), which he took from a treatise on the Incarnation which he believed to be by his great predecessor St. Athanasius. By this phrase he intended simply to emphasize against Nestorius the unity of Christ's Person; but the words in fact expressed equally the single Nature

taught by Eutyches and by his own successor Dioscurus. He brings out admirably the necessity of the full doctrine of the union of our humanity to God, to explain the scheme of the redemption of man. He argues that the flesh of Christ is truly the flesh of God, in that it is life-giving in the Holy Eucharist. In the richness and depth of his philosophical and devotional treatment of the Incarnation we recognize the disciple of Athanasius. But the precision of his language, and perhaps of his thought also, is very far behind that which St. Leo developed a few years after Cyril's death.

Cyril was a man of great courage and force of character. We can often discern that his natural vehemence was repressed and schooled, and he listened with humility to the severe admonitions of his master and adviser, St. Isidore. As a theologian, he is one of the great writers and thinkers of early times. Yet the troubles which arose out of the Council of Ephesus were due to his impulsive action; more patience and diplomacy might possibly even have prevented the vast Nestorian sect from arising at all. In spite of his own firm grasp of the truth, the whole of his patriarchate fell away, a few years after his time, into a heresy based on his writings, and could never be regained to the Catholic Faith. But he has always been greatly venerated in the Church. His letters, especially the second letter to Nestorius, were not only approved by the Council of Ephesus, but by many subsequent councils, and have frequently been appealed to as tests of orthodoxy. In the East he was always honoured as one of the greatest of the Doctors. His Mass and Office as a Doctor of the Church were approved by Leo XIII in 1883.

HIS WRITINGS.—The exegetical works of St. Cyril are very numerous. The seventeen books "On Adoration in Spirit and in Truth" are an exposition of the typical and spiritual nature of the Old Law. The *Γλαφυρά* or "brilliant", Commentaries on the Pentateuch are of the same nature. Long explanations of Isaiahs and of the minor Prophets give a mystical interpretation after the Alexandrine manner. Only fragments are extant of other works on the Old Testament, as well as of expositions of Matthew, Luke, and some of the Epistles, but of that of St. Luke much is preserved in a Syriac version. Of St. Cyril's sermons and letters the most interesting are those which concern the Nestorian controversy. Of a great apologetic work in twenty books against Julian the Apostate ten books remain. Among his theological treatises we have two large works and one small one on the Holy Trinity, and a number of treatises and tracts belonging to the Nestorian controversy.

The first collected edition of St. Cyril's works was by J. Aubert, 7 vols., Paris, 1638; several earlier editions of some portions in Latin only are enumerated by Fabricius. Cardinal Mai added more material in the second and third volumes of his "Bibliotheca nova Patrum", II-III, 1852; this is incorporated, together with much matter from the Catenæ published by Ghislerius (1633), Corderius, Possinus, and Cramer (1838), in Migne's reprint of Aubert's edition (P. G., LXVIII-LXXVII, Paris, 1864). Better editions of single works include P. E. Pusey, "Cyrilli Alex. Epistolæ tres œcumenicæ, libri V c. Nestorium, XII capitulum explanatio, XII capitulum defensio utraque, scholia de Incarnatione Unigeniti" (Oxford, 1875); "De rectâ fide ad Imp., de Incarnatione Unig. dialogus, derectâ fide ad principissas, de rectâ fide ad Augustas, quod unus Christus dialogus, apologeticus ad Imp." (Oxford, 1877); "Cyrilli Alex. in XII Prophetas" (Oxford, 1868, 2 vols.); "In divi Joannis Evangelium" (Oxford, 1872, 3 vols., including the fragments on the Epistles). "Three Epistles, with revised text and English translation" (Oxford, 1872); translations in the Oxford "Library of the Fathers"; "Commentary on St. John", I (1874), II (1885); "Five tomes against Nestorius" (1881); R. Payne Smith, "S. Cyrilli Alex.

Comm. in Luca evang. quæ supersunt Syriace e MSS. apud Mus. Brit." (Oxford, 1858); the same translated into English (Oxford, 1859, 2 vols.); W. Wright, "Fragments of the Homilies of Cyril of Alex. on St. Luke, edited from a Nitrian MS." (London, 1874); J. H. Bernard, "On Some Fragments of an Uncial MS. of St. Cyril of Alex. Written on Papyrus" (Trans. of R. Irish Acad., XXIX, 18, Dublin, 1892); "Cyrilli Alex. librorum c. Julianum fragmenta syriaca", ed. E. Nestle etc. in "Scriptorium graecorum, qui Christianam impugnaverunt religionem", fasc. III (Leipzig, 1880). Fragments of the "Liber Thesaurorum" in Pitra, "Analecta sacra et class.", I (Paris, 1888).

The best biography of St. Cyril is, perhaps, still that by TRILEMONT in *Mémoires pour servir*, etc., XIV. See also KOPALLIK, *Cyrillus von Alexandrien* (Mainz, 1881), an apology for St. Cyril's teaching and character. A moderate view is taken by BRIGHT in *Waymarks of Church History* (London, 1894) and *The Age of the Fathers* (London, 1903), II, but he is recognized as prejudiced wherever the papacy is in question. EHRRARD, *Die Cyrill v. Alex. zugeschriebene Schrift*, nepl. tñs. to K. Evangelios, ein Werk des Theodoret (Tübingen, 1888); LOOS, *Nestoriana* (Leipzig, 1905); WACH, *Die Heilslehre des Cyrill v. Alex.* (Mainz, 1905). Of review articles may be mentioned: LARGENT, *Études d'hist. eccl.*, S. Cyrille d'Al. et le conc. d'Éphèse in *Rev. des Quest. Hist.* (1882), and IDEM, *Études d'hist. eccl.*, (Paris, 1892); SCHÄFER, *Die Christologie des Cyril v. Al. in Theolog. Quartalschrift* (Tübingen, 1895), 421; MAHÉ, *Les anathématisés de S. Cyrille in Rev. d'hist. eccl.* (Oct., 1906); BETHUNE-BAKER, *Nestorius and his Teaching* (Cambridge, 1906); MAHÉ, *L'Eucharistie d'après S. Cyrille d'Al.* in *Rev. d'Hist. Eccl.* (Oct., 1907). L. J. STICKING defends Cyril in the affair of Hypatia in *Der Katholik*, CXXXI (1906), 44 and 127; on his accession, *ibid.*, CXXXII (1907), 31 and 121; CONY-BEARÉ, *The Armenian Version of Revelation and Cyril of Alexandria's scholia on the Incarnation edited from the oldest MSS. and Englished* (London, 1907).

JOHN CHAPMAN.

Cyril of Barcelona. See SIENI, CYRIL.

Cyril of Constantinople, SAINT, General of the Carmelites, d. about 1235. All that is known is that he was prior of Mount Carmel, some say for twenty-seven, others, more correctly, for three years, and that he had the reputation of being a prophet. One of the pseudo-prophecies, given out towards the end of the thirteenth century by the Franciscan Spirituals, and attributed to St. Cyril of Jerusalem, became known to Guido de Perpignan and other Carmelites at Paris, who ascribed it to their former general, now considered a saint and a doctor of the Church, his feast being introduced in 1399. In the Breviary lessons he was also confounded with Cyril of Alexandria. When the mistake was discovered (1430, but the confusion was maintained in the Venice Breviary, 1542), his title of doctor was justified by attributing to him a work, of which no trace exists, on the procession of the Holy Ghost. The prophecy or angelic oracle "Divinum oraculum S. Cyrillo Carmelita Constantinopolitano solenni legatione angeli missum" (ed. Philippus a SS. Trinitate, Lyons, 1663), so called because it is supposed to have been brought by an angel while Cyril was saying Mass, is a lengthy document of eleven chapters in incomprehensible language, with a commentary falsely ascribed to Abbot Joachim. It is first mentioned by Arnold of Villanova, c. 1295; Telesphorus of Cosenza applied it to the Western Schism and treated it as an utterance of the Holy Ghost. Another writing erroneously attributed to Cyril is "De processu sui Ordinis", by a contemporary, probably a French author; edited by Daniel a Virginie Marié in "Speculum Carmelitarum" (Antwerp, 1680), I, 75.

EHRLÉ, *Ueber Cyrills Oraculum angelicum in Archiv f. Literatur u. Kirchengesch.*, d. M. A. (Berlin, 1886), II, 327; ZIMMERMAN, *Monumenta histor. Carmel.* (Lérins, 1907), I, 295. B. ZIMMERMAN.

Cyril of Jerusalem, SAINT, Bishop of Jerusalem and Doctor of the Church, b. about 315; d. probably 18 March, 386. In the East his feast is observed on the 18th of March, in the West on the 18th or 20th. Little is known of his life. We gather information concerning him from his younger contemporaries, Epiphanius,

Jerome, and Rufinus, as well as from the fifth-century historians, Socrates, Sozomen, and Theodoret. Cyril himself gives us the date of his "Catecheses" as fully seventy years after the Emperor Probus, that is about 347, if he is exact. Constans (d. 350) was then still alive. Mader thinks Cyril was already bishop, but it is usually held that he was at this date only a priest. St. Jerome relates (*Chron. ad ann. 352*) that St. Cyril had been ordained priest by St. Maximus, his predecessor, after whose death the episcopate was promised to Cyril by the metropolitan, Acacius of Cæsarea, and the other Arian bishops, on condition that he should repudiate the ordination he had received from Maximus. He consented to minister as deacon only, and was rewarded for this impiety with the see. Maximus had consecrated Heraclius to succeed himself, but Cyril, by various frauds, degraded Heraclius to the priesthood. So says St. Jerome; but Socrates relates that Acacius drove out St. Maximus and substituted St. Cyril. A quarrel soon broke out between Cyril and Acacius, apparently on a question of precedence or jurisdiction. At Nicæa the metropolitan rights of Cæsarea had been guarded, while a special dignity had been granted to Jerusalem. Yet St. Maximus had held a synod and had ordained bishops. This may have been as much the cause of Acacius' enmity to him as his attachment to the Nicene formula. On the other hand, Cyril's correct Christology may have been the real though veiled ground of the hostility of Acacius to him. At all events, in 357 Acacius caused Cyril to be exiled on the charge of selling church furniture during a famine. Cyril took refuge with Silvanus, Bishop of Tarsus. He appeared at the Council of Seleucia in 359, in which the Semi-Arian party was triumphant. Acacius was deposed and St. Cyril seems to have returned to his see. But the emperor was displeased at the turn of events, and, in 360, Cyril and other moderates were again driven out, and only returned at the accession of Julian in 361. In 367 a decree of Valens banished all the bishops who had been restored by Julian, and Cyril remained in exile until the death of the persecutor in 378. In 380, St. Gregory of Nyssa came to Jerusalem on the recommendation of a council held at Antioch in the preceding year. He found the Faith in accord with the truth, but the city a prey to parties and corrupt in morals. St. Cyril attended the great Council of Constantinople in 381, at which Theodosius had ordered the Nicene faith, now a law of the empire, to be promulgated. St. Cyril then formally accepted the *homousion*; Socrates and Sozomen call this an act of repentance. Socrates gives 385 for St. Cyril's death, but St. Jerome tells us that St. Cyril lived eight years under Theodosius, that is, from January, 379.

WRITINGS.—The extant works of St. Cyril of Jerusalem include a sermon on the Pool of Bethesda, a letter to the Emperor Constantius, three small fragments, and the famous "Catecheses". The letter describes a wonderful cross of light, extending from Calvary to the Mount of Olives, which appeared in the air on the nones of May, after Pentecost, towards the beginning of the saint's episcopate. The catechetical lectures are among the most precious remains of Christian antiquity. They include an introductory address, eighteen instructions delivered in Lent to those who were preparing for baptism, and five "mystagogical" instructions given during Easter week to the same persons after their baptism. They contain interesting local references as to the finding of the Cross, the position of Calvary in relation to the walls, to other holy places, and to the great basilica built by Constantine in which these conferences were delivered. They seem to have been spoken extempore, and written down afterwards. The style is admirably clear, dignified, and logical; the tone is serious and full of piety. The subject is thus divided: 1. Hortatory. 2. On sin, and confidence in God's pardon. 3. On

baptism, how the water receives the power of sanctifying: as it cleanses the body, so the Spirit seals the soul. 4. An abridged account of the Faith. 5. On the nature of faith. 6-18. On the Creed: 6. On the monarchy of God, and the various heresies which deny it. 7. On the Father. 8. His omnipotence. 9. The Creator. 10. On the Lord Jesus Christ. 11. His Eternal Sonship. 12. His virgin birth. 13. His Passion. 14. His Resurrection and Ascension. 15. His second coming. 16-17. On the Holy Ghost. 18. On the resurrection of the body and the Catholic Church. The first mystagogical *catechesis* explains the renunciations of Satan, etc. which preceded baptism; the second is on the effects of baptism, the third on confirmation, the fourth on Holy Communion, and the fifth on holy Mass for the living and the dead. The hearers are told to observe the *disciplina arcani*; *Rom.* they must repeat nothing to heathens and catechumens; the book also has a note to the same effect.

A few points may be noted. The mythical origin of the Septuagint is told, and the story of the phoenix, so popular from Clement onwards. The description of Mass speaks of the mystical washing of the priest's hands, the kiss of peace, the "Sursum Corda", etc., and the Preface with its mention of the angels, the Sanctus, the Epiclesis, the transmutation of the elements by the Holy Ghost, the prayer for the whole Church and for the spirits of the departed, followed by the Paternoster, which is briefly explained. Then come the "Sancta Sanctis" and the Communion. "Approaching, do not come with thy palms stretched flat nor with fingers separated. But making thy left hand a seat for thy right, and hollowing thy palm, receive the Body of Christ, responding Amen. And having with care hallowed thine eyes by the touch of the Holy Body, take it, vigilant lest thou drop any of it. For shouldst thou lose any of it, it is as though thou wast deprived of a member of thy own body." "Then after Communion of the Body of Christ, approach the Chalice of His Blood, not extending thy hands, but bending low, and with adoration and reverence saying Amen, sanctify thyself by receiving also the Blood of Christ. And while thy lips are yet wet, touch them with thy hands, and sanctify thy eyes and thy forehead and thy other senses" (Cat. Myst., v, 22, 21-22). We are to make the sign of the cross when we eat and drink, sit, go to bed, get up, talk, walk, in short, in every action (Cat. iv, 14). Again: "if thou should be in foreign cities, do not simply ask where is the church (*κυριακόν*), for the heresies of the impious try to call their caves *κυριακά*, nor simply where is the Church (*ἐκκλησία*), but where is the Catholic Church, for this is the proper name of this holy Mother of all" (Cat. xviii, 26).

DOCTRINE.—St. Cyril's doctrine is expressed in his creed, which seems to have run thus: "I believe in one God, the Father Almighty, Creator of Heaven and earth and of all things visible and invisible. And in one Lord Jesus Christ, the only-begotten Son of God, begotten by the Father true God before all ages, God of God, Life of Life, Light of Light, by Whom all things were made. Who for us men and for our salvation came down, and was incarnate by the Holy Ghost and the Virgin Mary, and was made man. He was crucified . . . and buried. He rose again on the third day according to the Scriptures, and sat at the right hand of the Father. And He cometh in glory to judge the living and the dead, whose kingdom shall have no end. And in one Holy Ghost, the Paraclete, Who spake by the prophets; and in one baptism of repentance for the remission of sins, and in one holy Catholic Church, and in the resurrection of the body, and in life everlasting." The italicized words are uncertain. St. Cyril teaches the Divinity of the Son with perfect plainness, but avoids the word "consubstantial", which he probably thought liable to misunderstanding. He never mentions Arianism, though

he denounces the Arian formula, "There was a time when the Son was not". He belonged to the Semi-Arian, or Homean party, and is content to declare that the Son is "in all things like the Father". He communicated freely with bishops such as Basil of Ancyra and Eustathius of Sebaste. He not only does not explain that the Holy Trinity has one Godhead, but he does not even say the Three Persons are one God. The one God is for him always the Father: "There is one God, the Father of Christ, and one Lord Jesus Christ, the only-begotten Son of the only God, and one Holy Ghost, Who sanctifies and deifies all things" (Cat. iv, 16). But he rightly says: "We do not divide the Holy Trinity as some do, neither do we make a melting into one like Sabellius" (Cat. xvi, 4). Cyril never actually calls the Holy Ghost God, but He is to be honoured together with the Father and the Son (Cat. iv, 16). There is therefore nothing incorrect in his doctrine, only the explicit use of the Nicene formulæ is wanting, and these, like St. Meletius and others of his party, he fully accepted at a later date.

St. Cyril's teaching about the Blessed Sacrament is of the first importance, for he was speaking freely, untrammelled by the "discipline of the secret". On the Real Presence he is unambiguous: "Since He Himself has declared and said of the bread: This is My Body, who shall dare to doubt any more? And when He asserts and says: This is My Blood, who shall ever hesitate and say it is not His Blood?" Of the Transfiguration, he argues, if Christ could change water into wine, can He not change wine into His own Blood? The bread and wine are symbols: "In the type of bread is given thee the Body, in the type of wine the Blood is given thee"; but they do not remain in their original condition, they have been changed, though the senses cannot tell us this: "Do not think it mere bread and wine, for it is the Body and Blood of Christ, according to the Lord's declaration". "Having learned this and being assured of it, that what appears to be bread is not bread, though perceived by the taste, but the Body of Christ, and what appears to be wine is not wine, though the taste says so, but the Blood of Christ. . . strengthen thy heart, partaking of it as spiritual (food), and rejoice the face of thy soul". It is difficult not to see the whole doctrine of Transubstantiation in these explicit words. Confirmation is with blessed chrism: "As the bread of the Eucharist after the invocation of the Holy Ghost is not bread, but the Body of Christ, so this holy myrrh is no longer simple, as one might say, after the invocation, but a gift of Christ and capable by the presence of the Holy Ghost of giving His divinity" (ii, 4). St. Peter and St. Paul went to Rome, the heads (*προστάται*) of the Church. Peter is *ὁ κορυφαῖος καὶ πρωτοστάτης τῶν ἀποστόλων*. The Faith is to be proved out of Holy Scripture. St. Cyril, as the Greek Fathers generally, gives the Hebrew canon of the Old Testament omitting the deuterocanonical books. But yet he often quotes them as Scripture. In the New Testament he does not acknowledge the Apocalypse.

There have been many editions of St. Cyril's works:—(Vienna, 1560); G. Morel (Paris, 1564); J. Prévot (Paris, 1608); T. Milles (London, 1703); the Benedictine edition of Dom Touttée (Paris, 1720; reprinted at Venice, 1763); a new edition from MSS., by G. C. Reischl, 8vo (Munich, 1848; 2nd vol. by J. Rupp, 1860); Migne gives the Bened. ed. in P. G., XXXIII; Photius Alexandrides (2 vols., Jerusalem, 1867-8); Eng. tr. in Library of the Fathers (Oxford).

TILLEMONT, *Mémoires pour servir*, etc., VIII; TOUTTÉE in his edition, and REISCHL; *Acta SS.*, March, II; DELACROIX, *Saint-Cyrille de Jérusalem* (Paris, 1865); MADER, *Der hl. Cyrillus, Bischof von Jerusalem* (Einsiedeln, 1901).

Cyrillic Prophecy. See CYRIL OF CONSTANTINOPLE.

Cyrrhus, a titular see of Syria. The city of the same name was the capital of the extensive district of Cyrrhæstia, between the plain of Antioch and Commagene. The origin of the city is unknown; according to a false tradition, it was said in the sixth century to have been founded by Cyrus, King of Persia; this, however, was only a play upon the name. It became at an early date a suffragan of Hierapolis in Provincia Euphratensis. Eight bishops are known before 536 (Lequien, II, 929; E. W. Brooks, *The Sixth Book of the Select Letters of Severus*, II, 341). The first was present at Nicea in 325. The most celebrated is Theodoret (423–58), a prolific writer, well known for his rôle in the history of Nestorianism and Eutychianism. (His works are in Migne, P. G., LXXX–LXXXIV.) He tells us that his small diocese (about forty miles square) contained 800 churches, which supposes a very dense population.

At Cyrrhus a magnificent basilica held the relics of SS. Cosmas and Damian, who had suffered martyrdom in the vicinity about 283, and whose bodies had been transported to the city, whence it was also called Hagioupolis. Many holy personages, moreover, chiefly hermits, had been or were then living in this territory, among them SS. Acepsimas, Zematius, Zebinas, Polychronius, Maron (the famous patron of the Maronite Church), Eusebius, Thalassius, Maris, James the Wonder-worker, and others. Theodoret devoted an entire work to the illustration of their virtues and miracles. The city was embellished and fortified by Justinian. At the same time it became an independent metropolis, subject directly to Antioch. The patriarch, Michael the Syrian, names thirteen Jacobite bishops of Cyrrhus from the ninth to the eleventh century (*Revue de l'Orient chrétien*, 1901, p. 194). Only two Latin titulars are quoted by Lequien (III, 1195). The site of the city is marked by the ruins at Khoros, nine miles northwest of Kilis, in the vilayet of Aleppo; these ruins stand near the river Afrin Martsyas, a tributary of the Orontes), which had been banked up by the aforesaid Theodoret.

TILLEMONT, *Mémoires*, XV, 217–239.

S. VAILHÉ.

Cyrus and John, SAINTS, celebrated martyrs of the Coptic Church, surnamed *θαυματοργολοι ἀνδράγιοι* because they healed the sick gratis (Nilles, *Kalendarium utriusque Ecclesiae*, Innsbruck, 1896, I, 89). Their feast day is celebrated by the Copts on the sixth day of Emsir, corresponding to 31 January, the day also observed by the Greeks; on the same day they are commemorated in the Roman Martyrology, regarding which see the observation of Cardinal Baronio (*Martyrologium Romanum*, Venice, 1586). The Greeks celebrate also the finding and translation of the relics on 23 June (see “*Menologium Basil.*” and “*Menaia*”). The principal source of information regarding the life, passion, and miracles of Sts. John and Cyrus is the encomium written by Sophronius, Patriarch of Jerusalem (d. 638). Of the birth, parents, and first years of the saints we know nothing. According to the Arabic “*Synaxarium*” (Forget, *Synax. Alexandrinum*, Beirut, 1906, II, 252), compiled by Michael, Bishop of Atrihir and Malig, Cyrus and John were both Alexandrians; this, however, is contradicted by other documents in which it is said that Cyrus was a native of Alexandria and John of Edessa. Cyrus practised the art of medicine and had a work-shop (*ergasterium*) which was afterwards transformed into a temple dedicated to the three boy-saints, Ananias, Misael, and Azarias. He ministered to the sick gratis and at the same time laboured with all the ardour of an apostle of the Faith, and won many from pagan superstition. This took place under the Emperor Diocletian. Denounced to the prefect of the city he fled to Arabia of Egypt where he took refuge in a town near the sea called Tzōtēn. There, having

shaved his head and assumed the monastic habit, he abandoned medicine and began a life of asceticism.

John belonged to the army, in which he held a high rank; the “*Synaxarium*” cited above adds that he was one of the familiars of the emperor. Hearing of the virtues and wonders of Cyrus, he betook himself to Jerusalem in fulfilment of a vow, and thence passed into Egypt where he became the companion of St. Cyrus in the ascetic life. During the persecution of Diocletian three holy virgins, Theoctista (Theopista), fifteen years old, Theodota (Theodora), thirteen years old, and Theodossia (Theodoxia), eleven years old, together with their mother Athanasia, were arrested at Canopus and brought to Alexandria. Cyrus and John, fearing lest these girls, on account of their tender age, might, in the midst of torments, deny the Faith, resolved to go into the city to comfort them and encourage them in undergoing martyrdom. This fact becoming known they also were arrested and after dire torments they were all beheaded on the 31st of January. The bodies of the two martyrs were placed in the church of St. Mark the Evangelist where they remained up to the time of St. Cyril, Patriarch of Alexandria (412–444). At Menuthis (*Μενούτης* or *Μενούθις*) near Canopus there existed at that time a pagan temple reputed for its oracles and cures which attracted even some simple Christians of the vicinity. St. Cyril thought to extirpate this idolatrous cult by establishing in that town the cultus of Sts. Cyrus and John. For this purpose he transferred thither their relics (28 June, 414) and placed them in the church built by his predecessor, Theophilus, in honour of the Evangelists. Before the finding and transfer of the relics by St. Cyril it seems that the names of the two saints were unknown; certain it is that no written records of them existed (Migne, P. G., LXXXVII, 3508 sq.). In the fifth century, during the pontificate of Innocent I, their relics were brought to Rome by two monks, Grimaldus and Arnulfus—this according to a manuscript in the archives of the deaconry of Santa Maria in the Via Lata, cited by Antonio Bosio (*Roma Sotterranea*, Rome, 1634, p. 123). Mai, however, for historical reasons, justly assigns a later date, namely 634, under Pope Honorius and the Emperor Heraclius (*Spicilegium Rom.*, III, V). The relics were placed in the suburban church of St. Passera (Abbas Cyrus) on the Via Portuense. In the time of Bosio the pictures of the two saints were still visible in this church (Bosio, *op. cit.*, ib.) Upon the door of the hypogeum, which still remains, is the following inscription in marble:—

Corpora sancta Cyri renitent hic atque Joannis
Quæ quondam Romæ dedit Alexandria magna

(Bosio, *ib.*; Mai, *Spic. Rom.*, loc. cit.). At Rome three churches were dedicated to these martyrs, Abbas Cyrus de Militiis, Abbas Cyrus de Valeriis, and Abbas Cyrus ad Elephantum—all of which were transformed afterwards by the vulgar pronunciation into S. Passera, a corruption of Abbas Cyrus; in the Coptic Dīfnar, Apakiri, Apakyri, Apakyr; in Arabic, 'Abaqir, 'Abuqir (see Armellini, *Le Chiese di Roma*, Rome, 1891, 179 sq., 563 sq., 681, 945 sq.).

SOPHRONIUS, *Laudes in SS. Cyrum et Joannem* in MIGNE, P. G., LXXXVII, 3379–3676 (the other two lives, 3677–3696, are not of Sophronius); see also BARDENHEWER, *Patrol.* (I, tr., Rome, 1903), III, 41; *Acta SS.*, Jan., II, 1081 sq.; PETRUS PARNOPENSIS, *SS. Cyri et Joannis passio in Spicilegium Romanum* (Rome, 1840), IV, 288–290; *Analecta Bollandiana* (Brussels, 1889), VIII, 95–96; DEUBNER, *De incubatione capita quatuor* (Leipzig, 1900); cf. *Analecta Bollandiana* (1901), XX, 324 sq.; (1906) xxv, 233, 40; *Revue de l'Orient chrét.* (Paris, 1902), 375 sqq.

P. J. BALESTRI.

Cyrus of Alexandria, a Melchite patriarch of that see in the seventh century, and one of the authors of Monothelism; d. about 641. He had been since 620 Bishop of Phasis, in Colchis, when the Emperor

Heraclius, in the course of his Persian campaign (626), consulted him about a plan for bringing the Monophysites of Egypt back to the Church, and to the support of the empire. The plan, suggested by Sergius, Patriarch of Constantinople, consisted in confessing the faith of Chalcedon on the two natures of Christ, while practically nullifying it by the admission of one theandric will and operation, *ἐν θελήματι καὶ μίᾳ ἐνέργειᾳ*. Cyrus hesitated at first, but being assured by Sergius that this formula was opposed to neither the Fathers nor Chalcedon and was destined to achieve great results, he became a staunch supporter of it, and was, in return, raised by Heraclius to the then vacant See of Alexandria (630). Once a patriarch, he set himself vigorously to effect the desired union. In a synod held at Alexandria he proposed what is known as the *πληροφορία*, or "Satisfactio", an agreement in nine articles, the seventh of which is a bold assertion of the Monothelite heresy. The Monophysites (Theodosians or Severians) welcomed the agreement with, however, the remark that Chalcedon was coming to them, not they to Chalcedon. The union thus effected was adroitly exploited, with a view to win over Pope Honorius to Monothelism; otherwise it proved ineffective, and soon fell into discredit under the name of *ἑνωσις ὑπόβορᾶτης*, contemptuously called the "washy union". Cyrus persevered none the less in his adhesion to the compromise, and even accepted the Ecthesis, a new imperial formulæ of the same error (637). When Omar's general, Amru, threatened the Prefecture of Egypt, Cyrus was made prefect and entrusted with the conduct of the war. Certain humiliating stipulations, to which he subscribed for the sake of peace, angered his imperial master. He was recalled and harshly accused of connivance with the Saracens; however, he was soon restored to his former authority, owing to the impending siege of Alexandria, but could not avert the fall of the great city (640) and died shortly after.

From Cyrus we have three letters to Sergius and the "Satisfactio", all preserved in the acts of the Roman Synod of the Lateran and of the Sixth Ecumenical Council (Mansi, X, 1004; XI, 560, 562, 964). The first letter is an acceptance of the Ecthesis; in the second Cyrus describes his perplexity between Pope Leo and Sergius; the conversion of the Theodosians is narrated in the third. The seventh article of the "Satisfactio"—the others are irrelevant—reads thus: "The one and same Christ, the Son, performs the works proper to God and to man by one theandric operation [*μὴ θεανδρικήν ἐνέργειαν*] according to St. Dionysius". Cyrus' chief opponents, St. Sophronius, d. in 637 (Epistola synodica, Mansi, XI, 480), and St. Maximus, d. in 662 (Epistola ad Nicandrum; *disputatio cum Pyrrho*, P. G., XCI, 101, 345), reproached him for falsifying the then much-respected text of Dionysius and substituting *μὴ* for *καὶ* (new). They showed, moreover, the inanity of his claim to the support of the Fathers, and explained how the Divine and human natures of Christ, sometimes styled one, because they belong to the same person and work in perfect harmony, can no more be physically identified than the natures from which they proceed. Historians are not agreed as to how Cyrus came by this error. Some think that he was, from the outset, a Monophysite at heart. Others, with more reason, hold that he was led into error by Sergius and Heraclius. Cyrus was condemned as a heretic in the Lateran Council of 649 (Denzinger, *Enchiridion*, 217, 219) and in 680 at the Third Ecumenical Council of Constantinople (Denzinger, 238; Mansi, XI, 554). (See MONOTHELITES.)

J. F. SOLLIER.

Cyzicus, a titular see of Asia Minor, metropolitan of the ancient ecclesiastical province of Hellespontus. The city was probably founded by Pelasgians from Thessaly; later it received many colonies from Milesus, but its importance began only after the Peloponnesian war, when the decay of Athens and Miletus set in. Alcibiades defeated the Lacedæmonians there (410 B. C.). Alexander captured it from the Persians in 334 B. C.; and Mithridates besieged it with 300,000 men in 74 B. C., but it withstood him stoutly, and the year following was delivered by Lucullus. The Romans favoured it and recognized its municipal independence. Cyzicus was the leading city of Northern Mysia as far as Troas. Under Tiberius it was incorporated with the empire, but remained the capital of Mysia, afterwards of Hellespontus, and became one of the greatest cities in the world. The era of its Olympiads was reckoned from A. D. 135 or 139. Its peculiar coin, the Cyzicenus, was worth 28 drachmæ, i. e. nearly five dollars and a half in American money. Cyzicus was captured by the Arabs in 675, and ruined by earthquakes in 443 and 1043; it began to be deserted as early as the eleventh century. Its site is today marked by a huge heap of ruins amid the marshes of Balkiz Serai, in the *caza* of Erdek, vilayet of Brusa. The walls, dating from the fourth century, are partly preserved; there are also the ruins of a Roman aqueduct and a theatre. The amphitheatre, built in the third century B. C., was one of the largest in the world; its diameter was nearly 500 feet. Colossal foundations of a temple dedicated to Hadrian are still visible: the columns were 21.35 metres high (about 70 feet), while the highest known elsewhere, those at Baalbek in Syria, are only 19.35 metres (about 63 feet). The monuments of Cyzicus were used by Justinian as a quarry for the building of Saint Sophia, and are still exploited by the natives.

As ecclesiastical metropolis of Hellespontus, Cyzicus had a catalogue of bishops beginning with the first century; Lequien (I, 747) mentions fifty-nine. A more complete list is found in Nicodemus, in the Greek "Office of St. Emilian" (Constantinople, 1876), 34-36, which has eighty-five names. We may mention the famous Arian Eunomius; St. Dalmatius; St. Proclus and St. Germanus, who became Patriarchs of Constantinople; and St. Emilian, a martyr in the eighth century. Gelasius, an historian of Arianism, who wrote about 475, was born at Cyzicus. Lequien (III, 941) mentions a Latin bishop in 1477. Cyzicus is still a metropolitan title for the Greeks, the metropolitan residing at Artake (Erdek), a little port on the western shore of the peninsula. Opposite to Artake is another port, Peramos (Perama), where an Assumptionist Father has founded a Greek parish. At Panormos (Panderma), another more important port nine miles south-east of the ruins of Cyzicus (10,000 inhabitants), there is a Catholic Armenian parish. At the Dardanelles, also, there is a Latin parish.

S. VAILHÉ.

Czech Literature.—The Czech or Bohemian language is spoken by that branch of the Indo-European Slavs who settled in Moravia and Bohemia about the fifth century after Christ. It is closely allied to the Russian, Polish, Bulgarian, and other Slav languages having a common origin. The evolution of Czech literature dates back to 863, when Moravia and Bohemia, through the efforts of Sts. Cyril and Methodius, the apostles of these two countries, were converted to Christianity and thus became participants in the

great work of civilization. Of all Slav literature, with the exception of the Bulgarian, the Czech is the oldest and, until the seventeenth century, was also the richest. It may be divided into four periods.

First Period.—This era extended from the Christianization of Bohemia to the appearance in public of John Hus, in the year 1404. It may be called the childhood of Czech literature and is characterized by fruitfulness in poetry. From pagan times we have no literary relics, though it is certain that the Bohemians used certain crude characters or letters commonly called the runic. St. Cyril, using the Greek characters as a basis, devised a special Slav alphabet with new marks indicating soft sounds. At the same time he introduced a Slavonic Liturgy and translated part of the Bible. The liturgy, however, was soon superseded by the Latin, written in the Latin language with Roman letters. This was brought about chiefly by the German bishops, who, it is said, feared that this Slavonic Liturgy might finally lead to schism. The Slavonic Liturgy survived longest (until 1055) in the Abbey of Sazava. To re-establish it Emperor Charles I founded an abbey at Prague commonly called "Na Slovanech", or at the present time Emmaus, inducing Slav Benedictine monks from Croatia to settle there. The monks, however, were scattered during the Hussite wars in 1419 and did not return. The older part of the famous "Reims Gospel", it is claimed, dates from the eleventh or twelfth century. The newer part was written at Emmaus in 1395, and is the only relic of Old Slavonic extant. This Gospel was carried away by the Hussites, was taken as far as Turkey, and thence to Reims, where it was used by the French kings when pronouncing the coronation oath. Of the oldest period, that is from the tenth to the twelfth century, only a few manuscripts have been preserved, among them two fragments of liturgical translations written in the Glagolitic or Old Slavonic alphabet. The most precious relic of this period is the hymn "Hospodine, pomiluj ny", a paraphrase of the Kyrie Eleison, which, with its deep choral melody, is very impressive. It is surpassed only by the beautiful song in honour of St. Wenceslaus.

A marked improvement in Czech literature began in the year 1250. The Western lands gave birth to new watchwords, new ideas, and new life. The splendour of tournaments, the pomp of feasts, and the grandeur of knighthood took the fancy of the age, while the Crusades widened the people's knowledge of other countries and customs. The troubadours of France and the minnesingers of Germany went from castle to castle, glorifying heroic deeds of knighthood. Tendencies of this kind found favour also in Bohemia, and because of their origin in Latin or Roman lands, literature of this period is commonly called romance. The deeds and adventures of the knights were extolled in song and poem after foreign models; the best of these was "Alexandreis", written by an unknown author. This piece of literature is remarkable for its almost faultless form and elegant diction. Another effect of the Crusades was the extraordinary revival of religious faith among the people, which gave rise to a new class of literature, to legends and to mystery or spiritual plays. In prose were written spiritual romances, legends, and passionals depicting the passion of Our Lord and of the martyrs. The Crusades further enkindled in the hearts of many a desire to see and know new lands and new peoples. This led to works on travel, geography, etc. in great numbers. The veneration of the Blessed Mother developed rapidly and fostered a deeper respect for women and children. The founding of the University of Prague, in 1348, by Emperor Charles I was a mighty factor in the improvement of Bohemian literature in all branches. The moral condition of the Church at that time cannot be called exemplary. There existed certain disorders which called forth reformers, who honestly and sin-

cerely worked for their elimination. Numbers of devotional and moral tracts were written, the best of which were by Tomáš Štítný, who fearlessly assailed the abuses wherever he found them. Štítný's literary activity also made its influence felt in another line. Up to this time the Czech language had been regarded as unfit for scientific writing, the Latin being almost exclusively used here, as in many other countries, for treatises on theological and philosophical subjects. Štítný, however, dispelled this illusion, by using the Czech language even in his scientific writings, and thus created a rich scientific vocabulary. The last of these literary reformers was John Hus. He, however, allowed himself to be led astray by the heresies of John Wyclif and thus became the cause of unhappy dissensions and bloody war in his native country.

Second Period.—The appearance of John Hus in 1404 marks the second period of Czech literature. During this the Czech language passed from its old form to the medieval stage, and this epoch may be called the golden age of Bohemian literature. Devotional prose was in preponderance. The literary merit of John Hus consists in his establishing a diacritical orthography, making the written language more simple and stable; but, on the other hand, his activity caused dissensions in the Church, which brought on bloody wars and the ruin of literature. These sad conditions improved only during the reign of George of Podiebrad (1458-71). The sect known as the Bohemian Brethren, founded in 1457, imparted a new character to Czech literature and produced many eminent writers. In religious meetings held in the fashion of the early Christians, spiritual reading, meditation, and religious songs formed the greater part of the services. The practice led to the publishing of a great number of devotional songs and hymn-books, and to the founding of printing establishments. Eight leading members of the Brethren translated from the original Hebrew and Greek the whole of the Bible, which is generally known as the *Kralická Bible*, from the town of Kralice in which it was printed. This translation is excellent and from a literary standpoint it must be called classical. The greatest writer of the Brethren was their last bishop, Jan Amos Komenský (Johann Amos, called Comenius), a pedagogue of renown, who, in his masterpiece, "The Labyrinth of the World and the Heart's Paradise"—the best devotional and philosophical work in medieval Bohemian literature—proves that all worldly glory, riches, and pleasures are vanities and that true happiness consists only in the possession of God and the fulfilling of His Commandments.

Another important factor in Czech literature was Humanism. As early as the reign of George of Podiebrad (1458-71) many writers turned their attention to the old Roman and Greek literatures. They studied the classics, copied the elegancies of form, and drew upon the verbal riches, many even going so far as to write their works in Latin. But two powerful obstacles stood in the way from the beginning. An article of Hussite dogma condemned the fostering of worldly sciences, and the members of the Bohemian Brethren subscribed to this opinion. For this reason Humanism was cultivated at first only by Catholics. Foremost in this movement must be mentioned the talented poet Bohuslav z Lobkovic and John Hóděvský from Hóděv, who, though not a writer, was a generous patron of literature. When Protestantism superseded Hussitism, John Blahoslav, a member of the Bohemian Brethren, wrote an elaborate defence of Humanism, and three religious bodies then began to emulate one another in fostering Humanism: the Catholics, who had suffered greatly during the Hussite wars, the Bohemian Brethren, who at this time were at the zenith of their literary development, and the Protestants, who were growing in force. New schools were founded, of which those conducted by the

Brethren were foremost. These, however, were gradually superseded by the Jesuit schools. Humanism indeed revived classic models of poetry, but it was destructive of home, that is Czech, literature, in that Humanistic poetry was exclusively Latin. At the same time it must be acknowledged that through the influence of Humanism Bohemian prose vastly improved, culminating in the works of Daniel Adam of Veleslavín, who rightly wrote: "The Bohemian language, in its present high development, is elegant, rich, graceful, and sublime, and perfectly adapted to the setting forth of any topic, whether in theology or philosophy." This splendid development terminated suddenly in 1620, at the beginning of the era of decline.

Third Period.—The Protestant nobility, refusing to recognize Emperor Ferdinand II, chose the Calvinist Elector Frederick V as their king (1619). This rebellion was overthrown at the battle of the White Mountain, 8 Nov., 1620, and the Bohemian nation by the foolishness and stubbornness of its nobles was shorn of its independence. The victorious Ferdinand began to enforce the existing motto of the Reformation: *Cuius regio illius religio*. Some of the leaders of rebellion were executed and their property confiscated, and others were warned either to adopt the Catholic religion or to leave the land. Many left Bohemia and their property was sold or given to German, Spanish, French, or Italian nobles. After the battle of the White Mountain we meet but few writers. Most prominent amongst the Catholic writers of this day was Vilem Slavata of Chlum, who wrote a large history in refutation of that of Skala of Zhoř which unduly favoured Protestantism. After the Thirty Years War, however, all literary activity ceased. During the whole of the seventeenth century there was not published a single original work of merit. In the eighteenth century works were written in Latin and German. The German language gradually took the place of the Bohemian, and when, in 1774, Emperor Joseph II excluded it from the schools and from all public offices, it looked as if the Bohemian language was condemned to a gradual but sure death. But just here came a sudden change for the better, and 1780 marks the beginning of the modern period of Bohemian literature.

Fourth Period.—A handful of patriotic priests and teachers took up the heroic task of awakening the nation and succeeded. During the course of one century Bohemian literature grew to such proportions in all its branches that to-day it may well compare with the literature of other nations. Foremost among the pioneers of this era of resurrection must be mentioned Josef Dobrovský, a Jesuit, and Prof. Josef Jungman.

BOHEMIAN WRITERS IN VARIOUS FIELDS.—*Poetry:*—Fr. Lad. Čelakovský (1799–1852); Boleslav Jablonský, Catholic priest (1813–1881); Jan Kollar (1793–1852); Vítězslav Hálek (1835–1874); Adolf Heyduk (1835); Svatopluk Čech (1846–1908); Josef Sládek (1854), translated nearly all of the plays of Shakespeare and the principal works of Longfellow, Byron, Burns, Bret Harte, etc. Jaroslav Vrchlický (1853) is the most prolific Bohemian poet. He wrote sixty-seven volumes of original poems. Besides this he wrote a number of dramas and translated from nearly all the languages of Europe. He translated "Divina Commedia" of Dante, Ariosto's "Orlando Furioso", and a great part of Goethe, Carducci, Andersen, De Amicis, Byron, Hugo, de Lisle, Camoens, Ibsen, Molière, Hamerling, Shelley, etc. Julius Zeyer (1841–1901). Čech, Vrchlický, and Zeyer are the greatest Bohemian poets. The most prominent of the younger generation are:—Otokar Březina, Jaroslav Kvapil, Jan Machar, Fr. Svoboda; and the following Catholic priests:—Sigismund Bouška, O.S.B.; Xaver Dvořák; Adam Chluemský and the Bohemian-American poet, Jan Vránek of Omaha, Nebraska.

Novels and Romances:—Josef Ehrenberger, Catholic priest (1815–1882); Prokop Chocholoušek

(1819–1864); František Pravda, Catholic priest (1817–1904); Fr. Ruběš (1814–1852); Karolína Světlá (1830–1899); Jan Neruda (1834–1891); Božena Němcová (1820–1862); Václav Vlček (1839); Jakub Arbes (1840); Václav Beneš Třebízský, Catholic priest (1849–1884); Servác Heller (1845); Ignat Herman (1854); Alois Jirásek (1851); Karel Klostermann (1848); Václav Kosmák, Catholic priest (1843–1898); Václav Rezníček, Ph.D. (1861); Antal Stašek (1843); Alois Smilovský (1837–1883). Třebízský and Jirásek are the most famous novelists. The most prominent of the rising generation are:—Bohumil Brodský, Catholic priest (1862); Jan Havlasa (1883); Karel Rais (1859); Matěj Šimáček (1860); Alois Dostál, Catholic priest (1858).

Drama:—Václav Klicpera (1792–1859); Josef Tyl (1808–1856); Fr. Jeřábek (1836–1893); Josef Kolár (1812–1896); Emanuel Bozděch (1841–1889); Fr. Stroupežnický (1850–1892); Jos. Stolba, LL.D. (1846). The best dramatists are Bozděch and Stroupežnický.

Of all the branches of scientific Bohemian literature the theological is the richest. The leading writers are:—

Exegesis:—Fr. Sušil, Ph.D. (1804–1868), translated and wrote a very extensive commentary to the New Testament. This is the only work of its kind in all Slav literature. Innocenc Frencl, S.T.D. (1818–1862); Jaroslav Sedláček, S.T.D.

Pastoral Theology:—Antonín Skočdopole, Ph.D. (1828); Xaver Blanda, S.T.D. (1838).

Apologetics:—Bishops Jan Valerian Jirsík (1798–1883), Eduard Brynych (1846–1902), and Antonín Lenz, S.T.D. (1829–1901), a master of dogmatic theology, apologetics, Mariology, sociology, and Catholic anthropology. He pointed out with unusual clearness the errors of Wyclif, Hus, Chelčický, and Comenius.

Catholic Philosophy:—Jan Kadeřábek, S.T.D. (1840); Václav Šimánko, S.T.D. (1844–1897); Pavel Vychodil, O.S.B., Ph.D. (1862); František Konečný; Václav Hlavatý, S.T.D., and Josef Pospíšil, S.T.D.

Canon Law:—Klement Borový, S.T.D. (1838–1897); Alois Jiráček, S.T.D. (1848–1906).

Moral Theology:—Matěj Procházka, S.T.D. (1811–1889); Karel Reháček, S.T.D. (1843).

Christian Sociology:—Rudolf Horský, S.T.D., and Rudolf Vrba.

Oriental Languages:—Fr. Ryzlink, S.T.D.

Biblical Archeology:—Melichar Mlčoch, S.T.D. (1833), and Alois Musil, S.T.D., of wide repute.

Hagiography:—František Eckert; Hugo Karlík.

Church History:—Fr. Král, S.T.D. (1844); Fr. Kryštof, S.T.D.; Josef Svoboda, S.J. (1826–1896).

Dablon, Claude, Jesuit missionary, b. at Dieppe, France, in February, 1618; d. at Quebec, 3 May, 1697. At the age of twenty-one he entered the Society of Jesus, and after his course of studies and teaching in France, arrived in Canada in 1655. He was at once deputed with Chaumonot to begin a central mission among the Iroquois at Onondaga. The diary he kept of this journey and of his return to Quebec in the year following gives a graphic account of the terrifying conditions under which these journeys were made. In 1661 he accompanied Druillettes, the Apostle of Maine, on an expedition overland to Hudson Bay, the purpose of which was to establish missions among the Indians in that region and perchance to discover an outlet through Hudson Bay to the China Sea. The expedition was unsuccessful and is only chronicled as another abortive attempt to find the famous North-West Passage. In 1668 Dablon was on Lake Superior with Allouez and Marquette, forming with them what Bancroft calls the "illustrious triumvirate", and he was the first to inform the world of the rich copper mines of that region, so valuable to the commerce of to-day. It was Dablon who appointed Marquette to undertake the expedition which resulted in the discovery of the Upper Mississippi; he also gave Marquette's letters and charts to the world. In connexion with this discovery he called attention to the feasibility of passing from Lake Erie to Florida "by cutting a canal through only half a league of prairie to pass from the end of the Lake of the Illinois [Michigan] to the River of St. Louis" (the Illinois). This canal, projected by Dablon 233 years ago, was the subject of a special message from the Governor of Illinois to the State Legislature in March, 1907. After founding Sault Ste. Marie, Dablon became, in 1670, Superior General of all the Canadian Missions, retaining that office until 1680. He was reappointed in 1686 and remained superior until 1693. His contributions to the "Relations" possess the highest value, his descriptions of places and people and his narration of events being singularly clear and comprehensive.

E. P. SPILLANE.

Dacca, DIOCESE OF (DACCHENSIS), in Bengal, India. By the Constitution "*Æquam reputamus*" Paul III established in 1534 the See of Goa, conferring upon it spiritual jurisdiction over all the Portuguese possessions from the Cape of Good Hope to China. Early in the sixteenth century the Portuguese found their way into Eastern Bengal, and the Eurasian and native Christian communities that grew up around the several settlements were, in virtue of the aforesaid Constitution, subject to the ecclesiastical authority of Goa, and later (1606) to the See of Mylapore, suffragan to Goa. When the political power of Portugal was replaced by British rule in India, the Bishop of Mylapore still retained jurisdiction over the Church in Bengal, and seven thousand out of the twenty-two

thousand Catholics within the territory of the Diocese of Dacca are still subject to him. In the interest of more effective missionary work, Propaganda, 18 April, 1834, appointed Robert of St. Ledger, a priest of the Society of Jesus, Vicar Apostolic of Calcutta and the territory under its political jurisdiction, which at the time included the entire province of Bengal. In 1850, at the instance of Archbishop Carew, Vicar Apostolic of Bengal, Pius IX divided the province into two vicariates Apostolic, one of Eastern, the other of Western Bengal. A subsequent subdivision (1870) resulted in the establishment of a third allotment, the Vicariate of Central Bengal. The territory of the third vicar Apostolic was taken in part from the Eastern and in part from the Western vicariates.

On the creation of the hierarchy in India, Sept., 1886, the Eastern vicariate became the Diocese of Dacca, the district of Arakan (Burma) being substituted for that of Assam, which in 1889 became a prefecture Apostolic. With Dacca City as centre, the diocese is bounded on the north by the Prefecture Apostolic of Assam, on the east by the Vicariates of Northern and Southern Burma, on the south by the Bay of Bengal, and on the west by the Bay of Bengal and the Diocese of Krishnagar. According to the latest Government survey the area thus enclosed measured fifty-nine thousand square miles, the population in the census of 1902 registered slightly above seventeen millions. The first occupant of the new see was Augustine Louage, a priest of the Congregation of the Holy Cross, who on his death in 1894 was succeeded by Bishop Hurth. Except for an interim of twelve years (1876-1888) when the mission was in care of members of the Benedictine Order, religious of the Congregation of the Holy Cross have laboured in Eastern Bengal since 1853. Since 1888 the Institute of the Holy Cross has had from Rome exclusive charge of the mission. The nine "centres" into which the Diocese of Dacca is divided give opportunity to the twenty missionaries at work in it to carry on an active propaganda in outlying districts. In each centre there is a school, and in many of the dependent stations there is a catechumenate under the immediate supervision of local catechists and the elders of the respective communities. In Dacca, Chittagong, and Akyab the mission conducts schools in which students, irrespective of religious profession, are prepared for "entrance" or collegiate work. The academy for girls in each of these cities is directed by a staff of 35 nuns, Daughters of Our Lady of the Missions (23), and the Sisters Catechists (12). The diocesan school attendance for 1907 numbered 1768 pupils.

The Church in the Diocese of Dacca experiences all the obstacles common to foreign missionary work the world over. Dacca City is three-fifths Mohammedan, and among the Hindus of Eastern Bengal the traditional caste will oppose, for some time at least, an effective barrier to the rapid spread of the Catholic Faith. As Dacca, however, is the college town of India, the percentage of students being relatively greater here than in any other city of the empire, Catholicism has continually brightening prospects opening before it, in and around the capital of Bengal-Assam. The influential Somaj of Dacca is one of the many present-day manifestations of the increasingly accurate appreciation of the part or function of reason in life. The widespread awakening of a critical rationalistic spirit, which has already questioned the feasibility of many caste observances, will eventually work harm to the

claims of Hinduism itself. All this augurs well for the cause of truth.

P. J. HURTH.

Dacier, André, a French philologist, b. at Castres, 6 April, 1651; d. 18 Sept., 1722. He was a Huguenot and studied under Tanneguy Lefèvre at Saumur. While visiting Paris he was presented to the Duc de Montausier who engaged him to edit Pomponius Festus in the collection of Latin authors *Ad usum Delphini* (Paris, 1681; Amsterdam, 1699). In 1683 he married Anne Lefèvre, the daughter of his former preceptor and, two years later he and his wife abjured Protestantism. At this time Dacier published a translation of the works of Horace and a commentary on them (Paris, 1681-89), the text being that of Tanneguy Lefèvre published at Saumur in 1671. The translation is quite accurate for the period, but the commentary is far too diffuse and is distinctly illustrative of the taste for allegory that persisted far into the seventeenth century. According to Dacier, Horace knew everything, and the commentator even discovered that the poet had read the books of Moses and followed the method of Solomon in the Book of Proverbs to inspire a horror of adultery. In Dacier, however, are also found good explanations and judicious observations. He was mainly a translator, and his work in this line included "Marcus Antoninus" (Paris, 1690); Aristotle's "Poetics" (Paris, 1692); the "Cédipus," and "Electra" of Sophocles (Paris, 1692); Plutarch's "Lives" (five lives, Paris, 1694; complete, Paris, 1721; Amsterdam, 1723); Hippocrates (4 works, Paris, 1697); Plato (selections; Paris, 1699); Pythagoras and Hierocles (Paris, 1706) and Epictetus and Simplicius (Paris, 1715). He was appointed keeper of books in the king's study and, in 1695 entered the Academy of Inscriptions and the French Academy of which he became the secretary.

ANNE DACIER (*née LEFÈVRE*), the wife of André Dacier, b. at Saumur in 1651; d. 17 April, 1720. She received the same instruction as her brother and at the age of twenty-three published an edition of fragments from the Alexandrian poet Callimachus (Paris, 1674). She divided her time between translations (Anacreon and Sappho, 1681; several plays by Plautus and Aristophanes, 1683-1684; Terence, 1688; Plutarch's "Lives" in her husband's translation; "The Iliad", 1699; "The Odyssey", 1708) and the editions of the collection *Ad usum Delphini* (Florus, 1674; Dictys and Dares, 1684, and Aurelius Victor, 1681). She had a certain vigour that her husband lacked; "In intellectual productions common to both" says an epigram used by Boileau, "she is the father." In the notice on Dacier in the "Siècle de Louis XIV" Voltaire declares: "Madame Dacier is one of the prodigies of the century of Louis XIV". However, she was no bluestocking and refused to give her opinion in scholarly debates, agreeing with Sophocles that "silence is the ornament of women." She reared her three children admirably.

But Madame Dacier belongs to the history of French literature and, in a measure, to the history of ideas because of her participation in the dispute about the ancients and moderns. In 1699 Madame Dacier published a translation of "The Iliad" with a preface which was a reply to Homer's critics. It was only in 1713 that Houdart de la Motte, a wit and unpoetic versifier, published a translation of "The Iliad" in verse. The poem was reduced to twelve cantos, all its so-called prolixity was eliminated and it was revised in accordance with eighteenth century taste and made "reasonable and elegant". Madame Dacier re-

futed this attack in "Les causes de la corruption du goût" (Paris, 1714). The dogmatic part of this work consists of an analysis of the "Dialogue on Orators" by Tacitus and Madame Dacier added clever remarks on the influence of climates. La Motte replied humorously and courteously in his "Réflexions sur la critique" (Paris, 1714). In the course of the same year Fénelon, in his letter on the doings of the French Academy, ably and solidly defended the ancients, thus rendering their supporters a signal service. But the quarrel was prolonged, and in 1716 the Jesuit Hardouin published an apology for Homer. It was a new system of interpreting "The Iliad" and Madame Dacier attacked it in "Homère défendu contre l'apologie du P. Hardouin ou suite des causes de la corruption du goût" (Paris, 1716).

PAUL LEJAY.

Dagon, a Philistine deity. It is commonly admitted that the name *Dagon* is a diminutive form, hence a term of endearment, derived from the Semitic root *dāg*, and means, accordingly, "little fish". The name, therefore, indicates a fish-shaped god. This the Bible also suggests when speaking of the Dagon worshipped in the temple of Azotus (I K., v, 1-7): he had face and hands and a portion of his body resembled that of a fish, in accordance with the most probable interpretation of "the stump of Dagon" (verse 5). From the received text of the Septuagint it would seem that he possessed even feet, although Swete's edition gives here a different reading; at any rate, this sentence, in the Greek translation, shows all the appearances of a gloss. With the description found in the Bible coincides that which may be seen on the coins of various Philistine or Phœnician cities, on most of which Dagon is represented as a composite figure, human as to the upper part of the body, fish-like as to the lower. From this it may well be inferred that Dagon was a fish-god, a fact not in the least surprising, as he seems to have been the foremost deity of such maritime cities as Azotus, Gaza (the early sites of which are supposed to be buried under the sand-mounds that run along the sea-shore), Ascalon, and Arvad. In the monuments—also most probably in the popular worship—Dagon is sometimes associated with a female half-fish deity, Dereto or Atargatis, often identified with Astarte.

A few scholars, however, waving aside these evidences, consider Dagon as the god of agriculture. This opinion they rest on the following statement of Philo Byblius: "Dagon, that is, corn" [the Hebrew word for corn is *dāgān*]. "Dagon, after he had discovered corn and the plough, was called Zeus of the plough" (ii, 16). The same writer tells us (in Eusebius, *Præp. Evang.*, i, 6) that, according to an old Phœnician legend, Dagon was one of the four sons born of the marriage of Anu, the lord of heaven, with his sister, the earth. Moreover, on a seal bearing certain symbolic signs, among which is an ear of corn, but not, however, the image of a fish, may be read the name of Baal-Dagon, written in Phœnician characters. It is open to question whether these arguments outweigh those in favour of the other opinion; so much so that the etymology adopted by Philo Byblius might possibly be due to a misapprehension of the name. It should, perhaps, be admitted that, along the Mediterranean shore, a twofold conception and representation of Dagon were developed in the course of time as a result of the presumed twofold derivation of the

name. At any rate, all scholars agree that the name and worship of Dagon were imported from Babylonia.

The Tell-el-Amarna letters (about 1480-1450 B. C.), which have yielded the names of Yamir-Dagan and Dagan-takala, rulers of Ascalon, witness to the antiquity of the Dagon-worship among the inhabitants of Palestine. We learn from the Bible that the deity had temples at Gaza (Judges, xvi, 21, 23) and Azotus (I K., v, 1-7); we may presume that shrines existed likewise in other Philistine cities. The Dagon-worship seems even to have extended beyond the confines of their confederacy. The testimony of the monuments is positive for the Phœnician city of Arvad; moreover, the Book of Josue mentions two towns called Bethdagon, one in the territory of Juda (Jos., xv, 41), and the other on the border of Aser (Jos., xix, 27); Josephus also speaks of a Dagon "beyond Jericho" (Antiq. Jud., XIII, viii, 1; De bell. Jud., I, ii, 3): all these names are earlier than the Israelite conquest, and, unless we derive them from *dāgan*, witness to a wide dissemination of the worship of Dagon throughout Palestine. This worship was kept up, at least in certain Philistine cities, until the last centuries B. C. Such was the case at Azotus; the temple of Dagon that stood there was burned by Jonathan Machabeus (I Mach., x, 84; xi, 4).

Unlike the Baals, who, among the Chanaanites, were essentially local deities, Dagon seems to have been considered by the Philistines as a national god (I Par., x, 10). To him they attributed their success in war; him they thanked by great sacrifices, before him they rejoiced over the capture of Samson (Judges, xvi, 23); into his temple they brought the trophies of their victories, the Ark (I K., v, 1, 2), the armour, and the head of Saul (I K., xxxi, 9, 10; I Par., x, 10). A bronze demi-relievo of Assyro-Phœnician workmanship would also suggest that Dagon played a prominent part in the doctrines concerning death and future life. As to the ritual of his worship, little can be gathered either from the documents or from Scripture. The elaborate arrangements for returning the Ark (I K., v, vi) may have been inspired more by the circumstances than by any ceremonies of the Dagon-worship. We only know from ancient writers that, for religious reasons, most of the Syrian peoples abstained from eating fish, a practice that one is naturally inclined to connect with the worship of a fish-god.

CHARLES L. SOUVAY.

Daguesseau (or D'AGUESSEAU), HENRI-FRANÇOIS, chancellor of France, b. at Limoges, 27 November, 1668; d. at Paris, 5 February, 1751. He belonged to a distinguished family which had produced many able magistrates, and was educated by his father, who was intendant of Languedoc and afterwards a councillor of state. Having been appointed advocate-general of the Parlement of Paris at the age of twenty-two, Daguesseau performed the duties of his office in the most satisfactory manner for ten years, his speeches being models of elegant diction and clear reasoning. In 1700 he was promoted to the office of attorney-general. In this position he re-established order in the courts, reformed the management of the hospitals, prevented and corrected abuses. In 1709 war, famine, and public distress gave him an opportunity to display all his energy, judgment and goodness of heart. He was consulted on the most difficult points of administration and drew up many memorials for the king. Towards the end of the reign of Louis XIV, however, he was threatened with disgrace for refusing to register the Bull "Unigenitus", of which, as he was a strong Gallican, he was a pronounced opponent.

In 1717 the regent, the Duc d'Orléans, appointed Daguesseau chancellor, but before a year had elapsed, the seals were taken from him because he opposed the projects of the notorious John Law. In 1720, after the failure of Law's schemes, he was recalled to his former office. He repaired the mischief done during his retirement and by his firmness and sagacity prevented total bankruptcy. With a view to conciliation he finally consented to the registration of the Bull "Unigenitus". He was again disgraced in 1722, through the influence of Cardinal Dubois, and retired to his estate at Fresnes, where he passed five years. Here the Scriptures, which he read and compared in various languages, and the jurisprudence of his own and other countries were the principal objects of his study; the rest of his time he devoted to philosophy, literature, and gardening. Daguesseau was recalled to office in 1727. Chancellor now for the third time, he revived public respect for law, introduced several important enactments regarding donations, testaments, and succession, and effected a greater uniformity in the execution of the laws throughout the several provinces. In 1750 he resigned his position, the king bestowing upon him a pension of 100,000 francs, which he enjoyed until his death.

During his long career Daguesseau was a man of spotless honesty and absolute devotion to the public interest. He was an upright magistrate, a fine orator and jurist, and a remarkable linguist. He used his extensive knowledge and intellectual acquirements in the cause of religion and morals. Saint-Simon speaks of him thus: "Talent, industry, penetration, universal knowledge, dignity, purity, equity, piety and innocence of life are the foundation of M. d'Aguesseau's character." The greater part of Daguesseau's writings and letters were edited by Pardessus, "Œuvres complètes" (Paris, 1818-1820), 16 vols. 8vo; other letters were edited by M. Rives, "Lettres inédites" (Paris, 1823).

BOULLÉE, *Histoire de la vie et des œuvres du chancelier d'Aguesseau* (Paris, 1835); MONNIER, *Le chancelier d'Aguesseau, sa conduite et ses idées politiques* (Paris, 1860).

JEAN LE BARS.

Dahomey, VICARIATE APOSTOLIC OF, in West Africa, is territorially identical with the French colony of the same name. This colony has a coastline of about 75 miles on the Slave Coast of the Gulf of Guinea, whence it stretches northwards to the French Sudan; it is bounded on the east by the British territory of Lagos and the River Opeara, and on the west by the German territory of Togo and the River Mono. Its area is estimated at about 59,000 square miles, and its total population in 1902 was probably a little less than half a million. The chief exports of the colony are palm kernels and palm-oil. Its indigenous population is of the pure Negro stock, chiefly of the Fon subdivision of the Ewe family. About the year 1728 the territory now known as Dahomey was subject to three native dynasties, one of which at that date conquered the other two and set up its own despotism under the present territorial designation. This despotism, tempered only by the fear inspired by Fetishism (q. v.), of which Dahomey was said to be the last extant stronghold at the end of the nineteenth century, ended with the capture and exile of King Behanzim by a French military expedition in 1892.

The Faith was first preached in Dahomey in the year 1660, when certain French residents introduced Franciscan missionaries. Against this Catholic enterprise the English adventurers successfully combined with native priests of Fetishism. In 1674 Father Gonsalvez, a Dominican, with two companions, was poisoned; an Augustinian, who visited the coast in 1699, escaped death by flight. No further attempt to plant the Faith in Dahomey is recorded until 1860, when Fathers Borghero and Fernandez, of the then newly founded Lyons Society of African Missions, ar-

rived. Their institute has carried on the work ever since. The French Government, in 1864, obtained in behalf of the missionaries a large territorial concession at Porto Novo, where a flourishing station was soon established. The mission of Agwe, now one of the most flourishing in the vicariate, began its existence in 1874.

The first erection of a Vicariate Apostolic of Dahomey was in 1860, when its jurisdiction was defined to include all the country between the Rivers Niger and Volta. In 1870, however, the title of this vicariate was changed to "The Benin Coasts"; and in 1882 it was divided, the region west of the River Ocpara being then erected into the Prefecture Apostolic of Dahomey, from which, again, the German territory of Togo was ecclesiastically separated in 1892, and the adjacent British possessions in 1894. By decree dated 22 April, 1901, this Prefecture of Dahomey was erected into the present Vicariate Apostolic of that name, which is thus seen to differ territorially from that erected in 1860.

The residence of the vicar Apostolic is at the coast town of Whydah, formerly the native capital and a notorious centre of Dahomeyan Fetishism. "Missions Catholiques" (1907), the official triennial handbook of the Propaganda, gives the following statistics of Dahomey: Total Catholic population, 8900; missionary stations, 6; churches with resident pastor, 4; chapels, 11; total number of priests, 32; catechists, 15; houses of religious women (Sisters of the Queen of the Apostles), 4, with an aggregate of 20 religious; schools for boys, 13, with 1330 pupils; schools for girls, 4, with 480 pupils.

Dalalle, HENRY. See NATAL.

Dalberg, ADOLPHUS VON, Prince-Abbot of Fulda and founder of the university in the same city, b. 29 May, 1678; d. 3 November, 1737, at Hammelburg on the river Saale in Lower Franconia. After holding the office of provost at Zelle in Hanover for some years he was elected Prince-Abbot of the Benedictine monastery of Fulda in 1724. Though he was not a bishop, Dalberg had quasi-episcopal jurisdiction over the territory belonging to the abbey and held a diocesan synod in 1729. This privilege of quasi-episcopal jurisdiction was granted to the abbots of Fulda by Pope Zachary in 751. Dalberg spared no pains to improve the Catholic educational facilities of Fulda. Its once famous school, which had suffered severely during the religious upheaval of the sixteenth century, had regained some of its ancient prestige by the united efforts of the Jesuits and Benedictines. Dalberg hoped to restore in all its splendour the ancient seat of learning which had made Fulda world-renowned during the Middle Ages. With this end in view he founded a university at Fulda which came to be known after his own name as the Alma Adolphina. The faculties of philosophy and theology he formed by uniting the two existing schools of the Jesuits and the Benedictines; for the new faculties of jurisprudence and medicine he engaged other professors. Pope Clement XII granted the charter of foundation on 1 July, 1732, and Emperor Charles VI, the charter of confirmation on 12 March, 1733. The solemn inauguration of the university took place on 19 September, 1733. The Adolphina was, however, not destined to be of long duration. After the suppression of the Jesuit Order by Pope Clement XIV in 1773 the university came entirely into the hands of the Benedictines, who were finally obliged to discontinue it in 1805, in consequence of the secularization of the Benedictine monastery in 1802.

D'Alembert, JEAN LE ROND. See ENCYCLOPÉDISTES.

Dalgairns, JOHN DOBREE (in religion FATHER BERNARD), b. in the island of Guernsey, 21 Oct., 1818; d. 6 April, 1876, at St. George's Retreat, Burgess Hill, near Brighton, England. He matriculated at Exeter college, Oxford, 1836, and took a second class in *literis humanioribus*, 1839. Already an ardent follower of Newman, he had written (1838) to the Paris "Univers" a letter signed "jeune membre de l'Université", on the Catholic movement then spreading in the English Church, which elicited a correspondence with Father Dominic the Passionist. In 1842 he joined Newman at Littlemore; while there he contributed several articles to the "British Critic" and wrote the Lives of St. Stephen Harding, St. Gilbert, St. Helier, St. Aelred, and others for the series of early English saints then being edited by Newman. The grasp of medieval history displayed in these lives, and their picturesque setting evoked high praise even from such a strong Protestant as Dean Milman. Dalgairns's life, work, and studies had drawn him ever closer to the Church, and in September, 1845, he was received into it by his former correspondent, Father Dominic. He then repaired to the Abbé Jovain, canon of Langres, whose acquaintance he had made in 1841 when the abbé was on a visit to Oxford; in December, 1846, he was ordained priest at Langres. A worthless French translation of Newman's "Essay on Development" was described by Dalgairns in the "Univers", 10 Jan., 1847, as "un amas inintelligible de paroles sans idées, et dans lequel en plusieurs endroits le traducteur avait donné une apparence d'hérésie aux phrases de l'auteur", words strangely prophetic of the use made by certain "Modernist" writers of the same work.

At Easter, 1847, he joined Newman in Rome and entered the new English Oratorian novitiate at Santa Croce. As an Oratorian he was successively at Maryvale, St. Wilfrid's, Staffordshire, King William Street, London (1849), Birmingham (1853), and South Kensington, London (1856), where he was elected superior on Father Faber's death, September, 1863. As a preacher he was second only to Faber and as a confessor his knowledge of languages attracted a large circle of penitents, among whom was Queen Marie-Amélie, wife of Louis Philippe. In 1869 he became a member of the Metaphysical Society which was then being formed. With Manning and Ward, Dalgairns had to defend Catholicism against scientific agnostics like Huxley and Tyndall, literary agnostics such as Morley and Leslie Stephen, Thompson the Anglican Archbishop of York, the Unitarian James Martineau, and others of every shade of creed or of no creed. Speaking of these debates Thompson says, "he was more struck by the metaphysical ability of Father Dalgairns and Mr. James Martineau than any of the other debaters". Hutton, then editor of "The Spectator," says of Dalgairns and his coreligionists, "there was in their countenance a blending of genuine humility and genuine thankfulness for the authority on which they had anchored themselves and a sense of the redundancy of their provisions for the spiritual life, of which almost all the other members seemed to feel they had but a bare and scanty pasturage". His knowledge of Christian philosophy, and his acquaintance with the writings of German scientists enabled him to meet Huxley successfully on his own grounds. But the attendance at the meetings of the Society broke down Dalgairns's health. He was struck with

paralysis, and he died after a year's lingering mental illness. Hutton describes him as "a man of singular sweetness and openness of character with something of a French type of playfulness of expression". His best known works are "The Devotion to the Sacred Heart of Jesus" (London, 1853); "The Holy Communion" (Dublin, 1861); "The German Mystics of the Fourteenth Century" (London, 1858).

Dalila (Heb. *Delilah*). Samson, sometime after his exploit at Gaza (Judges, xvi, 1-3), "loved a woman, who dwelt in the valley of Sorec, and she was called Dalila" (verse 4). The village of Sorec was known to Eusebius and to St. Jerome (Onomast.), and rightly placed north of Eleutheropolis near Saraa, the home of Samson. It is now called Khan Sûreq. The valley of that name, mentioned in the text, was probably a little lateral valley of the great Wadi Serar, or the Wadi Serar itself (Lagrange, "Le livre des Juges", 247). The railway from Jaffa to Jerusalem passes through this region a little to the west of the station of Deir Aban. The district was on the borderline between the possessions of the Israelites and those of their principal enemies and oppressors at this period, the Philistines. Sorec may have been inhabited by the latter; and although it is not stated to which people Dalila belonged, the story told in this sixteenth chapter of Judges of her relations with the princes of the Philistines, makes it very unlikely that she was an Israelite. It is not probable either that she became the wife of Samson. The expression above quoted with which Scripture introduces the narrative of her relations with him, and the facility with which the Philistines were brought into her house, not to speak of her readiness to betray the Israelite hero, suggest rather that she was a harlot, an opinion that is now more common among commentators.

The Philistines, thinking that the strength which had made Samson familiar to them must be due to some magical charm, seek to find out what it is. Their princes, probably the five mentioned in Judges, iii, 3, and elsewhere, coming to Dalila, to whose house Samson often resorted—if he did not live there—say: "Deceive him, and learn of him wherein his great strength lieth, and how we may be able to overcome him, to bind and afflict him: which if thou shalt do, we will give thee every one of us eleven hundred pieces of silver" (verse 5). This sum must have appeared enormous to Dalila. She undertakes to discover the secret of Samson's strength and the means to overcome it. Four different times she asks him to tell her his secret, having each time a number of Philistines on hand to seize him if she can cajole him into betraying it. Samson at first indulges his humour in answers which allow him to laugh at her attempts to bind him; but finally her importunity prevails, and he tells her of his consecration as a Nazarite and of the necessity of keeping his long hair, the mark of that consecration. Dalila then causes this hair to be cut off while Samson sleeps, and hands him over to his enemies who bring him a prisoner to Gaza.

Dallas, DIOCESE OF (DALLASCENSIS), created 1890, comprises 108 counties in the northern and north-western portion of the State of Texas, U. S. A., and El Paso County in the western section, an area of 118,000 square miles. The city of Dallas has a population of 95,000 and stands in the centre of a circle within whose radius of fifty miles is included nearly one-half of the population of Texas. It was settled chiefly by people from Kentucky, Illinois, Indiana, with a sprinkling of foreigners and a considerable number of negroes. It is an important distributing centre, rich

in mineral resources and products of the soil (chiefly cotton). As late as 1868 there was only one Catholic family resident there whose members, with several scattering settlers, were attended as a mission station from St. Paul's, Pollin County, by Father Joseph Martinère, later a domestic prelate and vicar-general of the diocese. His visits often necessitated journeys over hundreds of miles through swamp and forest. In 1892 the Catholic population of the diocese had grown to 15,000 with 30 priests ministering to them.

The first bishop, THOMAS FRANCIS BRENNAN, was born October, 1853, in the County Tipperary, Ireland, and ordained priest at Brixen in the Tyrol, 4 July, 1880. He was consecrated at Erie, Pennsylvania, 5 April, 1891. Two years later (1 February, 1893) he was transferred to the titular See of Utiila and made coadjutor of the Bishop of St. John's, Newfoundland. He was removed December, 1904, and called to Rome,

URSULINE ACADEMY, DALLAS, TEXAS

where he resides (1908), having been transferred, 7 October, 1905, to the titular See of Cæsarea in Mauretania.

As his successor the Rev. EDWARD JOSEPH DUNNE, rector of the church of All Saints, Chicago, was chosen. He was born in the County Tipperary, Ireland, 23 April, 1848, emigrated to the United States with his parents when a child, and was ordained priest 29 June, 1871, in Baltimore. His consecration took place in Chicago, 30 November, 1893. He foresaw from the first the religious possibilities assured by the location and resources of Dallas, also by the enterprise of the people and by the climate. To his energy, administrative abilities, and zeal is owing the new cathedral, admittedly the finest in the South-Western States. The Vincentian College, St. Paul's Sanitarium, the Ursuline Academy, novitiate and provincial house (1907), the cathedral parochial school, St. Patrick's church, the industrial school for coloured children are other monuments of religion erected within a short space of time. Fort Worth, Sherman, El Paso, Denison, Munster, Weatherford, Marshall, and several other cities have substantial and even beautiful churches and religious institutions, educational and charitable.

Religious communities represented in the diocese are: *Men.*—Benedictine Fathers, five charges; Jesuits, six; Oblates; and Vincentians. *Women.*—School Sisters of Notre Dame; Sisters of Charity (Emmitsburg); Sisters of Charity of the Incarnate Word; Sisters of the Holy Cross; Sisters of Loretto; Sisters of St. Mary; Sisters of Divine Providence; White Benedictine Sisters of the Congregation of Mt. Olive; Sisters of St. Rose of Lima; Ursuline Nuns; Sisters of Mercy.

Statistics of the diocese (1908) give 83 priests (50 diocesan and 33 regulars); 52 churches with resident pastors, 51 with missions, 75 stations, 12 chapels; 12 academies for girls, 24 parochial schools with 3180

pupils, 14 ecclesiastical students, 1 industrial school (50 pupils); 1 orphan asylum (83 inmates); 6 hospitals; total Catholic population (estimated) 60,000.

SISTER M. AUGUSTINE ENRIGHT.

Dalley, WILLIAM BEDE, lawyer and statesman, b. in Sydney, New South Wales, 1831; d. there 28 October, 1888. He was educated in part at St. Mary's College, Sydney, and was called to the Bar in 1856. In 1857 he became a representative of Sydney in the first parliament elected under responsible government in New South Wales; was solicitor-general (1858-9), and attorney-general (1875-7, 1883-5). After the fall of Khartoum (1885) Dalley (then acting-premier) dispatched a contingent of nine hundred men to the Sudan to aid the imperial troops. Dalley, who had declined a knighthood and the office of Chief Justice of New South Wales, was in 1887 appointed a member of the Privy Council—the first Australian on whom that honour was conferred. He was regarded as the foremost lay representative and champion of the Catholic body, was noted for his parliamentary and forensic eloquence, and was endowed with considerable literary ability. Many of his newspaper articles and sketches were reprinted in 1866 in Barton's "Poets and Prose Writers of New South Wales".

Dalmatia, a part of the Kingdom of Croatia according to a convention entered into between Croatia and Hungary. It stretches along the eastern shore of the Adriatic Sea from Croatia on the north to Montenegro in the south and is bounded by Bosnia and Herzegovina on the east. The Velebit mountains separate it from Croatia, the highest peaks of which are Sveto brdo (5774 ft.) or Holy Mountain, the dwelling of fairies according to popular legend, Višeruna (5350 ft.) and Vaganski vrh (5563 ft.). The eastern frontier lines are formed by the Dinic Alps, running parallel to the sea, highest elevation being 5940 ft. The highest peak in Dalmatia is Mount Orjen (6225 ft.). The coast is steep and rocky and lined by many islands: Pago, Rab, and Krk on the northern Croatian coast; the first rises to a height of 885 ft., the last to 1338 ft. Islands of lesser importance are Cres, Lošinj, Osor, Uljan. On the south lies Brač with the mountain of St. Vid (2574 ft.), Hvar with St. Nicholas (2078 ft.), and Korčula (1879 ft.); lastly Lastovo, Mljet, and Vis. The principal natural harbours are: Zadar, Trogir, Sibenik, Gruž, Pelješac, Kotor, Hvar, Vis, and Mljet. Dalmatia is poor in water, though the rainfalls make temporary lakes. The only rivers of importance are: Krka (Titius) and Cetina (Tilurus) flowing from the Dinara mountains; the former has interesting falls and wild scenery. Neretva (Naro) belongs chiefly to Herzegovina. The climate is warm and healthy. The temperature varies between 57° F. at Zadar, 62° at Hvar, and 63° at Dubrovnik. The prevailing wind is the sirocco or south-east, but the terrible Boora or north-east, may blow at any season of the year. The land is fit chiefly for pasture. Barley, wheat, maize, oats, rye, millet, beeroot, hemp, and potatoes are raised in small quantities. Asses and mules are used as beasts of burden. Mines of coal, asphalt, lignite, salt are under development. Among the industries are the distillation of liquors, the manufacture of oil, tile-burning, the raising of timber, wine-growing, and ship-building. Other products of the country are cheese, honey, silk, and sardines. Railroads are nearly unknown in Dalmatia, although there is urgent need of them. Commerce is further hampered by a bureaucratic administration.

Coast navigation is gradually taking on greater proportions and extending through the Adriatic and Mediterranean Seas. The capital of Dalmatia is Zadar, where the Diet meets when convoked by the king. It is composed of forty-three members, and is represented in Vienna by eleven delegates elected by direct vote. The archbishop is a member of the Diet. The head of the Royal Dalmatian Government is a governor appointed by the king. Dalmatia is the most neglected country under Austrian rule. The population consists of Croats, who are in the majority, Serbs, Italians, and Albanians (about 10 per cent). Croatian is now the official language.

Religion and Schools.—The general educational institutions are public schools (with 5 classes), while in every village or hamlet there is an elementary school. There are also middle schools or gymnasia (with 8 classes), colleges and private institutions, a central seminary for priests at Zadar, and a *petit séminaire* at Dubrovnik. There are also a naval and an agricultural school. The majority of the inhabitants are Catholics. There are also Orthodox Greeks and a few Jews. There are many magnificent churches and ecclesiastical buildings which date back many centuries to the flourishing times of the Church. The archaeological museums at Bihac and Knin contain much historical material illustrating early Christianity and the period of the oldest Croatian rulers. There is a literary society, "Matica Dalmatinska", which publishes valuable books every year. The "Matica Hrvatska", at Zagreb, and the St. Jerome Society do the same for popular books. The Catholic press is represented by weeklies and periodicals such as "Academia Paleoslovenica", at Krk (Veglia). Throughout Dalmatia, including the adjoining islands, as well as on the Croatian coast, the Old Croatian language called Glagolitic is still in use at church services. This comes down from the times of Sts. Cyril and Methodius also. The right to use the Glagolitic language at Mass with the Roman Rite has prevailed for many centuries in all the south-western Balkan countries, and has been sanctioned by long practice and by many popes. The religious orders are well represented in Dalmatia by the Dominicans, Franciscans, Jesuits, and others, as well as by many communities of religious women. In the administration of church affairs the civil authorities accept the principles of canon law. The Concordat was abolished by the laws of 1874, and a civil marriage law was introduced in 1867. The irremovable rectors must contribute to the expenses of worship according to the provisions of the law. The State administers the church property and lays down the conditions for establishing new parishes. The archbishops, bishops, and canons are nominated by the king, and invested by the pope. The ecclesiastical province of Dalmatia was erected by Leo XII in 1828, by the Bull "Locum beati Petri", when the two Archbishoprics of Spljet and Dubrovnik were suppressed, and Zadar was made the see of the archbishop. The province comprises five bishoprics: Sibenik, Spljet, Hvar, Dubrovnik, and Kotor. The Bishopric of Krk was joined by Pope Pius VIII to the province of Gorizia. There are 527,500 Catholics in Dalmatia and 80,900 Greek schismatics with two bishoprics at Zadar and in Kotor.

History.—The meaning of the name *Dalmatia* or *Delmatia*, which is of Arnaic origin, is "land of shepherds" (*delminium*—pasture for sheep). The earliest mention of the name occurs at the time of the fall of the southern Illyric kingdom, 167 b. c. The people who dwelt near the rivers Neretva and Krka formed a league against the advancing Romans. Their principal town was Delminium, on the present plain of Sinj, or possibly Duvno in Herzegovina, and after that city the tribes called themselves Delmati, or Dalmati, 170 b. c. The islands were peopled by the Greeks; but the mainland by the Illyrians. The

Dalmatian league soon came into conflict with the Romans. In 153 B. C. the Roman Senate sent envoys to negotiate with the Dalmatians, but they returned complaining that they were received in an unfriendly manner, and that they would have been killed if they had not secretly escaped. During the next year war broke out. Finally Publius Cornelius Scipio Nasica conquered the land and demolished the city of Delminium. The Romans' success was incomplete; they must subdue the neighbouring Illyrians and Celts if they wished to retain the whole of Dalmatia. The two new consuls had to march from Gaul to Illyrium and occupy the city of Segestica, now Sisak, thence to invade Dalmatia and capture the city of Salona. The consul Metellus carried out this plan, defeated the enemy in 118 B. C., and celebrated a triumph at Rome, receiving the title *Dalmaticus* (117). The Roman Senate now created the large province of Illyricum, extending southward to the River Drim, northward as far as the Julian Alps and the River Sava. The principal strategic point and fortress in this new province was the city of Salona (Solin). But the Dalmatians did not patiently bear the Roman yoke and tribute. Many uprisings broke out until the time of Octavian, who came to Illyricum in 40 B. C., and subjugated all the tribes; he made the rivers Drava and Danube the northern boundaries of the Roman possessions and sailed on them in his triremes. Later, when emperor, he broke the power of the Dalmatian and Pannonian tribes who tried again to throw off the Roman rule. The insurrection started in the year 6 B. C. and ended in A. D. 9. The power of the rebels was crushed and their country devastated. Since the Punic wars Rome had not been in as critical a situation as during this insurrection suppressed by Tiberius.

From this date begins the Romanizing of Illyricum. This province now received the name of Dalmatia and comprised all the land south of the River Sava, within which were many famous watering places, such as *Aquæ Jassæ* (the *Varaždinske* topline of to-day), *Aquæ Balissæ* (*Lipik* in Croatia), and much mineral wealth exploited by them, as appears from their remains to-day. The Roman rule in Dalmatia ended with the entry of Christianity and the invasion of the northern nations. The Romans persecuted the Christians in Dalmatia and Pannonia, but they flourished nevertheless. St. Paul sent his disciple Titus to Dalmatia, who founded the first Christian see in the city of Salona and consecrated it with his blood A. D. 65. St. Peter sent St. Domnius. Salona became the centre from which Christianity spread. In Pannonia St. Andronicus founded the See of Syrmium (*Mitrovica*) and later those of Siscia and Mursia. The cruel persecution under Diocletian, who was a Dalmatian by birth, left numerous traces in Old Dalmatia and Pannonia. St. Quirinus, Bishop of Siscia, died a martyr A. D. 303. St. Jerome was born in Strido, a city on the border of Pannonia and Dalmatia. After the fall of the Western Empire in 476, peace never came to Dalmatia. She successively fell into the power of Odoacer, Theodoric, and Justinian. The Goths were Arians, but they did not persecute the Catholics. Two provincial church councils were held at Salona—530 and 532. The Western Empire was succeeded by the Ostro-Goths, after whose fall in 555 Dalmatia came under Byzantine power. In A. D. 598 the khan of the Avars advanced from Syrmium through Bosnia, devastated Dalmatia, and demolished forty cities. In A. D. 600 appeared the Slavs, who entered Dalmatia. Pope Gregory the Great wrote to Maxim, Archbishop of Salona: "*Et de Slavorum gente, quæ vobis valde imminet, affligor vehementer et conturbor. Affligor in his, quæ iam in vobis patior; conturbor quia per Istriæ aditum iam Italiani intrare cœperunt*".

In the seventh century Dalmatia received the

dominant element of its present population, the Croats. In the ninth century we find the Croatian influence at its height, and the Croatian princes recognized as Kings of Dalmatia. At the time of Thomislav there were held two councils at Spljet for the whole of Dalmatia and Croatia. The legates of the Holy See, John, Bishop of Ancona and Leo, Bishop of Præneste, were present. Pope John X wrote a letter to Thomislav, King of the Croats and all the people of Dalmatia. In this he reminded the king of the Anglo-Saxons, to whom Gregory I sent not only Christianity, but also culture and education. The council met in 925 to decide the question of the primacy of the Sees of Nin and Spljet; to re-establish rules of discipline, to settle administrative questions arising from disputes about the boundaries of dioceses, and finally to show the reason for using the Old Croatian

CATHEDRAL, TRAU, DALMATIA (XIII Century)

language at Mass. On this occasion Bishop Grgur Ninski energetically defended the right of the Croats to use that language. Pope Leo VI decreed by his Bull that the primate of Dalmatia and Croatia should be the Archbishop of Spljet. All the decisions of the councils were sent to Rome for confirmation. The See of Nin was suppressed in 928, when the See of Spljet renounced the jurisdiction of the Patriarch of Constantinople and submitted to the Holy See. At the next council, held 1059–60 at Spljet, permission was given to use the Greek and Latin languages at Mass. The use of the old Croatian language was often forbidden, but never abolished. During the following centuries the history of Dalmatia is closely connected with that of Croatia. In the course of time, however, Venice extended her authority over Dalmatia. Venice never gained the affection of the Dalmatian people. By the treaty of Campo Formio in 1797 she lost Dalmatia, which came under Austrian rule, under which it has continued to the present time with the exception of Napoleonic times (1805–1814). The feeling towards Austria was not friendly, as the outbreak in 1869 shows. This was put down by force of arms in February of the next year. Influential patriots, the members of the home Diet, and the dele-

gates in the Reichstag at Vienna are working to carry out the provisions of the fundamental law requiring the union of Dalmatia with the mother-country, Croatia, which the king promised in a solemn oath at his coronation.

The literature of Dalmatia from its beginnings in the eleventh century was inspired by the Catholic Church and remained so until the rise of Humanism. Numerous private and public libraries existed, containing thousands of volumes (1520). The art of printing found its way to Dalmatia as early as the end of the fifteenth century. The first Humanists such as Menčetić, Bobali, Pucić, Gučetić, Marulić wrote in Latin and Croatian and produced many varieties of literature: the drama, lyrics, epics, bucolics, comedies, religious, and gipsy poetry. Dalmatia has in fact been called the cradle of Croatian literature. The city of Dubrovnik was spoken of as another Athens. Architecture flourished greatly, as is proved by the existing monuments.

M. D. KRMPOTIĆ.

Dalmatic.—PRESENT USAGE.—The dalmatic is the outer liturgical vestment of the deacon. It is worn at Mass and at solemn processions and benedictions, except when these processions and benedictions have a penitential character, as in Advent, during the period from Septuagesima Sunday to Easter, at the blessing of candles and the procession on Candlemas Day, etc.; this is because the dalmatic has been regarded from the earliest times as a festal garment. The dalmatic is also worn by bishops under the chasuble at solemn pontifical Mass, but not at private Masses. Priests are not permitted to wear the dalmatic under the chasuble unless a special papal privilege to this effect has been granted, and then only on those days and occasions for which the permission has been given. At Rome, and throughout Italy, the dalmatic is a robe with wide sleeves; it reaches to the knees, is closed in front, and is open on the sides as far as the shoulder. Outside of Italy it is customary to slit the under side of the sleeves so that the dalmatic becomes a mantle like a scapular with an opening for the head and two square pieces of the material falling from the shoulder over the upper arm. The distinctive ornamentation of the vestment consists of two vertical stripes running from the shoulder to the hem; according to Roman usage these stripes are narrow and united at the bottom by two narrow cross-stripes. Outside of Rome the vertical stripes are quite broad and the cross-piece is on the upper part of the garment. There are no regulations as to the material of the dalmatic; it is generally made of silk corresponding to that of the chasuble of the priest, with which it must agree in colour, as the ordinances concerning liturgical colours include the dalmatic. As the dalmatic is the distinguishing outer vestment of the deacon, he is clothed with it at his ordination by the bishop, who at the same time says: "May the Lord clothe thee with the garment of salvation and with the vesture of praise, and may he cover thee with the dalmatic of righteousness forever".

HISTORY.—According to the "*Liber Pontificalis*" the dalmatic was introduced by Pope Sylvester I

(314-35). It is certain that as early as the first half of the fourth century its use was customary at Rome; then, as to-day, the deacons wore it as an outer vestment, and the pope put it on under the chasuble. In early Roman practice bishops other than the pope and deacons other than Roman were not permitted to wear the vestment without the express or tacit permission of the pope—such permission, for instance, as Pope Symmachus (498-514) gave to the deacons of St. Cæsarius of Arles. The Bishops of Milan most probably wore the dalmatic as early as the fifth century; this is shown by a mosaic of Sts. Ambrosius and Maternus in the chapel of San Satiro near the church of San Ambrogio; mosaics in the church of San Vitale at Ravenna show that it was worn by the archbishops of Ravenna and their deacons at least as early as the sixth century. About the ninth century the dalmatic was adopted almost universally for bishops and deacons in Western Europe, even including Spain and Gaul, where instead of a dalmatic deacons had worn a tunic called an alb (see ALB). About the tenth century the Roman cardinal-priests were granted the privilege of wearing the dalmatic, at which time also priests outside of Rome, especially abbots, received the same as a mark of distinction. Thus, John XIII in 970 granted the Abbot of St. Vincentius at Metz the right to wear the dalmatic. Benedict VII in 975 granted this privilege to the cardinal-priests of the cathedral of Trier, but limited it to occasions when they assisted the archbishop at a pontifical Mass or celebrated the solemn high Mass in the cathedral as his representatives. According to Roman usage the dalmatic was only worn by prelates at the pontifical Mass, and never under the cope on other occasions, as was often the case in Germany in the later Middle Ages.

The custom of leaving off the dalmatic on penitential days originated, like the vestment itself, in Rome, whence it gradually spread over the rest of Western Europe. In the twelfth century this usage was universal. On such days the deacons either wore no vestment over the alb or put on, instead of the dalmatic, the so-called *planetia plicata*, a dark-coloured chasuble folded in a particular manner. An exception was made in the penitential season for Maundy Thursday on which it had been the custom from ancient times, principally on account of the consecration of the holy oils, to use the vestments appropriate to feast days. In early times the dalmatic was seldom used by deacons at Masses for the dead, but in the latter part of the Middle Ages it was universally worn during solemn requiem Masses. At an early date it was customary at Rome to confer the dalmatic on a deacon at ordination; the usage is recognized in the "Eighth Ordo" (eighth century) and the "Ninth Ordo" (ninth century) of Mabillon. In the rest of Western Europe the custom took root very slowly, and it did not become universal until towards the end of the Middle Ages. The first mediaeval liturgist to mention it was Sicard of Cremona (c. 1200), from whose language it is evident that the ceremony was not everywhere prevalent. A prayer at the bestowal of the dalmatic was not customary until a later period.

SHAPE AND MATERIAL IN EARLIER AGES.—The original form of the vestment is well shown by the remains of the pre-Carolingian period, especially by the mosaics in San Satiro at Milan (fifth century), in San Vitale at Ravenna (sixth century), and in San Venanzo and Sant' Agnese at Rome (seventh century); also in various frescoes, such as the picture of the four holy bishops in the church of San Callisto at Rome. According to these representations it was a long, wide tunic with very large sleeves and reached to the feet. In the above-mentioned pictorial remains the width of the sleeves equalled the half or at least the third of the length of the vestment. Up to the twelfth century the Italian representations show no change in its

form. After this, in the Italian remains, the vestment is shorter and the sleeves narrower although the traces of the change are at first only here and there noticeable. As early as the ninth century the shortening of the vestment and the narrowing of the sleeves had begun in Northern countries, but up to the twelfth century no important modification had taken place. In the thirteenth century the length of the dalmatic was still about 51–55 inches. In Italy this measurement was maintained during the fourteenth century; in the sixteenth century the dalmatic, even in Italy, was usually only about 47½ inches long. In the seventeenth century its length everywhere was only a little more than 43½ inches; in the eighteenth century it was only 39½ inches, and at times about 35½ inches. The shortening of the vestment could hardly go further; and, as its length decreased, the sleeves became correspondingly narrower. To facilitate the putting on of the dalmatic slits were made in the sides of the vestment in the pre-Carlovigian era, and in the twelfth and thirteenth centuries regularly shaped openings were often substituted for the slits. In the latter part of the Middle Ages, especially in the fifteenth century, the sides were very commonly opened as far as the sleeves, unless the dalmatic was widened below by the insertion of a gore. Now and then, in the fifteenth century, the sleeves appear to have been opened for the sake of convenience, but this custom was not general until the sixteenth and seventeenth centuries and then it was not observed in Italy, where, in accordance with the Roman usage, the sleeves were always closed.

Originally the dalmatic was made of linen or wool, but when silk became more common and less expensive, the dalmatic was also made of silk. From about the twelfth century, judging from the inventories, the vestment seems to have been made almost altogether of silk, although up to modern times there were also dalmatics made of fine woollen material. Until after the tenth century the dalmatic was always white. From this time on coloured dalmatics are more often found, especially outside of Italy, in countries where old traditions were not so firmly rooted. Coloured dalmatics were the rule when, about 1200, it was determined what colours should be recognized as liturgical and in consequence their use was definitely regulated. As soon as certain colours were prescribed for the chasuble it must have seemed only proper to employ the same for the outer vestment of the deacon. The ornamentation of the dalmatic at first consisted of two narrow stripes, called *clavi*, which went in a straight line down the front and back, and of a narrow band on the hem of the sleeves. In the beginning the stripes were more purple than red in shade. In the old representations fringe is found on the dalmatic as early as the seventh century; at times it was placed on the sleeves, at other times along the openings on the sides. About the ninth century the curious custom arose of setting tufts of red fringe on the *clavi* and on the bands of the sleeves; this usage was kept up until the thirteenth century, but it was more common in Northern countries than in Italy. In the later medieval period there was great diversity in the ornamentation of the dalmatic, and very often it received no ornamentation at all. In Italy it was customary to set a costly, and often richly embroidered, band (*aurifrisium*, *parura*, *fimbria*) above the lower hem on the back and front of the vestment and also above the sleeves; at times narrow vertical bands were added to this adornment. In France and Germany the preference was to ornament the two sides of the vestment with broad and elegantly embroidered bands which were united on the breast and back by cross-bands. Occasionally the dalmatic was entirely covered with embroidered figures. A fine specimen of such decoration is preserved in the imperial treasury at Vienna. This dalmatic is completely covered with a costly ornamenta-

tion consisting of human figures very artistically executed in fifteenth-century Burgundian embroidery and was one of the rich Mass-vestments of the Order of the Golden Fleece.

ORIGIN AND SYMBOLISM.—The dalmatic was taken from a garment of the same name, which originated, to judge from the designation, in Dalmatia, and which came into common use at Rome probably in the course of the second century. But it was only the garment as such, and not the ornamental bands, that Rome imported, for the *clavi* were an old Roman adornment of the tunic. The secular dalmatic is often mentioned by writers and is frequently seen in the pictorial remains of the later imperial epoch, e. g. in the so-called consular diptychs. It was part of the clothing of the higher classes; consequently it is not surprising that it was taken into ecclesiastical use and afterwards became a liturgical vestment. The earliest symbolical interpretations of the dalmatic occur at the beginning of the ninth century, in the writings of Rabanus (Hrabanus) Maurus and Amalarius of Metz. On account of the cruciform shape and the red ornamental stripes, Rabanus Maurus regarded it as symbolical of the sufferings of Christ and said that the vestment admonished the servant of the altar to offer himself as an acceptable sacrifice to God. Amalarius saw in the white colour a symbol of purity of soul, and in the red stripes the emblem of love for one's neighbour. What in later times was said of the symbolism of the dalmatic is hardly more than a repetition of the words of Rabanus and Amalarius.

In the Oriental rites deacons do not wear a dalmatic; while instead of the chasuble the bishops wear an outer vestment called the *saccòs*, which is similar to the dalmatic. The *saccòs* came into use in the eleventh century.

Dalmatic in England.—The English inventories frequently give the dalmatic the same name as that of the wearer: thus (1539. Ludlow Priory. Salop.): "A chasabull and ij decons of whyte nedell work for lent." According to the old English Consuetudinary of Sarum (Salisbury) (ch. xvi) the acolytes, thurifers, etc. of the great cathedrals and minsters wore dalmatics in their ministrations. At York Minster they had sets of four tunicles *pro thuribulariis et choristis* (for the thurifers and chanters) in each of the four colours, white, red, blue, and green (York Fabric Rolls, pp. 228, 233–4). The dalmatic is still worn by the sovereigns of England at their coronation as a supertunic, surcoat, or *colodium*. (For the use of the dalmatic in England consult Rock, "Ages of Faith".)

JOSEPH BRAUN.

Dalton, JOHN, Irish author and translator from Spanish and German, b. in 1814; d. at Maddermarket, Norwich, 15 February, 1874. He spent his early years at Coventry, England, and was educated at Sedgley Park School. He then proceeded to Oscott College, where he was ordained priest in 1837. After serving some time on the mission at Northampton (where he established large schools), he laboured at Norwich for three years, and subsequently built a handsome church at Lynn. During his residence in Lynn he published his best-known book, an English translation of "The Life of St. Teresa, written by herself", showing a perfect mastery of the Spanish language. Father Dalton made an exhaustive study of the life and works of St. Teresa, and caused her writings to

become generally known to English readers. On the erection of the Diocese of Northampton, in 1854, he was made a member of the chapter, and lived many years at Bishop's House in that city. In order to acquire a first-hand acquaintance with the Spanish literature pertaining to the life of the foundress of the Discalced Carmelites, he spent nine months during the years 1858-59 at the English College, Valladolid. On his return to England he settled at St. John's, Maddermarket, Norwich, where he ended his days. Canon Dalton is described by contemporary writers as most amiable, zealous, and charitable, and a favourite with all creeds and classes. Among his numerous works translated from the Spanish are the following: "Life of St. Teresa" (London, 1851); "The Interior Castle, or the Mansions" (London, 1852-53); "The Way of Perfection" (London, 1852); "The Letters of St. Teresa" (London, 1853); "The Book of the Foundations" (London, 1853), etc. He also published translations from Latin and German, including "The Life of Cardinal Ximenes" from the German of Bishop Von Hefele (London, 1860).

W. H. GRATTAN-FLOOD.

Damão (DAMAU, DAMAUN), DIOCESE OF, suffragan to Goa, and situated in Portuguese India and the British Government of Bombay, was erected by the Bull "Humanæ Salutis" of Leo XIII, 1 September, 1886, which confirmed the concordat then entered into between the Holy See and Dom Luis I, King of Portugal. This concordat effected a settlement of the opposing claims to jurisdiction in India of the Metropolitan of Goa, on the one part, and the Sacred Congregation of Propaganda, on the other (see PAD-ROADO). A pontifical decree, dated 14 March, 1887, confirmed the nomination by the King of Portugal of Dom Antonio Pedro da Costa to be first Bishop of Damão with the titular Archbishopric of Cranganor, and that prelate took possession of his see 19 June, 1887. The church of Bom Jesus, at Damão, then became the cathedral of the new diocese.

The city of Damão, on the Arabian Sea, at the mouth of the Damão River, about 100 miles north of Bombay, formerly belonged to the Mohammedan State of Guzerat. It first came to the notice of the Portuguese in 1523, when Diogo de Mello, overtaken by a storm on his way to Ormuz, took refuge in the harbour. In 1529 an expedition sent by Dom Nuno da Cunha, the Portuguese viceroy, sacked and burned the city, and in 1541 da Cunha himself, on his way to the conquest of Diu, disembarked his whole army at Damão and caused Mass to be celebrated there for the first time. But it was not until the feast of the Purification in the year 1558 that another viceroy, Dom Constantino de Braganza, undertook to acquire finally the place for his sovereign; the native garrison, although much more numerous than the attacking force of 3000, fled at their approach, and the capture was effected without bloodshed. The victorious commander at once caused a mosque to be prepared for Christian worship; Father Gonsalo da Silveira, Provincial of the Jesuits, celebrated Mass there, and the mosque became the Jesuit church of São Paulo. From that time until its erection as a suffragan diocese, in 1886, Damão belonged to the Archdiocese of Goa.

The territory of the diocese extends along the shores of the Arabian Sea from the Nabada River, on the north, to Ratnagiri, on the south, and is bounded on the east by the Western Ghats. There are 71,000 Catholics in the diocese, 51 churches, 21 affiliated chapels, and about 85 priests. The stipends of the clergy are for the most part paid by the Portuguese Government. The territory is divided into districts as follows: Damão, 4 churches, 5 affiliated chapels;

Diu, 2 churches, 3 chapels; Thana (vicariate), 25 churches, 6 chapels; Konkán, 2 churches, 1 chapel; Bassein, 12 churches, 1 chapel; Bombay, 6 churches, 5 chapels. To each of the churches of this diocese a parish school is attached, where instruction is given in Catholic doctrine, music, English, and Portuguese, as well as, in some instances, Guzerati and Mahratti. Some of these schools receive subsidies from both the Portuguese and the British-Indian Governments. The spiritual work of the diocese is very largely helped by means of confraternities, of which there are at least 42 in the Vicariate of Thana alone.

Among the churches in the city of Damão the cathedral of Bom Jesus is worthy of note as having been built, in 1559, on the site of an old mosque. At Damão Pequeno (Little Damão) the church of Nossa Senhora do Mar, founded in 1701, in the old fortress, is still used by local Catholics. Another fortress church is that of the Conceição at Diu, which was originally built in 1610 as part of the now extinct convent of São Paulo. The vicariate of Thana includes the island of Salsette, of which Thana itself was formerly the capital. Here, before the Mogul invasion of 1318, a community of Nestorians existed. The conquering Mohammedans converted both the Nestorian churches and the Hindu temples into mosques for their own worship. It was also at Thana that the Franciscan missionaries Thomas of Tolentino and Giacomo of Padua, with the lay brothers Demetrius and Peter, were martyred early in the fourteenth century. Fra Jordanus, a Dominican, who buried the bodies of these martyrs, was himself also martyred by the Mohammedans, but the Hindus of the vicinity so highly venerated his memory as to set up a bronze statue of him among the gods in one of their temples; this temple was afterwards destroyed, and in the sixteenth century some workmen who were digging on the spot found among the ruins this pagan tribute to a Christian martyr. Thana was also the field of the fruitful labours of Father Gonçalo Rodrigues, one of the companions of St. Francis Xavier, who founded in the neighbourhood a Christian village. This village was destroyed by the Mahrattas, but the ruins of its church, college, and orphanage are still distinguishable. The church of Nossa Senhora do Carmo at Chaul, in the Konkán district, dates from the year 1580. Bassein, first acquired by Portugal in 1534, is memorable for the martyrdom of five religious burned alive in the orphanage by the Mahomedan invaders in 1540, as well as for the apostolic visits of St. Francis Xavier. Lastly, in the Mazagon suburb of Bombay is the church of Nossa Senhora da Gloria, long regarded locally as the Portuguese cathedral; here also is the Bombay residence of the Bishop of Damão, Titular Archbishop of Cranganor.

J. GODINHO.

Damaraland, the middle part of the German colony, German Southwest Africa, between 19° and 23° S. lat., 14° and 20° E. long. Moving from the Atlantic coast towards the interior the traveller meets first a sand-belt of forty-two miles, stripped of all vegetation and covered with gigantic sand-dunes; then a strip of desert land about ninety miles broad, with rugged, bare mountains and wide, barren sand-plains. Then follows Hereroland proper, which rises to a height of 7000 feet, and in which mountain ranges and solitary peaks succeed long-drawn valleys, deep ravines and high plateaux. Towards the north and east, this mountainous district passes over into the undulating plain of the Omaheke and the Kalahari Desert, which is crossed by dry river-beds and is sparsely inhabited. In general, the country suffers from want of rain; it is arid, and fit for cattle-raising only; agriculture is hardly possible except where the land is

artificially irrigated. The population is composed of the Hill Damara and the Herero; besides these there are also some 4000 Kaffirs, Bastards, and Nama, and 1500 Christian Ovambo. The Hill Damara, or Klip Kaffirs, about 20,000 in number, were the original possessors of the country, but were robbed of their pastures and flocks by the invading Herero. Down to our times they lived among the Herero as slaves, without rights and protection, poor and despised; at the uprising of the Herero they naturally sided with the German Government and thereby improved their lot considerably.

The Herero, or Ovaherero, are a tribe of the Bantu, and immigrated, during the seventeenth and eighteenth centuries, from the north-east into Damaraland. Their bodies are well built, their skin is chocolate-coloured, their hair wavy and jet black. The clothing of the men consists of an apron, made of the skin of sheep or goats, and wound around the hips; that of the women comprises a leather cap with a veil, a long apron, and a hide thrown over the back; numerous rings of iron and pearls adorn their arms and legs, and a number of pearl strings encircle their necks. The Herero are boastful, vain, avaricious, beggarly, given to lying and cheating, dishonest, and cruel and ferocious in their hatred; on the other hand, they are also hospitable, possess a high sense of honour, and great love for their parents. Their religion consists in an ancestral cult, especially of the deceased chiefs of each tribe, and a gruesome belief in ghosts and specters, to whom they frequently offer sacrifices. True they recognize a God of heaven and earth, but they do not worship him; they think of him, but they do not thank him. Previous to the insurrection of 1904-1906, which almost destroyed them, they were divided into tribes; these were ruled by chiefs, who were at the same time the tribal priests. In the fights with the Nama, all the Herero had acknowledged one commander-in-chief, Maherero Kajamuaha. After his death, in 1890, the German Government chose his younger son, Samuel Maherero, as supreme chief, passing by the rightful heir. Generally speaking, monogamy prevails among the Herero, though the chiefs and the wealthier tribesmen often have several wives.

The acquisition of the present German Southwest Africa by Germany was begun in the year 1883. The Bremen merchant Lüderitz acquired the bay of Angra Pequena and a few strips of land from the native chiefs; in 1884 this territory was placed under the protection of the German Empire. The heir to the rights of Lüderitz, the German Colonial Company for Southwest Africa, obtained more land. As Maherero, the supreme chief of the Herero, had formerly sided with the English against the Germans, he was forced, on 21 October, 1885, to conclude a treaty of protection and amity with Germany, and to acknowledge the German supremacy. As this treaty was in many regards obscure, many quarrels arose between the German Government and the Herero chiefs; small uprisings were, however, easily quelled. The love of freedom, predominant in the Herero, numerous injustices committed by the whites, extortions on the part of the white traders, and other causes finally led to the great insurrection of the Herero in the beginning of 1904, which soon spread throughout the colony. It took almost three years to subdue the sedition and great sacrifices of men and money had to be made. For the nation of the Herero, who before had numbered between 80,000 and 100,000, the revolt resulted in almost complete annihilation. The Herero who had been taken prisoners were accommodated in camps, where hundreds of them were carried off by virulent diseases. After peace was made, the remnant was handed over to officials, farmers, business and private houses, as servants.

Missions in Damaraland were first begun by Protestants. Since 1844 the Rheinisch-evangelische Mis-

sionsgesellschaft laboured in Hereroland without interruption. Before the insurrection it numbered 15 stations with 23 missionaries, 46 schools with 875 boys and 1182 girls, and counted 8300 coloured Christians. The Fathers of the Holy Ghost were the first Catholic missionaries who, at the end of the seventies, made the attempt to found a mission among the Herero; owing to the intolerance of the Protestants, however, they were compelled to abandon the work in 1881 (cf. *Katholische Missionen*, Freiburg, 1882, pp. 107-111). It was only when German rule had been definitely established, that the Catholic mission was at liberty to work in this field. On 1 August, 1892, the Prefecture Apostolic of Cimbebasia Inferior was erected, and under it was placed the whole of Damaraland and Ovamboland; in 1896 the territory was given in charge of the German Oblates of Mary Immaculate. But by the Colonial Government they were forbidden to work among the Ovambo, Hereros, and Kaffirs, and even after they had been put on the same legal footing with the Protestants they still had to fight against odds. All obstacles were finally removed in September, 1905. The Prefecture Apostolic in 1908 numbered 9 stations with 22 fathers and 18 brothers (all Oblates), 10 sisters (Franciscan Sisters from Nonnenwerth); there are 850 white, 210 black Catholics; 9 churches or chapels, 10 schools with 236 pupils, 1 trade school with 14 pupils, 1 high school for boys, 1 academy for girls, 1 orphan asylum, and 2 hospitals.

JOSEPH LINS.

Damascene, JOHN, SAINT. See JOHN DAMASCENE, SAINT.

Damascus, in Syria, one of the oldest cities in the world. According to Flavius Josephus it was founded by Us, grandson of Sem; it is mentioned in the Bible at the time of Abraham (Gen., xiv, 15; xv, 2); also on the pylons of Karnak, among the Syrian cities captured by the Pharaoh Toutames III.

KINGDOM OF DAMASCUS.—Damascus allied itself with Soba against David, was conquered and obliged to receive a Jewish garrison (II K., viii, 5; I Paral., xviii, 5); but under Solomon it became the capital of an independent kingdom, established by Razon or Rasin (III K., xi, 24). From this time Damascus was frequently at war with the kings of Israel, while it leaned on those of Juda, who sought with its aid to weaken their rivals of Samaria. The most famous of these enemies of Israel was Hazael, who had ascended the throne of Damascus with the help of Elijah and Elisha (III K., xix, 17; IV K., viii, 28; x, 32; xiii, 3). His successors were less fortunate. Jeroboam II, King of Samaria, captured Damascus (IV K., xiv, 28). When not engaged in mutual conflict the kings of Damascus and Samaria entered into alliances with the neighbouring princes against the powerful kings of Assyria; hence Damascus, usually at the head of the confederation, is often mentioned in cuneiform inscriptions. In 734 B. C. Damascus and Samaria nearly ruined Jerusalem. But Achaz, King of Juda, invoked the help of the Assyrian King, Tiglath-Pileser III (Theglathphalasar), who defeated the allies, captured Damascus after a siege of two years, and put an end to the Kingdom of Syria (IV K., xvi, 9-12). For the list of the kings of Damascus see Smith, "The Assyrian Eponym. Canon" 191.

THE GREEK CITY.—Thenceforth Damascus seems to have lost its autonomy. Jeremias (xlix, 27) threatens it with new chastisements, a proof that it

had risen from its decay; however, it appears only occasionally in the history of the Jews, Greeks, and Romans. After the battle of Issus (333 B. C.) the city, which held the wives and treasures of Darius, was betrayed to Parmenion. It soon became, next to Antioch, the most important city of Syria. From 112 to 85 B. C. it was the capital of a little Græco-Roman kingdom, but fell successively into the power of Aretas III, King of Petra, of Tigranes, King of Armenia, and finally of the Roman general Metellus. In 64 B. C. Pompey received there the ambassadors and gifts of the neighbouring kings; in the following year Syria became a Roman province. Herod the Great built a theatre and a gymnasium at Damascus, though the town was outside his dominion. Its population, though Syrian by race and language, was deeply affected by Græco-Roman culture, and made rapid progress in trade and industry; then, as now, Damascus was the chief commercial emporium for the nomad Arabs. In the time of St. Paul there were in Damascus about 50,000 Jews; most of the women in the upper classes of society had embraced this creed. It was on the road to and near the city that Saul, the severe persecutor of the Christians, recognized and worshipped the Jesus whom he had hated so much. Saul was brought to Damascus, lodged at Juda's in the Via Recta (to-day Souk el-Taouil), was baptized by Ananias (who is thought to have been the first Bishop of Damascus), preached Christ, and was obliged to flee by night to Arabia (Acts, ix, 3 sqq., xxii, 6 sqq., xxvi, 12 sqq.; Gal. i, 17; II Cor., xi, 32). The city then belonged to Aretas, King of the Arabs. Under Nero the heathen slaughtered by treachery 10,000 Jews in the gymnasium of Herod. After the destruction of the Nabatean Kingdom of Petra by Trajan, Damascus became a Roman city. Under Arcadius the great temple of the local god, Rimmon, was transformed into the magnificent church of St. John the Baptist. In 610 the city was used by Chosroes as his head-quarters during the long war he then began against Heraclius.

THE SEE OF DAMASCUS.—Damascus was then the metropolis of Phœnicia Secunda, or Libanensis, with eleven suffragan sees; it was subject to the Patriarchate of Antioch and held the sixth rank in the hierarchy (see Vailhé, in *Echos d'Orient*, X, 95, 140). Lequien (*Oriens christ.*, II, 833) was acquainted from the first to the sixteenth century) with the names of only fourteen Greek bishops, among them St. Peter, who suffered martyrdom at the hands of the Arabs in the eighth century. Numerous Jacobite bishops are also known (Lequien, II, 1423; *Revue de l'Orient chrétien*, VI, 194; Brooks, *The Sixth Book of the Select Letters of Severus*, London, 1903, II, 20, 57). Among the many illustrious men born at Damascus, we must mention Nicholas, a Greek writer under Augustus, Damascius, a heathen philosopher of the sixth century, John Moschus, the author of the charming "*Pratum spirituale*", St. Sophronius, Patriarch of Jerusalem (634–638), St. Andrew, Metropolitan of Crete, orator and hymnographer, finally, the celebrated Greek theologian, St. John Damascene.

Early in 635 Damascus was captured by the Arabs under Khalid and Abou Obeidah. Free public worship was allowed to the Christians in several churches, also in the western aisle of St. John's, the eastern aisle being reserved to the Mussulmans. It was only at the beginning of the eighth century that Abd el-Melek obtained from the Christians the use of the whole building, in return for which he allowed them four churches. From 660 to 753, under the Ommayad caliphs, Damascus was the capital of the Arabian empire; at that date Abou Abbas removed the seat of government to Bagdad. In the following centuries, amid broils and revolutions, Damascus fell into the hands of the Toulounides of Egypt, later into those of the Ikshidites and of the Fatimites. In 1075–1076

it was taken by the Seljuk Turk Aziz. In 1126 the crusaders, commanded by Baldwin of Jerusalem, defeated Prince Toghtekin near and south of the city, but were obliged to retreat. Nor were the allied princes, Conrad III of Germany, Louis VII of France, and Baldwin III of Jerusalem, more successful in their siege of Damascus (1148), owing to the treason of the barons of Syria. Nour-ed-Din, Sultan of Aleppo, captured Damascus in 1158. In 1177 Saladin repulsed a new attack of the Christian army. Damascus then became the commercial, industrial, and scientific centre of Syria; it had a school of medicine and an observatory on the Djebel Kasious. Under Saladin's successors it had to sustain several sieges; in 1260 it opened its gates to the Mongols of Houlagou. It then fell into the hands of Kotouz, Prince of the Mamelukes of Egypt, whose successor, Bibars, rebuilt its citadel. In 1300 it was plundered and partly burnt by the Tatars commanded by Ghazzen Khan. In 1399 Timur-Leng put to death almost all the inhabitants, except the sword-cutlers. These he brought to Samarkand and Khorassan where they continued to make the beautiful damascened blades, the secret of which has long been lost at Damascus. In 1516 Selim I conquered Syria from the Mamelukes; since that time Damascus has belonged to the Ottoman Empire. Mention should be made of the Egyptian occupation by Ibrahim Pasha (1832–1840), and the frightful slaughter of the Christians (July, 1860), which caused the flight of many thousands and brought about the occupation of Syria by a French army.

THE TURKISH CITY.—Damascus (Arab. *Dimisk es-Sham*, or simply *es-Sham*), the eye or the pearl of the East for the Arabs, is the chief town of the vilayet of Syria and the second city in the Ottoman Empire. Three railways start thence to Beirut, Mzerib, and Mecca; there is also a tramway to Hama. Trade flourishes throughout the province. The city stands 2267 feet above sea level and enjoys a very mild climate, owing to the Barada, which runs through it, and to its numerous fountains or springs. It is surrounded by the groves and gardens of the Ghouta, which stretch about ten miles south and east and include twenty-nine villages, the inhabitants of which are devoted to fruit culture (oranges, lemons, etc., especially plums and apricots). Within the city are the tombs of Noured-Din, Saladin, and Bibars, 850 fountains, 64 *hammams* (baths), 25 bazaars, a stock exchange for the local trade, a half-ruined citadel, 248 mosques, etc. The mosque of the Ommayyads (anciently St. John's church) was burned in 1893, on which occasion many manuscripts and works of art were lost.

RELIGIOUS CONDITIONS.—Damascus is a Latin archiepiscopal titular see; three bishops of the sixteenth century are mentioned in the "*Revue bénédictine*" 1907, (82–85). It is moreover a metropolitan see for the Catholic (also for the non-Catholic) Melchite Greeks, and for the Catholic Syrians, and finally an episcopal see for the Maronites. The population, including the rich Europeanized suburb of Es-Salayieh, is about 300,000. Of this number 255,000 are Mussulmans, 20,000 non-Catholic Melchite Greeks, 500 Protestants, 10,000 Jews, 1000 Armenian and Syrian Jacobites, and 20,200 Catholics (15,000 of whom are Melchite Greeks, 2500 Syrians, 1500 Maronites, 400 Latins, 700 Armenians, and 100 Chaldeans). Since the sixteenth century the non-Catholic Greek Patriarchs of Antioch have lived at Damascus. The Catholic Greek Patriarch of Antioch also resides at Damascus and governs his diocese through a titular bishop. The Syrian Catholic patriarch has recently transferred his residence to Damascus. The Catholic Greek archdiocese has about 15,000 faithful, 20 priests, and 12 churches. The Catholic Syrian archdiocese has 3000 faithful, 9 priests, 4 parishes, 6

churches. The Maronite diocese has 23,000 faithful, 65 priests, 61 churches, 80 Baladite monks in 5 monasteries, and 150 Aleppine monks in 6 monasteries. There are in Damascus 14 churches, of which 9 belong to the different Catholic rites. There are also 14 synagogues and 1 Protestant church. The Lazarists, who replaced the Jesuits at the time of their suppression, conduct a college with about 200 pupils. The Jesuits have occupied since 1872 a house said to have been that of St. John Damascene. The Franciscans have the Latin parish church and a school for boys. The Sisters of Charity (1854) have several schools, an orphanage, a dispensary, etc. The Mariamet native sisters conduct another school. The Catholic Greeks have their schools for boys and girls. As to the Protestants, the Anglo-Syrians possess a hospital and a school, the American mission and the Irish mission each one school. The Mussulmans have a large municipal hospital and a leper's hospital.

S. VAILLÉ.

Damasus I, SAINT,
POPE, b. about 304; d.
11 December, 384.

His father, Antonius, was probably a Spaniard; the name of his mother, Laurentia, was not known until quite recently. Damasus seems to have been born at Rome; it is certain that he grew up there in the service of the church of the martyr St. Lawrence. He was elected pope in October, 366, by a large majority, but a number of over-zealous adherents of the deceased Liberius rejected him, chose the deacon Ursinus (or Ursicinus), had the latter irregularly consecrated, and resorted to much violence and bloodshed in order to seat him in the Chair of Peter. Many details of this scandalous conflict are related in the highly prejudiced "Libellus Precum" (P. L., XIII, 83-107), a petition to the civil authority on the part of Faustinus and Marcellinus, two anti-Damasan presbyters (cf. also Ammianus Marcellinus, *Rer. Gest.*, XXVII, c. iii). Valentinian recognized Damasus and banished (367) Ursinus to Cologne, whence he was later allowed to return to Milan, but was forbidden

to come to Rome or its vicinity. The party of the antipope (later at Milan an adherent of the Arians and to the end a contentious pretender) did not cease to persecute Damasus. An accusation of adultery was laid against him (378) in the imperial court, but he was exonerated by Emperor Gratian himself (Mansi, *Coll. Conc.*, III, 628) and soon after by a Roman synod of forty-four bishops (Liber Pontificalis, ed. Duchesne, s. v.; Mansi, op. cit., III, 419) which also excommunicated his accusers.

Damasus defended with vigour the Catholic Faith in a time of dire and varied perils. In two Roman synods (368 and 369) he condemned Apollinarianism and Macedonianism; he also sent his legates to the Council of Constantinople (381), convoked against the

aforsaid heresies. In the Roman synod of 369 (or 370) Auxentius, the Arian Bishop of Milan, was excommunicated; he held the see, however, until his death, in 374, made way for St. Ambrose. The heretic Priscillian, condemned by the Council of Saragossa (380) appealed to Damasus, but in vain. It was Damasus who induced Saint Jerome to undertake his famous revision of the earlier Latin versions of the Bible (see VULGATE). St. Jerome was also his confidential secretary for some time (Ep. cxxiii, n. 10). An important Canon of the New Testament was proclaimed by him in the Roman synod of 374. The Eastern Church, in the person of St. Basil of Caesarea, besought earnestly the aid and encouragement of Damasus against triumphant Arianism; the pope, however, cherished some degree of suspicion against the great Cappadocian Doctor. In the matter of the Meletian

POPE ST. DAMASUS I
(Loggie di Raffaele, Vatican. Designed by Raphael)

Schism at Antioch, Damasus, with Athanasius and Peter of Alexandria, sympathized with the party of Paulinus as more sincerely representative of Nicene orthodoxy; on the death of Meletius he sought to secure the succession for Paulinus and to exclude Flavian (Socrates, *Hist. Eccl.*, V, xv). He sustained the appeal of the Christian senators to Emperor Gratian for the removal of the altar of Victory from the Senate House (Ambrose, Ep. xvii, n. 10), and lived to welcome the famous edict of Theodosius I, "De fide Catholica" (27 Feb., 380), which proclaimed as the religion of the Roman State that doctrine which St. Peter had preached to the Romans and of which Damasus was supreme head (Cod. Theod., XVI, 1, 2).

When, in 379, Illyricum was detached from the Western Empire, Damasus hastened to safeguard the authority of the Roman Church by the appointment of a vicar Apostolic in the person of Ascholius, Bishop of

Thessalonica; this was the origin of the important papal vicariate long attached to that see. The primacy of the Apostolic See, variously favoured in the time of Damasus by imperial acts and edicts, was strenuously maintained by this pope; among his notable utterances on this subject is the assertion (Mansi, Coll. Conc., VIII, 158) that the ecclesiastical supremacy of the Roman Church was based, not on the decrees of councils, but on the very words of Jesus Christ (Matt., xvi, 18). The increased prestige of the early papal decretals, habitually attributed to the reign of Siricius (384-99), not improbably belongs to the reign of Damasus ("Canones Romanorum ad Gallos"; Babut, "La plus ancienne décrétale", Paris, 1904). This development of the papal office, especially in the West, brought with it a great increase of external grandeur. This secular splendour, however, affected disadvantageously many members of the Roman clergy, whose worldly aims and life, bitterly reproved by St. Jerome, provoked (29 July, 370) an edict of Emperor Valentinian addressed to the pope, forbidding ecclesiastics and monks (later also bishops and nuns) to pursue widows and orphans in the hope of obtaining from them gifts and legacies. The pope caused the law to be observed strictly.

Damasus restored his own church (now San Lorenzo in Damaso) and provided for the proper housing of the archives of the Roman Church (see VATICAN ARCHIVES). He built in the basilica of St. Sebastian on the Appian Way the (yet visible) marble monument known as the "Platonia" (Platonia, marble pavement) in honour of the temporary transfer to that place (258) of the bodies of Sts. Peter and Paul, and decorated it with an important historical inscription (see Northcote and Brownlow, *Roma Sotterranea*). He also built on the Via Ardeatina, between the cemeteries of Callistus and Domitilla, a *basilicula*, or small church, the ruins of which were discovered in 1902 and 1903, and in which, according to the "Liber Pontificalis", the pope was buried with his mother and sister. On this occasion the discoverer, Monsignor Wilpert, found also the epitaph of the pope's mother, from which it was learned not only that her name was Laurentia, but also that she had lived the sixty years of her widowhood in the special service of God, and died in her eighty-ninth year, having seen the fourth generation of her descendants. Damasus built at the Vatican a baptistery in honour of St. Peter and set up therein one of his artistic inscriptions (Carmen xxxvi), still preserved in the Vatican crypts. This subterranean region he drained in order that the bodies buried there (*juxta sepulcrum beati Petri*) might not be affected by stagnant or overflowing water. His extraordinary devotion to the Roman martyrs is now well known, owing particularly to the labours of Giovanni Battista De Rossi. For a good account of his architectural restoration of the catacombs and the unique artistic characters (Damasan Letters) in which his friend Furios Dionysius Filocalus executed the epitaphs composed by Damasus, see Northcote and Brownlow, "Roma Sotterranea" (2nd ed., London, 1878-79). The dogmatic content of the Damasian epitaphs (*tituli*) is important (Northcote, Epitaphs of the Catacombs, London, 1878). He composed also a number of brief *epigrammata* on various martyrs and saints and some hymns, or *Carmina*, likewise brief. St. Jerome says (Ep. xxii, 22) that Damasus wrote on virginity, both in prose and in verse, but no such work has been preserved. For the few letters of Damasus (some of them spurious) that have survived, see P. L., XIII, 347-76, and Jaffé, "Reg. Rom. Pontif." (Leipzig, 1885), nn. 232-254.

The works of Damasus (ed. Merenda, Rome, 1754) are in P. L., XIII, 109 sqq. The best edition of his *epigrammata* is that of IMH (Leipzig, 1895); cf. WEYMAN in *Revue d'hist. et de lit. relig.* (Paris, 1895), I, 58-73. Over 100 are ascribed to him, more than one-half of which are accounted genuine. See also *Liber Pontificalis*, ed. DUCHESNE, I, 212, and preface, ccl;

THOMAS J. SHAHAN.

Damasus II, POPE (previously called Poppo), a native of Bavaria and the third German to be elevated to the See of Peter. On the death of Clement II, July, 1047, the Tusculan faction reasserted its power in Rome, and, with the secret aid of Boniface, Margrave of Tuscany, restored its wretched creature Benedict IX, who continued in his wonted manner to disgrace the papacy for a further period of eight months before disappearing entirely from history. On Christmas Day, 1047, an embassy sent by the Roman people brought the tidings of Clement's death to Henry III, at Pöthe in Saxony, and besought the emperor as *Patricius* of the Romans to appoint a worthy successor. The envoys, according to their instructions, suggested as a suitable candidate, Halinard, Archbishop of Lyons, who had a perfect command of the Italian tongue and was popular in Rome. Henry, however, in January, 1048, appointed Poppo, Bishop of Brixen, in Tyrol, and at once directed the Margrave Boniface to conduct the pope-designate to Rome. Boniface at first refused, alleging the installation of Benedict, but Henry's decisive threat soon reduced him to obedience. After Benedict's removal, the Bishop of Brixen at length entered the city and was enthroned at the Lateran as Damasus II, 17 July, 1048. His pontificate, however, was of short duration. After the brief space of twenty-three days, he died—a victim of malaria—at Palestrina, whither he had gone shortly after his installation to escape the summer heat of Rome. The pope was buried in S. Lorenzo fuori le mura.

Liber Pontif., ed DUCHESNE, II, 274; JAFFÉ, *Regesta RR. PP.*, 2d ed., I, 528 sq.; HÖFLER, *Die deutschen Päpste* (Regensburg, 1839), I, 269 sqq.

THOMAS OESTREICH.

Damberger, JOSEPH FERDINAND, church historian, b. 1 March, 1795, at Passau, Bavaria; d. 1 April, 1859, at Schäftlarn. After completing his earlier studies in the public schools of his native town, he pursued the study of law at Landshut, then studied theology at Salzburg, Landshut, and Munich, and was ordained priest in 1818. While at the Munich Lyceum he had also devoted himself very assiduously to historical studies. Until 1837 he was particularly active as a preacher at Landshut and at St. Cajetan's, Munich. His first historical works appeared at Ratisbon in 1831, three closely related narratives: "Fürstentafel der Staatengeschichte"; "Fürstenbuch zur Fürstentafel der europäischen Staatengeschichte"; "Sechzig genealogische, chronologische und statistische Tabellen zur Fürstentafel und Fürstenbuch".

In 1837 he joined the Society of Jesus, completed his novitiate at Brieg, canton of Valais, Switzerland, where he spent about ten years, partly as a mission-preacher and partly as professor of ecclesiastical history at Lucerne. A collection of his mission sermons was printed (Lucerne, 1842; 2nd ed., 1852), but was violently attacked (Missionsunfug der Jesuiten; Bern, 1842). The defeat of the Sonderbund (1847) brought with it the expulsion of the Jesuits from Switzerland. Damberger then passed several years at Innsbruck and Ratisbon, and in 1853 became confessor at the Convent of Schäftlarn in Bavaria, where he died. In these years he published his principal work in fifteen volumes, "Synchronistische Geschichte der Kirche und der Welt im Mittelalter" (Ratisbon, 1850-63). The last volume was finished and published after his death by Father Daniel Rattinger. The narrative reaches the year 1378. For its day it was an important piece of work, though lacking a sufficient degree of the critical quality. It reveals, nevertheless, close application and extensive learning.

There is a bibliographical notice by RATTINGER in the fifteenth volume of the *Synchron. Geschichte*; see WEGLE, *Dam-berger in Allgemeine deutsche Biographie* (Leipzig, 1896); SOMMERVOGEL, *Bibl. de la c. de J.* (2nd ed., Paris and Brussels, 1891), II, 1786 sqq.

Damien, FATHER (JOSEPH DE VEUSTER), missionary priest, b. at Tremeloo, Belgium, 3 January, 1840; d. at Molokai, Hawaii, 15 April, 1888. His father, a small farmer, sent him to a college at Braine-le-Comte, to prepare for a commercial profession; but as the result of a mission given by the Redemptorists in 1858, Joseph decided to become a religious. He entered the novitiate

GRAVE OF FATHER DAMIEN, ISLAND OF MOLOKAI

of the Fathers of the Sacred Heart of Jesus and Mary at Louvain, and took in religion the name of Damien. He was admitted to the religious profession, 7 Oct., 1860. Three years later, though still in minor orders, he was sent to the mission of the Hawaiian Islands, where he arrived, 19 March, 1864. Ordained priest at Honolulu 24 May, of the same year, he was later given charge of various districts on the island of Hawaii, and, animated with a burning zeal, his robust constitution allowed him to give full play to the im-

pulses of his heart. He was not only the missionary of the natives, but also constructed several chapels with his own hands, both in Hawaii and in Molokai.

On the latter island there had grown up a leper settlement where the Government kept segregated all persons afflicted with the loathsome disease. The board of health supplied the unfortunates with food and clothing, but was unable in the beginning to provide them with either resident physicians or nurses. On 10 May, 1873, Father Damien, at his own request and with the sanction of his bishop, arrived at the settlement as its resident priest. There were then 600 lepers. "As long as the lepers can care for themselves", wrote the superintendent of the board of health to Bishop Maigret, "they are comparatively comfortable; but as soon as the dreadful disease renders them helpless, it would seem that even demons themselves would pity their condition and hasten to their relief." For a long time, however, Father Damien was the only one to bring them the succor they so greatly needed. He not only administered the consolations of religion, but also rendered them such little medical service and bodily comforts as were within his power. He dressed their ulcers, helped them to erect their cottages, and went so far as to dig their graves and make their coffins. After twelve years of this heroic service he discovered in himself the first symptoms of the disease. This was in 1885. He nevertheless continued his charitable ministrations, being assisted at this period by two other priests

and two lay brothers. On 28 March, 1888, Father Damien became helpless and passed away shortly after, closing his fifteenth year in the service of the lepers.

Certain utterances concerning his morality called forth Robert Louis Stevenson's well-known philippic against the Rev. Dr. Hyde, wherein the memory of the Apostle of the Lepers is brilliantly vindicated. In addition a correspondence in the "Pacific Commercial Advertiser", 20 June, 1905, completely removes from the character of Father Damien every vestige of suspicion, proving beyond a doubt that Dr. Hyde's insinuations rested merely on misunderstandings.

TAUVEL, *Father Damien* (London, 1904); CLIFFORD, *Father Damien* (London, 1890); STODDARD, *Father Damien, The Martyr of Molokai* (San Francisco, 1901); HAYNE in "The Hawaiian" (Honolulu, Dec.-Jan., 1895-96); *Pacific Commercial Advertiser* (Honolulu, 20 June, 1905).

LIBERT H. BOEYNAEMS.

Damietta (Gr. *Tamiathis*, Arab. *Doumiât*), an Egyptian titular see for the Latins and the Catholic Melchite Greeks, in Augustamnica Prima. Damietta, first mentioned by Stephanus Byzantium, was situated at the mouth of the Phatnitic branch of the Nile, on the right bank; its prosperity seems to have coincided with the decline of its religious metropolis Pelusium. Only four bishops are known, from 431 to 879. Under Caliph Omar the Arabs took it by treachery and successfully defended it against the Greeks who tried to recover it, particularly in 739, 821, 921 and 968. The Arabs also repulsed several attacks of Amaury I, King of Jerusalem. It was finally captured by Jean de Brienne, 1219, after a siege of 15 months; of its 70,000 inhabitants only 3000 survived. St. Francis of Assisi visited the camp of the crusaders and went thence to that of Sultan Malek Kemal to preach the Christian Faith. In 1221 the Franks were defeated and obliged to abandon the town. In June, 1249, it was again captured by St. Louis, who transformed it into a church the magnificent mosque El-Fatah and established there a Latin bishop, Gilles; but having been taken prisoner with his army, April, 1250, he was obliged to surrender Damietta as ransom. In 1251 the Sultan, hearing that the pious king was preparing a new crusade, ordered the town and its citadel to be destroyed, except the mosque El-Fatah. Later on fishermen built their shelters among the ruins; in this way the modern town has gradually arisen. The site of ancient Damietta is erroneously placed by some historians at Esbeh el-Bordj, six miles from the modern town. Damietta is no longer at the mouth of the Nile, but ten miles from the sea; it has about 53,000 inhabitants, of whom 75 are Catholic Melchite Greeks, 60 Latins, and 250 non-Catholic Christians, the rest Muslims. Franciscans have resided there since the time of St. Francis, and Franciscan nuns conduct a school for girls. Wealthy inhabitants of Cairo are wont to retire to Damietta during the heated season. The harbour is of little importance. Damietta is also, probably since the fifth century, a see for the Monophysite Copts; moreover, one of the non-Catholic Greek metropolitans subject to the Patriarch of Alexandria bears the title of Pelusium and Damietta. In the neighbouring Mansourah, famous for the victory of St. Louis, there are about 1000 Catholics and several institutions.

S. VAILHÉ.

Dan (Heb. דָּן, Sept. Δάν).—(1) The fifth son of Jacob, being the elder of the two sons born to him by Bala, the handmaid of Rachel, and the eponymous ancestor of the tribe bearing the same name. Étymologically, the word is referred to the Hebrew root דָּן signifying "to rule" or "judge", and in the passage,

Gen., xlix, 17, it is interpreted "judge", but in Gen. xxx, 6, the explanation of the name rests rather on the passive sense of the word—the child Dan being represented as the result of God's judgment in favour of Rachel. In accordance with the meaning expressed in the latter passage, Josephus (Antiq., I, xix, 7) gives as the equivalent of the name Dan the Greek *θεοκριτος*. A cognate feminine form of the same word, likewise in the passive sense, is recognized in Dina (דִּינָה), name of the daughter of Jacob by Lia, doubtless with reference to the judgment or vindication she received at the hands of her two brothers Simeon and Levi (Gen., xxxiv). Apart from the account connected with his birth in Gen., xxx, the Bible gives very little information concerning Dan the son of Jacob. In Gen., xxxv, 25, his name is mentioned together with those of the other sons of Israel, and in Gen., xli, which contains a genealogical list of their immediate descendants, we read (23), "The sons of Dan: Husim". This last, being a Hebrew plural form, refers most likely not to an individual, but to a clan or tribe. In Numbers, xxvi, 42, we find "Suham" instead of "Husim". In Jacob's blessing (Gen., xlix), as well as in Deut., xxxiii, 22, and various other passages, the name Dan refers not to the son of the patriarch, but to the tribe of which he was the acknowledged father.

(2) One of the twelve tribes of Israel. According to the census related in the first chapter of Numbers (a section ascribed to the priestly writer), there were reckoned among the "sons of Dan" in the second year after the Exodus, 62,700 men "able to go forth to war", being the largest number given to any of the tribes except that of Juda. Confining ourselves to the Biblical data, and prescinding from all criticism of sources, it would appear from these figures that the tribe must have suffered a considerable diminution ere its establishment in Canaan, where, from various indications, it appears as one of the smallest of the twelve. The territory occupied by the tribe lay to the south-west of Ephraim; it was bounded on the south by Juda and on the west by the Shephela. Whether the Danites occupied also the latter or were confined to the mountainous inland district is uncertain. A passage of the Canticle of Debhora (Judges, v, 17) would seem to indicate that the territory extended down to the sea, and moreover, among the towns enumerated in Josue, xix, 40–48 (P.) mention is made of Acre and Joppe. Be that as it may, it was doubtless because of their narrow territorial limits that later the Danites undertook an expedition northward and created a new settlement at Lais. For, notwithstanding the narrative contained in Josue, xix, 40–48, indicating with detail the district and the cities allotted to Dan in the distribution after the conquest, we find later in the Book of Judges (xviii, 1) that "the tribe of Dan sought them an inheritance to dwell in: for unto that day they had not received their lot among the other tribes". This was perhaps another way of conveying the idea already set forth in the first chapter, viz. that "the Amorrite straitened the children of Dan in the mountain, and gave them not place to go down to the plain". Being thus cramped and restricted in their territory, they resolved to seek a home elsewhere. The interesting story of this expedition is told, with many traits characteristic of that period of Hebrew civilization, in the eighteenth chapter of Judges. Having previously sent spies to reconnoitre the ground, the Danites sent a detachment of six hundred men who plundered and burnt the city of Lais, and butchered its inhabitants, after which they "rebuilt the city and dwelt therein". At least a remnant of the tribe must have remained in the south, as is evidenced in the story of Samson, who was a Danite. Several references to the activities of the tribe of Dan in the early period of the monarchy are found in the Books of Chronicles. Thus, 28,600

armed men of the tribe are represented as taking part in the election of David in Hebron (I Par., xii, 35), and among the skilled artists sent by Hiram of Tyre to Solomon was the metal-worker Hiram, whose mother was of the tribe of Dan (II Par., ii, 13 sq.).

(3) A city of Palestine, originally Lais, or Lesem, and called Dan after it had been destroyed and rebuilt by the six hundred emissaries from the tribe of that name (Judges, xviii). Its location marked the northern boundary of Palestine as did Bersabee the southern extremity, whence the popular expression "from Dan to Bersabee" used to designate the entire extent of the country. Although nothing now remains of the city of Dan, its situation on the confines of Nephthali has been pretty accurately determined by means of various Scriptural and other ancient indications. That Lais was a Sidonian settlement at a distance from the parent city is clear from Judges, xviii, 7, 28, and the great fertility of the spot is affirmed in the same chapter (9, 12). Josephus, who calls the town *Δάνα*, and elsewhere *Δάρον*, places it "in the neighbourhood of Mt. Libanus, near the fountains of the Lesser Jordan, in the great plain of Sidon, a day's journey from the city" (Antiq., V, iii, 1). According to Eusebius and St. Jerome, the village of Dan was situated within four miles of Paneas (Bania, or Cæsarea-Philippi), on the road to Tyre, at the rise of the Jordan. Its proximity to Paneas has led to a confusion of the two towns in certain ancient works, as, for instance, in the Babylonian Talmud; and a few modern scholars, among whom is G. A. Smith, still identify Dan with Bania, but the generally received opinion places it at Tell el-Qadi, and this identification has in its favour, among other reasons, the practical identity of the name, as "Tell el-Qadi" signifies the "hill of the Judge". This quadrangular mound is situated about a mile and a half south-west of Mt. Hermon, and to the west of Bania. The site and surroundings are remarkably picturesque, and close to the mound on the west is a spring from which clear, cold water flows in abundance, forming a *nahr*, or torrent, which the Arabs call *Nahr Leddan*—probably a corruption of *ed-Dan*. This torrent is the main source of the Jordan, and it is doubtless the "Lesser Jordan" mentioned by Josephus.

Dan is mentioned in the fourteenth chapter of Genesis in connexion with the expedition of Abraham against Chodorlahomor, but it is doubtful if the place there referred to is the same as the ancient Lais. Though the identification is affirmed by both Eusebius and Jerome, many modern scholars place the Dan of Genesis, xiv, in the vicinity of Galaad, and identify it with Dan-Yaan mentioned in II Kings, xxiv, 6. The conquest of Lais by the Danites, referred to above under (2), is related in Judges, xviii. The portion of the tribe which took up its abode there was addicted to certain forms of idolatry from the beginning (cf. Judges, xviii, 30, 31), and it was in this frontier town that Jeroboam set up one of the golden calves which were intended to draw the Israelites of the Northern Kingdom away from the Sanctuary in Jerusalem (III Kings, xii, 29, 30; IV Kings, x, 29).

For (1) VIGOURoux, for (2) and (3) LEGENDRE, both in *Dict. de la Bible*, s. v.; also for (1) and (2) PEAKE, for (3) MACKIE, both in HASTINGS, *Dict. of the Bible*, s. v.

JAMES F. DRISCOLL.

Danaba, a titular see of Phœnicia Secunda. Danaba is mentioned by Ptolemy (V, xv, 24) as a town in the territory of Palmyra. According to Peutinger's table (where it is called Danova) it was a Roman military station between Damascus and Palmyra, twenty miles from Nezala. Danaba figures in an Antiochene "Notitia episcopatum" of the sixth century as a suffragan of Damascus, and remained so till perhaps the tenth century. (See Vailhé in "Echos d'Orient", X, 90 sqq. and 139 sqq.) Only two bishops are known: Theodore, who attended the Council of Chalce-

don in 451, and subscribed the letter of the bishops of the province to Emperor Leo I in 458, and Eulogius, present at the Second Council of Constantinople in 553 (Lequien, Or. Christ., III, 847). To-day Danaba is probably represented by Hafer, a village five miles south-east of Sadad, in the vilayet of Damascus. About 300 Jacobite Syrians live there, most of whom have recently been converted to Catholicism (Jullien, *Sinai et Syrie*, Lille, 1893, 199).
S. PÉTRIDÈS.

Dance of Death

(French, *Dance Macabre*, Germ. *Totentanz*).

—The "Dance of Death" was originally a species of spectacular play akin to the English moralities. It has been traced back to the middle of the fourteenth century. The epidemics so frequent and so destructive at the time, such as the Black Death, brought before popular imagination the subject of death and its universal sway. The dramatic movement then developing led to its treatment in the dramatic form. In these plays Death appeared not as the destroyer, but as the messenger of God summoning men to the world beyond the grave, a conception familiar both to Holy Writ and to the ancient poets. The dancing movement of the characters was a somewhat later development, as at first Death and his victims moved at a slow and dignified gait. But Death, acting the part of a messenger, naturally took the attitude and movement of the traditional messengers of the day, namely the fiddlers and other musicians, and the dance of death was the result.

The purpose of these plays was to teach the truth that all men must die and should therefore prepare themselves to appear before their Judge. The scene of the play was usually the cemetery or churchyard, though sometimes it may have been the church itself. The spectacle was opened by a sermon on the certainty of death delivered by a monk. At the close of the sermon there came forth from the charnel-house, usually found in the churchyard, a series of figures decked out in the traditional mask of death, a close-fitting, yellowish linen suit painted so as to resemble a skeleton. One of them addresses the intended victim, who is invited to accompany him beyond the grave. The first victim was usually the pope or the emperor.

The invitation is not regarded with favour and various reasons are given for declining it, but these are found insufficient and finally death leads away his victim. A second messenger then seizes the hand of a new victim, a prince or a cardinal, who is followed by others representing the various classes of society, the usual number being twenty-four.

The play was followed by a second sermon reinforcing the lesson of the representation.

The oldest traces of these plays are found in Germany, but we have the Spanish text for a similar dramatic performance dating back to the year 1360, "*La Danza General de la Muerte*". We read of similar dramatic representations elsewhere: in Bruges before Duke Philip the Good of Burgundy in 1449; in 1453 at Besançon,

and in France in the *Cimetière des Innocents* near Paris in 1424. That similar spectacles were known in England we infer from John Lydgate's "*Dance of Death*" written in the first half of the fifteenth century. In Italy besides the traditional dance of death we find spectacular representations of death as the all-conqueror in the so-called "*Trionfo della Morte*". The earliest traces of this conception may be found in Dante and Petrarch. In Florence

(1559) the "*triumph of death*" formed a part of the carnival celebration. We may describe it as follows: After dark a huge wagon, draped in black and white and drawn by oxen, drove through the streets of the city. At the end of the shaft was seen the Angel of Death blowing the trumpet. On the top of the wagon stood a great figure of Death carrying a scythe and surrounded by coffins. Around the wagons were covered graves which

opened whenever the procession halted. Men dressed in black garments on which were painted skulls and bones came forth and, seated on the edge of the graves, sang dirges on the shortness of human life. Before and behind the wagon appeared men in black and white bearing torches and death masks, followed by banners displaying skulls and bones and skeletons riding on scrawny nags. While they marched the entire company sang the *Miserere* with trembling voices.

Specimens of the dramatic dance of death have been

DANCE OF DEATH—HANS HOLBEIN
(From the woodcut series, the Dance of Death)

preserved in the Altsfeld Passion Plays, in the French morality entitled "Charité", and in the Neumarkt Passion Play which opens with the triumph of Death. As the painter's art developed, the dance of death was in a way made permanent by being painted on the enclosing walls of cemeteries, on charnel-houses, in mortuary chapels, and even in churches. These representations are found in most of the countries of Europe. One of the most famous is the "Triumph of Death" in the cemetery of Pisa, painted between 1450 and 1500. One of the oldest pictures of the dance of death proper is that in the Cimetière des Innocents at Paris (1425). Bäumer, in Herder's "Kirchenlexikon", enumerates seven French dances of death dating back to the fifteenth century, three of the sixteenth century, three of the seventeenth century, seven of uncertain date, five in England, and four in Italy. Within the limits of the old German Empire there still exist some thirty painted dances of death scattered throughout Germany, Austria, and Switzerland. In many representations underneath the several couples are found a rhymed dialogue between Death and his victims, being the invitation of the former and the reply of his victim.

CHARLES G. HERBERMANN.

With the development of his art the dance of death naturally became a popular theme for the engraver. Many such prints were produced by various German artists, but the most famous version is that of the younger Holbein, issued in 1538 by the brothers Trechsel at Lyons. It appears to be clear from the researches of Wornum and Woltmann, of Paul Mantz, of W. J. Linton, the Rev. G. Davies, C. Dodgson, and others, that the drawings were undoubtedly the work of Hans Holbein the younger, who was resident in Basle up to the autumn of 1526, before which time the drawings must have been produced. They are distinctly in his manner and of extraordinarily high merit. There is no evidence that Holbein ever cut a wood block himself, and when these were issued it was expressly stated that the artist or engraver, who is now generally accepted as Hans Lützelberger, one of the greatest of German engravers, was dead. But little is known of his career. He was certainly dead before 1526. The designs appear to have been cut on the wood eleven years before the book was published, and their issue was probably held back by reason of the unsettled state of religious opinion in Basle. The series comprises forty-two engravings, the subjects expressed with masterly dramatic power, marvellous clearness, and marked reticence of line. Technically they are as perfect as woodcuts can be. There are five sets of proof impressions in existence, and the little book passed through nine editions at Lyons and was printed also in Venice, Augsburg, and Basle. There have been many reissues and reproductions of it, and a facsimile of the first edition was published in Munich in 1884.

Besides the "Dance of Death" Holbein designed a series of initials consisting of an alphabet in which it is the *motif*. Of Holbein's larger "Dance of Death" more than one hundred editions have appeared. Since Holbein this subject has been treated again and again, especially by German engravers. The most noted of recent dances of death is that by Alfred Rethel, 1848, in which Death is represented as the hero of the Red Republic. Both the conception and the execution of Rethel's engravings are highly artistic and impressive.

GEORGE CHARLES WILLIAMSON.

Dancing.—The origin of dancing is to be sought in the natural tendency to employ gesture either to supplement or to replace speech. Strong emotions, in particular, key up the organs to a pitch of exaltation which spontaneously manifests itself through more or

less rhythmical movements that constitute what may be considered as elementary and natural dances. But in the same manner as speech soon developed into poetry and song, so also did these bodily movements gradually develop into the art of dancing. Both spontaneous and artistic dancing may be described as "an expression of the feelings by movements of the body more or less controlled by a sense of rhythm" (J. Millar), and are to some degree practised by all peoples. The Hebrews were no exception; their language contains no less than eight verbs to express the idea of dancing. However, many of the allusions found in the Bible point to mere spontaneous expressions of merriment by leaping, circling, or otherwise. Of this description were very likely the dances of Mary and the women of Israel after the crossing of the Red Sea (Exod., xv, 20), of the people around the golden calf (Exod., xxii, 19), of Jephthe's daughter coming to meet her father after the latter's victory (Judges, xi, 34), of the inhabitants of the cities on the way of the army commanded by Holofernes (Judith, iii, 10), even of David before the Ark (II K., vi, 5, 22). From these various places it might be inferred that dancing was a manifestation of joy ordinarily exhibited by women, and we know how David, in the occurrence above referred to, excited Michol's wonder. In later times dancing was positively looked upon as unbecoming men; such also was the opinion in Rome, where the saying ran that a man, to indulge in dancing, must be either intoxicated or mad.

Dancing as an art was made subservient to various purposes. Its use as an aid to heighten the splendour of religious celebrations should be first considered. Religious dances consisted mostly of slow and stately processions through the streets of the city or around the altar. Usually they were performed by colleges of priests; but occasionally citizens of both sexes and all ranks, without any disparagement to the gravity of their characters or dignity of position, took a part in these exhibitions (Liv., I, xx; Quintil., I, ii, 18; Macrobius, Sat. ii, 10). All religious dances, however, were not performed with the gravity above referred to. In Rome, the *sali*, carrying the sacred shields through the streets, leapt and jumped clumsily "like stamping fullers" (Seneca, Ep. xv). The Bible describes likewise the priests of Baal limping (so Heb.; D.V.: "leaping") around the altar (III K., xviii, 26). Throughout the East sacred dances were a prominent feature in religious worship. In Egypt even colleges of female singers and dancers were annexed to certain shrines. That dancing was also an accompaniment of the Jahweh worship is probable from Judges, xxi, 21, for early times, and clearly evidenced by Ps. cxlix, 3, and cl, 4, for the epoch following the captivity. The texts seem further to indicate that, in the second Temple, persons engaged in dancing and singing in God's honour formed choirs similar to those of the pagan rites (Cic., Phil., v, 6; Virg., Æn., VIII, 718; Hor., Od., I, i, 31).

War dances, so common among many peoples, and which were frequently introduced to enhance the pageants of public festivities among the Greeks and Romans, have left no trace among the Hebrews and their neighbours, although they are not unknown to modern inhabitants of Palestine and Arabia. Mimetic dances were as little known in the East as those of a military character. They consisted of expressive movements of the features, body, arms, and hands, executed to a musical accompaniment and meant vividly to represent historical or fabulous events and the actions and passions of well-known characters. How much such performances were relished by the Romans, we learn from many passages of Latin writers, such, e.g., as Macrobius, Sat. ii, 7; Suet., "Calig.", 57, "Nero", 54, "Tit.", 7; Ovid, "Ars Am.", I, 595, etc. Still more was scenic dancing in favour in Rome and Greece. It consisted of harmonious movements

principally of the arms, body, and feet, intended to show forth all the flexibility, agility, and grace of the human body. Such exhibitions were usually given for the pleasure of the guests, at great banquets, and performed by professional dancers hired for the occasion. Female dancers—there were also male dancers—were preferred. They were generally persons of considerable beauty and indifferent morals, and their performances were calculated to set forth, even at the cost of modesty for which they cared little, all the charms and attractiveness of their graceful figures. This class of persons, common in ancient Greece and Italy, were not altogether unknown in Palestine, at least in later times, if we believe the indication of Ecclus., ix, 4. The author of Eccles., impersonating Solomon, relates he had procured for his own enjoyment "singing men and singing women" (ii, 8), that is to say, very likely, dancers, for singing and dancing were scarcely distinct. At any rate, the performance of Herodias' daughter, recorded in Matt., xiv, 6, and the pleasure it afforded to Herod and his guests, show how Greek and Roman corruption had, about the time of Christ, made headway among the higher classes of Palestine.

Although perhaps less common, and certainly less elaborate than with us, social dancing appears nevertheless to have been a pleasurable diversion in ancient times, at least among the Jews. For, understood in the light of Judges, xxi, 21, such statements as those of Is., xvi, 10, and Jer., xxv, 30, indicate that the vintage season was one of public merriment exhibited in dances. Dancing was likewise indulged in, even by most grave persons (Bab. Talm., Ketuboth, 16b), at weddings and the Feast of Tabernacles. Men and women danced apart, as is still the custom in the East. Social dancing has undergone considerable development in the last few centuries, both as to prevalence and elaborateness. The introduction into modern fashion of the so-called round dances has quickened the interest of the old question as to the morality of dancing. As an exercise of physical culture, aside from the generally unhealthful conditions of dancing-halls, dancing may have advantages; we should not wonder, therefore, that from this viewpoint Plato recommended it. From the moral standpoint, religious and military dancing has never met with any criticism. Mimetic shows, on the contrary, mostly representing love-stories and mythological subjects, were at times so offensive to modesty that even the pagan emperors deemed it their duty to banish them repeatedly from Italy. In no wise better, as has been shown above, were scenic dances; and male and female dancers were in Rome considered, as are nowadays in Egypt, India, and Japan, the almehs, the bayaderes, and the geishas, as a lower and degraded class. According to Roman law, such persons were *infames*. Against their performances the Fathers of the Church raised a strong voice. The Decretals went farther, forbidding clerics to attend any mimic or histrionic exhibitions and enacting that any cleric taking active part in them should forfeit all his privileges, and that all persons engaged in professional dancing, mimic or histrionic performances, should incur irregularity and be thereby forever debarred from the clerical state and rendered incapable of receiving orders. As to social dancing, now so much in vogue, whilst in itself it is an indifferent act, moralists are inclined to place it under the ban, on account of the various dangers associated with it. Undoubtedly old national dances in which the performers stand apart, hardly, if at all, holding the partner's hand, fall under ethical censure scarcely more than any other kind of social intercourse. But, aside from the concomitants—place, late hours, *décolleté*, escorting, etc.—common to all such entertainments, round dances, although they may possibly be carried on with decorum and modesty, are regarded by moralists as fraught, by their very nature, with

the greatest danger to morals. To them perhaps, but unquestionably still more obviously to masked balls, should be applied the warning of the Second Council of Baltimore against "those fashionable dances, which, as at present carried on, are revolting to every feeling of delicacy and propriety". Needless to add that decency as well as the oft-repeated decrees of particular and general councils forbid clerics to appear, in any capacity whatever, on public dancing floors.

CHARLES L. SOUVAY.

Dandolo, ENRICO, Doge of Venice from 1192 to 1205; d., aged about a hundred years, in 1205. He belonged to one of the electoral families who claimed descent from the twelve tribunes by whom the first doge had been elected in 697. In the course of the twelfth century one of his relations was Patriarch of Grado for fifty years (Mon. Germ. Hist.: Script., XIV, 71). Of his life, we only know the rôle he played in history, but he appears to have been a man of uncommon physical and mental strength. At the age of almost a hundred he took the cross, and led the expedition against Constantinople; a fearless knight and the first to scale the walls of a city, he was also a distinguished diplomat, and his influence seems to have been predominant in the Fourth Crusade. He is first mentioned as taking part in the war between Venice and the Emperor Manuel Comnenus in 1171. The Venetians, decimated by the plague, were at Chios, and Dandolo was sent to Constantinople to make a treaty of peace. According to a tradition quoted by the "Chronicle of Novgorod", the emperor burnt out his eyes. Andrea Dandolo (1307-1354), a descendant of the same family, makes the statement that he was partly deprived of his sight in the service of his country (*pro salute patriæ constanter resistens, visu aliquantulum obtenebratus est*, "Chronica," ed. Muratori, xii, 298). It would seem that in spite of all the torture he underwent Dandolo was not completely deprived of sight (see Luchaire in "Journal des Savants", 1907, p. 110). In 1172 he went on a mission to William II of Sicily, then once more to Constantinople. In 1178 Dandolo was one of the forty electors commissioned, for the first time, to elect the doge. He himself was elected doge in his turn (1 June, 1192). In spite of his advanced age he displayed great activity, put an end to the commercial quarrels with Verona, declared war against the inhabitants of Zara for uniting their city to Hungary, and against the Pisans, who had attempted to establish themselves in Istria. In 1198 he concluded a treaty of alliance with the Emperor Alexis III of Constantinople, but as early as 1201 Venice had disagreements with Alexis, who broke all his promises and granted numerous privileges to the Genoese and the Pisans.

At this time (March, 1201) the leaders of the Fourth Crusade came to negotiate with Venice for the transport of the troops to the Orient; Dandolo himself took the cross as well as several other Venetian nobles. In consequence of circumstances not yet clearly explained, the crusade, originally directed against Egypt, was turned first against Zara and then against Constantinople. Streit (Venedig und die Wendung des vierten Kreuzzuges, 1877) attributes to Enrico Dandolo the principal rôle in the intrigues which preceded these events. Riant (Revue des questions historiques, XXIII, 109) has pointed out very truly that the initiative of the doge was strictly limited by the Constitution of Venice. If Dandolo directed the negotiations he did it in agreement with the

councils of Venice. With this reservation it may be admitted that Dandolo took the leading part in the negotiations which ended in the capture of Constantinople. In fact it was to the interest of Venice to re-establish order and security in the Byzantine Empire. Dandolo proposed the expedition against Zara (October, 1212) to the crusaders, as a way to pay off their debt to Venice. In the council of war held after the capture of Zara, according to the testimony of Robert de Clare, Dandolo was the first to suggest that the preliminary occupation of Greece would greatly facilitate the conquest of the Holy Land. Thereafter, during the entire expedition, his influence over the leaders of the Crusade grew from day to day. He presided at the council of war held at the Abbey of San Stefano, 23 June, 1203, and gave the wisest advice to the barons. In spite of his age he took an active part in the operations of the siege of Constantinople. While the barons attacked the walls in the Blachernæ quarter, Dandolo directed the assault of the Venetians against the sea walls and hoisted the gonfalon of St. Mark on his galley. The city captured, he wished to force Alexis IV to keep the promises made to the crusaders. Upon his refusal, Dandolo boldly defied him and advised the barons to undertake a second siege of the city. In the council of war, 1 March, 1204, Dandolo signed with them the treaty partitioning the empire between Venice and the crusaders.

After the capture of the city he had Boniface of Montferrat driven out of the empire; the barons offered him the imperial crown, but he loyally refused it, so as not to violate the Constitution of Venice. The new emperor Baldwin gave him the title of "Despot", and he settled in Constantinople. In 1205 he took part in the disastrous expedition against the Bulgarians; he died shortly afterwards and was buried in St. Sophia. Dandolo by his skill and energy established the political and commercial power of Venice in the Orient.

For bibliography see CRUSADES.

LOUIS BRÉHIER.

Daniel, the hero and traditional author of the book which bears his name. This name (Heb. דָּנִיֵּאל or דְּנִיֵּאל; Sept. Δανιήλ), which is also that of two other persons in the Old Testament [cf. I Paral., iii, 1; I Esd., viii, 2, and II Esd. (Nehem.), x, 6], means "God is my judge", and is thus a fitting appellation for the writer of the Book of Daniel, wherein God's judgments are repeatedly pronounced upon the Gentile powers. Nearly all that is known concerning the Prophet Daniel is derived from the book ascribed to him. He belonged to the tribe of Juda (i, 6), and was of noble, or perhaps of royal, descent (i, 3; cf. Josephus, *Antiquities of the Jews*, Bk. X, ch. x, § 1). When still a youth, probably about fourteen years of age, he was carried captive to Babylon by Nabuchodonosor in the fourth year of the reign of Joakim (605 B. C.). There, with three other youths of equal rank named Ananias, Misaël, and Azarias, he was entrusted to the care of Asphenez, the master of the king's eunuchs, and was educated in the language and learning of the "Chaldeans", whereby are meant the professors of divination, magic, and astrology in Babylon (i, 3, 4). From this passage Jewish tradition has inferred that Daniel and his companions were made eunuchs; but this does not necessarily follow; the master of the eunuchs simply trained these Jewish youths, among others, with a view to their entering the king's service (i, 5). Daniel now received the new name of Baltassar (Babyl. Balātsu-ušur, "Bel protect his life"), and, in agreement with Ananias, Misaël, and Azarias, who received similarly the new names of Sidrach, Misach, and Abdenago, respectively, asked and obtained permission not to use the special food from the royal table provided for those under training, and to be

limited to vegetable diet. At the end of three years Daniel and his three companions appeared before the king, who found that they excelled all the others who had been educated with them, and thereupon promoted them to a place in his court. Henceforth, whenever the prince tested them, they proved superior to "all the diviners, and wise men, that were in all his kingdom" (i, 7-20). Soon afterwards—either in the second or in the twelfth year of Nabuchodonosor's reign—Daniel gave a signal proof of his marvellous wisdom. On the failure of all the other wise men, he repeated and interpreted, to the monarch's satisfaction, the king's dream of a colossal statue which was made up of various materials, and which, on being struck by a stone, was broken into pieces, while the stone grew into a mountain and filled the whole earth. On this account, Daniel in Babylon, as Joseph of old in Egypt, rose into high favour with the prince, who not only bestowed on him numerous gifts, but also made him ruler of "the whole province of Babylon" and chief governor of "all the wise men". At Daniel's request, too, his three friends received important promotions (ii). The next opportunity afforded Daniel to give proof of his wisdom was another dream of Nabuchodonosor which, once more, he alone was able to interpret. The dream was of a mighty tree concerning which the king heard the command given that it should be cut down, and that "seven times" should "pass over" its stump, which had been left standing. This, explained Daniel, portended that in punishment of his pride the monarch would for a while lose his throne, be bereft of his reason, imagining himself an ox, and live in the open fields, but be again restored to his power, finally convinced of the supreme might and goodness of the Most High. With holy freedom, although in vain, the Prophet exhorted the king to forestall such punishment by atoning for his sins by deeds of mercy; and Daniel's prediction was fulfilled to the letter (iv). For a parallel to this, see Abydenus' account (second century B. C.) quoted in Eusebius (*Præp. Evang.*, IX, xli).

Nothing is expressly said as to what became of Daniel upon the death of Nabuchodonosor (561 B. C.); it is simply intimated in Daniel, v, 11 sqq., that he lost his high office at the court and lived long in retirement. The incident which brought him to public notice again was the scene of revelry in Baltasar's palace, on the eve of Cyrus's conquest of Babylon (538 B. C.). While Baltasar (Heb. Belsh'azzar, corresponding to the Babyl. Balātsu-ušur, "Bel protect the king") and his lords feasted, impiously drinking their wine from precious vessels which had been taken from the Temple at Jerusalem, there appeared the fingers of a man writing on the wall: "Mane, Thecel, Phares". These mysterious words, which none of the king's wise men was able to interpret, were explained by Daniel, who at length had been summoned, and who for his reward became one of the three chief ministers in the kingdom. The prophet, now at least

DANIEL—MICHELANGELO BUONARROTI (Sistine Chapel, Rome)

eighty years of age, remained in that exalted position under Darius the Mede, a prince possibly to be identified with Darius Hystaspes (485 B. C.). Darius, moreover, thought of setting him over all the kingdom (vi, 4), when Daniel's fellow-officers, fearing such an elevation, sought to compass his ruin by convicting him of disloyalty to the Crown. They secured from the king a decree forbidding any one, under penalty of being cast into the lions' den, to ask any petition of either god or man, except the monarch, for thirty days. As they had anticipated, Daniel nevertheless prayed, three times a day, at his open window, towards Jerusalem. This they reported to the king, and they forced him to apply the threatened punishment to the violator of the decree. Upon Daniel's miraculous preservation in the lions' den, Darius published a decree that all in his realm should honour and revere the God of Daniel, proclaiming that He is "the living and eternal God". And so Daniel continued to prosper through the rest of the reign of Darius, and in that of his successor, Cyrus the Persian (vi).

Such, in substance, are the facts which may be gathered for a biography of the Prophet Daniel from the narrative portion of his book (i-vi). Hardly any other facts are contributed to this biography from the second, and more distinctly apocalyptic, portion of the same work (vii-xii). The visions therein described represent him chiefly as a seer favoured with Divine communications respecting the future punishment of the Gentile powers and the ultimate setting up of the Messianic Kingdom. These mysterious revelations are referred to the reigns of Darius, Baltasar, and Cyrus, and as they are explained to him by the Angel Gabriel from an ever clearer disclosure of what is to happen in "the time of the end". In the deuterocanonical appendix to his book (xiii-xiv), Daniel reappears in the same general character as in the first part of his work (i-vi). Chapter xiii sets him forth as an inspired youth whose superior wisdom puts to shame and secures the punishment of the false accusers of the chaste Susanna. The concluding chapter (xiv), which tells the history of the destruction of Bel and the dragon, represents Daniel as a fearless and most successful champion of the true and living God. Outside of the Book of Daniel, Holy Writ has but few references to the prophet of that name. Ezekiel (xiv, 14) speaks of Daniel, together with Noe and Job, as a pattern of righteousness and, in chapter xxviii, 3, as the representative of perfect wisdom. The writer of the First Book of the Machabees (ii, 60) refers to his deliverance out of the mouth of the lions, and St. Matthew (xxiv, 15) to "the abomination of desolation, which was spoken of by Daniel the prophet". As might well be expected, Jewish tradition had been busy with completing the meagre account of Daniel's life as supplied by the Sacred Scriptures. Allusion has already been made to the tradition of the Jews, accepted by many Fathers of the Church, which states that he was made a eunuch in Babylon. Other Jewish traditions represent him as refusing divine honours proffered to him by Nabuchodonosor; they explain the reason why he was not forced with his three friends to worship that prince's statue in the plain of Dura (Dan., iii), he had been sent away by the king, who wanted to spare Daniel's life, for he knew full well that the prophet would never agree to commit such an act of idolatry; they give many fanciful details, as for instance concerning what happened to Daniel in the lions' den. Others endeavour to account for what they assume to be a fact, viz. that Yahweh's devout prophet did not return to God's land and city after the decree of restoration issued by Cyrus; while others again affirm that he actually went back to Judea and died there. Hardly less incredible and conflicting legends concerning Daniel's life and place of burial are met with in Arabic literature, although his name is not mentioned in the

Koran. During the Middle Ages there was a widespread and persistent tradition that Daniel was buried at Susa, the modern Shuster, in the Persian province of Khuzistan. In the account of his visit to Susa in A. D. 1165, Rabbi Benjamin of Tudela narrates that Daniel's tomb was shown him in the façade of one of the synagogues of that city; and it is shown there to the present day. The Roman martyrology assigns Daniel's feast as a holy prophet to 21 July, and apparently treats Babylon as his burial-place.

FRANCIS E. GIGOT.

Daniel, ANTHONY, Huron missionary, b. at Dieppe, in Normandy, 27 May, 1601, slain by the Iroquois at Teanaosæ, near Hillsdale, Limcoo Co., Ontario, Canada, 4 July, 1648. After two years' study of philosophy and one of law, he entered the Society of Jesus in Rome, 1 Oct., 1621. Sent to Canada in 1633, he was first stationed at Cape Breton, where his brother Captain Daniel had established a French fort in 1629. For two years he had charge at Quebec of a school for Indian boys, but with this exception he was connected with the Mission at Itonatiaria, in the Huron country, from July, 1634, until his death fourteen years later. In the summer of 1648, the Iroquois made a sudden attack on the mission while most of the Huron braves were absent. Father Daniel did all in his power to aid his people. Before the palisades had been scaled he hurried to the chapel where the women, children, and old men were gathered, gave them general absolution and baptized the catechumens. Daniel himself made no attempt to escape, but calmly advanced to meet the enemy. Seized with amazement the savages halted for a moment, then recovering themselves they discharged at him a shower of arrows. "The victim to the heroism of charity," says Bancroft, "died, the name of Jesus on his lips; the wilderness gave him a grave; the Huron nation were his mourners" (vol. II, ch. xxxii). Here Bancroft is in error. The lifeless body was flung into the burning chapel and both were consumed together. Daniel was the second to receive the martyr's crown among the Jesuits sent to New France, and the first of the missionaries to the Hurons. Father Ragueneau, his superior, speaks of him in a letter to the general of the order as "a truly remarkable man, humble, obedient, united with God, of never failing patience and indomitable courage in adversity" (Thwaites, tr. Relations, XXXIII, 253-269).

EDWARD P. SPILLANE.

Daniel, BOOK OF.—In the Hebrew Bible, and in most recent Protestant versions, the Book of Daniel is limited to its proto-canonical portions. In the Septuagint, the Vulgate, and many other ancient and modern translations of Holy Writ, it comprises both its proto- and its deuterocanonical parts, which two sets of parts have an equal right to be considered as inspired, and to be included in a treatment of the Book of Daniel. As in the Vulgate nearly all the deuterocanonical portions of that prophetic writing form a kind of appendix to its proto-canonical contents in the Hebrew text, the present article will deal first with the Book of Daniel as it is found in the

Hebrew Bible, and next, with its deuterocanonical portions.

PROTO-CANONICAL PORTIONS.—(1) *Contents*.—The Book of Daniel, as it now stands in the ordinary Hebrew Bibles, is generally divided into two main parts. The first includes a series of narratives which are told in the third person (chaps. i-vi), and the second, a series of visions which are described in the first person (chaps. vii-xii). The opening chapter of the first series may be considered as a preface to the whole work. It introduces to the reader the Hebrew heroes of the book, Daniel and his three fellow-captives, Ananias, Misael, and Azarias, and records the manner in which these noble youths obtained a high rank in Nabuchodonosor's service, although they had refused to be defiled by eating of the royal food. The second chapter relates a disquieting dream of the king which Daniel alone was able accurately to set forth and interpret. Nabuchodonosor's dream was that of a great statue made up of various materials and broken in pieces by a small stone which became a mountain and filled the whole earth. Daniel's interpretation was to the effect that the several parts of the statue with their various materials symbolized as many monarchies with their respective power, while the stone which destroyed them and grew into a great mountain prefigured a universal and everlasting kingdom which would break in pieces all the other kingdoms, and which, of course, is no other than that of the Messias.

The next section (iii, 1-30; Vulgate, iii, 1-23, 91-97) narrates how Daniel's three companions, having refused to worship a colossal statue set up by Nabuchodonosor, were cast into a highly-heated furnace in which they were preserved unharmed, whereupon the king issued a decree in favour of their God and promoted them to places of dignity. The following section (iii, 31-iv; Vulgate, iii, 98-iv) contains Nabuchodonosor's letter to all peoples and nations, recounting his dream of a mighty tree hewed down at God's bidding, and its interpretation by Daniel, together with its fulfilment in the form of a seven years' madness which befell the king, and the recovery from which was the occasion of his thankful letter. The fifth chapter (Heb. Bible, v-vi, 1) describes Baltasar's profane banquet, the mysterious handwriting on the wall, Daniel's interpretation of that writing, and the overthrow, on that same night, of Baltasar's kingdom. In the sixth chapter Daniel is represented as the object of the special favour of Darius the Mede, and also of the persistent jealousy of the other officers of the Crown, who finally succeed in having him thrown into the lions' den, because of his faithfulness in praying to God three times a day; upon Daniel's miraculous preservation, Darius decrees that all in his kingdom should "dread and fear the God of Daniel".

The second main part of the book in the Hebrew Bible (vii-xii) is taken up with four visions which Daniel describes in the first person. The first of these visions (ch. vii) is referred to the first year of Baltasar's reign, and offers a close parallel to the dream set forth and explained in the second chapter of the book. The nightly vision was of four several beasts coming out of the sea, and symbolical of the Gentile powers judged in due time by "the Ancient of days", and finally replaced by the universal and everlasting Messianic kingdom. Like the first, the second vision (ch. viii) is ascribed to the reign of Baltasar, and represents worldly powers under the figure of animals. Daniel sees a ram with two horns (the Medes and the Persians) pushing victoriously towards the west, north, and south, until it is struck by a he-goat (the Greeks) with a great horn (Alexander) between its eyes. This great horn is soon broken in its turn, and gives place to four others (the Greek kingdoms of Egypt, Syria, Macedonia, and Thrace), from one of which grows out a "little horn", namely Antiochus Epiphanes. This prince is not, indeed, named by the Angel Gabriel,

who explains the vision to Daniel, but is clearly designated by the description of the doings of the "little horn" against the host of heaven and its prince (God), desecrating "the sanctuary", interrupting the daily sacrifice for about three years and a half, and finally "broken without hand".

The next chapter contains the prophecy of the seventy weeks, which is referred to the first year of Darius, the son of Assuerus. As Daniel was supplicating God for the fulfilment of His promises of mercy in Jeremias, xxix, 10 sq., or xxv, 11, he was favoured with the vision of the Angel Gabriel. The heavenly messenger explained to him how the seventy years of desolation foretold by Jeremias should be understood. They are seventy weeks of years, falling into three periods of seven, sixty-two, and one weeks of years, respectively. The first period, one of seven weeks, or forty-nine years, will extend from the going forth of "the word" for the rebuilding of Jerusalem to "an anointed one, a prince". During the second, of sixty-two weeks or four hundred and thirty-four years, the Holy City will be built, though "in straitness of times". At the end of this period "an anointed one" will be cut off, and the people of a prince who shall come will "destroy" the city and the sanctuary; he will make a firm covenant with many for one week (or seven years), and during a half of this week he will cause sacrifice and oblation to cease and the abomination of desolation to be set up, until he meets with his fate. The last vision, ascribed to the third year of Cyrus, is recorded in chapters x-xii. Its opening part (x-xi, 1) gives a description of the vision with a reference to Media, Persia, and Greece. The second part (xi, 2-45) announces many events connected with four Persian kings, with Alexander and his successors, and more particularly with the deeds of a king of the north, i. e. Antiochus Epiphanes, against Egypt, the Jews, the Temple, etc., until he should come to an end. The conclusion of the vision (xii) declares how Michael (the guardian angel of Israel) will deliver the people. Mention is made of a resurrection of the dead, followed by rewards and punishments. For 1290 days, or about three and one half years, the daily sacrifice will cease and the abomination of desolation will be set up. Blessed is he who continues steadfast till 1335 days.

(2) *Object and Unity*.—From these contents it readily appears that the Book of Daniel has not for its object to give a summary historical account of the period of the Babylonian Exile, or of the life of Daniel himself, since both its parts profess to give only a few isolated facts connected with either the Exile or the Prophet's life. From the same contents it can also be readily seen that the object of that sacred writing is not to record in substance prophetic addresses similar to those which make up the works ascribed to distinct prophets in the Old-Testament literature. In respect to both matter and form, the contents of the Prophecy of Daniel are of a peculiar kind which has no exact parallel in Holy Writ, except in the Apocalypse of St. John. In Daniel, as in this last book of the Bible, one is in presence of contents whose general purpose is undoubtedly to comfort God's people under the ordeal of a cruel persecution, chiefly by means of symbolical visions bearing on "the time of the end". This is the obvious purpose of the four visions recorded in the second part of the Book of Daniel (chaps. vii-xii), and also of Nabuchodonosor's dream as given and explained in the second chapter of the first part of that inspired writing: the persecution therein in view is that of Antiochus Epiphanes, and the Jews are to be comforted by the assured prospect both of the fate that awaits their oppressor and of the setting up of God's universal and eternal kingdom. Nor have the narratives in chapters iii-vi a different general purpose: in each and in all of them the generous and constant servants of the true God—Daniel and his fellow captives—triumph in the end, while their op-

pressors, however mighty or numerous, are ultimately punished or made to acknowledge and promote the glory of the God of Israel. This apocalyptic object of the Book of Daniel is admitted by most scholars of the present day, and is in harmony with the place assigned to that sacred writing in the Hebrew Bible, where it appears not among "the Prophets", or second great division of the original text, but among "the Writings", or third main division of that text.

As apocalyptic writings usually bear the impress of compilation, one might not unnaturally be tempted to regard the Book of Daniel—whose apocalyptic character has just been described—as a compilatory work. In fact, many scholars of the last century—some of whom were Catholic—have set forth positive grounds to prove that the author of the book has actually put together such documents as could make for his general purpose. At the present day, however, the opposite view, which maintains the literary unity of the Prophecy of Daniel, is practically universal. It is felt that the uniform plan of the book, the studied arrangement of its subject-matter, the strong similarity in language of its two main parts, etc. are arguments which tell very powerfully in favour of the latter position.

(3) *Authorship and Date of Composition.*—Once it is admitted that the Book of Daniel is the work of one single author, there naturally arises the important question: Is this sole writer the Prophet Daniel who composed the work during the Exile (586–536 B. C.), or, on the contrary, some author, now unknown, who wrote this inspired book at a later date, which can still be made out? The traditional view, in vigour chiefly among Catholics, is to the effect that the whole work, as found in the Hebrew Bible, should be directly referred to Daniel, whose name it bears. It admits, indeed, that numerous alterations have been introduced into the primitive text of the book in the course of ages. It maintains, nevertheless, that both the narratives (chaps. i–vi) wherein Daniel seems to be described by some one else as acting as recorded, and the symbolic visions (chaps. vii–xii) wherein he describes himself as favoured with heavenly revelations, were written, not simply by an author who was contemporary with that prophet and lived in Babylon in the sixth century B. C., but by Daniel himself. Such difference in the use of persons is regarded as arising naturally from the respective contents of the two parts of the book: Daniel employed the third person in recording events, for the event is its own witness; and the first person in relating prophetic visions, for such communications from above need the personal attestation of those to whom they are imparted. Over against this time-honoured position which ascribes to Daniel the authorship of the book which bears his name, and admits 570–536 B. C. as its date of composition, stands a comparatively recent theory which has been widely accepted by contemporary scholars. Chiefly on the basis of historical and linguistic grounds, this rival theory refers the origin of the Book of Daniel, in its present form, to a later writer and period. It regards that apocalyptic writing as the work of an unknown author who composed it during the period of the Machabees, and more precisely in the time of Antiochus IV, Epiphanes (175–164 B. C.).

The following are the extrinsic testimonies which conservative scholars usually and confidently set forth as proving that the Book of Daniel must be referred to the well-known Prophet of that name and consequently to a much earlier date than that advocated by their opponents. Christian tradition, both in the East and in the West, has been practically unanimous from Christ's time to the present day in admitting the genuineness of the Book of Daniel. Its testimony is chiefly based on Matthew, xxiv, 15: "When therefore you shall see the abomination of des-

olation, which was spoken of by Daniel the prophet, standing in the holy place: he that readeth let him understand", in which passage Christ treats Daniel's visions as true oracles, and expressly names that Prophet as their writer. In so doing, it is argued, Christ endorsed and confirmed by His authority the view which was then received among the Jews, and which regarded Daniel as the author of the book which bears his name. Jewish tradition, both during and before Christ's time, bears also distinct witness to the genuineness of the Prophecy of Daniel. In his "Antiquities of the Jews" (Bk. XI, ch. viii, §5), the learned Jewish priest and Pharisee, Josephus (about A. D. 40–100), writes: "When the Book of Daniel was shown to Alexander the Great (d. B. C. 323), wherein Daniel declared that one of the Greeks should destroy the empire of the Persians, he supposed that himself was the person intended". Before the Christian Era, the First Book of the Machabees (written very early in the first century B. C.) shows acquaintance with the Septuagint version of the Prophecy of Daniel (cf. I Mach., i, 54, with Dan., ix, 27; I Mach., ii, 59, 60, with Dan., iii, vi), whence it is inferred (1) that at that date the Book of Daniel must have been for some considerable time rendered into Greek; and (2) that its composition must have preceded this translation by some considerable time more, so that its origin under Antiochus Epiphanes is hardly probable. Again, the Sibylline Oracles (Bk. III, verses 388 sqq.), supposed to have been written about 170 B. C., contain an allusion to Antiochus IV, and to the ten horns of Dan., vii, 7, 24, and therefore point to an earlier date than that which is proposed by the advocates of the recent theory. More particularly still, the Septuagint translation of the Pentateuch, made about 285 B. C., exhibits in Deut., xxxii, 8, a doctrine of guardian angels which it has apparently borrowed from the Book of Daniel, and thus tends to prove the existence of that inspired writing long before the time of Antiochus Epiphanes. Finally, according to Josephus (Contra Apion, VIII), the Old Testament Canon of the Jews of Palestine, which has always included Daniel among "the Writings", was closed by Esdras (middle of the fifth century B. C.), that is to say, at a date so near the composition of the book that its genuineness could then be easily ascertained, and would naturally be the reason for the insertion of the work into the Palestinian Canon.

To strengthen the inference drawn from these external testimonies, conservative scholars appeal to the following direct and indirect intrinsic grounds. Throughout the second part of his book Daniel speaks in the first person and thereby gives himself implicitly as the writer of chapters vii–xii. Nay more, in the words: "Then he [Daniel] wrote the dream and told the sum of the matters", we have a statement which ascribes expressly to him the writing of the first vision (chap. vii) and, implicitly, that of the subsequent visions, which are indissolubly bound up with the opening one. Now, if the visions described in the second part of the book were recorded by Daniel himself, the same thing must be admitted in regard to narratives which make up the first part of the book (chaps. i–vi), because of the acknowledged unity of the work. And in this way direct intrinsic evidence is considered as making for the Danielic authorship. The indirect intrinsic grounds point in the same direction, inasmuch as they tend to show that the author of the Book of Daniel was (1) a resident in Babylon; (2) one who wrote in the period to which the Prophet Daniel belonged; and (3) one who is best identified with that Prophet himself. The first of these positions, it is said, is borne out by the close acquaintance which the author evinces in the historical portion of the work (chaps. i–vi) with the manners, customs, history, religion, etc. of the Babylonians: the minute details he refers to, the local colouring of his descrip-

tions, his exact references to facts, are such as only a resident in Babylon could be fairly supposed to possess. It is likewise borne out by a comparison of the form of Daniel's prophecies in chapters vii-xii with the general surroundings of one living in Babylon and with the Babylonian monuments in particular: the imagery of Daniel's vision in the seventh chapter, for instance, is nearly the same as that found on monuments in the ruins of Nineve; and in chapters viii, 2 (Heb. text), and x, 4, the river-banks are most appropriately given as the scenes of Daniel's visions. While thus very familiar with Babylonia, the author of the Book of Daniel betrays no such special knowledge of Persia and Greece as would be natural to expect if, instead of living in the sixth century B. C., he had been a contemporary of Antiochus Epiphanes.

This absence of distinct knowledge of the times subsequent to the Babylonian period has sometimes been urged to prove the second position, viz. that the writer belonged to that period, and to no other. Oftener, however, and more strongly, the linguistic features of the Book of Daniel have been brought forth to establish that second position. It has been affirmed, on the one hand, that the Hebrew of Daniel, with its numerous Aramaisms, bears a close affinity to that of Ezechiel, and is therefore that of the period of the Exile; and, on the other hand, that the Aramaic portions of Daniel (ii, 4-vii) are in wonderful agreement with those of Esdras, while they are distinguished by many Hebrew idioms from the language of the earliest Aramaic paraphrases of the Old Testament. In particular, the easy transition from the Hebrew to the Aramaic (ii, 4), and the reverse (viii, 1 sqq.), is explicable, we are told, only on the supposition that the writer and the readers of the book were equally familiar with both; this free handling of both languages suits not the Machabean age but that of Daniel, or of the Exile, in which both tongues were naturally in equal use. The intrinsic grounds making for the last position, viz. that the author of the Book of Daniel is best identified with the Prophet of that name, may be summed up in this simple statement: while no other seer during the Babylonian Exile has been, and indeed can be, named as the probable recorder of the visions described in that inspired writing, Daniel, owing to his position at the court of Babylon, to his initiation into the wisdom of the Chaldees, and to the problem of his calling as God had shown it to him, was eminently fitted at that time for writing the prophecies which had been imparted to him for the comfort of the Jews of his time and of subsequent ages.

Scholars who have examined closely and without bias the details of the foregoing external and internal evidence have come to the conclusion that this evidence shows that rationalistic critics are decidedly wrong in denying totally the historical character of the Book of Daniel. At the same time, many among them still question the absolute cogency of the extrinsic and intrinsic grounds set forth to prove the Danielic authorship. These latter scholars rightly reject as untrue the statement of Josephus, which refers the close of the Old Testament Canon to the time of Esdras; and in the well-known bias of the same Jewish historian for magnifying whatever concerns his nation they have a valid reason for doubting his assertion that the prophecies of Daniel were shown to Alexander the Great when this prince passed through Palestine. The alleged reference to Daniel's expressions in the Septuagint version of Deuteronomy they easily explain as a later gloss, and the actual acquaintance of the First Book of the Machabees with the Prophecy of Daniel they not unnaturally regard as compatible with the non-Danielic authorship, and indeed with the composition of the Book of Daniel in the time of Antiochus IV. As regards the last external testimony in favour of the genuineness of that sacred

writing, viz. Christ's words concerning Daniel and his prophecy, these same scholars think that, without going against the reverence due to Christ's Person, and the credence due His words, they have a right not to consider the passage appealed to in Matt., xxiv, 15, as absolutely conclusive: Jesus does not say explicitly that Daniel wrote the prophecies that bear his name; to infer this from His words is to assume something which may well be questioned, viz. that in referring to the contents of a book of Holy Writ, He necessarily confirmed the traditional view of His day concerning authorship; in point of fact, many scholars whose belief in Christ's truthfulness and Divinity is beyond question—such Catholics, for instance, as Father Souciet, S. J., Bishop Hanneberg, François Lenormant, and others—have thought that Christ's reference to Daniel in Matt., xxiv, 15, does not bear out the Danielic authorship as it is claimed by conservative scholars chiefly on the basis of His words.

Having thus shown, to their own satisfaction, the inconclusive character of the external evidence, or mainstay in favour of the traditional view, the opponents of the Danielic authorship endeavour to prove that internal evidence points decisively to the late origin which they ascribe to the Book of Daniel. Briefly stated, the following are their principal arguments. As it is now found in the Hebrew Bible, the Book of Daniel contains historical references which tend to prove that its author is not an eyewitness of the events alluded to, as would be the case if he were the Prophet Daniel. Had this author lived during the Exile, it is argued, he would not have stated that "in the third year of the reign of Joakim, king of Juda, Nabuchodonosor, king of Babylon, came to Jerusalem, and besieged it" (Dan., i, 1), since this conflicts with Jeremias, xxxvi, 9, 29; he would not have repeatedly used the word "Chaldeans" as the name of a learned caste, this sense being foreign to the Assyro-Babylonian language, and of an origin later than the Exile; he would not have spoken of Baltasar as "king" (v, 1, 2, 3, 5, etc., viii, 1), as the "son of Nabuchodonosor" (v, 2, 18, etc.), since it is ascertained that Baltasar was never king, and that neither he nor his father had any blood-relationship to Nabuchodonosor; he would have avoided the statement that "Darius the Mede succeeded to the kingdom" of Baltasar (v. 31), since there is no room for such a ruler between Nabonahid, Baltasar's father, and Cyrus, the conqueror of Babylon; he could not have spoken of "the Books" (Dan., ix, 2—Heb. text), an expression which implies that the prophecies of Jeremias formed part of a well-known collection of sacred books, which assuredly was not the case in the time of Nabuchodonosor and Cyrus, etc. The linguistic features of the book, as it exists in the Hebrew Bible, point also, it is said, to a date later than that of Daniel: its Hebrew is of the distinctly late type which followed Nehemias' time; in both its Hebrew and its Aramaic portions there are Persian words, and at least three Greek words, which of course should be referred to a period later than the Babylonian Exile.

Not satisfied with the merely negative inference that the Book of Daniel was not composed during the Captivity, the opponents of the Danielic authorship strive to reach a positive conclusion as to the date of its origin. For this purpose, they examine the contents of that inspired writing, and they think that by viewing both its parts in the light of history, they are led to refer definitely its composition to the time of Antiochus Epiphanes. It can be readily seen, we are told, that the interest of the visions which make up the second part of Daniel culminates in the relations subsisting between the Jews and Antiochus. It is this prince who manifestly is the subject of Dan., viii, 9-13, 23-25, and who is very probably "the little horn" spoken of in Dan., vii, 8, 20, 21, 25, while events of his reign are apparently described in Dan., ix, 25—

27, and undoubtedly so in xi, 21-45; xii, 6, 7, 10-12. Whoever bears this in mind, it is argued, is led by the analogy of Scripture to admit that the book belongs to the period of Antiochus. The rule is that "even when the prophets of the Old Testament deliver a Divine message for far distant days, they have in view the needs of the people of their own day. They rebuke *their* sins, they comfort *their* sorrows, they strengthen *their* hopes, they banish *their* fears. But of all this there is no trace in Daniel, if the book was written in the time of Cyrus. Its message is avowedly for the time of the end, for the period of Antiochus and the Machabees". And this inference is confirmed by the fact that the narratives told in the first part, when studied in reference to the events of Antiochus's reign, are found to impart lessons especially suited to the Jews of that period. The question of eating meat (Dan., i. 8 sqq.) was at that time a test of faith (cf. I Mach., i, 65 sq.; II Mach., vi, 18 sqq.; vii). The lessons of the fiery furnace and the lions' den (Dan., iii, vi) were most appropriate in the time of the Machabees when the Jews were ordered on the pain of death to worship foreign deities (cf. I Mach., i, 43-54). The accounts of the humbling of Nabuchodonosor (Dan., iv) and the fate of Baltasar (Dan., v) were also particularly calculated to comfort the Jews so cruelly oppressed by Antiochus and his officers. Such a view of the date of the Book of Daniel is in harmony with the apocalyptic character of the whole work, and can be confirmed, it is said, by certain facts in the external history of the book, such for instance as its place among "the Writings" in the Palestinian Canon, the absence of all traces of Daniel's influence upon the post-exilic literature before the Machabean period, etc. Despite the fact that some of these arguments against the Danielic authorship have not yet been fully disproved, Catholic scholars generally abide by the traditional view, although they are not bound to it by any decision of the Church.

(4) *Prophecy of the Seventy Weeks.*—Several sections of the Book of Daniel contain Messianic predictions the general import of which has been sufficiently pointed out in setting forth the contents and object of that inspired writing. One of these predictions, however, claims a further notice, owing to the special interest connected with its contents. It is known as the prophecy of the seventy weeks, and is found in an obscure passage (ix, 24-27), of which the following is a literal rendering: "24. Seventy weeks [literally, *heptads*] have been decreed upon thy people and thy holy city, to close transgression and to make an end of sins, and to expiate iniquity, and to bring in everlasting righteousness, and to seal vision and prophet, and to anoint a most holy [literally: *holiness of holinesses*]. 25. Know then and discern: from the going forth of the word to build again Jerusalem until an anointed one, a prince, [there are] seven weeks, and for sixty-two weeks it shall be built again [with] broad place and moat, and that in straitness of times. 26. And after the sixty-two weeks an anointed one will be cut off and he will have no . . . [Heb. *וְלֹא יִהְיֶה*; Sept. *καὶ οὐκ ἔσται*]; and the people of a prince who shall come will destroy the city and the sanctuary, and the end thereof [will be] in a flood, and until the end [shall be] war, a sentence of desolations. 27. He will make a firm covenant with many for a week, and for half a week he shall cause sacrifice and oblation to cease, and instead thereof *עַל כְּנֶגֶד*, a more probable reading than the present one: *עַל כִּנְגֵּה* 'upon the wing' the abomination that makes desolate, and that until the consummation and that which is determined be poured upon the desolator."

The difficulty of rendering this passage of the Hebrew text is only surpassed by that of interpreting its contents. Most commentators admit, indeed, that the seventy weeks are weeks of years, which fall into three periods of 7, 62, and 1, weeks of years, respec-

tively, but they are still at variance with regard to both the exact starting point and the precise terminus of the seventy weeks. Most of them, too, regard the prophecy of the seventy weeks as having a Messianic reference, but even all Catholic interpreters do not agree as to the precise nature of this reference, some among them, after Hardouin, S. J., Calmet, O. S. B., etc., seeing in the contents of the prophecy a typical reference to Christ, in preference to the literal one which has been, and is still, more prevalent in the Church. Briefly stated, the following are the three principal interpretations which have been given by Dan., ix, 24-27. The first is the ancient view, which may be called traditional, and which maintains that the prophecy of the seventy weeks refers directly to the appearance of Christ in the flesh, His death, His establishment of the New Covenant, and the destruction of Jerusalem by the Romans. The second is that of most recent scholars, chiefly non-Catholic, who refer the whole passage directly to the time of Antiochus Epiphanes, with (Christians generally) or without (Rationalists at large) a typical reference to Christ. The third is that of some Fathers of the Church and some recent theologians who understand the prophecy in an eschatological sense, as a prediction of the development of the Kingdom of God from the end of the Exile to the fulfilment of that kingdom at Christ's second Advent.

(5) *Text and Principal Ancient Versions.*—One of the chief reasons of the obscurity which surrounds the interpretation of Dan., ix, 24-27, is found in the imperfect condition in which the original text of the Book of Daniel has come to us. Not only in the prophecy of the seventy weeks, but also throughout both its Hebrew (Dan., i-ii, 4; viii-xii) and its Aramaic (ii, 4-vii) sections, that text betrays various defects which it is easier to notice and to point out than to correct. Linguistics, the context, and the ancient translations of Daniel are most of the time insufficient guides towards the sure restoration of the primitive reading. The oldest of these translations is the Greek version known as the Septuagint, whose text has come down to us, not in its original form, but in that given to it by Origen (died about A. D. 254) for the composition of his Hexapla. Before this revision by Origen, the text of the Septuagint was regarded as so unreliable, because of its freedom in rendering, and of the alterations which had been introduced into it etc., that, during the second century of our era, it was discarded by the Church, which adopted in its stead the Greek version of Daniel made in that same century by the Jewish proselyte, Theodotion. This version of Theodotion was apparently a skilful revision of the Septuagint by means of the original text, and is the one embodied in the authentic edition of the Septuagint published by Sixtus V in 1587. In Dr. H. B. Swete's edition of the Septuagint, Origen's revision and Theodotion's version are conveniently printed side by side on opposite pages (vol. III, pp. 498 sqq.). The version of the proto-canonical portions of the Book of Daniel in the Latin Vulgate is St. Jerome's rendering from practically the same Hebrew and Aramaic text as is found in the current Hebrew Bibles.

DEUTERO-CANONICAL PORTIONS.—The Hebrew and Aramaic sections of the Book of Daniel, thus far dealt with, are the only ones found in the Hebrew Bible and recognized by Protestants as sacred and canonical. But besides those sections, the Vulgate, the Greek translations of Daniel (Septuagint and Theodotion), together with other ancient and modern versions, contain three important portions, which are deuterocanonical. These are: (1) the Prayer of Azarias and the Song of the Three Children, usually inserted in the third chapter between the twenty-third and the twenty-fourth verses; (2) the history of Susanna, found as ch. xiii, at the end of the book; (3) the his-

tory of the destruction of Bel and the dragon, terminating the book as ch. xiv. The first of these fragments (Dan., iii, 24-90) consists of a prayer in which Azarias, standing in the midst of the furnace, asks that God may deliver him and his companions, Ananias and Misael, and put their enemies to shame (verses 24-45); a brief notice of the fact that the Angel of the Lord saved the Three Children from all harm, whereas the flame consumed the Chaldeans above the furnace (46-50); and a doxology (52-56) leading on to the hymn familiarly known as the "Benedicite" (57-90). The second fragment (ch. xiii) tells the history of Susanna. She was the faithful wife of a wealthy Jew named Joakim, and resident in Babylon. Accused falsely of adultery by two unworthy elders whose criminal advances she had repelled, she was sentenced to death by the tribunal before which she had been arraigned. As Susanna was led forth to execution, Daniel, moved by God, remonstrated with the people upon permitting without sufficient inquiry the condemnation of a daughter of Israel. He examined himself the two pretended witnesses separately, and proved their testimony to be self-contradictory. In fulfilment of the Law of Moses (Deut., xix, 18, 19), the two elders were put to death, "and Daniel became great in the sight of the people from that day, and thenceforward." The last deuterocanonical part of Daniel (ch. xiv) contains the narrative of the destruction of Bel and the dragon. It recounts first the clever manner in which Daniel deceived the king, Cyrus, who regarded a Babylonian idol, called Bel, as "a living god" that actually ate ample offerings, whereas these were really consumed at night by the pagan priests and their families: in consequence, these impostors were put to death, and Bel and its temple destroyed. It records, in the second place, how Daniel caused to die a great dragon that the Babylonians worshipped, and that the king wished him to adore as "a living god". Enraged at this, the people forced the king to deliver Daniel to them, and cast the Prophet into a lions' den. Daniel remained there unharmed for six days, and fed by the prophet Habacuc who was miraculously transported from Judea to Babylon. On the seventh day, the king having found Daniel alive in the midst of the lions, praised aloud the God of Daniel and delivered the Prophet's accusers to the fate which Daniel had miraculously escaped.

The Greek is, indeed, the oldest form under which these deuterocanonical parts of the Book of Daniel have come down to us; but this is no decisive proof that they were composed in that language. In fact, the greater probability is in favour of a Hebrew original no longer extant. It is plain that the view which regards these three fragments as not originally written in Greek makes it easier to suppose that they were from the beginning integral parts of the book. Yet, it does not settle the question of their date and authorship. It is readily granted by conservative scholars (Vigouroux, Gilly, etc.) that the last two are probably from a different and later author than the rest of the book; while it is maintained, on the contrary, by nearly all Catholic writers, that the Prayer of Azarias and the Song of the Three Children cannot be dissociated from the preceding and the following context in Dan., iii, and that therefore they should be referred to the time of Daniel, if not to that Prophet himself. In reality, there are wellnigh insuperable difficulties to such an early date for Dan., iii, 24-90, so that this fragment also, like the other two, should most likely be ascribed to some unknown Jewish author who lived long after the Exile. Lastly, although the deuterocanonical portions of Daniel seem to contain anachronisms, they should not be treated—as was done by St. Jerome—as mere fables. More sober scholarship will readily admit that they embody oral or written traditions not altogether devoid of historical value.

But, whatever may be thought concerning these literary or historical questions, there cannot be the least doubt that in decreeing the sacred and canonical character of these fragments the Council of Trent proclaimed the ancient and morally unanimous belief of the Church of God.

FRANCIS E. GIGOT.

Daniel, CHARLES, b. 31 Dec., 1818, at Beauvais, France; d. 1 Jan., 1893, at Paris. He joined the Society of Jesus in 1841, was professor of rhetoric in the novitiate at Saint Acheul, and in 1857, with the assistance of Father Gagarin, founded the "Études de théologie et d'histoire", a magazine that soon became a monthly publication. Father Daniel edited it with ability until 1870. He was a man of extensive and accurate learning, of unquestionable taste, and he had an unusually receptive and assimilative mind. He contributed to the "Études" many articles on philosophical subjects: "Optimism" (1859), "Positivism" (1860), "Leibniz and Saisset" (1861), "The Vatican Council" (1869-1870); "Protestantism: the Crisis of Protestantism in France" (1862), "The Organization of Protestants in France" (1863); biographies of Père Beauregard (1858), Mme. Swetchine (1864), Ch. Lenormand (1860), and P. Léon Doudouy, martyr of the Paris Commune (1892).

Other more important works are: "Des Etudes classiques dans la société Chrétienne" (1853); "Histoire de la bienheureuse Marguerite Marie et des origines de la dévotion au Sacré Cœur" (1865), translated into Italian, Polish, and Chinese; "La vie du P. Alexis Clerc, marin et Jésuite" (1876, English tr., New York, 1880), and "Les Jésuites instituteurs de la jeunesse au XVII^e et au XVIII^e siècle" (1880). His "Questions actuelles: religion, philosophie, histoire, art et littérature" is preceded by a sketch of the author by Fathers Mercier and Fontaine, S. J. (Poitiers, 1895).

J. LIONNET.

Daniel, GABRIEL, historian and controversialist, b. at Rouen, France, 8 Feb., 1649; d. at Paris, 23 June, 1728. He entered the Society of Jesus at Paris in 1667, and after making his last vows at Rennes, 1683, was assigned to the professed house of Paris where his extraordinary talents resulted in his being appointed historiographer of France by Louis XIV. Of the published writings of Father Daniel, consisting of philosophical, theological, and historical treatises, many have been translated into German, English, Spanish, Italian, and Latin. In the first class perhaps the most famous was the oft-reprinted "Voyage du monde de Descartes", a refutation of the vortex theory of that philosopher. His refutation of Pascal's "Provincial Letters", which underwent several revisions and reprints, and his published correspondence with Natalis Alexander respecting the Dominican and Jesuit doctrines of Probabilism, Grace, Predestination, etc., stand out conspicuously among his theological works. He published also many shorter works, principally against the Jansenists, and one volume of a projected course of theology for seminaries.

But it is as the author of the celebrated "Histoire de France" that Father Daniel has achieved his most

lasting fame. This work in seventeen volumes was the fruit of his ripest years and was the most complete and accurate history of France that had then appeared (1713). It is still valuable, though overshadowed by more recent works. It went through many editions, and an abridgment of it in eight volumes made by the author was translated into German, English, and Italian. Besides this, a valuable work from original sources, the "Histoire de la milice française", contributed much to Daniel's reputation as a scholarly historian. The best edition of his great history is that of Paris (1755-60), in seventeen quarto volumes.

JOHN F. X. MURPHY.

Daniel, JOHN, b. 1745; d. in Paris, 3 October, 1823; son of Edward Daniel of Dorton, Lancashire, and great-nephew of the Rev. Hugh Tootell, better known as Dodd the historian. He was educated first at Dame Alice's School, Fernyhalgh, and then at Douai, where he was ordained priest and made professor of philosophy (1778) and afterwards of theology. When the president, Edward Kitchen, alarmed by the French Revolution, resigned his office in 1792, Daniel was appointed president, and was soon after, with his professors and students, taken prisoner and confined first at Arras and then at Dourlens. They were taken back, 27 Nov., 1794, to the Irish College at Douai and in February, 1795, were allowed to return to England. It is usually stated that Mr. Daniel was then appointed president of the college at Crook Hall (since removed to Ushaw), but this is difficult to reconcile with contemporary documents in the Westminster diocesan archives; he did not in fact take up residence at Crook Hall, but retired to Lancashire till 1802, when he went to Paris in order to recover the property of Douai College and other British establishments. After 1815 compensation amounting to half a million pounds was paid by the French Government, but the English Government confiscated this money, neither returning it to France nor allowing the English Catholics to receive it. Mr. Daniel was the last *de facto* president of Douai, though the Rev. Francis Tuite was appointed titular president, to succeed him in prosecuting the claims. Mr. Daniel wrote an "Ecclesiastical History of the Britons and Saxons" (London, 1815, 1824).

Narrative of the Seizure of Douay College in Catholic Magazine (1834), I; GILLow, *Bibl. Dict. Eng. Cath.* (London, 1885), II; COOPER in *Dict. Nat. Biog.* (London, 1888), XIV, merely abbreviating Gillow; KIRK, *Biographies of Eighteenth Century Catholics* (London, 1908); *Macmillan's Magazine*, XLI, 245; also several unpublished manuscript sources in Westminster Diocesan Archives and Ushaw College Archives.

EDWIN BURTON.

Daniel and Companions, SAINT, Friars Minor and martyrs; dates of birth unknown; d. 10 October, 1227. The martyrdom of St. Berard and his companions in 1219 had inflamed many of the religious of the Order of Friars Minor with the desire of preaching the Gospel in heathen lands; and in 1227, the year following St. Francis's death, six religious of Tuscany, Agnellus, Samuel, Donulus, Leo, Hugolinus, and Nicholas, petitioned Brother Elias of Cortona, then vicar-general of the order, for permission to preach the Gospel to the infidels of Morocco. The six missionaries went first to Spain, where they were joined by Daniel, Minister Provincial of Calabria, who became their superior. They set sail from Spain and on 20 September reached the coast of Africa, where they remained for a few days in a small village inhabited mostly by Christian merchants just beyond the walls of the Saracen city of Ceuta. Finally, very early on Sunday morning, they entered the city, and immediately began to preach the Gospel and to denounce the religion of Mahomet. They were soon apprehended and brought before the sultan who, thinking that they were mad, ordered them to be cast into

prison. Here they remained until the following Sunday when they were again brought before the sultan, who, by promises and threats, endeavoured in vain to make them deny the Christian religion. They were all condemned to death. Each one approached Daniel, the superior, to ask his blessing and permission to die for Christ. They were all beheaded. St. Daniel and his companions were canonized by Leo X in 1516. Their feast is kept in the order on the thirtieth of October.

STEPHEN M. DONOVAN.

Daniel of Winchester (DANIEL), Bishop of the West Saxons; and ruler of the See of Winchester from 705 to 744; died in 745. The prominent position which he held among the English clergy of his time can best be appreciated from the fact that he was the intimate friend of St. Aldhelm at Sherborne, of the Venerable Bede at Jarrow and of St. Boniface in Germany. Daniel was consecrated to succeed Bishop Hedda of Wessex whose vast diocese was then broken up. Dorsetshire, Wiltshire, Somerset, and Berkshire became the see of Sherborne under St. Aldhelm, while Daniel retained only Hampshire, Surrey, and Sussex, and of these Sussex soon after was constituted a separate diocese. Daniel like Aldhelm (q. v.) had been educated under the Irish scholar Maildubh at Malmesbury and it was to Malmesbury that he retired in his old age when loss of sight compelled him to resign the bishopric. There, no doubt, he had also learnt the scholarship for which he was famous among his contemporaries and which made Bede turn to him as the man best able to supply information regarding the church history of the south and west of Britain. Daniel, however, is best remembered for his intimate connexion with St. Boniface. It was from Daniel that the latter received commendatory letters when he started for Rome, and to Daniel he continually turned for counsel during his missionary labours in Germany. Two letters of the Bishop of Winchester to Boniface are preserved (see Haddan and Stubbs, "Councils", III, 304 and 343) and give an admirable impression of his piety and good sense. In the second of these epistles, which was written after his loss of sight, Daniel takes a touching farewell of his correspondent: "Farewell, farewell, thou hundredfold dearest one." Daniel had made a pilgrimage to Rome in 721 and in 731 assisted at the consecration of Archbishop Tatwine. He seems never to have been honoured as a saint. A vision recorded in "Monumenta Moguntina", No. 112, perhaps implies that he was considered to be lacking in energy; none the less it would follow from William of Malmesbury's reference (Gest. Pont., I, 357) to a certain stream in which Daniel used to stand the whole night long to cool his passions, that he was a man of remarkable austerity.

STUBBS in *Dict. Christ. Biog.*, s. v.; VENABLES in *Dict. Nat. Biog.*, s. v.; PLUMMER ed., *Bede, Opera Historica*, especially Vol. II, 307-308; BRIGHT, *Chapters of Early Eng. Ch. Hist.*, 424, 425. The materials of any biography must be drawn mainly from Bede, William of Malmesbury, and Florence of Worcester. The correspondence with Boniface has been most recently edited in the first volume of *Epistole in the Monumenta Germanica Historica*. See also CHEVALIER, *Bio-bibliographie*.

HERBERT THURSTON.

Daniel the Stylite. See STYLITES.

Dansara, a titular see in Osroene. Stephanus Byzantius mentions Dansara as a town near Edessa (Orfa). Procopius (*De ædif.*, II, 6) says it was one of the castles around Theodosiopolis (Rhasina), which were fortified by Justinian. Dansara, probably at the same time, became an episcopal see suffragan to Edessa, for it figures in the "Notitia episcopatum" of

the Patriarch of Antioch, Anastasius (Vailhé in *Echos d'Orient*, X, 90 sqq. and 139 sqq.), and its bishop Nonnus was present at the Fifth Ecumenical Council, held at Constantinople in 553 (Lequien, *Or. christ.*, II, 983). The see must have disappeared on account of the Arabian invasions, as no other bishop is known. It is not certain that it was still in existence in the tenth century (Vailhé in *Echos d'Orient*, X, 90 sqq.). The site of the city has not been identified. Its name is often written Dausara; such forms as Lansara, etc. are incorrect. The Latin titular see has recently been suppressed.

S. PÉTRIDES.

Dante Alighieri, Italian poet, b. at Florence, 1265; d. at Ravenna, Italy, 14 September, 1321. His own statement in the "Paradiso" (xxii, 112-117) that he was born when the sun was in Gemini, fixes his birthday between 18 May and 17 June. He was the son of Alighiero di Bellincione Alighieri, a notary belonging to an ancient but decadent Guelph family, by his first wife, Bella, who was possibly a daughter of Durante di Scolaio Abati, a Ghibelline noble. A few months after the poet's birth, the victory of Charles of Anjou over King Manfred at Benevento (26 Feb., 1266) ended the power of the empire in Italy, placed a French dynasty upon the throne of Naples, and secured the predominance of the Guelphs in Tuscany. Dante thus grew up amidst the triumphs of the Florentine democracy, in which he took some share, fighting in the front rank of the Guelph cavalry at the battle of Campaldino (11 June, 1289), when the Tuscan Ghibellines were defeated by the forces of the Guelph league, of which Florence was the head. This victory was followed by a reformation of the Florentine constitution, associated with the name of Giano della Bella, a great-hearted noble who had joined the people. By the Ordinances of Justice (1293) all nobles and magnates were more strictly excluded from the government, and subjected to severe penalties for offences against plebeians. To take any part in public life, it was necessary to be enrolled in one or other of the "Arts" (the guilds in which the burghers and artisans were banded together), and accordingly Dante matriculated in the guild of physicians and apothecaries. On 6 July, 1295, he spoke in the General Council of the Commune in favour of some modification in the Ordinances of Justice, after which his name is frequently found recorded as speaking or voting in the various councils of the republic.

Already Dante had written his first book, the "Vita Nuova", or "New Life", an exquisite medley of lyrical verse and poetic prose, telling the story of his love for Beatrice, whom he had first seen at the end of his ninth year. Beatrice, who was probably the daughter of Folco Portinari, and wife of Simone de' Bardi, died in June, 1290, and the "Vita Nuova" was completed about the year 1294. Dante's love for her was purely spiritual and mystical, the *amor amicitiae* defined by St. Thomas Aquinas: "That which is loved in love of friendship is loved simply and for its own sake". Its resemblance to the chivalrous worship that the troubadours offered to married women is merely superficial. The book is dedicated to the Florentine poet, Guido Cavalcanti, whom Dante calls "the first of my friends", and ends with the promise of writing concerning Beatrice "what has never before been written of any woman".

At the beginning of 1300 the papal jubilee was proclaimed by Boniface VIII. It is doubtful whether Dante was among the pilgrims who flocked to Rome. Florence was in a disastrous condition, the ruling Guelph party having split into two factions, known as *Bianchi* and *Neri*, "Whites" and "Blacks", which were led by Vieri de' Cerchi and Corso Donati, respectively. Roughly speaking, the *Bianchi* were the constitutional party, supporting the burgher government and the Ordinances of Justice; the *Neri*, at once

more turbulent and more aristocratic, relied on the support of the populace, and were strengthened by the favour of the pope, who disliked and mistrusted the recent developments of the democratic policy of the republic. The discovery of a plot on the part of certain Florentines in the papal service (18 April) and a collision between the two factions, in which blood was shed (1 May), brought things to a crisis. On 7 May Dante was sent on an unimportant embassy to San Geminiano. Shortly after his return he was elected one of the six priors who for two months, together with the *gonfaloniere*, formed the *Signoria*, the chief magistracy of the republic. His term of office was from 15 June to 15 August. Together with his colleagues, he confirmed the anti-papal measures of his predecessors, banished the leaders of both factions, and offered such opposition to the papal legate, Cardinal Matteo d'Acquasparta, that the latter returned to Rome and laid Florence under an interdict. Guido Cavalcanti had been among the exiled *Bianchi*; having contracted a fatal illness at Sarzana, he was allowed, together with the rest of his faction, to return to Florence, where he died at the end of August. This, however, was after Dante's term of office had ended. Enraged at this partial treatment, Corso Donati, in understanding with his adherents in Florence, appealed to the pope, who decided to send a French prince, Charles of Valois, with an armed force, as peacemaker. We find Dante, in 1301, prominent among the ruling *Bianchi* in Florence. On 19 June, in the Council of the Hundred, he returned his famous answer, *Nihil fiat*, to the proposed grant of soldiers to the pope, which the Cardinal of Acquasparta had demanded by letter. After 28 September he is lost sight of. He is said to have been sent on a mission to the pope at the beginning of October, but this is disputed. On 1 November, Charles of Valois entered Florence with his troops, and restored the *Neri* to power. Corso Donati and his friends returned in triumph, and were fully revenged on their opponents. Dante was one of the first victims. On a trumped-up charge of hostility to the Church and corrupt practices, he was sentenced (27 January, 1302), together with four others, to a heavy fine and perpetual exclusion from office. On 10 March, together with fifteen others, he was further condemned, as contumacious, to be burned to death, should he ever come into the power of the Commune. At the beginning of April the whole of the White faction were driven out of Florence.

A few years before his exile Dante had married Gemma di Manetto Donati, a distant kinswoman of Corso, by whom he had four children. He never saw his wife again; but his sons, Pietro and Jacopo, and one of his daughters, Beatrice, joined him in later years. At first, he made common cause with his fellow-exiles at Siena, Arezzo, and Forlì, in attempting to win his way back to Florence with the aid of Ghibelline arms. Dante's name occurs in a document of 8 June, 1302, among the exiled *Bianchi* who at San Godeenzo in the Apennines were forming an alliance with the Ubaldini to make war upon the Florentine Republic; but, in a similar agreement signed at Bologna on 18 June, 1303, he no longer appears among them. Between these two dates he had made his resolution to form a party by himself (Par., xvii, 61-68), and had sought refuge in the hospitality of Bartolommeo della Scala, the lord of Verona, where he first saw Can Grande della Scala, Bartolommeo's younger brother, then a boy of fourteen years, who became the hero of his later days.

Dante now withdrew from all active participation in politics. In one of his odes written at this time, the "Canzone of the Three Ladies" (Canz. xx), he finds himself visited in his banishment by Justice and her spiritual children, outcasts even as he, and declares that, since such are his companions in misfor-

DANTE ALIGHIERI

GIOTTO DI BONDONE, THE BARGELLO, FLORENCE

tune, he counts his exile an honour. His literary work at this epoch centres round his *rime*, or lyrical poems, more particularly round a series of fourteen *canzoni* or odes, amatory in form, but partly allegorical and didactic in meaning, a splendid group of poems which connect the "Vita Nuova" with the "Divina Commedia". Early in 1304 he seems to have gone to Bologna. Here he began, but left unfinished, a Latin treatise, "De Vulgari Eloquentia", in which he attempts to discover the ideal Italian language, the noblest form of the vernacular, and then to show how it should be employed in the composition of lyrical poetry. Even in its unfinished state, it is a most illuminating book to all who wish to understand the metrical form of the Italian *canzone*. On 10 March, 1306, the Florentine exiles were expelled from Bologna. In August we find Dante at Padua, and some weeks later in Lunigiana, where, on 6 October, he acted as the representative of the Marquess Franceschino Malaspina in making peace between his family and the Bishop of Luni. About this time (1306-08) he began the "Convivio", or "Banquet", in Italian prose, a kind of popularization of Scholastic philosophy in the form of a commentary upon his fourteen odes already mentioned. Only four of the fifteen projected treatises were actually written, an introduction and three commentaries. In allegorical fashion they tell us how Dante became the lover of Philosophy, that mystical lady whose soul is love and whose body is wisdom, she "whose true abode is in the most secret place of the Divine Mind".

All certain traces of Dante are now lost for some years. He is said to have gone to Paris some time between 1307 and 1309, but this is open to question. In November, 1308, Henry of Luxemburg was elected emperor as Henry VII. In him Dante saw a possible healer of the wounds of Italy, a renovator of Christendom, a new "Lamb of God" (the expression is the poet's) who would take away the sins of the world. This drew him back again into the tempestuous sea of politics and the life of action. It was probably in 1309, in anticipation of the emperor's coming to Italy, that Dante wrote his famous work on the monarchy, "De Monarchia", in three books. Fearing lest he "should one day be convicted of the charge of the buried talent", and desirous of "keeping vigil for the good of the world", he proceeds successively to show that such a single supreme temporal monarchy as the empire is necessary for the well-being of the world, that the Roman people acquired universal sovereign sway by Divine right, and that the authority of the emperor is not dependent upon the pope, but descends upon him directly from the fountain of universal authority, which is God. Man is ordained for two ends: blessedness of this life, which consists in the exercise of his natural powers and is figured in the terrestrial paradise; blessedness of life eternal, which consists in the fruition of the Divine aspect in the celestial paradise, to which man's natural powers cannot ascend without the aid of the Divine light. To these two ends man must come by diverse means: "For to the first we attain by the teachings of philosophy, following them by acting in accordance with the moral and intellectual virtues. To the second by spiritual teachings, which transcend human reason, as we follow them by acting according to the theological virtues." But, although these ends and means are made plain to us by human reason and by revelation, men in their cupidity would reject them, were not they restrained by bit and rein. "Wherefore man had need of a twofold directive power according to his twofold end, to wit, the Supreme Pontiff, to lead the human race in accordance with things revealed, to eternal life; and the Emperor, to direct the human race to temporal felicity in accordance with the teachings of philosophy." It is therefore the special duty of the

emperor to establish freedom and peace "on this threshing floor of mortality". Mr. Wicksteed (whose translation is quoted) aptly notes that in the "De Monarchia" "we first find in its full maturity the general conception of the nature of man, of government, and of human destiny, which was afterwards transfigured, without being transformed, into the framework of the Sacred Poem".

The emperor arrived in Italy in September, 1310. Dante had already announced this new sunrise for the nations in an enthusiastic letter to the princes and peoples of Italy (Epist. v). He paid homage to Henry in Milan, early in 1311, and was much gratified by his reception. He then passed into the Casentino, probably on some imperial mission. Thence, on 31 March, he wrote to the Florentine Government (Epist. vi), "the most wicked Florentines within", denouncing them in unmeasured language for their opposition to the emperor, and, on 16 April, to Henry (Epist. vii), rebuking him for his delay, urging him to proceed at once against the rebellious city, "this dire plague which is named Florence". By a decree of 2 Septem-

TOMB OF DANTE
(Church of Santa Croce, Florence)

ber (the reform of Baldo d'Aguglione), Dante is included in the list of those who are permanently excepted from all amnesty and grace by the commune of Florence. In the spring of 1312 he seems to have gone with the other exiles to join the emperor at Pisa, and it was there that Petrarch, then a child in his eighth year, saw his great predecessor for the only time. Reverence for his fatherland, Leonardo Bruni tells us, kept Dante from accompanying the imperial army that vainly besieged Florence in September and October; nor do we know what became of him in the disintegration of his party on the emperor's death in the following August, 1313. A vague tradition makes him take refuge in the convent of Santa Croce di Ponte Avellana near Gubbio. It was possibly from thence that, after the death of Clement V, in 1314, he wrote his noble letter to the Italian cardinals (Epist. viii), crying aloud with the voice of Jeremias, urging them to restore the papacy to Rome.

A little later, Dante was at Lucca under the protection of Ugucione della Faggiuola, a Ghibelline soldier who had temporarily made himself lord of that city. Probably in consequence of his association with Ugucione the Florentines renewed the sentence of death against the poet (6 Nov., 1315), his two sons being included in the condemnation. In 1316 several decrees of amnesty were passed, and (although Dante was undoubtedly excluded under a provision of 2 June) some attempt was made to get it extended to him. The poet's answer was his famous letter to an unnamed Florentine friend (Epist. ix), absolutely refusing to return to his country under shameful conditions. He now went again to Verona, where he

found his ideal of knightly manhood realized in Can Grande della Scala, who was ruling a large portion of Eastern Lombardy as imperial vicar, and in whom he doubtless saw a possible future deliverer of Italy. It is a plausible theory, dating from the fifteenth century, that identifies Can Grande with the "Veltro", or greyhound, the hero whose advent is prophesied at the beginning of the "Inferno", who is to effectuate the imperial ideals of the "De Monarchia", and succeed where Henry of Luxemburg had failed.

In 1317 (according to the more probable chronology) Dante settled at Ravenna, at the invitation of Guido Novello da Polenta. Here he completed the "Divina Commedia". From Ravenna he wrote the striking letter to Can Grande (Epist. x), dedicating the "Paradiso" to him, commenting upon its first canto, and explaining the intention and allegorical meaning of the whole poem. A letter in verse (1319) from Giovanni del Virgilio, a lecturer in Latin at the University of Bologna, remonstrating with him for treating such lofty themes in the vernacular, inviting him to come and receive the laurel crown in that city,

by his son Jacopo and forwarded by him to Can Grande.

The "Divina Commedia" is an allegory of human life, in the form of a vision of the world beyond the grave, written avowedly with the object of converting a corrupt society to righteousness: "to remove those living in this life from the state of misery, and lead them to the state of felicity". It is composed of a hundred cantos, written in the measure known as *terza rima*, with its normally hendecasyllabic lines and closely linked rhymes, which Dante so modified from the popular poetry of his day that it may be regarded as his own invention. He is relating, nearly twenty years after the event, a vision which was granted to him (for his own salvation when leading a sinful life) during the year of jubilee, 1300, in which for seven days (beginning on the morning of Good Friday) he passed through hell, purgatory, and paradise, spoke with the souls in each realm, and heard what the Providence of God had in store for himself and the world. The framework of the poem presents the dual scheme of the "De Monarchia" transfigured.

led Dante to compose his first "Eclogue", a delightful poem in pastoral Latin hexameters, full of human kindness and gentle humour. In it Dante expresses his unalterable resolution to receive the laurel from Florence alone, and proposes to win his correspondent to an appreciation of vernacular poetry by the gift of ten cantos of the "Paradiso". A second "Eclogue" was sent to Giovanni after Dante's death; but it is doubtful whether it was really composed by the poet. This correspondence shows that in 1319 the "Inferno" and "Purgatorio" were already generally known; while the "Paradiso" was still unfinished. This was now sent in instalments to Can Grande, as completed, between 1319 and 1321. If the "Quæstio de Aquâ et Terrâ" is authentic, Dante was at Verona on 20 January, 1320, where he delivered a discourse on the relative position of earth and water on the surface of the globe; but, although the authenticity of this treatise has recently found strenuous defenders, it must still be regarded as doubtful. In July, 1321, Dante went on an embassy from Guido da Polenta to Venice. Two months later he died, at Ravenna, on the feast of the Exaltation of the Cross, and was buried in the church of San Francesco in that city. The whole of the "Divina Commedia" had been published, with the exception of the last thirteen cantos of the "Paradiso", which were afterwards discovered

Virgil, representing human philosophy acting in accordance with the moral and intellectual virtues, guides Dante by the light of natural reason from the dark wood of alienation from God (where the beasts of lust, pride, and avarice drive man back from ascending the Mountain of the Lord), through hell and purgatory to the earthly paradise, the state of temporal felicity, when spiritual liberty has been regained by the purgatorial pains. Beatrice, representing Divine philosophy illuminated by revelation, leads him thence, up through the nine moving heavens of intellectual preparation, into the true paradise, the spaceless and timeless empyrean, in which the blessedness of eternal life is found in the fruition of the sight of God. There her place is taken by St. Bernard, type of the loving contemplation in which the eternal life of the soul consists, who commends him to the Blessed Virgin, at whose intercession he obtains a foretaste of the Beatific Vision, the poem closing with all powers of knowing and loving fulfilled and consumed in the union of the understanding with the Divine Essence, the will made one with the Divine Will, "the Love that moves the sun and the other stars".

The sacred poem, the last book of the Middle Ages, sums up the knowledge and intellectual attainment of the centuries that passed between the fall of the

Roman Empire and the beginning of the Renaissance; it gives a complete picture of Catholicism in the thirteenth century in Italy. In the "Inferno", Dante's style is chiefly influenced by Virgil, and, in a lesser degree, by Lucan. The heir in poetry of the great achievement of Bl. Albertus Magnus and St. Thomas Aquinas in christianizing Aristotle, his ethical scheme and metaphysics are mainly Aristotelean, while his machinery is still that of popular mediæval tradition. It is doubtful whether he had direct acquaintance with any other account of a visit to the spirit world, save that in the sixth book of the "Æneid". But over all this vast field his dramatic sense played at will, picturing human nature in its essentials, laying bare the secrets of the heart with a hand as sure as that of Shakespeare. Himself the victim of persecution and injustice, burning with zeal for the reformation and renovation of the world, Dante's impartiality is, in the main, sublime. He is the man (to adopt his own phrase) to whom Truth appeals from her immutable throne; as such, he relentlessly condemns the "dear and kind paternal image" of Brunetto Latini to hell, though from him he had learned "how man makes himself eternal"; while he places Constantine, to whose donation he ascribes the corruption of the Church and the ruin of the world, in paradise. The pity and terror of certain episodes in the "Inferno"—the fruitless magnanimity of Farinata degli Uberti, the fatal love of Francesca da Rimini, the fall of Guido da Montefeltro, the doom of Count Ugolino—reach the utmost heights of tragedy.

The "Purgatorio", perhaps the most artistically perfect of the three canticles, owes less to the beauty of the separate episodes. Dante's conception of purgatory as a lofty mountain, rising out of the ocean in the southern hemisphere, and leading up to the Garden of Eden, the necessary preparation for winning back the earthly paradise, and with it all the prerogatives lost by man at the fall of Adam, seems peculiar to him; nor do we find elsewhere the purifying process carried on beneath the sun and stars, with the beauty of transfigured nature only eclipsed by the splendour of the angelic custodians of the seven terraces. The meeting with Beatrice on the banks of Lethe, with Dante's personal confession of an unworthy past, completes the story of the "Vita Nuova" after the bitter experiences and disillusion of a lifetime.

The essence of Dante's philosophy is that all virtues and all vices proceed from love. The "Purgatorio" shows how love is to be set in order; the "Paradiso" shows how it is rendered perfect in successive stages of illumination, until it attains to union with the Divine Love. The whole structure and spiritual arrangement of Dante's paradise, in which groups of saints make a temporary appearance in the lower spheres in token of the "many mansions", is closely dependent upon the teachings of the Pseudo-Dionysius and St. Bernard concerning the different offices of the nine orders of angels. It is doubtful whether he knew the "Celestial Hierarchy" of Dionysius at first hand, in the translation of Scotus Erigena; but St. Bernard's "De Consideratione" certainly influenced him profoundly. Dante's debt to the Fathers and Doctors of the Church has not yet been investigated with the fullness of research that has been devoted to elucidating his knowledge of the classical writers. His theology is mainly that of St. Thomas Aquinas, though he occasionally (as when treating of primal matter and of the nature of the celestial intelligences) departs from the teaching of the Angelical Doctor. On particular points, the influence of St. Gregory, St. Isidore, St. Anselm, and St. Bonaventure may be traced; that of Boethius is marked and deep throughout. His mysticism is professedly based upon St. Augustine, St. Bernard, and Richard of St. Victor, while in many places it curiously anticipates that of

St. John of the Cross. Mr. Wicksteed speaks of "many instances in which Dante gives a spiritual turn to the physical speculations of the Greeks". Even in the "Paradiso" the authority of Aristotle is, next to that of the Scriptures, supreme; and it is noteworthy that, when questioned by St. John upon charity, Dante appeals first of all to the Stagirate (in the "Metaphysics") as showing us the cause for loving God for Himself and above all things (Par., xxvi, 37-39). The harmonious fusion of the loftiest mysticism with direct transcripts from nature and the homely circumstance of daily life, all handled with poetic passion and the most consummate art, gives the "Divina Commedia" its unique character. The closing canto is the crown of the whole work; sense and music are wedded in perfect harmony; the most profound mystery of faith is there set forth in supreme song with a vivid clearness and illuminating precision that can never be surpassed.

HOUSE OF DANTE, FLORENCE

Dante's vehement denunciation of the ecclesiastical corruption of his times, and his condemnation of most of the contemporary popes (including the canonized Celestine V) to hell have led to some questioning as to the poet's attitude towards the Church. Even in the fourteenth century attempts were made to find heresy in the "Divina Commedia", and the "De Monarchiâ" was burned at Bologna by order of a papal legate. In more recent times Dante has been hailed as a precursor of the Reformation. His theological position as an orthodox Catholic has been amply and repeatedly vindicated, recently and most notably by Dr. Moore, who declares that "there is no trace in his writings of doubt or dissatisfaction respecting any part of the teaching of the Church in matters of doctrine authoritatively laid down". A strenuous opponent of the political aims of the popes of his own day, the beautiful episodes of Casella and Manfred in the "Purgatorio", no less than the closing chapter of the "De Monarchiâ" itself, bear witness to Dante's reverence for the spiritual power of the papacy, which he accepts as of Divine origin. Not the least striking testimony to his orthodoxy is the part played by the Blessed Virgin in the sacred poem from the beginning to the end. It is, as it were, the working out in in-

spired poetry of the sentence of Richard of St. Victor: "Through Mary not only is the light of grace given to man on earth, but even the vision of God vouchsafed to souls in Heaven."

Our earliest account of the life and works of Dante is contained in a chapter in the "Croniche Fiorentine" of Giovanni Villani (d. 1348), who speaks of the poet as "our neighbour". There are six commentaries extant on the "Divina Commedia", in whole or in part, composed within ten years of the poet's death. Three of these—by Graziolo de' Bambaglioli, then chancellor of the commune of Bologna; an unidentified Florentine known as Selmi's Anonimo, and Fra Guido da Pisa, a Carmelite—extend to the "Inferno" alone; those by Jacopo Alighieri, the poet's second son, Jacopo della Lana of Bologna, and the author of the "Ottimo Commento" deal with the entire poem. Graziolo appears as the first defender of Dante's orthodoxy (then fiercely assailed in Bologna); the author of the "Ottimo" (plausibly identified with a Florentine notary and poet, Andrea Lancia) professes to have actually spoken with Dante, and gives us various interesting details concerning his life. About 1340 Dante's elder son, Pietro Alighieri, set himself to elucidate his father's work; two versions of his Latin commentary have been preserved, the later containing additions which (if really his) are of considerable importance. Some time after 1348, Giovanni Boccaccio (q. v.) wrote the first formal life of Dante, the "Trattatello in laude di Dante", the authority of which, once much derided, has been largely rehabilitated by more recent research. His commentary on the "Inferno" is the substance of lectures delivered at Florence in 1373. A few years later came the commentaries of Benvenuto da Imola and Francesco Buti, which were originally delivered as lectures at Bologna and Pisa respectively. Benvenuto's is a living book, full of humour and actuality as well as learning. The little "Life" by Leonardo Bruni (d. 1444), the famous chancellor of the Florentine Republic, which supplements Boccaccio's work with fresh information and quotes letters of the poet other than those which are now known, and the slighter notice by Filippo Villani (c. 1404), who is the first commentator who refers in explicit terms to the "Letter to Can Grande", bring the first age of Dante interpretation to an appropriate close. The title of father of modern Dante scholarship unquestionably belongs to Karl Witte (1800-83), whose labours set students of the nineteenth century on the right path both in interpretation and in textual research. More recently, mainly through the influence of G. A. Scartazzini (d. 1901), a wave of excessive scepticism swept over the field, by which the traditional events of Dante's life were regarded as little better than fables, and the majority of his letters and even some of his minor works were declared to be spurious. This has now happily abated. The most pressing needs of Dante scholarship to-day are more textual study of the "Divina Commedia", a closer and more thorough acquaintance with every aspect of the minor works, and a fuller investigation of Dante's position with regard to the great philosophies of the Middle Ages—such as will justify or restate the pregnant opening of the epitaph that Giovanni del Virgilio composed for his tomb: "Theologus Dantes, nullius dogmatis expers quod foveat claro philosophia sinu" (Dante the theologian, skilled in every branch of knowledge that philosophy may cherish in her illustrious bosom).

Dante may be said to have made Italian poetry, and to have stamped the mark of his lofty and commanding personality upon all modern literature. It can even be claimed that his works have had a direct share in shaping the aspirations and destinies of his native country. His influence upon English letters begins with the poetry of Chaucer, who hails him worthily in the "Monkes Tale", and refers his readers

to him as "the grete poete of Itaille that highte Dant". Eclipsed for a while in Tudor times by the greater popularity of Petrarch, he was afterwards ignored or contemned from the Restoration until the end of the eighteenth century. The first complete translation of the "Divina Commedia" into English, the work of an Irishman, Henry Boyd, was published in 1802 (that of the "Inferno" having been issued in 1785). Dante came again into his heritage among us with the great flood of noble poetry that the beginning of the nineteenth century witnessed. The eloquent tributes rendered to him by Shelley (in "Epipsychidion", the "Triumph of Life", and "A Defence of Poetry") and by Byron (especially in the "Prophecy of Dante"), as after them by Browning and Tennyson, need not be repeated here. Through Dante Gabriel Rossetti and the Pre-Raphaelites, he has been a fruitful influence in art no less than in letters. In the interpretation and criticism of Dante, English-speaking scholars at present stand second only to the Italians.

Never, perhaps, has Dante's fame stood so high as at the present day—when he is universally recognized as ranking with Homer, Æschylus, Sophocles, and Shakespeare, among the few supreme poets of the world. It has been well observed that his inspiration resembles that of the Hebrew prophet more than that of the poet as ordinarily understood. His influence, moreover, is by no means confined to mere literature. A distinguished Unitarian divine has pointed out that the modern cult of Dante is "a sign of enlarging and deepening spiritual perception as well as literary appreciation", and that it is one of the chief indications of "the renewed hold which the later Middle Ages have gained upon modern Europe" (Wicksteed, "The Religion of Time and of Eternity"). The poet's own son, Pietro Alighieri, declared that, if the Faith were extinguished, Dante would restore it, and it is noteworthy to-day that many serious non-Catholic students of life and letters owe a totally different conception of the Catholic religion to the study of the "Divina Commedia". The power of the sacred poem in popularizing Catholic theology and Catholic philosophy, and rendering it acceptable, or at least intelligible to non-Catholics, is at the present day almost incalculable.

The place of honour among Dante societies belongs unquestionably and in every sense to the "Società Dantesca Italiana", an admirably conducted association with its headquarters at Florence, which welcomes foreign students among its members, and is distinguished for its high and liberal scholarship. In addition to courses of lectures delivered under its auspices in various Italian cities, it publishes a quarterly "Bulletino", a survey of contemporary Dante literature, and has begun a series of critical editions of the minor works. Of these latter, volumes dealing with the "De Vulgari Eloquentiâ" and the "Vita Nuova", by Pio Rajna and Michele Barbi respectively, have already appeared, and may be truly said to mark an epoch in the critical and textual study of Dante's Latin and Italian writings alike. The association known as the "Dante Alighieri", on the other hand, is essentially a national and political society, and is only indirectly concerned with the poet whose name it bears. Of Dante societies other than Italian, the "American Dante Society" of Cambridge, Massachusetts, stands first in importance. The small but distinguished "Oxford Dante Society" does work of a high order of scholarship. The "Dante Society of London" is noteworthy for its large number of members, and publishes its sessional lectures in volume form; but its aims appear to be social rather than scholarly. A summary of some of the works on Dante will be found below.

The bibliography of Dante is so vast and voluminous that it is only possible here to make a brief selection of recent and general works. Complete editions: MOORE, *Tutte le Opere di*

Dante (last ed., Oxford, 1905); WICKSTEED, OELSNER, OKET, and HOWELL in *The Temple Classics*, *Dante*, tr. of all the works, with Italian texts of *Divina Commedia*, *Vita Nuova*, *Canzoniere* or *Rime*, and full commentaries (London, 1899-1906). Editions of the *Divina Commedia*: SCARTAZZINI, *La D. C. riveduta nel testo e commentata*, and *Prolegomeni* (4 vols., Leipzig, 1874-1890); IDEM, *Edizione minore* (2nd ed., Milan, 1896); CASINI, *La D. C. con commento* (5th ed., Florence, 1895); BUTLER, *The Hell, Purgatory, Paradise*, edited with translations and notes (London, 1885); VERNON, *Readings on the Inferno, Purgatorio, Paradiso* (London, 1894); (LORD) VERNON, AND PANIZZI, *Le prime quattro edizioni della D. C. letteralmente ristampate* (London, 1858). Critical editions of minor works: WITTE, *De Monarchiâ* (Leipzig, 1874); RAJNA, *De Vulgari Eloquentiâ* (Florence, 1896); BARBI, *Vita Nuova* (Florence, 1907); WICKSTEED, *Eclogues in Dante and Giovanni del Virgilio* (London, 1901); ALBINI, *Dante Ecloga* (Florence, 1905).

Dictionaries and Concordances: TOYNBEE, *A Dictionary of Proper Names and Notable Matters in the Works of Dante* (Oxford, 1898); POLETTI, *Dizionario Dantesco* (Siena, 1885-87); FAY, *Concordance of the Divina Commedia* (Cambridge, Massachusetts, 1888, and London, 1894); SHELDON AND WHITE, *Concordance delle Opere Italiane in prosa e del Canzoniere di Dante Alighieri* (Oxford, 1905). Introductory: GARDNER, *A Dante Primer* (London, 1900). General: BENVENUTO DA IMOLA, *Comentum super Danthi Alighierii Comediam*, ed. VERNON AND LACAPPA (Florence, 1887); BERTIERI, *La D. C. con commenti secondo la Scolastica* (Freiburg, 1892); GARDNER, *Dante's Ten Heavens* (2nd ed., London and New York, 1900); HETTINGER, *Dante's D. C. Its Scope and Value*, ed. BOWDEN (London, 1887); KRAUS, *Dante, sein Leben und sein Werk* (Berlin, 1897); DEL LUNGO, *Dell' Esilio di Dante* (Florence, 1881); IDEM, *Dal Secolo e dal Poema di Dante* (Bologna, 1898); MOORE, *Textual Criticism of the D. C.* (Cambridge, 1889); IDEM, *Studies in Dante* (3 vols., Oxford, 1896-1903); RICCI, *L'ultimo rifugio di Dante Alighieri* (Milan, 1891); SCHEILLO, *Alcuni capitoli della biografia di Dante* (Turin, 1896); WICKSTEED, *The Early Lives of Dante* (London and New York, 1904); WITTE, *Essays on Dante*, tr. and ed. LAWRENCE and WICKSTEED (London, 1898), a selection from *Dante-Forschungen* (Halle and Heilbronn, 1867-79); ZINGARELLI, *Dante* (Milan, 1903). History of Dante's Times: V. F. BUTLER, *The Lombard Communes* (London, 1906); DEL LUNGO, *Dino Compagni e la sua Cronaca* (Florence, 1879-87); VILLARI, *I primi due secoli della Storia di Firenze* (new ed., Florence, 1905), tr. of earlier edition (London, 1901); WICKSTEED AND SELFE, *Villani's Chronicle*, selections (2nd ed., London, 1906).

Contemporary Literature: ROSSETTI, *Early Italian Poets* (or *Dante and His Circle*) (1861); GASPARI, *Italian Literature to the Death of Dante*, tr. and ed. OELSNER (London, 1901). The translations of CARY and LONGFELLOW have been instrumental in familiarizing English and American readers with the *Divina Commedia*; the best recent versions are those of NORTON and HASLEFOOT; CARLYLE's prose-rendering of the *Inferno* is particularly meritorious. Among translations of the minor works, other than those included in the above lists, CHURCH's of the *De Monarchiâ* and LATHAM's of the *Letters* call for special notice.

EDMUND G. GARDNER.

Danti, IGNAZIO, mathematician and cosmographer, b. at Perugia, Italy, 1537; d. at Alatri, 19 Oct., 1586. As a boy he learned the rudiments of painting and architecture from his father and aunt, but mathematics and science were his favorite studies. He received the Dominican habit 7 March, 1555, changing his baptismal name Pellegrino to Ignazio. After completing his philosophy and theology he gave some time to preaching, but soon devoted himself zealously to mathematics, astronomy, and geography. About 1567 he was invited to Florence by Cosmo I, Duke of Tuscany, who wished to avail himself of his services in reviving mathematical and astronomical studies in his newly acquired dominion. About the same time Pope Sixtus V, who belonged to the Order of Preachers, is said to have commissioned him to furnish plans for the construction of a Dominican church and convent at Bosco. During his stay in Florence Danti taught mathematics with much success and may be said to have prepared the way for Galileo and his contemporaries. He resided at the convent of Sta Maria Novella, and designed the first gnomon on the façade of its church in 1572. He was chosen to direct the building of a canal which was to place Florence in communication with both the Mediterranean and the Adriatic. Cosmo did not live to carry out his project and shortly after his death (1574) Danti became professor of mathematics at the University of Bologna. While occupying this chair he spent some time in his native city, at the invitation of the governor, where he prepared maps of the Perugian republic.

On account of his mathematical attainments Gregory XIII invited him to Rome, appointed him pontifical mathematician and made him a member of the commission for the reform of the calendar. He also placed him in charge of the painters whom he had summoned to the Vatican to continue the work so brilliantly begun by Raphael during the reign of Leo X and at the same time desired him to make a number of maps of ancient and modern Italy. When the pontiff commissioned the architect Fontana to repair the Claudian harbour it was Danti who furnished the necessary plans. While at Rome Danti published a translation of a portion of Euclid with annotations and wrote a life of the architect Vignola, preparing also notes for the latter's work on perspective. In recognition of his labours Gregory, in 1583, made him Bishop of Alatri in the Campagna. Danti showed himself a zealous pastor in his new office. He convoked a diocesan synod, corrected many abuses, and showed great solicitude for the poor. Shortly before his death Sixtus V summoned him to Rome to assist in the erection of the grand obelisk in the piazza of the Vatican. Besides the works already mentioned, Danti was the author of "Trattato dell' uso e della fabbrica dell' astrolabo con la giunta del plapifero del Raja"; "Le Scienze matematiche ridotte in tavole", also a revised and annotated edition of "La Sfera di Messer G. Sacrobosco tradotta da Pier Vincenzo Danti".

H. M. BROCK.

VINCENZO DANTI, sculptor, brother of Ignazio, b. at Perugia, 1530; d. 24 May, 1576. He also enjoyed some reputation as a goldsmith, a military architect, and a poet. The statue of Pope Julius III on the cathedral square at Perugia is one of his early works. Later he modelled the "Decapitation of St. John the Baptist" over the south portal of the baptistery at Florence, and finished Andrea Sansovino's noble group of the "Baptism of Christ" over the east gate of the same baptistery. He competed against Cellini and Gian Bologna for the statue of Neptune in the fountain of Piazza della Signoria, which was ultimately given to an inferior artist, and he executed a marble group at the entrance to the Boboli Gardens in Florence, a youth raising and attempting to carry an old man bound hand and foot. This is supposed to be an allegory of the victory of honesty over deceit.

M. L. HANDLEY.

Dantine, MAURUS, Benedictine of the Congregation of Saint-Maur, and chronologist, b. at Gourieux near Namur, Belgium, 1 April, 1688; d. in the monastery of the "Blancs-Manteaux", Paris, 3 November, 1746. Like many of the members of his congregation he was one of the so-called *Appelants* who in 1713 did not accept the Bull "Unigenitus", but appealed to a general council. Dantine's chief merit is the work he did in chronology; he can, in reality, be called one of the founders of this important branch of history, on account of the carefully elaborated plan he drew up for the great publication: "L'Art de vérifier les dates historiques, des chartes, des chroniques et autres monuments, depuis la naissance de J.-C.". He did most of the preparatory work for this publication, constructing more exact chronological tables and introducing a better method for calculating historical dates. On account of illness, however, he was not able to continue his labours and was obliged to leave their completion to other members of his order, his chief successor being Clémencet. Besides this, he devoted himself to thorough linguistic studies and as a

result of these published a translation with commentary of the Psalms under the title: "Les psaumes traduits sur l'hébreu avec des notes" (Paris, 1739). This work attracted so much attention that in the same year a second, and in the following year a third, edition became necessary. In collaboration with Dom Carpentier he prepared a new edition of the great lexicon originally published in 1678 by Du Cange, and afterwards continued by the Maurists, its first Benedictine editor being Dom Guesnié, who was followed by Nicolas Toustain and Louis Le Pelletier. The edition of Dantine and Carpentier, half as large again as that of Du Cange, appeared in six volumes at Paris, 1733-36, under the title: "Glossarium ad scriptores mediæ et infimæ latinæ, editio locupletior operâ et studio monachorum O. S. B." Dantine's labours greatly increased the value of this admirable work, which is not only of the utmost importance for the knowledge of Latin, but is also a rich source for the study of law and morals in the Middle Ages.

Da Ponte, LORENZO, poet, b. at Ceneda, Italy, 1749; d. in New York, 17 Aug., 1838. He was the son of a Jew and was at first named Emmanuel Conegliano. When he was fourteen years old his father and the other members of the family embraced Christianity and were baptized, 20 Aug., 1763, in the cathedral of Ceneda. The bishop of the see, Lorenzo Da Ponte, seeing the talents of the lad, gave him his own name and sent him to the local seminary to be educated. Here Da Ponte remained for five years, and then went to teach in the University of Treviso. Political complications sent him to Vienna, where he met Mozart and composed for him the librettos of the operas "Le Nozze di Figaro", "Don Giovanni", and "Così fan tutte". He did not remain long in Vienna, but went to London, whence, after a somewhat chequered career, he emigrated to New York. Unsuccessful commercial ventures and unprofitable efforts to establish opera in that city followed, and he then settled down as a teacher of Italian with a nominal connexion with Columbia College. Da Ponte enjoys the distinction of being the first teacher in America to lecture on Dante's "Divina Commedia". He was buried in the old Catholic cemetery in East Eleventh Street, and as the grave was never marked it cannot now be located. His daughter married Dr. Henry James Anderson, for many years professor of mathematics and astronomy in Columbia College, and a prominent Catholic philanthropist.

THOMAS F. MEEHAN.

Darboy, GEORGES, Archbishop of Paris and ecclesiastical writer, b. at Fayl-Billot, near Langres, 1813; killed by Communists at Paris, 24 May, 1871. Ordained priest in 1836, he served for a time as curate of Notre-Dame at Saint-Dizier and as professor at the Grand Séminaire of Langres, then joined Mgr. Affre at Paris, 1845, where from "prêtre auxiliaire à la maison des Carmes" and chaplain of the Lycée Henri-IV, he soon rose to the position of canon of Notre-Dame, vicar-general and archdeacon of Saint-Denis, having previously been made prothonotary Apostolic. In 1859 he was appointed to the See of Nancy. During his three years as incumbent of that see, he took a special interest in educational matters, established the Ecole Saint-Léopold, enlarged the Grand Séminaire, and wrote (1862) his famous letter, "Sur la nécessité

de l'étude". Promoted by an imperial decree of 10 January, 1863, to the Archbishopric of Paris, made vacant by the death of Mgr. Morlot, he consecrated within a year the basilica of Notre-Dame, then completely restored, and was honoured with the titles of Grand Almoner, Senator, and Imperial Councillor. Though lacking the independence of Mgr. Affre, the administrative skill of Mgr. Sibour, and the affability of Cardinal Morlot, Darboy was a learned, conscientious, and respected prelate. With the help of such men as Buquet, Isoard, Langénieux, Meignan, and Foulon, he gave a new impetus to the somewhat remiss administration of his aged predecessor. The Gallicanism of Darboy made him unduly subservient to imperial wishes and caused him to assume against the exemptions of the religious an attitude which Rome (1869) compelled him to abandon. It was his chief motive for siding, during the Vatican Council, with the minority which deemed inopportune the definition of papal infallibility, his reasons being more of a political than of a theological nature. Darboy was one of those who suggested diplomatic intervention as a means of ending difficulties. He left Rome before the final vote of 18 July, 1870, and expressed sentiments which, however, he generously retracted when, several months after the definition, he subscribed to it. During the siege of Paris Darboy showed himself a true pastor and won the admiration of all. Arrested 4 April, 1871, by order of the Commune, and confined to Mazas Prison, the best efforts of his friends failed to save him; he was shot at Roquette, 24 May, and died blessing his executioners. As soon as order could be restored a national funeral was celebrated for him and the other victims of the Commune. The Abbé Perraud delivered his eulogy at Paris, and Père Didon at Nancy. Darboy was the author of the following works: "Œuvres de saint Denys l'Aréopagite, traduits du grec" (Paris, 1845); "Les femmes de la Bible" (Paris, 1846-9); "Les saintes femmes" (Paris, 1850); "Lettres à Combalot" (Paris, 1851); "Jérusalem et la terre sainte" (Paris, 1852); "L'imitation de Jésus-Christ, traduction nouvelle" (Paris, 1852); "Statistique religieuse du diocèse de Paris" (Paris, 1856); "Saint Thomas Becket" (Paris, 1858). He also contributed to the "Correspondant" (1847-1855) and was for a year (1850) director of the "Moniteur Catholique". His pastoral works (2 vols., Paris, 1876) were edited by his biographer, Foulon.

FOULON, *Histoire de la vie et des œuvres de Mgr Darboy* (Paris, 1889); JÉROME in *L'épiscopat français, 1802-1905* (Paris, 1907), 390; PISANI (*ibid.*, 463) gives an exhaustive bibliography; Darboy, et le Saint-Siège, documents inédits in *Rev. d'hist. et de lit. relig.* (May-June, 1907).

Darbyists. See PLYMOUTH BRETHREN.

Dardanus, a titular see in the province of Hellespont, suffragan of Cyzicus. Four or five bishops are known, from 431 or 451 to 879 (Lequien, *Or. Christ.*, I, 775). Dardanus figures in "Notitiæ episcopatum" as late as the twelfth or thirteenth century. The town seems to have been situated some seven miles south-west of the Dardanelles, near Kefez Bournou. However, the town called Dardanelles (Gr. Dardanellia; Turk. Kaleb-i-Sultanieh, "imperial fortress"; and commonly Tchanak Kaleb, "the fortress of pottery") is the modern representative of the ancient Dardanus. It is an important port on the straits which unite the Marmora with the Mediterranean (Straits of Dardanelles, the ancient Hellespont). The population is about 8000 (Turks, Greeks, Jews, a few Armenians, and Europeans). The little Catholic parish is conducted by a secular priest and the school is under Georgian Sisters, Servants of Mary. There is also an American Protestant mission. Dardanelles is the chief town of a sanjak, which depends directly on the Sublime Porte, and is strongly fortified. Every ship entering or quitting the straits must stop at Darda-

nelles and show the imperial firman, or permit, to enter or leave. Trade is rather active. Industry is represented by curious earthenware. Not far from the town is the hill of Hissaalik, the scene of some of Schliemann's important excavations. The entire region is covered with interesting ruins.

CUINET, *La Turquie d'Asie* (Paris, 1894), III, 689 sqq.
S. PÉTRIDES.

Dardel, JEAN, Friar Minor of the French province of the order, chronicler of Armenia in the fourteenth century, adviser and confessor to King Leo V (or VI) of Armenia. Nothing is known regarding him except what he himself tells us in his "Chronique d'Arménie", a work unknown until recent times. Dardel was born at Estampes, and became a Franciscan about the middle of the fourteenth century. Not earlier than 1375 he went with other pilgrims to Jerusalem and Mount Sinai. Arriving at Cairo he found the unhappy Leo, last King of Armenia (Cilicia), who after a nine-months siege in the fortress of Gaban was made prisoner by the Emir of Aleppo and brought to Jerusalem; and from there sent, together with his family, to Cairo (July, 1375). In Cairo Dardel accepted the invitation of the imprisoned monarch to act as his adviser, confessor, and secretary. With Dardel was a companion named Brother Anthony da Monopoli. Dardel saw the king frequently and said Mass before him, a privilege easily obtained from the sultan. He remained at Cairo till 1379, and, as he tells us, wrote some of the letters which the king sent to Europe seeking to procure his freedom. Eventually King Leo entrusted him with his royal seal and letters of credence, and sent him as ambassador to Peter IV of Aragon, and, failing success with him, to all the other kings of Christendom to obtain his freedom. Dardel and his companion, Brother Anthony, set out from Cairo 11 Sept., 1379, and reached Barcelona, 1 March, 1380. After traveling over half of Europe he barely succeeded in inducing the King of Aragon to send an embassy with gifts to the sultan. Under the leadership of the pilgrim Gian-Alfonso di Loric, with some support from John I, King of Castile, the release of King Leo was thus secured, and he arrived at Venice, 12 December, 1382. He set out for France, paid homage there to Clement VII (the antipope), and then went on to Spain where the King of Castile received him royally.

Clement VII appointed Dardel Bishop of Tortiboli in the Kingdom of Naples, 11 April, 1383, as a reward for his labours on behalf of the Armenian king. He has left us an important "Chronique d'Arménie", hitherto unknown to Orientalists. It was discovered by Canon Ulysse Robert, who came across the MS. in the Library of Dôle in France, and it has recently been published by the Institut des belles lettres de France in the second tome of the "Recueil des Historiens des Croisades".

GIROLAMO GOLUBOVICH.

Darerca, SAINT, of Ireland, a sister of St. Patrick. Much obscurity attaches to her history, and it is not easy to disentangle the actual facts of her history from the network of legend which medieval writers interwove with her acts. However, her fame, apart from her relationship to Ireland's national apostle, stands secure as not only a great saint but as the mother of many saints. When St. Patrick visited Bredach, as we read in the "Tripartite Life", he ordained Aengus mac Ailill, the local chieftain of Moville, now a seaside resort for the citizens of Derry. Whilst there he found "the three deacons", his sister's sons, namely, St.

Reat, St. Nenn, and St. Aedh, who are commemorated respectively on 3 March, 25 April, and 31 August. St. Darerca was twice married, her second husband, Chonas, founded the church of *Both-chonais*, now Binnion, Parish of Clonmany, in the barony of Inishowen, County Donegal. She had families by both husbands, some say seventeen sons, all of whom, according to Colgan, became bishops. From the "Tripartite Life of St. Patrick" it is evident that there were four sons of Darerca by Chonas, namely four bishops, St. Mel of Ardagh, St. Rioc of Inisboffin, St. Muinis of Forgney, County Longford, and St. Maelchu. It is well to note that another St. Muinis, son of Gollit, is described as of Tedel in Ara-cliaith.

St. Darerca had two daughters, St. Eiche of Kilglass and St. Lalloch of Senlis. Her first husband was Restitutus the Lombard, after whose death she married Chonas the Briton. By Restitutus she was mother of St. Sechnall of Dunshaughlin; St. Nectan of Killunche, and of Fennor (near Slane); of St. Auxilius of Killosey (near Naas, County Kildare); of St. Diarmaid of Druim-corcorri (near Navan); of Dabonna, Mogornon, Dríoch, Lugaun, and Coemed Maccu Baird (the Lombard) of Cloonshaneville, near Frenchpark, County Roscommon. Four other sons are assigned her by old Irish writers, namely St. Crummin of Lecua, St. Midu, St. Carantoc, and St. Maceath. She is identical with Liamiana, according to Colgan, but must not be confounded with St. Monennia, or Darerca, whose feast is on 6 July. St. Darerca is honoured on 22 March, and is the patroness of Valencia Island.

Daresté de la Chavanne, ANTOINE-ELISABETH, historian and professor, b. in Paris, 25 October, 1820; d. at Lucenay-lès-Aix, 6 August, 1882. Having completed his studies in the Ecole Normale and taken his degree of Doctor of Literature, he taught history at the lycées of Versailles and Rennes and at the Collège Stanislas, the largest Catholic school in Paris. In 1847 he was given a professorship at the University of Grenoble, and two years after was appointed to the chair of history at the University of Lyons. This latter position he retained for twenty years, being elected dean of the faculty of literature in 1865. While discharging with the greatest zeal and ability the duties of his position, he wrote a number of works, several of which received an award from the French Academy. Among them are: "Eloge de Turgot" (Paris, 1847); "Histoire de l'administration en France depuis Philippe-Auguste" (Paris, 1848, 2 vols. in 8vo); "Histoire des classes agricoles en France depuis saint Louis jusqu'à Louis XVI" (Paris, 1853); "Histoire de France depuis ses origines jusqu'à nos jours" (Paris, 1865-1873, 8 vols.; 2nd ed., 1879, 9 vols.). All his writings are clear, accurate, and complete without being diffuse. Although somewhat imbued with Gallican ideas, he invariably does justice to the Roman Church and the popes. In 1873 he was appointed rector of the academy at Lyons, but was placed on the unattached list in 1878, because of his devotion to Catholic interests, and the active part he took in the establishment of the Catholic University of Lyons.

HEINRICH, *Notice biographique sur M. Daresté de la Chavanne* (Lyons, 1883).

LOUIS N. DELAMARRE

Dark Ages. See MIDDLE AGES.

Darnis, a metropolitan titular see of Libya, in Egypt. Ptolemy (IV, 4, 2; 5; 6) and Ammian. Mar-

cell., (XXII, 16, 4) locate it in Pentapolis. It became the civil and later the religious metropolis of Libya Secunda, or Inferior, i. e. Marmarica (Hierocles, "Synecdemus", 734, 3; Lequien, "Oriens. christ.", II, 631; Gelzer, "Georgii Cyprii descriptio orbis Romani", 142). Darne is another form of the name; Dardanis is due to an error. Only three, perhaps four, bishops are known, from the fourth or sixth century to about 600. The city is now known as Darnah or Dernah, Terneh or Ternah, and is a little port at the end of a bay formed by the Mediterranean, where the French admiral Gantheaume landed in 1799. It is situated east of Benghazi in the vilayet of that name (Tripolitana), and has 2000 inhabitants, who live by fishing and the coasting trade.

S. PÉTRIDÈS.

Darras, JOSEPH-EPIPHANE, church historian, b. at Troyes, France, 1825; d. at Paris, Nov. 8, 1878. He completed his classical training and his theological studies in the Petit Séminaire and the Grand Séminaire of Troyes, in the former of which he became a teacher after his ordination to the priesthood, but had to resign apropos of a panegyric on the Bishop of Troyes, Etienne-Antoine de Boulogne (1809-1825), disgraced by Napoleon I, for his firm attitude on the occasion of the assembly of the French bishops in 1811. He then became tutor of Prince Eugène de Bauffremont, devoted himself to historical studies, and after the education of his pupil continued to live with the de Bauffremont family. He was a zealous antagonist of Gallicanism and devoted to the honour and the rights of the Holy See. He was at Rome during the Vatican Council as secretary to the meetings of the French bishops. His first literary work was the translation of Pallavicino's "Storia del Concilio Tridentino" for the Migne collection. To the same period belongs the "Légende de Notre-Dame" (Paris, 1848), written under the influence of Montalembert. The early theological studies of Darras did not include a good foundation in ecclesiastical history; this defect he sought to make good by private studies. His "Histoire générale de l'Eglise" in four volumes appeared at Paris in 1854 (14th ed., 1890). It follows the reigns of the popes, but betrays in the author a lack of methodical training and critical skill, defects noticeable also in his other works. In the following years Darras published a "Histoire de St. Denis l'Aréopagite, premier évêque de Paris" (Paris, 1863); a "Histoire de Notre Seigneur Jésus-Christ" (Paris, 1864), two volumes, and a "Notice biographique de Mgr. Jager" (Paris, 1868). He collaborated with Collin in the "Grande Vie des Saints" (Paris, 1873-75) twenty-five volumes. In the meantime he had prepared the material for his chief work: "Histoire de l'Eglise depuis la création", the first twenty-five volumes of which appeared before his death (Paris, 1875-77). They brought the narrative down to the twelfth century. After his death, J. Bareille continued the work to the pontificate of Clement VII (volumes XXVI-XXXII, Paris, 1879-84). It was completed by J. Fèvre to the pontificate of Leo XIII, inclusive (volumes XXXIII-XLIV, Paris, 1884-1907, with two volumes of Index). This work discloses the defects mentioned above. For a sharp criticism of it by the Bollandist Charles de Smedt, S. J., see the latter's "Principes de la critique historique" (Liège, 1885), 137 sqq.; 285.

Polybiblion (Paris, 1879), XXV, 80; HURTER, *Nomenclator*, III, 1325, 1396; DARRAS-BAREILLE-FÈVRE, *Histoire de l'Eglise* (Paris, 1888), XLII, 376 sqq.

J. P. KIRSCH.

Darrell, WILLIAM, theologian, b. 1651, in Buckinghamshire, England; d. 28 Feb., 1721, at St. Omer's, France. He was a member of the ancient Catholic family of Darrell of Scotney Castle, Sussex, being the only son of Thomas Darrell and his wife, Thomassine

Marcham. He joined the Society of Jesus on 7 Sept., 1671, was professed 25 March, 1689. He wrote: "A Vindication of St. Ignatius from Phanaticism and of the Jesuits from the calumnies laid to their charge in a late book (by Henry Wharton) entitled The Enthusiasm of the Church of Rome" (London, 1688); "Moral Reflections on the Epistles and Gospels of every Sunday throughout the Year" (London, 1711, and frequently reprinted); "The Gentleman Instructed in the conduct of a virtuous and happy life" (10th ed., London, 1732; frequently reprinted and translated into Italian and Hungarian); "Theses Theologicae" (Liège, 1702); "The Case Reviewed" in answer to Leslie's "Case Stated" (2nd ed., London, 1717); "A Treatise of the Real Presence" (London, 1721). He translated "Discourses of Cleander and Eudoxus upon the Provincial Letters from the French" (1701). Jones in his edition of Peck's "Popery Tracts" (1859), also attributes to Father Darrell: "A Letter on King James the Second's most gracious Letter of Indulgence" (1687); "The Layman's Opinion sent . . . to a considerable Divine in the Church of England" (1687); "A Letter to a Lady" (1688); "The Vanity of Human Respects" (1688).

EDWIN BURTON.

Darwinism. See EVOLUTION.

Dates and Dating.—In classical Latin even before the time of Christ it was usual for correspondents to indicate when and where their letters were written. This was commonly done by such words as *dabam Romæ ante diem quartum Kalendas Januariarum*, i. e. I gave or delivered this at Rome on December 29th. For this the later formula was *data Romæ* (given at Rome). Hence *data*, the first word of the formula, came to be used for the time and place therein specified. The principle that imperial decrees and charters must be "dated" as a condition of validity, i. e. that they must bear upon them the indication of the day and year when they were delivered, may be traced back to the time of Constantine. In the course of the Middle Ages this principle was generally admitted, and we find, for example, that at Cologne in the twelfth century the validity of a certain instrument was contested because it lacked a date. "Those who have seen it say that the document which John brought does not bear the day or the indiction . . . now the Roman decrees lay down that letters which lack the day and the indiction have no binding force." (*Westdeutsche Zeitschrift für Geschichte*, I, 377.) But although this principle was recognized in theory it was not always carried out in practice. Even down to the beginning of the twelfth century not only royal and imperial letters but even charters (*Urkunden*), properly so called, were occasionally through the carelessness of officials sent out without a date. (Bresslau, *Handbuch*, I, 891.) In this matter the Italian chancery officials seem to have been much more careful than those of the rest of Europe. The same is true with regard to the correctness of the dates which do appear in official documents, especially those of the early Middle Ages. As a rule the charters emanating from the chancery of the Western Emperors are much more liable to this form of error than those of the Holy See (Bresslau, *ib.*, 844). But even the bulls of such a pontiff as Innocent III are not unfrequently at fault, and as Léopold Delisle has shown, an erroneous calculation of the indiction may be perpetuated through a whole series of authentic documents (*Bib. de l'Ecole des chartes*, 1858, p. 55). In any case it remains certain and is admitted by all serious writers upon diplomatics that the mere fact that an erroneous date occurs in a document, especially when we are

dealing with the earlier Middle Ages, cannot by itself be accepted as a proof, or even a presumption, of the spuriousness of the document.

THE CHRISTIAN ERA.—The point of main interest in this connexion is to determine the source and period of the introduction of our present system of dating by the Christian Era. Although, as explained in the article CHRONOLOGY, GENERAL (q. v.), the monk known as Dionysius Exiguus, when resident in Rome, c. 527, seems to have been the first to initiate the practice of calculating years from the birth of Christ, and although it was undoubtedly he who identified the year of Christ's birth with the year 753 of the foundation of Rome, as is still done in our current chronology, nevertheless it was not until long after the age of Dionysius Exiguus that the system came into common use. For example no trace of it will be found in that great historian of the Gallic Church, St. Gregory of Tours, the contemporary of our St. Augustine of England; and in the writings of Pope St. Gregory the Great the Dionysian Era is not adopted. It was the pope's habit to date his letters by the regnal years of the emperor and letters so dated may be seen in Bede's "Ecclesiastical History", just as they were copied from the Roman archives. Apparently it was the Englishman Bede himself who was the first to bring the Dionysian system into general use, for it was through him that it was adopted in literature, having been employed systematically not only in his "De Temporum Ratione" but especially in his "Ecclesiastical History". What is more, we may notice the striking fact that the regular employment of the Christian Era in English charters began just at the period of Bede's pre-eminent influence. It is only from about the year 679 that we are able to appeal to English charters of indisputable authenticity. Taking eight such documents, the eight earliest which we can quote with confidence and dated respectively 679, 692, 697, 732, 734, 736, 740, 759, we may notice says Professor Earle (Land Charters, *Introduc.*, p. xxxiii) that "of this series the first five though all more or less dated, whether by the month or the regnal year, or by the Indiction, or by all these at once, have not the Anno Domini. On the other hand, the last three agree in using the Christian Era and from this time the practice is continuous. In the intervening year which breaks this series into two parts falls the death of Bede A. D. 735." Very noteworthy is the decree of an English synod held in 816, wherein it is prescribed that the bishop shall put the acts of the synod into writing and date them by the Era of the Incarnation. This points no doubt to a time "when ecclesiastics knew the era well enough but had not yet acquired the punctual habit of using it". It is in any case certain that neither in the papal chancery nor in that of the Western Empire was the system introduced until considerably later. In the empire it only became general in the latter part of the ninth century, while although it occurs occasionally in papal documents of the time of John XIII (965-972), it was not the rule before the twelfth century. But for the dating of papal documents and for the so-called "double date" see the article BULLS AND BRIEFS.

RECKONING OF YEARS.—Before the Christian Era was generally adopted in the dating of documents various other systems were employed at different periods and in different countries. The best known of these was the counting by "indications". The indication was a cycle of fifteen years, the first of these cycles being conceived to have started at a point three years before the beginning of the present Christian Era. It was usual to indicate only the position of the year in the current indication, and no notice was taken of the number of cycles already completed. Thus, for example, *indictio quarta* meant the fourth year of some particular indication and not the fourth cycle of fifteen years after B. C. 3; from which it follows that

merely to know the year of the indiction is useless for determining the absolute date of any document unless we know otherwise approximately the period to which the document belongs. In reckoning the beginning and consequently the changing-point of the indiction-cycles four different systems were adopted: the *indictio Græca* according to which the indiction began on September 1st; the *indictio Cæsarea* (or indiction of Bede) beginning September 24th; the *indictio Romana* beginning December 25th or January 1st; and the *indictio Senensis* beginning September 8th. The *indictio Græca* was the oldest of these and it remained in use in papal bulls until 1087 and in imperial documents until 832. It was partly supplanted, especially in the Carolingian sphere of influence, by the *indictio Cæsarea*.

Concurrently with the year of the indiction it was customary both in papal and imperial documents to mention the regnal year of the pope or emperor. So far as regards the emperors this was prescribed by Justinian (Novella xlvii). In the case of the popes we do not know any instance earlier than 787. Generally speaking (though the rule admitted of many exceptions, especially later) the regnal year was calculated from the day of coronation or consecration. In the official acts of most of the countries of Christendom, and notably in England, the regnal year of the sovereign was always given and sometimes this was the only indication of the year. As a continuous system of year enumeration the oldest era in practical use appears to have been that known as the "Era of the Martyrs" or "of Diocletian" (*æra Diocletiani*). Its starting-point was the accession of the Emperor Diocletian, 29 Aug., 284. The Spanish Era (*era Hispanica*) was in familiar use in Spain from the fifth century down to late in the Middle Ages. It adds about thirty-eight years to the ordinary numbering of the Christian Era. Where Byzantine influences prevailed the years were generally numbered from the beginning of the world (*ab origine mundi*). This era was calculated from 1 September, and the birth of Christ, which is the point of departure of our present chronology, took place in the year 5509 of the Byzantine system. Several other methods of reckoning, of which the best known is the Era of the Hegira followed in Mahomedan countries, have also prevailed in various localities, but they cannot be discussed in detail here. After the Christian Era had been universally adopted an important source of confusion as regards the dating of documents still remained in the diversity of practice about the beginning of the year. For the details of this the reader must be referred to the article CHRONOLOGY, GENERAL, and to the works mentioned in the bibliography, but we may notice here that among the Anglo-Saxons, as also at many different periods in the papal chancery, the new year was calculated to begin on December 25th. On the other hand, in England from the twelfth century onwards, largely under Norman influences, the years were numbered from the 25th of March. This arrangement was often called the *mos Anglicanus* or *computatio Anglicana*, though it also prevailed in Florence, Siena, Pisa, and at least occasionally in other parts of the Continent as well as in many papal documents. In England it lasted on down to the eighteenth century, though after Elizabethan times it became increasingly common in the dating of letters to indicate the system of dating adopted, N. S. often standing for the New or Continental Style in which the year began on January 1st, and O. S. for the Old Style in which the year was counted from March 25th. Further N. S. was still more frequently used for dates which followed the reformed calendar of Gregory XIII, as explained in the article CHRONOLOGY, GENERAL.

The Reckoning of Days.—The early converts to Christianity in the West not unnaturally retained the method of indicating the days of the month which

was current among their pagan contemporaries. According to this, three fixed points were taken in each month, the kalends on the first day, the ides on the thirteenth (or in some months on the fifteenth), and the nones on the ninth day before the ides, and consequently on the fifth or seventh. The dates which fell between these fixed points were designated by the number of days by which they fell short of the next fixed point. Thus the twenty-fourth of May was called *ante diem nonum kalendas Junias* (i. e. the ninth day before the kalends of June). During the early Middle Ages this system was retained practically unaltered except that the long Roman form was somewhat contracted, for example *decimo kalendas Julii* was written instead of the *ante diem decimum kalendas Julias*.

A curious arrangement prevailed at Bologna (it was called from its place of origin the *consuetudo Bononiensis*) and extended over a large part of the north of Italy. According to this the first half of the month was numbered forwards and called *mensis intrans*, but the last half of the month was called *mensis exiens* and numbered backwards, as in the Roman system; thus the seventeenth of May was called *die quinto decimo exeuntis mensis Maii*. Our present system of numbering the days straight on from the first of each month began to appear in the sixth century and gradually became more prevalent throughout the Middle Ages, but it never came into general use on account of the custom of indicating the day by the feasts of the local calendar. Not only did the common festivals serve for this purpose, but the Sundays were also often used, and were designated by the first words of their Introit in the Mass. For instance in *Dominica letare* means on the Sunday whose Introit begins with *Letare in Domino*, i. e. the fourth Sunday of Lent. Moreover the vigil of a feast, or the previous day, or the octave, or a specified day within the octave, were all familiarly designated by their relation to the feast, e. g. in *pervigilio Nativitatis Beate Mariæ*; *postridie Sancti Laurentii*; in *octava Sti. Laurentii*, etc. In this method of dating, which was constantly employed both in Latin and in the vernacular, the use of the English word *utras* for octave should be noticed. This method of dating by saints' days, as will be readily understood, depended much upon local conditions and was always apt to become both complicated and inexact.

BRESSLAU, *Handbuch der Urkundenlehre* (Leipzig, 1889); I, 818-874; GIRY, *Manuel de diplomatique* (Paris, 1894), 83-275 and 577-588; GROTEFEND, *Taschenbuch der Zeitrechnung*, 2nd ed. (Leipzig, 1905). This is a convenient abridgement of the same writer's larger work, *Zeitrechnung des deutschen Mittelalters und der Neuzeit* (Leipzig, 1891-1898); STOKVIS, *Manuel d'histoire*, etc. (Leyden, 1888-1893), 3 vols., see especially the introduction to Vol. II. This is a work of most prodigious research containing elaborate tabular statements of dates and chronological facts connected with every country of the world, Oriental and American as well as European. BOND, *Handy Book for Verifying Dates* (London, 1875); EARLE, *A Handbook to the Land Charters and other Saxon Documents* (Oxford, 1888), 28-36. The older manuals of chronology, such as the Benedictine *Art de vérifier les dates* and IDLER'S *Handbuch*, need not be more fully specified here.

HERBERT THURSTON.

Daubrée, GABRIEL-AUGUSTE, French geologist, b. at Metz, 25 June, 1814; d. at Paris, 29 May, 1896. He studied mining engineering at the Ecole Polytechnique in Paris and in 1834 entered the Government service. After being sent on commissions to England, Sweden, and Norway, he was attached to the department of the Lower Rhine. He was a close observer of geological phenomena and during this time published a paper on the ore deposits of Scandinavia which attracted the attention of Berzelius, and also issued his "Description géologique et minéralogique du département du Bas-Rhin". His appointment as professor of geology and mineralogy at Strasburg furnished him with a laboratory suitable for his experimental work in synthetic geology, begun in 1849.

His brilliant experimental researches at Strasburg, and later at Paris, extended over a number of years and have served to make him famous in the annals of geology. They comprised the artificial production of minerals, the geological action of superheated aqueous vapour, the effect of mutual abrasion, the influence of pressure and strain in mountain-making, etc. During the years 1857-61 he made a detailed study of the hot springs of Plombières, observing at the same time the chemical action of thermal waters. In 1861 he was admitted to the Académie des Sciences and succeeded Cordier as professor of geology at the Museum of Natural History in Paris and curator of the collections; to the latter he made extensive additions, particularly of meteorites. It may be mentioned in this connexion that daubréelite (CrS), a grayish granular mineral found in meteoric iron, was named after him. From 1862 he also lectured on mineralogy at the Ecole des Mines of which he became director in 1872. Daubrée's career was a long and active one. He was one of the foremost of Catholic geologists, and was much esteemed for his amiability and nobility of character. One of his friends and admirers was Dom Pedro, Emperor of Brazil. Besides the works already mentioned, he was the author of: "Observations sur le métamorphisme" (Paris, 1858); "Etudes synthétiques de géologie expérimentale" (Paris, 1879); "Les eaux souterraines" (Paris, 1887); "La classification des météorites du Muséum", and many articles in the "Journal des savants" and the "Revue des deux mondes".

Daulia, a titular see of Greece. Daulis, later Daulia, Daulieon, often Diauleia, even Davalia, was a town of Phocis, on the Cephissus, fifteen Roman miles north-east of Delphi. It is mentioned by Hierocles (Synecd., 643, 10), and at the end of the seventh century had become a suffragan of Athens. In 1393 Talantion was cut off from Daulia and made a distinct see: this was a town at the foot of Mount Knemis, the ancient name of which was Atalante. The bishops of Daulia long protested against this division; at last, about the end of the fifteenth century the two sees were reunited as "Daulia and Talantion"; they remained so, except for a brief period about 1567. In 1653 the double see was made an archbishopric, owing to the influence of a Turkish pasha, but after two years was reduced to its former status. Talantion was then commonly named in the first place, and finally was the only name in use. The bishop resided there, as Daulia was almost in ruins. The See of Daulia was suppressed in 1833, when the Church of the Kingdom of Greece was organized on an independent basis. We know about fifteen Greek bishops of Daulia, the first of whom, Germanos, died in 919; the last, Neophytos Metaxas, died as Metropolitan of Athens. As early as 1205 Daulia became a Latin see; many of the bishops are known from the thirteenth to the fifteenth century, among them one William, bearer, in 1384, of a letter from Urban VI to the Patriarch Nilus, concerning the reunion of the Churches. Since 1441, at least, the see has been titular.

S. PÉTRIDIS.

Daumer, GEORG FRIEDRICH, German poet and philosopher, b. at Nuremberg, 5 March, 1800; d. at Würzburg, 14 December, 1875. He was educated at the gymnasium of his native city, at that time directed by the famous philosopher Hegel. In 1817 he entered the University of Erlangen as a student of theology, but abandoned that study for philosophy. For a number of years Daumer was professor at the gymnasium of Nuremberg; owing to ill-health he was pensioned in 1832 and henceforth devoted himself entirely to literary work. While at Erlangen he came strongly under the influence of Pietism. Soon, however, he became sceptical and exhibited decided leanings towards pantheism. From an orthodox Protestant he gradually became a bitter enemy of Christianity, which he attacked in a number of writings and for which he strove to substitute a new religion "of love and peace", formulated in his work "Religion des neuen Weltalters" (Hamburg, 1850). Previous to this he had published a number of works, all of a distinctly anti-theological tendency, of which the more important are: "Philosophie, Religion, und Altertum" (Nuremberg, 1833); "Züge zu einer neuen Philosophie der Religion und Religionsgeschichte" (Nuremberg, 1835); "Der Feuer- und Molochdienst der Hebräer" (Brunswick, 1842); "Die Geheimnisse des christlichen Altertums" (Hamburg, 1847). Shortly after 1850 Daumer left Nuremberg and settled at Frankfurt, where a great change soon came over him. In 1858 at Mainz he publicly embraced the Catholic Faith and thenceforth became its zealous defender. Among the works written after his conversion are: "Meine Konversion" (Mainz, 1859); "Aus der Mansarde" (1860-62); "Das Christentum und sein Urheber" (Mainz, 1864); "Das Wunder, seine Bedeutung, Wahrheit und Notwendigkeit" (Ratisbon, 1874). The last mentioned work is directed expressly against the opinions of David Strauss.

Undoubtedly the best part of Daumer's work is his poetry. His "Hafis" (Hamburg, 1846; a second collection, 1852) contains graceful but very free imitations of the songs of the famous Persian poet. In fact, these poems are really original productions, and some of them have become widely known through the musical settings of Brahms. This collection, as well as "Mahomed und sein Werk" (Hamburg, 1848), is distinctly directed against the hypocrisy and asceticism which at that time Daumer believed to be inseparable from orthodox Christianity. Among other poems may be mentioned: "Glorie der heiligen Jungfrau Maria" (Nuremberg, 1841); "Frauenbilder und Huldigungen" (Leipzig, 1853); "Marianische Legenden und Gedichte" (Münster, 1859) and "Schöne Seelen" (Mainz, 1862).

Dauversière, JEROME DE LA. See MONTREAL.

D'Avenant, SIR WILLIAM, poet and dramatist, b. Feb., 1605-6, at Oxford, England; d. in London, 7 April, 1668. He was the second son of John D'Avenant, a prosperous vintner and owner of an inn afterwards known as the Crown Tavern, where Shakespeare frequently stayed. The story which would make William D'Avenant the natural son of Shakespeare seems to have no real foundation, though he may have been the poet's godson. D'Avenant was educated at the grammar school of All Saints, Oxford, and went for a short time to Lincoln College. Then he became page to Frances, Duchess of Richmond, and was afterwards taken into the service of Fulke Greville, Lord Brooke. In 1628 he began writing plays and ten years later succeeded Ben Jonson as Poet Laureate. He took up warmly the side of the king in the Civil War, and was knighted by Charles I in 1643. After the king's defeat, in 1644, he took

refuge in France where he became a Catholic. He was employed by Queen Henrietta Maria in her correspondence with the king in England, and was faithful to the royal cause to the end. More than once he was imprisoned and in danger of losing his life, but was finally released in 1651. In 1656 he was instrumental in reviving theatrical performances in England which had ceased since 1641. After the Restoration he was patronized by Charles II and continued, to the end of his life, to write and superintend the production of plays. His poetical work consists of the epic of "Gondibert" with other shorter poems (Chalmer, *English Poets*, London, 1810, vi), together with nearly thirty plays (Edinburgh, 1872-4, 5 vols., edited by Maidment and Logan). "Gondibert" is an unfinished poem in fifteen hundred heroic stanzas. Modern critics find it dull, but it has its place in English literature as marking a stage in the movement towards the so-called classical school of poetry which culminated in Dryden and Pope. D'Avenant's dramas do not rise much above mediocrity, but they are considered "exceptionally decorous and moral" for their time.

K. M. WARREN.

Davenport, CHRISTOPHER, also known as FRANCISCUS À SANCTA CLARA and sometimes by the alias of FRANCIS HUNT and FRANCIS COVENTRY, theologian, b. 1598, at Coventry, England; d. 31 May, 1680. He was the son of Alderman John Davenport and Elizabeth Wolley, and from the grammar school at Coventry went to Dublin where he spent fifteen months, leaving it 22 Nov., 1611. In 1613 he and his brother John proceeded to Merton College, Oxford, entering as "battlers" and taking Cook's commons; but the warden required them to enter as commoners or to leave the college; whereon in 1614 they migrated to Magdalen Hall. Here Christopher became B. A. on 28 May, his Dublin residence being allowed to count. (Oxford University Register.) John subsequently became a noted Puritan divine and emigrated to New England, where with a band of colonists he founded the city of New Haven, Connecticut (1638). Christopher was converted to Catholicism by a priest living near Oxford and in 1615 went to Douay. Attracted by the efforts to restore the English Franciscan Province, he joined the Flemish Franciscans at Ypres, 7 Oct., 1617. When he was professed (under the name of Franciscus à Sancta Clara) he joined the English Recollects at the newly-established convent of St. Bonaventure at Douay (18 Oct., 1618). He was sent to the University of Salamanca in Spain, where he took his degree in divinity and won reputation as a theologian. Returning to Douay, he became first professor of theology at St. Bonaventure's and filled the office of guardian. At length he was sent to England and was appointed chaplain to Queen Henrietta Maria, in which capacity he attended the Court and became acquainted with King Charles I, Archbishop Laud, Montague, Bishop of Norwich, and Goodman, Bishop of Gloucester. Inspired by the idea of converting England by means of corporate reunion, he wrote a treatise to show that the Thirty-nine Articles were susceptible of an interpretation more in accordance with Catholic teaching than was usually supposed. This was the "Paraphrastica Expositio Articulorum Confessionis Anglicanæ", published as an appendix to his book, "Deus, Natura, Gratia", in 1634. It offended many Catholics and was put on the Index in Spain, though a condemnation at Rome was averted by Panzani, the pope's nuncio in London.

On 19 June, 1637, Davenport was elected provincial of the order, an office to which he was subsequently re-elected, 10 July, 1650, and 4 June, 1665. After the Restoration he was appointed chaplain to Queen Catharine of Braganza, and returned to London,

where he spent most of his remaining years, with occasional visits to Flanders. His intellectual ability and attractive manner won for him the friendship of many, and aided in reconciling numerous converts, among whom was Anne, Duchess of York. He lived to celebrate three jubilees—of religious profession, of the priesthood, and of the mission. His works are: "Epistolum, continens confutationem duarum propositionum astrologicarum" (Douay, 1626); "Deus, Natura, Gratia", with the important appendix described above (Lyons, 1634); "Apologia Episcoporum" (Cologne, 1640); "The Practice of the Presence of God" (Douay, 1642); "Systema Fidei" (Liège, 1648); "De Definibilitate Controversiæ Immaculatæ Conceptionis Dei Genitricis Opusculum" (Douay, 1651); "Paralipomena Philosophica de Mundo Peripatetico" (Antwerp, 1652); "An Enchiridion of Faith" (Douay, 1655); "Explanation of the Catholic Belief" (1656); "Manuale Missionarium Regularium præcipue Anglorum Ordinis Sancti Francisci" (Douay, 1658, 1661); "Fragmenta: seu Historia Minor. Provinc. Angl. Fratrum Minorum"; "Tractatus de Schismate præsertim Anglicano"; "Vindication of Roman Catholics" (1659); "Liber Dialogorum" (Douay, 1661); "Problemata Scholastica et controversalia speculativa"; "Corollarium Dialogi de Medio Animarum Statu"; "Religio Philosophia Peripati discutienda" (Douay, 1662, 1667); "Opera omnia Francisci à S. Clara" (Douay, 1665-1667); "Disputatio de antiqua Provinciæ Præcedentia" (1670); "Supplementum Historiæ Provinciæ Angliæ" (Douay, 1671).

EDWIN BURTON.

Davenport, DIOCESE OF (DAVENPORTENSIS), erected 8 May, 1881, embraces the four southern tiers of counties of the State of Iowa, U. S. A., an area of about 22,873 square miles. From the time of the Louisiana Purchase down to 1827 the present Diocese of Davenport was included in the Diocese of New Orleans; from 1827 to 1837 it formed part of the Diocese of St. Louis; and from 1837 to 1881 it belonged to the Diocese of Dubuque. When Bishop Loras arrived in Dubuque in April, 1839, his diocese contained two churches, St. Raphael's in Dubuque, built in 1836, and St. Anthony's in Davenport, built in 1838. In all the vast territory subject to him there was but one priest, the Rev. Samuel Mazzuchelli, O. P., who had been labouring in the territory since 1835 and under whose direction the two churches referred to had been built. Bishop Loras brought with him two priests, the Rev. Joseph Cretin, afterwards first Bishop of St. Paul, and the Rev. J. A. M. Pelamourgues, whom the people of St. Anthony's parish, Davenport, and indeed of the whole Diocese of Davenport, venerate as their first resident pastor. Father Pelamourgues, the first citizen of Davenport in his day, a leader in every good work, was pastor of St. Anthony's from 1839 to 1868. Of the generous, zealous laity associated with him in his work in those early days, Mr. and Mrs. Antoine Le Claire deserve special mention. Notable among their benefactions was the donation to the church of the block of ground in the heart of the city on which St. Anthony's church was built.

GROWTH OF CATHOLICISM.—Bishop Loras and his successors in the See of Dubuque did much to promote the immigration to Iowa of German and Irish Catholics, with the result that Iowa has a large Catholic rural population. Between the years 1840 and 1850 the number of resident pastors in the present Diocese of Davenport increased from one to five. By

the year 1860 the number had increased to thirteen, and by 1870 to twenty. During the decade following 1870 the tide of Catholic immigration was heavy, and at the time of its formation, in 1881, the diocese contained seventy priests and a Catholic population estimated at 45,000. Since its formation the diocese has had a continuous, healthy growth.

BISHOPS.—(1) JOHN McMULLEN, was born in Ballynaghinch, Co. Down, Ireland, 8 January, 1832, and ordained priest in Rome, 20 June, 1858. He was consecrated, 25 July, 1881, at Chicago, where at the time of his appointment to Davenport, he was vicar-general. He entered with zeal and vigour into the work of organizing the new diocese. The cause of Catholic education was his especial concern. St. Ambrose College was founded by him in September, 1882. His health soon failed, and he died 4 July, 1883.

(2) HENRY COSGROVE, second bishop, was born at Williamsport, Pennsylvania, U. S. A., 19 December, 1834. He emigrated to Dubuque in 1845 and was ordained priest 7 August, 1857. He was assigned at once to St. Marguerite's, Davenport, with which church he was ever afterwards connected. When Bishop McMullen went to Davenport, he chose St. Marguerite's for his cathedral church and made Father Cosgrove his vicar-general. Father Cosgrove was consecrated Bishop of Davenport, 14 September, 1884, and for more than twenty-two years gave his best efforts to the cause of religion in his diocese. Under his guidance many new churches were erected; schools and other institutions established or enlarged. Worthy of special mention are the Sacred Heart cathedral, St. Vincent's home for orphans, and St. Ambrose College.

(3) Two years before his death, Bishop Cosgrove, enfeebled in health, was given a coadjutor in the person of his vicar-general, the Very Rev. James Davis. Bishop Davis was born in Ireland in 1852, ordained priest in 1878, was consecrated coadjutor to Bishop Cosgrove, 30 Nov., 1904, and on the death of the latter became Bishop of Davenport.

STATISTICS.—The religious communities represented in the diocese include the Benedictines, who have charge of four parishes, and the Redemptorists who have one; the Sisters of St. Benedict, Sisters of Charity B. V. M., Sisters of Charity of St. V. de Paul, Hospital Sisters of St. Francis, School Sisters of St. Francis, Franciscan Sisters of Perpetual Adoration, Sisters of the Holy Humility of Mary, Sisters of Mary, School Sisters of Notre Dame, Sisters of St. Francis of Assisi, Sisters of the Holy Cross. The number of priests in 1908 was 138, and the number of Catholics 75,518. The diocese then contained 154 churches, 105 of which had resident pastors, 43 parochial schools, 9 hospitals, 7 academies for young ladies, 1 college for boys, and 1 orphan asylum.

WM. P. SHANAHAN.

David (DEGUI, DEWI), SAINT, Bishop and Confessor, patron of Wales. He is usually represented standing on a little hill, with a dove on his shoulder. From time immemorial the Welsh have worn a leek on St. David's day, in memory of a battle against the Saxons, at which it is said they wore leeks in their hats, by St. David's advice, to distinguish them from their enemies. He is commemorated on 1 March. The earliest mention of St. David is found in a tenth-century MS. of the "Annales Cambriæ", which assigns his death to A. D. 601. Many other writers, from Geoffrey of Monmouth down to Father Richard Stanton, hold that he died about 544, but their opinion is based solely on data given in various late "lives" of St. David, and there seems no good reason for setting aside the definite statement of the "Annales Cam-

brise", which is now generally accepted. Little else that can claim to be historical is known about St. David. The tradition that he was born at Henvynyw (Vetus-Menevia) in Cardiganshire is not improbable. He was prominent at the Synod of Brevi (Llandewi Brefi in Cardiganshire), which has been identified with the important Roman military station, Lloventium. Shortly afterwards, in 569, he presided over another synod held at a place called Lucus Victorise. He was Bishop (probably not Archbishop) of Menevia, the Roman port Menapia in Pembrokeshire, later known as St. David's, then the chief point of departure for Ireland. St. David was canonized by Pope Callistus II in the year 1120.

This is all that is known to history about the patron of Wales. His legend, however, is much more elaborate, and entirely unreliable. The first biography that has come down to us was written near the end of the eleventh century, about 500 years after the saint's death, by Rhygyfarch (Ricemarchus), a son of the then Bishop of St. David's, and is chiefly a tissue of inventions intended to support the claim of the Welsh episcopate to be independent of Canterbury. Giraldus Cambrensis, William of Malmesbury, Geoffrey of Monmouth, John de Tinmouth, and John Capgrave all simply copy and enlarge upon the work of Rhygyfarch, whilst the anonymous author of the late Welsh life printed in Rees, "Cambro-British Saints" (Cott. MS. Titus, D. XXII) adds nothing of any value. According to these writers St. David was the son of Sant or Sandde ab Ceredig ab Cunedda, Prince of Keretica (Cardiganshire) and said by some to be King Arthur's nephew, though Geoffrey of Monmouth calls St. David King Arthur's uncle. The saint's mother was Nonna, or Nonnita (sometimes called Melaria), a daughter of Gynyr of Caergawch. She was a nun who had been violated by Sant. St. David's birth had been foretold thirty years before by an angel to St. Patrick. It took place at "Old Menevia" somewhere about A. D. 454. Prodiges preceded and accompanied the event, and at his baptism at Porth Clais by St. Elvis of Munster, "whom Divine Providence brought over from Ireland at that conjuncture", a blind man was cured by the baptismal water. St. David's early education was received from St. Iltyd at Caerworgorn (Llanwit major) in Glamorganshire. Afterwards he spent ten years studying the Holy Scriptures at Witland in Carmarthenshire, under St. Paulinus (Pawl Hên), whom he cured of blindness by the sign of the cross. At the end of this period St. Paulinus, warned by an angel, sent out the young saint to evangelize the British. St. David journeyed throughout the West, founding or restoring twelve monasteries (among which occur the great names of Glastonbury, Bath, and Leominster), and finally settled in the Vale of Ross, where he and his monks lived a life of extreme austerity. Here occurred the temptation of his monks by the obscene antics of the maid-servants of the wife of Boia, a local chieftain. Here also his monks tried to poison him, but St. David, warned by St. Scuthyn, who crossed from Ireland in one night on the back of a sea-monster, blessed the poisoned bread and ate it without harm. From hence, with St. Teilo and St. Padarn, he set out for Jerusalem, where he was made bishop by the patriarch. Here too St. Dubric and St. Daniel found him, when they came to call him to the Synod of Brevi "against the Pelagians". St. David was with difficulty persuaded to accompany them; on his way he raised a widow's son to life, and at the synod preached so loudly, from the hill that miraculously rose under him, that all could hear him, and so eloquently that all the heretics were confounded. St. Dubric resigned the "Archbishopric of Caerleon", and St. David was appointed in his stead. One of his first acts was to hold, in the year 569, yet another synod called "Victory", against the Pelagians, of which the decrees were confirmed by the

pope. With the permission of King Arthur he removed his see from Caerleon to Menevia, whence he governed the British Church for many years with great holiness and wisdom. He died at the great age of 147, on the day predicted by himself a week earlier. His body is said to have been translated to Glastonbury in the year 966.

It is impossible to discover in this story how much, if any, is true. Some of it has obviously been invented for controversial purposes. The twelve monasteries, the temptation by the women, the attempt on his life, all suggest an imitation of the life of St. Benedict. Wilder legends, such as the Journey on the Sea-Monster, are commonplaces of Celtic hagiology. Doubtless Rhygyfarch and his imitators collected many floating local traditions, but how much of these had any historical foundation and how much was sheer imagination it is no longer possible to decide.

LESLIE A. ST. L. TOKE.

David, ARMAND, missionary priest and zoologist, b. 1826; d. 1900. He entered the Congregation of the Mission in 1848, having already displayed great fondness for the natural sciences. Ordained in 1862, he was shortly afterwards sent to Peking, and began there a collection of material for a museum of natural history, mainly zoological, but in which botany and geology and palæontology were also well represented. At the request of the French Government important specimens from his collection were sent to Paris and aroused the greatest interest. The Jardin des Plantes commissioned him to undertake scientific journeys through China to make further collections. He succeeded in obtaining many specimens of hitherto unknown animals and plants, and the value of his comprehensive collections for the advance of systematic zoology and especially for the advancement of animal geography received universal recognition from the scientific world. He himself summed up his labours in an address delivered before the International Scientific Congress of Catholics at Paris in April, 1888. He had found in China altogether 200 species of wild animals, of which 63 were hitherto unknown to zoologists; 807 species of birds, 65 of which had not been described before. Besides, a large collection of reptiles, batrachians, and fishes was made and handed over to specialists for further study, also a large number of moths and insects, many of them hitherto unknown, were brought to the museum of the Jardin des Plantes. What Father David's scientific journeys meant for botany may be inferred from the fact that among the rhododendrons which he collected no less than fifty-two new species were found and among the *primulae* about forty, while the Western Mountains of China furnished an even greater number of hitherto unknown species of gentian. The most remarkable of hitherto unknown animals found by David was a species of bear (*ursus melanoleucus*, the black-white bear) which is a connecting link between the cats and bears. Another remarkable animal found by him received the scientific name of *elaphurus davidianus*. Of this animal the Chinese say that it has the horns of the stag, the neck of the camel, the foot of the cow, and the tail of the ass. It had disappeared with the exception of a few preserved in the gardens of the Emperor of China, but David succeeded in securing a

specimen and sent it to Europe. In the midst of his work as a naturalist Father David did not neglect his missionary labours, and was noted for his careful devotion to his religious duties and for his obedience to every detail of his rules.

JAMES J. WALSH.

David, GHEERAERT (or GERARD), son of John David, painter and illuminator, b. at Oudewater, South Holland, c. 1450, d. 13 August, 1523, at Bruges, where he had been admitted, 14 January, 1484, as master-painter into the Guild of St. Luke, of which, after filling minor offices, he was elected dean in 1501. It is not known where he learned his art, probably at Haarlem. On the completion of his apprenticeship, he no doubt, as was the custom, travelled to improve himself, working as an assistant under various masters wherever he found employment. He probably travelled to Italy, as his works show traces of Florentine and Venetian influence. Their landscape backgrounds prove that he knew the valley of the Meuse. On his way to Flanders he would not have failed to visit Louvain and study the works of his fellow-countryman, Dirk Bouts, nor to halt a while at Ghent to admire the polyptych of the Van Eycks. At Bruges he found the churches full of paintings by all the great masters, and one of these, Hans Memling, still living. He probably worked under him until he himself received commissions, for which he had not long to wait. In 1496 he married Cornelia Cnoop, daughter of the dean of the guild of goldsmiths, by whom he had one daughter, Barbara. Gheeraert was buried in the church of Our Lady, at the foot of the tower. He was not one of the greatest masters, nor did he strike out any new line like Van der Goes, but he gathered up all the best traditions of his predecessors, to which he faithfully adhered all through his life. His saints and angels compared with those of Memling are more sedate. One new type he created, the charming figure of the Child Jesus, which made a lasting impression on the succeeding generation of painters. His portraits are very good, his brocaded stuffs, embroidery, and jewellery have never been surpassed, and his landscapes are remarkably fine. His works show that he was a great religious painter; he was also a pious and charitable man. One of his finest paintings, the "Virgo inter Virgines", now in the museum at Rouen, was presented by him in 1509 to the Carmelite nuns of Sion at Bruges, to whom he lent a large sum of money free of interest. Gheeraert excelled in miniature-painting and illumination, which arts his wife also practised with success. David's principal works are in the National Gallery, London (2), National Gallery, Dublin (1), Town Gallery, Bruges (5), Town Gallery, Rouen (1), Museum, Sigmaringen (2), Imperial Gallery, Vienna (1).

W. H. JAMES WEALE.

David (דָּוִד or דָּוִד, beloved), KING.—In the Bible the name David is borne only by the second king of Israel, the great-grandson of Boaz and Ruth (Ruth, iv, 18 sqq.). He was the youngest of the eight sons of Isai, or Jesse (I Kings, xvi, 8; cf. I Par., ii, 13), a small proprietor, of the tribe of Juda, dwelling at Bethlehem, where David was born. Our knowledge of David's life and character is derived exclusively from the pages of Sacred Scripture, viz., I K., xvi; III K., ii; I Par., ii, iii, x-xxix; Ruth, iv, 18-22, and the titles of many Psalms. According to the usual chronology, David was born in 1085 and reigned from 1055 to 1015 B. C. Recent writers have been

induced by the Assyrian inscriptions to date his reign from 30 to 50 years later. Within the limits imposed it is impossible to give more than a bare outline of the events of his life and a brief estimate of his character and his significance in the history of the chosen people, as king, psalmist, prophet, and type of the Messias.

The history of David falls naturally into three periods: (1) before his elevation to the throne; (2) his reign, at Hebron over Juda, and at Jerusalem over all Israel, until his sin; (3) his sin and last years. He first appears in sacred history as a shepherd lad, tending his father's flocks in the fields near Bethlehem, "ruddy and beautiful to behold and of a comely face". Samuel, the Prophet and last of the judges, had been sent to anoint him in place of Saul, whom God had rejected for disobedience. The relations of David do not seem to have recognized the significance of this unction, which marked him as the successor to the throne after the death of Saul.

During a period of illness, when the evil spirit troubled Saul, David was brought to court to soothe the king by playing on the harp. He earned the gratitude of Saul and was made an armour-bearer, but his stay at court was brief. Not long afterwards, whilst his three elder brothers were in the field, fighting under Saul against the Philistines, David was sent to the camp with some provisions and presents; there he heard the words in which the giant, Goliath of Geth, defied all Israel to single combat, and he volunteered with God's help to slay the Philistine. His victory over Goliath brought about the rout of the enemy. Saul's questions to Abner at this time seem to imply that he had never seen David before, though, as we have seen, David had already been at court. Various conjectures have been made to explain this difficulty. As the passage which suggests a contradiction in the Hebrew text is omitted by Septuagint codices, some authors have accepted the Greek text in preference to the Hebrew. Others suppose that the order of the narratives has become confused in our present Hebrew text. A simpler and more likely solution maintains that on the second occasion Saul asked Abner only about the family of David and about his earlier life. Previously he had given the matter no attention.

David's victory over Goliath won for him the tender friendship of Jonathan, the son of Saul. He obtained a permanent position at court, but his great popularity and the imprudent songs of the women excited the jealousy of the king, who on two occasions attempted to kill him. As captain of a thousand men, he encountered new dangers to win the hand of Merob, Saul's eldest daughter, but, in spite of the king's promise, she was given to Hadriel, Michol, Saul's other daughter, loved David, and, in the hope that the latter might be killed by the Philistines, her father promised to give her in marriage, provided David should slay one hundred Philistines. David succeeded and married Michol. This success, however, made Saul fear the more and finally induced him to order that David should be killed. Through the intervention of Jonathan he was spared for a time, but Saul's hatred finally obliged him to flee from the court.

First he went to Ramatha and thence, with Samuel, to Naioth. Saul's further attempts to murder him were frustrated by God's direct interposition. An interview with Jonathan convinced him that reconciliation with Saul was impossible, and for the rest of the reign he was an exile and an outlaw. At Nob, whither he proceeded, David and his companions were harboured by the priest Achimelech, who was afterwards accused of conspiracy and put to death with his fellow-priests. From Nob David went to the court of Achis, king of Geth, where he escaped death by feigning madness. On his return he became the head of a band of about four hundred men, some of them his relations, others distressed

EINSIEDELN LIBRARY

debtors and malcontents, who gathered at the cave, or stronghold, of Odollam (Adullam). Not long after their number was reckoned at six hundred. David delivered the city of Ceila from the Philistines, but was again obliged to flee from Saul. His next abode was the wilderness of Ziph, made memorable by the visit of Jonathan and by the treachery of the Ziphites, who sent word to the king. David was saved from capture by the recall of Saul to repel an attack of the Philistines. In the deserts of Engaddi he was again in great danger, but when Saul was at his mercy, he generously spared his life. The adventure with Nabal, David's marriage with Abigail, and a second refusal to slay Saul were followed by David's decision to offer his services to Achis of Geth and thus put an end to Saul's persecution. As a vassal of the Philistine king, he was set over the city of Siceleg, whence he made raids on the neighbouring tribes, wasting their lands and sparing neither man nor woman. By pretending that these expeditions were against his own people of Israel, he secured the favour of Achis. When, however, the Philistines prepared at Aphee to wage war against Saul, the other princes were unwilling to trust David, and he returned to Siceleg. During his absence it had been attacked by the Amalecites. David pursued them, destroyed their forces, and recovered all their booty. Meanwhile the fatal battle on Mount Gelboe (Gilboa) had taken place, in which Saul and Jonathan were slain. The touching elegy, preserved for us in II Kings, i, is David's outburst of grief at their death.

By God's command, David, who was now thirty years old, went up to Hebron to claim the kingly power. The men of Juda accepted him as king, and he was again anointed, solemnly and publicly. Through the influence of Abner, the rest of Israel remained faithful to Isboseth, the son of Saul. Abner attacked the forces of David, but was defeated at Gabaon. Civil war continued for some time, but David's power was ever on the increase. At Hebron six sons were born to him: Amnon, Cheleab, Absalom, Adonias, Saphathia, and Jethraam. As the result of a quarrel with Isboseth, Abner made overtures to bring all Israel under the rule of David; he was, however, treacherously murdered by Joab without the king's consent. Isboseth was murdered by two Benjamites, and David was accepted by all Israel and anointed king. His reign at Hebron over Juda alone had lasted seven years and a half.

By his successful wars David succeeded in making Israel an independent state and causing his own name to be respected by all the surrounding nations. A notable exploit at the beginning of his reign was the conquest of the Jebusite city of Jerusalem, which he made the capital of his kingdom, "the city of David", the political centre of the nation. He built a palace, took more wives and concubines, and begat other sons and daughters. Having cast off the yoke of the Philistines, he resolved to make Jerusalem the religious centre of his people by transporting the Ark of the Covenant (q. v.) from Cariathiarim. It was brought to Jerusalem and placed in the new tent constructed by the king. Later on, when he proposed to build a temple for it, he was told by the prophet Nathan, that God had reserved this task for his successor. In reward for his piety, the promise was made that God would build him up a house and establish his kingdom forever.

No detailed account has been preserved of the various wars undertaken by David; only some isolated facts are given. The war with the Ammonites is recorded more fully because, whilst his army was in the field during this campaign, David fell into the sins of adultery and murder, bringing thereby great calamities on himself and his people. He was then at the height of his power, a ruler respected by all the nations from the Euphrates to the Nile. After his sin with

Bethsabee and the indirect assassination of Urias, her husband, David made her his wife. A year elapsed before his repentance for the sin, but his contrition was so sincere that God pardoned him, though at the same time announcing the severe penalties that were to follow. The spirit in which David accepted these penalties has made him for all time the model of penitents. The incest of Amnon and the fratricide of Absalom (q. v.) brought shame and sorrow to David. For three years Absalom remained in exile. When he was recalled, David kept him in disfavour for two years more and then restored him to his former dignity, without any sign of repentance. Vexed by his father's treatment, Absalom devoted himself for the next four years to seducing the people and finally had himself proclaimed king at Hebron. David was taken by surprise and was forced to flee from Jerusalem. The circumstances of his flight are narrated in Scripture with great simplicity and pathos. Absalom's disregard of the counsel of Achitophel and his consequent delay in the pursuit of the king made it possible for the latter to gather his forces and win a victory at Manahaim, where Absalom was killed. David returned in triumph to Jerusalem. A further rebellion under Seba at the Jordan was quickly suppressed.

At this point in the narrative of II Kings we read that "there was a famine in the days of David for three years successively", in punishment for Saul's sin against the Gabaonites. At their request seven of Saul's race were delivered up to be crucified. It is not possible to fix the exact date of this famine. On other occasions David showed great compassion for the descendants of Saul, especially for Miphiboseth, the son of his friend Jonathan. After a brief mention of four expeditions against the Philistines, the sacred writer records a sin of pride on David's part in his resolution to take a census of the people. As a penance for this sin, he was allowed to choose either a famine, an unsuccessful war, or pestilence. David chose the third and in three days 70,000 died. When the angel was about to strike Jerusalem, God was moved to pity and stayed the pestilence. David was commanded to offer sacrifice at the threshing-floor of Areuna, the site of the future temple.

The last days of David were disturbed by the ambition of Adonias, whose plans for the succession were frustrated by Nathan, the prophet, and Bethsabee, the mother of Solomon. The son who was born after David's repentance was chosen in preference to his older brothers. To make sure that Solomon would succeed to the throne, David had him publicly anointed. The last recorded words of the aged king are an exhortation to Solomon to be faithful to God, to reward loyal servants, and to punish the wicked. David died at the age of seventy, having reigned in Jerusalem thirty-three years. He was buried on Mount Zion. St. Peter spoke of his tomb as still in existence on the day of Pentecost, when the Holy Ghost descended on the Apostles (Acts, ii, 29). David is honoured by the Church as a saint. He is mentioned in the Roman Martyrology on 29 December.

The historical character of the narratives of David's life has been attacked chiefly by writers who have disregarded the purpose of the narrator in I Par. He passes over those events that are not connected with the history of the Ark. In the Books of Kings all the chief events, good and bad, are narrated. The Bible records David's sins and weaknesses without excuse or palliation, but it also records his repentance, his acts of virtue, his generosity towards Saul, his great faith, and his piety. Critics who have harshly criticized his character have not considered the difficult circumstances in which he lived or the manners of his age. It is uncritical and unscientific to exaggerate his faults or to imagine that the whole history is a series of myths. The life of David was an important

epoch in the history of Israel. He was the real founder of the monarchy, the head of the dynasty. Chosen by God "as a man according to His own heart", David was tried in the school of suffering during the days of exile and developed into a military leader of renown. To him was due the complete organization of the army. He gave Israel a capital, a court, a great centre of religious worship. The little band at Odollam became the nucleus of an efficient force. When he became King of all Israel there were 339,600 men under his command. At the census 1,300,000 were enumerated capable of bearing arms. A standing army, consisting of twelve corps, each of 24,000 men, took turns in serving for a month at a time as the garrison of Jerusalem. The administration of his palace and his kingdom demanded a large retinue of servants and officials. Their various offices are set down in I Par., xxvii. The king himself exercised the office of judge, though Levites were later appointed for this purpose, as well as other minor officials.

When the Ark had been brought to Jerusalem, David undertook the organization of religious worship. The sacred functions were entrusted to 24,000 Levites; 6000 of these were scribes and judges, 4000 were porters, and 4000 singers. He arranged the various parts of the ritual, allotting to each section its tasks. The priests were divided into twenty-four families; the musicians into twenty-four choirs. To Solomon had been reserved the privilege of building God's house, but David made ample preparations for the work by amassing treasures and materials, as well as by transmitting to his son a plan for the building and all its details. We are told in I Par. how he exhorted his son Solomon to carry out this great work and made known to the assembled princes the extent of his preparations.

The prominent part played by song and music in the worship of the temple, as arranged by David, is readily explained by his poetic and musical abilities. His skill in music is recorded in I Kings, xvi, 18 and Amos, vi, 5. Poems of his composition are found in II Kings, i, iii, xxii, xxiii. His connexion with the Book of Psalms, many of which are expressly attributed to various incidents of his career, was so taken for granted in later days that many ascribed the whole Psalter to him. The authorship of these hymns and the question how far they can be considered as supplying illustrative material for David's life will be treated in the article PSALMS.

David was not merely king and ruler, he was also a prophet. "The spirit of the Lord hath spoken by me and his word by my tongue" (II Kings, xxiii, 2) is a direct statement of prophetic inspiration in the poem there recorded. St. Peter tells us that he was a prophet (Acts, ii, 30). His prophecies are embodied in the Psalms he composed that are literally Messianic and in "David's last words" (II K., xxiii). The literal character of these Messianic Psalms is indicated in the New Testament. They refer to the suffering, the persecution, and the triumphant deliverance of Christ, or to the prerogatives conferred on Him by the Father. In addition to these his direct prophecies, David himself has always been regarded as a type of the Messiah. In this the Church has but followed the teaching of the Old Testament Prophets. The Messiah was to be the great theocratic king; David, the ancestor of the Messiah, was a king according to God's own heart. His qualities and his very name are attributed to the Messiah. Incidents in the life of David are regarded by the Fathers as foreshadowing the life of Christ; Bethlehem is the birth-place of both; the shepherd life of David points out Christ, the Good Shepherd; the five stones chosen to slay Goliath are typical of the five wounds; the betrayal by his trusted counsellor, Achitophel, and the passage over the Cedron remind us of Christ's Sacred Passion. Many of the Davidic Psalms, as we learn

from the New Testament, are clearly typical of the future Messias.

JOHN CORBETT.

David of Augsburg (DE AUGUSTA), medieval German mystic, b. probably at Augsburg, Bavaria, early in the thirteenth century; d. at Augsburg, 19 Nov., 1272. He entered the Franciscan Order probably at Ratisbon, where a monastery of this order was in existence as early as 1226; the Franciscan monastery at Augsburg was not erected until 1243. At Ratisbon David filled the position of master of novices and wrote for the spiritual benefit of the latter his celebrated "Formula Novitiorum". Whether the distinguished Franciscan preacher Berthold of Ratisbon (q. v.) was one of his pupils is at least very doubtful. In 1246 Berthold and David were appointed inspectors of the convent of Niedermünster at Ratisbon. From about 1250 David accompanied Berthold on his missionary tours and most probably took part in the preaching himself; he also had a share in the proceedings of the Inquisition against the Waldenses. On the day of David's death it is said that Berthold, who was preaching in a distant place, stopped in the midst of his sermon and quoted, in reference to his friend who had just passed away, the following lines of the hymn, "Iste Confessor":—

Qui pius, prudens, humilis, pudicus,

Sobriam duxit sine labe vitam

—etc. David wrote both in Latin and German. For a long period his Latin works were attributed to others, at times to St. Bernard of Clairvaux and St. Bonaventure, a proof of the high esteem in which they were held. The most striking case of this mistaken ascription is that of the "Formula Novitiorum" which in addition to two letters of David form three books: (1) "De Compositione hominis exterioris" (treats of the external life of the member of an order); (2) "De Reformatione hominis interioris"; (3) "De septem processibus religiosorum". This work, of which the different parts often appeared separately, is a rational and progressive introduction to monastic and mystical life. It was first published under the name of St. Bonaventure (Brescia, 1485; Venice, 1487; Antwerp, 1591; Cologne, 1618); it appeared also in the *editio Vaticana* of the works of St. Bonaventure (Rome, 1588-96), and consequently in all of the reprints of this edition. It also appeared in the "Magna Bibliotheca veterum Patrum" (Cologne, 1618), vol. XIII, in the "Maxima Bibliotheca vet. Patr." (Lyons, 1675), vol. XXV, and, in part, among the doubtful works of St. Bernard of Clairvaux in Migne, P. L., CLXXXIII, col. 1189. The Latin edition published at Augsburg in 1596 was issued in German at the same place in 1597. The latest and by far the best edition is that which appeared at Quaracchi (1889), in the introduction to which the work is positively ascribed to Brother David of Augsburg; a list of 370 manuscripts is also given. David's treatise "De hæresi pauperum de Lugduno" was erroneously issued, in an incomplete form, by Martène and Durand (*Thesaurus novus anecdot.*, V, 1777 sqq.) under the name of the Dominican Yvonne; but it has been proved by Pfeiffer and Preger to be one of David's writings and the full text was edited by Preger for the first time. Extracts from David's "Expositio Regulæ", an explanation of the monastic rules of St. Francis of Assisi, have been edited by E. Lempp.

Attention was first called to David's German writings by Pfeiffer, who in 1845 published the following

eight treatises and ascribed them to David: (1) "Die sieben Vorregeln der Tugend"; (2) "Der Spiegel der Tugend"; (3) "Christi Leben unser Vorbild" (to this treatise Pfeiffer found later a continuation five times larger than the part published); (4) "Die vier Fittiche geistlicher Betrachtung"; (5) "Von der Anschauung Gottes"; (6) "Von der Erkenntnis der Wahrheit"; (7) "Von der unergründlichen Fülle Gottes"; (8) "Betrachtungen und Gebete". Preger raised doubts as to the correctness of ascribing these tractates, with exception of the first three, to David, but his attack proved a failure and Pfeiffer's views have been successfully defended by Hecker and Telling. It must, however, be acknowledged that the eighth contains much that was common property in the Middle Ages. David's German treatises are fine examples of German prose and assure him a permanent place in the history of German literature. Like the radiance of a gently burning flame they attract the heart and spirit of the reader to the beautiful and the Divine. They turn the mind from vice and error with most convincing eloquence and kindle in it the love of God. In these writings, as in the treatises for novices, David is at all times the circumspect mystic, averse to fantastic ecstasy and exaggeration. A sober good sense pervades his profound yet animated expositions, which have nothing in common with the vagaries of the German mystics of the fourteenth century, although David's influence on the latter is not to be denied. His writings exerted some influence also on the "Schwabenspiegel" (Swabian Mirror), the well-known compilation of civil law used in Southern Germany, which appeared about 1268. Personally David belonged to the earlier school of mystics.

MICHAEL BIHL.

David of Dinant, a pantheistic philosopher who lived in the first decades of the thirteenth century. Very little is known about his life. It is not certain whether he was born at Dinant in Belgium, or at Dinan in Brittany. He is believed to have lived for some time at the Roman Court under Innocent III. He was a *magister*, or teacher, perhaps at Paris; at any rate, it was at Paris that his work, entitled "Quaternuli" (little note-books), was condemned by a provincial council in 1210, a condemnation which was confirmed in 1215 by a letter of Cardinal Robert Courçon, papal legate. From a work ascribed to Albert the Great, "Compilatio de Novo Spiritu", in the Munich Library (MS. lat. 311, fol. 92 b), we learn further that in consequence of the condemnation, David fled from France, and so escaped punishment. When and where he died is unknown; all we are warranted in saying is that he died after the year 1215. Besides the "Quaternuli", condemned in the council of 1215, and ordered to be burned "before Christmas", another work entitled "De Tomis, seu Divisionibus", is mentioned. It is not improbable, however, that this was merely another title for the "Quaternuli". The effect of the order issued by the council was to cause all the writing of David to disappear. Whatever is known, therefore, about his doctrines is derived from the

assertions of his contemporaries and opponents, chiefly Albert the Great and St. Thomas. From these sources we learn that David was a Pantheist. He identified God with the material substratum of all things, *materia prima* (St. Thomas, *Summa Theol.*, I, Q. iii, a. 8). He reduced all reality to three categories, namely bodies, minds, and eternal separate substances. The indivisible substrate or constituent of bodies is matter (*yle*); of minds, or souls, intellect (*nous*); and of eternal separate substances, God (*Deus*). These three, matter, intellect, and God, are one and the same. Consequently all things, material, intellectual, and spiritual, have one and the same essence—God (St. Thomas, *In II Sent.*, dist. xvii, Q. i; Albert the Great, *Sum. Theol.*, II, Tract. xii, Q. lxxii, a. 2).

The phraseology, which must be David's own, as well as the title above mentioned, "De Tomis", suggests at once the influence of John Scotus Eriugena, an influence which cannot be denied. Eriugena's work must have been widely known and read in the first decades of the thirteenth century, as is evident from many undeniable facts. Whether David was influenced also by Amalric of Chartres (see AMALRICIANS) is a matter of debate. Albert, who was a contemporary of David, says that David merely renewed the heresy of Alexander, "who taught that God and intellect and matter are one substance". It is impossible to determine whom Albert here means by Alexander, "a disciple of Xenophanes"; probably the reference is to some Arabian work that went under the name of a Greek philosopher. There were several works of that kind current in the early part of the thirteenth century. Some critics, however, put forward the surmise that David's immediate source was Avicbron's "Fons Vitæ", or the work "De Unitate", written by Archdeacon Gundisalvi of Segovia, who was well versed in Arabian philosophical literature. Whatever the source, the doctrines were, as all our authorities concur in describing them, the expression of the most thoroughgoing pantheism. This of itself would justify the drastic measures to which the Council of Paris had recourse. There were, moreover, circumstances which rendered summary condemnation necessary. On the one hand the University of Paris was being made the scene of an organized attempt to foist the Arabian pantheistic interpretation of Greek philosophy on the schools of Latin Christendom. Texts, translations, and commentaries were introduced every day from Spain, in which doctrines incompatible with Christian dogma were openly taught. On the other hand, there was the popular movement in the South of France which found its principal expression in the Albigensian heresy, while in learned and ascetic communities in the North, the anti-hierarchical mysticism of the Calabrian Joachim of Floris was being combined with the more speculative pantheistic mysticism of John Scotus Eriugena. In view of these conditions the condemnation of the errors of David of Dinant, the complete extirpation of the sect of Amalricians to which he apparently belonged, and the unwonted harshness of St. Thomas's reference to him cannot be judged untimely or intemperate.

WILLIAM TURNER.

David Scotus, a medieval Irish chronicler, date of birth unknown; d. 1139. Early in the twelfth century there was at Würzburg an ecclesiastic and teacher known as David. His surname Scotus shows that he very probably came from Ireland; perhaps from Wales, if he is identical with the homonymous

Bishop of Bangor (see below). According to Ekkehard (Chronicon, ed., Mon. Germ. Hist.: Script., VI, 243), Emperor Henry V received him, was charmed with his virtue and knowledge, and made him one of the imperial chaplains. With other scholars David accompanied the king on his expedition to Italy in 1100, and was appointed royal historiographer for the occasion. His work in three books is now known only from excerpts of it in later historians, especially in Ekkehard (op. cit. above) and William of Malmesbury. The latter (*Gesta regum Anglorum*, in P. L., CLXXIX, 1375) says that David described the expedition with partiality for the king. A certain David was consecrated Bishop of Bangor in Wales, 4 April, 1120; according to Malmesbury (loc. cit.) he was none other than the chaplain, David Scotus. As bishop he took part in several English synods, and probably died in 1139, since his successor was then consecrated. But it is not easy to reconcile with the foregoing, the statement of a later historian (Trithemius, *Annales Hirsauenses*; I, 349), that David became a monk under St. Macharius in the monastery of St. James in Würzburg, as this abbey was not founded until 1140.

J. P. KIRSCH.

Davies, WILLIAM, VENERABLE, martyr, one of the most illustrious of the priests who suffered under Queen Elizabeth, b. in North Wales, probably at Crois in Yris, Denbighshire, date uncertain; d. at Beaumaris, 27 July, 1593. He studied at Reims, where he arrived 6 April, 1582 just in time to assist at the first Mass of the venerable martyr Nicholas Garlick. He received tonsure and minor orders 23 Sept., 1583, together with seventy-three other English students. Ordained priest in April, 1585, he laboured with wonderful zeal and success in Wales till March, 1591-2, when he was arrested at Holyhead with four students whom he was sending via Ireland to the English College at Valladolid. He was thrown into a loathsome dungeon in Beaumaris Castle and separated from his companions, having frankly confessed that he was a priest. After a month his sanctity and patience gained him some relaxation of his close confinement and he was able to join the students for an hour in the day, and even to celebrate Mass. By degrees the jailor became so indulgent that they might have escaped had they so willed. The fame of the priest's sanctity and wisdom brought Catholics from all parts to consult him and Protestant ministers came to dispute with him. At the assizes he and his companions were condemned to death, on which the martyr intoned the "Te Deum", which the others took up. The injustice of the sentence was so apparent that to still the people's murmurs the judge reprieved the condemned till the queen's pleasure should be known. Sent to Ludlow, to be examined by the Council of the Marches, Father Davies had to submit to fresh assaults by the ministers. Here too he foiled the artifices of his enemies who took him to the church under pretext of a disputation, and then began the Protestant service. He at once began to recite the Latin Vespers in a louder voice than the ministers', and afterwards publicly exposed the trick of which he had been a victim. From Ludlow he was sent to Bewdley, where he had to share a foul dungeon with felons, and from thence to other prisons, until at last he was sent back to Beaumaris, where, to their mutual consolation, he rejoined his young companions. For some six months he lived with them the life of a religious community, dividing the time between prayer and study, "with so much comfort to themselves that they seemed to be rather in heaven than in prison". At the summer assizes it was decided that the priest must die as a traitor, though he was offered his life if he would go but once to

church. In spite of the open opposition of the people, who honoured him as a saint, the cruel sentence was carried out and he was hanged, drawn, and quartered at Beaumaris. As he put the rope round his neck, the martyr said: "Thy yoke, O Lord, is sweet and Thy burden is light." His cassock stained with his blood was bought by his companions and preserved as a relic. They, though condemned to imprisonment for life, managed in time to escape, and the youngest found his way at last to Valladolid, where he recounted the whole story to Bishop Yepes, who wrote it in his "*Historia particular de la Persecucion en Inglaterra*". There is now a chapel in Anglesey built as a memorial to the martyr.

BEDE CAMM.

Dávila Padilla (AGUSTÍN), a native of the City of Mexico, b. 1562; d. 1604. At the age of sixteen he graduated at the University of Mexico as master of arts and soon after entered the Dominican Order. He held the chairs of philosophy and theology at Puebla and Mexico. He was successively definitor and procurator of the Mexican province of his order and was sent to Rome and Madrid as its representative. In 1601 he was made Bishop of Santo Domingo, where he died. Dávila Padilla was not a prolific writer. He left, however, one very important, though unfortunately rare, work, the "*Historia de la Fundacion y Discurso de la Provincia de Santiago de México*" (Madrid, 1596; Brussels, 1625). Beristain mentions a third edition of 1634. While not free from mistakes, it still stands as the foremost chronicle of the Dominican Order and its missions in America up to the end of the sixteenth century.

Dawson, ÆNEAS McDONNELL, author, b. in Scotland, 30 July, 1810; d. in Ottawa, Canada, 29 Dec., 1894. He studied at the seminary of Paris and was ordained priest in 1835. Until 1840 he laboured on the mission of Dumfries, Scotland, and subsequently in Edinburgh. Before emigrating to Canada in 1855 he had charge successively of the Counties of Fife, Kinross, and Clackmannan, during all this time rendering valuable service to the cause of the Church. On his arrival in Canada he was given the parish of St. Andrew's, Ottawa, and later became preacher at the cathedral. Father Dawson was a lecturer of repute and a frequent contributor to the provincial press. He is the author of "*The Temporal Sovereignty of the Pope*" (Ottawa and London, 1860), the first book printed and published in Ottawa; "*St. Vincent de Paul: A Biography*" (London, 1865); "*Seven Letters together with a Lecture on the Colonies of Great Britain*" (Ottawa, 1870); "*The Late Hon. Thomas D'Arcy McGee. A Funeral Oration*" (Ottawa, 1870); "*Our Strength and Their Strength: The Northwest Territory and Other Papers, Chiefly Relating to the Dominion of Canada*" (Ottawa, 1870)—the first title heads a refutation of Goldwin Smith's anti-clerical views; under the last comes a series of poems, discourses, lectures, critical reviews; "*Pius IX and his Time*" (London, 1880). He translated from the French: (1) "*Maitre Pierre. Conversations on Moral-*

ity, by M. Delcasott" (Paris, 1836); (2) "The Parish Priest and His Parishioners, or Answer to Popular Prejudices against Religion, by M. B. D'Exauvillez" (Glasgow, 1842), reviewed in "The Tablet", London, 12 Feb., 1842; (3) Letters of same author on the Spanish Inquisition (London, 1848); (4) "Count Joseph de Maistre's celebrated work on the Pope" (London, 1850), and his "Soirées de S. Pétersbourg" (London, 1851), "an excellent and careful translation. . . . Another instance of enlightened zeal from one of the small band of Scottish Catholics" ("The Tablet", London, 23 Nov., 1850). A list of his poems and other works is given in the "Proceedings and Transactions of the Royal Society of Canada" (1894, XII, 23), of which he was a member.

Dawson* (Ottawa, 1890); TANGUAY, *Répertoire Général du Clergé Canadien* (Quebec, 1868). In this Tanguay inaccurately gives the date of Father Dawson's birth as 1830.

EDWARD P. SPILLANE.

Dax. See AIRE.

Day, GEORGE, Bishop of Chichester; b. in Shropshire, England, c. 1501; d. 2 August, 1556. He was graduated at Cambridge in 1520-1 and admitted Fellow of St. John's, 19 September, 1522. Though apparently always a Catholic in belief, Day submitted like too many others to the assumption by Henry VIII of ecclesiastical supremacy. He was made Master of St. John's in 1537, Vice-Chancellor of the University, and Provost of King's College (though not a fellow of it) by special exercise of the royal authority, in 1538. Consecrated Bishop of Chichester in 1543 by Crammer, he firmly opposed the spread of the Reformation under Edward VI. He answered in a Catholic sense Crammer's written questions on the "Sacrament of the Altar", defended the Catholic doctrine in the House of Lords, and voted against the bills for Communion under both kinds, and for the introduction of the new Prayer Book. In his own diocese his preaching was so effective that, in October, 1550, the Council felt it necessary to send "Dr. Cox, the king's almoner, to appease the people by his good doctrine, which are troubled through the seditious preaching of the Bishop of Chichester and others", and, in the following December, Day was brought before the Council to answer for his disregard of an injunction to have "all the altars in every church taken down, and in the lieu of them a table set up",—himself preaching on the occasion, if possible in his cathedral. After repeated interrogations, his final answer was that "he would never obey to do this thing, thinking it a less evil to suffer the body to perish than to corrupt the soul with that thing that his conscience would not bear". For this "contempt" he was imprisoned in the Fleet, and after further questionings was deprived of his bishopric in October, 1551. From the Fleet he was transferred in June of 1552 into the keeping of Bishop Goodrich of Ely, then Lord Chancellor, in whose custody he remained until the death of Edward VI. Queen Mary restored him at once to his dignity, besides naming him her almoner. In re-establishing the ancient worship she had, however, to proceed cautiously. Thus contemporary chroniclers record that Crammer conducted Edward's funeral "without any cross or light", and "with a communion in English", though "the Bishop of Chichester preached a good sermon". Day again preached at Mary's coronation. His previous sufferings prove the sincerity of his conversion from the schism, and his reconciliation to the Church had doubtless already been privately effected. His formal absolution and confirmation in his bishopric by Cardinal Pole, as Papal Legate, is dated 31 January, 1555. His death occurred only a year and a half later and he was buried in Chichester cathedral.

G. E. PHILLIPS.

Day, SIR JOHN CHARLES, jurist, b. near Bath, England, 1826; d. 13 June, 1908, at Newbury. He was educated at Rome and at Fribourg, finally with the Benedictines at Downside, who prepared him to graduate with honours at the London University and attain subsequent distinction at the Bar. He was called to the Middle Temple, 1849; took silk, 1872; Bencher of the Middle Temple, 1873; raised to the Bench as Judge of the Queen's Bench Division of High Court of Justice and knighted, 1882; resigned, 1901; created Privy Councillor, 1902. His first ten years at the Bar were a constant struggle, and then his book, "Common Law Procedure Acts", brought him fame and fortune. As a judge his severe sentences, especially for crimes of violence, made him the terror of evildoers, among whom he was in consequence nicknamed "Day of Reckoning" and "Judgment Day". He was also eminent as an art connoisseur and his collection of pictures by painters of the Barbizon School was one of the best in England. In 1888-90 he served as a judge on the famous Parnell Special Commission. Two of his sons, Henry and Arthur, joined the Society of Jesus and a third, Samuel, selected the law. Judge Day also edited Roscoe's "Evidence at Nisi Prius" (1870).

THOMAS F. MEEHAN.

Day of Judgment. See JUDGMENT, DAY OF.

Deacons.—The name *deacon* (*διάκονος*) means only minister or servant, and is employed in this sense both in the Septuagint (though only in the Book of Esther, e. g. ii, 2; vi, 3) and in the New Testament (e. g. Matt., xx, 28; Romans xv, 25; Eph., iii, 7; etc.). But in Apostolic times the word began to acquire a more definite and technical meaning. Writing about A. D. 63, St. Paul addresses "all the saints, who are at Philippi, with the bishops and deacons" (Phil., i, 1). A few years later (I Tim., iii, 8 sq.) he impresses upon Timothy that "deacons must be chaste, not double tongued, not given to much wine, not greedy of filthy lucre, holding the mystery of the faith in a pure conscience". He directs, further, that they must "first be proved: and so let them minister, having no crime", and he adds that they should be "the husbands of one wife: who rule well their children, and their own houses. For they that have ministered well, shall purchase to themselves a good degree, and much confidence in the faith which is in Christ Jesus". This passage is worthy of note, not only because it describes the qualities desirable in candidates for the diaconate, but also because it suggests that external administration and the handling of money were likely to form part of their functions.

ORIGIN AND EARLY HISTORY OF THE DIACONATE.—According to the constant tradition of the Catholic Church, the narrative of Acts, vi, 1-6, which serves to introduce the account of the martyrdom of St. Stephen, describes the first institution of the office of deacon. The Apostles, in order to meet the complaints of the Hellenistic Jews that "their widows were neglected in the daily ministrations [*διακονία*]", called together "the multitude of the disciples and said: It is not reason that we should leave the word of God and serve [*διακονεῖν*] tables. Wherefore, brethren, look ye out among you seven men of good reputation, full of the Holy Ghost and wisdom, whom we may appoint over this business. But we will give ourselves continually to prayer, and to the ministry of the word [*τῇ διακονίᾳ τοῦ λόγου*]. And the saying

was liked by all the multitude. And they chose Stephen, a man full of faith, and of the Holy Ghost" (with six others who are named). These they placed "before the apostles; and they, praying, imposed hands upon them." Now, on the ground that the Seven are not expressly called deacons and that some of them [e. g. St. Stephen, and later Philip (Acts, xxi, 8)] preached and ranked next to the Apostles, Protestant commentators have constantly raised objections against the identification of this choice of the Seven with the institution of the diaconate. But apart from the fact that the tradition among the Fathers is both unanimous and early—e. g., St. Irenæus (Adv. Hær., III, xii, 10 and IV, xv, 1) speaks of St. Stephen as the first deacon—the similarity between the functions of the Seven who "served the tables" and those of the early deacons is most striking. Compare, for example, both with the passage from the Acts and with I Tim., iii, 8 sq., quoted above, the following sentence from Hermas (Sim., IX, 26): "They that have spots are the deacons that exercised their office ill and plundered the livelihood of widows and orphans and made gains for themselves from the ministrations which they had received to perform." Or, again, St. Ignatius (Ep. ii to the Trallians): "Those who are deacons of the mysteries of Jesus Christ must please all men in all ways. For they are not deacons of meats and drinks [only] but servants of the church of God"; while St. Clement of Rome (about A. D. 95) clearly describes the institution of deacons along with that of bishops as being the work of the Apostles themselves (Ep. Clem., xlii). Further, it should be noted that ancient tradition limited the number of deacons at Rome to seven (Eusebius, Hist. Eccl., VI, xliii), and that a canon of the Council of Neo-Cæsarea (325) prescribed the same restriction for all cities, however large, appealing directly to the Acts of the Apostles as a precedent. We seem, therefore, thoroughly justified in identifying the functions of the Seven with those of the deacons of whom we hear so much in the Apostolic Fathers and the early councils. Established primarily to relieve the bishops and presbyters of their more secular and invidious duties, notably in distributing the alms of the faithful, we need not do more than recall the large place occupied by the agapæ, or love-feasts, in the early worship of the Church, to understand how readily the duty of serving at tables may have passed into the privilege of serving at the altar. They became the natural intermediaries between the celebrant and the people. Inside the Church they made public announcements, marshalled the congregation, preserved order, and the like. Outside of it they were the bishop's deputies in secular matters, and especially in the relief of the poor. Their subordination and general duties of service seem to have been indicated by their standing during the public assemblies of the Church, while the bishops and priests were seated. It should be noticed that along with these functions probably went a large share in the instruction of catechumens and the preparation of the altar services. Even in the Acts of the Apostles (viii, 38) the Sacrament of Baptism is administered by the deacon Philip.

An attempt has recently been made, though regarded by many as somewhat fanciful, to trace the origin of the diaconate to the organization of those primitive Hellenistic Christian communities, which in the earliest age of the Church had all things in common, being supported by the alms of the faithful. For these it is contended that some steward (*oconomus*) must have been appointed to administer their temporal affairs. (See Leder, *Die Diakonen der Bischöfe und Presbyter*, 1905.) The full presentment of the subject is somewhat too intricate and confused to find place here. We may content ourselves with noting that less difficulty attends the same writer's theory of the derivation of the judicial and administrative functions of the archdeacon from the duties

imposed upon one selected member of the diaconal college, who was called the bishop's deacon (*diaconus episcopi*) because to him was committed the temporal administration of funds and charities for which the bishop was primarily responsible. This led in time to a certain judicial and legal position and to a surveillance of the subordinate clergy. But for all this see ARCHDEACON.

DUTIES OF DEACONS.—1. That some, if not all, members of the diaconal college were everywhere stewards of the church funds and of the alms collected for widows and orphans is beyond dispute. We find St. Cyprian speaking of Nicostratus as having defrauded widows and orphans as well as robbed the Church (Cypr., Ep. xlix, ad Cornelium). Such peculation was all the easier because the offerings passed through their hands, at any rate to a large degree. Those gifts which the people brought and which were not made directly to the bishop were presented to him through them (Apost. Const., II, xxvii), and on the other hand they were to distribute the oblations (*εὐχαρίστας*) which remained over after the Liturgy had been celebrated among the different orders of the clergy according to certain fixed proportions. It was no doubt from such functions as these that St. Jerome calls the deacon *mensarum et viduarum minister* (Hieron. Ep. ad Evang.). They sought out the sick and the poor, reporting to the bishop upon their needs and following his direction in all things (Apost. Const., III, xix, and xxxi, xxxii). They were also to invite aged women, and probably others as well, to the agapæ. Then with regard to the bishop they were to relieve him of his more laborious and less important functions, and in this way they came to exercise a certain measure of jurisdiction in the simpler cases which were submitted to his decision. Similarly they sought out and reproved offenders as his deputies. In fine, as the Apostolic Constitutions declare (II, xlv), they were to be his "ears and eyes and mouth and heart", or, as it is laid down elsewhere, "his soul and his senses" (*ψυχὴ καὶ αἰσθήσεις*) (Apost., Const., III, xix).

2. Again, as the Apostolic Constitutions further explain in some detail, the deacons were the guardians of order in the church. They saw that the faithful occupied their proper places, that none gossiped or slept. They were to welcome the poor and aged and to take care that they were not at a disadvantage as regards their position in church. They were to stand at the men's gate as janitors to see that during the Liturgy none came in or went out, and St. Chrysostom says in general terms: "if anyone misbehave let the deacon be summoned" (Hom. xxiv, in Act. Apost.). Besides this they were largely employed in the direct ministry of the altar, preparing the sacred vessels and bringing water for the ablutions, etc., though in later times many of these duties devolved upon clerics of an inferior grade. Most especially were they conspicuous by their marshalling and directing the congregation during the service. Even to the present day, as will be remembered, such announcements as *Ite missa est*, *Flectamus genua*, *Procedamus in pace*, are always made by the deacon; though this function was more pronounced in the early ages. The following from the newly discovered "Testament of Our Lord", a document of the end of the fourth century, may be quoted as an interesting example of a proclamation such as was made by the deacon just before the Anaphora: "Let us arise; let each know his own place. Let the catechumens depart. See that no unclean, no careless person is here. Lift up the eyes of your hearts. Angels look upon us. See, let him who is without faith depart. Let no adulterer, no angry man be here. If anyone be a slave of sin let him depart. See, let us supplicate as children of the light. Let us supplicate our Lord and God and Saviour Jesus Christ."

3. The special duty of the deacon to read the Gospel

seems to have been recognized from an early period, but it does not at first appear to have been so distinctive as it has since become in the Western Church. Sozomen says of the church of Alexandria that the Gospel might only be read by the archdeacon, but elsewhere ordinary deacons performed that office, while in other churches again it devolved upon the priests. It may be this relation to the Gospel which led to the direction in the Apostolic Constitutions (VIII, iv), that the deacons should hold the book of the Gospels open over the head of a bishop-elect during the ceremony of his consecration. With the reading of the Gospel should also probably be connected the occasional, though rare, appearance of the deacon in the office of preacher. The Second Council of Vaison (529) declared that a priest might preach in his own parish, but that when he was ill a deacon should read a homily by one of the Fathers of the Church, urging that deacons, being held worthy to read the Gospel, were a fortiori worthy of reading a work of human authorship. Actual preaching by a deacon, however, despite the precedent of the deacon Philip, was at all periods rare, and the Arian Bishop of Antioch, Leontius, was censured for letting his deacon Aetius preach (Philostorgius, III, xvii). On the other hand, the greatest preacher of the East Syrian Church, Ephraem Syrus, is said by nearly all the original authorities to have been only a deacon, though a phrase in his own writings (Opp. Syr., III, 467, d) throws some doubt upon the fact. But the statement attributed to Hilarus Diaconus, *nunc neque diaconi in populo prædicant* (nor do the deacons now preach to the people), undoubtedly represents the ordinary rule both in the fourth century and later.

4. With regard to the great action of the Liturgy it seems clear that the deacon held at all times, both in East and West, a very special relation to the sacred vessels and to the host and chalice both before and after consecration. The Council of Laodicea (can. xxi) forbade the inferior orders of the clergy to enter the *diaticum* or touch the sacred vessels, and a canon of the First Council of Toledo pronounces that deacons who have been subjected to public penance must in future remain with the subdeacons and thus be withdrawn from the handling of these vessels. On the other hand, though the subdeacon afterwards invaded their functions, it was originally the deacons alone who (a) presented the offerings of the faithful at the altar and especially the bread and wine for the sacrifice, (b) proclaimed the names of those who had contributed (Jerome, Com. in Ezech., xviii), (c) carried away the remnants of the consecrated elements to be reserved in the sacristy, and (d) administered the Chalice, and on occasion also the Sacred Host, to communicants. A question arose whether deacons might give Communion to priests but the practice was forbidden as unseemly by the First Council of Nicaea (Hefele-Leclercq, I, 610-614). In these functions, which we may trace back to the time of Justin Martyr (Apol., I, lxx, lxxvi; cf. Tertullian, De Spectac., xxv, and Cyprian, De Lapsis, xxv), it was repeatedly insisted, in restraint of certain pretensions, that the deacon's office was entirely subordinate to that of the celebrant, whether bishop or priest (Apost. Const., VIII, xxviii, xlvi; and Hefele-Leclercq, I, 291 and 612). Although certain deacons seem locally to have usurped the power of offering the Holy Sacrifice (*offerre*), this abuse was severely repressed in the Council of Arles (314), and there is nothing to support the idea that the deacon in any proper sense was held to consecrate the chalice, as even Onslow (in Dict. Christ. Ant., I, 530) fully allows, though a rather rhetorical phrase of St. Ambrose (De Offic. Min., I, xli) has suggested the contrary. Still the care of the chalice has remained the deacon's special province down to modern times. Even now in a high Mass the rubrics direct that when the chalice is offered, the

deacon is to support the foot of the chalice or the arm of the priest and to repeat with him the words: *Offerimus tibi, Domine, calicem salutaris*, etc. As a careful study of the first "Ordo Romanus" shows, the archdeacon in the papal Mass seems in a sense to preside over the chalice, and it is he and his fellow-deacons who, after the people have Communicated under the form of bread, present to them the *calicem ministerialem* with the Precious Blood.

5. The deacons were also intimately associated with the administration of the Sacrament of Baptism. They were not, indeed, as a rule allowed themselves to baptize apart from grave necessity (Apost. Const., VII, xlvi expressly rejects any inference that might be drawn from Philip's baptism of the eunuch), but inquiries about the candidates, their instruction and preparation, the custody of the chrism—which the deacons were to fetch when consecrated—and occasionally the actual administration of the sacrament as the bishop's deputies, seem to have formed part of their recognized functions. Thus, Saint Jerome writes: "*sine chrismate et episcopi jussione neque presbyteri neque diaconi jus habeant baptizandi*" (Without chrism and the command of the bishop neither presbyters nor deacons have the right of baptizing.—"Dial. c. Luciferum", iv). Analogous to this charge was their position in the penitential system. As a rule their action was only intermediary and preparative, and it is interesting to note how prominent is the part played by the archdeacon as intercessor in the form for the reconciliation of penitents on Maundy Thursday still printed in the Roman Pontifical. But certain phrases in early documents suggest that in cases of necessity the deacons sometimes absolved. Thus, St. Cyprian writes (Ep. xviii, 1) that if "no priest can be found and death seems imminent, sufferers can also make the confession of their sins to a deacon, that by laying his hand upon them in penance they may come to the Lord in peace" (*ut manu eis in penitentiam imposita veniant ad dominum cum pace*). Whether in this and similar cases there can have been question of sacramental absolution is much debated, but certain Catholic theologians have not hesitated about returning an affirmative answer. (See, e. g., Rauschen, Eucharistie und Buss-Sakrament, 1908, p. 132.) There can be no doubt that in the Middle Ages confession in case of necessity was often made to the deacon; but then it was equally made to a layman, and, in the impossibility of Holy Viaticum, even grass was devoutly eaten as a sort of spiritual communion.

To sum up, the various functions discharged by the deacons are thus concisely stated by St. Isidore of Seville, in the seventh century, in his epistle to Leudefredus: "To the deacon it belongs to assist the priests and to serve [*ministrare*] in all that is done in the sacraments of Christ, in baptism, to wit, in the holy chrism, in the paten and chalice, to bring the oblation to the altar and to arrange them, to lay the table of the Lord and to drape it, to carry the cross, to declaim [*prædicare*] the Gospel and Epistle, for as the charge is given to lectors to declaim the Old Testament, so it is given to deacons to declaim the New. To him also pertains the office of prayers [*officium precum*] and the recital of the names. It is he who gives warning to open our ears to the Lord, it is he who exhorts with his cry, it is he also who announces peace" (Migne, P. L., LXXXII 895). In the early period, as many extant Christian epitaphs testify, the possession of a good voice was a qualification expected in candidates for the diaconate. *Dulcia nectareo promebat mella canore* was written of the deacon Redemptus in the time of Pope Damasus, and the same epitaphs make it clear that the deacon had then much to do with the chanting, not only of the Epistle and Gospel, but also of the Psalms as a solo. Thus of the archdeacon Deusdedit in the fifth century it was written:—

Hic levitarum primus in ordine vivens

Davidici cantor carminis iste fuit.

But Pope Gregory the Great in the council of 595 abolished the privileges of the deacons in regard to the chanting of Psalms (Duchesne, *Christian Worship*, vi), and regular cantors succeeded to their functions. However, even as it is, some of the most beautiful chants in the Church's liturgy are confided to the deacon, notably the *præconium paschale*, better known as the Exsultet, the consecratory prayer by which the paschal candle is blessed on Holy Saturday. This has been often praised as the most perfect specimen of Gregorian music, and it is sung throughout by the deacon.

DRESS AND NUMBER OF DEACONS.—The early developments of ecclesiastical costume are very obscure and are complicated by the difficulty of identifying securely the objects indicated merely by a name. It is certain, however, that both in East and West a stole, or *orarium* (ὠράριον), which seems to have been in substance identical with what we now understand by the term, has been from an early period the distinctive attire of the deacon. Both in East and West, also, it has been worn by the deacon over the left shoulder, and not round the neck, like that of a priest. Deacons, according to the Fourth Council of Toledo (633), were to wear a plain stole (*orarium*—*orarium quia orat, id est, prædicat*) on the left shoulder, the right being left free to typify the expedition with which they were to discharge their sacred functions. It is interesting to note as a curious survival of an ancient tradition that the deacon during a Lenten high Mass in the Middle Ages took off his chasuble, rolled it up, and placed it over his left shoulder to leave his right arm free. At the present day he still takes off his chasuble during the central part of the Mass and replaces it with a broad stole. In the East the Council of Laodicea, in the fourth century, forbids subdeacons to wear the stole (ὠράριον), and a passage in St. John Chrysostom (*Hom. in Fil. Prod.*) refers to the light fluttering draperies over the left shoulder of those ministering at the altar, evidently describing the stoles of the deacons. The deacon still wears his stole over the left shoulder only, although, except in the Ambrosian Rite at Milan, he now wears it *under* his dalmatic. The dalmatic itself, which is now regarded as distinctive of the deacon, was originally confined to the deacons of Rome, and to wear such a vestment outside of Rome was conceded by early popes as a special privilege. Such a grant was apparently made, for example, by Pope Stephen II (752-757) to Abbot Fulrad of St-Denis, allowing six deacons to array themselves in the *stola dalmaticæ decoris* (sic) when discharging their sacred functions (Braun, *Die liturgische Gewandung*, p. 251). According to the "*Liber Pontificalis*", Pope St. Sylvester (314-335) *constituit ut diaconi dalmaticis in ecclesia uterentur* (ordained that deacons should use dalmatics in church), but this statement is quite unreliable. On the other hand it is practically certain that dalmatics were worn in Rome both by the pope and by his deacons in the latter half of the fourth century (Braun, *op. cit.*, p. 249). As to the manner of wearing, after the tenth century it was only in Milan and Southern Italy that deacons carried the stole over the dalmatic, but at an earlier date, this had been common in many parts of the West.

As regards the number of deacons, much variation existed. In more considerable cities there were normally seven, according to the type of the Church of Jerusalem in Acts, vi, 1-6. At Rome there were seven in the time of Pope Cornelius, and this remained the rule until the eleventh century, when the number of deacons was increased from seven to fourteen. This was in accord with Canon xv of the Council of Neo-Cæsarea incorporated in the "*Corpus Juris*". The "*Testament of Our Lord*" (I, 34) speaks of twelve priests, seven deacons, four subdeacons, and

three widows with precedence. Still this rule did not remain constant. In Alexandria, for example, even as early as the fourth century, there must apparently have been more than seven deacons, for we are told that nine took the part of Arius. Other regulations seem to suggest three as a common number. In the Middle Ages nearly every local use had its own customs as to the number of deacons and subdeacons that might assist at a pontifical Mass. The number of seven deacons and seven subdeacons was not infrequent in many dioceses on days of great solemnity. But the great distinction between the diaconate in the early ages and that of the present day lay probably in this, that in primitive times the diaconate was commonly regarded, possibly on account of the knowledge of music which it demanded, as a state that was permanent and final. A man remained a simple deacon all his life. Nowadays, except in the rarest cases (the cardinal-deacons sometimes continue permanently as mere deacons), the diaconate is simply a stage on the road to the priesthood.

SACRAMENTAL CHARACTER OF THE DIACONATE.—Although certain theologians, such as Cajetan and Durandus, have ventured to doubt whether the Sacrament of Order is received by deacons, it may be said that the decrees of the Council of Trent are now generally held to have decided the point against them. The council not only lays down that order is truly and properly a sacrament, but it forbids under anathema (Sess. XXIII, can. ii) that anyone should deny "that there are in the Church other orders both greater and minor by which as by certain steps advance is made to the priesthood", and it insists that the ordaining bishop does not vainly say, "receive ye the Holy Ghost", but that a character is imprinted by the rite of ordination. Now, not only do we find in the Acts of the Apostles, as noticed above, both prayer and the laying on of hands in the institution of the Seven, but the same sacramental character suggestive of the imparting of the Holy Spirit is conspicuous in the ordination rite as practised in the Early Church and at the present day. In the Apostolical Constitutions we read: "A deacon thou shalt appoint, O Bishop, laying thy hands upon him, with all the presbytery and the deacons standing by thee; and praying over him, thou shalt say: Almighty God . . . let our supplication come unto Thy ears and make Thy face to shine upon this Thy servant who is appointed unto the office of a deacon [*ἐς διακονίαν*] and fill him with the Spirit and with power, as thou didst fill Stephen, the martyr and follower of the sufferings of Thy Christ."

The ritual of the ordination of deacons at the present day is as follows: The bishop first asks the archdeacon if those who are to be promoted to the diaconate are worthy of the office and then he invites the clergy and people to propose any objection which they may have. After a short pause the bishop explains to the *ordinandi* the duties and the privileges of a deacon, they remaining the while upon their knees. When he has finished his discourse, they prostrate themselves, and the bishop and clergy recite the litanies of the Saints, in the course of which the bishop thrice imparts his benediction. After certain other prayers in which the bishop continues to invoke the grace of God upon the candidates, he sings a short preface which expresses the joy of the Church to see the multiplication of her ministers. Then comes the more essential part of the ceremony. The bishop puts out his right hand and lays it upon the head of each of the *ordinandi*, saying: "Receive the Holy Ghost for strength, and to resist the devil and his temptations, in the name of the Lord". Then stretching out his hand over all the candidates together, he says: "Send down upon them, we beseech Thee, O Lord, the Holy Ghost by which they may be strengthened in the faithful discharge of the work of Thy ministry, through the bestowal of Thy sevenfold grace". After this the bishop delivers

to the deacons the insignia of the order which they have received, to wit, the stole and the dalmatic, accompanying them with the formulæ which express their special significance. Finally he makes all the candidates touch the book of the Gospels, saying to them: "Receive the power of reading the Gospel in the Church of God, both for the living and for the dead in the name of the Lord". Although the actual form of words which accompanies the laying on of the bishop's hands, *Accipe Spiritum Sanctum ad robur*, etc., cannot be traced further back than the twelfth century, the whole spirit of the ritual is ancient, and some of the elements, notably the conferring of the stole and the prayer which follows the delivery of the book of the Gospels, are of much older date. It is noteworthy that in the "Decretum pro Armenis" of Pope Eugene IV the delivery of the Gospels is spoken of as the "matter" of the diaconate, *Diaconatus vero per libri evangeliorum dationem (traditur)*.

In the Russian Church the candidate, after having been led three times around the altar and kissed each corner, kneels before the bishop. The bishop lays the end of his omophorion upon his neck and marks the sign of the cross three times upon his head. Then he lays his hand upon the candidate's head and says two prayers of some length which speak of the conferring of the Holy Ghost and of strength bestowed upon the ministers of the altar and recall the words of Christ that he "who would be first among you become as a servant" (*διάκονος*): then there are delivered to the deacon the insignia of his office, which, besides the stole, include the liturgical fan, and as each of these is given the bishop calls aloud, *ξίθος*, "worthy", in a tone increasing in strength with each repetition (see Maltzew, *Die Sacramente der orthodox-katholischen Kirche*, 318-333).

In modern times the diaconate has been so entirely regarded as a stage of preparation for the priesthood that interest no longer attaches to its precise duties and privileges. A deacon's functions are now practically reduced to the ministrations at high Mass and to exposing the Blessed Sacrament at Benediction. But he may, as the deputy of the parish priest, distribute the Communion in case of need. Of the condition of celibacy see the article CELIBACY OF THE CLERGY.

DEACONS OUTSIDE THE CATHOLIC CHURCH.—It is only in the Church of England and in the Episcopal communions of Scotland and North America that a deacon receives ordination by the imposition of hands of a bishop. In consequence of such ordination, however, he is considered empowered to perform any sacred office except that of consecrating the elements and pronouncing absolution, and he habitually preaches and assists in the communion-service. Among the Lutherans, however, in Germany the word *deacon* is generally applied to assistant, though fully ordained, ministers who aid the minister in charge of a particular cure or parish. However, it is also used in certain localities for lay helpers who take part in the work of instruction, finance, district-visiting, and relieving distress. This last is also the use of the word which is common in many Nonconformist communions of England and America.

HERBERT THURSTON.

Deaconesses.—We cannot be sure that any formal recognition of deaconesses as an institution of consecrated women aiding the clergy is to be found in the

New Testament. There is indeed the mention of Phebe (Rom., xvi, 1), who is called *διάκονος*, but this may simply mean, as the Vulgate renders it, that she was "in the ministry [i. e. service] of the Church", without implying any official status. Again it is not improbable that the "widows" who are spoken of at large in I Tim., v, 3-10, may really have been deaconesses, but here again we have nothing conclusive. That some such functionaries were appointed at an early date seems probable from Pliny's letter to Trajan concerning the Christians of Bithynia (Ep. x, 97, A. D. 112). There he speaks of obtaining information by torture from two *ancillæ quæ ministræ dicebantur*, where a technical use of words seems to be implied. In any case there can be no question that before the middle of the fourth century women were permitted to exercise certain definite functions in the church and were known by the special name of *διάκονοι* or *διακονίσσαι*.

HISTORY AND CONSECRATION.—Most Catholic scholars incline to the view that it is not always possible to draw a clear distinction in the early Church between deaconesses and widows (*χήραι*). The Didascalia, Apostolic Constitutions, and kindred documents undoubtedly recognize them as separate classes and they prefer the deaconess to the widow in the duty of assisting the clergy. Indeed the Apostolic Constitutions (III, 6) enjoin the widows to be obedient to the deaconesses. It is probable also, as Funk maintains, that in the earlier period it was only a widow who could become a deaconess, but undoubtedly the strict limits of age, sixty years, which were at first prescribed for widows, were relaxed, at least at certain periods and in certain localities, in the case of those appointed to be deaconess; for example, the Council of Trullo in 692 fixed the age at forty. Tertullian speaks with reprobation of a girl of twenty *in viduatu ab episcopo collocatam*, by which he seems to mean ordained as a deaconess. There can again be no question that the deaconesses in the fourth and fifth centuries had a distinct ecclesiastical standing, though there are traces of much variety of custom. According to the newly discovered "Testament of Our Lord" (c. 400), widows had a place in the sanctuary during the celebration of the liturgy, they stood at the anaphora behind the presbyters, they communicated after the deacons, and before the readers and subdeacons, and strange to say they had a charge of, or superintendence over, the deaconesses. Further it is certain that a ritual was in use for the ordination of deaconesses by the laying on of hands which was closely modelled on the ritual for the ordination of a deacon. For example the Apostolic Constitutions say: "Concerning a deaconess, I Bartholomew enjoin, O Bishop, thou shalt lay thy hands upon her with all the Presbytery and the Deacons and the Deaconesses and thou shalt say: Eternal God, the Father of our Lord Jesus Christ, the Creator of man and woman, that didst fill with the Spirit Mary and Deborah, and Anna and Huldah, that didst not disdain that thine only begotten Son should be born of a woman; Thou that in the tabernacle of witness and in the temple didst appoint women guardians of thy holy gates: Do Thou now look on this thy handmaid, who is appointed unto the office of a Deaconess and grant unto her the holy Spirit, and cleanse her from all pollution of the flesh and of the spirit, that she may worthily accomplish the work committed unto her, to thy glory and the praise of thy Christ." Comparing this form with that given in the same work for the ordination of deacons we may notice that the reference to the outpouring of Holy Ghost in the latter case is much more strongly worded: "fill him with the spirit and with power as thou didst fill Stephen the martyr and follower of the sufferings of thy Christ". Moreover, in the case of the deacon, prayer is made that he "may be counted worthy of a higher standing", a clause which not im-

probably has reference to the possibility of advance to a higher ecclesiastical dignity as priest or bishop, no such praise being used in the case of the deaconess.

The subject of the precise status of deaconesses is confessedly obscure and confused, but two or three points at any rate seem worth insisting on. In the first place there were no doubt influences at work at one time or other which tended to exaggerate the position of these women-helpers. This tendency has found expression in certain documents which have come down to us and of which it is difficult to gauge the value. Still there is no more reason to attach importance to these pretensions than there is to regard seriously the spasmodic attempts of certain deacons (q. v.) to exceed their powers and to claim, for example, authority to consecrate. Both in the one and the other case the voice of the Church made itself heard in conciliar decrees and the abuse in the end was repressed without difficulty. Such restrictive measures seem to be found in the rather obscure 11th canon of Laodicea, and in the more explicit 19th canon of the Council of Nicæa, which last distinctly lays down that deaconesses are to be accounted as lay persons and that they receive no ordination properly so called (Hefele-Leclercq, Conciles, I, 618). In the West there seems always to have been considerable reluctance to accept the deaconesses, at any rate under that name, as a recognized institution of the Church. The Council of Nîmes in 394 reproved in general the assumption of the levitical ministry by women, and other decrees, notably that of Orange in 441 (can. 26), forbid the ordaining of deaconesses altogether. It follows from what has been said that the Church as a whole repudiated the idea that women could in any proper sense be recipients of the Sacrament of Order. None the less in the East, and among the Syrians and Nestorians much more than among the Greeks (Hefele-Leclercq, Conciles, II, 448), the ecclesiastical status of deaconesses was greatly exaggerated.

Another source of confusion has also been introduced by those who have interpreted the word *diaconissæ*, on the analogy of *presbyteræ* and *presbytides*, *episcopæ* and *episcopissæ*, as the wives of deacons who, living apart from their husbands, acquired *ipso facto* an ecclesiastical character. No doubt such matrons who generously accepted this separation from their husbands were treated with special distinction and were supported by the Church, but if they became deaconesses, as in some cases they did, they had, like other women, to fulfil certain conditions and to receive a special consecration. With regard to the duration of the order of deaconesses we note that when adult baptism became uncommon, this institution, which seems primarily to have been devised for the needs of women catechumens, gradually waned and in the end died out altogether. In the time of Justinian (d. 565) the deaconesses still held a position of importance. At the church of St. Sophia in Constantinople the staff consisted of sixty priests, one hundred deacons, forty deaconesses and ninety subdeacons; but Balsamon, Patriarch of Antioch about 1070 A. D., states that deaconesses in any proper sense had ceased to exist in the Church though the title was borne by certain nuns (Robinson, Ministry of Deaconesses, p. 93), while Matthew Blastares declared of the tenth century that the civil legislation concerning deaconesses, which ranked them rather among the clergy than the laity, had then been abandoned or forgotten (Migne, P. G., CXIX, 1272). In the West in spite of the hostile decrees of several councils of Gaul in the fifth and sixth centuries, we still find mention of deaconesses considerably after that date, though it is difficult to say whether the title was more than an honorific name attributed to consecrated virgins and widows. Thus we read in Fortunatus that St. Radegund was "ordained deaconess" by St. Medard (about A. D. 540—Migne, P. L., LXXXVIII, 502). So also the ninth

Ordo Romanus mentions, as forming part of the papal procession, the "*femine diaconissæ et presbyterissæ quæ eodem die benedicuntur*", and *diaconissæ* are mentioned in the procession of Leo III in the ninth century (Duchesne, Lib. Pont., II, 6). Further, the Anglo-Saxon Leofric missal in the eleventh century still retained a prayer *ad diaconissam faciendum*, which appears in the form *Exaudi Domine*, common to both deacons and deaconesses. The only surviving relic of the ordination of deaconesses in the West seems to be the delivery by the bishop of a stole and maniple to Carthusian nuns in the ceremony of their profession.

FUNCTIONS OF DEACONESSES.—There can be no doubt that in their first institution the deaconesses were intended to discharge those same charitable offices, connected mainly with the temporal well-being of their poorer fellow-Christians, which were performed for the men by the deacons. But in one particular, viz. the instruction and baptism of catechumens, their duties involved service of a more spiritual kind. The universal prevalence of baptism by immersion and the anointing of the whole body which preceded it, rendered it a matter of propriety that in this ceremony the functions of the deacons should be discharged by women. The Didascalia Apostolorum (III, 12; see Funk, Didascalia, etc., i, 208) explicitly direct that the deaconesses are to perform this function. It is probable that this was the starting-point for the intervention of women in many other ritual observances even in the sanctuary. The Apostolic Constitutions expressly attribute to them the duty of guarding the doors and maintaining order amongst those of their own sex in the church, and they also (II, c. 26) assign to them the office of acting as intermediaries between the clergy and the women of the congregation; but on the other hand, it is laid down (Const. Apost., VIII, 27) that "the deaconess gives no blessing, she fulfils no function of priest or deacon", and there can be no doubt that the extravagances permitted in some places, especially in the churches of Syria and Asia, were in contravention of the canons generally accepted. We hear of them presiding over assemblies of women, reading the epistle and Gospel, distributing the Blessed Eucharist to nuns, lighting the candles, burning incense in the thuribles, adorning the sanctuary, and anointing the sick (see Hefele-Leclercq, II, 448). All these things must be regarded as abuses which ecclesiastical legislation was not long in repressing.

DEACONESSES IN PROTESTANT COMMUNIONS.—Outside the Catholic Church the name of deaconesses has been adopted for a modern revival which has had great vogue in Germany and to some extent in the United States. It was begun in 1833 by the Lutheran Pastor Fliedner at Kaiserswerth near Düsseldorf. His first inspiration is said to have been derived from the Quakeress Elizabeth Fry, and through the celebrated Miss Florence Nightingale, who organized a staff of nurses in the Crimean war and who had previously been trained at Kaiserswerth, the revival at a later date attracted a good deal of attention in England. The main work of deaconesses is the tending of the sick and poor, instruction and district visiting, but with more subordination to parish needs than is usually compatible with the life of an Anglican sisterhood. In the United States more particularly, community life is usually not insisted upon, but a good deal of attention is given to training and intellectual development. Both in the Anglican Church, and in the Protestant Episcopal Church and Methodist Episcopal Church of America, deaconesses are "admitted" in solemn form by the bishop with benediction and the laying-on of hands. In Germany the movement has taken such hold that the Kaiserswerth organization alone claims to number over 16,000 sisters, but it is curious that relatively to the population the institution is most popular in Catholic districts, where prob-

ably the familiar spectacle of Catholic nuns has accustomed the people to the idea of a community life for women.

HERBERT THURSTON.

Dead, BAPTISM FOR THE. See BAPTISM.

Dead, PRAYERS FOR THE.—This subject will be treated under the following three heads: I. General Statement and Proof of Catholic Doctrine; II. Questions of Detail; III. Practice in the British and Irish Churches.

I. GENERAL STATEMENT AND PROOF.—Catholic teaching regarding prayers for the dead is bound up inseparably with the doctrine of purgatory (q. v.) and the more general doctrine of the communion of saints (q. v.), which is an article of the Apostles' Creed. The definition of the Council of Trent (Sess. XXV., "that purgatory exists, and that the souls detained therein are helped by the suffrages of the faithful, but especially by the acceptable sacrifice of the altar", is merely a restatement in brief of the traditional teaching which had already been embodied in more than one authoritative formula—as in the creed prescribed for converted Waldenses by Innocent III in 1210 (Denzinger, *Enchiridion*, n. 373) and more fully in the profession of faith accepted for the Greeks by Michael Palæologus at the Second (Ecumenical) Council of Lyons in 1274 (*ibid.*, n. 387). The words of this profession are reproduced in the decree of union subscribed by the Greeks and Latins at the Council of Florence in 1439: "[We define] likewise, that if the truly penitent die in the love of God, before they have made satisfaction by worthy fruits of penance for their sins of commission and omission, their souls are purified by purgatorial pains after death; and that for relief from those pains they are benefited by the suffrages of the faithful in this life, that is, by Masses, prayers and almsgiving, and by the other offices of piety usually performed by the faithful for one another according to the practice (*instituta*) of the Church" (*ibid.*, n. 588). Hence, under "suffrages" for the dead, which are defined to be legitimate and efficacious, are included not only formal supplications, but every kind of pious work that may be offered for the spiritual benefit of others, and it is in this comprehensive sense that we speak of prayers in the present article. As is clear from this general statement, the Church does not recognize the limitation upon which even modern Protestants often insist, that prayers for the dead, while legitimate and commendable as a private practice, are to be excluded from her public offices. The most efficacious of all prayers, in Catholic teaching, is the essentially public office, the Sacrifice of the Mass.

Coming to the proof of this doctrine, we find, in the first place, that it is an integral part of the great general truth which we name the communion of saints. This truth is the counterpart in the supernatural order of the natural law of human solidarity. Men are not isolated units in the life of grace, any more than in domestic and civil life. As children in Christ's Kingdom they are as one family under the loving Fatherhood of God; as members of Christ's mystical body they are incorporated not only with Him, their common Head, but with one another, and this not merely by visible social bonds and external co-operation, but

by the invisible bonds of mutual love and sympathy, and by effective co-operation in the inner life of grace. Each is in some degree the beneficiary of the spiritual activities of the others, of their prayers and good works, their merits and satisfactions; nor is this degree to be wholly measured by those indirect ways in which the law of solidarity works out in other cases, nor by the conscious and explicit altruistic intentions of individual agents. It is wider than this, and extends to the bounds of the mysterious. Now, as between the living, no Christian can deny the reality of this far-reaching spiritual communion; and since death, for those who die in faith and grace, does not sever the bonds of this communion, why should it interrupt its efficacy in the case of the dead, and shut them out from benefits of which they are capable and may be in need? Of very few can it be hoped that they have attained perfect holiness at death; and none but the perfectly holy are admitted to the vision of God. Of few, on the other hand, will they at least who love them admit the despairing thought that they are beyond the pale of grace and mercy, and condemned to eternal separation from God and from all who hope to be with God. On this ground alone it has been truly said that purgatory is a postulate of the Christian reason; and, granting the existence of the purgatorial state, it is equally a postulate of the Christian reason that the souls in purgatory should continue to share in the communion of saints, or, in other words, be helped by the prayers of their brethren on earth and in heaven. Christ is King in purgatory as well as in heaven and on earth, and He cannot be deaf to our prayers for our loved ones in that part of His Kingdom, whom He also loves while He chastises them. For our own consolation as well as for theirs we *want* to believe in this living intercourse of charity with our dead. We would believe it without explicit warrant of Revelation, on the strength of what is otherwise revealed and in obedience to the promptings of reason and natural affection. Indeed, it is largely for this reason that Protestants in growing numbers are giving up to-day the joy-killing doctrine of the Reformers, and reviving Catholic teaching and practice. As we shall presently see, there is no clear and explicit warrant for prayers for the dead in the Scriptures recognized by Protestants as canonical, while they do not admit the Divine authority of extra-Scriptural tradition. Catholics are in a better position.

Arguments from Scripture.—Omitting some passages in the Old Testament which are sometimes invoked, but which are too vague and uncertain in their reference to be urged in proof (v. g. Tobias, iv, 18; Eccclus., vii, 37; etc.), it is enough to notice here the classical passage in II Machabees, xii, 40-46. When Judas and his men came to take away for burial the bodies of their brethren who had fallen in the battle against Gorgias, "they found under the coats of the slain some of the donaries of the idols of Jamnia, which the law forbiddeth to the Jews: so that all plainly saw, that for this cause they were slain. Then they all blessed the just judgment of the Lord, who had discovered the things that were hidden. And so betaking themselves to prayers, they besought him, that the sin which had been committed might be forgotten . . . And making a gathering, he [Judas] sent twelve [al. two] thousand drachms of silver to Jerusalem for sacrifice to be offered for the sins of the dead, thinking well and religiously concerning the resurrection (for if he had not hoped that they that were slain should rise again, it would have seemed superfluous and vain to pray for the dead), and because he considered that they who had fallen asleep in godliness, had great grace laid up for them. It is therefore a holy and wholesome thought to pray for the dead, that they may be loosed from sins." For Catholics who accept this book as canonical, this passage leaves nothing to be desired. The inspired au-

thor expressly approves Judas's action in this particular case, and recommends in general terms the practice of prayers for the dead. There is no contradiction in the particular case between the conviction that a sin had been committed, calling down the penalty of death, and the hope that the sinners had nevertheless died in godliness—an opportunity for penance had intervened.

But even for those who deny the inspired authority of this book, unequivocal evidence is here furnished of the faith and practice of the Jewish Church in the second century B. C.—that is to say, of the orthodox Church, for the sect of the Sadducees denied the resurrection (and, by implication at least, the general doctrine of immortality), and it would seem from the argument which the author introduces in his narrative that he had Sadducean adversaries in mind. The act of Judas and his men in praying for their deceased comrades is represented as if it were a matter of course; nor is there anything to suggest that the procuring of sacrifices for the dead was a novel or exceptional thing; from which it is fair to conclude that the practice—both private and liturgical—goes back beyond the time of Judas, but how far we cannot say. It is reasonable also to assume, in the absence of positive proof to the contrary, that this practice was maintained in later times, and that Christ and the Apostles were familiar with it; and whatever other evidence is available from Talmudic and other sources strongly confirms this assumption, if it does not absolutely prove it as a fact (see, v. g., Luckock, "After Death", v, pp. 50 sq.). This is worth noting because it helps us to understand the true significance of Christ's silence on the subject—if it be held on the incomplete evidence of the Gospels that He was indeed altogether silent—and justifies us in regarding the Christian practice as an inheritance from orthodox Judaism.

We have said that there is no clear and explicit Scriptural text in favour of prayers for the dead, except the above text of II Machabees. Yet there are one or two sayings of Christ recorded by the Evangelists, which are most naturally interpreted as containing an implicit reference to a purgatorial state after death; and in St. Paul's Epistles a passage of similar import occurs, and one or two other passages that bear directly on the question of prayers for the dead. When Christ promises forgiveness for all sins that a man may commit except the sin against the Holy Ghost, which "shall not be forgiven him, neither in this world, nor in the world to come" (Matt., xii, 31-32), is the concluding phrase nothing more than a periphrastic equivalent for "never"? Or, if Christ meant to emphasize the distinction of worlds, is "the world to come" to be understood, not of the life after death, but of the Messianic age on earth as imagined and expected by the Jews? Both interpretations have been proposed; but the second is far-fetched and decidedly improbable (cf. Mark, iii, 29); while the first, though admissible, is less obvious and less natural than that which allows the implied question at least to remain: May sins be forgiven in the world to come? Christ's hearers believed in this possibility, and, had He Himself wished to deny it, He would hardly have used a form of expression which they would naturally take to be a tacit admission of their belief. Precisely the same argument applies to the words of Christ regarding the debtor who is cast into prison, from which he shall not go out till he has paid the last farthing (Luke, xii, 59).

Passing over the well-known passage, I Cor., iii, 14 sq., on which an argument for purgatory may be based, attention may be called to another curious text in the same Epistle (xv, 29), where St. Paul argues thus in favour of the resurrection: "Otherwise what shall they do that are baptized for the dead, if the dead rise not again at all? Why are they then baptized for them?" Even assuming that the practice here re-

ferred to was superstitious, and that St. Paul merely uses it as the basis of an *argumentum ad hominem*, the passage at least furnishes historical evidence of the prevalence at the time of belief in the efficacy of works for the dead; and the Apostle's reserve in not reprobating this particular practice is more readily intelligible if we suppose him to have recognized the truth of the principle of which it was merely an abuse. But it is probable that the practice in question was something in itself legitimate, and to which the Apostle gives his tacit approbation. In his Second Epistle to Timothy (i, 16-18; iv, 19) St. Paul speaks of Onesiphorus in a way that seems obviously to imply that the latter was already dead: "The Lord give mercy to the house of Onesiphorus"—as to a family in need of consolation. Then, after mention of loyal services rendered by him to the imprisoned Apostle at Rome, comes the prayer for Onesiphorus himself, "The Lord grant unto him to find mercy of the Lord in that day" (the day of judgment); finally, in the salutation, "the household of Onesiphorus" is mentioned once more, without mention of the man himself. The question is, what had become of him? Was he dead, as one would naturally infer from what St. Paul writes? Or had he for any other cause become separated permanently from his family, so that prayer for them should take account of present needs while prayers for him looked forward to the day of judgment? Or could it be that he was still at Rome when the Apostle wrote, or gone elsewhere for a prolonged absence from home? The first is by far the easiest and most natural hypothesis; and if it be admitted, we have here an instance of prayer by the Apostle for the soul of a deceased benefactor.

Arguments from Tradition.—The traditional evidence in favour of prayers for the dead, which has been preserved (a) in monumental inscriptions (especially those of the catacombs), (b) in the ancient liturgies, and (c) in Christian literature generally, is so abundant that we cannot do more in this article than touch very briefly on a few of the more important testimonies.

(a) The inscriptions in the Roman Catacombs range in date from the first century (the earliest dated is from A. D. 71) to the early part of the fifth; and though the majority are undated, archæologists have been able to fix approximately the dates of a great many by comparison with those that are dated. The greater number of the several thousand extant belong to the ante-Nicene period—the first three centuries and the early part of the fourth. Christian sepulchral inscriptions from other parts of the Church are few in number compared with those in the catacombs, but the witness of such as have come down to us agrees with that of the catacombs. Many inscriptions are exceedingly brief and simple (PAX, IN PACE, etc.), and might be taken for statements rather than prayers, were it not that in other cases they are so frequently and so naturally amplified into prayers (PAX TIBI, etc.). There are prayers, called *acclamatory*, which are considered to be the most ancient, and in which there is the simple expression of a wish for some benefit to the deceased, without any formal address to God. The benefits most frequently prayed for are: peace, the good (i. e. eternal salvation), light, refreshment, life, eternal life, union with God, with Christ, and with the angels and saints—e. g. PAX (TIBI, VOBIS, SPIRITUI TUO, IN ÆTERNUM, TIBI CUM ANGELIS, CUM SANCTIS); SPIRITUS TUUS IN BONO (SIT, VIVAT, QUIESCANT); ÆTERNA LUX TIBI; IN REFRIGERIO ESTO; SPIRITUM IN REFRIGERIUM SUSCIPIAT DOMINUS; DEUS TIBI REFRIGERET; VIVAS, VIVATIS (IN DEO, IN SPIRITO SANCTO, IN PACE, IN ÆTERNO, INTER SANCTOS, CUM MARTYRIBUS).—For detailed references see Kirsch, "Die Acclamationen", pp. 9-29; Cabrol and Leclercq, "Monumenta Liturgica" (Paris, 1902), I, pp. ci-cvi, cxxxix, etc. Again there are prayers of a formal character, in which sur-

vivors address their petitions directly to God the Father, or to Christ, or even to the angels, or to the saints and martyrs collectively, or to some one of them in particular. The benefits prayed for are those already mentioned, with the addition sometimes of liberation from sin. Some of these prayers read like excerpts from the liturgy: e. g. SET PATER OMNIPOTENS, ORO, MISERERE LABORUM TANTORUM, MISERE(re) ANIME NON DIG(na) FERENTIS (De Rossi, *Inscript. Christ.*, II a, p. ix). Sometimes the writers of the epitaphs request visitors to pray for the deceased: e. g. QUI LEGIS, ORA PRO EO (*Corpus Inscript. Lat.*, X, n. 3312), and sometimes again the dead themselves ask for prayers, as in the well-known Greek epitaph of Abercius (see ABERCIUS, INSCRIPTION OF), in two similar Roman epitaphs dating from the middle of the second century (De Rossi, *op. cit.*, II a, p. xxx, Kirsch, *op. cit.*, p. 51), and in many later inscriptions. That pious people often visited the tombs to pray for the dead, and sometimes even inscribed a prayer on the monument, is also clear from a variety of indications (see examples in De Rossi, "Roma Sotteranea", II, p. 15). In a word, so overwhelming is the witness of the early Christian monuments in favour of prayer for the dead that no historian any longer denies that the practice and the belief which the practice implies were universal in the primitive Church. There was no break of continuity in this respect between Judaism and Christianity.

(b) The testimony of the early liturgies is in harmony with that of the monuments. Without touching the subject of the origin, development, and relationships of the various liturgies we possess, without even enumerating and citing them singly, it is enough to say here that all without exception—Nestorian and Monophysite as well as Catholic, those in Syriac, Armenian, and Coptic as well as those in Greek and Latin—contain the commemoration of the faithful departed in the Mass, with a prayer for peace, light, refreshment, and the like, and in many cases expressly for the remission of sins and the effacement of sinful stains. The following, from the Syriac Liturgy of St. James, may be quoted as a typical example: "We commemorate all the faithful dead who have died in the true faith . . . We ask, we entreat, we pray Christ our God, who took their souls and spirits to Himself, that by His many compassions He will make them worthy of the pardon of their faults and the remission of their sins" (*Syr. Lit. S. Jacobi*, ed. Hammond, p. 75).

(c) Turning finally to early literary sources, we find evidence in the apocryphal "Acta Joannis", composed about A. D. 160–170, that at that time anniversaries of the dead were commemorated by the application of the Holy Sacrifice of the Mass (Lipsius and Bonnet, "Acta Apost. Apocr.", I, 186). The same fact is witnessed by the "Canons of Hippolytus" (ed. Achelis, p. 106), by Tertullian (*De Cor. Mil.*, iii, P. L., II, 79), and by many later writers. Tertullian also testifies to the regularity of the practice of praying privately for the dead (*De Monogam.*, x, P. L., II, 942); and of the host of later authorities that may be cited, both for public and private prayers, we must be content to refer to but a few. St. Cyprian writes to Cornelius that their mutual prayers and good offices ought to be continued after either should be called away by death (*Ep. lvii*, P. L., III, 830 sq.), and he tells us that before his time (d. 258) the African bishops had forbidden testators to nominate a priest as executor and guardian in their wills, and had decreed, as the penalty for violating this law, deprivation after death of the Holy Sacrifice and the other offices of the Church, which were regularly celebrated for the repose of each of the faithful; hence, in the case of one Victor who had broken the law, "no offering might be made for his repose, nor any prayer offered in the Church in his name" (*Ep. lxxvi*, P. L., IV, 399). Ar-

nobius speaks of the Christian churches as "conventicles in which . . . peace and pardon is asked for all men . . . for those still living and for those already freed from the bondage of the body" (*Adv. Gent.*, IV, xxxvi, P. L., V, 1076). In his funeral oration for his brother Satyrus St. Ambrose beseeches God to accept propitiously his "brotherly service of priestly sacrifice" (*fraternum munus, sacrificium sacerdotis*) for the deceased ("De Excessu Satyri fr.", I, 80, P. L., XVI, 1315); and, addressing Valentinian and Theodosius, he assures them of happiness if his prayers shall be of any avail; he will let no day or night go past without remembering them in his prayers and at the altar ("De Obitu Valent.", 78, *ibid.*, 1381). As a further testimony from the Western Church we may quote one of the many passages in which St. Augustine speaks of prayers for the dead: "The universal Church observes this law, handed down from the Fathers, that prayers should be offered for those who have died in the communion of the Body and Blood of Christ, when they are commemorated in their proper place at the Sacrifice" (*Serm. clxxii*, 2, P. L., XXXVIII, 936). As evidence of the faith of the Eastern Church we may refer to what Eusebius tells us, that at the tomb of Constantine "a vast crowd of people together with the priests of God offered their prayers to God for the Emperor's soul with tears and great lamentation" (*Vita Const.*, IV, lxxi, P. G., XX, 1226). Aerius, a priest of Pontus, who flourished in the third quarter of the fourth century, was branded as a heretic for denying the legitimacy and efficacy of prayers for the dead. St. Epiphanius, who records and refutes his views, represents the custom of praying for the dead as a duty imposed by tradition (*Adv. Hær.*, III, lxxx, P. G., XLII, 504 sq.), and St. Chrysostom does not hesitate to speak of it as a "law laid down by the Apostles" (*Hom.*, iii, in *Philipp.*, i, 4, P. G., LXII, 203).

Objections alleged.—No rational difficulty can be urged against the Catholic doctrine of prayers for the dead; on the contrary, as we have seen, the rational presumption in its favour is strong enough to induce belief in it on the part of many whose rule of faith does not allow them to prove with entire certainty that it is a doctrine of Divine revelation. • Old-time Protestant objections, based on certain texts of the Old Testament and on the parable of Dives and Lazarus in the New, are admitted by modern commentators to be either irrelevant or devoid of force. The saying of Ecclesiastes (xi, 3) for instance, "if the tree fall to the south, or to the north, in what place soever it shall fall, there shall it be", is probably intended merely to illustrate the general theme with which the writer is dealing in the context, viz. the inevitableness of natural law in the present visible world. But even if it be understood of the fate of the soul after death, it can mean nothing more than what Catholic teaching affirms, that the final issue—salvation or damnation—is determined irrevocably at death; which is not incompatible with a temporary state of purgatorial purification for the saved. The imagery of the parable of Lazarus is too uncertain to be made the basis of dogmatic inference, except as regards the general truth of rewards and punishments after death; but in any case it teaches merely that one individual may be admitted to happiness immediately after death while another may be cast into hell, without hinting anything as to the proximate fate of the man who is neither a Lazarus nor a Dives.

II. QUESTIONS OF DETAIL.—Admitting the general teaching that prayers for the dead are efficacious, we are naturally led on to inquire more particularly: (1) What prayers are efficacious? (2) For whom and how far are they efficacious? (3) How are we, theoretically, to conceive and explain their efficacy? (4) What disciplinary laws has the Church imposed regarding her public offices for the dead?—We shall state

briefly what is needful to be said in answer to these questions, mindful of the admonition of the Council of Trent, to avoid in this matter those "more difficult and subtle questions that do not make for edification" (Sess. XXV).

(1) The Sacrifice of the Mass has always occupied the foremost place among prayers for the dead, as will be seen from the testimonies quoted above; but in addition to the Mass and to private prayers, we have mention in the earliest times of almsgiving, especially in connexion with funeral *agapæ*, and of fasting for the dead (Kirsch, *Die Lehre von der Gemeinschaft der Heiligen*, etc., p. 171; Cabrol, *Dictionnaire d'archéologie*, I, 808-830). Believing in the communion of saints in which the departed faithful shared, Christians saw no reason for excluding them from any of the offices of piety which the living were in the habit of performing for one another. The only development to be noted in this connexion is the application of Indulgences (q. v.) for the dead. Indulgences for the living were a development from the ancient penitential discipline, and were in use for a considerable time before we have any evidence of their being formally applied for the dead. The earliest instance comes from the year 1457. Without entering into the subject here, we would remark that the application of Indulgences for the dead, when properly understood and explained, introduces no new principle, but is merely an extension of the general principle underlying the ordinary practice of prayers and good works for the dead. The Church claims no power of *absolving* the souls in purgatory from their pains, as on earth she absolves men from sins. It is only *per modum suffragii*, i. e. by way of prayer, that Indulgences avail for the dead, the Church adding her official or corporate intercession to that of the person who performs and offers the indulgenced work, and beseeching God to apply, for the relief of those souls whom the offerer intends, some portion of the superabundant satisfactions of Christ and His saints, or, in view of those same satisfactions, to remit some portion of their pains, in what measure may seem good to His own infinite mercy and love.

(2) To those who die in wilful, unrepented mortal sin, which implies a deliberate turning away from God as the last end and ultimate good of man, Catholic teaching holds out no hope of eventual salvation by a course of probation after death. Eternal exile from the face of God is, by their own choice, the fate of such unhappy souls, and prayers are unavailing to reverse that awful doom. This was the explicit teaching of Christ, the meek and merciful Saviour, and the Church can but repeat the Master's teaching (see HELL). But the Church does not presume to judge individuals, even those for whom, on other grounds, she refuses to offer her Sacrifice and her prayers [see below, (4)], while it may happen, on the contrary, that some of those for whom her oblations are made are among the number of the damned. What of such prayers? If they cannot avail to the ultimate salvation of the damned, may it at least be held that they are not entirely unavailing to procure some alleviation of their sufferings, some temporary *refrigeria*, or moments of mitigation, as a few Fathers and theologians have suggested? All that can be said in favour of this speculation is, that the Church has never formally reprobat it. But the great majority of theologians, following St. Thomas (In Sent. IV, xlv, q. ii, a. 2), consider it rash and unfounded. If certain words in the Offertory of the Mass for the Dead, "Lord Jesus Christ, deliver the souls of all the faithful departed from the pains of hell, and the deep abyss", seem originally to have suggested an idea of deliverance from the hell of the damned, this is to be understood not of rescue, but of preservation from that calamity. The whole requiem Office is intensely dramatic, and in this particular prayer the Church suppliant is figured

as accompanying the departed soul into the presence of its Judge, and praying, ere yet sentence is pronounced, for its deliverance from the sinner's doom. On the other hand, prayers are needless for the blessed who already enjoy the vision of God face to face. Hence in the Early Church, as St. Augustine expressly assures us (Serm. cclxxv, 5, P. L., XXXVIII, 1295), and as is otherwise abundantly clear, prayers were not offered for martyrs, but to them, to obtain the benefit of their intercession, martyrdom being considered an act of perfect charity and winning as such an immediate entrance into glory. And the same is true of saints whom the Church has canonized; they no longer need the aid of our prayers on earth. It is only, then, for the souls in purgatory that our prayers are really beneficial. But we do not and cannot know the exact degree in which benefits actually accrue to them, collectively or individually. The distribution of the fruits of the communion of saints among the dead, as among the living, rests ultimately in the hands of God—is one of the secrets of His economy. We cannot doubt that it is His will that we should pray not only for the souls in purgatory collectively, but individually for those with whom we have been bound on earth by special personal ties. Nor can we doubt the general efficacy of our rightly disposed prayers for our specially chosen ones as well as for those whom we leave it to Him to choose. This is sufficient to inspire and to guide us in our offices of charity and piety towards the dead; we may confidently commit the application of their fruits to the wisdom and justice of God.

(3) For a theoretical statement of the manner in which prayers for the dead are efficacious we must refer to the articles MERIT and SATISFACTION, in which the distinction between these terms and their technical meanings will be explained. Since merit, in the strict sense, and satisfaction, as inseparable from merit, are confined to this life, it cannot be said in the strict sense that the souls in purgatory merit or satisfy by their own personal acts. But the purifying and expiatory value of their discipline of suffering, technically called *satispassio*, is often spoken of in a loose sense as satisfaction. Speaking of satisfaction in the rigorous sense, the living can offer to God, and by impenetration move Him graciously to accept, the satisfactory value of their own good works on behalf of the souls in purgatory, or in view of it to remit some part of their discipline; in this sense we may be said to satisfy for the dead. But in order that the personal works of the living may have any satisfactory value, the agents must be in the state of grace. The prayers of the just are on this account more efficacious in assisting the dead than the prayers of those in sin, though it does not follow that the general impetratory efficacy of prayer is altogether destroyed by sin. God may hear the prayers of a sinner for others as well as for the suppliant himself. The Sacrifice of the Mass, however, retains its essential efficacy in spite of the sinfulness of the minister; and the same is true, in lesser degree, of the other prayers and offices offered by the Church's ministers in her name.

(4) There is no restriction by Divine or ecclesiastical law as to those of the dead for whom private prayers may be offered—except that they may not be offered formally either for the blessed in heaven or for the damned. Not only for the faithful who have died in external communion with the Church, but for deceased non-Catholics, even the unbaptized, who may have died in the state of grace, one is free to offer his personal prayers and good works; nor does the Church's prohibition of her public offices for those who have died out of external communion with her affect the strictly personal element in her minister's acts. For all such she prohibits the *public offering* of the Sacrifice of the Mass (and of other liturgical offices); but theologians commonly teach that a priest

is not forbidden to offer the Mass *in private* for the repose of the soul of any one who, judging by probable evidence, may be presumed to have died in faith and grace, provided, at least, he does not say the special requiem Mass with the special prayer in which the deceased is named, since this would give the offering a public and official character. This prohibition does not extend to catechumens who have died without being able to receive baptism (see, v. g., Lehmkuhl, "Theol. Moralis", II, n. 175 sq.). For other cases in which the Church refuses her public offices for the dead, the reader is referred to the article BURIAL, CHRISTIAN. (See also MASS; INDULGENCE; PURGATORY.)

III. PRACTICE IN THE BRITISH AND IRISH CHURCHES.

—The belief of our forefathers in the efficacy of prayers for the dead is most strikingly shown by the liturgy and ritual, in particular by the collects at Mass and by the burial service. See, for instance, the prayers in the Bobbio Missal, the Durham Ritual, Leofric's Missal, the Salisbury Rite, the Stowe Missal, etc. But it should also be noted that this belief was clearly formulated, and that it was expressed by the people at large in numerous practices and customs. Thus, Venerable Bede declares that "some who for their good works have been preordained to the lot of the elect, but who, because of some bad deeds stained with which they went forth out of the body, are after death seized upon by the flames of the purgatorial fire, to be severely chastised, and either are being cleansed until the day of judgment from the filth of their vices by this long trial, or, being set free from punishment by the prayers, the alms-deeds, the fasts, the tears of faithful friends, they enter, undoubtedly before that time, into the rest of the blessed" (Homily xlix, ed. Martène, Thes. Anecd., p. 326).

The Council of Calcuth (816) ordained that at a bishop's death the bell of every parish church should call the people together to sing thirty Psalms for the soul of the departed (Wilkins, Concilia, I, 171). In the Missal of Leofric (d. 1072) are found special prayers varying according to the condition and sex of the departed. Archbishop Theodore (d. 690), in the penitential ascribed to him, and St. Dunstan (d. 988), in his "Concordia", explain at length the commemoration of the departed on the third, seventh, and thirtieth day after death. The month's mind (*moneth's mynde*) in that age signified constant prayer for the dead person during the whole month following his decease. In every church was kept a "Book of Life", or register of those to be prayed for, and it was read at the Offertory of the Mass. This catalogue was also known as the "bead-roll" and the prayers as "bidding the beads". The "death-bill" was a list of the dead which was sent around at stated times from one monastery to another as a reminder of the agreement to pray for the departed fellow-members. These rolls were sometimes richly illustrated, and in passing from one religious house to another they were filled in with verses in honour of the deceased. The laity also were united in the fellowship of prayer for the dead through the guilds, which were organized in every parish. These associations enjoined upon their members various duties in behalf of the departed, such as taking part in the burial services, offering the Mass-penny, and giving assistance to the alms-folks, who were summoned at least twice a day to bid their beads at church for the departed fellows of the guild. Among other good works for the dead may be mentioned: the "soul-shot", a donation of money to the church at which the funeral service took place, the "doles", i. e. alms distributed to the poor, the sick, and the aged for the benefit of a friend's soul; the founding of chantries (q. v.) for the support of one or more priests who were to offer Mass daily for the founder's soul; and the "certain", a smaller endowment which secured for the donor's special benefit the recitation of the prayers

usually said by the priest for all the faithful departed. The universities were often the recipients of benefactions, e. g. to their libraries, the terms of which included prayers for the donor's soul; and these obligations are set down in the university statutes. These various forms of charity were practised not only by the common people but also, and on a very generous scale, by the nobility and royalty. Besides the bequests they made, they often provided in their will for granting freedom to a certain number of bondmen, and left lands to the Church on condition that the anniversary of their death should be kept by fasting, prayer, and the celebration of Masses. For a more complete account see Lingard, "History and Antiquities of the Anglo-Saxon Church", ch. ix; and Rock, "The Church of Our Fathers" (London, 1852), II, III.

Strange as it must seem to any one acquainted with the history of Ireland, various attempts have been made to prove that in the early Irish Church the practice of praying for the dead was unknown. Notable among these is Ussher's "Discourse of the Religion anciently professed by the Irish and British" (1631; Vol. IV of "Complete Works", Dublin, 1864). Cf. Killen, "The Ecclesiastical History of Ireland" (London, 1875), I; and Cathcart, "The Ancient British and Irish Churches" (London, 1894). The weakness of Ussher's argument has been shown by several Catholic writers, e. g. Lanigan, "Ecclesiastical History of Ireland" (Dublin, 1829), II, 330 sq., and Brennan, "Ecclesiastical History of Ireland" (Dublin, 1864), appendix. More careful study has convinced competent non-Catholic writers also that "to pray for the dead was a recognized custom in the ancient Celtic as in every other portion of the primitive Church" (Warren, The Liturgy and Ritual of the Celtic Church, Oxford, 1881). This statement is borne out by various documents. The Synod of St. Patrick ("Synodus alia S. Patricii" in Wilkins, "Concilia") declares, ch. vii: "Hear the Apostle saying: 'there is a sin unto death; I do not say that for it any one do pray'. And the Lord: 'Do not give the holy to dogs'. For he who did not deserve to receive the Sacrifice during his life, how can it help him after his death?" The reference to the custom of offering Mass for the departed is obvious; the synod discriminates between those who had observed, and those who had neglected, the laws of the Church concerning the reception of the Eucharist.

Still more explicit is the declaration found in the ancient collection of canons known as the "Hibernensis" (seventh or eighth century): "Now the Church offers to the Lord in many ways; firstly, for herself, secondly for the Commemoration of Jesus Christ who says, 'Do this for a commemoration of me', and thirdly, for the souls of the departed" (Bk. II, ch. ix; Wassersleben, "Die irische Kanonensammlung", 2nd ed., Leipzig, 1885). In the fifteenth book of the "Hibernensis", entitled "On Care for the Dead", there is a first chapter "On the four ways in which the living assist the dead". Quoting from Origen, it is said that "the souls of the departed are released in four ways: by the oblations of priests or bishops to God, by the prayers of Saints, by the alms of Christians, by the fasting of friends". There follow eight chapters entitled: (2) On those for whom we should offer; (3) On sacrificing for the dead; (4) On prayer for the dead; (5) On fasting for the dead; (6) On almsgiving for the dead; (7) On the value of a redeemed soul; (8) On not seeking remission after death when it has not been sought for in life; (9) On the care of those who have been snatched away by sudden death (Wasserschleben, op. cit.). Each of these chapters cites passages from the Fathers—Augustine, Gregory, Jerome—thus showing that the Irish maintained the belief and practice of the Early Church. That prayers were to be offered only for those who died in the Faith

is evident from certain prescriptions in St. Cummian's Penitential according to which a bishop or abbot was not to be obeyed if he commanded a monk to sing Mass for deceased heretics; likewise, if it befell a priest singing Mass that another, in reciting the names of the dead, included heretics with the Catholic departed, the priest, on becoming aware of this was to perform a week's penance. In the Leabhar Breac, various practices in behalf of the faithful departed are commended. "There is nothing which one does on behalf of the soul of him who has died that doth not help it, both prayer on knees, and abstinence and singing requiems and frequent blessings. Sons are bound to do penance for their deceased parents." (Whitley Stokes, *Introductio* to "Vita Tripartita"). It is not, then, surprising that the Irish Culdees of the eighth century had as part of their duty to offer "intercessions, in the shape of litanies, on behalf of the living and the dead" (Rule of the Culdees, ed. Reeves, Dublin, 1864, p. 242). The old Irish civil law (Senchus Mor, A. D. 438-441) provided that the Church should offer *requiem* for all tenants of ecclesiastical lands. But no such enactments were needed to stir up individual piety.

Devotion to the souls departed is a characteristic that one meets continually in the lives of the Irish saints. In the life of St. Ita, written about the middle of the seventh century, it is related that the soul of her uncle was released from purgatory through her earnest prayers and the charity which, at her instance, his eight sons bestowed (Colgan, *Acta SS. Hiberniæ*, pp. 69-70). St. Pulcherius (Mochoemog), in the seventh century, prayed for the repose of the soul of Roman, a chieftain of Ele, and recommended the faithful to do likewise. In the life of St. Brendan, quoted, singularly enough, by Ussher, we read, "that the prayer of the living doth profit much the dead". In the "Acta S. Brendani", edited by Cardinal Moran, the following prayer is given (p. 39): "Vouchsafe to the souls of my father and mother, my brothers, sisters, and relations, and of my friends, enemies and benefactors, living and dead, remission of all their sins, and particularly those persons for whom I have undertaken to pray."

At the death of St. Columbanus (615), his disciple, St. Gall, said: "After this night's watch, I understood by a vision that my master and father, Columbanus, to-day departed out of the miseries of this life into the joys of paradise. For his repose, therefore, the sacrifice of salvation ought to be offered"; and "at a signal from the bell [the brethren] entered the oratory, prostrated themselves in prayer and began to say masses and to offer earnest petitions in commemoration of the blessed Columbanus" (Walafrid Strabo, *Vita B. Galli*, I, Cap. xxvi). Cathcart (op. cit., 332) cites only the words narrating the vision, and says: "they show conclusively that heaven was the immediate home after death of all the early Christians of Great Britain and Ireland." But the truth is that praying for the dead was a traditional part of the religious life. Thus, when St. Gall himself died, a bishop who was his intimate friend offered the Holy Sacrifice for him—"pro carissimo salutare hostias immolavit amico" (ibid., ch. xxx). The same is recorded of St. Columba when he learned of the death of Columbanus of Leinster (Adamnan, *Vita S. Col.*, III, 12). These facts are the more significant because they show that prayers were offered even for those who had been models of holy living. Other evidences are furnished in donations to monasteries, ancient inscriptions on gravestones, and the requests for prayers with which the writers of manuscripts closed their volumes. These and the like pious practices were after all but other means of expressing what the faithful heard day by day at the memento for the dead in the Mass, when prayer was offered for those "who have gone before us with the sign of faith and rest in the sleep of peace" (Stowe Missal). (See Salmon, "The An-

cient Irish Church", Dublin, 1897; Bellesheim, "Gesch. d. katholischen Kirche in Irland", Mainz, 1890, I, and bibliography there given.)

Dead, RESURRECTION OF THE. See RESURRECTION.

Dead, SERVICE FOR THE. See BURIAL; REQUIEM.

Dead Sea, the name given to the lake that lies on the south-eastern border of Palestine. The Old Testament makes frequent reference to it under a variety of titles; once only, however, by its present one. The Vulgate's rendering of Josue (iii, 16) reads, *mare solitudinis (quod nunc vocatur Mortuum)* translated in the D. V. "the sea of the wilderness (which now is called the Dead Sea)". In the Hebrew Bible the verse reads יַמ־הַעֲרֵבָה יִמְהַלֵּךְ; and in the Septuagint ἡνὲν θάλασσαν Ἀραβίαν, θάλασσαν ἄλως, which the A. V. gives thus: "towards the sea of the plain, even the salt sea"; and the R. V., "the sea of the Arabah, even the salt sea". In Joel (ii, 20) the prophet speaks of "the east sea"; and the apocryphal Fourth Book of Esdras (v, 7) speaks of the *mare Sodomiticum*—the Sodomitish Sea. Josephus, Pliny, and other profane writers, among other names, called it the Lake of Asphalt; Ἀσφαλτίτις Λίμνη and *Lacus Asphaltites*. The present-day inhabitants of its vicinity call it *Bahr Lut*—the Sea of Lot.

The Dead Sea is the final link of the chain of rivers and lakes that lies in the valley of the Jordan. Taking its rise on the southern slopes of Mt. Hermon, the Jordan in its southern course first spreads out into Lake Merom, emerging from which it flows into the Lake of Tiberias, whence it descends into the Dead Sea. To convey a proper idea of the size and shape of the Dead Sea travellers often compare it to the Lake of Geneva. The resemblance between the two is striking in almost every particular. The great lake of the Holy Land is forty-seven miles long and about ten miles across at its widest part. Its area is approximately 360 square miles. The surface of the water is 1292 feet below the level of the Mediterranean, which is only a few miles to the west. This extraordinary feature alone singles out the Dead Sea from all other bodies of water. A low-lying peninsula about ten miles wide, called el-Lisan, "the tongue", which runs out from the south-eastern shore to within three miles of the opposite shore, divides the sea into two unequal parts. The northern and larger part is very deep, reaching at one point a depth of 1310 feet. The southern bay is, on the contrary, very shallow, averaging hardly a depth of thirteen feet. In two places it is possible to cross from the peninsula to the opposite shore by means of two fords which are known to the Arabs.

The water in the Dead Sea is salt. Every day the Jordan and other affluents pour into it over six and one half million tons of fresh water. There is, however, no outlet to the ocean, and the sole agent whereby this increase is disposed of is evaporation. The power of the sun's rays in this great pit is, however, so intense that save for a small fluctuation between the wet and dry seasons, the level of the sea does not change, despite the great volume that is added to it. In the water that remains after evaporation solid matters make up 26 per cent of the whole; 7 per cent be-

ing chloride of sodium (common salt), the rest being chiefly chlorides of magnesium, calcium, and derivatives of bromium. The chloride of magnesium gives the water a very loathsome taste; the chloride of calcium an oily appearance. The specific gravity of the water is 1.166. The presence of so much salt explains well the weird name of the sea, since save for a few microbes, no organic life can exist in it. Even fish from the ocean perish when put into it. The human body will not sink below the surface. Bathing, however, in the Dead Sea can hardly be styled a pleasure, as the water is very irritating to the skin and eyes. There is, it need hardly be said, no foundation for the statement sometimes made, that birds cannot fly across the water, as occasionally sea-birds can be seen resting on its surface. From time to time large quantities of bitumen rise to the surface from the bottom. Bitumen is also found along the shores and is referred to in Genesis (xiv, 10) where it speaks of the *puleos multos bituminis*—"many pits of slime". This feature caused the ancients to speak of the sea as the "Lake of Asphalt".

The Dead Sea is mentioned in the Old Testament mostly as a boundary. Its formation comes into discussion in the Book of Genesis (xiv, 3) where, speaking of the kings against whom Chodorlahomor fought, the text says: "All these came together into the woodland vale, which is now the salt sea". According to the geologists who have explored the region, the formation of this depression of the earth's surface does not date from any historical period, but from the later tertiary or early quaternary period. Their theory is that at some remote time the western part of this region, owing to some profound disturbance of the strata, sank far below the eastern part, thus causing the great dissimilarity of the strata of the two sides of the sea. Besides this, the beds of gypsum, marl, flint, and alluvium found at different heights all along the Jordan valley indicate at that one time the entire valley, from the Lake of Tiberias to the Dead Sea, was a lake. Just what were the conditions at the time of the destruction of Sodom and Gomorrah is only a matter of conjecture. But the words of the text, taken as they stand, prove that in the great catastrophe there was an inundation from the sea. The mooted question as to the sites of Sodom and Gomorrah does not properly enter into this article.

It is a very strange sight that this region presents to the eye, especially when seen from some height. On the eastern and western sides great mountains rise up in some places sheer from the water. To the north, the silvery line of the Jordan can be traced as far as the eye can reach. To the south, the hills of solid salt, called Jebel Usdum—Mt. Sodom—and, on a clear day, mountains close to the Red Sea may be seen. Now all is deserted and dead. No vegetation or sign of human occupation greets the traveller. In other days the scene was different. Vessels plied the surface of the sea and many people lived near its shores. The prophecies of Ezechiel (xlvii) and of Zacharias (xiv, 8) give one subject of thought on the scene here when the life-giving streams pouring forth from the Temple will have transformed it anew.

Dean (Gk. *δέκα*, ten; Lat. *decanus*), one of the principal administrative officials of a diocese. The term was first used to denote a military officer having authority over ten soldiers; in the fourth century it came to be used as a title for certain minor officials in the imperial household. A completely civil aspect was given to the office in Anglo-Saxon times in England, the dean having jurisdiction within his district or tithing for trials of first instance.

In the monastic life we find the term used by St. Benedict (Rule, c. xxi) to denote a monk who was placed over ten other monks, his duty being to see that their work was properly done and that they observed the rules of the house in which they were living. The custom which the monks thus introduced soon found its counterpart in diocesan pastoral work. The early Christian communities were always desirous of uniting themselves to the urban bishop, but for people who lived far away from the city communication with the bishop was not always easy; hence they were provided for by the appointment of a priest or deacon whose position was sometimes permanent, sometimes temporary. These ecclesiastics were merely assistants to the bishop and in the early fourth century became known as *chorepiscopi*. Special decrees were made concerning them at the Councils of Ancyra (314) and Antioch (341). The *chorepiscopi*, though frequently having the charge of several parishes, were nevertheless always subject to the bishop of the city from whom they received their jurisdiction. They could only confer minor orders. Most of them were simple priests, but they had extensive faculties. (See Gillmann, "Die Chorbischöfe im Orient", Munich, 1903.) For the East the office of *chorepiscopus* was abolished at the Council of Laodicea (between 343 and 381) because episcopal rights had been usurped by many who held the office; in their place (can. lvii) were substituted *circitores*, *visitatores*. But it was only in and after the eighth century that it finally disappeared in the East, though yet customary among the Jacobites. In the West, during and after the tenth century, there appeared another representative officer, the arch-deacon, who took the chief burden in administering the temporal affairs of the diocese and enjoyed, after the bishop, the greatest consideration. He was present at councils as the representative of the bishop, and on the death of the bishop he became the administrator of the diocese, to which he usually succeeded.

The immediate administrative necessities of the numerous rural parishes were provided for by the appointment of several archpriests, who represented either the bishop or the archdeacon, and were originally the priests having charge of baptismal churches. In the West, after the restoration of the *vita canonica* in the latter half of the eighth century, their number and influence grew. They were charged with the supervision of ecclesiastical life and conduct, with the execution of episcopal commands, and were wont to convoke more or less frequently the clergy of their district (*capitula ruralia, concilia, calendæ*). They made a yearly report to the bishop. It is to these ancient offices that the modern dean has succeeded (see Sägmüller, *Entwicklung des Archipresbyterats*, 1898). There are at present two classes of deans: deans of chapters (cathedral or collegiate) and deans of parochial districts. The latter act as representatives of the bishop in certain matters, as heads of aggregations of parishes, either urban or rural. The dean is also known by the name of vicar forane (*vicarius foraneus*).

Rural Deans.—In the Catholic Church it is to be noted that the dean has only delegated jurisdiction, restricted to a particular area and to certain matters specified by the bishop. His powers are generally determined by the diocesan statutes, by custom, or by special mandate of the bishop. In countries where canon law is in full force, deans have power to dis-

pense and absolve in certain cases. They can also institute an inquiry or informative process to be afterwards transmitted to the bishop. Furthermore, they are to see that the churches in their district are well-ordered both in spiritual and in temporal affairs, and they can grant leave of absence to priests for short periods. They also have charge of the solemn installation of parish priests, care for them in grave illness, and provide for their decent burial. They possess also, in some places, certain honorary rights, e. g. precedence, and occasionally some distinction in dress. In countries where canon law is not in full vigour the powers and rights of rural deans vary greatly; in fact, each diocese may be said to have its own peculiar customs and regulations. In some English dioceses the deans merely preside at the monthly conference; in others the bishop gives them faculties to dispense in certain cases, and they have care of the temporalities of the churches in their districts when there is a change of rector. In Ireland the deans can grant certain dispensations, and absolve from reserved sins; they also have to guard against the growth of abuses among the clergy. They transmit to the clergy the orders of the bishop and render to him an annual account as to the state of the parishes in their care. Quite similar are the provisions of the Third Plenary Council of Baltimore (cap. iv, nos. 27-30) for the office of dean in the United States.

Deans of Chapters.—The first dignitary of a chapter is variously styled. Sometimes he is called archdeacon, or archpriest; in other places he is called the provost or dean. The office is in the appointment of the pope. The dean takes precedence of all the other members of the chapter in choir and processions and other similar functions, and also during the capitular deliberations. His rights or prerogatives are to celebrate Mass when the bishop is prevented from so doing. He also administers the last sacraments to the ordinary and celebrates the funeral Mass. During Divine Office he gives the signal to commence etc., and he also corrects mistakes and remedies abuses at variance with the diocesan decrees and local approved custom. He is bound to be present in choir and to give a good example to the chapter, both in his behaviour and in the manner in which he recites or sings the various portions of the Divine liturgy.

In modern Catholic universities the dean is an officer chosen by the professors of his faculty to represent them as a body, to preside over their meetings, and to supervise the regularity of the ordinary academic exercises. His authority is based partly on the papal documents of foundation, partly on the enactments of the university authorities, and partly on custom.

The following are the decanal offices now existing in the Church of England; honorary deans, e. g. the dean of the Chapels Royal; dean of peculiars, i. e. having jurisdiction but no cure of souls; provincial dean, an office always held by the (Protestant) Bishop of London; deans of chapters, who rule over the canons of cathedral or collegiate churches, and are bound to be in residence for eight months in the year; rural deans who act as deputies for the bishop or archdeacon. In the English universities (Cambridge, Oxford), the dean has the care of the discipline of the college and the arranging of the chapel services.

Dean, RURAL. See DEAN.

Dean, WILLIAM, VENERABLE, b. in Yorkshire, England, date uncertain, martyred 28 August, 1588. He studied at Reims and was ordained priest at Soissons, 21 December, 1581, together with the martyrs George Haydock and Robert Nutter. Their ordination coincided with the time that the news of Campion's martyrdom reached the college. Dean said his first Mass 9 January and left for England 25 January, 1581. He is called by Champney "a man distinguished by the soundness of his morals and learning". He was banished with a number of other priests in 1585, put ashore on the coast of Normandy, and threatened with death if he dared to go back to England. Nevertheless he quickly returned to his labours there and was again arrested, tried, and condemned for his priesthood, 22 August, 1588. The failure of the Spanish Armada, in spite of the loyalty manifested by English Catholics at that crisis, brought about a fierce persecution and some twenty-seven martyrs suffered that year. Six new gibbets were erected in London, it is said at Leicester's instigation, and Dean, who had been condemned with five other priests and four laymen, was the first to suffer on the gallows erected at Mile End. With him suffered a layman, the Venerable Henry Webley, for relieving and assisting him. At the martyrdom Dean tried to speak to the people, "but his mouth was stopped by some that were in the cart, in such a violent manner that they were like to have prevented the hangman of his wages". Seven martyrs suffered on the same day. Leicester died on 5 September, within a week of their execution.

Deanery. See DEAN.

Dease, THOMAS, b. in Ireland, 1568; d. at Galway, 1651. He sprang from an ancient Irish family at one time possessing considerable landed property in Cavan and Westmeath. In youth he acquired some proficiency in the Irish language, in which language he wrote some poems. Having determined to become a priest, he proceeded to Paris, where after ordination he spent the first years of his priesthood. During this time he became rector of the Irish Seminary, the precursor of the present Irish College. In 1622 he was consecrated Bishop of Meath, returning to Ireland the same year. In spite of persecution and penal laws he continued loyal to England and preached loyalty to his flock. He regarded with disfavour the Confederation of Kilkenny, and resisted all the arguments and entreaties of the primate to join it. This conduct brought him toleration, if not favour, from the Government, though it made him unpopular with his Catholic fellow-countrymen. And it specially annoyed the nuncio, Rinuccini, who charged him with having sown the seeds of enmity between the Confederate generals Preston and O'Neill. The news of Dease's death was therefore received, in 1648, by the nuncio with little regret. But the news turned out false, and the nuncio writing to Rome reported that the bishop still lived "to try the patience of the good".

E. A. D'ALTON.

Death, PREPARATION FOR.—Spiritual writers are as one in declaring that ordinarily the only adequate preparation for death is a righteous life. It is a commonplace with them that the tendency to think of this preparation as a set exercise without much, if any, reference to one's previous career represents a miserable error. There is no way, of course, to combat the

obviousness of this position. Nevertheless, in what follows here we are contemplating that array of actions, mental and moral attitudes, ministrations, etc. which are commonly rated as the proximate making ready for the coming of the supreme moment. No matter how carefully conformed to the law of God and the precepts of the Church one's life may have been, no Christian will want to enter eternity without some immediate forearm against the terrors of that last passage. We shall deal first with the case of those to whom the dread summons comes after an illness which has not bereft them of consciousness. The Roman Ritual is explicit in its injunction to the pastor to hasten to the bedside of the sick person at the first intimation that one of his flock is ill. This he is to do without even waiting for an invitation: "*Cum primum noverit quempiam ex fidelibus curæ suæ commissis ægrotare, non expectabit ut ad eum vocetur, sed ultra ad eum accedat*" (I, cap. iv). Indeed, it is impossible to unduly accentuate the importance of this timely coming of the priest to offer opportune spiritual succours to the one who is ill. Practically, in the actual conditions of modern life, it must often happen that the priest can only know of this need for his services through information furnished by the relatives or friends of the sick person. They, therefore, have a very definite obligation in this matter. Too often there is a mistaken interpretation of the claims of affection or, even worse, a weakly surrender to a lamentable human respect, and so the minister of God is sent for, if at all, only when the patient is unconscious, and death is imminent. For the Catholic Christian, getting ready for death is not simply the being submitted passively to the administration of certain religious rites. It is, as far as may be, the conscious, deliberate employment of prayer; the forming or deepening of a special temper of soul and acceptance of such sacramental help as will fit the human spirit to appear with some confidence before its Judge. Hence the failure to call the clergyman in time may, far from being an exhibition of tenderness or consideration, be the most irreparable of cruelties. To be sure it is not always necessary that the patient should be told that his case is past remedy; even when the approach of death is fairly discernible, and even when such distressing information must for any reason be conveyed, there is room for the exercise of a great deal of prudence and tact. It may be that the sick person will have important affairs to set in order, and that a hint of the probability of a fatal issue of his illness will be the only adequate stimulus to quicken him into a discharge of his obligations. In such instances it may be not only a kindness but a duty to impart such knowledge straightforwardly, but gently. It is plain that a special measure of delicacy is necessary when this office falls to the attending priest to perform. Beyond question it is of paramount importance that all such matters as the disposition of temporalities, payment of debts, satisfaction of burdens of restitution, etc. should have been settled so as to leave an undivided attention for the momentous considerations which are to engage the mind of the one who is presently to pass through the portals of death into eternity.

So far as priestly assistance goes the first step in the process of preparation for death is the receiving of the patient's confession and the conferring of sacramental absolution. Indeed, inasmuch as it offers the ordinary means of reconciliation with God, it is the most indispensable factor in helping the soul to qualify for its departure from the body. The Roman Ritual (I, cap. iv, 8) indicates that the priest is to draw upon all the resources of his prudence and charity in order to obtain a confession from the sick person, even though the danger apprehended be as yet remote. The confession need not necessarily be of the sort that is described as general, unless, of course, the reasons

exist that would make it obligatory at any other time of life as well. It will often be useful where, with due regard to the remaining strength of the stricken penitent, it is possible to make, at least in some sense, this general avowal of the sins of one's life. Whether there be question of a general confession or merely the ordinary one, the clergyman has often to remember that in this trying juncture the Divine precept exacting entirety in the recital of offenses admits of more than usually benignant interpretation. Where the person is incapable of sustained mental effort without serious prejudice to his failing powers, the priest need give himself no scruple about being satisfied with incomplete, or less specific, forms of accusation. The law of integrity is not to be rigorously urged under such circumstances. Even when nothing but the most general acknowledgment of one's sinful condition can be obtained, it is incontrovertible that in the premises this is a valid substitute for a more detailed confession. After the confession comes the reception of the Holy Eucharist as viaticum (*per modum viatici*). "Sacred writers", according to the Catechism of the Council of Trent, "called it 'the Viaticum', as well because it is the spiritual bread by which we are supported in our mortal pilgrimage, as also because it prepares for us a passage to eternal glory and happiness." The concordant teaching of theologians, as well as the inference from the uniform discipline of the Church, is that there is a Divine precept binding one to receive the Holy Eucharist when in danger of death. At this time the communicant is exempted from the traditional natural fast. The Council of Constance witnesses to the custom of the Church in this matter, and the Roman Ritual (I, cap. iv, 4) says: "*potest quidem Viaticum brevi morituris dari non jejunis*". This privilege may be enjoyed repeatedly by the dying person during the illness. Strictly speaking, it is not extended to persons whose danger of death comes from a cause other than sickness, such as soldiers about to engage in battle or criminals about to be executed. Still, even they, as appears from a declaration of the Sacred Congregation of Propaganda, 21 July, 1841, may receive the Viaticum even though they are not fasting, if they find any considerable difficulty in observing the law. So far as is possible, nothing should be omitted which can help to confer upon the administration of the Viaticum becoming solemnity. This is all the more desirable in that sometimes the demeanor of those who are present on such occasions, and even of the sick person, is not such as to betray any very alert sense of the Presence that has come to hallow this last stage of life's journey. It is needless to add that whatever the enlightened zeal of the priest or the careful piety of the bystanders can suggest ought to be done to awaken in the communicant a special degree of fervour, a more than ordinarily penetrating faith and ardent love on the occasion of what may be his final eating of the Bread of Life.

There follows the Sacrament of Extreme Unction, or anointing, as it is popularly designated. Here the clergyman may find himself confronted with prejudices which in spite of reiterated explanations seem to have an extraordinary vitality. His announcement that he purposes to anoint the sick person is often accepted by the patient and his friends as the reading of the death-warrant. It is necessary to point out that the Sacrament of Extreme Unction gives health not only to the soul, but also sometimes to the body. The basis for the teaching is of course to be found in the well-known utterance of St. James (v, 14, 15): "Is any man sick among you? Let him bring in the priests of the church, and let them pray over him, anointing him with oil in the name of the Lord. And the prayer of faith shall save the sick man; and the Lord shall raise him up; and if he be in sins, they shall be forgiven him." Anciently it was the custom

to confer this sacrament before the Viaticum; the maintenance of the existing usage has been prescribed by the Roman Ritual (V, cap. i, 2). Although the existence of a precept to receive this sacrament cannot be established, still the failure to avail oneself of its efficacy out of sheer sloth would be a venial sin. It cannot be administered more than once during the same illness, unless, after some notable betterment which has either certainly or probably taken place, a new danger should supervene. In chronic diseases, therefore, such as tuberculosis, it will often happen that the sacrament may and ought to be repeated because of the recurrence of what is, morally speaking, a new danger. According to the discipline in vogue in the Latin Church, the unctions essential to the validity of the sacrament are those of the organs of the five senses—the eyes, ears, nostrils, mouth, and hands. There is a diversity in the custom as to the unctions to be added to those already enumerated; in the United States, besides the parts mentioned, only the feet are anointed. The sick-room ought to be made ready for the visit of the priest on the occasion of his giving the last sacrament; it can at least be cleaned and aired. On a table covered with a white cloth there ought to be a lighted blessed candle, a crucifix, a glass of water, a spoon, a vessel containing holy water, and a towel. According to the rubric of the Roman Ritual the priest is to remind those who are present to pray for the sick person during the anointing, and it suggests that the Seven Penitential Psalms with the litanies might be employed for this purpose. Extreme unction, like other sacraments, produces sanctifying grace in the soul. It has, however, certain results proper to itself. Of these the principal one seems to be the getting rid of that spiritual torpor and weakness which are the baneful output of actual sin, and which would be such a serious handicap in this supreme moment. From the viewpoint of the Christian, the struggle to be maintained with the devil is now more formidable than ever, and a special endowment of heaven-sent strength is necessary for the soul's final victory. The anointing is ordinarily succeeded by the conferring of the Apostolic benediction, or "last blessing", as it is commonly called. To this blessing a plenary indulgence is attached, to be gained, however, only at the hour of death, i. e. it is given *nunc pro tunc*. It is conferred in virtue of a special faculty granted to the bishops and by them delegated quite generally to their priests. The conditions requisite for gaining it, are the invocation of the Holy Name of Jesus at least mentally, acts of resignation by which the dying person professes his willingness to accept all his sufferings in reparation for his sins and submits himself entirely to the will of God.

The cardinal disposition of soul at the approach of death are: a frequent eliciting of the acts of faith, hope, love, and contrition; a striving towards a more and more perfect conformity with the will of God; and the constant maintaining of a penitential spirit. The words of St. Augustine are in point: "However innocent your life may have been, no Christian ought to venture to die in any other state than that of the penitent." As the hour of the agony approaches, the clergyman, according to the Roman Ritual, is to be called to pronounce the pathetically beautiful "Recommendation of a departing soul". Where the presence of the priest cannot for any reason be had, these prayers ought not to be omitted; they are nowadays easily obtainable in the vernacular and ought to be recited by those who watch beside the death-bed. The dying person should be invited to join in these petitions, without, however, harassing or fatiguing him. As the person is about to expire, the Ritual directs those who are by to pray more earnestly than ever; the Holy Name of Jesus is to be invoked, and such ejaculations as the following whispered in his

ear: "Into thy hands, Lord, I commend my spirit"; "O Lord, Jesus Christ, receive my spirit"; "Holy Mary, pray for me"; "Mary Mother of grace, Mother of mercy, do thou protect me from the enemy and receive me at the hour of my death".

When death is apprehended as imminent after a sudden seizure even in the act of sin, an accident, attempted suicide, and the like, and the person is meanwhile deprived of consciousness, the method of proceeding is as follows: Conditional absolution is imparted, Viaticum of course is omitted, as it is likewise when the person, though in possession of his senses, is subject to an almost unintermittent vomiting. Extreme unction and the last blessing are given as usual. In such an extremity, when the person is unable to make a confession, extreme unction may prove to be the most effective and necessary means of salvation.

It is interesting to note that recent investigations have made it plain that it is no longer possible to determine even within a considerable margin the precise moment of death. Father Ferreres, S. J., in his work, gathers as the conclusion of his researches that the only absolutely certain sign of death is decomposition. The practical value of this statement is that absolution and extreme unction may be given conditionally for some time after the person would have hitherto been reputed to be dead. In what has been said, it is taken for granted that the person to be gotten ready for death is baptized. If this is not so, or if there be a doubt about it, either as to fact or validity, then of course baptism must first be administered, either absolutely or conditionally, as the case warrants, after some instruction on the principal truths of religion. Baptism may be conferred conditionally on those who are unconscious in as far as they can be presumed to have the desire of receiving it. It is perhaps worth while to add here that, when there is question of the dying, it is the mind of the Church that her minister should avail himself of any sort of probability, no matter how slight, in order to be able to give absolution, at least conditionally. He then applies with great amplitude the principle, *Sacramenta propter homines*. Practically, therefore, the only case in which the priest in these circumstances may not absolve is when the person refuses the sacraments, or is manifestly discerned to have a perverse disposition of soul.

Lingard, in his "Antiquities of the Anglo-Saxon Church", gives a description of the discipline in force among the Anglo-Saxons of the mediæval period with regard to the preparation of the dying for the end. He says: "At the first appearance of danger, recourse was had to the ministry of the parish priest or of some distinguished clergyman in the neighbourhood. He was bound to obey the summons and no plea but that of inability could justify his negligence. Attended by his inferior clergy, arrayed in the habits of their respective orders, he repaired to the chamber of the sick man, offered him the sacred rites of religion and exhorted him to prepare his soul to appear before the tribunal of his Creator. The first duty which he was bound to require from his dying disciple was the arrangement of his temporal concerns. Till provision had been made for the payment of his debts and the indemnification of those whom he had injured, it was in vain to solicit the succours of religion; but as soon as these obligations had been fulfilled the priest was ordered to receive his confession, to teach him to form sentiments of compunction and resignation, to exact from him a declaration that he died in peace with all mankind, and to pronounce over him the prayer of reconciliation. Thus prepared he might with confidence demand the Sacrament of Extreme Unction. With consecrated oil the principal parts of the body were successively anointed in the form of a cross; each unction was accompanied with an ap-

propriate prayer and the promise of St. James was renewed, 'that the prayer of faith should save the sick man and if he be in sins they should be forgiven'. The administration of the Eucharist concluded these religious rites at the termination of which the friends of the sick man ranged themselves around his bed, received the presents which he distributed among them as memorials of his affection, and gave him the kiss of peace and bade him a last and melancholy farewell." Dr. Lingard mentions a curious attitude with regard to extreme unction as prevalent among the illiterate Anglo-Saxons of this time. He says, "It [extreme unction] appears to have been sometimes received with reluctance by the illiterate from an idea that it was a kind of ordination which induced the obligation of continency and abstinence from flesh on those who afterwards recovered. The clergy were ordered to preach against the erroneous notion." (See VIATICUM; EXTREME UNCTION.)

JOSEPH F. DELANY.

Debbora, prophetess and judge; she was the wife of Lapidoth and was endowed by God with prophetic gifts which secured for her the veneration of the divided Israelitic tribes and gave her great authority over them. Her wisdom was first displayed in settling litigious matters submitted to her: "She sat under a palm-tree, which was called by her name, between Rama and Bethel, in Mount Ephraim, and the children of Israel came up to her for all judgment" (Judges, iv, 5). Debbora was thus a judge in the ordinary sense of the word. In the case of the other persons whose history is recorded in the book of Judges, the title seems to be given them as "deliverers and leaders" of the chosen people, no mention being made of ordinary judicial functions; but it was rather the confidence inspired by Debbora in the discharge of such functions which enabled her to bring about the deliverance of the nation, which was then suffering under the oppression of the Chanaanites.

The main army of the enemy was rendered particularly formidable by the fact that it possessed nine hundred iron chariots. It was commanded by Sisara, whose headquarters were at Haroseth, probably identical with the actual el Haritiyeh, between Haifa and Nazareth, on the banks of the Nahr Muquatt'a (Cison) in the plain of Esdraelon. Occupying this position in the centre of the country, the Chanaanites could harass the tribes to the north and south, and render it very difficult for them to unite in a common effort. For "twenty years" the enemy had "grievously oppressed" the children of Israel, when Debbora declared it was God's will that His people should be freed. This will of God she first made known to Barac, who dwelt in Cedes of Nephthali, to-day Qedeis, one of the principal ruins of Northern Galilee. She charged him to gather and lead to Thabor, a mountain to the east of the plain of Esdraelon, an army of ten thousand men, promising him that God would deliver into his hand Sisara and the Chanaanite army. Barac undertook to carry out those instructions only on the condition that the prophetess herself should accompany him. She agreed to do so, foretelling, however, that the glory of ridding the land of Sisara would belong to a woman. This prophecy refers not to Debbora herself, but to Jahel whose story is told in the last part of the fourth chapter. Debbora, however, did certainly share in the glory of Barac. The call to battle was not merely issued to

the northern tribes of Nephthali and Zabulon; the "Canticle of Debbora", given in chapter fifth, praises the tribes of Ephraim and Benjamin, in the midst of which the prophetess had lived, as well as the tribes of West Manasses and Issachar, for furnishing their contingents, while it reproves Ruben, Gad, and Aser for their refusal to take part in the contest. Juda and Simeon were apparently not called upon.

In the battle of Thabor, which marked an era in the history of Israel, Debbora had an important part. She indicated the time to attack the enemy, and encouraged Barac to go down boldly from the mountain to fight in the plain notwithstanding the advantages which the chariot troops gave the Chanaanites on level ground. God justified this assurance which He had inspired by the prophetess. A violent rain storm swelled the torrent of Cison and rendered the ground unfit for the movements of the dreaded chariots. A panic seized upon Sisara's army, and its rout was complete. The general himself died at the hands of Jahel. The "Canticle of Debbora" is in the sacred text attributed to Barac and Debbora. This very early poem is one of the most precious documents for the history of the period of the Judges. The faith in the God of Sinai of the still loosely connected tribes finds vivid expression in the song. It strikingly describes the distress of the land "until Debbora arose, a mother arose in Israel", and the heroic fight for freedom to which she aroused her countrymen. After the deliverance "the land rested for forty years". We are not told what part was taken by Debbora in the affairs of her country during this period of peace; but it is likely that her influence was increased by the glorious event to which her name ever remained attached.

De Bollandt. See BOLLANDISTS.

Debt (*debitum*), that which is owed or due to another; in general, anything which one person is under an obligation to pay or render to another. In a wide sense of the word this obligation may arise from a variety of sources. Thus we say that one who has received a favour from another lies under a debt of gratitude to make him some return for it. The superfluous wealth of the rich is due to the poor; it is a debt to the payment of which, according to the expression of many Fathers and theologians, the poor have a right, not of justice but of charity. We here take the word in the ordinary and strict sense, according to which it signifies something which is due to another in justice. We treat the matter, too, from the ethical rather than from the legal point of view, and so we consider debts of honour as true debts though they cannot be enforced in the civil court.

A debt arises not merely from a contract of borrowing; something may be due to another in justice for many different reasons, but all these may be reduced to two. When one has wilfully caused unjust damage to another, he is bound to make good the loss which he has inflicted, and when he finds himself in possession of what belongs to another, he must restore the property to its owner. Justice requires this, that each one should have his own, and one who has suffered loss unjustly at the hands of another has not his own, as long as the loss is not made good, any more than one whose property is unjustly detained by another. A state of indebtedness, then, of one to another arises from either of these two roots, as theologians call them. A debt must be paid to the owner of the property or to one who has the right to receive payment for him. Sometimes, however, the true owner is unknown, and then payment must be made to the poor or to charitable purposes. At any rate,

one who is the unjust cause of wrong to another cannot be allowed to become a gainer by injustice, and inasmuch as society is injured by injustice, if reparation cannot be made to the individual who has been wronged, it must be made to society, and this cannot be done better than by paying the debt to charitable purposes or to the poor. In general, debts must be paid as they become due, or at the time and in the manner agreed upon. If the debtor is unable to meet his obligations at the proper time he will be made a bankrupt, his property will vest in the official receiver or trustee, and will be distributed among the creditors in proportion to their claims. Certain debts, however, have priority over others by law. In England the order among these is as follows: rates and taxes; the wages or salary of any clerk or servant not exceeding fifty pounds in respect of services rendered during four months prior to the receiving order; wages of any labourer or workman not exceeding twenty-five pounds for services, whether time- or piece-work, rendered during two months prior to the date of the receiving order. If the assets are sufficient for the purpose these debts must be paid in full before all others, otherwise they will abate equally among themselves. In the United States the National Bankruptcy Act of 1898, as amended in 1903, gives priority to certain debts in the following order: all taxes legally due and owing by the bankrupt to the United States, State, County, District, or Municipality; costs of preserving the estate subsequent to filing the petition; the filing fees; the costs of administration; wages due to workmen, clerks, or servants which have been earned within three months before the date of the commencement of proceedings, not exceeding three hundred dollars to each claimant; and finally debts owing to any person who by the laws of the States or of the United States is entitled to priority. Similarly, the debts of a person lately deceased must be paid by the executor or administrator in the order prescribed by law. According to English law funeral expenses and the expenses of probate or taking out administration come first. Then the debts of the deceased in the following order: Crown debts; debts having priority by statute; debts of record; debts by specialty and simple contract. Similarly also in the United States, after costs of administration and funeral expenses the debts due to the general government come next. Then follow other debts similar to those mentioned above as having priority in English law, but the order is not identical in all the States.

In certain circumstances the obligation of paying a debt ceases. This will be the case when a creditor freely condones the debt, as of course he may do if he chooses. Moreover, physical or moral impossibility excuses the debtor from paying the debt as long as the impossibility lasts. If a man has no money and no means of getting any, he is excused on the ground of impossibility from paying his debts. Even if he could not pay without reducing himself and his family to beggary, it will be held morally impossible for him, as long as those conditions last, to satisfy his obligations. Even justice must take account of other virtues and obligations. (How far a discharge in bankruptcy excuses from payment of debts in full out of subsequently acquired property is laid down in the article BANKRUPTCY.) The popes have sometimes for just cause used their authority as the supreme heads of Christian society to grant partial remissions or compositions for debts due to unknown creditors. One of the clauses of the *Bulla Cruciate* granted to the Spanish dominions confers such a privilege on the recipient on certain conditions. When a debt is barred by lapse of time, the civil authority refuses its help to enable the creditor to recover what is due to him, but the debtor is not freed in conscience; he is still under a moral obligation to pay his debt. Finally, it may be mentioned that by ecclesiastical

law those who have incurred heavy debts which they are unable to pay are prohibited from entering a religious order, at least if they have been reduced to that state through grave fault of their own.

T. SLATER.

Decalogue (Greek *δέκα*, ten, and *λόγος*, word), the term employed to designate the collection of precepts written on two tables of stone and given by God to Moses on Mount Sinai. The injunctions and prohibitions of which it is composed are set forth in Exodus (xx, 1-17) and in Deuteronomy (v, 6-21). The differences discernible in the style of enumerating them in Exodus as contrasted with Deuteronomy are not essential and pertain rather to the reasons alleged for the precepts in either instance than to the precepts themselves. The division and ordering of the commandments in use in the Catholic Church is that adopted by St. Augustine (*Questiones in Exodus*, q. 71). That which is commonly in vogue amongst Protestants seems to have Origin for its sponsor. He regarded Exodus, xx, 3-6, as containing two distinct commandments and in this hypothesis in order to keep the number ten, verse xvii would have but one. The practice now universally adhered to among Catholics is just the reverse. See **COMMANDMENTS OF GOD**.

Decapolis (from Gr. *δέκα*, ten, and *πόλις*, city), the name given in the Bible and by ancient writers to a region in Palestine lying to the east and south of the Sea of Galilee. It took its name from the confederation of the ten cities that dominated its extent. The Decapolis is referred to in the New Testament three times: Matt., iv, 25; Mark, v, 20; vii, 31. Josephus, Ptolemy, Strabo, Pliny, and other ancient geographers and historians make frequent reference to it.

At the disruption of the army of Alexander the Great, after his burial at Sidon, great numbers of his veterans, their occupation gone, settled down to a life of peace. The coast towns being already peopled, many of the Greeks sought homes farther inland. There they either laid out new cities or rebuilt and transformed older ones. In 218 B. C., according to Polybius, several of these towns were looked upon as strong fortresses. As long as the Seleucidae ruled in the North and the Ptolemies in the South, the influence of the Greeks remained paramount in Syria; but when, with the rise of the Romans, the power of the descendants of Alexander's soldiers weakened, the Greek cities were in sore straits. Especially perilous was the plight of these towns in Palestine after the successful rise of the Machabees. In the years 64-63 B. C., however, Pompey overran Syria and made it a Roman province. The Grecian cities, being regarded as bulwarks of Roman rule against any native uprisings, were granted many favours. They enjoyed the right of coinage, preserved their municipal freedom, and were allowed a certain sway over the near-by country.

It was after Pompey's conquest that the league of the Decapolis was formed. There is no record of the year, and although most likely it was soon after the coming of Pompey, yet it may not have been until Herod's time. The earliest list of the ten cities of the Decapolis is Pliny's, which mentions Scythopolis, Pella, Hippo, Dion, Gerasa, Philadelphia, Raphana, Canatha, and Damascus. Later, Ptolemy enumerates eighteen cities, thus showing that the term Decapolis was applied to a region. The importance of this league was greatly strengthened by the advantageous positions of the principal towns. Scythopolis, the

capital of the Decapolis, lay at the head of the plain of Esdraelon, to the west of the Jordan, guarding the natural portal from the sea to the great interior plateau of Basan and Galaad. The other cities were situated to the east of the Jordan on the great routes along which passed the commerce of the whole country. To-day the cities of the Decapolis, with the exception of Damascus, are deserted and in ruins. Yet even in their ruined state they offer a striking contrast to the near-by cities of the Semites. Their temples, theatres and forums built on a lavish scale, give even to this day clear indication of the genius of the people who built them.

Among the cities of the Decapolis of special interest are: Damascus, so often referred to in the Old and New Testament; Gadara, on the Sea of Galilee, whose inhabitants were the Gerasens of the Evangelists—the Γαδαρανῶν of one reading of Matt., viii, 28—whose swine were driven by the devil into the sea; and Pella, the city in the valley of the Jordan to which the Christians withdrew at the first siege of Jerusalem.

Dechamps, ADOLPHE, Belgian statesman and publicist, brother of Cardinal Dechamps, b. at Melle near Ghent, 17 June, 1807, d. at Manage, 19 July, 1875. He entered public life about 1830 and soon became popular through his brilliant contributions to several Catholic newspapers. Having founded with his friend de Decker "*La Revue de Bruxelles*", he advocated in that paper a system of parliamentary government which was termed "government of the centres". The ministries were to be composed of Catholics and Liberals and to be supported by the moderate elements of the two parties. The scheme was not without merit under the circumstances, and it worked successfully for some years, but no great political shrewdness was needed to foresee that, unless the Catholics were willing to surrender their principles, they must sooner or later part company with the Liberals. In 1834 Dechamps was elected to the Chamber of Representatives, where his talent as an orator and his practical sagacity soon secured him a prominent position. In 1836 he participated very actively in the discussion of the bill on the organization of the communes, and in 1839 he opposed the treaty with Holland. The great Powers had imposed that treaty on Belgium and Holland in 1834, but the latter had delayed accepting it in the hope that she might eventually obtain better conditions. Dechamps, with many others, held that by this delay Holland had forfeited her right to the advantages granted her by the Powers and they urged the Government to appeal to arms rather than to surrender any part of Belgian territory. This warlike policy, however, would have been unwise in view of the opposition of the Powers, and peace was finally signed with Holland.

The most remarkable event of Dechamps's political career is perhaps the leading part he played in the passing of the bill on elementary instruction. Up to 1842 there had been no elementary public schools in Belgium, although there were numerous schools organized under the direction of the clergy. One of the provisions of the new bill enacted that religious instruction was to form an essential part of public education and to be under the control of the clergy. The bill was passed almost unanimously by the votes of both Catholics and Liberals. From 1843 to 1848 Dechamps was a member of several ministries and showed himself a competent administrator. After the defeat of his party in 1848 he became the leader of the Catholic

minority in the Chamber of Representatives and retained that position for several years. In 1864 he retired from politics and engaged in financial enterprises, but his ventures proved unfortunate. The following are his most important works: "*Le second Empire*" (Brussels, 1859); "*Le second Empire et l'Angleterre*" (Brussels, 1865); "*Jules César; l'empire jugé par l'empereur*" (Brussels, 1865); "*La France et l'Allemagne*" (Brussels, 1865); "*La Convention de Gastein*" (Brussels, 1865); "*Les partis en Belgique et le nouveau règne*" (Brussels, 1866); "*L'école dans ses rapports avec l'Eglise, l'Etat et la liberté*" (Brussels, 1869); "*Le prince de Bismarck et l'entrevue des trois empereurs*" (Brussels, 1873).

PIERRE MARIQUE.

Dechamps, VICTOR AUGUSTIN ISIDORE, Cardinal, Archbishop of Mechlin, and Primate of Belgium; b. at Melle near Ghent 6 Dec., 1810; d. 29 Sept., 1883, at Mechlin. He and his brothers made rapid progress in science under their father's direction. One, Adolphe, entered on a political career. Victor pursued his ecclesiastical studies first at the seminary of Tournai and then in the Catholic University begun at Mechlin and afterwards transferred to Louvain. Ordained priest 20 Dec., 1834, he entered the Congregation of the Most Holy Redeemer in 1835, and made his vows 13 June, 1836. The next four years he spent at Wittem as prefect of students and lector in dogmatic theology. In 1840 he began his missionary life and in 1842 was nominated rector at Liège. He took an active part in the founding of the Confraternity of the Holy Family, which he considered his most salutary work. In the historic jubilee of Liège he had a large share both by his "*Le plus beau souvenir de l'histoire de Liège*", and by his preaching (1845-46). He visited England and saw the wonderful effects of the Tractarian movement. In 1849 he was nominated consultant general of his congregation, and took up his residence at Pagani near Naples just when Pius IX. was in exile at Gaeta. He had several audiences with the pope and was instrumental in arranging the transfer of the superior general from Pagani to Rome. This was not effected till 1855, when Pius IX. invited Father Dechamps to the first general chapter held in Rome. The question of his appointment to the See of Liège was considered in 1852, but the pope, touched by his personal appeal, did not insist. In 1865 Dechamps became Bishop of Namur, whence he was transferred in 1875 to the Archdiocese of Mechlin and made primate. At all times devoted to the Church and the pope, he took an active part in the formation of the pontifical zouaves, and persuaded General Lamoricière to offer his services to Pius IX. But his prominence in the history of his country and of the Church is due to his battle for Catholic schools and his defence of papal infallibility before and during the Vatican Council. Manning and Dechamps were indefatigable; and they became cardinals in the same consistory, 15 March, 1875. Dechamps worked to the very end. He said Mass on 28 Sept., 1883, and died the day following in the arms of a Redemptorist who happened to be present. He was buried, as he had desired, by the side of Venerable Passerat at Rumilliers.

The complete works of Dechamps, revised by himself, were published in seventeen volumes at Mechlin. In presenting fourteen of the seventeen volumes to Leo XIII. on 7 Feb., 1879, the author writes: "There is one thing that consoles me, Holy Father, in sending you my poor works: they are all consecrated to the truths of our holy Faith. . . . Volume I is consecrated to the truths of faith; II to Our Lord Jesus Christ; V to the Blessed Virgin Mary; III and IV to the

Church and St. Peter; VI to the pope and his infallibility; VII, VIII, and IX to the refutation of modern errors; X, XI, XII, XIII, and XIV to my preaching as bishop and to acts by which I governed my diocese." Of the remaining volumes, XV, "Mélanges", deals with many important questions; XVI and XVII contain letters on questions in philosophy, theology, and other subjects. Cardinal Dechamps's brother, Adolphe, was made Prime Minister of Belgium, 4 April, 1843. He was also minister of public works, and minister of foreign affairs from 30 July, 1845, to 12 June, 1847.

J. MAGNIER.

Decius (CAIUS MESSIUS QUINTUS TRAJANUS DECIVS), Roman Emperor 249-251. He was born, date uncertain, near Sirmium in Pannonia of a Roman or a Romanized family. Practically nothing is known

EMPEROR DECIVS
(Capitoline Museum, Rome)

about his career, but the greater part of his life seems to have been passed in the army. He was the first of the great soldier-emperors from the Danubian provinces under whom the senatorial regime ended and the government became an absolute monarchy. No sooner was his position as emperor made certain by the defeat of Philip at Verona, than Decius commenced to put into effect extensive plans for the reorganization of the empire. Problems of administration, internal as well as external, at once claimed his attention. To the latter he principally devoted his own energies and consequently the greater part of his reign was spent at the head of the legions attempting to repel the Gothic invaders from the Balkan lands. After several campaigns during which he gave no evidence of military genius he met with a signal defeat in the marshes of the Dobrukscha in which he lost his life. This overthrow, attributed by some writers to the treachery of some of the Roman generals, was so complete that the emperor's body was never recovered. In the administration of the internal affairs of the empire, Decius showed himself to be an unstatesmanlike theorist. He conceived the impractical policy of reforming the morals of his time by a forcible restoration of the old religion. He revived the obsolete office of censor as a sop to the senatorial party, permitted them to name its first incumbent, whom he invested with the most autocratic powers in matters of civil service and over the private lives of the citizens. Oblivious of the changes wrought by time and the march of ideas, he pinned his faith to the almost abandoned paganism of old Rome as the solution of the problems of his time. Such sweeping reforms necessarily brought into prominence the growing power of the Christian Church, and made it clear that any attempt to realize or enforce the absolutism of earlier Roman politics must necessarily be futile as long as any considerable body of citizens professing

the Christian creed was allowed the free exercise of their religion. Belief in the freedom of conscience and the higher estimate of religion found among the Christians could find no part in such schemes as those of Decius and would necessarily prove an insuperable obstacle to the complete realization of his plans. Various reasons have been assigned for the emperor's hatred of Christianity, some seeing in it an evidence of innate cruelty, others a desire to be avenged on the friends of his predecessor; but there can be little doubt that the main motives for his hostility were political, conceived not in the form of fanaticism but in purposes of political expediency. The scope of the anti-Christian legislation of Decius was broader than that of his predecessors and much more far-reaching in its effects. The text of his edicts has not survived but their general tenor can be judged from the manner in which they were executed. The object of the emperor was not the extermination of the Christians, but the complete extinction of Christianity itself. Bishops and priests were unconditionally punished with death. To all others was given an opportunity to recant and, to ensure the abandonment of Christianity, all were compelled to submit to some test of their loyalty to Paganism, such as the offering of sacrifice, the pouring of libations, or the burning of incense to the idols. The unexpectedness of the attack, coupled with the fact that an appalling amount of laxity and corruption had manifested themselves during the long peace which the Church had just enjoyed, produced the most deplorable effect in the Christian fold. Multitudes presented themselves to the magistrates to express their compliance with the imperial edict and to these apostates tickets were issued attesting the fact that they had offered sacrifice (*sacrificati*) or burned incense (*thurificati*), while others, without actually performing these rites, availed themselves of the venality of the magistrates to purchase certificates attesting their renunciation (*libellatici*). These defections, though numerous, were more than counterbalanced by the multitudes who suffered death, exile, confiscation, or torture in all parts of the empire. The Decian persecution was the severest trial to which the Church up to that time had been subjected and the loss suffered by the Church in consequence of apostasy was almost as damaging as the losses by martyrdom. The problem of deciding on what conditions the *lapsi* should be admitted to the church and what weight was to be attached to the pardon of confessors, produced the bitterest dissensions and led directly to two dangerous schisms.

P. J. HEALY.

Decker, HANS, a German sculptor of the middle of the fifteenth century. Very little is recorded concerning Decker, but that his home was in Nuremberg. His name is mentioned in a register for the year 1449, and certain early productions in the years 1432 and 1437 are attributed to him. Though his carving in stone is rather rough, he stands alone among his contemporaries for his energy and realism. The few works known to us appear to inaugurate a new style. His principal sculptures are the colossal statue of St. Christopher with the Child Christ on his shoulder, at the south-west portal of the church of St. Sebald, a memorial of the Schlusselfeld family, and the great "Entombment", dated 1446, in the chapel of St. Wolfgang, in the church of St. Egidius. The group is composed of eight figures of heroic proportions powerfully disposed. In the body of Christ the handling is hard, but there is a distinct attempt at correct anatomy. The head is noble and manly; Mary is full of grief; John raises his Master's arm to kiss it. The draperies are simple and finely arranged. This work is not

only a masterpiece in itself, but is so full of the new naturalistic tendency, that it may be said to open the second epoch of sculpture in Nuremberg.

M. L. HANDLEY.

Decorations, PAPAL. See DECORATIONS, PONTIFICAL.

Decorations, PONTIFICAL, the titles of nobility, orders of Christian knighthood and other marks of honour and distinction which the papal court confers upon men of unblemished character who have in any way promoted the interests of society, the Church, and the Holy See. The titles range all the way from prince to baron inclusive, and are bestowed by the pope as temporal sovereign. The title ordinarily conferred is that of count prefixed to the family name, which title is either merely personal or transferable by right of primogeniture in the male line. Bishops assistant at the throne are *de jure* Roman counts. There is another title which is usually called Count Palatine, but the true designation is Count of the Sacred Palace of Lateran, which is attached to many offices in the papal court. The papal orders of knighthood, ranking according to their importance and dignity, are: (1) Supreme Order of Christ; (2) Order of Pius IX.; (3) Order of St. Gregory the Great; (4) Order of St. Sylvester; (5) Order of the Golden Militia, also called of the Golden Spur; (6) Order of The Holy Sepulchre (semi-official note of the Cardinal Chancellor of Equestrian Orders, "Osservatore Romano", 12 Feb., 1905).

Pius X decreed that the Orders of Christ and the Golden Militia should have only one, the other four orders, three grades or classes ("Mulum ad excitandos"; 7 Feb., 1905); that occasionally, but very rarely, in matters of special importance and by special papal permission, a commander eminently distinguished might be allowed to wear the badge (smaller size than that of the first class) on the left breast. According to critical historians, these orders do not antedate the Crusades. After the Crusades, the kings of Europe founded and placed under the protection of the Blessed Virgin Mary, or the Saints, orders of chivalry. Of these, some were intended to protect their kingdoms from the incursions of the infidel, and were in reality religious military orders; others were designed as a desirable and honourable recompense for eminent services to king and country. The lavish and indiscriminate creation of knights of the latter orders led in course of time to a loss of prestige and desire on the part of men of eminent merits to be knighted. The Roman pontiffs, in their dual capacity of spiritual and temporal rulers, either founded or approved, or remodelled and restored to their pristine glory, the six papal orders afore-mentioned.

Supreme Order of Christ.—The Supreme Order of Christ is of Portuguese origin (see CHRIST, ORDER OF THE KNIGHTS OF). The papal and Portuguese orders are one and the same, for a two-fold reason; the pope is the head of every religious order and can admit to solemn profession in any order without the permission of its superior general, and, further, in the Bull of approvals he reserved to himself and his successors the right to create knights of the order, a right which was exercised by the popes and recognized by the kings of Portugal. The decoration is a long red cross, bordered with a narrow gold band, whose extremities are of a trapezoidal form, surmounted by a royal crown, which, in turn, is surmounted by a military trophy attached to the ribbon. Upon the centre of the long red cross is superimposed a small, simple, white enamelled Latin cross. The white upon the red symbolizes the triumph of the Immaculate Lamb of God, by His blood, over the world of sin. Until within a few

years ago, this decoration was worn suspended by a red ribbon which encircled the wearer's neck. Pope Pius X, in memory of the ancient collar composed of alternate swords and tiaras which the knights of old wore, decreed that the decoration should henceforth be worn suspended from a collar composed of shields bearing alternately the cross of the order and the papal emblems connected with golden knots. The "plaque", or badge, worn on the breast, is a silver eight-rayed star ornamented with jewels, bearing on its centre the cross of the order, which is encircled by a crown of gold oak leaves wound with a green fillet. The uniform is of a bright scarlet with facings of white cloth and rich gold embroideries on the collar, breast and cuffs (Moroni, *Diz.*, XVIII, 216). Knee breeches of white smooth silk with gold side stripes, shoes of white silk with gold buckles, hat with white plumes and ornamented with a knot of twisted gold cord terminating in tassels of gold, and a sword with a gold ornamented mother-of-pearl hilt and pendant tassels of twisted gold cord complete this official costume (Pius X, 3 May, 1905). The official dress of a professed knight of this order when it was a religious military body was white.

Order of Pius IX.—This had for its founder (17 June, 1847) the pope whose name it bears. Its object is to fittingly reward noble and conspicuous deeds which merit well of Church and society, and to stimulate others to follow the illustrious example set them. At first it comprised only two classes, knights of the first class, who, upon receiving the decoration, were made nobles with hereditary succession, and knights of the second class, whose title of nobility was personal. Shortly after (17 June, 1849, "Cum hominum mentes") the order was divided into four classes, viz.: (1) Knights of the Great Ribbon; (2) Commanders with the Badge; (3) Commanders, and (4) Knights. Knights of the Great Ribbon wear a wide ribbon extending from the left shoulder saltier-wise to the right side where from a rosette attached to the ribbon the star of the order is suspended. They also wear on the breast the large badge set with diamonds. Commanders wear the decoration at the neck. Commanders with the Badge, besides the star at the neck, wear a badge of smaller design than the large plaque on the breast, and simple knights wear the star on the left breast. The decoration is an eight-pointed blue enamelled star. The spaces between the rays are filled in with undulating golden flames. On the centre is a white enamelled medallion on which is engraved the words PIUS IX and around it, in a golden circle, are stamped in characters of blue, the motto, VIRTUTI ET MERITO. The reverse is identical with the obverse side except that the inscription ANNO 1847 is used instead of PIUS IX. There are two forms of badges. One is a large silver medal similar to the star, and the other is of the same design but larger and adorned with brilliant gems. The ribbon of the decoration is dark blue silk bordered with red. The official costume (rarely worn) is a dark blue evening dress coat closed in front by one row of gold buttons. The collar and cuffs and breast of the coat are covered with golden embroideries more or less elaborate, according to the grade or class of the wearer. Golden epaulettes, white trousers with gold side stripes, a bicornered hat with white plumes, complete the official dress. This order may be conferred also upon non-Catholics.

Order of St. Gregory the Great.—Gregory XVI founded this order to reward the civil and military virtues of subjects of the Papal States by brief "Quod Summis", 1 Sept., 1831, and placed it under the patronage of the great pope whose name it bears. It has two divisions, civil and military, and each division is divided into four classes, viz.: (1) Grand Cross Knights of the First Class; (2) Grand Cross Knights of the Second Class; (3) Commanders, and (4) simple

Knights. The decoration is a bifurcated or eight-pointed red enamelled gold cross, in the centre of which is a blue medallion on which is impressed in gold the image of St. Gregory, and at the side of his head near the right ear is a dove; in a circle around the image appears in golden letters "S. Gregorius Magnus". On the reverse side is the device, "Pro Deo et Principe", and in the centre around it, GREGORIUS XVI. P. M. ANNO. 1. The badge is the cross of the order surrounded with silver rays. The ribbon of the order is red with orange borders. The cross worn by a knight of the military division is surmounted by a military trophy; the cross of a knight of the civil division is surmounted by a crown of gold oak leaves. The costume of ceremony is a dress coat of dark green open in front, and covered on breast and back with embroideries in the form of oak leaves. White trousers with silver side stripes, a bicornered ornamented hat, and the usual knightly sword, complete the costume, which is rarely worn.

Order of St. Sylvester, before the Regulations of Pius X.—This was the Order of the Golden Militia under a new name. Prior to the year 1841 it was known as the Militia of the Golden Spur or Golden Militia, and though it is not historically established who among the many supposed founders is the true one, yet it undoubtedly is the oldest and, at one time, was one of the most prized of the papal orders. Faculties granted to the Sforza family (Paul III. "Hinc est quod nos", 14 Apr., 1539), to the College of Abbreviators (Leo X Const. 14 "Summi") and to bishops assistant at the throne (Julius III, 6 Apr., 1557) to create Knights of the Golden Militia resulted in lavish bestowal and diminished prestige of the decoration. Pope Gregory XVI ("Quod hominum mentes", 31 Oct., 1841), retaining the ancient name, placed the order under the patronage of St. Sylvester (one of its alleged founders), withdrew all faculties to whom and by whomsoever given, and forbade the use of the title or the decoration to all knights created by other than by papal Brief. The better to restore it to its ancient glory and splendour, he limited the number of commanders to one hundred and fifty and knights to three hundred (for Papal States only), and appointed the Cardinal of Apostolic Briefs as Chancellor of the Order, with the duty of preserving the name, grade, number and date of admission of each knight. He divided it into two classes, commanders and knights. The former wore the large sized decoration suspended at the neck, the latter the small sized one on the left side of the breast. The decoration, according to the Gregorian Brief, was an eight-pointed gold cross with an image of St. Sylvester wearing the tiara on its white enamelled centre, and around this centre a blue enamelled circle bearing in letters of gold the inscription SANC. SYLVESTER P. M. On the reverse side, in golden characters, was stamped MDCCCXLI GREGORIUS XVI RESITUIT. A golden spur hung suspended from the sides of the bifurcated foot of the cross of the order to mark the unity of the Sylvestrine order with that of the Golden Militia. The ribbon of the decoration was of silk composed of five strands, three of which were red, and two black. Commanders wore the decoration at the neck, the knights on the breast. The ribbon of the former was larger than that of the latter, the cross of the former was also more elegant than that of the latter. The official costume was a red evening dress coat with two rows of gold buttons with green collar and facing. The gold embroideries of the coat were of a more ornate design for commanders than for knights. White trousers, with gold side bands, hat with white plumes and a sword with a silver hilt and also gilt spurs, completed this rarely used costume. Knights of both classes wore around the neck a gold chain from which was suspended a tiny golden spur commemorative of the ancient order of that denomination. Pius X (Motu Proprio, "Multum ad

excitandos", 7 Feb., 1905) divided the Sylvestrine into two orders of knighthood, one retaining the name of St. Sylvester and the other taking the ancient name of the order, i. e. Order of the Golden Militia, or Golden Spur.

Order of St. Sylvester, since the Regulations of Pius X.—The order now has three classes of knights: (1) Knights Grand Cross, (2) Commanders, and (3) Knights. The present decoration is a gold cross of white enamelled surface, in the centre of which is impressed the image of St. Sylvester P. M., surrounded by a blue enamelled circle bearing the inscription in letters of gold SANC. SYLVESTER P. M. On the opposite side, in the centre, are the pontifical emblems with the date of the Gregorian restoration, MDCCCXXXI, and that of the Pius X renovation, MDCCCXV, impressed in characters of gold upon a blue circle. The badge is the cross of the order attached to a silver star. The new costume consists of a black (formerly red) coat with one row (formerly two) of gilt buttons, and cuffs and collar of black velvet embroidered in gold; black trousers, with gold stripes, a bicornered hat of rough silk adorned with papal-coloured cockade, and finally a sword with a hilt of mother-of-pearl ornamented with gold and worn suspended from a gilt belt. The ribbon of the decoration is black silk bordered with red. Simple knights wear the cross on the left breast of the tunic. Commanders wear a larger cross suspended by the ribbon of the order encircling the neck, and the Knights of the Grand Cross wear a cross of largest form pendant from the right shoulder and the badge on the left side of the breast. The hat of the commander is adorned with a black, that of the grand cross knight with a white, plume.

The Order of the Golden Militia, or the Golden Spur.—Pius X, in commemoration of the high prestige to which this order had attained long years before it was absorbed into the Gregorian Order of St. Sylvester, and as a souvenir of the golden jubilee of the dogmatic definition of the Immaculate Conception of the B. V. M., gave back to it the separate existence, name and grade of ancient days, and rendered it still more illustrious by placing it under the patronage of the Immaculate Conception. To this order are to be admitted only those who have distinguished themselves in an eminent degree, and either by feat of arms, or by their writings, or by any other conspicuous work, have spread the Catholic Faith, and by their bravery have safeguarded, or by their learning made illustrious, the Church of God. To insure its continued high grade of excellence and desirability, its founder limited it to one class and one hundred knights for the entire world ("Multum ad excitandos", 7 Feb., 1905). It can be conferred on those already knighted in the highest orders, even that of Christ, as well as on those who have never received any order of knighthood. The honour is bestowed by a "Motu Proprio" (Pope's own motion) and as such is expedited through the secretariat of State, and free from all chancery fees. The decoration is an eight-pointed or bifurcated yellow enamelled gold cross, with a gold trophy on top and pendant from the inner sides of its bifurcated foot a gold spur. On a small white medal in the centre of the cross the word MARIA surrounded by a golden circle, and on the reverse side in the centre is stamped the year MDCCCXV in the surrounding circle the inscription PIUS X RESITUIT. The badge is the cross upon the rays of a silver star. The ribbon used for both decoration and badge is red bordered with white. The knights of to-day do not wear the ancient collar. The cross is worn suspended by the ribbon of the order which encircles the neck. The badge is attached by the ribbon to the left breast of the tunic. The present official dress consists of a red tunic with two rows of gilt buttons, the collar and cuffs of which are black velvet embroidered with threads of gold, long, black cloth trousers with gold side stripes; epaulettes ornamented with gold fringes and surmounted on top

with emblems of the order, gold spurs, oblong two-peaked hat fringed with gold and adorned with a gold knob displaying papal colours, a sword whose hilt is a gilt cross and scabbard black, and finally a gilt sword belt with red fringe. All former concessions of noble titles, even that of count palatine to Knights of the Golden Spur, were revoked by Pope Pius X, who desired to have the personal merit and worth of the knights their sole and only title to honour and respect among men.

Order of The Holy Sepulchre.—St. James, first Bishop of Jerusalem, the Empress St. Helena, Charlemagne, Godfrey of Bouillon and Baldwin I, are among the reputed founders of this order. According to the opinion of critical historians, the order is a branch of the Knights of S. John of Jerusalem which was approved (1113) by Pope Pascal II. Whoever may have been its real founder, it is certain that in the twelfth century there was another order following the Rule of St. Basil that proceeded on a line of action parallel with that of Knights of Jerusalem. Upon the fall of the Latin Kingdom of Jerusalem, the Knights of the Holy Sepulchre were driven out of Palestine, and some of them settled at Perugia. Gradually the order lost its prestige, and was by Pope Innocent VIII (1489) united to the Knights Hospitallers. Pope Alexander VI (1496) restored (Hélyot says, instituted) this order that by offering a most desirable and honourable distinction as a reward for the great labour, fatigue and expense of a journey to the Holy Land, he might incite wealthy and noble Europeans to visit and aid the holy places. He reserved to himself and his successors the title and office of supreme head; but empowered the Franciscan Custodian of Mount Sion, the Commissary Apostolic of the Holy Land—as long, and no longer than, the Jerusalem Latin Patriarchate remained vacant—to confer in the name of the pope the Knighthood of the Holy Sepulchre upon worthy persons. Popes Alexander VII (1665) and Benedict XIII (1727) confirmed the privilege. Benedict XIV (“In Supremo Militantis Ecclesie”, 17 Jan., 1746) remodelled the rules of the order, fixed the forms by which the Franciscan Custodian should be guided in bestowing the decoration, renewed its ancient privileges (similar in part to those granted to the Golden Militia), and granted to the Knights the right to use the title of Count of the Sacred Palace of Lateran. Pius IX, upon the restoration of the Latin Jerusalem Patriarchate (1847), withdrew the Alexandrine faculty, and gave it to the new patriarch and his successors. The patriarchs alone can in future create Knights of the Holy Sepulchre, and this they do not of their own right, but in the name and by virtue of the pope’s authority. It was required that a knight should, except in an exceptional case, give an alms of 100 sequins in gold (equal to \$200) towards the Holy Places. This money was by decree (S. C. P. F., 1847) ordered to be turned over to the patriarch for the needs of the Holy Land. Pope Pius IX (“Cum multa”, Jan. 24, 1868) remodelled and approved the ancient statutes, and divided the order into three (practically four) classes: (1) Grand Cross Knights, (2) Commanders, and (3) Knights.

Commanders of conspicuous ability and eminent virtue were, in rare cases, and by special papal faculty, permitted to wear the badge on the breast, and so constituted a grade between the grand cross knight and the commander. Pius X (“Quam multa te Ordinemque”, 3 May, 1907) fixed the number of grades at three, granted the privilege of affixing a military trophy to the cross, approved the creation of patriarchal representatives in other lands, as the good of the order may demand, prescribed the uniform for them, reserved to himself and successors the title of grand master, and appointed the Latin Patriarch of Jerusalem his lieutenant and administrator in the bestowing of this papal decoration. He also arranged

that in the event of the death of the patriarch and the vacancy of the see, the powers of the patriarch as papal lieutenant and administrator of the Order of Holy Sepulchre should by law devolve upon the cardinal secretary of state. The decoration is a large red enamelled gold cross, with a narrow border of gold, and surmounted by a royal crown. Prior to the last century the cross was simply gold without the red enamel. The form of the cross is what is called “potentiate”, that is, crutched or gibbet-shaped. The four extremities are shaped as the large cross and four small red enamelled crosses of simple form are attached. The ribbon is of black watered silk. A mulberry trophy connects the cross with the ribbon. The plaque or badge is an eight-pointed or rayed silver star, on whose centre is the red cross encircled by the two green enamelled branches, one oak and the other laurel. The collar, worn only on solemn occasions, is composed of little Jerusalem crosses, and rings of burnished gold. Knights of the first class wear the grand cross suspended from the wide black watered silk ribbon running saltier-wise from the right shoulder to the left side, and the badge on the breast. Commanders carry the cross and ribbon fastened at the neck. Knights wear the badge on the left breast.

Patriarchal representatives, besides the usual decorations, are permitted to wear the grand cross prominently placed on the breast of the uniform, but on the right side of the breast of the civil dress. The costume is a white evening dress coat with collar, cuffs and breast facings of black velvet with gold embroideries, epaulet of twisted gold cord, white trousers with gold side stripes, a sword and plumed hat. Pius X added to the costume a large white woolen mantle with a red Jerusalem cross on the left breast. The knights rarely don this official robe; they content themselves with wearing the decorations on the civil dress. This decoration may be conferred upon ladies who are then styled Dames or Matrons of the Holy Sepulchre. The dames wear the insignia of their grade, no matter what grade it may be, always on the left side of the breast (Leo XIII, 3 Aug., 1888).

In addition to these principal, there are other minor papal distinctions, of which some are temporary and others permanent. Permanent minor decorations are the medals: (1) The Pro Ecclesia et Pontifice, (2) Benemerenti, (3) The Holy Land. The medal Pro Ecclesia et Pontifice was instituted by Pope Leo XIII (17 July, 1888, “Quod Singulari”) in memory of his golden sacerdotal jubilee, and bestowed on those women and men who had merited well by aiding and promoting, and by other excellent ways and means assisted in making the jubilee and the Vatican Exposition successful. This decoration was made a permanent distinction only in October, 1898 (Giobbio, see below). Its object is to reward those who in a general way deserve well of the pope on account of services done for the Church and its head. The medal is of gold, silver or bronze. The decoration is not subject to chancery fees. The medal is a cross made octangular in form by fleurs-de-lis fixed in the angles of the cross in a special manner. The extremities of the cross are of a slightly patonce form. In the centre of the cross is a small medal with an image of its founder, and encircling the image are the words LEO XIII P. M. ANNO X (tenth year of his pontificate). On the obverse side are the papal emblems in the centre, and in the circle surrounding the emblems the motto PRO DEO ET PONTIFICE is stamped. On the obverse surface of the branches of the cross are comets—which with the fleurs-de-lis form the coat of arms of the Pecci family. On the reverse side are stamped the words, PRIDIE (left branch); KAL. (top branch); JANUAR. (right branch); 1888 (at the foot). The ribbon is purple, with delicate lines of white and yellow on each border. The decoration is worn on the right side of breast.

Benemerenti Medals.—Pope Gregory XVI (1832) instituted two medals which he called merit-medals to reward civil and military daring and courage. The military medal bears on one side the image of the founder, and on the other side an angel holding a scroll with the word *BENEMERENTI*, surmounted by the papal emblems (sometimes this medal is found encircled by a crown of laurels). It is worn on the breast suspended by a white and yellow ribbon. The civil merit-medal has engraved on its face surface only the word *BENEMERENTI*, surrounded by a crown of oak leaves. The ribbon is of the papal colours.

Medal of the Holy Land.—This was designed by Leo XIII (Dec. S.C.P.F. 2 May, 1901), who empowered the Custodian of the Holy Land to bestow it upon pilgrims who presented a certificate of good, moral Christian life from their parish priest and a genuinely religious intention in making the journey to the Holy Land. It serves as a testimonial and souvenir of the pilgrimage. The decoration is a cross similar to that of the Knights of the Holy Sepulchre, save that the four small crosses are crutched instead of being simple of form. A medallion with the inscription *LEO XIII CREAVIT. ANNO M.C.M.* occupies the centre of the large cross. On each branch of the large cross are graven figures of the Annunciation, Nativity, Baptism of Christ, and Last Supper respectively. On the crutched-shaped extremities are the words, *CHRISTI AMOR CRUCIFIXI TRAXIT NOS*. On the reverse side of the cross, the figure of Christ appears in the centre of the medallion. On the branches are representations of the Agony in the Garden, Flagellation, Crowning with Thorns and Crucifixion, and on the extremities of the branches the words *SIGNUM SACRI ITINERIS HIERUSOLIMITANI*. It is worn on the left breast suspended from a red ribbon with four small blue transverse bars bordered with white, which in turn are edged with dark yellow. There are three classes of medals: gold, silver, and bronze, adapted to the condition of pilgrims and the services they have rendered to the Holy Land. The recipient must pay the cost of the medal and bestow an alms of at least two dollars towards the maintenance of the Holy Places. Each year the custodian must inform the Propaganda how many decorations have been bestowed and the amount of the alms given (Dec. S. C. P.F. 10 June, 1901).

Popes Pius VII and Pius IX conferred special decorations which were temporary and not permanent. The former bestowed a medal for military bravery, and another for zeal and courage in stamping out the brigandage, which had taken such hold in the Papal States during the seven years of the French occupation. The latter conferred the Mentana and Castelfidardo medals upon the papal and French soldiers who came to his help at those places.

Pontifical decorations are bestowed either by *motu proprio*, and then forwarded by the secretary of state, or upon petition, when they are expedited through the chancery. The most certain and expeditious mode of procuring the coveted decoration is by a petition from the bishop of the diocese of the person to be honoured. The petition must state the name, age, country, in short, a brief history of the life of the applicant, bringing out in relief the eminent labours or work in science, literature, arts, controversial or other religious writings, or generous and self-sacrificing gifts or endowments made or done for society, the Church or its head, which are deemed worthy of papal recognition and reward. This petition must be endorsed by the ordinary of the applicant. The endorsement of another than the diocesan bishop will not suffice. The petition is sent to an agent at Rome, who presents it to the cardinal chancellor of the orders, who not only registers the petition and the endorsement of it by the bishop, but also seeks information from other sources as to the character of the party and his eminent good works.

Decree (Lat. *decretum*, from *decerno*, I judge), in a general sense, an order or law made by a superior authority for the direction of others. In ecclesiastical use it has various meanings. Any papal Bull, Brief, or *Motu Proprio* is a decree inasmuch as these documents are legislative acts of the Holy Father. In this sense the term is quite ancient. Pope Siricius speaks (Ep. i, ad Himer., c. ii) of the *decreta generalia* of Pope Liberius. The Roman Congregations are empowered to issue decrees in matters which come under their particular jurisdiction. Each ecclesiastical province, and also each diocese may issue decrees in their periodical synods within their sphere of authority. The word is also used to denote certain specified collections of church law, e. g. The Decree of Gratian (*Decretum Gratiani*). In respect of the general legislative acts of the pope there is never doubt as to the universal extent of the obligation; the same may be said of the decrees of a General Council, e. g. those of the Vatican Council. The Council of Trent was the first to apply the term indiscriminately to rulings concerning faith and discipline (*decreta de fide, de reformatione*). The decrees of the Roman Congregations (q. v.) are certainly binding in each case submitted for judgment. But there are varying opinions as to whether such judgment is to be taken as a rule or general law applying to all similar cases. The common opinion is that when the decisions are enlargements of the law (*declaratio extensiva legis*) the decisions do not bind except in the particular case for which the decree is made. If, however, the decision is not an enlargement, but merely an explanation of the law (*declaratio comprehensiva legis*), such decree binds in similar cases. The decrees of a national council may not be promulgated until they have received the approval of the pope. The decrees of a provincial synod have no force until they have been approved by Rome. This approval is twofold: ordinary (*in formâ communi*), and specific (*in formâ specificâ*). The former means that there is nothing which needs correction in the decrees of the synod, and they thereby have force in the province. This is the approval generally given to such decrees. If approval is given *in formâ specificâ* the decrees have the same force as if they emanated from the Apostolic See, though they are binding only in the province for which they are made. The decrees of a diocesan bishop deal with the administration and good order of his diocese. If they are made during a synod, they are diocesan laws, are usually known as "diocesan statutes", or "synodal statutes", and bind until revoked by the bishop or his successor. If the decrees are extra-synodal, they have force only during the lifetime of the bishop or until he revokes them himself. For the so-called "Decretum Gelasianum" see GELASIVS I. For the use of judicial *decreta* in canonical procedure see Permaneder in *Kirchenlexikon*, III, 1442-44. (See CONSTITUTIONS, ECCLESIASTICAL; RESCRIPTS.)

Decretals, PAPAL.—I. DEFINITION AND EARLY HISTORY.—(1) In the wide sense of the term *decretals* (i. e. *epistola decretalis*) signifies a pontifical letter

containing a *decretum*, or pontifical decision. (2) In a narrower sense it denotes a decision on a matter of discipline. (3) In the strictest sense of the word, it means a rescript (*rescriptum*), i. e. an answer of the pope when he has been appealed to or his advice has been sought on a matter of discipline. Papal decretals, therefore, are not necessarily general laws of the Church. But frequently the pope ordered the recipient of his letter to communicate the papal answer to the ecclesiastical authorities of the district to which he belonged; and it was their duty then to act in conformity with that decree when analogous cases arose. It is generally stated that the most ancient decretal is the letter of Pope Saint Siricius (384–398) to Himerius, Bishop of Tarragona in Spain, dating from 385; but it would seem that the document of the fourth century known as “*Canones Romanorum ad Gallos episcopos*” is nothing else than an *epistola decretalis* of his predecessor, Pope Damasus (366–384), addressed to the bishops of Gaul (Babut, *La plus ancienne décrétale*, Paris, 1904). The decretals ought to be carefully distinguished from the canons of the councils; from the *epistolæ dogmaticæ*, i. e. the pontifical documents touching on Catholic doctrine; from the *constitutiones*, or pontifical documents given *motu proprio*, that is, documents issued by the pope without his being asked to do so or consulted upon a subject. (4) Finally, under the name *decretals* are known certain collections, containing especially, but not exclusively, pontifical decretals. These are the canonical collections of a later date than the “*Decretum*” of Gratian (about 1150). The commentators on these collections are named decretalists, in contradistinction to the decretists, or those who commented upon the “*Decretum*” of Gratian. Eventually some of these collections received official recognition; they form what is now known as the “*Corpus Juris Canonici*”. An account will be given here of the collections of decretals, but particularly of those of Gregory IX.

II. THE “QUINQUE COMPILATIONES ANTIQUÆ DECRETALUM”.—The “*Decretum*” of Gratian was considered in the middle of the twelfth century as a *corpus juris canonici*, i. e. a code of the ecclesiastical laws then in force. As such, however, it was incomplete; moreover, many new laws were made by succeeding popes; whence the necessity of new collections (see *CORPUS JURIS CANONICI*). Five of these collections exhibited pontifical legislation from the “*Decretum*” of Gratian to the pontificate of Gregory IX (1150–1227). These are known as the “*Quinque compilationes antiquæ*”. On account of their importance they were made the text of canonical instruction at the University of Bologna, and, like the “*Decretum*” of Gratian, were glossed, i. e. notes bearing on the explanation and interpretation of the text were added to the manuscripts. The first collection, the “*Breviarium extravaganterium*”, or summary of the decretals not contained in the “*Decretum*” of Gratian (*vagantes extra Decretum*), was the work of Bernard of Pavia (q. v.) and was compiled 1187–1191. It contains papal decretals to the pontificate of Clement III inclusive (1187–1191). The compilation known as the third (*Compilatio tertia*), written however prior to the second collection (*Compilatio secunda*), contains the documents of the first twelve years of the pontificate of Innocent III (8 January, 1198–7 January, 1210) which are of a later date than those of the second compilation, the latter containing especially the decretals of Clement III and Celestine III (1191–1198). The “*Compilatio tertia*” is the oldest official collection of the legislation of the Roman Church; for it was composed by Cardinal Petrus Collivacinus of Benevento by order of Innocent III (1198–1216), by whom it was approved in the Bull “*Devotioni vestræ*” of 28 December, 1210.

The second compilation, also called “*Decretales mediæ*” or “*Decretales intermediæ*”, was the work of a private individual, the Englishman John of Wales

(de Walesio, Walensis, or Galensis). About 1216 an unknown writer formed the “*Compilatio quarta*”, the fourth collection, containing the decretals of the pontificate of Innocent III which are of a later date than 7 January, 1210, and the canons of the Fourth Lateran Council held in 1215. Finally, the fifth compilation is, like the third, an official code, compiled by order of Honorius III (1216–1227) and approved by this pope in the Bull “*Novæ causarum*” (1226 or 1227). It must also be noted that several of these collections contain decretals anterior to the time of Gratian, but not inserted by him in the “*Decretum*”. Bernard of Pavia divided his collection into five books arranged in titles and chapters. The first book treats of persons possessing jurisdiction (*iudex*), the second of the civil legal processes (*iudicium*), the third of clerics and regulars (*clerus*), the fourth of marriage (*connubium*), the fifth of delinquencies and of criminal procedure (*crimen*). In the four other collections the same logical division of the subject-matter was adopted. (For the text see Friedberg, *Quinque compilationes antiquæ*, Leipzig, 1882.)

III. THE DECRETALS OF GREGORY IX.—Gregory IX, in 1230, ordered his chaplain and confessor, St. Raymond of Peñafort (Pennaforst), a Dominican, to form a new canonical collection destined to replace all former collections. It has been said that the pope by this measure wished especially to emphasize his power over the Universal Church. The papacy had, indeed, arrived at the zenith of its power. Moreover, a pope less favourably circumstanced would, perhaps, not have thought of so important a measure. Nevertheless, the utility of a new collection was so evident that it is needless to seek other motives than those which the pope himself gives in the Bull “*Rex pacificus*” of 5 September, 1234, viz., the inconvenience of recurring to several collections containing decisions most diverse and sometimes contradictory, exhibiting in some cases gaps and in others tedious length; moreover, on several matters the legislation was uncertain.

St. Raymond executed the work in about four years, and followed in it the method of the aforesaid “*Quinque compilationes antiquæ*”. He borrowed from them the order of the subject-matter, the division into five books, of the books into titles, and of the titles into chapters. Of the 1971 chapters which the Decretals of Gregory IX contain, 1771 are taken from the “*Quinque compilationes antiquæ*”, 191 are due to Gregory IX himself, 7 are taken from decretals of Innocent III not inserted in the former collections, and 2 are of unknown origin. They are arranged, as a general rule, according to the order of the ancient collections, i. e. each title opens with the chapters of the first collection, followed by those of the second, and so on in regular order; then come those of Innocent III, and finally those of Gregory IX. Almost all the rubrics, or headings of the titles, have also been borrowed from these collections, but several have been modified as regards detail. This method considerably lightened St. Raymond’s task. However, he did more than simply compile the documents of former collections. He left out 383 decisions, modified several others, omitted parts when he considered it prudent to do so, filled up the gaps, and, to render his collection complete and concordant, cleared up doubtful points of the ancient ecclesiastical law by adding some new decretals. He indicated by the words *et infra* the passages excised by him in the former collections. They are called *partes decisæ*. The new compilation bore no special title, but was called “*Decretales Gregorii IX*” or sometimes “*Compilatio sexta*”, i. e. the sixth collection with reference to the “*Quinque compilationes antiquæ*”. It was also called “*Collectio seu liber extra*”, i. e. the collection of the laws not contained (*vagantes extra*) in the “*Decretum*” of Gratian. Hence the custom of denoting this collection by the letter X (i. e. *extra*).

Quotations from this collection are made by indicating the number of the chapter, the name the work goes by (X), the number of the book, and that of the title. Usually the heading of the title and sometimes the first words of the chapter are quoted; for instance, "c. 3, X, III, 23", or "c. Odoardus, X, De solutionibus, III, 23", refers to the third chapter, commencing with the word *Odoardus*, in the Decretals of Gregory IX, book III, title 23, which is entitled "De solutionibus". If the number of the chapter or of the title is not indicated it will easily be learned on consulting the alphabetical indexes of the rubrics and of the introductory words of the chapters, which are to be found in all editions of the "Corpus Juris Canonici". Gregory IX sent this new collection to the Universities of Bologna and Paris, and, as already stated, declared, by the Bull "Rex pacificus" of 5 September, 1234, that this compilation was the official code of the canon law. All its decisions have the force of law, whether they be authentic or not, whatever the juridical value of the texts considered in themselves, and whatsoever the original text. It is a unique (*unica*) collection; all its decisions were simultaneously promulgated, and are equally obligatory, even if they appear to contain, or if in fact they do contain, antinomies, i. e. contradictions. In this peculiar case it is not possible to overcome the difficulty by recourse to the principle that a law of later date abrogates that of an earlier period. Finally, it is an exclusive collection, that is to say, it abrogates all the collections, even the official ones, of a later date than the "Decretum" of Gratian. Some authors (Schulte, Laurin) maintain that Gregory IX abrogated even those laws prior to Gratian's time which the latter had not included in his "Decretum", but this opinion is contested by several others (von Scherer, Schneider, Wernz, etc.). The controversy is no longer of practical interest.

The Decretals of Gregory IX differ widely from our modern codes. Instead of containing in one concise statement a legislative decision, they generally contain, in the beginning, an account of a controversy, the allegations of the parties in dispute, and a demand for the solution of the question. This is the *species facti* or the *pars historica* and has no juridical value whatever. The enacting part of the chapter (*pars dispositiva*) alone has the force of law. It is this part which contains the solution of the case or the statement of the rule of conduct. The rubrics of the titles have the force of law when their sense is complete, as for instance, *Ne sede vacante aliquid innovetur* (Let there be no innovation while the see is vacant). This is because the headings form an integral part of the official code of the laws. However, they ought always to be interpreted according to the decisions contained in the chapters. The historical indications concerning each chapter are often far from being exact, even since they were corrected in the Roman edition of 1582. It may be regretted that St. Raymond did not have recourse to the original documents themselves, of which a large number must have been at his disposal. The summaries (*summaria*) which precede the chapters are the work of the canonists and may assist in the elucidation of the text. The *partes decisæ* are sometimes of like use, but never when these parts were designedly omitted from a desire to extinguish their legal force or because they contain decisions irreconcilable with the actual text of the law.

As in the case of the former canonical collections, the Decretals of Gregory IX were soon glossed. It was customary to add to the manuscript copies textual explanations written between the lines (*glossa interlinearis*) and on the margin of the page (*glossa marginalis*). Explanations of the subject-matter were also added. The most ancient glossarist of the Decretals of Gregory IX is Vincent of Spain; then follow Godefridus de Trano (d. 1245), Bonaguida Aretinus (thirteenth century), and Bernard of Botone

or Parmensis (d. 1263), the author of the "Glossa ordinaria", i. e. of that gloss to which authoritative credence was generally given. At a later date some extracts were added to the "Glossa ordinaria" from the "Novella sive commentarius in decretales epistolas Gregorii IX" by Giovanni d'Andrea (Johannes Andreae). After the invention of printing, the Decretals of Gregory IX were first published at Strasburg from the press of Heinrich Eggesteyn. Among the numerous editions which followed special mention must be made of that published in 1582, in *ædibus populi romani*, by order of Gregory XIII. The text of this edition, revised by the *Correctores Romani*, a pontifical commission established for the revision of the text of the "Corpus Juris", has the force of law, even when it differs from that of St. Raymond. It is forbidden to introduce any change into that text (Brief "Cum pro munere", 1 July, 1580). Among the other editions, mention may be made of that by Le Conte (Antwerp, 1570), of prior date to the Roman edition and containing the *partes decisæ*; that of the brothers Pithou (Paris, 1687); that of Böhmer (Halle, 1747), which did not reproduce the text of the Roman edition and was in its textual criticism more audacious than happy; the edition of Richter (Leipzig, 1839); and that of Friedberg (Leipzig, 1879-1881). All these authors added critical notes and the *partes decisæ*.

To indicate the principal commentators on the Decretals would necessitate the writing of a history of canon law in the Middle Ages. Mere mention will be made of Innocent IV (d. 1254), Enrico de Segusio or Hostiensis (d. 1271), the "Abbas antiquus" (thirteenth century), Johannes Andreae, already mentioned, Baldus de Ubaldis (d. 1400), Petrus de Ancharrano (d. 1416), Franciscus de Zabarellis (d. 1417), Dominicus a Sancto Geminiano (fifteenth century), Joannes de Imola (d. 1436), Nicolò Tudesco, also called the "Abbas Siculus", or "Modernus", or "Panormitanus" (d. 1453). Among the modern commentators, Manuel Gonzalez Tellez and Fagnanus may be consulted advantageously for the interpretation of the text of the Decretals. The Decretals of Gregory IX still form the basis of canon law so far as it has not been modified by subsequent collections and by the general laws of the Church (see CORPUS JURIS CANONICI).

IV. LATER COLLECTIONS OF DECRETALS.—The decretals of the successors of Gregory IX were also arranged in collections, of which several were official, notably those of Innocent IV, Gregory X, and Nicholas III, who ordered their decretals to be inserted among those of Gregory IX. In addition to these, several unofficial collections were drawn up. The inconveniences which Gregory IX had wished to remedy presented themselves again. For this reason Boniface VIII made a new collection of decretals which he promulgated by the Bull "Sacrosanctæ" of 3 March, 1298. This is the "Sextus Liber Decretalium"; it has a value similar to that of the Decretals of Gregory IX. Boniface VIII abrogated all the decretals of the popes subsequent to the appearance of the Decretals of Gregory IX which were not included or maintained in force by the new collection; but as this collection is of later date than that of Gregory IX, it modifies those decisions of the latter collection which are irreconcilable with its own. Clement V, also, undertook to make an official collection, but death prevented him from perfecting this work. His collection was published by John XXII on 25 October, 1317, under the title of "Liber septimus Decretalium", but it is better known under the name of "Constitutiones Clementis V" or "Clementine". This is the last official collection of decretals. The two following collections, the last in the "Corpus Juris Canonici", are the work of private individuals. They are called "Extravagantes", because they are not included in the official collections. The first contains twenty

Constitutions of John XXII, and is named "Extravagantes Joannis XXII"; the second is called "Extravagantes communes"; and contains the decretals of different popes commonly met with in the manuscripts and editions. They were brought to their present form by Jean Chappuis in 1500 and 1503. (See *CORPUS JURIS CANONICI*; *EXTRAVAGANTES*; *DECRETALS*.)

Dedication, a term which, though sometimes used of persons who are consecrated to God's service, is more properly applied to the "setting aside" of places for a special and sacred purpose (cf. Hastings, *Diet. of the Bible*). The Christian, indeed, believes that God is everywhere and that the Divine Immensity fills all space; but this faith does not exclude the idea of reserving a special spot in which the creature may hold communion with his Creator and worship Him. That the setting aside of this hallowed place was ever done with a certain show and ceremony is evident from the examples of Jacob (Gen., xxviii, 18), of Moses (Lev., viii, 10), and above all, of Solomon (III Kings, viii). This precedent of the Old Law was too obvious to be overlooked in the New, and we may be sure that the modern custom was consecrated by Apostolic usage. In a fragment of a martyrology ascribed to St. Jerome (cf. D'Achéry, *Spicilegium IV*) this passage occurs: "Romæ dedicatio primæ Ecclesiæ a beato Petro constructæ et consecratæ". It is not strange, however, that owing to the persecutions of the first three centuries, references to the dedication of churches are extremely rare. The first authentic accounts of this kind are furnished by Eusebius (*Hist. Eccl.*, X, iii, iv; *De Vitâ Const.*, IV, xliii, in P. G., XX), and Sozomen (*Hist. Eccl.*, II, xxvi in P. G., XLVII) in regard to the cathedral of Tyre (314) and Constantine's church at Jerusalem. The well-known historical document entitled "*Peregrinatio Silvæ*" (Etheria) has a full description of the celebration of the dedicatory festival of the church of Jerusalem as it was witnessed by our pilgrim-authors in the fourth century (cf. Cabrol, *Livre de la prière antique*, p. 311). Here it will suffice to emphasize, in connexion with the dedication of churches, (1) the ritual employed, (2) the minister, (3) necessity and effects, and (4) festival and its days.

1. In the beginning the dedication ceremony was very simple. A letter of Pope Vigilius to the Bishop of Bracara (538) states: "Consecrationem cujuslibet ecclesiæ, in quâ non ponuntur sanctuaria (reliquiæ) celebritatem tantum scimus esse missarum" (We know that the consecration of any church in which shrines (relics) are not placed consists merely in the celebration of Masses). That the primitive ceremonial consisted mainly in the celebration of Mass, where there were no relics, is also shown from the old "Ordines Romani" (cf. Mabillon, "*Museum Italicum*", II, in P. L., LXXXVIII, 857). Where relics were used the ceremony of translating and depositing them under the altar formed a notable feature of the dedication rite (cf. "*Ordo of St. Amand*" in Duchesne, "*Christian Worship*", London, 1903, Appendix; "*Ordo of Verona*" in Bianchini, ed., "*Lib. Pont.*", III). The first complete formulary is found in the Gelasian Sacramentary (in P. L., LXXIV), which embodies the Roman liturgical usages of the seventh century. Here the

rite consists of prayers, sprinklings with holy water, and blessings. So quickly, however, was this ritual elaborated that in the ninth century it attained the completeness which it enjoys at the present time (cf. the eighth-century "*Liber Sacramentorum*" in P. L., LXXXVIII; "*Ordines Romani*", ed. Martène, "*De Ant. Eccl. Rit.*", III; Daniel, "*Cod. Lit.*", I). The modern dedicatory ceremonial assumes two forms according as a church is simply blessed or solemnly consecrated. In the former case the function consists of prayers, sprinklings of holy water, and Mass (cf. *Roman Ritual*; Schulte, "*Benedicenda*", p. 155, etc.). The solemn rite of consecration is described in the article CONSECRATION.

2. The solemn ceremony of dedication, or consecration is found in the Roman Pontifical and is performed *de jure* by a bishop (see CONSECRATION). The simpler rite, which is given in the Roman Ritual, is generally reserved to bishops, but may be also undertaken by a priest with episcopal delegation.

3. All churches, public oratories and semi-public, if destined for Divine worship in *perpetuum*, must be at least blessed before the Sacred Mysteries can be regularly celebrated in them (Cong. of Rites, Sept., 1871). Purely private or domestic oratories may not be thus dedicated, but simply blessed with the *Benedictio loci* (cf. *Roman Ritual* or *Missal*) on each occasion Mass is said in them. As a rule the principal churches in every district should be consecrated in the solemn manner, but as certain conditions are required for licit consecration that are not always feasible (cf. *Irish Ecclesiastical Record*, April, 1908, p. 430) the ordinary simple dedication rite is regarded as practically adequate. Both forms render the place sacred, and contribute, as sacramentals, to the sanctification of the faithful, but they differ in this that while a church that is consecrated must, if polluted, be reconciled by a bishop, a church that is simply blessed may be reconciled in similar circumstances by a priest (cf. *Roman Ritual*).

4. Another difference in the effects of the two forms of dedication is that a consecrated church is entitled to celebrate each year the anniversary feast of its consecration, which is to be held as a double of the first class with an octave, by all the priests attached to the church. A church that is only blessed has no right to this anniversary feast unless *per accidens*, that is, when it is included in the special indult granted for the simultaneous celebration of the anniversaries of all the churches in a district or diocese. In this case the Office and Mass must be celebrated in every church, within the limits of the indult independently of their consecration (Cong. of Rites, n. 3863). Though any day may be selected for the dedication of a church, yet the Roman Pontifical suggests those "Sundays and solemn festive days" which admit the dedicatory Office and Mass, as well as the anniversary celebration.

In addition to the authorities cited the following may be usefully consulted: CATALANI, *Commentarium in Pontificale Romanum* (Paris, 1850); FERRARIUS, *Bibliotheca, s. v. Ecclesia* (Paris, 1865); DE HERDT, *Præcis Pontificalis* (Louvain, 1905); BERNARD, *Le Pontifical* (Paris, 1902), II; MANY, *De Locis Sacris* (Paris, 1904); SCHULTE, *Benedicenda*; *Consecranda* (New York, 1906), very full on ceremonial.

PATRICK MORRISROE.

Dedication, FEAST OF THE (Scriptural), also called the Feast of the Machabees and Feast of Lights (Josephus and Talmudic writings), mentioned in the Old Testament (I Mach., iv, 56), and in the New (John, x, 22). It was instituted by Judas Machabees (64 B. C.) to be celebrated yearly on the 25th day of the month Kislev and during its octave, in commemoration of the purification of the temple of Jerusalem which had been polluted by Antiochus Epiphanes on that day three years previously (I Mach., iv, 41-64; II Mach., vi, 2). Unlike the great Hebrew annual feasts, it could be celebrated not only in the temple at Jerusalem, but also in the synagogues of all places. It was observed with manifestations of joy such as accom-

panied the Feast of Tabernacles, during the celebration of which the dedication of the first temple had taken place. During the celebration of the feast mourning and fasting were not allowed to begin. The Jews assembled in the temple and synagogues bearing branches of trees and palms and singing psalms; the Hallel (Pss. cxiii-cxviii) being sung every day. The joyful character of the feast was also manifested by illuminations, which may have been suggested by the "lighting of the lamps of the candlestick" when the temple service was first restored (1 Mach., iv, 50-51), or, according to very early Midrashim, by the miraculous burning throughout the first celebration of the feast of a vial of oil found in the temple. Since the first century a general illumination of Hebrew houses has been customary, every house having at least one light, and some, according to the school of the rabbis, having one light for each person in the house on the first night and twice the number on each succeeding night; others again, having eight lights the first night and a lesser number each night thereafter. Modern Hebrews keep the feast on 12 Dec., with strictness, but do not forbid servile work. At the daily morning prayer a different portion of Numbers vii is read in the Synagogue.

ARTHUR L. McMAHON.

Deduction (Lat. *de ducere*, to lead, draw out, derive from; especially, the function of deriving truth from truth). I. As an argument or reasoning process: that kind of mediate inference by which from truths already known we advance to a knowledge of other truths necessarily implied in the former; the mental product or result of that process. II. As a method: the deductive method, by which we increase our knowledge through a series of such inferences.

I. The typical expression of deductive inference is the syllogism. The essential feature of deduction is the necessary character of the connexion between the antecedent or premises and the consequent or conclusion. Granted the truth of the antecedent judgments, the consequent must follow; and the firmness of our assent to the latter is conditioned by that of our assent to the former. The antecedent contains the ground or reason which is the motive of our assent to the consequent; the latter, therefore, cannot have greater firmness or certainty than the former. This relation of necessary sequence constitutes the *formal* aspect of deduction. It can be realized most clearly when the argument is expressed symbolically, either in the hypothetical form "If anything (S) is M it is P; but this S is M; therefore this S is P," or in the categorical form, "Whatever (S) is M is P; but this S is M; therefore this S is P." The *material* aspect of the deductive argument is the truth or falsity of the judgments which constitute it. If these be certain and evident the deduction is called *demonstration*, the Aristotelian *ἀποδείξις*. Since the conclusion is necessarily implied in the premises, these must contain some abstract, general principle, of which the conclusion is a special application; otherwise the conclusion could not be necessarily derived from them; and all mediate inferences must be deductive, at least in this sense, that they involve the recognition of some universal truth and do not proceed directly from particular to particular without the intervention of the universal.

II. When, starting from general principles, we advance by a series of deductive steps to the discovery and proof of new truths, we employ the deductive or synthetic method. But how do we become certain of those principles which form our starting-points? (1) We may accept them on authority—as, for example, Christians accept the deposit of Christian revelation

on Divine authority—and proceed to draw out their implications by the deductive reasoning which has shaped and moulded the science of theology. Or (2) we may apprehend them by intellectual intuition as self-evident, abstract truths concerning the nature of thought, of being, of matter, of quantity, number, etc., and thence proceed to build up the deductive sciences of logic, metaphysics, mathematics, etc. Down through the Middle Ages enlightened thought was fixed almost exclusively on those two groups of data, both sacred and profane; and that accounts for the fullness of the scholastic development of deduction. But (3) besides being and quantity, the universe presents change, evolution, regular recurrences or repetition of particular facts, from the careful observation and analysis of which we may ascend to the discovery of a third great class of general truths or laws. This ascent from the particular to the general is called induction, or the inductive or analytic method. Comparatively little attention was paid to this method during the Middle Ages. Apparatus for the accurate observation and exact measurement of natural phenomena was needed to give the first real impetus to the cultivation of the physical, natural, or inductive sciences. In these departments of research the mind approaches reality from the side of the concrete and particular and ascends to the abstract and general, while in deduction it descends from the general to the particular. But although the mind moves in opposite directions in both methods, nevertheless the reasoning or inference proper, employed in induction, is in no sense different from deductive reasoning, for it too implies and is based on abstract, necessary truths.

P. COFFEY.

Deer, ABBEY OF, a once famous Scotch monastery. According to the Celtic legend St. Columcille, his disciple Drostan, and others, went from Hy (Iona) into Buchan and established an important missionary centre at Deer on the banks of the Ugie on lands given him by the *mormaer* or chief of the district whose son he had by his prayers freed of a dangerous illness. This happened probably in the last quarter of the sixth century. Columcille soon after continued his missionary journeys and left Drostan as abbot at Deer. Drostan died here about 606. The legend receives confirmation from the fact that the parish of Aberdour venerated St. Drostan as patron. In later years the Normans had little sympathy with the Celtic institutions, so we find the Earl of Buchan in 1219 founding the Cistercian abbey of New Deer about two miles westward of Columcille's foundation, granting to the new abbey a portion of the lands of Old Deer, the rest going to the maintenance of a parochial church. In 1551 the son of the Earl Marischal succeeded his uncle Robert Keith as titular Abbot of Deer holding the abbey lands in *commendam*. The flourishing monastery soon fell a prey to the Scottish Reformers. Among its treasures is the venerable document known as the "Book of Deer". This is one of the oldest monuments of Scottish literature, and was ably edited in 1869 for the Spalding Club by its secretary, Dr. John Stuart. It had become known to scholars in 1858 when it was found in the University of Cambridge. It was then also discovered that the university had come into its possession in 1715 among the books of Dr. John Moore, Bishop of Norwich, which had been purchased by George I and presented by him to the university; how Bishop Moore had obtained it is not known. The manuscript is a small, nearly square octavo numbering eighty-six folios of parchment, written on both sides of the leaf in a dark brown ink, in a hand wonderfully clear and legible. The pages had been ruled with a sharp pointed instru-

ment and the letters had been placed under the lines, not on them. It contains the first six chapters of the Gospel of St. Matthew, a part of the fifth chapter of St. Mark, the entire Gospel of St. John, a part of the office for visiting the sick and the Apostles' Creed. The text is from the Latin Vulgate with some peculiarities common to Irish Bible editions, and is written in the well-known minuscule lettering of the Irish scribes; the initial letters were greatly enlarged and ornamented with patches of colour in dragoonesque forms, and the pages have ornamental borders. There are also full portraits of the Evangelists. The Book then contains entries in the Gaelic tongue, the most important being that giving an account of the foundation of the Abbey of Deer. The author was probably a member of that community and lived perhaps in the eighth century. He gives no clue to his identity, but signs himself a poor wretch and asks for a blessing. The last document in the Book is a Latin charter from the great and good King David.

Defender of the Faith. See HENRY VIII.

Defender of the Matrimonial Tie (*Defensor matrimonii*), an official whose duty is to defend the marriage-bond in the procedure prescribed for the hearing of matrimonial causes which involve the validity or nullity of a marriage already contracted. Benedict XIV, by his Bull "Dei Miseratione", 3 November, 1741, introduced this official into the marriage procedure to guard against abuses occurring from the ordinary procedure. An annulment of a marriage might result from the appearance of only one of the married couple who desired freedom to enter upon a new marriage, while the other was apathetic and conniving at the annulment, or at times unable or indisposed to incur expense to uphold the marriage-tie, especially if it implied an appeal to a higher court. Perhaps, too, the judicial decision might induce change of opinion without sufficient warrant. Scandal arose from the frequency of dissolution of marriages with the freedom to enter new contracts. The Bull "Dei Miseratione" requires that in each diocese the ordinary shall appoint a defender of marriage, upright in character, and learned in the law, an ecclesiastic if possible, a layman if necessary. The bishop may suspend him or remove him for cause, and, if he is prevented from taking part in the procedure, substitute one with the requisite qualifications. He must be summoned to any trial in which there is question, before a competent judge, of the validity or nullity of a marriage, and any proceeding will be null if he is not duly cited. He must have the opportunity to examine the witnesses, and, orally or in writing, to bring forward whatever arguments may favour the validity of the marriage. He must be cited even though the party interested in the defence of the marriage be present, and all the acts of the court are always to be accessible to him, and at any time he has a right to bring forward new documents or witnesses favourable to the marriage. On assuming his office he must take an oath to fulfil its duties and he is expected to renew the oath in each case. If the judge decides in favour of the marriage the defender takes no further action unless its opponent appeals to a higher court. Here a defender undertakes anew the defence of its validity. If the judge of first instance decides against the validity of the marriage and no one else appeals, the defender of marriage is required by the Bull "Dei Miseratione"

in all cases to appeal to the higher court. If the first two courts agree upon the nullity of a marriage the defender need not appeal, unless his conscience tells him that a serious mistake was made. If he feels it his duty to appeal a new marriage may not be contracted till his plea is heard. The decision in matrimonial cases is never absolutely final; so that if new, serious reason appears for the validity of a marriage, it must be judicially investigated.

This legislation was extended and enforced in the United States by an Instruction of Propaganda in 1883, published with the "Acts and Decrees of the Third Plenary Council of Baltimore". Though the Bull "Dei Miseratione" does not require it, the practice of the Roman Congregations extends the intervention of the defender to cases of true marriages not consummated where the Holy See is requested to grant a dispensation for a new marriage. The obligation of the defender to appeal from the decision of first instance, adverse to the validity of a marriage, has been modified by the Holy See in several cases, where the invalidity depends upon facts indisputably proven, through the Congregation of the Holy Office (5 June, 1889) whose decree was declared (16 June, 1894) to extend to the whole Church. Where the decree "Tametsi" of the Council of Trent was binding, requiring the presence of the parish priest for the validity, if only a civil ceremony was used, the bishop may declare the marriage null without the participation of the defender. In view of the new matrimonial legislation contained in the decree "Ne Temere" of Pius X this also holds anywhere if a marriage is attempted only before a civil authority or non-Catholic minister of religion. Yet if an ecclesiastical form had been used, and the nullity from clandestinity was questioned, his presence is required; but if the impediment of clandestinity clearly appears he need not appeal. This is true also if, through absence of ecclesiastical dispensation, there is an impediment of disparity of worship, or of consanguinity, or of affinity from lawful intercourse, or of spiritual relationship, or of certain previous legitimate marriage still existing. In these cases the ordinary may, with the participation of the defender, declare the marriage null, and the defender is not required to appeal. This, however, was declared by the Holy Office (27 May, 1901) to be understood only of cases in which certainly and clearly the impediment is proven; otherwise the defender must proceed to the higher court. The defender is exhorted to exercise his office gratuitously, but he may be compensated from fees imposed by the court or from other diocesan resources.

R. L. BURSELL.

Defensor Ecclesiæ. See ADVOCATUS ECCLESIE.

Definition, THEOLOGICAL.—The Vatican Council (Sess. iv, cap. iv) solemnly taught the doctrine of papal infallibility in the following terms: "The Roman Pontiff, when he speaks *ex cathedra*, that is to say, when in the exercise of his office of pastor and teacher of all Christians he, in virtue of his supreme Apostolic authority, defines that a doctrine on faith or morals is to be held by the whole Church, by the assistance of God promised to him in the person of Blessed Peter, has that infallibility with which it was the will of Our Divine Redeemer that His Church should be furnished in defining a doctrine on faith or morals." From this teaching we obtain an authoritative notion of the meaning of *definition* in its theological, as distinct from its philosophical, or canonical, sense. It is an irrevocable decision, by which the supreme teaching

authority in the Church decides a question appertaining to faith or morals, and which binds the whole Church. From this explanation it will be seen that four conditions are required for a theological definition.

(1) *It must be a decision by the supreme teaching authority in the Church.*—There are two organs of supreme doctrinal authority, viz.: the pope, speaking in his official capacity of pastor and teacher of all Christians, and the bishops of the Catholic Church dispersed throughout the world or assembled in a general council. The pope, as successor of St. Peter, has definitive authority, in the exercise of which he speaks neither as a private individual, nor as a mere theologian, nor as Bishop of the Diocese of Rome, nor as Metropolitan of the Roman Province, nor as Primate of Italy, nor as Patriarch of the Western Church, nor as head of any Roman Congregation, but as supreme pastor of the whole Church. The bishops of the Catholic Church assembled with the pope in a general council have the same doctrinal authority with which the pope is endowed; and so have the bishops dispersed throughout the Catholic world when, in conjunction with the pope, they teach a doctrine of faith or morals to be irrevocably held by all Christians. These two supreme teaching authorities are the organs of active infallibility from which alone a theological definition can proceed.

(2) *The decision must concern a doctrine of faith or morals.*—Faith means the speculative doctrines of revelation; morals, the practical doctrines of revelation. Faith is what we have to believe, morals what we have to do, in order to obtain eternal life. Both faith and morals are parts of the deposit which Christ left for the guidance of His Church; so far as the obligation of assent is concerned, there is no difference between them; the distinction is made for the sake of convenience rather than for the sake of any substantial difference between them so far as they are the objects of active infallibility. Doctrines of faith or morals which are formally revealed are called the direct object of infallibility, while doctrines which are only virtually revealed, or are only intimately connected with revelation, such as dogmatic or moral facts, are called the indirect object of infallibility. The Church has authority to issue definitions in connexion with both the direct and the indirect objects of active infallibility. It is not, however, *de fide* that the Church has infallible authority over the indirect doctrines of faith and morals, though it cannot be denied without theological censure.

(3) *The decision must bind the Universal Church.*—Decrees which bind only a part of the Church are not definitions; but only those which command the assent of all the faithful. It is not, however, absolutely necessary that the decree should be directly sent or addressed to the whole Church; it is quite sufficient if it is made clear that the supreme teaching authority means to bind the Universal Church. Thus, St. Leo addressed his famous dogmatic definition to Flavian, yet it was rightly considered as binding the Universal Church; and Pope Innocent sent his decree to the African Church alone, yet St. Augustine exclaimed: *Causa finita est, utinam aliquando finiatur error!* (Serm. ii, de Verb. Ap., c. vii).

(4) *The decision must be irrevocable or, as it is called, definitive.*—Arguments contained in conciliar definitions are proposed by the supreme teaching authority in the Church, they concern faith and morals, and they bind the Universal Church; yet they are not definitions, because they lack this fourth condition—they are not definitively proposed for the assent of the whole Church. Two things are implied by the statement that a decree, to be a definition, must be final and irrevocable. The decree must be the last word of supreme teaching authority; there must be no possibility of re-opening the question in a spirit of doubt; the

decree must settle the matter for ever. The decree must also, and in consequence of its final nature, bind the whole Church to an irrevocable internal assent. This assent is at least an assent of ecclesiastical faith; and in doctrines which are formally revealed it is also an assent of Divine faith. When the definition commands an irrevocable assent of Divine faith as well as of ecclesiastical faith, the defined dogma is said to be *de fide* in the technical sense of this phrase. It is well to note that the definitive nature of a decree does not prevent the defined doctrine from being examined anew and defined again by the pope or a general council; what it excludes is a re-opening of the question in a spirit of doubt about the truth of the doctrine which has been already definitively settled.

It has been sometimes said that it is impossible to know whether or not a theological definition has been issued; but very few words are needed to show that the assertion is without foundation. At times, doubt will remain about the definitive nature of a decree, but as a rule no possibility of doubt is consistent with the terminology of a definitive decree. Thus in the doctrinal teaching of a general council, *anathema* attached to condemned errors is a certain sign of an infallible definition. Words also like those in which Pius IX solemnly defined the doctrine of the Immaculate Conception of the Blessed Virgin give irrefutable proof of the definitive nature of the decree: "By the authority of Our Lord Jesus Christ and of the Blessed Apostles Peter and Paul, and by Our own authority, We declare, pronounce and define the doctrine . . . to be revealed by God and as such to be firmly and immutably held by all the faithful." No set form of words is necessary; any form which clearly indicates that the four requisite conditions are present suffices to show that the decree is a definition in the strict sense. It should be noted that not everything contained in a definition is infallibly defined. Thus, arguments from Scripture, tradition, or theological reason, do not come under the exercise of definitive authority. Incidental statements, called *obiter dicta*, are also examples of non-definitive utterances. Only the doctrine itself, to which those arguments lead and which these *obiter dicta* illustrate, is to be considered as infallibly defined. (See INFALLIBILITY; CENSURES, THEOLOGICAL; DOGMATIC FACTS; BEATIFICATION AND CANONIZATION; FAITH.)

J. M. HARTY.

Definitor (IN CANON LAW), an official in secular deaneries and in certain religious orders. Among regulars, a definitor is appointed as a counsellor of the provincial or general superior with certain determinate powers. (See DEFINITORS IN RELIGIOUS ORDERS.) Dioceses are usually divided into deaneries, and these deaneries are again sub-divided into districts which are sometimes called *definitiones*. Over each district is placed an official styled definitor, who oversees the administration of ecclesiastical property and also gives aid to the dean in the more important duties of his office. Such definitors are elected by the rural chapters with the bishop's approval, or in some cases are directly appointed by the ordinary. Anciently, their principal duty was to care for and divide the revenues of a prebend between the heirs of the deceased and the new occupant, and likewise to determine what proportion of income belonged to outgoing and incoming beneficiaries of a church. The definitor acts as the representative of the dean when the latter is absent or incapacitated by illness or irregularity. It is his duty to announce to the bishop, likewise, the death of the dean and conduct preparations for the election of a successor. It is to be observed that definitors are in no sense necessary officials of a diocese, and that the duties here assigned to them are

sometimes fulfilled by others. In some decanal or rural chapters the title given to the defensor is chamberlain or treasurer.

LAURENTIUS, *Institutiones Jur. Eccl.* (Freiburg, 1903). *Corpus Juris Canonici*, c. 4, X, I, 24 (c. xiii, Conc. Ticin., an. 850).

WILLIAM H. W. FANNING.

Definitors (IN RELIGIOUS ORDERS), generally speaking, the governing council of an order. Bergier describes them as those chosen to represent the order in general or provincial chapters, but this is not altogether correct, for the usage varies in different orders. With the Dominicans all who are sent to represent the provinces in a general chapter are definitors; amongst the Cluniac monks there existed a similar regulation (though normally in the Benedictine Order definitors have no place). On the other hand, in the Franciscan Order, definitors are elected by the general and provincial chapters to assist the general or provincial superiors in the government of the order and a similar rule exists amongst the Carmelites and the Hermits of St. Augustine. But in this case it would seem that the definitors form a sort of executive committee of the chapter, since they are subject to the legislative enactments of the chapter. Definitors, strictly so called, have a decisive vote in congregation equally with the general or provincial superior; in this they differ from mere consultors such as exist in some orders and in the Society of Jesus. Nor may the general or provincial superior act in matters of greater moment without taking the vote of the definitors. A defensor, however, has the right to vote only when present in congregation. When called to give his opinion in congregation he is bound in conscience to speak candidly according to his own judgment, even if he knows his opinion to be contrary to that of the other definitors, and if he fails to do so in matters of gravity, he is held to sin gravely. Yet when the vote is taken, he is bound to sign the declaration of the majority, though he has the right to insist upon a minority report. In some orders, e. g. the Capuchin, the junior defensor gives his opinion first, that he may not be influenced by the seniors; but in other orders the senior speaks first. Again, in some orders the local superiors are appointed by the definitors; in others they are elected by the local community. Thus, amongst the Franciscans, the provincial superior is selected by the provincial chapter, subject to confirmation by the minister general and his definitors, whereas the superiors of houses are appointed directly by the provincial definitors: whilst amongst the Dominicans all local superiors are elected by the local community.

Deger, ERNST, historical painter, b. in Bockenem, Hanover, 15 April, 1809; d. in Düsseldorf, 27 Jan., 1885. Little is known concerning his early life. In 1828 he went to the Berlin Academy of Fine Arts to begin the study of art under Professor Wach, and was there so impressed by pictures of the Düsseldorf School that he placed himself under Schadow, the director of the Düsseldorf Academy. Deger, says Dr. Banz, "lived in religion, had a profound conviction of the nobility of his art, and painted what he felt, believed and hoped." He was only twenty-one when his "Pieta" brought him fame, and thenceforth he devoted himself to religious painting. In 1837 he went to Italy with Ittenbach and the Müller brothers to study the frescoes by the old masters in Florence and Rome. Overbeck, leader of the German neo-Raphaelites and head of the "Nazarene School", gave advice and encouragement to these young zealots, and Deger especially gained much from contact with this master. Deger was intrusted with the most important frescoes

in the church of St. Apollinaris (Remagen), and, fully equipped after his four years' study, he returned from Rome in 1843 and began the work. In eight years he finished a noble series of paintings, representing the events in the life of Christ; these Apollinaris frescoes, the most remarkable productions of the "Nazarenes", mark the zenith of the German school of religious painting, called by Cardinal Wiseman "the restorer of Christian taste throughout all Europe."

In 1851 Frederick William IV, King of Prussia, commissioned Deger to paint twelve scenes in the chapel of the castle of Stolzenfels (Coblenz), and for this Deger chose subjects illustrating the redemption of mankind. When this monumental work was finished, Deger settled permanently in Düsseldorf, commenced again to paint in oil, and spent the rest of his life on easel pictures, chiefly Madonnas. Of these the most beautiful are the idyllic "Madonna 'mid the Green" and the inspiring "Regina Coeli". He frequently visited Munich where he painted a "Virgin and Child" and an "Ascension" for the Maximilianum of that city. In 1857 and 1859 two of his notable canvases, both religious subjects, were hung in the Paris Salon. Deger was made professor in the Munich Academy of Fine Arts, a member of the Berlin Academy of Fine Arts, and, in 1869, professor in the Düsseldorf Academy of Fine Arts. His style was vigorous, direct, and simple; his handling careful and precise; his drawing and power of characterization masterful; and his colour rich and harmonious. Deger exerted a powerful influence in ridding German art of its *baroque* element and in stimulating its votaries to poetry, loftiness, and profound conviction. Two of his notable works are "Adam and Eve", in the Raczyński Gallery, Berlin, and the "Virgin and Child", in St. Andrew's Chapel, Düsseldorf.

LEIGH HUNT.

Degradation (Lat. *degradatio*), a canonical penalty by which an ecclesiastic is entirely and perpetually deprived of all office, benefice, dignity, and power conferred on him by ordination; and by a special ceremony is reduced to the state of a layman, losing the privileges of the clerical state and being given over to the secular arm. Degradation, however, cannot deprive an ecclesiastic of the character conferred in ordination, nor does it dispense him from the law of celibacy and the recitation of the Breviary. Degradation is twofold: verbal, i. e. the mere sentence of degradation; and real or actual, i. e. the execution of that sentence. They are not two distinct penalties, but parts of the same canonical punishment. Degradation is a perpetual punishment, and the clergyman so punished has never any right to release from it. It differs from deposition in so far as it deprives, and always totally, of all power of orders and jurisdiction and also of the privileges of the ecclesiastical state, thus in all things subjecting the delinquent to civil authority. While a bishop, even before his consecration, can inflict deposition or pronounce a sentence of verbal degradation and can reinstate those so punished, it is only a consecrated bishop who can inflict actual degradation, and only the Holy See which can reinstate ecclesiastics actually degraded.

Solemn degradation owes its origin to the military practice of thus expelling soldiers from the army; the Church adopted this institution in order to remove grievously delinquent clerics from the ecclesiastical order. The first mention of clerical degradation is found in the eighty-third Novel of Justinian; subsequently it was adopted with its external solemnities by early medieval councils as a repressive measure against heretics. It did not originally differ from de-

position, and degraded ecclesiastics were still privileged and remained exclusively subject to ecclesiastical jurisdiction. The laity, however, complained that churchmen, even when degraded, secured in this way impunity for their crimes. Hence Innocent III (c. viii, Decrim. falsi, X, v, 20) made it a permanent rule that clerical offenders, after degradation, should be handed over to the secular power, to be punished according to the law of the land. Degradation cannot be inflicted except for crimes clearly designated in the law, or for any other enormous crime when deposition and excommunication have been applied in vain, and the culprit has proved incorrigible. According to the Council of Trent (Sess. XIII, c. iv, De ref.) a bishop, when inflicting degradation on a priest, must have with him six mitred abbots as associate judges, and three such prelates for the degradation of a deacon or subdeacon. If abbots cannot be had, a like number of church dignitaries of mature age, and skilled in canon law, may take their place. All these must give their vote, which is decisive, and must be unanimous for the imposition of so grave a penalty.

The ceremony of actual degradation consists chiefly in bringing before the ecclesiastical superior the culprit vested in the robes corresponding to his order; in gradually divesting him of his sacred vestments, beginning with the last he received at his ordination; finally, in surrendering him to the lay judge (who must always be present) with a plea for lenient treatment and avoidance of bloodshed. The words pronounced by the ecclesiastical superior during the ceremony, also other rubrical details, are laid down by Boniface VIII (c. Degradatio, ii, de pœnis, in VI) and by the Roman Pontifical (pt. III, c. vii). Degradation is now rarely, if ever, inflicted; dismissal, with perpetual deprivation, takes its place.

Deharbe, JOSEPH, theologian, catechist, b. at Strasburg, Alsace, 11 April, 1800; d. at Maria-Laach, 8 November, 1871. He entered the Society of Jesus in 1817 and after teaching for eleven years at the Jesuit College at Brieg, Switzerland, he became in 1840 a missionary and catechist in Cöthen. With Father Roh, S. J., he established at Lucerne in 1845 the Academy of St. Charles Borromeo. When in 1847 a persecution broke out against the Jesuits in Switzerland, Deharbe barely escaped with his life. After that he was chiefly engaged in giving missions in Germany. As a catechist in Cöthen he felt very keenly the lack of a good catechism and was encouraged by his superior, Father Devis, to compose a serviceable textbook, but always hesitated, feeling himself incompetent. His superior, knowing Deharbe's spirit of obedience, simply commanded him to undertake the task. As a model he took the Mainz catechism of 1843 and made use also of other good textbooks, notably of Bossuet's catechism. He completed his first catechism, called "Katholischer Katechismus oder Lehrbegriff", in 1847. In 1848 it appeared anonymously at Ratisbon and immediately won universal approval. Bishop Blum of Limburg introduced it officially into his diocese in the same year; the following year the Bishops of Trier and Hildesheim did likewise for their sees. In 1850 the Bavarian bishops resolved to introduce a common catechism for the whole kingdom, and accepted Deharbe's catechism, which was then introduced in 1853. Other German dioceses adopted it as follows: Cologne, 1854; Mainz and Paderborn, 1855; Fulda, 1858; Ermland, 1861; Culm, 1863; Gnesen-Posen, 1868. At the same time it spread outside of Germany, in Switzerland, Austria-Hungary, and the United States. It was translated in 1851 into Magyar, then into Bohemian, Italian, and French; into Swedish and Marathi, 1861; into Polish and Lithu-

anian, 1862; into English, 1863; into Slovenian, 1868; into Danish, 1869; and later repeatedly into Spanish and Portuguese. It was reintroduced into Bavaria in 1908; and it is still in use in most German dioceses, in Denmark and Sweden, in Brazil, Chile, East India, and in many schools of the United States. In a revised form, Austria adopted it in 1897. Deharbe himself prepared and published at Ratisbon four extracts of his first work, entitled: (1) "Katholischer Katechismus" (1847); (2) "Kleiner katholischer Katechismus" (1847); (3) "Anfangsgründe der katholischen Lehre für die kleinen Schüler" (1847); (4) "Kleiner katholischer Katechismus" (1849-50). According to Father Linden, S. J., Deharbe's catechism possesses theological correctness, brevity of sentences, preciseness of expression, clearness, and good order; according to the same authority its defects consist in redundancy of memory-matter, abstractness of expression, incomplete sentences. It is to Deharbe's credit that in his catechism he preserved catechetical tradition, but abandoned the Canisian division, arranging the text-matter under chapters on Faith, Commandments, and Means of Grace. Deharbe's catechisms have been frequently edited and revised. His other works, all published at Ratisbon, are: "Die vollkommene Liebe Gottes" (1855); "Erklärung des katholischen Katechismus" (4 vols., 1857-64, fifth ed., 1880 —); "Kürzeres Handbuch zum Religionsunterrichte" (1865-68, sixth ed., Linden ed., 1898).

De Hondt. See PETER CANISIUS, BLESSED.

Deicolus (DICHUIL), SAINT, elder brother of St. Gall, b. in Leinster, Ireland, c. 530; d. at Lure, France, 18 January, 625. Having studied at Bangor he was selected as one of the twelve disciples to accompany St. Columbanus in his missionary enterprise. After a short stay in England he journeyed to Gaul, in 576, and laboured with St. Columbanus in Austrasia and Burgundy. At Luleuil he was unwearied in his ministrations, and yet was always serene and even joyous. When St. Columbanus was expelled by Thierry, in 610, St. Deicolus, then eighty years of age, determined to follow his master, but was forced, after a short time, to give up the journey, and settled in a deserted place called Lutre, or Lure (French Jura), in the Diocese of Besançon, to which he had been directed by a swineherd. Till his death, he was thenceforth the apostle of this district, where he was given a little church and a tract of land by Bertheide, widow of Weifar, the lord of Lure. Soon a noble abbey was erected for his many disciples, and the Rule of St. Columbanus was adopted. Numerous miracles are recorded of St. Deicolus, including the suspension of his cloak on a sunbeam and the taming of wild beasts. Clothaire II, King of Burgundy, recognized the virtues of the saint and considerably enriched the Abbey of Lure, also granting St. Deicolus the manor, woods, fisheries, etc. of the town which had grown around the monastery. Feeling his end approaching, St. Deicolus gave over the government of his abbey to Columbanus, one of his young monks, and spent his remaining days in prayer and meditation. His feast is celebrated on 18 January. So revered was his memory that his name (Diehuil), under the slightly disguised form of Deel and Deela, is still borne by most of the children of the Lure district. His Acts were written by a monk of his own monastery in the tenth century.

Deiferus. See DIER.

Dei gratia; Dei et Apostolicæ Sedis gratia (By the grace of God; By the grace of God and the Apostolic See), formulæ added to the titles of ecclesiastical dignitaries. The first (*N. Dei gratiâ Episcopus N.*) has been used in that form or in certain equivalents since the fifth century. Among the signatures of the Councils of Ephesus (431) and Chalcedon (451) we find names to which are added: *Dei gratiâ, per gratiam Dei, Dei miseratione Episcopus N.* (Mansi, *Sacr. Conc. Coll.*, IV, 1213; VII, 137, 139, 429 sqq.). Though afterwards employed occasionally, it did not become prevalent until the eleventh century. The second form (*N. Dei et Apostolicæ Sedis gratiâ Episcopus N.*) is current since the eleventh century; but came into general use by archbishops and bishops only since the twelfth and thirteenth centuries. The first formula expresses the Divine origin of the episcopal office; the second exhibits the union of the bishops and their submission to the See of Rome. Temporal rulers since King Pepin the Short, in the eighth century, also made use of the first formula; from the fifteenth it was employed to signify complete and independent sovereignty, in contradistinction to the sovereignty conferred by the choice of the people. For this reason the bishops in some parts of Southern Germany (Baden, Bavaria, Württemberg) are not allowed to use it, but must say instead: *Dei Miseratione et Apostolicæ Sedis gratiâ*.

FRANCIS J. SCHAEFER.

Deism (Lat. *Deus*, God), the term used to denote certain doctrines apparent in a tendency of thought and criticism that manifested itself principally in England towards the latter end of the seventeenth century. The doctrines and tendency of deism were, however, by no means entirely confined to England, nor to the seventy years or so during which most of the deistical productions were given to the world; for a similar spirit of criticism aimed at the nature and content of traditional religious beliefs, and the substitution for them of a rationalistic naturalism has frequently appeared in the course of religious thought. Thus there have been French and German deists as well as English; while Pagan, Jewish, or Mohammedan deists might be found as well as Christian. Because of the individualistic standpoint of independent criticism which they adopt, it is difficult, if not impossible, to class together the representative writers who contributed to the literature of English deism as forming any one definite school, or to group together the positive teachings contained in their writings as any one systematic expression of a concordant philosophy. The deists were what nowadays would be called freethinkers, a name, indeed, by which they were not infrequently known; and they can only be classed together wholly in the main attitude that they adopted, viz. in agreeing to cast off the trammels of authoritative religious teaching in favour of a free and purely rationalistic speculation. Many of them were frankly materialistic in their doctrines; while the French thinkers who subsequently built upon the foundations laid by the English deists were almost exclusively so. Others rested content with a criticism of ecclesiastical authority in teaching the inspiration of the Sacred Scriptures, or the fact of an external revelation of supernatural truth given by God to man. In this last point, while there is a considerable divergence of method and procedure observable in the writings of

the various deists, all, at least to a very large extent, seem to concur. Deism, in its every manifestation, was opposed to the current and traditional teaching of revealed religion.

In England the deistical movement seems to be an almost necessary outcome of the political and religious conditions of the time and country. The Renaissance had fairly swept away the later scholasticism and with it, very largely, the constructive philosophy of the Middle Ages. The Protestant Reformation, in its open revolt against the authority of the Catholic Church, had inaugurated a slow revolution, in which all religious pretensions were to be involved. The Bible as a substitute for the living voice of the Church and the State religion as a substitute for Catholicism might stand for a time; but the very mentality that brought them into being as substitutes could not logically rest content with them. The principle of private judgment in matters of religion had not run its full course in accepting the Bible as the Word of God. A favourable opportunity would spur it forward once more; and from such grudging acceptance as it gave to the Scriptures it would proceed to a new examination and a final rejection of their claims. The new life of the empirical sciences, the enormous enlargement of the physical horizon in such discoveries as those of astronomy and geography, the philosophical doubt and rationalistic method of Descartes, the advocated empiricism of Bacon, the political changes of the times—all these things were factors in the preparation and arrangement of a stage upon which a criticism levelled at revelational religion might come forward and play its part with some chance of success. And though the first essays of deism were somewhat veiled and intentionally indirect in their attack upon revelation, with the revolution and the civil and religious liberty consequent upon it, with the spread of the critical and empirical spirit as exemplified in the philosophy of Locke, the time was ripe for the full rehearsal of the case against Christianity as expounded by the Establishment and the sects. The wedge of private judgment had been driven into authority. It had already split Protestantism into a great number of conflicting sects. It was now to attempt the wreck of revealed religion in any shape or form.

The deistical tendency passed through several more or less clearly defined phases. All the forces possible were mustered against its advance. Parliaments took cognizance of it. Some of the productions of the deists were publicly burnt. The bishops and clergy of the Establishment were strenuous in resisting it. For every pamphlet or book that a deist wrote, several "answers" were at once put before the public as antidotes. Bishops addressed pastoral letters to their dioceses warning the faithful of the danger. Woolston's "Moderator" provoked no less than five such pastorals from the Bishop of London. All that was ecclesiastically official and respectable was ranged in opposition to the movement, and the deists were held up to general detestation in the strongest terms. When the critical principles and freethought spirit filtered down to the middle classes and the masses, when such men as Woolston and Chubb put pen to paper, a perfect storm of counter-criticism arose. As a matter of fact, not a few educated and cultured men were really upon the side of a broad toleration in matters of religion. The "wit and ridicule" by which the Earl of Shaftesbury would have all tested meant, as Brown rightly notes, no more than urbanity and good nature. But Shaftesbury himself would by no means allow that he was a deist, except in the sense in which the term is interchangeable with theist; and Herbert of Chisbury, by far the most cultured representative of the movement, is noted as having been the most moderate and the least opposed of them all to the teachings of Christianity. One phase through which deism may be said to have passed was that of a critical examination of

the first principles of religion. It asserted its right to perfect tolerance on the part of all men. Freethought was the right of the individual; it was, indeed, but one step in advance of the received principle of private judgment. Such representatives of deism as Toland and Collins may be taken as typical of this stage. So far, while critical and insisting on its rights to complete toleration, it need not be, though as a matter of fact it undoubtedly was, hostile to religion. A second phase was that in which it criticised the moral or ethical part of religious teaching. The Earl of Shaftesbury, for example, has much to urge against the doctrine of future rewards and punishments as the sanction of the moral law. Such an attitude is obviously incompatible with the accepted teaching of the Churches. Upon this follows a critical examination of the writings of the Old and New Testaments, with a particular regard to the verification of prophecy and to the miraculous incidents therein recorded. Antony Collins performed the first part of this task, while Woolston gave his attention principally to the latter, applying to Scriptural records the principles put forward by Blount in his notes to the "Apollonius Tyanæus". Lastly, there was the stage in which natural religion as such was directly opposed to revealed religion. Tindal, in his "Christianity as old as the Creation", reduces, or attempts to reduce, revelation to reason, making the Christian statement of revelational truths either superfluous, in that it is contained in reason itself, or positively harmful, in that it goes beyond or contradicts reason.

It is thus clear that, in the main, deism is no more than an application of critical principles to religion. But in its positive aspect it is something more, for it offers as a substitute for revealed truth that body of truths which can be built up by the unaided efforts of natural reason. The term deism, however, has come in the course of time to have a more specific meaning. It is taken to signify a peculiar metaphysical doctrine supposed to have been maintained by all the deists. They are thus grouped together roughly as members of a quasi-philosophical school, the chief distinguishing tenet of which is the relationship asserted to obtain between the universe and God. God, in this somewhat inferential and constructive thesis, is held to be the first cause of the world, and to be a personal God. So far the teaching is that of the theists, as contrasted with that of atheists and pantheists. But, further, deism not only distinguishes the world and God as effect and cause; it emphasizes the transcendence of the Deity at the sacrifice of His indwelling and His providence. He is apart from the creation which He brought into being, and unconcerned as to the details of its working. Having made Nature, He allows it to run its own course without interference on His part. In this point the doctrine of deism differs clearly from that of theists. The verbal distinction between the two, which are originally convertible terms—deism, of Latin origin, being a translation of the Greek theism—seems to have been introduced into English literature by the deists themselves, in order to avoid the denomination of naturalists by which they were commonly known. As naturalism was the epithet generally given to the teaching of the followers of the Spinozistic philosophy, as well as to the so-called atheists, deism seemed to its professors at once to furnish a disavowal of principles and doctrines which they repudiated, and to mark off their own position clearly from that of the theists. The word seems, however, to have been first employed in France and Italy about the middle of the sixteenth century, for it occurs in the epistle dedicatory prefixed to the second volume of Viret's "Instruction Chrétienne" (1563), where the reforming divine speaks of some persons who had called themselves by a new name—deists. It was principally upon account of their methods of investigation and their criticism of the traditional Prot-

estant religious teaching that they had also come to be called rationalists, opposing, as has been pointed out, the findings of unaided reason to the truths held on faith as having come from God through external revelation. Whether it was by ignoring this altogether, or by attempting actively to refute it and prove its worthlessness, rationalism was the obvious term of their procedure. And it was also, in very much the same manner, by their claiming the freedom to discuss on these lines the doctrines set forth in the Bible and taught by the Churches, that they earned for themselves the no less commonly given title of freethinkers.

There are notable distinctions and divergences among the English deists as to the whole content of truth given by reason. The most important of these distinctions is undoubtedly that by which they are classed as "mortal" and "immortal" deists; for, while many conceded the philosophical doctrine of a future life, the rejection of future rewards and punishments carried with it for some the denial of the immortality of the human soul. The five articles laid down by Lord Herbert of Cherbury, however, with their expansion into six (and the addition of a seventh) by Charles Blount, may be taken—and especially the former—as the formal professions of deism. They contain the following doctrines: (1) that there exists one supreme God, (2) who is chiefly to be worshipped; (3) that the principal part of such worship consists in piety and virtue; (4) that we must repent of our sins and that, if we do so, God will pardon us; (5) that there are rewards for good men and punishments for evil men both here and hereafter. Blount, while he enlarged slightly upon each of these doctrines, broke one up into two and added a seventh in which he teaches that God governs the world by His providence. This can hardly be accepted as a doctrine common to the deists; while, as has been said, future rewards and punishments were not allowed by them all. In general they rejected the miraculous element in Scripture and ecclesiastical tradition. They would not admit that there was any one "peculiar people", such as the Jews or the Christians, singled out for the reception of a truth-message, or chosen to be the recipients of any special grace or supernatural gift of God. They denied the doctrine of the Trinity and altogether refused to admit any mediatorial character in the person of Jesus Christ. The atonement, the doctrine of the "imputed righteousness" of Christ—especially popular with orthodoxy at the time—shared the fate of all Christological doctrines at their hands. And above all things and upon every occasion—but with at least one notable exception—they raised their voices against ecclesiastical authority. They never tired of inveighing against priestcraft in every shape or form, and they went so far as to assert that revealed religion was an imposture, an invention of the priestly caste to subdue, and so the more easily govern and exploit, the ignorant.

As deism took its rise, in the logical sequence of events, from the principles asserted at the Protestant Reformation, so it ran its short and violent course in a development of those principles and ended in a philosophical scepticism. For a time it caused an extraordinary commotion in all circles of thought in England, provoked a very large and, in a sense, interesting polemical literature, and penetrated from the highest to the lowest strata of society. Then it fell flat, whether because the controversy had lost the keen interest of its acuter stage or because people in general were drifting with the current of criticism towards the new views, it would be difficult to say. With most of the arguments of the deists we are nowadays quite familiar, thanks to the efforts of modern freethought and rationalism to keep them before the public. Though caustic, often clever, and sometimes extraordinarily blasphemous, we open the shabby little

books to find them for the most part out-of-date, commonplace, and dull. And while several of the "replies" they evoked may still be reckoned as standard works of apologetics, the majority of them belong, in more senses than one, to the writings of a bygone age. When Viscount Bolingbroke's works were published posthumously in 1754, and even when, six years previously, David Hume's "Essay on the Human Understanding" was given to the public, little stir was caused. Bolingbroke's attacks upon revealed religion, aimed from the standpoint of a sensationalistic theory of knowledge, were, as a recent writer puts it, "insufferably wearisome"; nor could all his cynicism and satire, any more than the scepticism of the Scottish philosopher, renew general interest in a controversy that was practically dead. The deistical controversy traceable to the philosophy of Hobbes and Locke is pre-eminently an English one, and it is to the English deists that reference is usually made when there is question of deism. But the same or a similar movement took place in France also. "In the eighteenth century", says Ueberweg, "the prevailing character of French philosophy . . . was that of opposition to the received dogmas and the actual conditions in Church and State, and the efforts of its representatives were chiefly directed to the establishment of a new theoretical and practical philosophy resting on naturalistic principles" (Gesch. d. Philosophie, Berlin, 1901, III, 237). Men like Voltaire, and even the materialistic Encyclopædists, exemplify a tendency of philosophic thought which has very much in common with what in England ended in deism. It had the same basis, the theory of knowledge propounded by Locke and subsequently pushed to an extreme point by Condillac, and the general advance of scientific thought. From Voltaire's criticisms of ecclesiastical organization and theology, his unwearying attacks upon Christianity, the Bible, the Church, and revelation, the tendency turned towards pantheism and materialism. Rousseau would have a religion of nature substituted for the traditional forms of revelation, and bring it, as he would bring philosophy and politics, to the point of view of individualism. Helvetius would have the moral system based upon the principle of present self-interest. And thus, as in England the logical development of deism ended in the scepticism of Hume, so in France it came to rest in the materialism of La Mettrie and Holbach.

Reference has been made above to several of the more important representatives of English deism. Ten or twelve writers are usually enumerated as noteworthy contributors to the literature and thought of the movement, of whom the following brief sketches may be given.—*Lord Herbert of Cherbury* (1581–1648), a contemporary of the philosopher Hobbes, was the most learned of the deists and at the same time the least disposed to submit Christian revelation to a destructive criticism. He was the founder of a rationalistic form of religion—the religion of nature—which consisted of no more than the residuum of truth common to all forms of positive religion when their distinctive characteristics were left aside. The profession of faith of Herbert's rationalism is summed up in the five articles given above. His principal contributions to deistical literature are the "Tractatus de Veritate prout distinguitur a Revelatione, a Verisimili, a Possibili et a Falso" (1624); "De Religione Gentilium Errorumque apud eos Causis" (1645, 1663); "De Religione Laici".

Charles Blount (1654–93) was noted as a critic of both the Old and New Testaments. His methods of attack upon the Christian position were characterized by an indirectness and a certain duplicity that has ever since come to be in some degree associated with the whole deistical movement. The notes that he appended to his translation of Apollonius are calculated to weaken or destroy credence in the miracles of

Christ, for some of which he actually suggests explanations upon natural grounds, thus arguing against the trustworthiness of the New Testament. In a similar manner, by employing the argument of Hobbes against the Mosaic authorship of the Pentateuch, and by attacking the miraculous events therein recorded, he had impeached the accuracy and veracity of the Old Testament. He rejects utterly the doctrine of a mediatorial Christ and contends that such a doctrine is subversive of true religion; while the many falsehoods he perceives in the traditional and positive forms of Christianity he puts down to the political invention (for purposes of power and of easy government) of priests and religious teachers. The seven articles into which Blount expanded the five articles of Lord Herbert have been noticed above. His notes to the translation of Philostratus' "Life of Apollonius Tyaneus" were published in 1680. He wrote also the "Anima Mundi" (1678–9); "Religio Laici", practically a translation of Lord Herbert's book of the same title (1683); and "The Oracles of Reason" (1893).

John Toland (1670–1722), while originally a believer in Divine revelation and not opposed to the doctrines of Christianity, advanced to the rationalistic position with strong pantheistic tendencies by taking away the supernatural element from religion. His principal thesis consisted in the argument that "there is nothing in the Gospels contrary to reason, nor above it; and that no Christian doctrine can properly be called a mystery." This statement he made on the assumption that whatever is contrary to reason is untrue, and whatever is above reason is inconceivable. He contended, therefore, that reason is the safe and only guide to truth, and that the Christian religion lays no claim to being mysterious. Toland also raised questions as to the Canon of Scripture and the origins of the Church. He adopted the view that in the Early Church there were two opposing factions, the liberal and the Judaizing; and he compared some eighty spurious writings with the New Testament Scriptures, in order to cast doubt upon the authenticity and reliability of the canon. His "Amyntor" evoked a reply from the celebrated Dr. Clarke, and a considerable number of books and tracts were published in refutation of his doctrine. The chief works for which he was responsible are:—"Christianity not Mysterious" (1696); "Letters to Serena" (1704); "Pantheisticon" (1720); "Amyntor" (1699); "Nazarenus" (1718).

Antony Ashley Cooper, third Earl of Shaftesbury (1671–1713), one of the most popular, elegant, and ornate of these writers, is generally classed among the deists on account of his "Characteristics". He himself would not admit that he was such, except in the sense in which deist is contrasted with atheist; of him Bishop Butler said that, had he lived in a later age, when Christianity was better understood, he would have been a good Christian. Thus, in a preface that Shaftesbury contributed to a volume of the sermons of Dr. Whicheot (1698), he "finds fault with those in this profane age, that represent not only the institution of preaching, but even the Gospel itself, and our holy religion, to be a fraud". There are also passages in "Several Letters Written by a Noble Lord to a Young Man in the University" (1716) in which he shows a very real regard for the doctrines and practice of the Christian religion. But the "Characteristics of Men, Matters, Opinions, and Times" (1711–1723) gives clear evidence of Shaftesbury's deistical tendencies. It contains frequent criticisms of Christian doctrines, the Scriptures, and revelation. He contends that this last is not only useless but positively mischievous, on account of its doctrine of rewards and punishments. The virtue of morality he makes to consist in a conformity of our affections to our natural sense of the sublime and beautiful, to our natural estimate of the worth of men and things. The Gos-

pel, he asserts with Blount, was only the fruit of a scheme on the part of the clergy to secure their own aggrandizement and enhance their power. With such professions it is difficult to reconcile his statement that he adheres to the doctrines and mysteries of religion; but this becomes clear in the light of the fact that he shared the peculiar politico-religious view of Hobbes. Whatever the absolute power of the State sanctions is good; the opposite is bad. To oppose one's private religious convictions to the religion sanctioned by the State is of the nature of a revolutionary act. To accept the established state religion is the duty of the citizen. Shaftesbury's more important contributions to this literature are the "Characteristics" and the "Several Letters", mentioned above.

Antony Collins (1676-1729) caused a considerable stir by the publication (1713) of his "Discourse of Freethinking, occasioned by the Rise and Growth of a Sect call'd Freethinkers". He had previously conducted an argument against the immateriality and immortality of the soul and against human liberty. In this he had been answered by Dr. Samuel Clarke. The "Discourse" advocated unprejudiced and unfettered enquiry, asserted the right of human reason to examine and interpret revelation, and attempted to show the uncertainty of prophecy and of the New Testament record. In another work Collins puts forth an argument to prove the Christian religion false, though he does not expressly draw the conclusion indicated. He asserts that Christianity is dependent upon Judaism, and that its proof is the fulfilment of the prophetic utterances contained in the Old Testament. He then proceeds to point out that all such prophetic utterance is allegorical in nature and cannot be considered to furnish a real proof of the truth of its event. He further points out that the idea of the Messiah among the Jews was of recent growth before the time of Christ, and that the Hebrews may have derived many of their theological ideas from their contact with other peoples, such as the Egyptians and Chaldeans. In particular, when his writings on prophecy were attacked, he did his utmost to discredit the book of Daniel. The "Discourse on the Grounds and Reasons of the Christian Religion" (1724) called forth a great number of answers, principal among which were those of the Bishop of Lichfield, Dr. Chandler ("Defence of Christianity from the Prophecies of the Old Testament"), and Dr. Sherlock ("The Use and Intent of Prophecy"). It was in Collins' "Scheme of Literal Prophecy" that the antiquity and authority of the Book of Daniel were discussed. The "prophecies" were made to be a record of past and contemporary events rather than a prevision of the future. But the "Scheme" was weak, and though it was answered by more than one critic, it cannot be said to have added much weight to the "Discourse". Altogether Collins' attacks upon prophecy were considered to be of so serious a nature that they called forth no less than thirty-five replies. Of his works, the following may be noticed, as bearing especially upon the subject of deism: "Essay Concerning the Use of Reason in Theology" (1707); "Discourse of Freethinking" (1713); "Discourse on the Grounds and Reasons of the Christian Religion" (1724); "The Scheme of Literal Prophecy Considered" (1727).

Thomas Woolston (1669-1733) appeared as a moderator in the acrimonious controversy that was being waged between Collins and his critics with his "Moderator between an Infidel and an Apostate". As Collins had succeeded in allegorizing the prophecies of the Old Testament until nothing remained of them, so Woolston tried to allegorize away the miracles of Christ. During the years 1728-9, six discourses on the miracles of Our Lord came out in three parts, in which Woolston asserted, with an extraordinary violence of language and blasphemy that could only be

attributed to a madman, that the miracles of Christ, when taken in a literal and historical sense, are false, absurd, and fictitious. They must therefore, he urges, be received in a mystical and allegorical sense. In particular, he argued at great length against the miracles of resurrection from the dead wrought by Christ, and against the resurrection of Christ Himself. The Bishop of London issued five pastoral letters against him, and many ecclesiastics wrote in refutation of his work. The most noteworthy reply to his doctrines was "The Tryal of the Witnesses" (1729) by Dr. Sherlock. In 1729-30, Woolston published "A Defense of his Discourse against the Bishops of London and St. David's", an extremely weak production.

Matthew Tindal (1657-1733) gave to the controversy the work that soon became known as the "Deists' Bible". His "Christianity as Old as the Creation" was published in his extreme old age in 1730. As its sub-title indicates, its aim was to show that the Gospel is no more than a republication of the Law of Nature. This it undertakes to make plain by eviscerating the Christian religion of all that is not a mere statement of natural religion. External revelation is declared to be needless and useless, indeed impossible, and both the Old and New Testaments to be full of oppositions and contradictions. The work was taken as a serious attack upon the traditional position of Christianity in England, as is evinced by the hostile criticism it at once provoked. The Bishop of London issued a pastoral; Waterland, Law, Conybeare, and others replied to it, Conybeare's "Defence" creating a considerable stir at the time. More than any other work, "Christianity as Old as the Creation" was the occasion of the writing of Butler's well known "Analogy".

Thomas Morgan (d. 1743) makes professions of Christianity, the usefulness of revelation, etc., but criticizes and at the same time rejects as revelational the Old Testament history, both as to its personages and its narratives of fact. He advances the theory that the Jews "accommodated" the truth, and even goes so far as to extend this "accommodation" to the Apostles and to Christ as well. His account of the origin of the Church is similar to that of Toland, in that he holds the two elements, Judaizing and liberal, to have resulted in a fusion. His principal work is "The Moral Philosopher, a Dialogue between Philalethes, a Christian Deist, and Theophanes, a Christian Jew" (1737, 1739, 1740). This was answered by Dr. Chapman, whose reply called forth a defence on the part of Morgan in "The Moral Philosopher, or a farther Vindication of Moral Truth and Reason".

Thomas Chubb (1679-1746), a man of humble origin and of poor and elementary education, by trade a glove-maker and tallow-chandler, is the most plebeian representative of deism. In 1731 he published "A Discourse Concerning Reason" in which he disavows his intention of opposing revelation or serving the cause of infidelity. But "The True Gospel of Jesus Christ", in which Lechler sees "an essential moment in the historical development of Deism", announces Christianity as a life rather than as a collection of doctrinal truths. The true gospel is that of natural religion, and as such Chubb treats it in his work. In his posthumous works a sceptical advance is made. These were published in 1748, and after the "Remarks on the Scriptures" contain the author's "Farewel to His Readers". This "Farewel" embraces a number of tracts on various religious subjects. A marked tendency to scepticism regarding a particular providence pervades them. The efficacy of prayer, as well as the future state, is called in question. Arguments are urged against prophecy and miracle. There are fifty pages devoted to those against the Resurrection alone. Finally, Christ is presented as a mere man, who founded a religious sect among the Jews. Chubb published also "The Supremacy of the Father" (1715) and

"Tracts" (1730). He is also responsible for the sentiments of "The Case of Deism Fairly Stated", an anonymous tract which he revised.

Henry St. John, Viscount Bolingbroke (1678-1751), belongs to the deists chiefly by reason of his posthumous works. They are ponderously cynical in style and generally dull and uninteresting, containing arguments against the truth and value of Scriptural history, and asserting that Christianity is a system foisted upon the unlettered by the cunning of the clergy to further their own ends.

Peter Annet (1693-1769) was the author, among other works, of "Judging for Ourselves, or Freethinking the great Duty of Religion" (1739), "The Resurrection of Jesus Considered" (1744), "Supernaturals Examined" (1747), and nine numbers of the "Free Enquirer" (1761). In the second of these works he denies the Resurrection of Christ and accuses Holy Writ of fraud and imposture.

Henry Dodwell (d. 1748), who wrote "Christianity not Founded on Argument", is also generally reckoned, with Annet, as among the representative deists. (See God; PROVIDENCE; RATIONALISM; SCEPTICISM; THEISM.)

FRANCIS AVELING.

Deity (Fr. *déité*; L. L. *deitas*; Lat. *deus*, *divus*, "the divine nature", "godhead", "god").—The original meaning of the word is shown in the Sanskrit *dyaus*, gen. *divas*, root *div*, which root appears in an adjective formation as *deva*, "bright", "heavenly"—attributes of God—hence *devas*, "the bright beings", or, as a noun substantive, *dyaus*. In its substantive form, *dyaus* is either masculine—e. g. "heaven", "sky"—or feminine, as Heaven (personified). Hence, in the Avesta *daēva*, "evil spirit"; Lith. *deva*, "a god"; Gael. and Irish *dia*, "god"; O. Teut. *tīw*; A. S. *tīw* (e. g. *Tuesday*, i. e. *Tīwesday*); Gr. *Zeús* (gen. *Διός*); Lat. *Jupiter* (i. e. *Jov-pater*). From the same root we have the Lat. names of deities: *Diana*, *Janus*, *Juno*, *Dis*, the genitive *Jovis* (*Divis*), and the word *diēs*.

The present article is confined to the non-Christian notion of the Deity. The Christian idea is set forth under the title God. The data, therefore, are drawn from the new science of the history of religions. They embrace written records, customs, laws, life, language. The earliest documents of history show that religion had long existed at the time of their composition. For a long time some deity had been adored, had received sacrifices, and no one could recall the beginning of these ancient rites. Many histories of religion published in recent years are made up of hypotheses pure and simple; often far removed from the facts on which they are based; often absolutely arbitrary. The scientific spirit demands statements of facts verified beyond dispute or inductions in accord with facts. Thus viewed, the history of religions shows on the subject of the Deity: (1) as an actual fact, the mingling of polytheistic and monotheistic elements; (2) that the farther back we go in the history of religious thought, the purer becomes the notion, so that traces of a primitive monotheism are forced upon us; (3) that the ghost-theory, advanced by Spencer and other writers, to account for the origin of the Deity is narrow, partial, and unscientific.

Religion, in its most general sense, is a universal phenomenon of mankind. The assertion of Lubbock, that tribes exist who have no notion of the Deity, is refuted by Tylor and Roskoff. At times this conception appears lofty and pure, again it is comparatively crude and involved in a mass of superstitious fancy. Yet, however imperfect and childish the expression may seem, it represents the highest idea of the Deity which the mind, for the time and under the circumstances, grasped.

I.—Religious life among savage peoples of to-day, as among pagan nations before Christianity, resembles the entangled confusion of a forest where trees, brambles, and creepers, of all ages and sizes, are to be seen interlacing, supporting and crushing each other with their earthy growths, while, above the topmost branches, is caught a glimpse of the blue sky of heaven. The religion of paganism in general is Polytheism, which has been accounted for by theories of Animism, Fetishism, Naturism, and the concrete forms of Anthropomorphism and Idolatry. The advocates of these various theories should be classed as theorists rather than historians. Taking the theory of evolution as a common starting-point, they hold that man arose from the brute and that he is a brute gradually transformed. They differ only in the cause and nature of the religious development which resulted in the notion of the Deity. Here we reject all presuppositions and deal only with the historical aspect of the problem. In the words of Waitz, the primitive man of modern anthropology is "a pure fiction, however convenient a fiction he may be".

Paganism presents not a doctrine, but a grouping of customs and teachings different and often opposed, an incoherent mass of beliefs with various origins. Close analysis enables the student to separate the doctrinal streams and trace them to their proper sources. The luminous truth presented by this study is the corruption of religious ideas on the nature of the Deity by the tangled confusion of human growth. Sir A. C. Lyall (*Asiatic Studies*, Ser. II, p. 234), while rejecting the theory of a primitive revelation, admits that "beyond doubt we find many beliefs and traditions running downward, spreading at a level much below their source". The causes which contributed to produce this tangled profusion in the pagan conception of the Deity are:—

(1) *Deification of nature* and her powers and of sensible objects. Of necessity the result was an inexhaustible variety of deities. As time went on, the divine assumed thousands of fanciful and fortuitous images and forms. Deification of the powers of nature led first to the worship of the elements. One divinity of the heavens stood in contrast with one of the earth. Fire, as the warming, nourishing, consuming, and destroying power, was early worshipped as a separate deity. Hence the Vestal Virgins in Rome, the Vedic *Agni*, the Fire-worshippers of Mazdeism, and the sacred fire of Shintoism. So also moisture or water, not only in general, but in its concrete forms, e. g. sea, lake, river, spring, cloud; and thus was had a fourth elemental deity. In the East, *Astrolatry*, or *Sabæism*, i. e. the worship of the stars that illumine the earth, developed, above all the worship of the sun. Where soil and vegetation was rich, the earth was regarded as a nursing mother, and *Geolatry* in many forms arose. In the Vedic hymns we can trace the transition from natural phenomena into natural deities—e. g. *Agni*, i. e. fire, *Varuna*, i. e. heaven, *Indra*, i. e. the rain-clouds—but even then doubts spring up, and the poetic writers ask themselves whether, after all, there are such things as the *Devas*. In Homer and Hesiod the forces of nature are conceived as persons, e. g. *Uranos*, i. e. heaven; *Nyx*, i. e. night; *Hypnos*, i. e. sleep; *Oνειρος*, i. e. dream; *Οκεανος*, i. e. ocean; the answer of Achilles to the river Scamander "in human form, confessed before his eyes" (*Iliad*, XXI), and his

prayer to the winds Boreas and Zephyrus, that they kindle the flames on the funeral pyre of Patroclus (Iliad, XXIII). Observation of the fact that in nature two energies—one active and generative, the other passive and feminine—combine, led men to associate heaven and earth, sun and moon, day and night, as common primal and motherly deities co-operating in the production of being. Hence the distinction of male divinities—e. g. heaven, ether, sun—and of female divinities—e. g. earth, air, moon. From this only a step to the deification of the generative principle and the worship of the *phallus*.

(2) *Anthropomorphism*.—The powers of nature were at first worshipped without form or name, afterwards humanized and regarded as persons. Thus Gaia, of ancient Pelasgic worship, appears as Rhea in Cretan traditions, as the Cybele of Asia Anterior, as Hera in Arcadia and Samos, as the goddess of nature Aphrodite, as Demeter. In Rome the Bona Dea of mystic rite, whose proper name was not to be spoken, was later akin to, or identified with, a number of Greek or Italian deities. De la Saussaye writes of ancient Babylon-Assyrian religion: "Among the influential words which could avert or expel evil, the most prominent were the names of the great gods; but these names were considered to be secret, and therefore people appealed to the god himself to pronounce them." In Samothrace the Cabiri, i. e. great and mighty deities, the supreme powers of nature, were adored at first without specific names. In old Latium the pontifices concealed the names of the gods. Herodotus says the Pelasgian deities were nameless. In the Vedic hymns the sacrificial tree, to which the sacrifices were attached, is thus addressed: "Where thou knowest, O Tree, the sacred names of the gods, to that place make the offerings go." According to de la Saussaye the deities of the Rig-Veda are but slightly individualized. To the formless gods of nature succeeded the deities of Homeric imagination, in human shape and with human feelings. In the judgment of Herodotus it was Homer and Hesiod who settled the theogony of the Greeks—in fact laid the basis of the later Hellenic religion. The Greeks lavished the rich stores of their intellectual life upon their deities, humanized and severed them from natural phenomena. Hence the whole of nature was pervaded by a family of deities descending from the elements as primal gods, the individual members of which family were of kin to one another and in mutual relations of higher and lower, older and younger, male and female, stronger and weaker; so that man, feeling himself surrounded on all sides by deities, discovered in the course of nature, and in her various phenomena, their actions, histories, and manifestations of their will. The conception of these deities was anthropopathic, in their motives and passions they were more powerful and more perfect men, they had a human body and a human countenance, human thoughts and feelings; they resided in the clouds or on a high mountain; they dwelt in a heavenly palace. Such an idea is incoherent and contradictory. In reality the Deity was nature. If its inanimate forms were personified and worshipped, why not animals and plants—e. g. tree-worship?

(3) *Human Apotheosis* is another cause and equally prolific in later pagan times. Plutarch (in his "Romulus") enters at length into the question, how the soul, when separated from the body, advances into the state of heroism, and from a hero develops into a demon and from a demon becomes a god. To Cicero the doctrine of Euhemerism is the core and fundamental principle of the mysteries (de Nat. Deor., III, xxi). With the Greeks it had been a custom to honour renowned or well-deserving men as heroes after death, e. g. Herakles, Theseus; but to pay divine honours to the living never entered into their minds in early times. Heroes or saintly men were regarded (a) as sons of the gods, e. g. in Hesiod; (b) as incarna-

tions of the great gods. The growth of popular Polytheism in modern India is due to the fact that the Brahmins, by their doctrine of divine embodiments (*avatara*), create holy men into deities actually worshipped. Thus the older gods of India, i. e. nature-personifications, are in turn obscured by the swarm of earth-born deifications. Colebrooke says that the worship of deified heroes is a later phase not to be found in the Vedas, though the heroes themselves not yet deified are therein mentioned occasionally. (c) The hero was identified with one of the great gods. Thus hero-worship was strange to the early Romans. Romulus, according to Plutarch, was not worshipped as a hero properly speaking, but as a god, and that after he had been identified with the Sabine god Quirinus. (d) Hero-worship properly speaking, e. g. in the Odyssey. (e) Apotheosis.—Plutarch tells us that Lysander (d. 394 B. C.) was the first man to whom the Greeks erected altars and offered sacrifices as to a god. Farnell states that one of the most fruitful offshoots of the older Hellenic system was hero-worship. And Pliny writes, "Of all ways of paying due thanks to men of great desert, the most time-honoured is to enrol them as gods". The Jaina faith, an offshoot of Buddhism, is nothing but the worship of deified men. In Egypt divine honours were paid to kings even during their lifetime. Cicero makes a formal profession of Euhemerism. "Knowest that thou art a god?" he represents the glorified Scipio addressing himself in a dream (de Rep., VI, xxiv). Men and women after death had been raised to be gods; therefore he would have his daughter Tullia exalted to the same honour, as having best deserved it, and he would dedicate a temple to her (ep. ad Att., xii). The Christian apologists, who stood face to face with Heathendom, positively declared that all the deities of Paganism were deified men. Among the Romans the worship of the *genius* was to men the deification of manhood, as that of Juno was to women the deification of womanhood. Pliny saw in this belief a formal self-deification, proceeding upon the theory that the *genius*, or Juno, was nothing else than the spiritual element of man, or woman. Not only the individual, but every place and, above all, the Roman people and Rome itself had its *genius*. The time-honoured worship of the latter was naturally associated with, and passed into, a worship of the emperor. Thus pre-Christian heathenism culminated in the worship of Augustus. In the Book of Wisdom the various stages in the process of human deification are clearly described (Wisdom, xiv).

(4) St. Augustine (Civ. Dei, IV, ii) discusses the opinion of Roman writers that all the manifold gods and goddesses of the Romans were in the final analysis but one Jupiter, for these deities melt away into each other on closer inspection. Thus we have a single god, who by the dissection of his nature into various aspects of his powers, and by the personifying of his individual powers, has been resolved into a multiplicity of deities. The Romans thus broke up the idea of deity by hypostasizing particular powers, modes of operation, physical functions, and properties. By this process not only events in nature and in human life, but their various phases, qualities, and circumstances were considered apart as endowed with proper personalities, and worshipped as deities. Thus in the life of a child, Vaticanus opens his mouth, Cunina guards the cradle, Educa and Potina teach him to eat and drink, Fabulinus to speak, Statalinus helps him to stand up, Adeona and Abeona watch over his first footsteps. Since every act required a god, there was scarcely any limit to the inventive work of the imagination. And St. Augustine tells us (Civ. Dei, IV, viii) that the Roman farmer was in the hands of a host of deities who assisted him at each stage of ploughing, hoeing, sowing, and reaping. Under such conditions we can understand how easily the cultured Roman

could embrace the pantheism of Stoic philosophy, teaching the one creative all-ruling power of Nature—itsself a personification—and at the same time permit the ignorant to personify and worship as distinct deities the various acts and phases by which this power was manifested.

(5) A political element enters into the multiplication of deities in the Pagan world. To make a nation, several tribes must unite. Each has its god, and the nation is apt to receive them all equally in its Pantheon. Or in time of war the victorious nation was not content to impose laws and tribute upon the conquered; it must displace the conquered deities by its own. Again, where ancient nations, each having its own religion and mythology, were brought by commerce into close contact, the deities who showed a certain similarity were identified, and even their names were adopted by one language from another. According to Max Müller, Durga and Siva are not natural developments, nor mere corruptions of Vedic deities, but importations or adaptations from without. A striking illustration is furnished in the history of Rome. In the earlier times the chief deities were general nature-powers or mere abstractions of the State or family. They had no real personality. Thus the Lares came from Etruria, the chief of them being the Lar Familiaris, the divine head of the family, the personification of the creative power assuring the duration of the family; Vesta, the fire of the domestic hearth, the protectress of the family, became identified later with the Greek Hestia. Afterwards, when Rome spread out into a world-power, it received into its Pantheon the deities of the nations conquered by its armies. Again, the political element becomes a more potent factor when deities are created by human enactment. Thus, in ancient Rome the pontifices had the right and care of making new deities. And in China to-day the Government orders posthumous honours and titles and deifications of men, gives titles and rewards to deities for supposed public service, and exercises a control over Buddhist incarnations. The Emperor of China uses the monopoly of deification as a constitutional prerogative, like the right of creating peers.

(6) A final explanation can be found in language. The words employed by the mind to designate spiritual facts are all drawn from conscious individual experience. In the beginning man naturally expressed the power and attributes of the deity in different words drawn from nature and from life. According to de la Saussaye the opinion is even expressed in the Rig-Veda that the many names of the gods are only different ways of denoting a single being. Now the tendency of language is to become crystallized. Words gradually lose their etymological force, and their original meaning is forgotten. They stand out as distinct and independent facts in our mental life. What was at first a sign becomes itself an object. Thus in the Vedic religion the Sun has many names—Surya, Savitri, Mitra, Pushan, Aditya. Each of these names grew by itself into some kind of active personality after its original meaning had been forgotten. Originally all were meant to express one and the same object viewed from different points; e. g. *Surya* meant the Sun as offspring of the sky; *Savitri* the Sun as quickener or enlivener; *Mitra* the bright Sun of the morn; *Pushan* the Sun of the shepherds; *Varuna* was the sky as all-embracing; *Aditya* the sky as boundless. In this sense the Hindu gods have no more right to substantive existence than Eös or Nyx; they are *nomina*, not *numina*; i. e. words, not deities. So also in Egypt the Sun is *Horus* in the morning, *Ra* at mid-day, *Tum* in the evening, *Osiris* during the night. In another manner language may lead into error, as when Bancroft remarks that in many of the American languages the same word is used for storm and god. Brinton writes, "The descent is almost imperceptible

which leads to the personification of wind as god". Goldzeher states that the Baghirami in Central Africa use the same term for storm and deity. The Akra people on the Gold Coast of Africa say, "Will God come?" for "Will it rain?" Here we have the same word with two meanings. Thus the Odjisi, or Ashantis, call the deity by the same word as the sky, but mean a personal god who created all things and is the giver of all good things.

All pagan religions have zoomorphic, or partially zoomorphic, idols, deities in the shape of lower animals. Especially is this true of the Egyptian deities. But it is the sphere of totem-lore or mythology to explain these strange metamorphoses, which scandalized philosophers, and which Ovid set in verse for the cultured of his time.

II.—The human race has at all times and in divers ways sought to express the notion of the deity. The history of religions, however, lays bare another truth, viz., that the farther back we go in the history of religious thought, the purer becomes the notion of the deity. In the Rig-Veda, the most ancient of the Hindu sacred books, traces of a primitive monotheism are clearly shown. The Deity is called "the only existing being" who breathed, calmly self-contained, in the beginning before there was sky or atmosphere, day or night, light or darkness. This being is not the barren philosophical entity found in the later Upanishads, for he is called "our Father", "our Creator", omniscient, who listens to prayers. Father Calmette maintains that the true God is taught in the Vedas. Again, "That which is and is one, the poets call in various ways", and it is declared to exist "in the form of the unborn being". Traces of a nature-religion are found in the Vedas. To a later date, however, must be ascribed the mythology of the Vedic hymns in which the "bright ones" (the heavens and earth, the sun and moon, with various elemental powers of storm and wind) are the only distinctly recognized deities. D'Harlez, F. C. Cook, and Phillips hold that the moral and spiritual basis is older. Pictet, A. B. Smith, Banerjia, Ellingwood, Wilson, Muir do not hesitate to declare that the loftier conceptions of the Vedas are unquestionably the earlier, and that they show clear traces of a primitive monotheism. The use of different divine names in the Vedas does not warrant us in concluding without other evidence that different deities are designated. On this basis we could conclude, with Tiele, that the Jews at different times worshipped three different gods, e. g. Elohim, Yahweh, Adonai. The use of the different names may be due to personification of natural forces or to crystallization of language, but such a use marks a later stage in religious thought. Why could not these names originally be employed to express the many perfections and attributes of the great God? Thus the Vedic poet writes, "Agni, many are the names of Thee, the Immortal One"; and, "The father adoring gives many names to Thee, O Agni, if thou shouldst take pleasure therein". Of the Egyptian deity Ra it is written, "His names are manifold and unknown, even the gods know them not". Farnell states that "many deities, some of whom were scarcely known outside a narrow area, were invoked as *πολύωνυμοι*, all possible titles of power being summed up in one word". Thus, the farther back we go in the history of the Indian people, the purer becomes the form of religious belief. Idolatry is shown to be a degeneration. "It is true", says Sir A. C. Lyall, "that in India, as elsewhere, the idea of one Supreme Being, vaguely imagined, stands behind all the phantasmagoria of supernatural personages". A luminous proof of this inference is furnished by an analysis of the word *Jupiter*. *Jupiter* in Latin is *Zeus pater* in Greek and in *Dyaus pitar* in Sanskrit. The Teutonic form is *Tiu*. The meaning is "Heaven-Father". The designation of the Deity in all these branches of the Aryan family

points to a time, 5000 years ago or earlier, when the Aryans, before their dispersion, before they spoke Sanskrit, Greek, Latin, or German, united in calling on the Deity as the Heaven-Father. In the Vedas *Dyaus-pitar* is found, but even in these documents *Dyaus* is already a fading star; he is crowded out by Indra, Rudra, Agni, and other purely Indian deities. In the Vedas *Dyaus* has two forms; a masculine and a feminine. But the Vedic *Dyu* or *Dyaus-pitar* is first of all a masculine, while in later Sanskrit only it becomes exclusively a feminine. Hence it is not true to say that the name originally was a feminine to designate heaven, and that the nation afterwards changed it into a proper name to express the Deity.

The Gathas, the most ancient hymns of the Avesta, form the kernel about which the sacred literature of the Iranians clustered in an aftergrowth. They inculcate belief in Ahura Mazda, the self-existent omnipotent being. He is the all-powerful Lord who made heaven and earth, and all that is therein, and who governs everything with wisdom. Tiele says that the sole really personal being is Ahura, and that the two spirits in antagonism are below him (Elem. of the Science of Rel., Ser. I, p. 47). The opposition of Ahriman is of a later date. Pfeiderer holds that originally he was a good spirit created by Ahura (Phil. of Rel., III, p. 84). The Amesha-Spentos of the Gathas have the nature of abstract ideas or qualities, i. e. attributes of Ahura; afterwards they formed a kind of celestial council. L. H. Mills (New World, March, 1895) holds that the spiritual, unique nature of Ahura is attested beyond question, and he unites with d'Harlez, Darmesteter, and Tiele in teaching that the primitive form of Iranian belief was monotheistic. The Paganism of Greece and Rome, with its family of deities in human shapes and with human passions, bears upon its face evident marks of degradation and corruption. Thus a critical study of the Aryan beliefs convinces the student that in them we find no illustration of an evolution from a primitive, low, to a later, and higher, form. "The religion of the Indo-European race", writes Darmesteter (Contemp. Rev., Oct., 1879), "while still united, recognized a supreme God, an organizing God, almighty, omniscient, moral. The conception was a heritage of the past."

The same truth is evident from a study of the religions of Egypt and of China. In the most ancient monuments of Egypt the simplest and most precise conception of one God is expressed; He is one and alone; no other beings are with Him; He is the only being living in truth; He is the self-existing one who made all things, and He alone has not been made. Brugsch accepts this view, but calls it Pantheism. The ethical element in the Deity, however, is adverse to this. Renouf finds a similar Pantheism, but prefers the word Henotheism. De la Saussaye admits that "one can maintain that Egyptian Monotheism and Pantheism have never been denied by any serious enquirer, though the majority do not look on them as general and original". The sublime portions of the Egyptian religion are not the comparatively late result of a process of purification from earlier and grosser forms. In the outlines of History of Religion Tiele so taught; but in a later work, Egyptian Religion, he expresses the contrary opinion. Lieblein, Ed. Meyer, and Renouf admit degeneration in Egyptian religion. Thus de Rougé, Tiele, Pierret, Ellingwood, Rawlinson, Wilkinson hold that belief in one Supreme Deity, the Creator and Lawgiver of men, is a truth clearly expressed in that ancient civilization, and Polytheism is an aftergrowth and corruption. The popular religion of China rests on the worship of natural powers and of ancestral spirits. Underneath, however, is the conviction of the existence of a higher creative power, which, according to Edkins (Religions in China, p. 95), is a tradition handed down from the earliest period of their history. D'Harlez (New

World, Dec., 1893) and F. M. James (New World, June, 1899) teach that the primitive Chinese worshipped Shang-Ti, the Supreme Lord, one, invisible, spiritual, the only true god. Dr. Legge (Religion of China, p. 18) asserts that Ti was the one supreme object of homage as far back as we can go, and unites with d'Harlez, Faber, Happel in declaring that 5000 years ago the Chinese were monotheists. Lenormant bases the Babylonian-Assyrian religion on an original monotheism. He claims to have discovered a reliable trace of this in the word *Ilu* (*el* in *Babel*) which is said originally to mean "the only god". De la Saussaye advances as an objection that "this word is nothing else than the name for the conception of God, just like the Indian Deva and other epithets of the same sort", yet he holds that "the goddesses of Babylonian-Assyrian religion are really only one and the same thing under different names, and these again must be looked on partly as titles".

Even among the lowest and most barbarous tribes illustrations of the same truth are found. "Nothing in savage religion", writes A. Lang, "is better vouched for than the belief in a Being whom narrators of every sort call a Creator, who holds all things in His power, and who makes for righteousness." The aborigines of Canada call Him Andouagne, according to Father Le Jeune. This Being is seldom or never addressed in prayer. The fact of an otiose or unworshipped Supreme Being is fatal to some modern theories on the origin and evolution of the deity. Tylor admits that a Supreme Being is known to African natives, but ascribes it to Islam, or to Christian influence. If this were so, we should expect to find prayer and sacrifice. Fraser holds that the deity was invented in despair of magic as a power out of which something could be got. But how could the savage expect anything from a deity he did not address in prayer? Spencer teaches that the deity was a development out of ancestral spirits. But the Maker of things, not approached in prayer as a rule, is said to exist where ancestor spirits are not reported to be worshipped. William Strachey, writing from Virginia in 1611, says that Okeus was only "a magisterial deputy of the great God who governs all the world and makes the sun to shine . . . him they call Ahone. The good and peaceable god requires no such duties [as are paid to Okeus] nor needs to be sacrificed to, for He intendeth all good unto them; He has no image." Winslow writes from New England in 1622 that the god Kiehtan is a being of ancient credit among the natives. He made all the other gods. Canadians, Algonquins, Virginians, and the natives of Massachusetts had a Great Spirit before the advent of the Christian missionaries.

The Australian mystery-rites reveal a moral creative being whose home is in or above the heavens, and his name is Maker (*Baïame*), Master (*Biamban*), and Father (*Papang*). The Benedictine monks of Australia say that the natives believe in an omnipotent Being, the creator of heaven and earth, whom they call Motogon. The Australian will say, "No, not seen him [i. e. *Baïame*], but I have felt him". Waitz tells us that the religious ideas of the African tribes are so high that if we do not like to call them monotheistic, we may say at least that they have come very near the boundaries of true monotheism. "However degraded these people may be," writes Livingstone (Missionary Travels, p. 158), "there is no need telling them of the existence of God or of a future life. These two truths are universally admitted in Africa. If we speak to them of a dead man, they reply: He is gone to God." Among savage tribes, where the supreme Being is regarded as too remote and impassive, he is naturally supplied with a deputy. Thus, e. g., Ahone has Okeus, Kiehtan has Hobanock, Boyma has Grog-oragally, Baïame has Tundun, or in places Daramulun, Nypukupon in West Africa has Bobowissi. Sometimes, as in Australia, these active deputies are sons of

the supreme Being. In other cases—e. g. Finnish Num, Zulu Unkulunkulu, and Algonquin Atahocan—this being is quite neglected in favour of spirits who receive sacrifices of meat and grease. In north-west central Queensland Roth describes Mulkari as “a benevolent omnipresent supernatural being, whose home is in the skies”. In Australia the supreme Being cannot have been evolved out of ghost-worship, for the natives do not worship ancestral spirits. Sir A. B. Ellis has repudiated his theory of borrowing a god in the case of the Tshi-speaking races. Waitz also denies that the higher religious beliefs of the Australians were borrowed from Christianity. His position is sustained by Howitt, Palmer, Dawson, Ridley, Günther, and Greenway, who studied the natives on the spot. The esoteric and hidden nature of the beliefs, the usual though not universal absence of prayer, show their indigenous and ancient source.

In “The Golden Bough” (2d ed.), Fraser has raised the question, whether magic has not everywhere preceded religion. Yet among the blacks of Australia, the most backward race known, we find abundant testimony of a belief speculative, moral, emotional, but not practical. These deities are not propitiated by sacrifice and very seldom by prayer, yet they are makers, friends, and judges. In the conception of them the ethical element predominates. An all-knowing Being observes and rewards the conduct of men; He is named with reverence if named at all; His abode is in the heavens; He is Maker and Lord of all things; His lessons soften the heart. Mariner says concerning the Tongan deity Ta-li-y-Tooboo: “Of his origin they had no idea, rather supposing him to be eternal”. In Guinea the natives worship “The Ancient One”, “The Ancient One in Skyland”, “Our Maker”, “Our Father”, “Our Great Father”. Wilson writes that their belief in one supreme Being who made and upholds all things is universal. In America the same truth obtains. To the Indians God is “The Great Spirit”. With some the idea of the Deity is very lofty; again it is found in cruder and lower expression. Darwin’s description of the Patagonians as having very low religious beliefs is refuted by Giacomo Bove. The Pawnees worship *A-ti-us ta-kaw-a*, i. e. our Father in all places, or *Ti-ra-wa*, i. e. the Spirit-Father, with whom they expect to live after death. The Zunis speak of the deity as *Awonawilona*, i. e. the All-Father. The Indians of Missouri worship “Old Man Immortal”, “the Great Spirit”, “the Great Mystery”. The Tinne of British America have the term *Nayeweri*, i. e. “He-who-creates-by-thought”. The Algonquin speaks of *Kitche-Maneto* who created the world “by an act of his will”. If the supreme Being in barbarous tribes is regarded as otiose and inactive, so as to become a mere name and a by-word, it is due to the fact that He has been thrust into the background by the competition either of ancestral spirits—e. g. Unkulunkulu of the Zulus—or of friendly and helpful spirits—as, e. g., the Australian Baiame and Mungau-ngaur. Thus in West Africa the natives believe in Motogon, who created by breathing; he is long since dead and they pay him no worship. From a study of savage tribes Mr. Lang holds that first in order of evolution came belief in a supreme Being by some way only to be guessed at (to him St. Paul’s explanation is the most probable); that this belief was subsequently obscured and overlaid by belief in ghosts and in a pantheon of lesser deities; that in many cases the savage creative Being has a deputy, often a demiurge, who exercises authority; that when this is the case, where ancestor-worship is the working religion, the deputy easily comes to be envisaged as the first man. If to this we add the tradition, universal both among civilized—e. g. Hindus, Greeks, Romans—and savage nations, that formerly heaven was nearer to man than it now is, that the Creator Himself gave lessons of wisdom to human beings, but afterwards withdrew

from them to heaven, where He now dwells, the line of reasoning will be even more cogent.

Therefore we can consider as conclusions well established: (1) That the farther back we go in the history of any religion, the purer becomes the conception of the deity, hence the fact of primitive purity; (2) That everywhere evident traces are found of the corruption of the primitive belief, hence the fact of degeneracy; (3) That all nations point in tradition to the time when the Deity was nearer to man, hence traces of primitive revelation. Tylor concedes that “the degeneration-theory, no doubt in some instances with fairness, may claim these beliefs as mutilated and perverted remains of a higher religion” (Primitive Culture, ed. 1871, p. 305).

III. The modern science of anthropology proposes an explanation of its own for the origin and existence of the Deity. It is called the anthropological theory. Its principal advocates are Tylor and Spencer. In purpose they agree, i. e. to show that the Deity has no real existence outside the mind of men; in method only they differ. With Tylor the method is biological, and we have Animism; with Spencer it is psychological, and we have what is termed the ghost-theory. According to Spencer, primitive man derived the conception of spirit from reflections on phenomena of sleep, dreams, shadow, trance, and hallucination. In these experiences the ghosts of the departed came to him, he grew to dread them, and so worshipped them. From the departed souls of his kindred, first worshipped, the idea was gradually extended; they then became gods; finally, one of these deities in imagination became supreme and was regarded as the one only God.

It is a fact that ancestor-worship is found in various nations; in China, India, ancient Greece and Rome it is, or was, an organized system. Here it formed the basis of family religion and of civil law. The Romans had their *dii manes*, i. e. divine ancestral spirits (“Eos leto datos divos habento”—Laws of the Twelve Tables as cited by Cicero in “De Leg.” II, ii, 22). As *lar familiaris*, the first ancestor was considered the protector and genius of the house. In Greece the ancestral spirits of families became *θεοὶ πατρίων*, i. e. paternal gods. How the ancestor watches over the race is shown in the “Antigone”. In India we find the *pitris*, the companions of the devas, and later above the devas. In ancient Persia the *fravashis* helped Ahura Mazda in all his works. The songs of the *Shih-King* describe the ancestral festivals of China. With the Slavs was deeply rooted the belief in vampires, the souls of dead people, who suck the blood from the living. Among some savage nations the malignant character of ghosts prevails and gives rise to magic. On these facts Spencer constructs a theory to explain the origin and development of the deity among all nations. The theory is purely materialistic and unscientific.

(1) Superior or supreme beings are found among races who do not worship ancestral spirits. It is not shown, it is denied by Waitz, it is not even alleged by Spencer, that the Australians steadily propitiate or sacrifice at all to any ghosts of dead men. The Dieri of Central Australia pray for rain to the Mura Mura, a good spirit, not a set of remote ancestral spirits. Thus the Australians and Andamanese worship a relatively supreme Being and Maker, and do not worship ghosts.

(2) The Zulus are ancestor-worshippers; yet the recent dead parent, i. e. the father of the family actually worshipping, is far above all others. Thus the supreme ancestral-spirit changes with each generation. If, therefore, ancestors are forgotten in proportion as they recede from their living descendants, how can we on Spencer’s hypothesis maintain that, as they gradually recede into the past, they develop into the conception of a supreme Deity and Creator?

And how can we explain that savages can forget the very names of their great grandfathers and yet remember traditional persons from generation to generation? The Blacks of Australia will often, by peculiar devices, avoid mentioning the names of the dead, a practice hostile to the development of ancestor-worship; yet these same people have a belief in a deity and in a future state of some kind. The Wathi-Wathi call this being *Tha-tha-pah*; the Ta-ta-thi call him *Tulong*.

(3) The otiose, unworshipped supreme Being, often credited with the charge of future rewards and punishments among ancestor-worshipping peoples, cannot be explained in Spencer's theory. On the contrary, it shows the corruption of Theism by Animism. "Among the negroes of Central Africa", writes de la Saussaye, "we find belief in a Highest God, the Creator of the world; but of course this God is not worshipped, since as a general rule negroes worship cruel dreaded gods much more than friendly gods. Worship of ancestors is also general. In Dahomey and Ashantee huge human hecatombs are offered to deceased rulers". The Kafirs acknowledge a deity, Molunga, but neither adore nor pray to him. The Zulu religion, now almost exclusively ancestor-worship, seems to contain a broken and almost obliterated element of belief in a high, unworshipped Deity presiding over a future life. The Zulu Unkulunkulu made things, as the Australian Baiame. Unlike them, he is subject to the competition of ancestral ghosts, the more recent the more powerful, in receipt of prayer and sacrifice. Hence he is neglected, by many believed to be dead or the mere shadow of a children's tale. Or this being exists in repose, remote from men with whom he acts through a deputy or deputies.

(4) Spencer, to support his theory, appeals to the crude languages of savages; he says they are unable to say, "I dreamed that I saw", instead of "I saw". Now, in many savage speculations are found ideas as metaphysical as in Hegel. Again, the Australian languages have the noun *sleep* and the verb *to see*. They make an essential distinction between waking hallucinations and the hallucinations of sleep; anyone can have the latter, only a wizard the former. Furthermore, Spencer contradicts himself; he credits these low savages with great ingenuity and strong powers of abstract reasoning—an admission fatal to his premises. Again Spencer holds that the idea of the Deity was formed after the analogy of human rulers. But whence comes the great God in tribes which have neither chief nor king nor distinction of rank, e. g. the Fuegians, Bushmen, Australians? The Deity cannot be a reflection from human kings where there are no kings. Furthermore, Spencer's assumption is false, viz. that deities improve morally and otherwise according to the rising grades in the evolution of culture and civilization. Usually, the reverse is the case. "In its highest aspect", writes A. Lang, "that simplest theology of Australia is free from the faults of the popular theology in Greece. The God discourages sin, He does not set the example of sinning. He is almost too sacred to be named (except in mythology) and far too sacred to be represented by idols. It would scarcely be a paradox to say that the popular Zeus or Ares is degenerate from Darumulum or the Fuegian being who forbids the slaying of an enemy".

(5) The real difficulty in Spencer's theory is to account for the evolution from ghosts of the eternal creative moral Deity found in the belief of the lowest savages. The Bushmen, Fuegians, Australians believe in moral, practically omniscient, deities, makers of things, fathers in heaven, friends, guardians of morality, seeing what is good or bad in the hearts of men. So widely is this belief diffused that it cannot be ignored. The only recourse is to account for these deities as "loan-gods". This explanation is refuted

by A. Lang. Waitz writes, "Among branches where foreign influence is least to be suspected we discover behind their more conspicuous fetichisms and superstitions something which we cannot strictly call monotheism, but which tends in that direction." In the belief of the savages morality and religion are united. The savage, who lives in terror of the souls of the dead, might worship a devil, not a deity who is moral and benevolent. The Andamanese have *Pulusha*, "Like-fire", but invisible, never born, and so immortal, who knows the thoughts of the heart, is angered by wrongdoing, pitiful to the distressed, sometimes deigning to grant relief, the judge of souls. Huxley's contention, in "Science and Hebrew Tradition", that the Australians had merely a non-moral belief in ghost-like entities, usually malignant, and that in this state theology is wholly independent of ethics, is refuted by an exact study of these very beliefs. He claims that the religion of Israel arose from ghost-worship. But how does he explain the silence of the prophets or the Hebrew apparent indifference to the departed soul? Elohim differs from a ghost; in Hebrew belief He is ethical, immortal, and without beginnings. "In all ancient primitive peoples", writes Wellhausen, "religion furnished a motive for law and morals; in case of none did it become so with such purity and power as in that of the Israelites". The problem which Spencer's theory cannot solve is, how the Australians could bridge the gulf between the ghost of a soon-forgotten fighting man and that conception of a Father in Heaven, omniscient, moral, which under various names is found all over a continent. The distinction between the creative supreme Deity of the savage, unpropitiated by sacrifice, and the waning, easily-forgotten, cheaply propitiated ghost of a tribesman is vital and essential.

(6) Finally, the two conceptions (i. e. ghost and god) have different sources. According to de la Saussaye, "The sentiments which men entertain towards spirits and gods are different. Fear and egoistic calculation, which prevail in Animism, have been replaced by more exalted sentiments and a less selfish interest. This by itself would speak against a derivation of the whole belief in gods from Animism." Spencer speaks of medicine men adored as gods after death; but this supposes the idea of the Deity. In Rome, Greece, and India ancestor-worship supposes the worship of the great gods. The departed, the fathers, the ancestors, the heroes are admitted to the society of the gods; they are often called "half-gods"; but the gods are always there before them. Again the Deity of savage faith as a rule never died at all; yet the very idea of ghost implies the previous death; a ghost is a phantom of a dead man. Now anthropologists tell us that the idea of death as a universal ordinance is unnatural to the savage (A. Lang; de la Saussaye). Diseases and death once did not exist and normally ought not to exist, the savage thinks. The Supreme Deity of the savage is minus death; he was active before death entered the world, and was not affected by the entry of death. The essential characteristic of Darumulum, of Baiame, of Cogn, of Bunjil is that they never died at all. They belong to the period before death entered the world. Hence between the high deities of savages and the apotheosized first ancestors exists a great gulf, i. e. death.

It is interesting to compare this savage belief with the *diî immortales* of the Romans, the *θεοὶ ἀθάνατοι* of the Greeks, the *Amartya* of the Hindus, the deathless gods of Babylonia, and the Egyptian deities, kings over death and the dead. The Banks Islanders have two orders of intelligent beings different from living men: ghosts of the dead and beings who are not, nor ever have been, human. The beings who never were human and who never died are called *vui*; the ghosts are named *lamate*. A *vui* is not a spirit who has been a ghost. This is the usual savage doctrine. The distinction, therefore, between eternal being and

ghost is radical and common. The fault of some anthropologists is in neglecting the distinction, in confusing both under the name of spirits, and in deriving both from the ghosts of the dead. In Polynesia the gods are called *atua*; the spirits and souls of the departed *tiki*. Their conceptions of the heavenly dwellings of the gods and the underground kingdom of the dead (*Po*, *Pulotu*) are greatly developed and not clearly defined. The Fijians have the term *kalou*, which signifies beings other than men. All gods are *kalou*, but not all beings that are *kalou* are gods. Gods are *kalou vu*; deified ghosts are *kalou yalo*; the former are eternal, the latter subject to infirmity and even death. Their supreme deity, *Udengi*, is neglected. But so would *Jehova* have been neglected, and become a mere name, if not for the Prophets. A. Lang says, "The Old Testament is the story of the prolonged effort to keep *Jehova* in the supreme place. To make and succeed in this was the *differentia* of Israel." The Zulus believe their first ancestor *Unkulunkulu* was the Creator and prior to death. Réville does not understand, in Spencer's system, "why, in so many places, the first ancestor is the Maker, if not the Creator of the world, Master of life and death, and possessor of divine powers not held by any of his descendants. This proves that it was not the first ancestor who became God, in the belief of his descendants, but rather the Divine Maker and Beginner of all who, in the creed of his adorers, became the first ancestor." Miss Kingsley maintains that a clear line of demarcation exists between ghosts who are worshipped and gods; that the former never developed into the latter; warns us against confusing the offerings to the dead with sacrifices made to the gods; she says West Africa has never deified ancestors.

Finally, as de La Saussaye states, in Greece other names are applied to the altars, sacrifices, and offerings connected with the dead than those used in the worship of the Olympian gods. The altar of the ancestors is *εσχάρα*, of the gods *βωμός*; the offering of sacrifice to the ancestors is *ἐναιγίειν* or *ἐντέλειν*, to the gods *θύειν*; the libations to the ancestors *χοαί*, to the gods *σπονδαί*. Again, the temples of the gods in Greece were so constructed that the statue in the main shrine should face the rising sun; the temple of the hero opened to the west and looked toward Erebus and the region of gloom. With Æschylus the homage of the highest gods is kept apart from that of the powers below. The Greeks sacrificed to the gods by day, to the heroes in the evening or by night; not on high altars, but on a low sacrificial hearth; black-colored animals of the male sex were killed for them, and the heads of the victims were not, as in the case of those intended for the gods, turned toward the sky, but pressed down to the ground. M. Müller tells us that in the Vedas the exclamation used in sacrificing to the gods is *svāhā*, to the departed *śradhā*. Rightly, therefore, Jevons holds that the ghost never became a god and rejects the theory that all the deities of the earlier races, without exception, were the spirits of dead men divinized. "If Mr. Spencer," writes M. Müller, "can find a single scholar to accept this view of the origin of Zeus in Greek or Dyaus in Sanscrit, I shall never write another word on mythology or religion." Thus the Ghost-theory is needed only for the rise of ghost-propitiation and genuine ancestor-worship. It reveals something in man apart and distinct from the material elements of the body. Thus viewed, its arguments are so many reasons for the belief in the future life of the soul after dissolution of the body.

Thus the history of religion reveals (1) the belief in a powerful, moral, eternal, omniscient Father and Judge of men; (2) the belief in somewhat of man which exists beyond the grave. These truths are found in every nation historically known to us. The latter belief, developed into an animistic ghost-worship, ob-

scures, but does not obliterate, the former. "Christianity," writes A. Lang, "combined what was good in Animism, the care for the individual soul as an immortal spirit under eternal responsibilities, with the One Righteous Eternal of prophetic Israel."

JOHN T. DRISCOLL.

De La Croix, CHARLES, missionary, b. at Hoorbeke-St-Corneille, Belgium, 28 Oct., 1792; d. at Ghent, 20 Aug., 1869. He was educated at the seminary in Ghent. With his fellow-students he resisted the bishop forced upon the diocese by Napoleon I and was imprisoned with his brother Joseph in the fortress of Wesel, where the latter died. After the fall of the empire, De La Croix resumed his studies, was ordained in Ghent by Bishop Dubourg of Louisiana and, with several other seminarians and some Flemish workmen, followed the bishop to the United States. In May, 1818, he was sent to Barrens, Perry County, Missouri, where, beside his missionary duties, he was to superintend the building of a seminary for the Louisiana diocese. After the arrival of Father Rosati, president of the new seminary, Father De La Croix went to Florissant, also called St. Ferdinand, near St. Louis (3 Dec., 1818). Here, with the help of the newly arrived colony of Religious of the Sacred Heart, he laboured zealously and successfully, not only among the Catholic families of the district, but also among the Osage Indians of the Missouri plains. He prepared the way for De Smet and the other Jesuit missionaries, who came to Florissant in 1823. When Father Van Quickenborne, S. J., arrived with his eight companions, all Belgians like himself, De La Croix had almost completed and paid for the brick church, started a farm, and opened a missionary field for the work of the young Jesuits. Having been appointed to St. Michael's parish in Lower Louisiana, Father De La Croix prepared for the Religious of the Sacred Heart the convent in which they opened a boarding-school in 1828. The following year he went to Belgium, broken in health, but returned to his mission with funds collected in Belgium to build a substantial church which was completed in 1832. In 1833 he went back to Belgium, where he became a canon of the cathedral of Ghent, a position which he held until his death.

P. P. LIBERT.

Delacroix, FERDINAND-VICTOR-EUGÈNE, French painter, b. at Charenton-St-Maurice, near Paris, 26 April, 1798; d. 13 August, 1863. He was the son of Charles Delacroix, minister of foreign relations under the Convention from 1795 to 1797, and a grandson, by his mother, of Aben, the famous pupil of Boule. From his earliest childhood his love for music was intense and exercised throughout his life a decided influence on his work. He always attributed his success in his representation of the Magdalen (Saint-Denis of

the Holy Sacrament), fainting from grief for her crucified Master, to an impression made upon him by the canticles of the month of May; while it was under the emotion produced by the music of the Dies Iræ that he brought forth the terrible angel of the fresco of Heliodorus (Saint-Sulpice). After his studies at the Lycee Louis-le-Grand, he entered the school of Fine Arts in Paris and studied there under Guérin.

The extreme poverty which fell to the lot of Delacroix after the death of his parents in 1819 drove him to the production of lithographs, caricatures, etc. In the mean time, however (1818), a distinct promise of his future eminence had been manifested in the first of his recorded canvases, "Roman Matrons Sacrificing Their Jewelry to Their Country". Against the advice of his master, Guérin, he exhibited at the Salon of 1822 the "Dante and Virgil", which immediately had the effect of bringing to its creator notoriety, if not fame, for it aroused a whirlwind of critical controversy. In the then-existing state of French public opinion in matters of art, it is not wonderful that Delacroix should have failed to win the much-coveted *Prix de Rome*, for which he was a competitor; but two years later (1824) his "Massacre of Scio" renewed the strife of the critics which his earlier Salon picture had first kindled, and brought him a little nearer to the goal of success. The conservative classicists condemned his work, as they condemned that of all the new romanticists, for its contempt of established traditions; the subsequent triumph of romanticism brought with it in good time his personal triumph, to be eventually signalized and confirmed by the acquisition of the two bitterly criticized early canvases, the "Roman Matrons" and the "Massacre of Scio", for the national collection of the Louvre. But only after the Revolution of 1830 did official recognition and approval visit him. In the year next following that event he travelled through Spain and Morocco, whence he brought back an inspiration of Southern light, colour, and vital force which was to make itself effectively felt in all his later and more widely known work. The new government made him a chevalier of the Legion of Honour; the day of nineteenth-century romanticism had begun in France, and Delacroix, always a leader of this new school, was fairly *arrivé*. From the exhibition of his "Murder of the Bishop of Liège" in the Salon (1831) his progress was never seriously interrupted, in spite of incessant criticism, until, in 1857, it brought him into the fold of the Institute of France. It was during this quarter of a century of his career that he produced those great compositions on mediæval and Arabian themes with which his name is now-days most commonly associated.

The bitter opposition which Delacroix had all his life to endure drew him into discussions in which he displayed a real literary talent. No one who would arrive at a true idea of the man should omit the perusal of his essays on art and his correspondence. The number of his pictorial works is immense, aggregating about 9140 subjects, classified by Ernest Chesneau as follows: 853 canvases, 1525 pastels, water-colours, etc., 6629 drawings, 24 engravings, 109 lithographs, and 60 albums. The following may be mentioned as marking important moments in the development of his genius: "The 28th of July, 1830" (1830); "Charge of Arab Cavalry" (Montpellier Museum—1832); "Algerian Women" (Louvre—1834); "Jewish Wedding in Morocco" (Louvre—1841); "Taking of Constantinople by the Crusaders" (Versailles Museum—1841); "Muley-abd-el-Rahman leaving his palace at Mequinez" (Toulouse Museum—1845); "The Two Foscari" (Collection of the Duc d'Aumale at Chantilly—1855). To his early period belong the famous lithographs of Faust which brought him warm praise from Goethe himself. "Sardanapalus" (Salon, 1828), another early *chef-d'œuvre*, drew from Vitet the remark

that "Delacroix était devenu la pierre de scandale des Expositions", while Delécluze called it "une erreur de peinture". "Richelieu Saying Mass", was ordered by the Duke Louis Philippe d'Orléans, while "The Death of Charles the Bold" was ordered by the Minister of the Interior. "The Murder of the Bishop of Liège", the canvas which actually assured his contemporary fame, was probably the best of all his pictures. From this on, masterpieces follow one another until adverse criticism could no longer seriously affect his position in the world of art.

Appreciation of His Work.—The real founder of the nineteenth-century French School of art, Delacroix stands alone and unsurpassed. The difficulties he had to contend with came from his forcing upon an ignorant public a new school wholly opposed to that of David, which was insincere in its coldness and artificiality, conventional, and absolutely unsympathetic. Though one can find in Delacroix almost all the best points of men like Rembrandt, Rubens, and Correggio, from the moment he shook off the influence of Géricault—so manifest in "Dante and Virgil"—he threw himself entirely on the resources of his own genius. On the eve of finishing the "Massacre of Scio" he had occasion to notice some works of Constable, and there discovered and made his own a principle of art

which so many masters have failed to appreciate, viz. that in nature, what seems to be of one colour is in reality made up of many shades, discovered only by the eye which knows how to see. Thereafter colouring had no secret for him. Delacroix was an artist in a supreme degree. Possessed of a deep knowledge of history, he studied each group and each individual in series of sketches, which were retouched again and again; then only did they take place in the ensemble. With the instinct of a poet he saw vividly the scene he was painting. His artistic sense kept him from falling into the melodramatic, but he remains tragic, and it is for this tragic note, which finds expression in so many bloody themes, that he is generally criticized. Delacroix worked with an unerring instinct of composition, avoiding the monotony of regular line by the varied attitudes of his figures. He excelled in the various branches of his art, and his decorative pictures in the Gallery of Apollo at the Louvre, the drawing-room of the king, the chamber of deputies, and St-Sulpice are as excellent as his canvases. There is hardly a tragedy of the human soul which is not reproduced in his work. He is not popular because the multitude wants pleasure, and Delacroix, like Pascal, does not make one laugh; he terrifies. In the "Murder of the Bishop of Liège", before admiration comes one has shivered at the vivid portrayal of human ferocity; in the "Christ in the Garden of Gethsemani" there is no human sorrow equal to that. Delacroix is the highest manifestation of French genius in art; he not only honours France, but mankind, and is one of those whom Emerson said were "representative of humanity".

HENRY ANGER.

Delaroche, HIPPOLYTE (known also as PAUL), painter, b. at Paris, 17 July, 1797; d. 4 November, 1856. A pupil of Watelet, a landscape painter of mediocre ability, and afterwards of Gros, a great painter but a very poor teacher and incapable of harmonizing his doctrines with his genius, Delaroche was consequently badly trained. Without any deep conception of mankind or of life, without style, and lacking even a novel idea along the lines of art or beauty, Delaroche was nevertheless gifted with a certain commonplace skill and aptitude which satisfied the public, and, whilst fully realizing his narrow limitations, he was astute enough to supply the want of artistic ability by an ingenious choice of subjects. Herein lay his genius, if indeed it may so be called. In this he appealed to the taste of the bourgeoisie which, devoid of artistic culture, had in the rôle of Mæcenas succeeded the aristocracy of the old regime and definitively come into power during the Restoration and the July Mon-

PAUL DELAROCHE

archy. The artist's debut in the *salon* of 1819 with "Naphtali in the Desert" passed by unnoticed. Another Biblical subject appeared in the *salon* of 1822, and in 1824 he won the gold medal. Delaroche discovered his vein and thenceforth, except for the occasional treatment of some current event (The Capture of the Trocadero, 1827), he worked upon that series of historical incidents, that vast repertory of anecdotes generally taken from the civil wars of France and England and which, when multiplied by the engravings of Goupil, the publisher, who thereby made a fortune, became equally valuable to the author in Paris and London. We must admit that Delaroche was admirably served by his engravers, of whom Henriquel Dupont was the best known. His inartistic painting gained much by being translated into engraving as, in this way, only the subject had to be reproduced. It must be admitted that, in all these works, Delaroche shows himself an incomparable scene-setter. In his masterpiece, "The Assassination of the Duke of Guise" (1835, Condé Museum), he is most realistic and furnishes, as it were, the retrospective photograph of a sixteenth-century drama. Therein accuracy of detail, naturalness of composition, and the extremely careful treatment of the decoration copied from the Château of Blois replaced, if indeed they do not equal, the impression made by real art. And yet the unique success of this small picture does not attend the larger ones, which do not so fully reflect the painter's fancy.

In 1833 there was question of entrusting him with the decoration of the church of the Madeleine, but the large order was divided and the artist refused to accept half of the task that was to have been his in its entirety. By way of compensation he was commissioned to decorate the hemicycle of the Ecole des Beaux-Arts. This work, completed in 1841 and which

was for some time regarded as a masterpiece of decorative painting, is an ideal assemblage, or ecumenical council, of all the great artists from Ictinus to Bramante, from Cimabue to Velazquez, and from Phidias to Erwin von Steinbach, a composition in which the disconnectedness of the whole rivals the absence of character in each personage taken individually. Few great "machines" convey a more cruel impression of the utter lack of ideas and the incurable debility of the poetic or plastic conception. This frieze, officially praised, marked the decline of the artist in the eyes of competent judges and gave unmistakable evidence of his indigence. Delaroche endeavoured to reinstate himself by working up different familiar and pious subjects. He also followed the vogue of the imperial cult and produced several scenes from the life of Napoleon. But even this ingenious idea did not restore the artist to his pristine glory. Then, as a last resource, he returned to his first subjects: "The Last Prayer of the Children of Edward IV" (1852); "The Last Communion of Mary Stuart" (1854), etc. His declining years were very sad. In 1835 he married the only daughter of Horace Vernet, but she died in 1848. At this time, although retaining popular favour, he was keenly sensible of the contempt of his fellow artists and realized not only that they would never regard him as one of their number but that, despite his glory, his fortunes, and his titles, he must ever remain in their eyes a Philistine painter. He exhibited nothing in the *salon* subsequently to 1837 and had not the courage to participate in the great manifestation of 1855, which was the dazzling triumph of the French School. His "Christian Martyr" (Louvre, 1855), so feebly delineated and poorly painted, nevertheless exhales exquisite sentiment and is, as it were, the last sigh of a Christian Ophelia. But the shortcomings of the artist should not blind us to the purity of his character and the uprightness of his life. Besides, faulty as his style may be, he nevertheless has the merit of being an inventor. He created anecdotal painting and the special order of illustrations to which we owe, among so many inferior works, the most creditable productions of J. P. Laurens. Delaroche had an "idea", whatever its value, and this fact alone is unusual enough to be taken into account.

LOUIS GILLET.

Delatores (Lat. for DENOUNCERS), a term used by the Synod of Elvira (c. 306) to stigmatize those Christians who appeared as accusers of their brethren. This synod decided (can. lxxiii, Hefele, *Concilien-geschichte*, 2d ed., I, 188) that if any Christian was proscribed or put to death through the denunciation (*delatio*) of another Christian, such a delator was to suffer perpetual excommunication. No distinction is made between true and false accusation, but the synod probably meant only the accusation of Christianity before the heathen judge, or at most a false accusation. Any false accusation against a bishop, priest, or deacon was visited with a similar punishment by the same synod (can. lxxv, op. cit., 189). The punishment for false witness in general was proportioned by can. lxxiv to the gravity of the accusation. The Council of Arles of 314 issued a similar decree (can. xiv, op. cit., p. 213), when it decided that Christians who accused falsely their brethren were to be forever excluded from communion with the faithful. During the persecutions of the early Christians it sometimes happened that apostates denounced their fellow-Christians. The younger Pliny relates in a letter to Trajan (*Apostolic Fathers* ed. Lightfoot, 2d ed., I, i, 50 sqq.),

that an anonymous bill of indictment was presented to him on which were many names of Christians; we do not know, however, that the author of this *libellus* was a Christian. According to can. xiii of the Council of Arles (op. cit., 211 sqq.), during the persecution of Diocletian Christians were denounced by their own brethren to the heathen judges. If it appeared from the public acts that an ecclesiastic had done this, he was punished by the synod with perpetual deposition; however, his ordinations were considered valid. In general, false accusation is visited with severe punishments in later synods, e. g. Second Council of Arles (443 or 453, can. xxiv), the Council of Agde (506, can. viii) and others. These decrees appear in the later medieval collections of canons (q. v.). New punitive decrees against calumny were issued by Gregory IX in his *Decretals* (*de calumniatoribus*, V, 3 in Corp. Jur. Can.).

De la Vega. See GARCILASO DE LA VEGA.

Delaware, one of the original thirteen of the United States of America. It lies between 38° 28' and 39° 47' of N. lat. and between 74° 56' and 75° 46' of long. West of Greenwich, and is bounded on the N. by the State of Pennsylvania, on the E. by the Delaware River and Bay, and on the S. and W. by the State of Maryland. Its area is 2370 square miles, of which 1965 square miles are of land area, and 405 square miles of water area. Delaware is an agricultural state, its soil is fertile and a large portion of it in a high state of cultivation.

HISTORY.—In 1609 Henry Hudson, in the employ of the Dutch East India Company, on his third voyage of discovery, sailed into Delaware Bay. This was the first visit of a European, so far as known, to the territory now called Delaware. The bay was so named about the year 1610 by the Virginians in honour of their first Governor, Thomas West, Lord Delawarr. The Dutch, basing their claims on rights acquired by Hudson's discovery, made the first attempt at settlement. In 1629, under the authority of the Dutch West India Company, and with the countenance of the Governor and Council of New Netherlands, a tract of land from Cape Henlopen to the mouth of the Delaware River was purchased from the natives, and a company formed in Holland to colonize it. In the spring of 1631 a ship carrying emigrants reached the Delaware, and a colony was planted near Cape Henlopen, on Lewes Creek, the colonists giving the country the name *Swaanendael*. The life of this colony was ended after a few months. Trouble with the Indians arose, and a fort which had been erected was destroyed, and all the colonists murdered. In 1638 an expedition consisting of two ships carrying some fifty Swedish emigrants, and commanded by Peter Minuit, the deposed Governor of the New Netherlands colony, commissioned by the Swedish Queen Christina, entered Delaware Bay, and the present site of Wilmington was chosen as the place for the first settlement. The colony was known as New Sweden. A fort called Christina was built. After about two years of prosperity sickness began to prevail, and the colony was on the eve of breaking up when another Dutch expedition, though under the patronage of the Swedish Company, appeared, and the new colonists located their settlement several miles from Fort Christina. The new arrivals revived the spirits of the Swedes, who decided to remain. Additional colonists from Sweden arrived in 1640, and the colony became well established and prosperous. In 1655, on the appearance of a Dutch fleet, all the forts and settlements were surrendered, and such Swedes as would not take the oath of allegiance were sent to the home country. In 1656 the West India Company sold its interests on

the South River (called South as distinguished from the North River, as the Hudson was then called) to the City of Amsterdam, and the colony was called "New Amstel" and the authority of New Netherlands over it was ended. In 1664, after the surrender of New Amsterdam to the English, the Delaware settlements were also taken. The name of New Amstel was changed to New Castle, and the settlements were annexed as an appendage to New York, then also under English rule.

According to the charter to William Penn in 1681, the territory of Pennsylvania was bounded on the south by a circle drawn twelve miles distant from the town of New Castle northward and westward, the territory on the Delaware as far down as what was then called Cape Henlopen remaining to the Duke of York. In the same year Penn's authority, with the consent of York, was extended to include this territory also. As early as 1685 a controversy began between Penn and Lord Baltimore as to the ascertainment of the southern and western boundaries of the country along the bay as transferred by York to Penn. Numerous agreements were entered into between the respective proprietors for determining the boundaries, but none gave promise of ever being carried out. This quarrel retarded the settlement of the country and oftentimes caused bloodshed. In 1750 the present boundaries between Delaware, Maryland and Pennsylvania, as mentioned in an agreement between the heirs of Penn and Baltimore in 1732, were decreed by the English Court of Chancery, and in 1763, Charles Mason and Jeremiah Dixon, two surveyors, were engaged and sent over from England to mark the lines. In 1764 the work was started. The present south and west lines of Delaware are the result of a part of this work. The east and west line (between the present States of Pennsylvania and Maryland), which they ran and marked, is the historical Mason and Dixon's Line, the boundary between the former free and slaves States. In 1691, with Penn's consent, the lower counties, now the State of Delaware, became a separate Government, only to be again united to Pennsylvania in 1693. In 1702 Pennsylvania convened its legislature apart, and the two colonies were never again united. The "Counties of New Castle, Kent and Sussex upon Delaware" as they were called, began to be governed by a separate assembly, and though the authority of the Governor of Pennsylvania was still acknowledged, the legislature and tribunals were not appreciably affected by any external authority. This was the form of government until a separate constitution was adopted in 1776. The representatives of the three lower counties upon the Delaware were members of the Continental Congresses of 1774 and 1775, and voted for the adoption of the Declaration of Independence in 1776. Among the most noteworthy Articles of the Constitution of 1776 was the following: "There shall be no establishment of any one religious sect in this State, in preference to another, and no clergyman or preacher of the gospel of any denomination shall be capable of holding a civil office in the State, or of being a member of either of the branches of the legislature, while they continue in the exercise of the pastoral function." In 1779 the State's delegates were instructed to ratify the "Articles of Confederation and Perpetual Union" adopted by Congress.

During the Revolutionary War Delaware enlisted, including Continental soldiers and militia, a total of 3763 men. On 7 Dec., 1787, the Delaware legislature ratified the Federal Constitution, being the first State to give its approval. The population of the State in 1790 was 59,094, of whom 8887 were slaves. Constitutional conventions were held in 1791 and 1831, and the present Constitution was adopted at a convention in 1897. The common law procedure is followed in the courts, and the judges are appointed for terms of

twelve years. In the war of 1812 Delaware was well represented in both the land and naval forces, her best-known representative in the latter being Commodore Thomas Macdonough, the hero of Lake Champlain. Prior to the Civil War, Delaware was classed with the Southern, or slave-holding, States. In the election of November, 1860, the State's electoral vote was given to John C. Breckinridge, who stood for the constitutional rights of the Southern States, while at the same time all the political parties within the State pledged their loyalty to the Union. In January, 1861, a commissioner from Mississippi appeared before the Delaware legislature and invited the State to join the Southern Confederacy. The House unanimously, and the Senate by a majority vote, expressed their disapproval of such a remedy for existing difficulties. While there was considerable respect and some sympathy for the rights of the seceding States, there was at all times constant adherence to the National Government. Delaware being a border State, there was some distrust on the part of the Government, particularly as to the southern portion, and at times martial law prevailed. Out of a total white population in the State in 1860 of 90,589, the aggregate number of troops furnished to the Union army during the war by Delaware was 13,651. Admiral Samuel F. Dupont was one of the ranking officers in the Union service credited to Delaware. On 5 Feb., 1867, the State legislature in accordance with the Governor's recommendation rejected the Fourteenth Amendment to the Federal Constitution. At the legislative session of 1869 the Fifteenth Amendment to the Constitution was also rejected.

POPULATION.—The estimated population of the State in 1906 was 194,479. Wilmington, with an estimated population in 1906 of 85,140, is the largest city. In 1900, in a population of 184,735 there were 94,158 males and 90,577 females. Classified by race, there were 153,977 whites, 30,697 negroes and 61 persons of other races; 170,925 of the population were natives, and 13,810 were foreign born. There were 40,029 males of military age, and 54,018 males of voting age, of whom 45,592 were whites, and 8,374 were negroes. The total number of families was 39,446 and the average number of persons to a family was 4.7.

EDUCATION.—The first school in the State was opened before 1700, under the direction of the pastor of Old Swedes' Church. During the last half of the eighteenth century, the leading educational institution in the State was the Wilmington Academy, which was built in 1765. Prior to the constitution of 1791, no provision was had for free schools in the State. In that instrument provision was made "for establishing schools and promoting the arts and sciences", and in 1796 an act was passed by the legislature applying all the moneys received from marriage and tavern licenses to a school fund. This was the beginning of the public school system in the State. In 1829 a "Free School Law" was passed, which divided the counties into many self-governing school districts, each district being the judge of the tax requisite for its own needs. The present school law was passed in 1875, and provided for a fixed tax to be raised annually in each district for the support of the schools therein. Each county has a superintendent of schools, who as such is a member of the State Board of Education. In addition to the tax raised in each school district, there is the income of a large permanent school fund, and regular legislative appropriations. The Constitution ordains that not less than \$100,000 annually shall be provided by the legislature, which, with the income of the permanent school fund, shall be used exclusively for payment of teachers' salaries, and for furnishing free text-books. Separate schools are provided for coloured children. In 1900 the total attendance in the free schools of the State was 28,753, nearly equally divided as to sex, of

which number 24,868 were whites, and 3883 were negroes. The total amount expended on the free schools of the State for the school year 1905-1906, including amounts derived from school tax, legislative appropriations, and income from school fund, was \$501,745.80.

In 1907 a compulsory education law was passed providing for the continuous attendance for at least five months in each year, at either public or private school in which the common English branches are taught, of all children between the ages of seven and fourteen years, unless excused for certain reasons specified. Delaware College, the chief institution of learning in the State, is located at Newark. Chartered in 1833, it was opened in 1834, and has had a very successful career. It is governed by a board of trustees, one-half of whom are named by the State. In 1869 the legislature adopted this college as the institution to be provided as an Agricultural College in accordance with the Congressional Enabling Act of 1862. Technological and agricultural, as well as classical, courses of instruction are provided. The number of professors and teachers is twenty-two, and the number of students in attendance is 158. Women are excluded from attendance at the college. Wilmington Conference Academy (Methodist), located at Dover, was founded in 1873. St. Mary's College, founded in Wilmington in 1841, by the Rev. Patrick Reilly, became a well-known institution, and numbered some of the best-known Catholics in the country among its graduates. In 1857 there were 120 resident students. It prospered till the opening of the Civil War, and in 1866 closed its doors. There are a number of excellent private schools and academies scattered through the State. A State College for coloured students, founded in 1892, is located at Dover. A manual and agricultural, as well as classical and technical, instruction is there furnished. Reform schools for both boys and girls are supported in part by the State. There is also a State Hospital and Insane Asylum. Delaware having no institution for the instruction of the deaf and dumb or the blind, the State bears the expense of having a certain number of them cared for and instructed in proper institutions in other States.

CATHOLIC PROGRESS.—Prior to 1772 no definite records are obtainable regarding any regularly established Catholic church in the present State of Delaware. The Catholics in the State prior to the latter part of the eighteenth century were very few in number. In 1730 Cornelius Hallahan, an Irish Catholic, settled in Mill Creek Hundred, in New Castle County, on an estate called by him Cuba Rock, near the present location of Mount Cuba. The first Catholic services in the State were probably held at his house. The Apoquinimick Mission, in the lower part of New Castle County, was established before 1750 by Jesuits from St. Xavier's Mission in Cecil County, Maryland. The latter mission, founded in 1706 by Father Thomas Mansell, S.J., near the junction of the Great and Little Bohemia Rivers, is still in existence, and known as Bohemia Manor. In a report from the Episcopal Mission at Dover (Kent County) to the clergymen of the Pennsylvania province, made in 1748, it is stated that the "Quakers and Roman Catholics were long accustomed to bury their dead at their own plantations." Again in 1751 a like report from the Dover Mission states: "There are about five or six families of Papists, who are attended once a month from Maryland with a priest." In January, 1772, Father Matthew Sittensperger, a Jesuit known at the Bohemian Mission under the name of Manners, purchased a farm in Mill Creek Hundred, which was known as Coffee Run, and here a log chapel called St. Mary's and a residence were erected. Father Sittensperger was succeeded by the Rev. Stephen Faure, who, with other Frenchmen, driven from St. Domingo by negro

uprisings, settled at Wilmington. He was assisted by the Rev. John Rosseter, an officer in Rochambeau's army during the Revolutionary War, and then an Augustinian. In 1798 he was succeeded by the Rev. Mr. Cibot, who had been Vice-Prefect Apostolic in St. Domingo. In 1800 the Rev. Charles Whelan became pastor, to be succeeded in 1805 by the Rev. Patrick Kenny. From this church the Catholics of the surrounding country as far as at West Chester, Pennsylvania, and Wilmington, were attended. Father Kenny was assisted for a time by the Rev. George A. Carrell, who afterwards became Bishop of Covington, Kentucky. The arduous labours and personality of Father Kenny have made him probably the best-known priest in the early Catholic history of the State. Some portions of Coffee Run Church are still standing. The site of the church is about six miles from Wilmington on the Lancaster Pike. In 1785 Delaware was one of the four States (the others being Pennsylvania, Maryland, and Virginia) where Catholics were not virtually under civil disabilities.

From its earliest settlement, at no time did religious intolerance ever appear in the government of the Swedish colony which grew into the State of Delaware. In 1816 St. Peter's, the second church in the State, was built by Father Kenny. This church, often enlarged and beautified since, is now the cathedral of the diocese. Father Kenny was first assisted in 1834, and later succeeded, by the Rev. Patrick Reilly, who, as priest and educator, was one of the most respected clergymen in the country. In 1830 the first Catholic Orphan Asylum in the state was opened in Wilmington. In 1839 the first parochial school in the State was built adjoining St. Peter's. Until 1868 the State formed a portion of the Diocese of Philadelphia, but in that year the present Diocese of Wilmington was created. It comprises the State of Delaware and the Eastern Shore counties of Maryland and Virginia. The Right Rev. Thomas A. Becker was the first bishop. Bishop Becker, on being transferred to Georgia in 1886, was succeeded by the Right Rev. Alfred A. Curtis, who, after a service of ten years, resigned, and was succeeded by the Right Rev. John J. Monaghan, 26 January, 1897. The Delaware diocese from its creation has been distinguished by the excellences in ability and temperament of its bishops. The years 1825 to 1860 marked the first important period of Catholic immigration, and the chief nationality found among the Catholic population has been the Irish. The Catholic population of the diocese (1908) is 31,000, of whom 500 are negroes. The Catholic population of the State is 25,000. There are 46 churches in the diocese, of which 20 are in Delaware. The one Catholic church for negroes is situated in Wilmington. The number of priests in the diocese is 43, and the number in the State 34. Of the whole number in the diocese 30 are seculars and 13 belong to various orders. There are twelve parochial schools in the State, with an attendance of 3100. Orphan asylums for white boys and girls, the former near Delaware City and the latter at Wilmington, are under the care, respectively, of the Sisters of St. Francis and the Sisters of Charity. A coloured orphan asylum in Wilmington is conducted by the Josephite Fathers. A coloured Industrial and Agricultural School is also maintained by the Josephite Fathers at Clayton. A Home for the Aged, at Wilmington, is under the care of the Little Sisters of the Poor. All these institutions are well housed, admirably managed, and speak well for Catholic benevolence in the state. A Summer Home for the teaching orders of the Sisters in the State and for poor girls has been opened at Rehoboth, a seaside town. Salesianum, a preparatory school, located at Wilmington, under the care of the Oblates of St. Francis de Sales, and the Ursuline Academy, a boarding and day school for girls, are the present chief Catholic educational institutions in the State. Within the diocese is a

novitiate of the order of Oblates of St. Francis de Sales and a convent of Visitation nuns.

OTHER RELIGIONS.—The first religion in the State was that brought by the Swedish settlers, namely, the Lutheran. The first church erected was in 1638 within Fort Christina, and the second in 1643 near New Castle. Dutch and Swedes worshipped there. Old Swedes' Church, built in 1698, under the direction of the celebrated Swedish minister Bjork, is still in use and in a splendid state of preservation. After the arrival of the English, the Swedish and English churches were, for the greater part of the time, attended by the same minister. About 1791 the Swedish Lutheran Church merged into the Protestant Episcopal. The Society of Friends erected their first meeting house in Delaware about 1687, and for the greater part of the State's history, they were probably the most influential and respected class in the State, particularly in the northern portion. The first Presbyterian church in the State is known to have been established with elders and trustees as early as 1705, but the precise year of its institution is not known. The Baptist Church in the State was founded in 1703 by emigrants from South Wales, who settled upon the "Welsh Tract", a portion of the Penn grant in Pencader Hundred, New Castle County, and erected a meeting house. This was the third Baptist meeting house erected in America. Meetings of the Methodist denomination were held at Wilmington as early as 1766, and in 1780 "Barratt's Chapel" in Kent County (still in use) was erected. This was one of the cradles of the Methodist Church in America, and here the first General Conference of American Methodism was appointed. The active church membership and the Sunday-school membership of the leading Protestant denominations are (1908): Methodist Episcopal, 40,000; Protestant Episcopal, 6280; Baptist, 5000; Presbyterian, 12,700. There are many churches for coloured people in the State, among which the Baptist and Methodist, particularly the latter, predominate. Among other creeds and denominations represented in the State, are the Lutheran, Unitarian, Swedenborgian, Christian Science, Methodist Protestant, various divisions of the Baptist Church, Seventh Day Adventist, and Hebrew.

LEGISLATION.—The first article of the State Constitution, adopted in 1897, states, "No man shall or ought to be compelled to attend any religious worship, to contribute to the erection or support of any place of worship, or to the maintenance of any ministry, against his own free will and consent"; and also states that "No religious test shall be required as a qualification to any office or public trust under this State". This same language is found in the Constitution adopted in 1831. Blasphemy is punishable as a misdemeanor. By statute any worldly employment, labour or business (works of necessity or charity excepted), peddling goods, droving, fishing, fowling, gaming, horseracing, cock fighting or hunting game, and playing and dancing, on the Sabbath day, are all prohibited and made punishable as misdemeanours. The usual form of oath is by swearing upon the Holy Evangelists of Almighty God. A person believing in any other than the Christian religion may be sworn according to the peculiar ceremonies of his religion, if there be any such. A person conscientiously scrupulous of taking an oath may be permitted to affirm to the truth of the matters to be testified. A chaplain is appointed by either branch of the legislature, and the daily sessions (by force of custom only) are opened with prayer. Christmas and Sunday are the only religious holidays recognized as legal holidays. There is neither statute nor court decision in the State, regarding the seal of confession.

Prior to 1893 the provisions of one statute covered the incorporation of congregations or societies of whatsoever denomination. At that time, a statute

was passed providing exclusively for the incorporation of Catholic congregations. It gives a simple method for incorporating a church congregation. Under a statute, all real and personal property belonging to any church or religious society is not liable to assessment and taxation for public purposes, unless the property is in the form of a school where the tuition is not free. The constitution provides: "No portion of any fund now existing, or which may hereafter be appropriated or raised by taxation, for educational purposes, shall be appropriated to, or used for, or in aid of any sectarian church or denominational school, provided, that all real or personal property used for school purposes where tuition is free, shall be exempt from taxation and assessment for public purposes". The right of any charitable or educational corporation to take by devise or bequest is undoubted. While the language of the statute under which Catholic congregations are formed into church corporations is not beyond cavil in this regard, the assumption is that such a corporation may take by devise or bequest, without qualification or condition. In this respect, the rights of Catholic church corporations are clearer and more liberal than those enjoyed by church corporations of any other denomination. Ordained ministers of the Gospel are not liable to serve as jurors. Military service is voluntary. By the constitution, no divorce may be granted except by the judgment of a court. Annulment of marriage for certain causes, existing at the time of marriage, is provided for. For divorce, the reasons are adultery, bigamy, imprisonment, cruelty, desertion, habitual drunkenness, and hopeless insanity. Hearings and trials in divorce matters must in all cases be had before the court and in public. Marriage within the degrees of the established table of consanguinity, or between whites and blacks, is unlawful and void, and the parties thereto are guilty of a misdemeanour. A regularly issued license is a condition precedent to marriage, unless the banns are published at some place of stated religious worship, within the Hundred of the woman's residence on two Sabbaths, and no objection made to such marriage.

The sale of liquor is licensed by the State, but with many restrictions. The State is divided into four local option districts, in two of which prohibition laws are now in force.

Legacies for religious, charitable and educational purposes are not subject to taxation. The right to dispose of property by will may be exercised by any person of the age of twenty-one years or upwards, who is of sound mind. Such will must be in writing, except a nuncupative will, by which an estate not exceeding \$200 may be disposed of. Cemetery corporations are now formed under the provisions of a general incorporation law. No taxes are paid on lands used for cemetery purposes.

The constitution places no limit to direct taxation, but no State tax on assessed property is levied. County and municipal assessment and taxation is employed. There is no tax on income. A collateral inheritance tax is collected, where the recipient is a stranger in blood, and the estate exceeds \$500.

CHARLES F. CURLEY.

Delaware Indians, an important tribal confederacy of Algonquian stock originally holding the basin of the Delaware River, in Eastern Pennsylvania, U. S. A., together with most of New Jersey and Dela-

ware. They call themselves *Lenapé* or *Lenni-lenapé*, about equivalent to "real men". The English knew them as Delawares, from the name of the river; the French called them *Loups* (wolves), under which term they included also the cognate *Mahican*; while to most of their Algonquian neighbours they were known as *Wapanaki* (Easterners). By reason of being the parent body of a number of cognate tribes, and holding the ancestral territory, they were accorded precedence in intertribal assemblies, under the respectful title of "grandfather".

The Lenapé proper consisted of three tribes—Munsee, Unami, and Unalagtgo—symbolized respectively under the totems of the Wolf, Turtle, and Turkey. Of these the Munsee held the Upper Delaware and were considered the defenders of the frontier against the incursions of the hostile Iroquois. Their dialect differed considerably from that of the other two. The Unami held the middle course of the river, together with the hereditary chieftaincy, while the third tribe occupied the lower country. Each tribe was organized into clans or *gentes*, numbering about thirty-five in all, with descent in the female line, as usual among the Eastern Indians. In habit they were sedentary, depending chiefly upon agriculture rather than upon hunting, cultivating large quantities of corn, beans, squashes, and tobacco. Their houses, consisting of a framework of poles covered with bark or mats woven of rushes, were of wagon-top shape and accommodated several families each.

The most ancient traditions of the Lenapé are contained in the sacred pictograph record known as the *Walam Olum* or "Red Score", first brought to notice by Rafinesque in 1836 and published with translation and notes by Brinton in 1885. They made their first treaty, with Penn, in 1682, at Shackamaxon within the present limits of Philadelphia. To this period belongs their noted chief Tamenend, from whom the Tammany Society derives its name. As the whites pressed upon them the Delawares gradually retired westward, first to the Susquehanna and thence to the Alleghany, until in 1751 they began to make settlements in Ohio, where the greater part of the tribe was established at the outbreak of the French and Indian war in 1754. In common with all the other tribes of the Ohio region, they sided with the French against the English in this war and continued the struggle independently for some time after the French garrisons had been withdrawn. Throughout the Revolution and the war of 1812 they were allies of the English against the Americans. As early as 1746 zealous Moravian missionaries had begun work in the tribe in Eastern Pennsylvania, and succeeded in winning a considerable number to Christianity, despite persecutions and removals forced upon them by the whites, culminating in the massacre of an entire community of Christian Delawares at Gnadenhutton, in Ohio, in 1782.

The war of 1812 was followed by treaty cessions and other removals, most of the Christian Delawares emigrating to Canada, while the others, after various halts by different bands in Indiana, Missouri, Arkansas, and Kansas, were finally collected chiefly in the present Oklahoma, the main body incorporating with the Cherokee in 1867. They have greatly decreased, but number (1908) altogether about 1900 souls, including about 870 with the Cherokee and 95 more with the Wichita, in Oklahoma; about 250 Munsee in Wisconsin and some 50 more in Kansas; and the rest, under the names of Muncsees and Moravians, on reservations in Ontario, Canada.

JAMES MOONEY.

Delcus, a titular see of Thrace, suffragan of Philipopolis. The Greek name of the place was Delkos or Delkoi, later Derkos or Derkoi; the latter forms have prevailed. The Turkish and common name is Derkos. It is now a little village south-west of Kara Bournou, a promontory on the Black Sea, and on the southern bank of Lake Derkos, the waters of which are brought to Constantinople by an aqueduct. There are about 300 inhabitants. The see, though some have connected its origin with the preaching of St. Andrew, is not mentioned before the eighth century; however a rather obscure record of Balsamon (P. G., CXXXVII, 548) permits the supposition that it was established shortly after the Trullan Council of 692. The first known bishop is Gregory, who attended the Second Council of Nicæa in 787. In the records of the councils under Photius are found the signatures of his partisan Neophytus and of Macarius, the partisan of St. Ignatius. About 840 the see stood twentieth among the autocephalous archbishops. Its archbishop, John, subscribed a synodal sentence in 997. Balsamon (P. G., CXXXVIII, 273) speaks of another prelate who sought permission to reside in the larger and richer city of Philæas. Another was reproached in the Holy Synod by the Patriarch Michael with having ordained a bishop native of Constantinople and before the canonical age (*ibid.*, 213); he was perhaps the John who was present in 1166 at the council of Constantinople, known as "Pater major me est". One Gregory subscribed another council in 1193. In 1316 the see was given to the Archbishop of Nymphæum, who had been deprived of his own (Miklosich and Müller, "Acta et diplomata græca", I, 50). Luke was archbishop in 1329 (*ibid.*, 98). In 1356 the see was per *adjunctionem* in the hands of the Metropolitan of Bizye (*ibid.*, 355). In 1365 it had again an occupant, and its bishop in 1379 and 1381 was Paul; in 1389 Joseph was bishop (*op. cit.*, II, 6, 39, and 129). In 1466 it was and probably had long been ruled directly by the Patriarch of Constantinople [Kam-bourgoulos, Monuments for History of Athens (Gr.), II, 354]. It was not re-established until the beginning of the seventeenth century, when the titular resided at Therapia on the Bosphorus. Delcus was made a metropolis in 1655. In October, 1746, it was raised to the eighth rank of the Greek hierarchy (Mansi, Col. concil., XXXVIII, 527). The diocese now includes 41 villages in the vicinity of Constantinople and along the shores of the Black Sea and the Sea of Marmora, among them San Stefano, Makri-Keui, and Beuyuk-Déré, with Catholic parishes conducted by Capuchins, Dominicans, and Minor Conventuals.

L. PETIT.

Delegates, APOSTOLIC. See LEGATE.

Delegation (Lat. *delegare*), the commission to another of jurisdiction, which is to be exercised in the name of the person delegating. Jurisdiction is defined as the power of anyone who has public authority and pre-eminence over others for their rule and government.

I. In ancient Roman law, delegation was the substitution of one debtor for another; the second debtor making payment in the name of the first. In modern civil law, the term *delegations* is used for committees of representatives or judges, who in the name of the parliament of the judiciary consider and determine the special matters confided to them. In canon law, delegation is the spiritual jurisdiction or power which a person exercises in virtue of a commission from one having ordinary jurisdiction (see JURISDICTION), with the understanding that such delegate must act in the name of the one delegating. The canons distinguish

between delegation *ab homine*, and delegation *a jure*. The former is that which comes from a person in the strict sense of the word; while the latter may have its source in a juridical or moral person. Thus, it is through delegation *a jure*, that is in virtue of jurisdiction granted by the Council of Trent, that bishops have certain powers in regard to exempted regulars. Whenever the common law designates a person as having powers which belong to another by ordinary right, the one upon whom they are conferred is said to be a delegate *a jure*. If bishops exercise such powers "as delegates of the Apostolic See", an appeal against their actions would have to be made to the pope, for it is really his jurisdiction they are employing; while if the common law refers to them as acting "also as delegates of the Holy See", an appeal could be taken to the metropolitan, as in such a case the bishop acts in virtue of both ordinary and delegated jurisdiction. Historically, the origin of canonical delegation is to be sought most probably in the fifth (in the Latin version, the seventh) canon of the Council of Sardica (A. D. 347), which speaks of judges delegated for Roman appeals. From the fifth century onwards, instances of appointment of delegates by the popes are distinctly recorded, and such delegation became more frequent as time went on, particularly since the pontificate of Gregory I (590-604).

II. Anyone having ordinary jurisdiction may delegate another, unless such power be expressly withheld from him. It is necessary to mention this restriction, for although parish priests have ordinary jurisdiction for the tribunal of penance, yet they cannot strictly delegate another for that task, because the hearing of confessions belongs to the external forum and all confessions need episcopal approbation. The person delegated by the lawful superior must be a cleric well versed in the matter for which he receives delegation, and he must not be excommunicate. While the age of twenty years is prescribed by law for the delegate, it is also provided that the age of eighteen will suffice, if those concerned are satisfied. Several delegates may be appointed for the same matter. In this case each may receive such a commission that if he undertake the matter alone the other delegates may no longer interfere, unless the first be hindered from determining it (*delegatus in solidum*); or the power in a cause may be delegated to several persons so that they must act together to make the effect of their delegation valid (*delegatus simpliciter*). If the delegate be commissioned by the pope, he should ordinarily be an ecclesiastical dignitary or a cathedral canon, and the case should be heard in a city or place of some religious or civic distinction. It is evident, however, that the sovereign pontiff may, if he choose, derogate from these laws in all their aspects. General defects disqualifying a person to receive delegation are infamy, deafness, insanity, dumbness, slavery, and the like. It was stated that the person delegated should be a cleric; for neither bishops nor those inferior to them can delegate a layman for spiritual matters or for criminal causes of ecclesiastics. It is disputed whether a delegation made by them to lay judges to determine even civil causes of clerics would be valid. The pope, however, may delegate laymen for such cases when there is question of an individual instance. Reiffenstuel says that to commit in general all causes of ecclesiastics to laymen, would be to do away with the forensic privilege of clerics (*privilegium fori*) and therefore is outside the sphere of papal prerogatives, as the exemption of clerics is probably of Divine right. The granting of a delegation may be verbal, except in cases where the law expressly prescribes that it be in writing. The delegation must also be the free act of the superior, for delegated faculties obtained absolutely against the will of the donor would be invalid. If, however, they be extorted by fear, they will not be void, for then they

would not be absolutely against the will of the superior.

III. Delegated powers are necessary, either for the liceity or validity of an act performed by the delegate. If there be question only of the liceity of an act, permission reasonably presumed is sufficient. This would be the case, for example, in the administration of the sacraments, except penance and possibly matrimony. If, however, it be a question of the validity of an act, the delegation must be express, or at least rest upon a presumption of outward signs indicating actual consent. Such, for example, would be the delegation requisite for valid absolution in the tribunal of penance. In general, a delegate may not proceed to the exercise of his power until it be formally notified to him, for, according to an axiom of law, jurisdiction is acquired only by one knowing and accepting. In certain cases, this knowledge and acceptance may be only implicitly implied, but it is then considered sufficient. The fact of delegation must be proved to those concerned in the matter at stake, either by showing them the written instrument or exhibiting unexceptionable testimony that the power has been received. The delegate must also carefully observe the form of procedure specified by the superior who has empowered him to act. In case of grievance, an appeal may be made against the delegate to the tribunal of the person who delegated him. This fact shows that the power of the vicar-general of a diocese is not delegated power, for there is no appeal from his tribunal to that of the bishop, because their tribunal is declared to be one and the same. The power of a vicar-general is most correctly characterized as quasi-ordinary, for on the one hand, he holds an office to which certain faculties are annexed, and on the other, he exercises his powers in the name of another. Some canonists, however, maintain that a vicar-general has delegated, and others that he has ordinary jurisdiction. Finally, no inferior ordinaries can delegate their entire authority to others in perpetuity without the license of the Roman pontiff, because such delegation would be equivalent to abdication, which is not permissible without the consent of the supreme authority. What has been said in this respect of inferior ordinaries, holds good also for those delegated to certain classes of cases in general (*ad universitatem causarum*). As the powers delegated by the Holy See are generally for very important matters, the Council of Trent (Sess. XXV, c. 10, de ref.) made an effort to provide by law for a certain number of qualified persons whom the pope could appoint as his delegates. The council ordered that several such ecclesiastics should be elected in provincial synods and that their names should be forwarded to Rome by the bishops. The decree, however, was seldom acted on and gradually became entirely obsolete.

IV. Delegated jurisdiction can sometimes be subdelegated to others. If the delegate was appointed by the pope, even for a particular case, he has the power of subdelegation. The latter is prohibited only when the matter has been committed to his personal care in an especial manner, or when it is of unusual importance or of a merely executive nature. Hence, when a confessor has received by Apostolic privilege the faculty of absolving all the faithful from certain sins and censures, or of dispensing in certain irregularities and vows, he can not subdelegate this ministry. In like manner, one who has been charged with the execution of matrimonial dispensations may not subdelegate the ministry itself, yet he may employ others to assist him in matters connected with his delegated jurisdiction, provided their work be only supplementary, not principal. If the delegate was appointed by an ordinary other than the pope, he can not subdelegate, unless he has been commissioned *ad universitatem causarum*, or when the person delegating has given him the special authority to subdelegate. The

subdelegate cannot make a new delegation, but he can call in the assistance of others for the details of his work. When a delegate has confided all his authority in a particular matter to a subdelegate an appeal from the decision of the latter does not lie to the delegate, but to the superior who had originally commissioned the delegate.

V. Delegation ceases if the work assigned to the delegate has been completed; if the delegate abdicates his power or declares the rescript of his appointment invalid; if the term fixed for the conduct of the matter has expired, unless in a contentious case both parties have agreed to a prorogation; if the delegation be revoked; if the delegate die, unless he was one of a number of delegates *simpliciter* and their commission had provided for its continuance in such an emergency; if the person delegating die, and the case had not yet begun; if the person die on whose account the delegation was constituted, unless some matter concerning the Church or a prelacy be at stake.

WILLIAM H. W. FANNING.

De Leon, PONCE. See LEON.

Delfau, FRANÇOIS, theologian, b. 1637 at Montel in Auvergne, France; d. 13 Oct., 1676, at Landevenec in Normandy. He joined the Order of St. Benedict when he was seventeen years of age, and made his solemn profession at the Abbey of St. Alire, 2 May, 1656. He was a profound student of the Fathers of the Church and the history of the councils. Constant application to study speedily matured the powers of his exceptionally keen and brilliant mind, and he soon came to be looked upon as a foremost authority on all questions connected with patristic theology. When the Congregation of St. Maur in 1670 determined to undertake a critical edition of the works of St. Augustine, Delfau was commissioned by his superiors to prepare it. The task was a difficult one, but together with six other members of the order, among them his intimate friend Dom Robert Guérard, he began with energy and courage this great labour of love, and prosecuted it with an ardour truly Benedictine. In 1671 he prepared an elaborate prospectus, setting forth the general scope and character of the new edition and the principles by which the editors were to be guided. Manuscripts came to the learned Maurists from various countries, and Pope Clement X even sent them priceless codices of the Vatican Library together with all the materials that had been gathered there under Clement VIII for a projected edition of the Opera Augustini. When the first two volumes were about to be printed, the work was suddenly arrested, 18 Sept., 1675, by two *lettres de cachet* from Louis XIV, decreeing the banishment of both Delfau and Guérard from Paris. The occasion for this drastic measure seems to have been Delfau's book "*L'abbé commendataire*", published at Cologne, 1673, in which the young monk had severely commented on the abuses connected with the system of *commendam* as it was then shamelessly carried on in France to the great detriment of the Church. The fearless work greatly aroused the king's anger, of which the enemies of the Maurists did not fail to take advantage. Delfau was obliged to withdraw to the monastery of Landevenec; he lived there but little more than a year when, at the early age of thirty-eight, he was drowned as he was crossing to the Carmelite convent at Brest, where he was to deliver a eulogy on the feast-day of St. Teresa. Delfau's works are: "*Apologia Cardinalis Fürstenbergii*"; a masterly epitaph on Casimir, King of Poland, who died as Abbot of St. Germain des Prés; and a dissertation on the authorship of the "*Imitatio Christi*", in his edition of that book (Paris, 1673).

1770); ZIEGELBAUER, *Hist. rei lit.* O. S. B. (Augsburg, 1754), III, 395 sq.

THOMAS OESTREICH.

Delfino, PIETRO, theologian, b. at Venice in 1444; d. 16 Jan., 1525. He entered the Camaldolese Monastery of San Michele at Murano, and in 1479 was elected abbot of the same community. The following year he was made general of the order and held that office until the year 1513 when he resigned in favour of his fellow-countryman Blessed Paul Giustiniani, whom he had invested with the Camaldolese habit in 1510. Delfino was the forty-sixth general from St. Romuald, the founder of the Camaldolese, and the last elected for life, the office after him being held for three years only. In 1488 he received the votes of his countrymen in Venice for the cardinalate, but refused to accept this dignity from Innocent VIII. The letters of Delfino, which number more than four thousand, addressed to different religious of his own and other orders and to various secular dignitaries, are valuable not only on account of the trustworthiness of their author, but more especially because of the accounts they contain of contemporary events in his own order and the Church in general. A collection of his Latin letters was published at Venice in 1524. Several others that had been omitted in the Venetian editions were included later in Martène's "*Veterum Scriptorum amplissima collectio*". The "*Apothegmata Patrum*" and the "*Dialogues*" on Savonarola are still unedited.

MARTÈNE, *Veterum Scriptorum et monumentorum ecclesiasticorum et dogmaticorum amplissima collectio*, III, 915.

STEPHEN M. DONOVAN.

Delille, JACQUES, French abbé and *littérateur*, b. at Aigueperse, 22 June, 1738; d. at Paris, 1 May, 1813. He received his education at the Collège de Lisieux in Paris and became an instructor at the Collège de la Marche in the same city. His translation into verse of Virgil's "*Georgics*", which appeared in 1770, had very great success and eventually won for him a seat in the French Academy. He was afterwards appointed to the chair of poetry in the Collège de France and through the patronage of the Count d'Artois he received as a benefice the Abbey of Saint-Severin, but took only minor orders. In 1786 he accompanied the Count de Choiseul to Constantinople and visited Greece; his stay in the East does not seem, however, to have much influenced his literary career. The French Revolution deprived him of his position and benefice, and in 1794 he had to leave France; his exile was spent in Switzerland, Germany, and England. He returned to France in 1802 and again took his seat in the French Academy. For some years Delille was considered a great poet, Voltaire at one time even going so far as to call him the French Virgil; but he did not enjoy very long this unwarranted reputation. All agree to-day that he was a wonderful versifier, having at his command all the secrets of his art, but it is also recognized that his long descriptive poems betray a complete lack of poetic feeling and inspiration. They are a striking illustration of the difference between versification and poetry. His best known works are: "*Traduction des géorgiques de Virgile*" (Paris, 1770); "*Dithyrambe sur l'immortalité de l'âme*" (Paris, 1793); "*L'Imagination*" (Paris, 1806); "*Les Trois Règnes de la nature*" (Paris, 1806); "*La Conversation*" (Paris, 1812).

PIERRE MARIQUE.

De Lisle, AMBROSE LISLE MARCH PHILLIPPS, b. 17 March, 1809; d. 5 March, 1878. He was the son of Charles March Phillipps of Garendon Park, Leicestershire, and Harriet Ducarel, a lady of Huguenot descent. He assumed the name of de Lisle in 1862,

when on the death of his father he inherited the estates of the ancient family of de Lisle.

He spent his earliest years at his birthplace and was brought up as a member of the Church of England, receiving his first religious instruction from his uncle, William March Phillipps, a high-church clergyman. In 1818 Ambrose was sent to a private school at South Croxton, whence he was removed in 1820 to Maizemore Court School, near Gloucester, kept by the Rev. George Hodson. The Bishop of Gloucester, having married Sophia March Phillipps, was his uncle by marriage, and so the boy had the advantage of spending Sundays and holidays at the bishop's palace. At school he met for the first time a Catholic, the Abbé Giraud, a French *émigré* priest, whose holy life struck the boy as inconsistent with what he had always heard of Catholics. On one of his journeys to Gloucester he took the opportunity of questioning the priest as to the real belief of Catholics. The answers he received so excited his interest that he began to read all the books on the subject he could find in his father's library. A visit to Paris in 1823 gave him his first acquaintance with Catholic liturgy. The effect on his mind was shown on his return home when he persuaded the Anglican rector to place a cross on the communion table, but this first effort to restore the cross to English churches was promptly suppressed by the Bishop of Peterborough as savouring of Popery. At this time an incident occurred which left an indelible impression on his mind, and which he thus related to his subsequent biographer: "One day in the year 1823, as I was rambling along the foot of the hills in the neighbourhood of the school, and meditating, as was my wont in those boyish days, over the strange Protestant theory that the Pope of Rome is the Anti-Christ of Prophecy, all of a sudden I saw a bright light in the heavens, and I heard a voice which said: 'Mahomet is the Anti-Christ, for he denieth the Father and the Son.' On my return home in the next holidays I looked for a Koran and there I found those remarkable words, 'God neither begetteth nor is begotten.'"

About this time Mr. Hodson's school was removed to Edgbaston, near Birmingham, and here it was that the boy, now sixteen years old, had a remarkable dream "in which Our Lord seemed to reproach him with not having fully complied with the light he had received." Moved by this, he wrote to a Catholic priest, the Rev. Thomas Macdonnell, asking him to meet him at Loughborough and receive him into the Catholic Church. Mr. Macdonnell met him and was surprised to find him so thoroughly instructed in Catholic doctrine, and after a few days he considered him sufficiently prepared to be received into the Church. Ambrose informed both his father and his schoolmaster, with the result that he was immediately removed from Mr. Hodson's school, at that gentleman's desire, and returned home with his father, who arranged for him to continue his preparation for the university under the private tuition of the Rev. William Wilkinson. He was obliged every Sunday to attend the Protestant church, but did not join in the service. His own account of his conversion will be found in Appendix I, in the first chapter of his biography below.

Ambrose Phillipps went into residence at Trinity College, Cambridge, 16 October, 1826. He found at the university a congenial friend in Kenelm Digby (q. v.), author of "*Mores Catholici*" and "*The Broadstone of Honour*", and like himself, a recent convert. There was no Catholic chapel then at Cambridge, and every Sunday for two years these two young Catholics used to ride over, fasting, to St. Edmund's College, Old Hall, a distance of twenty-five miles, for Mass and Communion. It was on one of these visits to St. Edmund's, in April, 1828, that Phillipps was seized with a serious illness, having broken a blood-vessel on the

lungs. The doctors recommended his father to take him to Italy for the winter, and this necessarily cut short his Cambridge career, so that he had to leave the university without taking his degree. On his return to England in 1829, he became acquainted with the Hon. and Rev. George Spencer, then an Anglican clergyman, and his conversation was largely instrumental in leading to Spencer's conversion, as the latter admits in his "Account of my Conversion"—"I passed many hours daily in conversation with Philipps and was satisfied beyond all expectations with the answers he gave me to the different questions I proposed about the principal tenets and practices of Catholics." The following winter (1830-1831) he again spent in Italy, on which occasion he met Rosmini, who made a great impression on him.

On 25 July, 1833, Ambrose Philipps married Laura Mary, eldest daughter of the Hon. Thomas Clifford, son of Hugh, fourth Lord Clifford of Chudleigh. The marriage proved a most happy union, and on this occasion Mr. Charles March Philipps gave his son possession of the second family estate, the manor of Grace-Dieu in Leicestershire, which before the Reformation had been a priory of Augustinian nuns. Here Ambrose Philipps built a new manor-house during the years 1833-34, and in the mean time he and his wife resided at Leamington, or at Garendon Park. Marriage made no difference to the ardour with which he devoted himself to the interests of the Church and the spread of Catholicism, and this at a time when the great influences of later days had not made themselves felt. Writing a few years before his death (Letter to the Rev. W. R. Brownlow, 10 Dec., 1869, *Life*, I, 349) he thus summed up the chief aims of his own life: "There were three great objects to which I felt after my own conversion as a boy of fifteen specially drawn by internal feeling for the whole space of forty-five years which have since elapsed. The first was to restore to England the primitive monastic contemplative observance, which God enabled me to do in the foundation of the Trappist monastery of Mount St. Bernard. The second was the restoration of the primitive ecclesiastical chant, my edition of which is now recommended by the Archbishop of Westminster for the use of churches and chapels. The third was the restoration of the Anglican Church to Catholic Unity." In the foundation of the Cistercian Abbey he received generous support from his friend John, Earl of Shrewsbury, but it was he himself who conceived the idea, believing it necessary that the ascetic aspect of Catholic life should be presented to the English people. He gave both land and money, even crippling his own resources in providing the necessary buildings. This work was begun in 1835 and completed in 1844, while, during the same period, he founded missions at Grace-Dieu and Whitwick. His disappointment was great when he found that the Trappists were prevented by their rule from undertaking active missionary work, because he attached the greatest importance to a supply of zealous missionary priests who would labour in English villages. "I would have them go about and preach everywhere on the foreign plan, in the fields or in the high roads even" (Letter to Lord Shrewsbury, 1839; *Life*, I, 105).

Besides the material assistance thus given to the spread of Catholicism, he devoted himself with persistent energy and faith to spiritual means in which he believed even more strongly. In 1838 he joined his friend Rev. George Spencer in establishing and propagating the Association of Universal Prayer for the Conversion of England. This remarkable crusade, the results of which cannot be estimated, met with deserved success due to the untiring efforts which Spencer and Philipps put forth. The sanguine hopes which both entertained of a speedy, if not immediate, return of England to the Catholic Faith lent

force to the vehemence with which they urged their point, and accounts for the co-operation they everywhere met with. In a continental tour they made together, accompanied by Mrs. Philipps and two of her children, in 1844, they passed through Belgium, Germany, and North Italy, meeting many distinguished Catholics and everywhere enlisting the sympathy of prelates and clergy in the cause. Wiseman was co-operating in Rome, and soon the movement spread widely through the Catholic world. In this work Mr. Philipps laboured without ceasing; by interviews and by letters he aroused the interest and awakened the enthusiasm of others, so that he became the lay apostle of prayer for the conversion of England. It is natural to see the first-fruits of this prayer in the numerous conversions that resulted from the Oxford Movement, and in that movement Mr. Philipps played a unique part. He was for some time the only Catholic who was in confidential correspondence with the leaders of the party at Oxford. His ideal of the conversion of England had always been corporate reunion; the reconciliation of the Anglican Church as a body, rather than individual conversions however numerous; and in the Oxford Movement his sanguine spirit saw the beginning of this process. Accordingly, he set himself to remove obstacles on both sides and to act as a mediator, the more useful as he was unofficial. This he looked upon as his vocation, as his son has stated (*Life and Letters*, I, 254, note): "National Conversion by means of Corporate Reunion he likened unto the Apostolic practice of fishing with a net 'gathering in multitudes of all kinds of fishes.' And this he considered to be his own special call from on High, to prepare the way and hasten the time when the Divine Word should again be spoken to Peter, 'Cast your nets into the deep'." With this end in view Mr. Philipps did much to obviate misunderstandings by promoting at Oxford fuller knowledge of Catholic life. This he did by personal intercourse and correspondence with Newman and others, and by receiving several Oxford men as his guests at Grace-Dieu. His efforts were rewarded by the numerous conversions that took place and the impetus given to the Catholic cause.

The restoration of the hierarchy in 1850 was an event after his own heart, and he exerted himself to reconcile to it some of the Catholic laymen who thought it inexpedient. During the excitement that ensued throughout the country he wrote two pamphlets which met with much success: "A Letter to Lord Shrewsbury on the Re-establishment of the Hierarchy and the Present Position of Catholic Affairs", and "A few words on Lord John Russell's Letter to the Bishop of Durham". The progress of events raised his hopes so high that he regarded the reconciliation of the Anglican Church to the Holy See as imminent, and to hasten its fulfilment entered on a new crusade of prayer, in which the co-operation of non-Catholics was desired. "The Association for promoting the Unity of Christendom", known as A. P. U. C., was founded on 8 September, 1857, by fourteen persons including Father Lockhart, Fr. Collins, O. Cist., and Mr. de Lisle; the rest were Anglicans, with one exception, a Russo-Greek priest. The only obligation incumbent on members, who might be either Catholics, Anglicans, or Greeks, was to pray to God for the unity of the baptized body. At first the association progressed rapidly. Mr. de Lisle writing to Lord John Manners (*Life*, I, 415) said: "We soon counted among our ranks many Catholic Bishops and Archbishops and Dignitaries of all descriptions from Cardinals downwards; the Patriarch of Constantinople and other great Eastern prelates, the Primate of the Russian Church. . . I do not think any Anglican Bishops joined us, but a large number of clergy of the second order". He gave the number of members as nine thousand. The formation of this association was,

however, regarded with distrust by Dr. Manning (afterwards Cardinal and Archbishop of Westminster) and other Catholics, who also took exception to Mr. de Lisle's treatise "On the Future Unity of Christendom". The matter was referred to Rome and was finally settled by a papal rescript addressed "Ad omnes episcopos Angliæ", dated 16 September, 1864, which condemned the association and directed the bishops to take steps to prevent Catholics from joining it. This was a great blow to Mr. de Lisle, who considered that "the authorities had been deceived by a false relation of facts" (Letter to Editor of Union Review, 20 Dec., 1864; Life, I, 400). He however withdrew his name from the A. P. U. C. "under protest, as an act of submission to the Holy See". The ground on which the association was condemned was that it subverted the Divine constitution of the Church, inasmuch as its aim rested on the supposition that the true Church consists partly of the Catholic Church, in communion with Rome, "partly also of the Photian Schism and the Anglican heresy, to which equally with the Roman Church belong the one Lord, the one faith and one baptism" (Rescript, in Life, I, 388). Mr. de Lisle's own pamphlet was not censured, but the condemnation of the A. P. U. C. was regarded by him as the death-blow of his hopes for the reunion of Christendom during his own lifetime. But his own belief in it persevered and influenced his views in other Catholic affairs. Thus he warmly supported the attendance of Catholics at the English universities, and he even approved of the abortive project of a Unitarian Church.

The rest of his life passed without any very special incident, though he continued ever to take an interest in public affairs as affecting the fortunes of the Church, and in the same connexion he carried on intimate and cordial correspondence with men so different as Newman, Gladstone, and Montalembert. He counted among his friends John, Earl of Shrewsbury, Cardinal Wiseman, Pugin, Faber, and many other well-known Catholics, and though he differed on many points from Cardinal Manning and Dr. W. G. Ward he remained on friendly terms with both. He died a holy death at Garendon, leaving his saintly wife and eleven of his sixteen children surviving him. Besides the pamphlets mentioned above he wrote a remarkable work, "Mahometanism in its relation to Prophecy; or an Inquiry into the prophecies concerning Anti-Christ, with some reference to their bearing on the events of the present day" (1855). He also translated Father Dominic's "Lamentations of England" (1831); Manzoni's "Vindication of Catholic Morality" (1836); Montalembert's "St. Elizabeth of Hungary" (1839); Rio's "La petite Chouannerie" (1842); "Maxims and Examples of the Saints" (1844); and he compiled: "Manual of Devotion for the Confraternity of the Living Rosary" (1843); "Catholic Christian's Complete Manual" (1847); "The Little Gradual" (1847); "Thesaurus animæ Christianæ" (1847); "Sequentiæ de Festis per Annum" (1862). He also wrote many articles for the press, of which many were issued in pamphlet form, but a complete bibliography has not hitherto been compiled.

EDWIN BURTON.

Delisle, GUILLAUME, reformer of cartography, born 28 February, 1675, in Paris; died there 25 January, 1726. His father, Claude Delisle (1644-1720),

having completed his law studies, settled in Paris as private teacher in geography and history, and afterwards filled the office of royal censor. He was also a cartographer, and in 1696 drew up a map in manuscript and also took part in his son's first works, "The Map of the World" and "The Map of the Continents", both published in 1700. These and the terrestrial maps produced subsequently, which surpassed all similar publications, established the son's fame. In 1702 he became *élève*, in 1716 *adjoint*, and in 1718 *associé* of the Académie des Sciences; and, as the young king's instructor in geography, received the title of First Royal Geographer with a fixed salary, an office which was then created for the first time.

Guillaume Delisle adopted entirely new principles in cartography and set about making a thorough reform in that subject. The map-publishers of the time did not know how to utilize the material supplied mainly by the French astronomers of the latter half of the seventeenth century, and Delisle recognized that the new methods of measuring by scale and of marking the places were very valuable for cartography; with this help he therefore produced a new and perfect picture of the world. When his astronomical information fell short he carefully examined and sifted all the books of travel and all the maps he could find, and the products of this reading were dovetailed neatly into the facts which he had already at hand. According to a fixed method he worked up the several continents and countries one by one, France in particular. In disputed points he named his source on the map or wrote additional notes, the majority of which were published in the writings of the Academy. One particular recommendation of his charts is that he employed a fixed scale of measurement for regions closely connected with one another. No less famous than his astronomical corrections are the completeness of his topography and the care displayed in the orthography of the names.

An accurate summary of his charts and treatises with the highest commendation is given by CHRISTIAN SANDLER, *Die Reformation der Kartographie um 1700* (Munich, 1905).

OTTO HARTIG.

De L'Orme, PHILIBERT, celebrated architect of the French Renaissance, b. at Lyons, c. 1515 or a little later; d. at Paris, 8 January, 1570. Of the exact date of his birth there exists no documentary evidence. He was the son of Jehan de L'Orme, a master builder of Lyons, from whom he received his training. At an age when he speaks of himself as being "of great youth" Philibert was at Rome, where his curiously careful and scientific study of classic antiquities attracted the attention of the learned Cardinal of Santa Croce, then a bishop, later Pope Marcellus II, through whose influence he was employed by Paul III. From this service he was recalled to Lyons two years later, in 1536, by Guillaume du Bellay and his brother, Cardinal Jean du Bellay. Soon after his return de L'Orme was made military controller, an office he held until 1545, when he was named by the king "master architect and general conductor of buildings, works and fortifications." In this capacity he ingeniously averted a threatened attack of the English upon the dismantled château of Brest by means of mock cannon and an improvised soldiery. At various subsequent periods, he was endowed by royal favour with the title of counsellor and almoner ordinary of the king, and was made Abbé de Géveton, of Barthélemy, of Saint-Eloy-les-Noyon, besides receiving other such sinecures; he was also appointed a canon of Notre-Dame at Paris. Though it was the usage of the time for the king to bestow upon laymen the title and benefices of an abbé as reward or salary, it has been conjectured from the double title of king's almoner and canon of Notre-Dame, that de L'Orme had received minor orders. Between the years 1541

and 1559, during which he held the position of royal architect under Francis I and Henry II, de L'Orme altered, enlarged, and restored numerous châteaux, notably those of Villers-Cotterets, Saint-Germain-en-Laye, Fontainebleau, and Vincennes. His first individual achievement of importance, however, was the château of Saint-Maur-les-Fossés, originally designed for Cardinal du Bellay, Bishop of Paris, but afterwards taken over by Catherine de' Medici. Of this notable work almost nothing remains. In 1552 the château d'Anet, regarded as the best example of de L'Orme's genius, was begun for Diana of Poitiers, mistress of Henry II. Benvenuto Cellini's famous bronze Diana, now in the Louvre, was executed for this building and other eminent artists assisted in its decoration.

The death of Henry II (1559) marked the turning-point of de L'Orme's prosperity. His large revenues, as well as his rugged independence had made for him envious and contentious enemies, not the least formidable of whom was the poet Ronsard. During the period of unpopularity which succeeded he issued, in 1561, the work "Nouvelles inventions pour bien bastir et a petits fraiz" (How to Build Well and at Small Expense). This was subsequently a part of his notable treatise on architecture which contains much lively autobiography; the first volume of this work appeared at Paris in 1567 under the title: "Le premier tome de l'architecture de Philibert de L'Orme". In 1564 he laid the foundations of the historic château of the Tuileries for Catherine de' Medici. The initial part of the structure, however, suffered a complete change under other hands. The Tuileries was the last important undertaking of the architect, who was buried with the honours of a canon of Notre-Dame. The claim has been made by some biographers that de L'Orme designed for Saint-Denis the Valois Chapel, now destroyed; there is much doubt as to his exact share in various other works with which he is known to have been associated. The only great work of de L'Orme now actually remaining is the tomb of Francis I in Saint-Denis at Paris.

CHARLES D. MAGINNIS.

Delphine, BLESSED, of the Third Order of St. Francis, b. in Provence, France, in 1284; d. 26 November, 1358. Left an orphan in her infancy, she was placed under the guardianship of her uncles, and under the direction of her aunt, the Abbess of St. Catherine of Sorbo. She grew up in the practice of every virtue, and took a vow of virginity which she kept faithfully to the end of her life. In her twentieth year she was married to Elzéar, Count of Sarban, and the couple, having received the habit of the Third Order of St. Francis, lived together in the edifying practice of prayer, penance, and charity towards the poor until the death of St. Elzéar in 1323. After the death of her husband, Blessed Delphine sold all her vast possessions for the benefit of the poor and retired first to Naples and then to Cabrières. She finally returned to Apt where her husband had been buried. During the last years of her life she endured the greatest sufferings without the slightest complaint or sign of impatience. The cult that had long been paid to Blessed Delphine was confirmed by Pope Urban V, godson of St. Elzéar. Her feast is kept in the Franciscan Order on the twenty-seventh of November.

STEPHEN M. DONOVAN.

Delrio, MARTIN ANTON, scholar, statesman, Jesuit theologian, b. at Antwerp, 17 May, 1551; d. at Louvain, 19 October, 1608. He studied at Paris, Douai, Louvain, and Salamanca where he received the degree of Doctor of Law in 1574. Returning to the Low Countries with the reputation of being "the miracle of his age", a title given him by Justus Lipsius, he held the offices of senator, auditor of the army, vice-chancellor, and procurator general. In 1580 he entered the Society of Jesus, made his novitiate at Valladolid, and returned to Louvain for further studies. He afterwards held the chairs of philosophy, moral theology, and Scripture at the Universities of Douai, Liège, Louvain, Graz, and Salamanca. He possessed a speaking-knowledge of at least nine languages, wrote in a pure though somewhat diffuse style, and was careful to the extreme in the preparation of his books, as may be seen from the fact that his second work, published at the age of twenty-three, contains citations from nearly eleven hundred authors. His principal works comprise: Commentaries on Claudius, Ennius, Florus, and Seneca; on the ancient geographer and historian, C. J. Silivius Polyhistor; notes on the Christian poets, St. Orientius and St. Aldhelm; an exhaustive treatise on civil law; a "Historia Belgica", on the contemporary disorders in the Low Countries; some controversial pamphlets written against Joseph Scaliger; commentaries on Genesis, on the Canticle of Canticles, and on the Lamentations of Jeremiah; an explanation of various proverbial expressions in the Old Testament called "Adagialia sacra Veteris Testamenti"; panegyrics and other works on the virtues of the Blessed Virgin; and a treatise on magic, called "Disquisitionum magicarum libri sex". This last work, the one by which Delrio is best known, was much praised in its day and went through many editions, but can no longer be accepted in full.

J. H. FISHER.

Delta of the Nile, PREFECTURE APOSTOLIC OF THE, is situated in the north of Egypt and comprises four of the six provinces forming Lower Egypt, namely: Gharbieh, Charkieh, Menufieh, and Kalyubieh. Prior to the establishment of the prefecture, the four provinces contained 1000 Catholics belonging to different rites. The prefecture was erected by Propaganda, 17 March, 1887. In 1888 the Rev. Augustin Duret of the Lyons Society for African Missions was appointed first prefect Apostolic and the prefecture confided to the care of this society. It had at first only two missionary posts, one at Tantah and the other at Zagazig, but a new post was founded at Zifteh in 1887 and another at Mahalla-el-Kebir in 1891. About this time the city of Cairo, which had already outgrown its former limits, developed considerably on the north, and populous quarters grew up within the Prefecture of the Delta. For the convenience of resident Catholics a Latin parish was formed in the Choubra quarter in 1894 and given to the Fathers of the Society for African Missions; in 1896 another Latin parish under the same direction was established at Zeitoun for the outlying districts of Koubbah, Zeitoun, and Matarieh.

STATISTICS.—The last official census (1897) gave for the four provinces of the Delta a total population of 3,282,457; 73,365 being schismatics of different rites; 3091 Catholics of various rites; and 241 Protestants. These figures do not distinguish the population of the quarters or outskirts from that of Cairo; on the basis of other returns, the total population of the prefecture may be estimated at about 3,500,000; 100,000 of this

number being schismatics and 15,000 Catholics of various rites; over 5000, perhaps, belonging to the Latin Rite. *Clergy and Religious*.—Priests of the African Missions, 49; Jesuits, 47; Brothers of the Christian Schools, 17; *Petite Frères* de Marie, 8; Sisters of Notre-Dame des Apôtres, 92; Sisters of the Good Shepherd of Angers, 77; Ladies of the Sacred Heart, 34; Religious of Marie Réparatrice, 14; Filles de la Charité, 14; Filles de Notre-Dame des Douleurs, 9; Pieuses Mères de la Nigritie, 16. *Parishes*.—There are 4 Latin parishes: at Choubra (Cairo quarter), Zeitoun (suburb of Cairo), Tantah, and Zagazig; 2 succursal parishes (mission churches): at Mahalla-el-Kebir, and Ziftah. *Educational Institutions*.—1 Jesuit college with 450 pupils; 3 schools conducted by the Priests of the African Missions; at Tantah (231), Zeitoun (75), and Ziftah (50); 2 Christian Brothers' schools at Choubra (250), and Zagazig (50); the Sisters of Notre-Dame des Apôtres have 6 institutions: at Tantah (249), Zagazig (150), Zeitoun (110), Ziftah (100), Mahalla (80), and Matarieh (38); 1 boarding-school conducted by the Ladies of the Sacred Heart (60); and 1 institution of the Sisters of the Good Shepherd of Angers (220), making a total of 2113 pupils. *Charitable Institutions*.—3 hospitals: 1 conducted by the Filles de la Charité, and 2 by the Pieuses Mères de la Nigritie (150 to 200 sick); 2 orphanages: 1 for boys, conducted by the Filles de la Charité (60 orphans), and 1 for girls by the Sisters of the Good Shepherd of Angers (78 orphans); 5 dispensaries in charge of the Sisters of Notre-Dame des Apôtres, where several hundreds of sick daily receive gratuitous treatment; 1 home for the aged conducted by the Filles de Notre-Dame des Douleurs where from 50 to 60 inmates, both men and women, are cared for gratuitously; 1 house of refuge in charge of the Sisters of the Good Shepherd of Angers.

The Prefecture of the Delta owes its development chiefly to the prodigious growth of the city of Cairo which, in extending its limits, had to stretch out upon prefectorial territory. Here, as in all cosmopolitan and growing centres, the missionaries have found their chief obstacle in religious indifference.

AUGUSTIN DURET.

Deluge, the name of a catastrophe fully described in Gen., vi, 1-ix, 19, and referred to in the following passages of Sacred Scripture: Wisd., x, 4; xiv, 6-7; Eccles., xvi, 8, xlv, 17-19; Is., liv, 9; Matt., xxiv, 37-39; Luke, xvii, 26-27; Hebr., xi, 7; I Peter, iii, 20-21; II Peter, ii, 5. In the present article we shall consider: I. The Biblical Account; II. Its Historicity; III. The Universality of the Flood; IV. Collateral Questions.

I. **BIBLICAL ACCOUNT OF THE DELUGE**.—The Book of Genesis gives the following brief account of the Deluge: God sees the wickedness of men, and determines to destroy them excepting Noe and his family (vi, 1-8). He reveals his decree to Noe and instructs him how he may save himself and the seed of all animal life by means of an ark to be built according to certain dimensions (vi, 9-22). Seven days before the Flood, God commands the patriarch to enter the ark (vii, 1-5). Noe completes his entrance into the ark on the very day on which the Flood begins; the rain falls for forty days and nights; all living things outside the ark are destroyed; the waters prevail upon the earth a hundred and fifty days (vii, 6-24). The waters decrease, the earth dries up; Noe ascertains its condition by means of a raven and a dove sent out from the ark (viii, 1-14). Noe obeys the Divine command to leave the ark, builds an altar, offers sacrifice,

makes a covenant with God, and begins to be a husbandman (ix, 1-27).

Simple as this account seems to be, the Biblical critics maintain that it is a mosaic made up of two Flood stories, differing in authorship and in contents. They assign one to the Yahwistic writer usually designated by the letter J; the other, to the post-exilic priestly writer generally known as P. According to Kautzsch, the sections vi, 1-8; vii, 1-5, 7-10, 12, 16b-17, 22-23; viii, 2b-3a, 6-12, 13b, 20-22; ix, 18-27, belong to J, while P claims vi, 9-22; vii, 6, 11, 13-16a, 18-21; vii, 24-viii, 2a; viii, 3b-5, 13a, 14-19; ix, 1-17. This division of the text is based on the following grounds: (1) J uses the divine name Yahweh, P employs Elohim; (2) J and P narrate the same series of events; (3) J and P differ in language; (4) J and P disagree in their statements.

The composite character of the Flood story does not conflict with its Mosaic authorship. The most conservative Bible student will grant that Moses was not an eye-witness of the Deluge. Prescinding from Divine revelation, he must have derived his information about the event either from tradition or from written documents. If Biblical criticism has succeeded in restoring the main sources utilized by Moses in his history of the Flood, it has rendered a most signal service to exegesis. Happily we are in the position to be able to control the value of the critical conclusions by means of the Babylonian or Akkadian account of the Deluge. Without delaying over its form as contained in the fragments of Berosus which are of comparatively recent date, we find that the version given in a cuneiform inscription on tablets preserved in the British Museum, and first deciphered by George Smith in 1872, contains a combination of the P and J elements of the Flood story. This version is said by experts to date back at least to about 3000 B. C. It is certain, therefore, that the so-called P and J documents reconstructed by the critics were combined long before the Biblical text was put in writing. This fact is confirmed by a Deluge story contained in Scheil's recently discovered fragment, which cannot be dated much later than 2140 B. C. Critics can no longer deny the existence of a Flood tradition similar to the history contained in the Book of Genesis, antedating our Biblical account. In order to uphold their division of the inspired text into the so-called J and P documents, they maintain that the Akkadian story was copied partially in the J and partially in the P documents, and that the Biblical "Redactor" reunited these two partial accounts into one. This series of assumptions, however, is at best an awkward attempt to explain away a fact which stands in the way of their theory. But we are prepared to admit the critical division of the Flood account in spite of its disagreement with the results of recent discoveries, if the critical arguments are really cogent.

(1) We are told the J uses the Divine name Yahweh, while P employs Elohim. But the following considerations must be kept in mind: First, we are hardly sufficiently sure of the use of the Divine names in the primitive inspired text to build a solid argument on their occurrence in the present text-form. Secondly, in the present text-form Elohim occurs twice in the Yahwistic document, vi, 2, and vii, 9. Thirdly, six passages in the section vii, 16-viii, 20, are assigned to the Yahwistic writer, though the name Yahweh does not occur once. Fourthly, the variation of the Divine names in the Deluge story can be explained satisfactorily without resorting to the violent measure of dividing up the text between two distinct writers.

(2) It is alleged that J and P report the same events. If we examine the two documents as reconstructed by the critics, in the light of this contention, we find that they are fragmentary and that they do not contain two series of events. J passes from God's determination to destroy the world (vi, 1-8) to the Divine

command that Noe should enter the ark without telling him where to find or how to procure an ark (vii, 1-5). Noe builds an altar and offers burnt offerings without leaving the ark (viii, 20). P does not inform us of the real nature of the corruption of all flesh (vi, 9-12); he knows of God's order to save the animals, but knows nothing of God's command concerning Noe and his family (vi, 17-22; vii, 13); even eleven months after the beginning of the Flood and two months after the appearance of the tops of the mountains, he knows of no attempt on the part of Noe to ascertain the condition of the earth (viii, 13 sq.); finally, he gives no ethical motive for the Divine blessing bestowed on Noe (ix, 1, sqq.). The critics are aware of these gaps in the two documents, and explain them by supposing that the "Redactor", who had the original Flood stories before him, did not insert their complete text into the Biblical account. But if the "Redactor" omitted certain parts of the original documents in order to avoid repetitions, why did he not omit the repetitions discovered by the critics? Or are we to assume that he introduced certain repetitions, while he carefully avoided others? Is it not more likely that he considered the repetitions alleged by the critics as mere rhetorical devices, as recapitulatory transitions, e. g. (vi, 9-12), or gradations (vii, 17-20; vii, 21-23), or amplifications (vii, 7, 13-16a)?

(3) J and P are said to differ in language; but the critical division being what it is, it would be strange if the two documents did not differ in language. The sections which contain chronological, systematic, and scientific material are attributed to P, the rest is left to J. Is it surprising that J does not describe the measurements of the ark, seeing that the critics do not give him any ark to describe? Or is it remarkable that P lacks the poetic style found in J's description of the raven and the dove, seeing that no section is assigned to him, which would admit such a treatment? The care with which only set subjects and determined expressions are assigned to J and P respectively is well illustrated by the fact that in spite of their minute dissection of the Flood story, the critics must remove part of vi, 7; vii, 3, 7, 17, 22, 23; ix, 18, 22, 23, 26; and the whole of vii, 8, 9, from the J document, and part of vi, 17; vii, 6; ix, 4, from the P document, in order not to allow inconsistencies in their sources.

(4) Finally, J and P are said to disagree with regard to the animals to be taken into the ark, as to the duration of the Flood, and as to God's behaviour towards man after the Flood. In vi, 19, indeed, P records God's command, "thou shalt bring two of a sort into the ark"; but is it inconsistent with this, if 120 years later, when Noe is about to enter the ark, J relates the more accurate Divine specification, "of all clean beasts take seven and seven . . . but of the beasts that are not clean two and two" (vii, 2, 3)? It cannot be said that the fulfilment shows that only two of every kind were taken into the ark; both vii, 9, and vii, 15, 16, read "two and two . . . male and female", so that they express couples fit for generation rather than any absolute number. The discrepancy as to chronology between J and P is more artificial than true; there is no inconsistency in the chronology of the Biblical account of the Flood, so that the discrepancy between the documents, if there be one, is of critical manufacture. Besides, a simple reading of the J document taken separately will show that its chronology is not satisfactory. Finally, if in ix, 15, P knows of a Divine covenant which according to J is the result of the self-deliberation of Yahweh in consequence of the patriarch's sacrifice (viii, 21-22), the two documents are rather supplementary than contradictory; J supplies the ethical motive for God's action as described by P.

II. HISTORICITY OF THE BIBLICAL DELUGE ACCOUNT.—It has been contended that the Flood story of the Bible and the Flood legends of other peoples, looked at from a merely historical point of view,

stand on a similar footing, the Biblical account being a mere late variant of one of them. And on inquiring into their origin, we find that four theories have been advanced: (1) The Flood story is a mere product of fancy. This theory contradicts the analogy of similar legends among all peoples. (2) The Deluge story is by others considered as a nature-myth, representing the phenomena of winter, which in Babylonia especially is the time of rain. This nature-myth again is by some writers believed to have grown out of an archaic ether-myth, according to which the sun was imagined as a man voyaging on a boat in the heavenly ocean. The fact that the sea was to be found on the earth, not in heaven, and the damage wrought by the incessant winter-rain and the inundation of great rivers, transferred the myth from heaven to earth, changing the ether-myth into a nature-myth. But this theory, too, neglects the numerous Flood stories existing among many nations, which do not lend themselves to a similar explanation. (3) Connected with the preceding theory is the explanation which makes the Deluge story a cosmogonic fable. It has been seen that the hero rescued in the ship must have been the sun-god (cf. the ether-myth). Thus the Deluge becomes ultimately a variant of the Babylonian creation-myth. It is for this reason that the mythological text published by Peiser calls the time of the Deluge "the year of the great serpent". For this "great serpent" is the personified ocean which on old Babylonian maps encircles Babylonia, just as Leviathan is the world-encircling ocean personified as a serpent; it is the same monster which is a central figure in the Creation story. We need not add that this theory, too, leaves the great bulk of the existing Flood traditions unexplained. (4) It has been inferred from the improbability of the preceding theories, that the Flood story must be a poetical or legendary presentation of some natural occurrence. Furthermore, it is maintained that the immediate basis of the legend is a local disturbance. It may have been a great inundation caused by an overflow of the Tigris and Euphrates, or the incursion of a tidal wave resulting from an earthquake south of the mouth of the two rivers. But however terrible the ruin wrought by such inundations may be, this theory does not account for the universality of the Flood tradition, unless we suppose that the ruin affected the ancestors of all human races.

Thus far we have considered the Biblical Flood story from a merely historical point of view. But the Bible student who believes in the inspiration of the Sacred Scriptures and admits the value of tradition in their exegesis can hardly rest satisfied with the results thus far obtained. It will not even be enough to grant that the ancient Flood legend became the vehicle of religious and spiritual truth by means of a divinely guided religious feeling and insight of the inspired writer. The Deluge is referred to in several passages of Scripture as a historical fact; the writings of the Fathers consider the event in the same light, and this view of the subject is confirmed by the numerous variants under which the Flood tradition lives in the most distant nations of the earth.

(a) The following are some of the New Testament passages which imply that the Deluge was a real historical event: "And as in the days of Noe, so shall also the coming of the Son of man be. For as in the days before the flood, they were eating and drinking, marrying and giving in marriage, even till that day in which Noe entered into the ark, and they knew not till the flood came, and took them all away; so also shall the coming of the Son of man be" (Matt., xxiv, 37-39). In these words Christ regards the Flood with its circumstances as being not less real than the last days will be of which He speaks in the passage. The same view concerning the Flood, Christ implies in Luke, xvii, 26-27. In the Epistle to the Hebrews.

(xi, 7) the inspired writer is not less clear about the historicity of the Flood: "By faith, Noe having received an answer concerning those things which as yet were not seen, moved with fear, framed the ark for the saving of his house, by the which he condemned the world; and was instituted heir of the justice which is by faith." St. Peter (I Peter, iii, 20) too refers to the ark and the Flood as historical facts: "When they waited for the patience of God in the days of Noe, when the ark was a building: wherein a few, that is, eight souls, were saved by water". He returns to the same teaching in II Peter, ii, 5. We might appeal to Is., liv, 9; Nah., i, 8; Ezech., xiv, 14; Ecclus., xlv, 18 sq.; Ps. xxviii, 10; xxxi, 6; but what has been said sufficiently shows that the Bible urges the historicity of the Deluge story.

(b) As to the view of Christian tradition, it suffices to appeal here to the words of Father Zorell who maintains that the Bible story concerning the Flood has never been explained or understood in any but a truly historical sense by any Catholic writer (cf. Hagen, *Lexicon Biblicum*). It would be useless labour and would exceed the scope of the present article to enumerate the long list of Fathers and Scholastic theologians who have touched upon the question. The few stray discordant voices belonging to the last fifteen or twenty years are simply drowned in this unanxious chorus of Christian tradition.

(c) The historicity of the Biblical Flood account is confirmed by the tradition existing in all places and at all times as to the occurrence of a similar catastrophe. F. von Schwarz (*Sintfluth und Völkerwanderungen*, pp. 8-18) enumerates sixty-three such Flood stories which are in his opinion independent of the Biblical account. R. Andree (*Die Flutsagen ethnographisch betrachtet*) discusses eighty-eight different Flood stories, and considers sixty-two of them as independent of the Chaldee and Hebrew tradition. Moreover, these stories extend through all the races of the earth excepting the African; these are excepted, not because it is certain that they do not possess any Flood traditions, but because their traditions have not as yet been sufficiently investigated. Lenormant pronounces the Flood story as the most universal tradition in the history of primitive man, and Franz Delitzsch was of opinion that we might as well consider the history of Alexander the Great a myth, as to call the Flood tradition a fable. It would, indeed, be a greater miracle than that of the Deluge itself, if the various and different conditions surrounding the several nations of the earth had produced among them a tradition substantially identical. Opposite causes would have produced the same effect.

III. UNIVERSALITY OF THE DELUGE.—The Biblical account ascribes some kind of a universality to the Flood. But it may have been geographically universal, or it may have been only anthropologically universal. In other words, the Flood may have covered the whole earth, or it may have destroyed all men, covering only a certain part of the earth. Till about the seventeenth century, it was generally believed that the Deluge had been geographically universal, and this opinion is defended even in our days by some conservative scholars (cf. Kaulen in *Kirchenlexikon*). But two hundred years of theological and scientific study devoted to the question have thrown so much light on it that we may now defend the following conclusions:

(1) The geographical universality of the Deluge may be safely abandoned. Neither Sacred Scripture nor universal ecclesiastical tradition, nor again scientific considerations, render it advisable to adhere to the opinion that the Flood covered the whole surface of the earth. (a) The words of the original text, rendered "earth" in our version, signify "land" as well as "earth"; in fact, "land" appears to have been their primary meaning, and this meaning fits in admir-

ably with Gen., iv, v, and Gen., x; why not adhere to this meaning also in Gen., vi-ix, or the Flood story. Why not read, the waters "filled all on the face of the land", "all flesh was destroyed that moved in the land", "all things wherein there is the breath of life in the land died", "all the high mountains under the whole heaven (corresponding to the land) were covered"? The primary meaning of the inspired text urges therefore a universality of the Flood covering the whole land or region in which Noe lived, but not the whole earth.

(b) As to the cogency of the proof from tradition for the geographical universality of the Flood, it must be remembered that very few of the Fathers touched upon this question *ex professo*. Among those who do so there are some who restrict the Deluge to certain parts of the earth's surface without incurring the blame of offending against tradition. The earthly paradise, e. g., was exempted by many, irrespective of its location on the top of a high mountain or elsewhere; the same must be said of the place in which Mathusala must have lived during the Flood according to the Septuagint reading; St. Augustine knows of writers who exempted the mountain Olympus from the Flood, though he himself does not agree with them; Pseudo-Justin hesitatingly rejects the opinion of those who restrict the Flood to the parts of the earth actually inhabited by men; Cajetan revived the opinion that the Flood did not cover Olympus and other high mountains, believing that Genesis spoke only of the mountains under the aerial heaven; Tostatus sees a figure of speech in the expression of the Bible which implies the universality of the Flood; at any rate, he exempts the earthly Paradise from the Deluge, since Henoch had to be saved. If the Fathers had considered the universality of the Flood as part of the body of ecclesiastical tradition, or of the deposit of faith, they would have defended it more vigorously. It is true that the Congregation of the Index condemned Vossius's treatise "De Septuaginta Interpretibus" in which he defended, among other doctrines, the view that the Flood covered only the inhabited part of the earth; but theologians of great weight maintained that the work was condemned on account of its Protestant author, and not on account of its doctrine.

(c) There are also certain scientific considerations which oppose the view that the Flood was geographically universal. Not that science opposes any difficulty insuperable to the power of God; but it draws attention to a number of most extraordinary, if not miraculous phenomena involved in the admission of a geographically universal Deluge. First, no such geological traces can be found as ought to have been left by a universal Deluge; for the catastrophe connected with the beginning of the ice-age, or the geological deluge, must not be connected with the Biblical. Secondly, the amount of water required by a universal Deluge, as described in the Bible, cannot be accounted for by the data furnished in the Biblical account. If the surface of the earth, in round numbers, amounts to 510,000,000 square kilometres, and if the elevation of the highest mountains reaches about 9000 metres, the water required by the Biblical Flood, if it be universal, amounts to about 4,600,000,000 cubic kilometres. Now, a forty days' rain, ten times more copious than the most violent rainfall known to us, will raise the level of the sea only about 800 metres; since the height to be attained is about 9000 metres, there is still a gap to be filled by unknown sources amounting to a height of more than 8000 metres, in order to raise the water to the level of the greatest mountains. Thirdly, if the Biblical Deluge was geographically universal, the sea water and the fresh water would mix to such an extent that neither the marine animals nor the fresh-water animals could have lived in the mixture without a miracle. Fourth-

ly, there are serious difficulties connected with the animals in the ark, if the Flood was geographically universal: How were they brought to Noe from the remote regions of the earth in which they lived? How could eight persons take care of such an array of beasts? Where did they obtain the food necessary for all the animals? How could the arctic animals live with those of the torrid zone for a whole year and under the same roof? No Catholic commentator will repudiate an explanation merely for fear of having to admit a miracle; but no Catholic has a right to admit Biblical miracles which are not well attested either by Scripture or tradition. What is more, there are traces in the Biblical Flood story which favour a limited extent of the catastrophe: Noe could have known the geographical universality of the Deluge only by revelation; still the Biblical account appears to have been written by an eye-witness. If the Flood had been universal, the water would have had to fall from the height of the mountains in India to the level of those in Armenia on which the ark rested, i. e. about 11,500 feet, within the space of a few days. The fact that the dove is said to have found "the waters . . . upon the whole earth", and that Noe "saw that the face of the earth was dried", leaves the impression that the inspired writer uses the word "earth" in the restricted sense of "land". Attention has been drawn also to the "bough of an olive tree, with green leaves" carried by the dove in her mouth on her second return to the ark.

(2) The Deluge must have been anthropologically universal, i. e. it must have destroyed the whole human race. After limiting the extent of the Flood to a part of the earth, we naturally ask whether any men lived outside the region covered by its waters. It has been maintained that not all men can have perished in the Flood for the following reasons: Tribes which certainly sprang from Noe were preceded in their earliest settlements by other tribes whose origin is unknown to us: the Dravidic tribes preceded the Aryans in India; the proto-Medians preceded the Medians; the Akkadians preceded the Cushites and Semites in Chaldea; the Chanaanites were preceded in Palestine by other races. Besides, the oldest Egyptian monuments present the Negro race just as we find it to-day, so that even at that remote age, it was wholly different from the Caucasian race. Again, the languages of the races springing from Noe are said to be in a state of development different from that in which we find the languages of the peoples of unknown origin. Finally, the Biblical account of the Flood is said to admit a restriction of its anthropological universality as readily as a limitation of its geographical completeness; for if "land" be substituted in our translation for earth, the Book of Genesis speaks only of the men inhabiting a certain district, and not of the men of the whole earth, as being the victims of the waters. Considerations like these have induced several Catholic writers to regard as quite tenable the opinion that the Deluge did not destroy all men outside the ark.

But if the reason advanced for limiting the Flood to a certain part of the human race be duly examined, they are found to be more specious than true. The above scientific arguments do not favour a partial destruction of the human race absolutely, but only in so far as the uninterrupted existence of the various races in question gives them more time for the racial development and the historical data that have to be harmonized with the text of Genesis. Those who urge these arguments grant, therefore, implicitly that the allowance of a proper length of time will explain the facts on which their arguments are based. As there is nothing in the teaching of the Bible preventing us from assigning the Flood to a much earlier date than has usually been done, the difficulties urged on the part of science against the anthropological universality of the Flood may be easily evaded. Nor can

the distribution of the nations as described in the tenth chapter of Genesis be appealed to, seeing that this section does not enumerate all races of the earth, but confines itself probably to the Caucasian.

Science, therefore, may demand an early date for the Deluge, but it does not necessitate a limitation of the Flood to certain parts of the human race. The question, whether all men perished in the Deluge, must be decided by the teaching of the Bible, and of its authoritative interpreter. As to the teachings of the Bible, the passage which deals *ex professo* with the Flood (Gen., vi-ix), if taken by itself, may be interpreted of a partial destruction of man; it insists on the fact that all inhabitants of the "land", not of the "earth", died in the waters of the Deluge, and it does not explicitly tell us whether all men lived in the "land". It may also be granted, that of the passages which refer incidentally to the Flood, Wis., x, 4; xiv, 6; Eccles., xlv, 17 sqq., and Matt., xxiv, 37 sqq., may be explained, more or less satisfactorily, of a partial destruction of the human race by the inundation of the Deluge; but no one can deny that the *prima facie* meaning of I Peter, iii, 20 sq., II Peter, ii, 4-9, and II Peter, iii, 5 sqq., refers to the death of all men not contained in the ark. The explanations of these passages, offered by the opponents of the anthropological universality of the Deluge, are hardly sufficient to remove all reasonable doubt. We turn, therefore, to authority in order to arrive at a final settlement of the question. Here we are confronted, in brief, with the following facts: Up to the sixteenth and seventeenth centuries the belief in the anthropological universality of the Deluge was general. Moreover, the Fathers regarded the ark and the Flood as types of baptism and of the Church; this view they entertained not as a private opinion, but as a development of the doctrine contained in I Peter, iii, 20 sq. Hence, the typical character of both ark and Flood belongs to the "matters of faith and morals" in which the Tridentine and the Vatican Councils oblige all Catholics to follow the interpretation of the Church.

IV. COLLATERAL QUESTIONS.—These may be reduced to the time of the Deluge, its place, and its natural causes.

(1) *Time of the Deluge.*—Genesis places the Deluge in the six-hundredth year of Noe; the Masoretic text assigns it to the year 1656 after the creation, the Samaritan to 1507, the Septuagint to 2242, Flavius Josephus to 2256. Again, the Masoretic text places it in B. C. 2350 (Klaproth) or 2253 (Lüken), the Samaritan in 2903, the Septuagint in 3134. According to the ancient traditions (Lüken), the Assyrians placed the Deluge in 2234 B. C. or 2316, the Greeks in 2300, the Egyptians in 2600, the Phœnicians in 2700, the Mexicans in 2900, the Indians in 3100, the Chinese in 2297, while the Armenians assigned the building of the Tower of Babel to about 2200 B. C. But as we have seen, we must be prepared to assign earlier dates to these events.

(2) *Place of the Flood.*—The Bible teaches only that the ark rested on a mountain in Armenia. Hence the Flood must have occurred in a place whence the ark could be carried towards this mountain. The Babylonian tradition places the Deluge in the lower valley of the Tigris and Euphrates.

(3) *Natural Causes of the Flood.*—Scripture assigns as the causes of the Deluge the heavy forty days' rains, the breaking up of the fountains of the great deep, and the opening of the flood-gates of heaven. This does not exclude the opinion that certain natural forces were at play in the catastrophe. It has been suggested that the axis of the earth was shifted on account of the earth's collision with a comet, or that powerful volcanic eruptions raised new mountains in the sea, or that an earthquake caused a tidal wave to overrun certain portions of the dry land. Thus, Süß speaks of the frequency of earthquakes and of storms

in the Gulf of Persia; but this would enclose the Flood within too narrow limits both of space and of time. Another conjecture has been proposed by von Schwartz. He supposes that an inland Mongolian sea, in size about equal to the Mediterranean, situated at a height of about 6000 feet above the level of the ocean and 5000 feet above the surrounding Aralo-Caspian plain, at the time of an earthquake broke through one of its walls, and sent its 3,000,000 cubic kilometres of water into the region north of Persia, Armenia, and the Caucasus, covering the whole plain, until the waters were drained by way of the Black Sea and the Mediterranean into the Atlantic Ocean. Here we have the breaking of the bonds of the great deep, we have an outflow of water lasting for several months, and we find that the ark must have been carried westward by the general drift of the waters till it rested on the mountains of Armenia. But not to mention the improbability of the supposition urged by several scientists, we do not understand why the tops of the mountains should not have been visible even after the mooring of the ark. A number of other hypotheses have been proposed in order to explain by natural causes the phenomena implied in the Biblical account of the Deluge, but thus far they have not satisfied the various details given in the Book of Genesis.

Demarcation, LINE OF. See PORTUGAL; SPAIN.

Demerara. See GUIANA.

Demers, MODESTE, apostle of the Pacific Coast of North America, and the first Catholic missionary among most of the Indian tribes of Oregon, Washington, and British Columbia; b. at St. Nicholas, Quebec, 11 Oct., 1809; d. at Victoria, B. C., 21 July, 1871. His father, Michel Demers, and his mother, Rosalie Foucher, were two worthy representatives of the French Canadian farmer class. Endowed with a delicate conscience and a distinctly religious disposition, young Demers resolved to enter the ecclesiastical state, and studied first privately and then at the seminary of Quebec. He was ordained 7 Feb., 1836, by Bishop Signay, and after fourteen months passed as assistant priest at Trois-Pistoles, he volunteered for the far-off mission of Oregon, where the white population, made up mostly of French Canadian employés of the Hudson Bay Company, was clamouring for the ministrations of a priest. Having crossed the American continent in the company of the Rev. F. N. Blanchet, his superior, he reached Walla-Walla, on the lower Columbia, 18 Nov., 1838, and immediately applied himself to the care of the lowliest, that is the Indian tribes, which were then very numerous and not any too meek. He studied their languages and visited their homes regularly, preaching, catechizing the adults, and baptizing the children, especially those whose habitat lay to the north of the Columbia. His apostolic zeal even led him on along the coast of British Columbia, and in 1842 he proceeded inland as far north as Stuart Lake, evangelizing as he went all the interior tribes of that province.

His companion, the Rev. F. N. Blanchet, having been elevated to the episcopate, Demers had to submit to what he considered a burden beyond his strength.

He was consecrated bishop on 30 Nov., 1847, and appointed to the spiritual care of Vancouver Island, making the incipient town of Victoria his headquarters. As a bishop he continued his favourite work among the Indians, though he soon had to give his best attention to the rough and cosmopolitan element which now formed his white flock. For its benefit he procured in 1858 the services of the Sisters of St. Anne, who established schools at Victoria and elsewhere, and of the Oblate Fathers, who took in hand the evangelization of the natives and also founded a college in his cathedral city. In 1866 he assisted at the Second Plenary Council of Baltimore, and shortly afterwards he was one of the fathers of the Ecumenical Council of the Vatican. He died soon after his return, beloved alike by Protestants and Catholics, and revered for his gentleness and his apostolic zeal on behalf of the poor and lowly.

A. G. MORICE.

Demetrius, SAINT, Bishop of Alexandria from 188 to 231. Julius Africanus, who visited Alexandria in the time of Demetrius, places his accession as eleventh bishop after St. Mark in the tenth year of Commodus (tenth of Severus, Eus. His. Eccl., VI, ii, is a slip). A legendary history of him is given in the Coptic "Synaxaria", in an Abyssinian poem cited by the Bollandists, and in the "Chronicon Orientale" of Abraham Echchellensis the Maronite. Three of their statements, however, may have some truth: one that he died at the age of 105 (born, therefore, in 126); another, found also in the Melchite Patriarch Eutychius [Sa'id Ibn Batrik, (d. about 940), Migne, P. G., CXI, 999], that he wrote about the calculation of Easter to Victor of Rome, Maximus (i. e. Maximinus) of Antioch and Gabius or Agapius (?) of Jerusalem (cf. Eus., H. E., V, xxv). Eutychius relates that from Mark to Demetrius there was but one see in Egypt, that Demetrius was the first to establish three other bishoprics, and that his successor Heraclas made twenty more.

At all events Demetrius is the first Alexandrian bishop of whom anything is known. St. Jerome has it that he sent Pantænus on a mission to India, but it is likely that Clement had succeeded Pantænus as the head of the famous Catechetical School before the accession of Demetrius. When Clement retired (c. 203-4), Demetrius appointed the young Origen, who was in his eighteenth year, in Clement's place. Demetrius encouraged Origen when blamed for his too literal execution of an allegorical counsel of our Lord, and is said to have shown him great favour. He sent Origen to the governor of Arabia, who had requested his presence in letters to the prefect of Egypt as well as to the bishop. In 215-16 Origen was obliged to take refuge in Cæsarea from the cruelty of Caracalla. There he preached at the request of the bishops present. Demetrius wrote to him complaining that this was unheard of presumption in a layman. Alexander of Jerusalem and Theoctistus of Cæsarea wrote to defend the invitation they had given, mentioning precedents; but Demetrius recalled Origen. In 230 Demetrius gave Origen a recommendation to take with him on his journey to Athens. But Origen was ordained priest at Cæsarea without leave, and Demetrius with a synod of some bishops and a few priests condemned him to banishment, then from another synod sent a formal condemnation of him to all the churches. It is impossible to doubt that heresy, and not merely unauthorized ordination, must have been alleged by Demetrius for such a course. Rome accepted the decision, but Palestine, Phœnicia, Arabia, Achaia rejected it, and Origen retired to Cæsarea, whence he sent forth letters in his own defence, and attacked Demetrius. The latter placed at the head of the Catechetical School the first pupil of Origen, Heraclas, who had long been

his assistant. But the bishop died very soon, and Heracles succeeding him, Origen returned to Alexandria.

A fragment ascribed to Demetrius by PITRA in his *Analecta Sacra*, II, 345, is probably by a certain Demetrius Callatianus mentioned by Strabo.

JOHN CHAPMAN.

Demetrius, the name of two Syrian kings mentioned in the Old Testament and two other persons in the New Testament.

(a) DEMETRIUS SOTER, or the Saviour, so called because he saved the Babylonians from the tyranny of the satrap Heracles, reigned from 162 to 150 b. c. He was the son of Seleucus Philopator, and spent his early years as a hostage in Rome, petitioning the Senate in vain for permission to return to his country. With the assistance, however, of his friend, the historian Polybius, he escaped to Tripolis in Phoenicia, formed a party, murdered Antiochus V, his cousin, with Lysias, the chancellor, ascended the throne of the Seleucide, and was acknowledged by Rome. A Jewish party, dissatisfied with Judas Machabeus, invited Demetrius to interfere in their favour. Demetrius appointed Alcimus as high-priest and sent his general Bacchides with an army in his support. Soon after, as Alcimus' position seemed secure, Bacchides left. As Judas, however, grew stronger, Alcimus again appealed for help. Demetrius sent as general Nicanor, who first tried to capture Judas by strategy, but then met him at Kapharsalama and lost the battle. Nicanor entered Jerusalem, vented his wrath on the priests, and threatened to destroy the Temple. Judas met Nicanor again at Beth-Horon and utterly routed his army. Nicanor fell in the battle (161 b. c.). Two months later Demetrius, for the third time, sent a Syrian army into Palestine under Bacchides, who defeated and slew Judas in the battle of Berea, garrisoned some Jewish towns, and returned. A Syrian army entered Palestine under the same Bacchides for the fourth time in 158 b. c., but the Machabean party had recovered its strength, and a treaty ended the campaign. Meanwhile a pretender had arisen to the Syrian throne in the person of Alexander Balas. Both Demetrius and Alexander were anxious to gain the support of the Jews. Alexander offered to Jonathan Machabeus the purple and a diadem, which he accepted in 153 b. c. Demetrius subsequently offered still greater privileges to the Jews and their leader, but the Jews remained faithful to Alexander. In 150 b. c. Alexander and his allies defeated Demetrius, "who valiantly fought with undaunted courage in the thick of the battle and was slain" (I Mach., vii, ix, x; II Mach., xiv, xv; Justin, XXXV, i.).

(b) DEMETRIUS NIKATOR, or the Conqueror, son of the above, succeeded four years after the death of his father in gaining the Syrian throne. Jonathan Machabeus, remaining faithful to Alexander unto the end, had opposed the succession of Demetrius II. Demetrius' vicerey, Apollonius, who ruled over Coele Syria, held Joppe and Ashdod for his king, but was driven out and defeated by Jonathan, who destroyed Ashdod and brought a rich booty to Jerusalem. Jonathan tried to throw off the Syrian yoke altogether and besieged the fortress of Jerusalem. Demetrius first cited Jonathan to Ptolemais to answer for his rebellion, relying upon a pro-Syrian party among the Jews; but Jonathan boldly continued the siege of Jerusalem and then, nothing daunted, faced Demetrius at Ptolemais. He demanded an extension of territory and

several privileges for the Jews, and supported his demand by costly gifts. Demetrius did not dare to refuse, but agreed to the addition of three Samaritan districts, Ephraim, Lydda, and Ramathaim, to Judea; he freed this extension of Judea from all taxes and confirmed Jonathan in all his dignities. Demetrius had thus escaped further danger from his Jewish vassal but soon after had to encounter Trypho, a former general of Alexander Balas. This man proclaimed Alexander's son Antiochus VI king, though as yet only a boy, and the threatening attitude of the people of Antioch brought the throne of Demetrius II into imminent danger. In his distress he appealed to Jonathan, who sent 3000 men to quell the insurrection at Antioch. Demetrius promised to hand over Jerusalem and some other fortresses of Judea to Jonathan. Jonathan stamped out the revolution at Antioch, but Demetrius did not fulfil his promise. Shortly after, Trypho and Antiochus the Pretender captured Antioch and sought the assistance of Jonathan. As Demetrius II had proved himself faithless, Jonathan left his side and went over to Trypho. In consequence Demetrius gathered an army against Jonathan, to punish his defection, but never risked a battle. When Trypho had murdered Antiochus VI, Jonathan returned to Demetrius' allegiance. Trypho was finally defeated by the brother of Demetrius, but Demetrius was made prisoner in a campaign against the Parthians, in whose hands he remained for ten years, the daughter of whose king Mithridates he received in marriage and by whom, under Phraates, he was restored to the Syrian throne after defeating his brother Antiochus Sidetes. He was then persuaded to attack the King of Egypt, Ptolemy Physcon. This caused the rise of another Syrian pretender, Alexander Zabinas, who defeated Demetrius near Damascus. Demetrius fled to Tyre, and on landing was there assassinated in 128 b. c. His wife Cleopatra is said to have been privy to the crime. (I Mach., xiii, 41; x, 67; xiv, 3.)

(c) DEMETRIUS, the name of two persons mentioned in the New Testament. (1) Acts, xix, 24, mentions Demetrius, a silversmith (*ἀργυροκόπος*), who made silver shrines for Diana at Ephesus. These shrines (*ναοὶ*; in D. V. "temples") were probably little silver models either of the temple or of the actual shrine (*sacellum*) in which the idol was placed, and were used as amulets or objects of piety and souvenirs carried away by thousands of pagan pilgrims. Finding his trade diminished through the spread of Christianity and the decline of heathen worship, he and his fellow-craftsmen caused the uproar against St. Paul as narrated in Acts, loc. cit.

(2) St. John the Apostle, in his Third Epistle (v. 12), praises Demetrius to whom "testimony is given by all, and by the truth itself" and apparently opposes him to Diotrephes, who did not receive St. John, and cast out of the Church those that did (verses 9, 10). Nothing more is known of him. Possibly he was the bearer of the letter.

J. P. ARENDZEN.

Demiurge.—The word means literally a public worker, *δημιουργός*, *δημιουργός*, and was originally used to designate any craftsman plying his craft or trade for the use of the public. Soon, however, *τεχνίτης* and other words began to be used to designate the common artisan while demiurge was set aside for the Great Artificer or Fabricator, the Architect of the universe. At first the words *τοῦ κόσμου* were added to distinguish the great Workman from others, but gradually *δημιουργός* became the technical term for the

Maker of heaven and earth. In this sense it is used frequently by Plato in his "Timæus". Although often loosely employed by the Fathers and others to indicate the Creator, the word never strictly meant "one who produces out of nothing" (for this the Greeks used *κτῆρης*), but only "one who fashions, shapes, and models". A creator in the sense of Christian theology has no place in heathen philosophy, which always presupposes the existence of matter. Moreover, according to Greek philosophy the world-maker is not necessarily identical with God, as first and supreme source of all things; he may be distinct from and inferior to the supreme spirit, though he may also be the practical expression of the reason of God, the Logos as operative in the harmony of the universe. In this sense, i. e. that of a world-maker distinct from the Supreme God, *Demiurge* became a common term in Gnosticism. The Gnostics, however, were not satisfied merely to emphasize the distinction between the Supreme God, or God the Father, and the Demiurge, but in many of their systems they conceived the relation of the Demiurge to the Supreme God as one of actual antagonism, and the Demiurge became the personification of the power of evil, the Satan of Gnosticism, with whom the faithful had to wage war to the end that they might be pleasing to the Good God. The Gnostic Demiurge then assumes a surprising likeness to Ahriman, the evil counter-creator of Ormuzd in Mazdean philosophy. The character of the Gnostic Demiurge became still more complicated when in some systems he was identified with Jehovah, the God of the Jews or of the Old Testament, and was brought in opposition to Christ of the New Testament, the Only-Begotten Son of the Supreme and Good God. The purpose of Christ's coming as Saviour and Redeemer was to rescue us from the power of the Demiurge, the lord of the world of this darkness, and bring us to the light of the Good God, His Father in heaven. The last development in the character of the Demiurge was due to Jehovah being primarily considered as he who gave the Law on Sinai, and hence as the originator of all restraint on the human will. As the Demiurge was essentially evil, all his work was such; in consequence all law was intrinsically evil and the duty of the children of the Good God was to transgress this law and to trample upon its precepts. This led to the wildest orgies of Antinomian Gnosticism.

According to Valentinus the Demiurge was the offspring of a union of Achamoth (הכחמות, *hē kakhmōt* or lower wisdom) with matter. And as Achamoth herself was only the daughter of *Σοφία*, the last of the thirty Æons, the Demiurge was distant by many emanations from the Propatōr, or Supreme God. The Demiurge in creating this world out of Chaos was unconsciously influenced for good by Jesus Soter; and the universe, to the surprise even of its Maker, became almost perfect. The Demiurge regretted even its slight imperfection, and as he thought himself the Supreme God, he attempted to remedy this by sending a Messiah. To this Messiah, however, was actually united Jesus the Saviour, Who redeemed men. These are either *δυῖκοι*, or *πνευματικοί*. The first, or carnal men, will return to the grossness of matter and finally be consumed by fire; the second, or psychic men, together with the Demiurge as their master, will enter a middle state, neither heaven (*pleroma*) nor hell (*hyle*); the purely spiritual men will be completely freed from the influence of the Demiurge and together with the Saviour and Achamoth, his spouse, will enter the *pleroma*, divested of body (*ἔλκη*) and soul (*ψυχή*). In this most common form of Gnosticism the Demiurge had an inferior though not intrinsically evil function in the universe as the head of the psychic world. According to Marcion, the Demiurge was to be sharply distinguished from the Good God; the former was *δίκαιος*, severely just, the latter *ἀγαθός*, or loving-kind; the former was the God of the Jews, the latter the true God

of the Christians. Christ, though in reality the Son of the Good God, pretended to be the Messiah of the Demiurge, the better to spread the truth concerning His heavenly Father. The true believer in Christ entered into God's kingdom, the unbeliever remained forever the slave of the Demiurge. To this form of Gnosticism, the Demiurge has assumed already a more evil aspect. According to the Naassenes the God of the Jews is not merely *δίκαιος*, but he is the great tyrant Jaldabaoth, or Son of Chaos. He is Demiurge and maker of man, but as a ray of light from above enters the body of man and gives him a soul; Jaldabaoth is filled with envy; he tries to limit man's knowledge by forbidding him the fruit of knowledge in paradise. The Demiurge, fearing lest Jesus, whom he had intended as his Messiah, should spread the knowledge of the Supreme God, had him crucified by the Jews. At the consummation of all things all light will return to the *pleroma*; but Jaldabaoth, the Demiurge, with the material world, will be cast into the lower depths. Some of the Ophites or Naassenes venerated all persons reprobated in the Old Testament, such as Cain, or the people of Sodom, as valiant resisters of the Demiurge. In these weird systems the idea of the world-maker was degraded to the uttermost. Amongst the Gnostics, however, who as a rule set some difference between the Demiurge and the Supreme God, there was one exception; for according to the Ebionites, whose opinions have come down to us in the Pseudo-Clementine literature, there is no difference between the Highest God and the Demiurge. They are identical, and the God Who made heaven and earth is worthy of the adoration of men. On the other hand the Ebionite system is tainted with pantheism, and its Demiurge is not a creator but only a world-builder. (See Gnosticism; Valentinus; Marcion.)

Democracy. See GOVERNMENT, FORMS OF.

Democracy, CHRISTIAN.—In Christian Democracy, the name and the reality have two very different histories, and therefore they must be carefully distinguished.

THE REALITY.—What Christian democracy is was authoritatively laid down by Pope Leo XIII in his Encyclical "Graves de communi" wherein it is declared to be the same as "popular Catholic action". Such a definition is certainly intensive; so that not everything done by Catholics, among the people or for the people, can be technically termed Christian democracy, or popular Catholic action. *Action* in this definition is taken to mean an organized movement with a definite programme to deal with the pressing problems that come before it. *Popular* has reference to the people, not inasmuch as they are a nation or collective whole, but as the fourth estate: the *plebs*, the *tenuiiores*, and the *tenuissimi* of classical antiquity. Lastly, *Catholic* (and therefore Christian through and through) signifies that this organized action in favour of the people (*plebs*) is the work of Catholics as such. Popular Catholic action, therefore, means that the scope mapped out for the activity of the organization is the well-being of the people; and that the movement proceeds along Catholic lines, under the guidance of Catholic leaders. Having stated this, it is easy to understand that the existence of Christian democracy is not a thing of yesterday. In the very nature of Christianity, in the spirit of the Church, in the mission of the clergy (cf. Benigni, *Storia sociale della Chiesa*, Milan, 1907, I) lies the germ of popular Catholic action technically so called; in other

words, of Christian democracy. As soon, therefore, as political and social circumstances allowed it, the Church set her hand to this work, and she has continued without interruption her traditional action in behalf of the people. To prove this there is no need of distorting the facts of history. Even if we exclude the marvellous economic organization of the Church of the first three centuries (see the last part of the "Storia" referred to above), it is certain that from the time of Constantine the Church began the practical work of Christian democracy, when the clergy showed their zeal in establishing hospices for orphans, for the aged and infirm, and for wayfarers.

Constantine in a period of famine chose the bishops rather than the civil officials to distribute corn among a starving people, and thus showed his appreciation of Christian democracy. Julian the Apostate showed even a clearer insight when in his famous letter to the pagan high-priest of Galatia he urged him strongly to admonish the pagan priesthood that they must rival the Christian clergy in this field of popular work. But when the fall of the Empire of the West under the shock of the barbarian invasion brought civilization to the verge of ruin and shook the very foundation of the people's welfare; when it became necessary to build up again laboriously the neo-Roman culture of the West out of the remnants that escaped the catastrophe and the raw material of the scarcely civilized races, then shone forth in its real light the true Christian democracy of the Catholic Church. Suffice it to say that an entire system of laws and customs in furtherance of the civil and material well-being of the people was established, or at least strengthened and developed, by the united action of clergy and laity. The right of sanctuary, the art guilds and trade guilds, the relentless war against usury, the numberless benevolent institutions, the protection afforded to labour in general, and the special provision made for the unemployed, all these form a golden thread of Christian democracy that runs through the whole course of medieval Church history, unbroken and untarnished amid its surroundings of iron and stone. The Truce of God (which proclaimed the inviolability of the lands and dominions of a lord who had gone to the Crusades) was not only a safeguard of that lord's interests, but above all of his people, who, in the absence of their military chief could offer but a sorry defence against the frequent inroads of neighbouring lords or princes. The *montes pietatis*, too, were an admirable Catholic institution that delivered the poor from the clutches of the extortioner from whom they were obliged to borrow. The many thousand confraternities scattered up and down Europe were religious associations, but in nearly every instance they had a common fund for the benefit and protection of their members. Thus, in the Papal States, up to the time of the French Revolution, many guilds (such as shoemakers, carpenters, etc.) had a notary public and a lawyer who were bound to transact for a few pence the legal business of the members of the guild. These few examples, chosen from widely different fields, suffice to show that an organized action, really Catholic and really of the people, is one of the time-honoured traditions of Catholicism.

But the last definitive stage of Christian democracy, and one that has given the name a fixed and technical meaning, dates from the time that elapsed between the fall of Napoleon I and the international Revolution of 1848. Among the many calumnies heaped upon the Church during the French Revolution was the charge that she was anti-democratic, and this not only in a political, but also in a larger social sense; it meant that the Church favoured the great and mighty, and sided with the monarchical oligarchy against the just political and economic demands of the middle and lower classes. The horrors of the Revolution and, later on, the illusions of the Restoration, drove the

clergy and a number of the thinking laity into the movement of the Counter-Revolution, which, in the hands of politicians like Metternich, developed into a "reaction", i. e. it was not deemed sufficient to struggle against the evil of revolution and uphold the social order; it was thought necessary to restore the old regime, bury everything good and bad that savoured of democracy, and thereby deprive the people of a means of improving their politico-economic conditions. This reactionary programme looked on the social question as one to be solved by fear of the Government's armed hand, by charitable subsidies, and by the creation of holidays. This programme found support in a saying attributed to the King of Naples: To rule the mob you must use three *f's*: *feste*, *farina*, and *forca* (festivals, food, and gallows). But a new revolution was in the air. The Carbonari began their work in 1821 and kept on until it resulted in the general upheaval of 1848. The mass of the clergy and of militant Catholics stood by the "reaction" as far as it was a counter-revolution in the better sense of the word; but in the general public opinion the clergy and the Catholics, partly through mistakes of their own, but chiefly through the malice of their enemies, came to be looked upon as reactionaries who favoured the oppression of the people.

Then there began among Catholics "a reaction against reaction", and there arose, especially in France, the de Lamennais party which had as a mouthpiece the newspaper known as "L'Avenir," and for its motto, "God and Liberty". There is no doubt that Ozanam, with his conferences of St. Vincent de Paul, had the true practical idea of charity, at once thoroughly Christian and thoroughly adapted to actual needs; he was not content with the passing touch of the hand that gave and the hand that received, but he sent the charitable into the very homes of the needy and brought them face to face with the hard reality in order to give them a better understanding and a stronger sense of brotherhood. De Lamennais had an insight, confused but keenly felt, into a popular Catholic action not restricted to works of material and immediate beneficence, but extending beyond these to an assertion of justice and social equity for the lower classes. De Lamennais, therefore, was in reality a pioneer of Christian democracy. Unfortunately, he also led the way in errors that even to-day we deplore. By involving the ethico-juridical and economical action of Christian democracy in political agitation, he fell into a mistake which was the more unfortunate as the parties of his day made use of it to bring about a violent political crisis. He was wrong, too, in believing that liberty was the positive foundation of everything; hence the justice of the reproach cast upon his formula, "God and Liberty": either *Liberty* was superfluous, since that is already implied in *God*, or the phrase was illogical, since there can be no question of liberty unless it harmonizes with social order. And so de Lamennais and his movement ended in failure.

The revolution of 1848 and the consequent reaction of 1850 hindered the Catholics from availing themselves of such good as there was in de Lamennais' attempt. Then came the political and religious struggles which the Church had to face during the long pontificate of Pius IX and the early years of Leo XIII's rule. But the latter pontiff soon issued his Encyclicals on the political, ethical, juridical, and economical questions of the day, and in dealing with the social question in its popular aspects he published, 15 May, 1891, the immortal "Rerum Novarum" which has become the Magna Charta of Christian democracy. Measures were at once taken to secure popular Catholic action; and it quickly appeared how unequal most Catholics were to the doctrinal and practical requirements of the situation. On the one hand, many of them, terrified by the evils

of the Revolution (especially in Latin countries), would not hear of the burning questions of the day or of new organizations, but confined themselves to the old traditional methods of material and spiritual assistance, occasionally venturing on the establishment of conferences of St. Vincent de Paul and of workmen's mutual benefit societies, such as were already widely organized by the middle-class liberal party. On the other hand, there were some who thought that the best means of combating Socialism was to imitate it; and they encouraged ideas, attitudes, and expressions of a socialistic type, which resulted in a distorted viewpoint and an undisciplined activity, to the great injury of genuine popular Catholic action.

But these various turnings in the course of modern Christian democracy are hardly as yet matters of history; they are rather items in a chronicle that is still being written; and this is not the place to discuss them. Only let it be noted that Leo XIII over and over again, especially in receiving pilgrimages of workmen, laid down clearly the limits and the nature of popular Catholic action, and that Pius X has repeatedly confirmed and approved of them. Christian democracy is the ensemble of Catholic doctrine, organization, and action in the field of popular social questions, i. e. the vast field occupied by the proletariat, called by some (inexactly, because the term is not wide enough) the labour question. Christian democracy recognizes in principle and in fact that the popular social question cannot be limited to the question of justice, nor of charity; but that it ought to establish a harmony between the claims of the first and the pleadings of the second, avoiding the excesses of anarchistic individualism as well as those of communism, socialistic or otherwise. Christian democracy, then, disapproves of the conduct of those "socialistic" Catholics who despise or minimize the social function of Christian charity; just as it disapproves the position of those other Catholics who would ignore and disregard the question of social justice in such matters as minimum salary and maximum number of working hours, obligatory insurance of workmen, and proportionate sharing of profits. But real Christian democracy seeks to be, and is, absolutely neutral on political matters. It is not, and never can be monarchical, or republican, or oligarchical, or parliamentary, or partisan in politics. So much follows from its very nature. On this foundation Christian democracy, emerging from the present crisis, will develop its vast programme for the moral and material redemption of the people, and will be one of the grandest and most fortunate applications of the programme of Pius X, "to restore all things in Christ".

THE NAME.—After the appearance of the Encyclical "Rerum Novarum", the rapid growth of popular Catholic action called for a suitable name to describe it. The old name, indeed, "Popular Catholic Action", was both accurate and comprehensive; but a discussion arose as to selecting a *nom de guerre*, and the choice eventually lay between "Catholic Socialism" and "Christian Democracy". The discussion was carried on especially in Belgium, where popular Catholic action had been highly developed. Those in favour of "Catholic Socialism" pointed out that the name *socialism* signified purely social questions, while *democracy* implied the idea of government and therefore savoured of politics. Their opponents answered that *socialism* was a branded word, and belonged to the materialistic and revolutionary party known by that name, while *democracy* had lost its political meaning and actually signified nothing else than "popular question" or merely "popularity"; so much so that a king who loves his people and is loved by them is called a "democratic" king. In the end the word *democracy* won; and Leo XIII in the Encyclical "Graves de communi" (18 January, 1901) declared as acceptable and accepted the expression "Christian

democracy" as meaning neither more nor less than popular Catholic action and as having for its aim to comfort and uplift the lower classes (*studium solandæ erigendæque plebis*), excluding expressly every appearance and implication of political meaning. Thus the name was officially accepted at once (e. g. by the "Opera dei Congressi e Comitati Cattolici d'Italia") in the sense laid down by the encyclical. But unfortunate complications soon arose through the action of a few, who were not unjustly likened to the Roman revolutionaries of 1848 who besought Pius IX to give them a constitution, nothing but a constitution, and, when they got it, wanted to pass off anything and everything under the name of the Constitution. There were formed soon (in France, Italy, and Belgium) groups of "Christian Democrats" who made it their business to war against conservative Catholics and to consort with Socialists. On their leaflets and calendars the Italian demo-Christians printed the dilemma: "either Bourbonist or Christian-Democrats", as though to be Bourbon in politics hindered one from belonging to the party of popular Catholic action, i. e. to Christian Democracy. While insisting that it is still at the chronicle stage, we may state in conclusion that the term *Christian Democracy* seems to have been seriously compromised by the action of those who distorted its meaning from that laid down in the Encyclical "Graves de communi"; it therefore inclines to lose the meaning of "popular Catholic action", and tends more and more to denote a school and a political party. (See BELGIUM; FRANCE; GERMANY; ITALY; SPAIN.)

U. BENIGNI.

Demon (Greek δαίμων and δαιμόνιον; Lat. *dæmonium*).—In Scripture and in Catholic theology this word has come to mean much the same as *devil* and denotes one of the evil spirits or fallen angels (see *DEVIL*). And in fact in some places in the New Testament where the Vulgate, in agreement with the Greek, has *dæmonium*, our vernacular versions read *devil*. The precise distinction between the two terms in ecclesiastical usage may be seen in the phrase used in the decree of the Fourth Lateran Council: "Diabolus enim et alii dæmones" (The devil and the other demons), i. e. all are demons, and the chief of the demons is called the devil. This distinction is observed in the Vulgate New Testament, where *diabolus* represents the Greek διάβολος, and in almost every instance refers to Satan himself, while his subordinate angels are described, in accordance with the Greek, as *dæmones* or *dæmonia*. This must not be taken, however, to indicate a difference of nature; for Satan is clearly included among the *dæmones* in James, ii, 19, and in Luke, xi, 15, 18. But though the word *demon* is now practically restricted to this sinister sense, it was otherwise with the earlier usage of the Greek writers. The word, which is apparently derived from *δαω* "to divide" or "apportion", originally meant a divine being; it was occasionally applied to the higher gods and goddesses, but was more generally used to denote spiritual beings of a lower order coming between gods and men. For the most part these were beneficent beings, and their office was somewhat analogous to that of the angels in Christian theology. Thus the adjective εὐδαίμων, "happy", properly meant one who was guided and guarded by a good demon. Some of these Greek demons, however, were evil and malignant. Hence we have the counterpart to εὐδαιμονία, "happiness", in κακοδαιμονία which denoted misfortune, or in its more original meaning, being under the possession of an evil demon. In the Greek of the New Testament and in the language of the early Fathers, the word was already restricted to the sinister sense, which was natural enough, now

that even the higher gods of the Greeks had come to be regarded as devils.

We have a curious instance of the confusion caused by the ambiguity and variations in the meaning of the word, in the case of the celebrated "Dæmon" of Socrates. This has been understood in a bad sense by some Christian writers who have made it a matter of reproach that the great Greek philosopher was accompanied and prompted by a demon. But, as Cardinal Manning clearly shows in his paper on the subject, the word here has a very different meaning. He points to the fact that both Plato and Xenophon use the form *δαίμων*, which Cicero rightly renders as *divinum aliquid*, "something divine". And after a close examination of the account of the matter given by Socrates himself in the reports transmitted by his disciples, he concludes that the promptings of the "Dæmon" were the dictates of conscience, which is the voice of God.

It may be observed that a similar change and deterioration of meaning has taken place in the Iranian languages in the case of the word *daeva*. Etymologically this is identical with the Sanskrit *deva*, by which it is rendered in Neriosengh's version of the Avesta. But whereas the devas of Indian theology are good and beneficent gods, the daevas of the Avesta are hateful spirits of evil. (See also DEMONOLOGY.)

MANNING, *The Dæmon of Socrates* (1872); ALEXANDER, *Demonic Possession in the New Testament* (1902).

W. H. KENT.

Demoniacs (Gr. *δαίμονιός*, *δαίμονιζόμενος*, possessed by a demon).—The idea of demonic possession by which a man becomes demonized, that is possessed or controlled by a demon, was present in many ancient ethnic religions, and in fact it is found in one form or another wherever there is a belief in the existence of demons, and that is practically everywhere (cf. DEMON; DEMONOLOGY). Here, however, we are chiefly concerned with the demonic possession in the New Testament; for this is in many ways the most worthy of special attention, and serves as a standard by which we may judge of cases occurring elsewhere. Further questions in regard to these other cases and the general practice of the Church in dealing with those who are possessed by evil spirits will be treated in other articles (EXORCISM, OBSESSION). Among the many miracles recorded in the synoptic Gospels, special prominence is given to the casting out of devils or demons (*δαίμων*, *δαίμονιον*). Thus, in St. Mark, the first of all the wonders is the casting out of the devil from a demoniac, the man "with an unclean spirit" (*ἐν πνεύματι ἀκαθάρτῳ*) in the synagogue at Capharnaum. And St. Peter thus describes the mission and the miracles of Christ: "Jesus of Nazareth: how God anointed him with the Holy Ghost, and with power, who went about doing good, and healing all that were oppressed by the devil" (*τοῦς καταδυναστευομένους ὑπὸ τοῦ διαβόλου*—Acts, x, 38).

The reason for the stress thus laid on this casting out of the devils is not far to seek. For the miracles of Christ, as St. Augustine says, are both deeds and words. They are works done in testimony of His power and His Divine mission; and they are words, because they have a deep significance. In both these aspects the casting out of devils seems to have a special pre-eminence. Few, if any, of the wonders can be said to give such a striking proof of a power above the order of nature. And for this reason we find that the disciples seem to have been more impressed by this than by the other powers given to them—"The devils even are subject to us." And as, when He stilled the storm at sea, they cried: "Who is this (think you), that He commandeth both the winds and the sea, and they obey Him?" (Luke, viii, 25). So those who saw the devil cast out at Capharnaum asked: "What thing is this? What is this new doc-

trine? For with power He commandeth even the unclean spirits, and they obey Him" (Mark, i, 27). In the same way it may be said that these wonders speak in a special manner and show forth the meaning of His mission; for He had come to break the power of Satan and deliver men from their state of servitude. It is thus that Christ Himself, on the eve of His Passion, speaks of the great victory which He was about to accomplish by His Cross on Calvary: "Now is the judgment of the world: now shall the prince of this world be cast out" (John, xii, 31). That casting-out is symbolized in the deliverance of every demoniac. They might also be in the slavery of sin and in need of forgiveness. They might possibly have some bodily infirmity and need healing; still, it was not for this that they were said to be demoniacs, but because an evil spirit had literally entered into, and taken possession of, them to control and direct, or perhaps hinder, their physical powers, e. g. to speak through their vocal organs, or to tie their tongues. And though this possession might be associated with sin, this was not necessarily the case; for sometimes this affliction might befall an innocent person, as in the case of the boy who had been possessed from his infancy (Mark, ix, 20). So neither is it necessary to suppose that there was any bodily infirmity in the victim distinct from the demonic possession itself, even in the case of those who are described as being blind or dumb as well as being possessed by a devil. For it may be—and in some places it may seem that this is intimated by the text—that the dumbness or other infirmity is not due to any defect in the organs, but to the fact that their normal activity is hindered by the possessing devil. Hence, when once his influence and restraint is taken away, the infirmity forthwith disappears.

It is in this way that these cases of demonic possession have been constantly understood by Catholic commentators; that is to say, the words of Scripture have been taken literally, and understood to mean that an evil spirit, one of the fallen angels, has entered into the demoniac, that this spirit may speak through the voice of the demonized person, but that it is not the man, but the spirit, who is speaking, and that by the command of Christ or that of one of His servants the evil spirit may be cast out, and the possessed person set free. And though our commentators and theologians have treated the subject of obsession with their wonted fullness of detail and critical discrimination, for a long time there was little occasion for any determined defence of this literal interpretation and acceptance of the Scriptural doctrine on this matter. For even in the days of the first Reformers, when so many traditional doctrines were rudely called in question, there was no disposition to dispute the reality of demonic possession. The primitive Protestants might not accept the claims of the Church to the power of exorcizing evil spirits, as they plainly denied the higher sacramental powers of the Christian priesthood; but they had no mind to doubt or deny the existence of evil spirits and the reality of Satanic influence and activity. Nor is this surprising, since the beginning of Protestantism was marked by an increase in practices of superstition, and for a long while, both in Catholic and in Protestant countries, men were prone to be too credulous in these matters, and to exaggerate the extent of obsession, witchcraft, and intercourse with evil spirits.

Needless to say, the whole traditional doctrine on this matter was rejected by the Sceptical philosophers of the eighteenth century. And with the spread of new ideas in the age of revolution, and political economy and practical science, it seemed, for a time at any rate, in the early nineteenth century, that the old superstitious beliefs in spirits and witchcraft were dying a natural death. Most educated men were incredulous of any diabolical agency in this world, even if they retained some shadowy belief in the existence

of the evil spirits in another sphere. But with a happy inconsistency, many who rejected as superstitious all other alleged cases of obsession still professed their belief in the Gospel narrative, with its numerous demoniacs and its miraculous exorcisms. Of course it was possible, at least in the abstract, and without making a too curious examination of the facts, to hold a theory that possession had really happened of old and had since ceased altogether. For all must admit that in any case it does not occur with the same frequency in all ages or in every land alike. But it is one thing to dispute the fact and another to deny the possibility of demonic possession in medieval or modern times. It may be a great mistake, but there is no contradiction involved in saying that obsession did happen of old but does not happen now; it is surely another matter if we say that these things cannot happen now, that they are intrinsically impossible. And though they may not be fully conscious of their own motives, it is to be feared that this is really the position adopted by those who reject all cases of demonic possession except those that are recorded in the New Testament. It is true that some are provided with a theological, or Biblical, reason for this limitation. For they tell us that possession was indeed possible before the Death of Christ, but that since that great victory the power of Satan has been broken, or, in the language of Scripture, he has been bound, so that he can no longer gain possession of the bodies of men. It may be freely allowed that there is no contradiction or inconsistency involved in admitting the Gospel cases of obsession and denying the others, if this be the real reason for making the distinction. But it is difficult to believe that this is really the ground on which all later instances are rejected as unreal. For, after all, this doctrine about the binding of Satan and the consequent ceasing of obsession is at best a theological conjecture (see *DEVIL*) and a plausible interpretation of a mysterious text, and as such it can hardly afford a basis for a certain conclusion. And it may be safely said that those who deny all modern or medieval cases of obsession are generally very certain of their conclusion. There is a further difficulty in the fact that cases of obsession are recorded in the New Testament as having taken place after the death of Christ.

It was no doubt due to the force of these objections, or to a desire to find some means of meeting or evading them, that the Rationalistic school of German Biblical criticism set about the task of providing a new interpretation of the Gospel cases of demonic possession. Older free-thinking philosophers and assailants of revealed religion had bluntly denied the fact of obsession, and asserted that the demoniacs were merely madmen, that they were suffering from epilepsy, or mania, or some other form of mental alienation, and that Jewish superstition had ascribed the disease to the presence of an evil spirit. The earlier school of German Rationalist theologians endeavoured to modify this view of the matter and so interpret the Sacred Text as to reconcile the naturalistic explanation with due reverence for the Gospel and for the wisdom of the Divine Redeemer. Thus they accepted the view that the demoniacs were merely lunatics, and that it was only popular superstition that imagined that they were possessed by devils. So far these theologians agreed with the infidel writers. But, instead of making the confusion between lunacy and possession a ground of attack on the Gospel, they went on to explain that Christ indeed knew the truth and only accommodated Himself to the ideas of His ignorant hearers, who were incapable of grasping the true facts, and that this was the wisest way to lead them on to the truth. One of these interpreters seeks to explain the answers to the evil spirit at Capernaum by the method adopted by doctors in dealing with those who are suffering under a delusion. The

best means of curing them is often found in an affected adoption of the patient's delusion, e. g., if he imagines that he has to undergo some operation, the doctor will pretend to perform it. In the same way it is suggested that the superstitious belief in demonic possession prevailed among the Jews in the time of Christ (and whether true or false it certainly did prevail among them), and in these circumstances a lunatic might very well be under the delusion that he was a subject of this imaginary obsession; and thus a wise physician might cure the delusion by means of an affected exorcism of the non-existent evil spirit.

The fallacy of this crude Rationalism was searchingly criticized and exposed by Strauss in his critical *Life of Christ* more than seventy years ago (*Das Leben Jesu*, ix). He points out that such interpretations not only have no basis in the text, but that there is much there that plainly contradicts them. The critic, he observes, is really ascribing the ideas of his own time to those who lived in the first century. And indeed a closer scrutiny of the evidence may well be enough to show that this Rationalistic exegesis is inconsistent in itself and in conflict with the testimony of the very documents on which it professes to be founded. It may be admitted that there is an element of truth in the general notion that there may be some condescension or accommodation where an enlightened teacher is addressing a rude and uncultured audience, and one who cannot in some measure adapt himself to their crude conceptions and habits of thought and expression might as well address them in a foreign tongue. It may be added that in the case of a Divine teacher there must needs be some condescension or accommodation to the lowly ways of men. And for this reason St. Gregory Nazianzen likens the inspired words of Holy Scripture to the simple language in which a mother speaks to her lisping little ones. It need not surprise us, therefore, did we find that Christ accommodated His words to the limitations of those who heard Him. But this principle will not serve to explain His manner of speaking and acting in regard to this matter of demonic possession, for it simply will not fit the facts. It is not a question of some isolated and possibly ambiguous action or utterance, but of many and various acts and utterances all consistent with each other, and with the belief or knowledge that there is real demonic possession, and utterly incompatible with the interpretation that has been put upon them by these critics. It may be a wise course to humour a madman who imagines himself to be possessed, by pretending to accept his belief and bidding the devil depart from him, and in the case of some modern missionary, of whom we knew no more than the fact that he had used some words in a case of supposed possession, there might be room to doubt whether he himself believed in the possession, or was merely seeking to pacify a lunatic by making use of his delusion. But it would surely be otherwise if we found the same missionary speaking in this way about demons and demonic possession to others who were not lunatics suffering from this painful monomania: if we found him teaching how evil spirits enter into a man, and how, when they are cast out, they wander in desolate places. Yet this is what we actually find in the Gospels, where Christ not only addresses the devils and bids them depart or be silent, and thus treats them as personalities distinct from the man who is the subject of possession, but speaks of them in the same way to His disciples, to whom he teaches a doctrine about demonic possession. So again, it may sometimes be a wise course for a religious teacher to deal gently with the beliefs of the ignorant; he may feel that it is impossible to do all at once, and that some errors can only be destroyed by gentle means and gradual enlightenment. It may be that the best and most enlightened teacher, who found him

self in the midst of a simple, credulous, and superstitious population, would shrink from adopting harsh and drastic measures to get rid of these cherished superstitions and popular errors. And though on this point we must speak with some reserve, it is possible that in such a case the teacher, in endeavouring to make himself understood by his hearers, will use their own language and convey his own message of truth through the medium of words and phrases which, taken literally, may seem to give some countenance to these popular errors. But whether this be permissible or no, it may be safely asserted that a wise and good teacher will not carry his accommodation to the point of confirming his hearers in their delusions. And these critics themselves can hardly question the fact that the whole treatment of demonic possession in the Gospels has had this effect, and has confirmed and perpetuated the belief in real demonic possession.

And at least in these latter days there must be many who would have abandoned all belief in the reality or even the bare possibility of any such possession, but that they felt constrained to believe it on the authority of Christ and the testimony of the Gospels. Certainly, if it were possible to accept this interpretation of the early Rationalists, and regard the attitude of Christ as an accommodation to popular beliefs and superstitions, it must be confessed that the alleged economy has had very unfortunate consequences. Later Rationalists, who see the difficulty, or rather the impossibility, of reconciling this view with the evidence of the Gospels, have turned to other ways of escape, and, like the other supernatural and miraculous elements in the Gospel narrative, the instances of demonic possession and the casting out of devils have been explained as parts of a mythical legend that has grown up around the figure of Christ; or again they have furnished grounds for disputing the fullness of His knowledge, or the authenticity and veracity of the narrative. This is not the place to deal with these problems of apologetics; but it may be well to say a word on the true ground for the rejection of belief in real demonic possession. The tendency has been to deny the possibility of miracles or demonic possession. And it is sometimes curious that critics who are so bold in setting limits to the knowledge of Christ are often strangely oblivious of their own natural knowledge. On metaphysical principles we can have no valid ground for deciding that such a thing as demonic obsession is impossible, and it is a more reasonable, as well as a more modest, course to keep to means of knowledge within our reach and examine the evidence adducible for the actual occurrence of obsession. If any one has examined this evidence and found it insufficient, his denial of demonic agency, whether we accept it or not, is at any rate entitled to respect. But few of those who have been most decided in their rejection of obsession or other preternatural or miraculous manifestations have taken any pains to examine the adducible evidence. On the contrary, they have generally dismissed it with contempt, as unworthy of serious consideration. And Baader is surely well warranted when he complains of what he calls "Rationalistic obscurantism and dogmatism" in this matter (Werke, IV, 109). Of late years the magnetism to which this acute thinker was calling the attention of philosophers in the work we have cited, and more recently the phenomena of hypnotism and spiritism, have helped to bring the critics to a more rational attitude. And with the weakening of this credulous prejudice many of the difficulties raised against the demonic possession in the New Testament will naturally disappear.

The instances of obsession mentioned in the New Testament may be roughly divided into two classes. In the first group we are given some facts which, even apart from the use of *demonized* or some equivalent term might suffice to show that it is a case of demonic

possession properly so called. Such are the cases of the "man with an unclean spirit" in the synagogue at Capernaum (Mark, i) and the Gerasene demoniac (Luke, xi). In both of these instances we have evidence of the presence of an evil spirit who betrays knowledge beyond the ken of the demonized person or (in the latter case) manifests his power elsewhere after he has been cast out. In the second group may be placed those cases in which we are not given such distinct and unmistakable signs of true demonic possession, e. g. the woman who had a spirit of infirmity (Luke, xiii, 11). Here, apart from the words, *spirit*, and *whom Satan hath bound*, there is apparently nothing to distinguish the case from an ordinary healing of infirmity. A careful consideration of the medical aspect of demonic possession has often been associated with a denial of the demonic agency. But this is by no means necessary; and, rightly understood, the medical evidence may even help to establish the truth of the record. This has been done within the last few years by Dr. Wm. Menzies Alexander in his "Demonic Possession in the New Testament: Its Relations, Historical, Medical, and Theological" (Edinburgh, 1902). In his view, the Gospel records of the chief cases of demonic possession exhibit all the symptoms of such mental diseases as epilepsy, acute mania, and so on, with such accuracy of detail that the narrative can only owe its origin to a faithful report of the actual facts. At the same time Dr. Alexander is equally impressed by the cogency of the evidence for real demonic possession at least in these cases. Even those readers who are unable to accept his conclusions—and in regard to later instances of obsession we are unable to follow him—will find the book helpful and suggestive and it may be commended to the attention of Catholic theologians.

For authorities see modern titles cited at end of DEVIL.

W. H. KENT.

Demonology.—As the name sufficiently indicates, demonology is the science or doctrine concerning demons. Both in its form and in its meaning it has an obvious analogy with theology, which is the science or doctrine about God. And with reference to the many false and dangerous forms of this demonic science we may fitly adapt the well-known words of Albertus Magnus on the subject of theology and say of demonology, "*A dæmonibus docetur, de dæmonibus docet, et ad dæmones ducit*".—It is taught by the demons, it teaches about the demons, and it leads to the demons.—For very much of the literature that comes under this head of demonology is tainted with errors that may well owe their origin to the father of falsehood, and much of it again, especially those portions which have a practical purpose (what may be called the ascetical and mystical demonology) is designed to lead men to give themselves to the service of Satan. There is, of course, a true doctrine about demons or evil spirits, to wit that portion of Catholic theology which treats of the creation and fall of the rebel angels, and of the various ways in which these fallen spirits are permitted to tempt and afflict the children of men. But for the most part these questions will be dealt with elsewhere in this work. Here, on the contrary, our chief concern is with the various ethnic, Jewish, and heretical systems of demonology. These systems are so many that it will be out of the question to deal with them all or to set forth their doctrines with completeness. And indeed a full treatment of these strange doctrines of demons might well seem somewhat out of place in these pages. It will be enough to give some indication of the main features of a few of the more important systems in divers lands and in distant ages. This may enable the reader to appreciate the important part played by these ideas in the course of human history and their influence on the religion and morals and social life of the people.

At the same time some attempt may be made to distinguish the scattered elements of truth which may still be found in this vast fabric of falsehood—truths of natural religion, recorded experience of actual facts, even perhaps remnants of revealed teaching that come from the Jewish and Christian Scriptures or from primitive tradition. This point has some importance at the present day, when the real or apparent agreement between heathen legend and Christian theology is so often made a ground of objection against the truth of revealed religion.

Perhaps the first fact that strikes one who approaches the study of this subject is the astonishing universality and antiquity of demonology, of some belief in the existence of demons or evil spirits, and of a consequent recourse to incantations or other magical practices. There are some things which flourished in the past and have long since disappeared from the face of the earth; and there are others whose recorded origin may be traced in comparatively modern times, and it is no surprise to find that they are still flourishing. There are beliefs and practices, again, which seem to be confined to certain lands and races of men, or to some particular stage of social culture. But there is something which belongs at once to the old world and the new, and is found flourishing among the most widely different races, and seems to be equally congenial to the wild habits of savages and the refinements of classical or modern culture. Its antiquity may be seen not only from the evidence of ancient monuments, but from the fact that a yet more remote past is still present with us in the races which remain, as one may say, in the primitive and prehistoric condition. And even amid these rude races, apparently innocent of all that savours of science and culture, we may find a belief in evil spirits, and some attempts to propitiate them and avert their wrath, or maybe to secure their favour and assistance. This belief in spirits, both good and evil, is commonly associated with one or other of two widespread and primitive forms of religious worship—and accordingly some modern folk-lorists and mythologists are led to ascribe its origin either to the personification of the forces of nature—in which many have found a "key to all the mythologies"—or else to Animism, or a belief in the powerful activity of the souls of the dead, who were therefore invoked and worshipped. On this last theory all spirits were at first conceived of as being the souls of dead men, and from this aboriginal Animism there were gradually developed the various elaborate systems of mythology, demonology, and angelology. But here it is well to distinguish between the facts themselves and the theory devised for their interpretation. It is a fact that these rude forms of worship are found among primitive peoples. But the manner in which they began and the motives of the first prehistoric worshippers are and must remain matters of conjecture. In the same way, with regard to the later phases, it is a fact that these primitive beliefs and practices have some features in common with later and more elaborate ethnic systems—e. g. the Iranian demonology of the Avesta—and these again have many points which find some counterpart in the pages of Scripture and Catholic theology; but it by no means follows from these facts that these facile theories are right as to the nature of the connexion between these various ethnic and Christian systems. And a further consideration of the subject may serve to show that it may be explained in another and more satisfactory manner.

Assyrian and Akkadian Demonology.—Some idea of the antiquity of demonology and magical practices might be gathered from notices in the Bible or in classic literature, to say nothing of the argument that might be drawn from the universality of these beliefs and practices. But still more striking evidence has been brought to light by the decipherment of the cuneiform

hieroglyphics which has opened a way to the study of the rich literature of Babylon and Assyria. In consequence of their bearing on the problems of Biblical history, attention has been attracted to the evidence of the monuments in regard to such matters as the cosmology, the tradition of the Deluge, or the relations of Assyria and Babylon with the people of Israel. And possibly less interest has been taken in the religious beliefs and practices of the Assyrians themselves. In this question of demonology, however, some of the Assyrian monuments may be said to have a special importance. From certain cuneiform texts which are more especially described as "religious", it appears, as Lenormant remarks, that, besides the public and official cult of the "twelve great gods" and their subordinate divinities, the Assyrians had a more sacred and secret religion, a religion of mystery and magic and sorcery. These "religious" texts, moreover, together with a mass of talismanic inscriptions on cylinders and amulets, prove the presence of an exceedingly rich demonology. Below the greater and lesser gods there was a vast host of spirits, some of them good and beneficent and some of them evil and hurtful. And these spirits were described and classified with an exactness which leads Lenormant to liken the arrangement to that of the choirs and orders of our own angelic hierarchy. The antiquity and importance of this secret religion, with its magic and incantations of the good spirits or evil demons, may be gathered from the fact that by order of King Assurbanipal his scribes made several copies of a great magical work according to an exemplar which had been preserved from a remote antiquity in the priestly school of Erech in Chaldaea. This work consisted of three books, the first of which is entirely consecrated to incantations, conjurations, and imprecations against the evil spirits. These cuneiform books, it must be remembered, are really written on clay tablets. And each of the tablets of these first books which has come down to us ends with the title, "Tablet No.— of the Evil Spirits". The ideogram which is here rendered as *kullutu*—"accursed" or "evil"—might also be read as *limuttu*—"baneful". Besides being known by the generic name of *udukku*—"spirit"—a demon is called more distinctly *ecimmu*, or *maskimmu*. One special class of these spirits was the *sedu*, or divine bull, which is represented in the well-known figure of a man-headed bull so common on the Assyrian monuments. This name, it may be remarked, is probably the source of the Hebrew word for demon. The Assyrian *sedu*, it is true, was more commonly a beneficent or tutelary spirit. But this is hardly an obstacle to the derivation, for the good spirits of one nation were often regarded as evil by men of rival races.

Iranian Demonology.—In many ways one of the most remarkable demonologies is that presented in the Avesta (q. v.), the sacred book of the Mazdean religion of Zoroaster. In this ancient religion, which, unlike that of the Assyrians, still exists in the Parsee community, the war between light and darkness, good and evil comes into greater prominence. Over against the good God, Ahura Mazda, with his hierarchy of holy spirits, there is arrayed the dark kingdom of demons, or *daēvas*, under Anro Mainyus (Ahriman), the cruel Evil Spirit, the Demon of Demons (*Daēvanam Daēva*), who is ever warring against Ahura Mazda and his faithful servants such as Zoroaster. It may be remarked that the name of *Daēva* is an instance of that change from a good to a bad sense which is seen in the case of the Greek word *δαίμων*. For the original meaning of the word is "shining one", and it comes from a primitive Aryan root *div*, which is likewise the source of the Greek *Zeús* and the Latin *deus*. But while these words, like the Sanskrit *deva*, retain the good meaning, *daēva* has come to mean "an evil spirit". There is at least a coincidence, if no deeper sig-

nificance, in the fact that, while the word in its original sense was synonymous with *lucifer*, it has now come to mean much the same as *devil*. There is also a curious coincidence in the similarity in sound between *daēva*, the modern Persian *dev*, and the word *devil*. Looking at the likeness both in sound and in significance, one would be tempted to say that they must have a common origin, but for the fact that we know with certainty that the word *devil* comes from *diabolus* (διάβολος—*διαβάλλειν*), and can have no connexion with the Persian or Sanskrit root.

Although there are marked differences between the demons of the Avesta and the devil in Scripture and Christian theology (for Christian doctrine is free from the dualism of the Mazdean system), the essential struggle between good and evil is still the same in both cases. And the pictures of the holiness and fidelity of Zoroaster when he is assailed by the temptations and persecutions of Anro Mainyus and his demons may well recall the trials of saints under the assaults of Satan or suggest some faint analogy with the great scene of the temptation of Christ in the wilderness. Fortunately for English readers, a portion of the Vendidad (fargard xix), which contains the temptation of Zoroaster, has been admirably rendered in a doctrinal paraphrase in Dr. Casartelli's "Leaves from my Eastern Garden". The important part played by the demons in the Mazdean system may be seen from the title of the Vendidad, which is the largest and most complete part of the Avesta, so much so that when the sacred book is written or printed without the commentaries it is generally known as *Vendidad Sade*, which means something that is "given against the demons"—*vidāvoḍdāta*, i. e. *contra damones datus* or *antidemoniacus*.

Jewish Demonology.—When we turn from the Avesta to the Sacred Books of the Jews, that is to say to the canonical Scripture, we are struck by the absence of an elaborate demonology such as that of the Persians and Assyrians. There is much, indeed, about the angels of the Lord, the hosts of heaven, the seraphim and cherubim, and other spirits who stand before the throne or minister to men. But the mention of the evil spirits is comparatively slight. Not that their existence is ignored, for we have the temptation by the serpent, in which Jews as well as Christians recognize the work of the Evil Spirit. In Job, again, Satan appears as the tempter and the accuser of the just man; in Kings it is he who incites David to murder the prophet; in Zacharias he is seen in his office of accuser. An evil spirit comes upon the false prophets. Saul is afflicted, or apparently possessed, by an evil spirit. The activity of the demon in magic arts is indicated in the works wrought by the magicians of Pharaoh, and in the Levitical laws against wizards or witches. The scapegoat is sent into the wilderness to Azazel, who is supposed by some to be a demon (see ATONEMENT, DAY OF), and to this may be added a remarkable passage in Isaiah which seems to countenance the common belief that demons dwell in waste places: "And demons and monsters shall meet, and the hairy ones shall cry out one to another, there hath the lamia lain down, and found rest for herself" (Isaiah, xxxiv, 14). It is true that the Hebrew word here rendered by "demons" may merely mean wild animals. But, on the other hand, שְׂעִירִים, which is rendered very literally as "hairy ones", is translated "demons" by Targum and Peshitta, and is supposed to mean a goat-shaped deity analogous to the Greek Pan. And "lamia" represents the original Lilith, a spirit of the night who in Hebrew legend is the demon wife of Adam.

A further development of the demonology of the Old Testament is seen in the Book of Tobias, which, though not included in the Jewish Canon, was written in Hebrew or Chaldean, and a version in the latter language has lately been recovered among some rab-

binical writings. Here we have the demon Asmodeus, who plays the part assigned to demons in many ethnic demonologies and folk-legends. He has been identified by some good authorities with the Aēshmo Daēva of the Avesta; but Whitehouse doubts this identification and prefers the alternative Hebrew etymology. In any case Asmodeus became a prominent figure in later Hebrew demonology, and some strange tales told about him in the Talmud are quite in the vein of "The Arabian Nights". The rabbinical demonology of the Talmud and Midrashim is very far from the reticence and sobriety of the canonical writings in regard to this subject. Some modern critics ascribe this rich growth of demonology among the Jews to the effects of the Captivity, and regard it as the result of Babylonian or Persian influence. But though in its abundance and elaboration it may bear some formal resemblance to these external systems, there seems no reason to regard it as simply a case of appropriation from the doctrines of strangers. For when we come to compare them more closely, we may well feel that the Jewish demonology has a distinctive character of its own, and should rather be regarded as an outgrowth from beliefs and ideas which were present in the mind of the chosen people before they came into contact with Persians and Babylonians. It is certainly significant that, instead of borrowing from the abundant legends and doctrines ready to their hand in the alien systems, the rabbinical demonologists sought their starting-point in some text of their own scriptures and drew forth all they wanted by means of their subtle and ingenious methods of exegesis. Thus the aforesaid text of Isaiahs furnished, under the name of Lilith, a mysterious female night spirit who apparently abode in desolate places, and forthwith they made her the demon wife of Adam and the mother of demons. But whence, it may be asked, had these exponents of the sacred text any warrant for saying that our first father contracted a mixed marriage with a being of another race and begot children other than human? They simply took the text of Genesis, v: "And Adam lived a hundred and thirty years, and begot a son to his own image and likeness". This explicit statement, they said, plainly implies that previous to that time he had begotten sons who were not to his own image and likeness; for this he must needs have found some helpmeet of another race than his own, to wit a demon wife, to become the mother of demons. This notice of a union between mankind and beings of a different order had long been a familiar feature in pagan mythology and demonology, and, as will presently appear, some early Christian commentators discovered some countenance for it in Genesis, vi, 2, which tells how the sons of God "took to themselves wives of the daughters of men". One characteristic of Jewish demonology was the amazing multitude of the demons. According to all accounts every man has thousands of them at his side. The air is full of them; and, since they were the causes of divers diseases, it was well that men should keep some guard on their mouths lest, swallowing a demon, they might be afflicted with some deadly disease. This may recall the common tendency to personify epidemic diseases and speak of "the cholera fiend", "the influenza fiend", etc. And it may be remarked that the old superstition of these Jewish demonologists presents a curiously close analogy to the theory of modern medical science. For we are now told that the air is full of microbes and germs of disease, and that by inhaling any of these living organisms we receive the disease into our systems.

Demonology of the Early Christian Writers.—Whatever may be said of this theory of the Rabbis, that the air is full of demons, and that men are in danger of receiving them into their systems, it may certainly be said that in the days of the early Christians the air was dangerously full of demonologies, and that men were in peculiar peril of adopting erroneous doctrines

on this matter. It must be remembered, on the one hand, that many of the Gospel miracles, and particularly the casting out of devils, must in any case have given the faithful a vivid sense of the existence and power of the evil spirits. At the same time, as we have seen, Scripture itself did not furnish any full and clear information in regard to the origin and the nature of these powerful enemies; on the other hand, it may be observed that the first Christian converts and the first Christian teachers were for the most part either Jews or Greeks, and many of them were living in the midst of those who professed some or other of the old Oriental religions. Thus, while they naturally wished to know something about these matters, they had but little definite knowledge of the truth, and on the other hand their ears were daily filled with false and misleading information. In these circumstances it is scarcely surprising to find that some of the earliest ecclesiastical writers, as St. Justin, Origen, and Tertullian, are not very happy in their treatment of this topic. There was, moreover, one fruitful source of error which is rather apt to be forgotten. Now that common consent of Catholic commentators has furnished a better interpretation of Genesis, vi, 2, and conciliar definitions and theological arguments have established the fact that the angels are purely spiritual beings, it may seem strange that some early Christian teachers should have supposed that the phrase, *sons of God*, could possibly mean the angels or that these pure spirits could have taken unto themselves wives of the daughters of men. But it must be borne in mind that the old commentators, who read the Septuagint or some derivative version, did not put this interpretation on the passage; the word itself was in the text before them; that is to say, the old Greek Bible expressly said that "the Angels of God took wives of the daughters of men". This unfortunate reading was certainly enough to give a wrong direction to much of the demonology of early Christian writers, and those who went astray in other matters also naturally adopted peculiar ideas on this subject. In some ways one of the most remarkable examples of this mistaken demonology is that to be found in the pseudo-Clementine Homilies (Hom. viii, ix). The writer gives a very full account of the mysterious episode of Genesis, vi, 2, which, in common with so many others, he takes to be the origin of the demons who were, in his view, the offspring of the supposed union of the angels of God and the daughters of men. But on one point, at any rate, he improves the story and does something to lighten our initial difficulty. The first objection to the legend was, that the angels, as pure spirits, were plainly incapable of feeling sensual passions; and it was possibly a keen sense of this difficulty that led some who had adopted the story to deny the spirituality of the angelic nature. But the moralist evades it in a more ingenious manner. According to his account, the angels were not overpowered with the passion of sensual love while they were as yet in their purely spiritual state; but when they looked down and witnessed the wickedness and ingratitude of men whose sins were defiling the fair creation of God, they asked of their Creator that they might be endowed with bodies like unto men, so that, coming down to earth, they might set things right and lead a righteous life in the visible creation. Their wish was granted, they were clothed in bodies and came down to dwell on earth. But now they found that with their raiment of mortal flesh they had acquired also the weakness and passions which had wrought such havoc in men; and they too, like the sons of men, became enamoured of the beauty of women and, forgetting the noble purpose of their descent to earth, gave themselves up to the gratification of their lust, and so rushed headlong to their ruin. The offspring of their union with the daughters of men were the giants—the mighty men of superhuman build

and superhuman powers, as became the sons of incarnate angels, yet at the same time mortal, like their mortal mothers. And when these giants perished in the Flood their disembodied souls wandered through the world as the race of demons.

Medieval and Modern Demonology.—Throughout the Christian Middle Ages the external systems of demonology among the uncultured races or in the ancient civilizations of the East continued their course, and may still be found flourishing in the home of their origin or in other lands. Within the Catholic fold there was less scope for the worse form of the old errors. The early heresies had been cast out, and theological speculation had been directed in the true way by the decision of the Fifth Ecumenical Council (545), which condemned certain Origenist errors on the subject of demons. But while the theologians of the great scholastic period were setting forth and elucidating the Catholic doctrine concerning angels and devils, there was withal a darker side in the popular superstitions, and in the men who at all times continued to practise the black arts of magic, and witchcraft, and dealing with the devil. In the troubled period of the Renaissance and the Reformation there appears to have been a fresh outbreak of old superstitions and evil practices, and for a time both Catholic and Protestant countries were disturbed by the strange beliefs and the strange doings of real or supposed professors of the black arts and by the credulous and cruel persecutors who sought to suppress them. In the new age of the Revolution and the spread of practical ideas and exact methods of science it was at first thought by many that these medieval superstitions would speedily pass away. When men, materialized by the growth of wealth and the comforts of civilization, and enlightened by science and new philosophies, could scarce find faith to believe in the pure truths of revealed religion, there could be little room for any belief in the doctrines of demons. The whole thing was now rudely rejected as a dream and a delusion. Learned men marvelled at the credulity of their fathers, with their faith in ghosts, and demons, and black magic, but felt it impossible to take any serious interest in the subject in their age of enlightenment. Yet in fact there was still stranger delusion in the naive faith of the early Rationalists, who fondly fancied that they had found the key to all knowledge, and that there were no things in heaven or earth beyond the reach of their science and philosophy. And much of the history of the last hundred years forms a curious comment on these proud pretensions. For, far from disappearing from the face of the earth, much of the old occultism has been revived with a new vigour, and has taken new form in modern Spiritism. At the same time, philosophers, historians, and men of science have been led to make a serious study of the story of demonology and occultism in past ages or in other lands, in order to understand its true significance.

Conclusion.—With all their variations and contradictions, the multitudinous systems of demonology yet have much in common. In some cases this may be accounted for by the fact that one has freely borrowed from another. Thus, the demonology of early Christian writers would naturally owe much both to the systems of Jewish and Greek demonology, and these in their turn can hardly have been free from other foreign influences. And since not only heretical opinions, but orthodox teaching on this subject has at any rate some elements in common with the ethnic systems—from the Animism of the simple savage to the elaborate demonology of the Chaldeans and Iranians—the mythologist or folk-lorist bids us come to the conclusion that all are from the same source, and that the Biblical and Catholic doctrine on evil spirits must be no more than a development from Animism and a more refined form of ethnic demonology. But it

may be well to observe that at best this solution is but a plausible hypothesis and that the facts of the case may be explained just as well by another hypothesis which some philosophic writers do not seem to have considered, to wit: the hypothesis that the teaching of revealed religion on this topic is true after all. Can it be said that if this were so there would be no trace of belief in demons among races outside the Christian fold or in religious systems older than the Bible? If, as our theology teaches, the fallen angels really exist and are permitted to try and tempt the sons of men, should we not expect to find some belief in their existence and some traces of their evil influence in every land and in every age of human history? Should we not expect to find that here as elsewhere the elements of truth would be overlaid with error, and that they should take different shapes in each nation and each succeeding age, according to the measure of knowledge, and culture, and new ideas current in the minds of men? This hypothesis, to say no more, will fit well all the facts—for instance, the universality of the belief in evil spirits and any evidence adducible for actual influence on men, whether in the records of demonic possession and magic in the past or in the phenomena of modern Spiritism. And we can scarcely say the same of the other hypothesis.

W. H. KENT.

Dempster, THOMAS, savant, professor, and author; b., as he himself states, at Clifftog, Scotland, 23 August, 1579; d. at Bologna, Italy, 6 September, 1625; son of Thomas, Baron of Muresk, Auchterless, and Killesmont, Aberdeenshire, and Jane Leslie, sister to the Baron of Balquhain; educated at the schools of Turriff and Aberdeen. His troublous life began early. On leaving school, aged ten, he went to Cambridge, leaving it shortly for Paris. Illness occasioned his removal to Louvain, whence, having attracted the notice of a representative of the Holy See, he was taken to Rome, and there provided with a pension for his education in a papal seminary. Through failing health he returned northwards to Tournai, but was immediately transferred to Douai, means being forthcoming through royal bounty. On the completion of a three years' course, he returned to Tournai as professor of humanities. Tournai, however, he forsook for Paris, where, after graduating in canon law, he occupied, at the age of seventeen, a professorial chair in the Collège de Navarre. He could not remain here either, and, after an interval in Poitou, he became professor of humanities again, this time at Toulouse. Before long, zeal in local dissensions sent him adrift once more. Declining a chair of philosophy at Montpellier, he successfully competed for one of oratory at Nîmes. From this he was suspended, a lawsuit following in vindication of his integrity. The post of tutor to the son of the Maréchal de Saint-Luc he lost through unfriendly relations with the family of his patron. Once more adrift, he visited Scotland, vainly begged assistance from kith and kin, and, through Protestant intrigue, failed to recover his family estates, which had been parted with by his father. Seven years of professorship followed in Paris, at the end of which he was invited to reside in London in the capacity of historian to James I. He married in England, but only to bring on himself domestic misfortune. Anglican influence having procured royal dismissal, he left for Italy, and occupied under grand-ducal auspices the chair of civil law in Florence.

Further trouble led to his last change. In disgrace with the grand duke, he passed through Bologna, and was there provided with a chair of humanities. Even here he had his troubles, and had to clear himself of a suspicion of unorthodoxy before the Inquisition. He lies buried in the church of St. Dominic, at Bologna.

Dempster's worth as an autobiographer and historian is much discounted by manifest errors, and by immoderate self-praise and zeal for the exaltation of his country. An unrestrained temper and resentful disposition, added to a harsh exterior, were, in spite of learning and good qualities, the cause of his unpopularity and many misfortunes. The seventeenth-century Irish ecclesiastical historians generally resented Dempster's dishonest attempts to claim for Scotland many saints and worthies of Irish birth. John Colgan, John Lynch, and Stephen White, all eminent scholars, entered the lists against him (see W. T. Doherty, *Inis-Owen and Tirconnell*, Dublin, 1895, pp. 108-16).

The chief of his many writings are: "*Historia Ecclesiastica Gentis Scotorum*"; published posthumously at Bologna, 1627; republished by Bannatyne Club, Edinburgh, 1829; "*Antiquitatum Romanarum Corpus Absolutissimum*" (Paris, 1613, 1743); "*De Etruriâ Regali*", brought out during the Florentine professorship (latest edition, 1723-4); "*Κεραυρὸς καὶ Ὁβελὸς*, in *Glossam librorum IV. Institutionum Justiniani*" (Bologna, 1622), edition of Claudian; annotated edition of Benedetto Accolti's "*De Bello a Christianis contra Barbaros gesto*" (Florence, 1623; Groningen, 1731); annotated edition of Aldrovandi's "*Quadrupedum omnium bisulcorum Historia*" (Florence, 1623, 1647). His minor works include: tragedies, poems, especially "*Musca Recidiva*", thrice reprinted during his life.

DEMPSTER, *Autobiography*, n. 1210 in *Hist. Eccl. Scotie* (Edinburgh, 1829); IRVING, *Preface to DEMPSTER, Hist. Eccl. Scotie*; CHAMBERS, *Dictionary of Eminent Scotsmen* (Edinburgh, 1855); BRADLEY, in *Dict. of Nat. Biog.* (London, 1888), s. v.; BAYLE, *Dictionary*. JEROME POLLARD-URQUHART.

Denaut, PIERRE, tenth Bishop of Quebec, b. at Montreal, 20 July, 1743; d. at Longueuil in 1806. After studying at Montreal and Quebec, he was ordained priest in 1767, and appointed pastor of Soulanges, when only twenty-four years old. During the American invasion (1775) he maintained his flock faithful to their sovereign. Transferred to Longueuil (1787), appointed vicar-general (1791), he succeeded Bishop Bailly as coadjutor to Bishop Hubert, and was consecrated 29 June, 1795. He remained at Longueuil even after his appointment to the See of Quebec (1797), always taking a predominant part in the government of the diocese, with the efficacious co-operation of Bishop Plessis, appointed coadjutor in 1801. He visited his entire diocese, travelling through Upper Canada on his way to Detroit, in 1801 and 1802. In 1803, via Burlington and Boston, he visited the Maritime Provinces, where the Acadians and Indians beheld a bishop for the first time. An enlightened patron of education, he founded Nicolet College (1803), and aided in enlarging Montreal College in 1804. He resisted the encroachments of a British governor claiming the right of presentation to parishes, and opposed the "Royal Institution" investing Protestants with the control of public instruction. Courteous towards temporal authorities and firm in the defence of episcopal rights, he prepared the way for the civil recognition of the Bishop of Quebec and the freedom of the Church.

Dénés (men or people, in most of their dialects), an aboriginal race of North America, also called Athapaskans and known among earlier ethnologists as Tinné or Tinneh. They are the northernmost of American Indians, and, as regards territorial exten-

sion, may perhaps be considered as the most important native family on the American Continent. They are divided into three groups: the Southern, composed of the Apaches and the Navahoes, to whom, in *THE CATHOLIC ENCYCLOPEDIA*, special articles are devoted which describe their habitat; the Pacific Dénés, composed mainly of remnants of tribes in Washington, Oregon, and Northern California; and the Northern Dénés, by far the most important division, which covers the territory extending from Churchill River and the northern branch of the Saskatchewan to the confines of the Eskimo fishing-grounds. In British Columbia they range from 51° 30' N. lat., and are likewise to be found over the whole of Alaska with the exception of its coasts. The southern branch of the family is to-day in a thriving condition and relatively numerous; but the uncertainty of life in the dreary wastes or dense forests which have long been the home of the Northerners precludes the possibility of a population even distantly commensurate with the enormous area claimed by them. The latest and most reliable statistics give the following figures for the numbers of the three divisions: Southern Dénés, 27,365; Pacific Dénés, 846; Northern Dénés, 19,390. It is but fair to add that whole tribes or septs were almost wiped out of existence by epidemics and disorders consequent on the advent of the whites among them. The principal Northern tribes are: the Loucheux, neighbours of the Eskimos in Alaska and the lower Mackenzie, contiguous to which are, from north to south: the Hares, the Dog-Ribs, the Slaves, the Yellow-Knives, and the Chippewayans. Ignoring several intermediate or Rocky Mountain tribes, we find in Northern British Columbia the Nahanaïs, the Sekanaïs, the Babines, the Carriers, and the Chilcoïns. The Yellow-Knives receive their name from the tools of native copper which were common among them in prehistoric times; the Babines are so called from their custom of wearing labrets, wood or stone ornaments inserted in the lip, and the Carriers owe their name to a custom of the women of carrying on their backs the charred remains of their husbands.

Though the Navahoes have at last adopted pastoral life, all the Déné tribes were originally made up of hunters and have remained so in the north. Yet in British Columbia the abundance of fish, especially of salmon, has made fishing of at least as great economic importance to the Dénés stationed there as hunting. Most of the hard work was done by the women, who generally occupied a very low place in the social scale. They were united to men by ties which were never considered indissoluble, and polygamy was everywhere prevalent. As to society itself, it was of the crudest description. The original form of government among the entire stock was a sort of anarchy tempered by patriarchal proclivities. The septs were led by the more influential fathers of families, whose children succeeded in the male line of their rank, such as it was, and inherited their earthly belongings. But contact with aliens made the Western tribes adopt, in course of time, matriarchy, or mother-right, and its consequent institutions: the clans with their petty chiefs, the totems, and more or less elaborate social observances. These totems, or emblems, were of at least two kinds, gentile and personal. The former represented the clan, and though probably evolved from the latter, they came to be regarded as more social than religious in import. The nature of the personal totems is better understood by a reference to the theogonistic and cosmogonic notions of the Indians. In common with most American aborigines they believed in a twofold world: the one visible and purely material now inhabited by man; the other invisible, though in some way coextensive with the first, which is the home of spirits. Of these there are two kinds, good and bad, all more or less under the control of a Supreme Being whose personality and attributes

are not well defined. By some he was known as "he (or it) whereby the earth exists", or simply "the powerful"; others, like the Hares, designated him as "he that sees in front and behind", while the prehistoric Carriers knew him as "that which is on high", apparently confounding him with the dynamic forces of nature and the cause of rain, snow, wind, and the other celestial phenomena. As to the spirits, the noxious ones are constantly lurking among men and cause disease and all evils. The good ones are closely connected with the various elements of the created world, and are ever ready to adopt and protect individuals in return for some sort of respect and implied veneration of the animal, tree, plant, celestial body, or terrestrial entity which is their normal seat or representative. These are the personal totems or tutelary genii, of which every Déné has at least one, communion with which was supposed to be established through the agency of dreams, apparitions, etc.

It sometimes happened that the totem suddenly prostrated the native while awake and rendered him unconscious. The individual thus affected was believed to commune with some powerful spirit, and on being restored to consciousness by means of loud chanting and the rhythmical beating of drums, was considered as endowed with supernatural powers over the evil spirits and their works. Hence his services were called into requisition to cast out the evil spirits from those who were afflicted with illness, or to obtain some particular end in the order of nature, such as calm in tempestuous weather, a plentiful run of salmon, a successful hunt, and the like. These ideas were so firmly rooted among all the tribes that they long remained proof against the influence of civilization. The first encounter of the Dénés with this was in the south, as is shown in the articles on the Apaches and the Navahoes. In the north, the fur of the animals on whose flesh they mostly subsisted and whose skins were utilized as garments was the principal cause of the intrusion of the white races on their desolate wilderness. As early as 1670 was established the celebrated Hudson Bay Company, whose agents were gradually drawn into close intercourse with the easternmost tribes. One of these agents, Samuel Hearne, was the first to penetrate to any considerable inland distance. In the years 1769-72 he discovered Lake Athabasca, and went as far north as the mouth of the Coppermine with a horde of Eastern Dénés who proved to be as unruly, brutal, and lustful as the explorer was himself timid and gentlemanly. On the other hand, the latter extols the virtue and meekness of their women. Then came the Northwest Fur Trading Company, a member of which, Laurent Le-roux, was the first to visit Great Slave Lake (1784). This energetic corporation soon dotted the country with trading establishments, whereupon the Hudson Bay Company began a keen competition, which was the source of many disorders among the natives, intoxicants being used by each party to win them over to its own side. Then came the explorations of Mackenzie in 1789 and 1792-93; Franklin's in 1820-22; Back's in 1833-35; and a number of other journeys in the course of which the Dénés proved valuable, if somewhat fickle helpers. They were strictly honest, anxious to please the whites and to adopt their ways as far as compatible with their own condition.

The Dénés had already learned something of the Catholic religion through the French Canadian traders and voyagers. From the very beginning they showed themselves ready converts, which is not to be wondered at when we consider that the Déné, when of pure stock, is by nature eminently religious. The first missionaries were Catholic priests. In 1842 the Rev. J. B. Thibault, one of the pioneers of the Red River Settlement (now Manitoba) reached the Rocky Mountains in his apostolic wanderings, and must have evangelized some of the border tribes. Three years later

he visited the Chippewayans of Ile-à-la-Crosse, which locality was soon to become the centre of far-reaching missionary operations. That very year there arrived at St. Boniface the first two representatives of the Oblate Order, which has since had charge of the evangelization of all Northern Déné tribes. In 1847 Father (afterwards Archbishop) Taché visited Lake Athabasca, where he was kindly received and accomplished much good. Year after year the sphere of religious activity was enlarged, new missions being established, until that of Our Lady of Good Hope was founded by Father Grollier, 31 Aug., 1859, within the Arctic Circle. Thence apostolic excursions were made into Alaska, first by Father Petitot in 1870, and then by Bishop I. Clut in 1872. But the Western Loucheux, rendered hostile to Catholicism by itinerant Protestant ministers and fanatical traders, proved generally rebellious. Serious Protestant missionary efforts among the Dénés date from 1858. The Rev. J. Hunter then made a reconnoitring visit to the Mackenzie, and as a result a mission was established on that stream at Fort Simpson. After this work was undertaken among the Loucheux of the Yukon with some measure of success. However, in spite of the assertion of the late Anglican bishop, W. C. Bompas, that "the numbers under instruction of each Church may not greatly differ" (Diocese of Mackenzie, London, 1888, p. 108) among the Northern Dénés, taken as a whole, the number of Protestant Dénés is insignificant compared with those who have embraced the Catholic Faith. In British Columbia they are practically all Catholic, and east of the Rocky Mountains there is not one Protestant among the natives who repair to some fifteen of the Hudson Bay Company's fur-trading posts. Even at Fort Simpson, the headquarters of the Church of England in the Mackenzie, half of the aboriginal population is Catholic.

A. G. MORICE.

Denifle, HEINRICH SEUSE (baptized JOSEPH), palæographer and historian, born at Imst in the Austrian Tyrol, 16 Jan., 1844; d. at Munich, 10 June, 1905. His father, who was the village schoolmaster and church organist, had him educated in the episcopal seminary of Brixen. On his reception, at Graz, 22 Sept., 1861, into the Dominican Order, he took the name of Heinrich. His studies of Aristotle and St. Thomas were begun in Graz and continued in Rome and Marseilles. After his return to Graz, Father Denifle taught philosophy and theology for ten years (1870-1880), and during this period also he was one of the best preachers in Austria. A course of apologetic sermons delivered in Graz cathedral, "Die katholische Kirche und das Ziel der Menschheit" was printed in 1872. Denifle, who had loved music from his boyhood and composed pieces at fifteen, also published in 1872, as his first literary essay, an article on the Gregorian Chant: "Schönheit und Würde des Choralis". That even then his mind was occupied with a subject about which his last and perhaps his greatest work was destined to be written, is evident from a series of articles entitled "Tetzel und Luther", which appeared in 1873. From that time onward, though he preached occasionally, the biography of Denifle is the description of his literary achievements. His life therefore may be divided into four periods characterized respectively by work on theology and mysticism, medieval universities, the Hundred Years War between France

and England with its consequences to the Church, and Luther and Lutheranism.

A subject to which in early years he devoted much of his attention was the relation existing between scholastic theology and medieval mysticism. It was comparatively unknown, and had in fact been grossly misrepresented by some flippant writers according to whom the German mystics were the precursors of the German Reformers. Denifle's researches put the matter in its true light. He discovered in various libraries of Austria, Germany, and Switzerland copious materials in fourteenth-century manuscripts, and a selection of 2500 texts was given to the public in his book "Das geistliche Leben. Eine Blumenlese aus den deutschen Mystikern des 14. Jahrhunderts" (Graz, 1873). He also began a critical edition of Blessed Henry Suso's works (the first and only volume of Denifle's edition appeared in 1880—another edition is in progress 1908), and on Suso and other mystics he wrote several articles (fifteen in all with appendices) published in various periodicals from 1873 to 1889. His fame as a palæographer, German philologist, and textual critic arose from these investigations and especially from his studies on Tauler, Eckhart, and Blessed Henry Suso. Up to 1875 the most disputed problem in the history of German mysticism was that of the "Gottesfreund" and his marvellous influence. Denifle solved it simply by showing that the "Gottesfreund" was a myth. This discovery, which created quite a sensation, and several others brought him into controversy with Preger and Schmidt, who had till then been looked up to as authorities on the history of mysticism, and also into controversy with Jundt. He proved and demonstrated that Catholic mysticism rests on scientific theology. Denifle's remarks were often sharp, but there could be no doubt that his arguments and his destructive criticism were unanswerable. Catholic and non-Catholic savants alike, as Schrörs, Kirsch, Müller, Schönbach, etc., have recognized that he was immeasurably superior to his adversaries. This was owing to his intimate knowledge of the Fathers, of theology—both scholastic and mystic—of medieval history, and lastly of Middle-High German with its dialects.

In 1880 Denifle was made socius, or assistant, to the general of his order, and summoned to Rome, where a new field of inquiry awaited him. Leo XIII had commanded that a critical edition of the works of St. Thomas Aquinas should be begun, and Denifle was commissioned to search for the best manuscripts. He visited the libraries in Italy, Austria, Germany, Bavaria, Holland, England, France, Spain, and Portugal. Nothing escaped his eagle eye, and while preparing for the new edition, before his return to Italy in 1883, he had also gathered abundant materials for his own special study. In the autumn of 1880 Leo XIII had opened the secret archives of the Vatican to scholars; he had in 1879 appointed as archivist Cardinal Hergenröther. On the latter's recommendation the pope now (1 Dec., 1883) made Denifle sub-archivist, a post which he held till his death. Since the beginning of his residence in Rome, Denifle, who found nothing there for his contemplated history of mysticism, had been investigating the career of a celebrated prophet, i. e. the Abbot Joachim, and the reasons of the condemnation of his "Evangelium Æternum" by the University of Paris. This led him to study the controversy between the university and the mendicant orders. As he found du Boulay's history of the university inaccurate, Denifle, who was a foe to adventurous statements and hasty generalizations, resolved to write a history based on original documents, and as an introduction to it, to commence with a volume on the origin of the medieval university system, for which he already had prepared copious transcripts and notes. His leading idea was that to appreciate the mystics one should understand not only the theology they had

learned, but also the genius of the place where it was commonly taught. The first and only volume appeared in 1885 under the title "Die Universitäten des Mittelalters bis 1400" (xlv-814). The wealth of erudition it contains is extraordinary. The work was everywhere applauded; it led, however, to a somewhat bitter controversy. G. Kaufmann attacked it, but was worsted by the erudite and unsparing author. The most copious collection on the subject to be found in any archives is that possessed by the Vatican, and this Denifle was the first to use. Munich, Vienna, and other centres supplied the rest. Among his discoveries two may be mentioned; namely, that the universities did not, as a rule, owe their origin to cathedral schools, and that in the majority of them at first theology was not taught. The University of Paris formed an exception. Denifle had planned four other volumes; viz. a second on the development of the organization of universities, a third on the origin of the University of Paris, a fourth on its development to the end of the thirteenth century, and a fifth on its controversies with the mendicant orders. But the Conseil Général des Facultés de Paris, which had in 1885 decided on publishing the "Chartularium", or records of the University of Paris, resolved on 27 March, 1887, to entrust the work to Denifle, with Emile Chatelain, the Sorbonne librarian, as *collaborateur*. This quite suited Denifle, for he had resolved not to write before he had collected all the relevant documents, so with the assistance of Chatelain he began his gigantic task. In less than ten years four folio volumes of the "Chartularium" appeared as follows: 1889, volume I, A. D. 1200-1286 (xxxvi-714 pp.), 530 original documents, with fifty-five from the preparatory period, 1163-1200; 1891, volume II, 1286-1350 (xxiii-808 pp.), 661 documents; 1894, volume III, 1350-1384 (xxxvii-777 pp.), 520 documents; 1897, volume IV, 1384-1452 (xxxvi-835 pp.), 988 documents, and two volumes of the "Auctarium". This monumental work, the "Chartularium Universitatis Parisiensis", contains invaluable information regarding its inner life, organization, famous professors and students, relations with popes and kings, controversies, etc., during the period when this university was the chief centre of theological learning. "With its aid", as Kirsch remarks, "a history of medieval theology has at last become possible." Some idea of the labour involved in its preparation may be gathered from the fact that all the great libraries and archives in Europe were visited, that Denifle travelled from Paris to Rome forty times, and that in the Vatican archives alone he examined 200,000 letters, of which he utilized 80,000 in his notes (see II, p. 17), though of course more material was found in Paris than in Rome. In order to preserve the unity of the "Chartularium", any reference to the "nations" was relegated to the "Auctarium". The two volumes published contain the "Liber Procuratorum Nationis Anglicanæ 1333-1446". Fournier, who rashly criticized Denifle and Chatelain, fared badly at their hands. After Denifle's death the materials he had collected for another volume were entrusted to Chatelain, so that the work might be continued. Owing to the vastness and completeness of his research and to his amazing erudition, what Denifle gave to the world, even though for him it was only a preliminary study, has sufficed to make him the great authority on medieval universities. (See Merkle, Dreyes, etc., or Rashdall's "Universities of Europe in the Middle Ages", Oxford, 1895.) In order to publish valuable texts which he had deciphered and the results of his studies on various subjects, together with Father Ehrle, S. J., the sub-librarian of the Vatican, he founded in 1885 the "Archiv für Literatur und Kirchengeschichte des Mittelalters". The two friends were the only contributors. The first five years of this serial contain several articles from his pen, on various universities, on Abelard and other scholars, on religious orders, on popes, etc., Denifle's extensive

acquaintance with manuscripts and his skill in palaeography were also put at the service of beginners in the art of deciphering by his annotated "Specimina palaeographica Regestorum Pontificum ab Innocentio III ad Urbanum V" (Rome, 1888). Among its sixty-four plates, that representing the Vatican transcript of the "Unam Sanctam" is especially valuable. The work was the offering of the papal archivists to Leo XIII on his golden jubilee.

A work of another kind suggested itself to him while gathering in the Vatican archives materials for his annotations on the "Chartularium". Denifle noticed in the three hundred volumes of "Registers of Petitions" addressed to Clement VI and Urban V, between 1342 and 1393, that many came from France during the Hundred Years War between that country and England. So for the sake of a change of occupation, or "*un travail accessoire*" as he calls it, Denifle went again through these volumes (each about 600 pages folio). In 1897 he published: "La désolation des églises, monastères, hôpitaux, en France vers le milieu du XV^e siècle". It contains a harrowing description of the state of France, based on 1063 contemporary documents, most of which were discovered in the Vatican. Then, in order to give in explanation a similar account of the cause of all these calamities, he published in 1899: "La guerre de cent ans et la désolation des églises, monastères, et hôpitaux, tom. I, jusqu'à la mort de Charles V" (1385). Though the work was not continued the enormous amount of recondite information brought together and illustrated for the first time makes the volume indispensable to historians (see, e. g., his account of the Battle of Crécy and the Black Prince).

Denifle had for years been studying the history of medieval theology and mysticism, as well as the lives of saints and scholars by whom in both departments progress had been effected; on the other hand his investigations revealed the decadence of ecclesiastical life during the Hundred Years War and caused him to amass documents (about 1200) showing the many abuses then prevalent among the clergy both secular and regular. The contrast was marked. As was his wont he resolved to solve the problem that arose, to see what could have been the result of such moral corruption. These new researches were not confined to France; they gradually extended to Germany. Denifle found proof that in both countries, with praiseworthy exceptions, during the fourteenth century things went from bad to worse, but he saw that the end had not been reached yet. He traced the downward course of profligacy to the third decade of the sixteenth century, and there he stopped for he had found the abyss. Crimes which ecclesiastics and religious were ashamed of in the preceding era now became to one section a cause of self-glorification, and were even regarded as miracles and signs of sanctity. At the beginning of this painful investigation Denifle had not a thought about Luther, but now he saw that he could not avoid him; to estimate the new departure it was necessary to understand Luther, for of this appalling depravity he was the personification as well as the preacher. So Denifle devoted many years to the task of ascertaining for himself how, and why, and when Luther fell. The Vatican archives and various libraries, particularly those of Rostock and Kiel, supplied original documents to which this independent study was confined. As usual Denifle made a series of discoveries. His work, which is divided into three parts, if we take its second edition, is in no sense a biography. The first part is a critique of Luther's treatise on monastic vows. It examines his views on the vow of chastity in detail, and convicts him of ignorance, mendaciousness, etc. The second part, which is entitled "a contribution to the history of exegesis, literature and dogmatic theology in the Middle Ages", refutes Luther's assertion that his doctrine of

justification by faith, i. e. his interpretation of Rom., i, 17, was the traditional one, by giving the relevant passages from no fewer than sixty-five commentators. Of these works many exist only in manuscript. To discover them it was necessary to traverse Europe; this part which appeared posthumously is a masterpiece of critical erudition. The third part shows that the year 1515 was the turning point in Luther's career, and that his own account of his early life is utterly untrustworthy, that his immorality was the real source of his doctrine, etc. No such analysis of Luther's theology and exegesis was ever given to the learned world for which it was written.

For some time previous it had been known that Denifle was engaged on such a work, but when in 1904 the first volume of 860 pages of "Luther und Lutherum in der ersten Entwicklung quellenmässig dargestellt" appeared, it fell like a bomb into the midst of the Reformer's admirers. The edition was exhausted in a month. The leading Protestants and rationalists in Germany, Seeberg, Harnack, and seven other professors, besides a host of newspaper writers attempted to defend Luther, but in vain. Denifle's crushing answer to Harnack and Seeberg, "Luther in rationalistischer und christlicher Beleuchtung" appeared in March, 1904, and two months afterwards he issued a revised edition of the first part of the first volume; the second was brought out in 1905 and the third in 1906 by A. Weiss, O. P. He has the second volume on Lutheranism, for which the author left materials, ready (1908) for the press.

Denifle has been censured by some and praised by others for the tone of this work. Perhaps if it were less indignant the amazing erudition displayed would produce a greater effect. There was no need of hard words in a work, to use the words of Cambridge University when it honoured Denifle, on "Lutherum ab eodem ad fidem documentorum depictum". He has thrown more light on Luther's career and character than all the editors of Luther's works and all Luther's biographers taken together. Denifle wished to offend no man, but he certainly resolved on showing once and for all the Reformer in his true colours. He makes Luther exhibit himself. Protestant writers, he remarks, betray an utter lack of the historical method in dealing with the subject, and the notions commonly accepted are all founded on fable. As he pointedly observes: "Critics, Harnack and Ritschl more than others, may say what they like about God Incarnate; but let no one dare to say a word of disapproval about Luther before 1521". Denifle's impeachment is no doubt a terrible one, but apart from some trifling inaccuracies in immaterial points it is established by irrefragable proofs.

Denifle, who was beloved by Leo XIII and Pius X, was a consultant of the cardinalitial Commission of Studies, a member of the Imperial Academy of Sciences (Vienna), and of those of Paris, Prague, Berlin, Göttingen; honorary Doctor of the Universities of Münster and Innsbruck; member of the Legion of Honour, of the Order of the Iron Crown, etc. He was on his way to Cambridge, where he and his friend Father Ehrle were to be made Honorary Doctors of that university, when he was struck down by the hand of death.

REGINALD WALSH.

DENIS, SAINT, Bishop of Paris, and martyr. Born in Italy, nothing is definitely known of the time or place, or of his early life. His feast is kept on 9 October. He is usually represented with his head in his

hands because, according to the legend, after his execution the corpse rose again and carried the head for some distance. That, however, while still very young he was distinguished for his virtuous life, knowledge of sacred things, and firm faith, is proved by the fact that Pope Fabian (236-250) sent him with some other missionary bishops to Gaul on a difficult mission. The Church of Gaul had suffered terribly under the persecution of the Emperor Decius and the new messengers of Faith were to endeavour to restore it to its former flourishing condition. Denis with his inseparable companions, the priest Rusticus and the deacon Eleutherius, arrived in the neighbourhood of the present city of Paris and settled on the island in the Seine. The earliest document giving an account of his labours and of his martyrdom (*Passio SS. Dionysii, Rustici et Eleutherii*), dating from the end of the sixth or the beginning of the seventh century and wrongly attributed to the poet Venantius Fortunatus, is interwoven with much legend, from which, however, the following facts can be gleaned.

On the island in the Seine Denis built a church and provided for a regular solemnization of the Divine service. His fearless and indefatigable preaching of the Gospel led to countless conversions. This aroused the envy, anger, and hatred of the heathen priests. They incited the populace against the strangers and importuned the governor Fescenninus Sisinnius to put a stop by force to the new teaching. Denis with his two companions were seized and as they persevered in their faith were beheaded (about 275) after many tortures. Later accounts give a detailed description of the confessors' sufferings. They were scourged, imprisoned, racked, thrown to wild beasts, burnt at the stake, and finally beheaded. Gregory of Tours simply states: "Beatus Dionysius Parisiorum episcopus diversis pro Christi nomine affectus poenis presentem vitam gladio imminente finivit" (*Hist. Franc. I.*, 30). The bodies of the three holy martyrs received an honourable burial through the efforts of a pious matron named Catulla and a small shrine was erected over their graves. This was later on replaced by a beautiful basilica (*egregium templum*) which Venantius celebrated in verse (*Carm. I.*, ii).

From the reign of King Dagobert (622-638) the church and the Benedictine monastery attached to it were more and more beautifully adorned; the veneration of St. Denis became by degrees a national devotion, rulers and princes vying with one another to promote it. This development is due in no small degree to an error prevailing throughout the Middle Ages, which identified St. Denis of Paris with St. Dionysius the Areopagite, and with the Pseudo-Dionysius, the composer of the Areopagitic writings. The combining of these three persons in one was doubtless effected as early as the eighth or perhaps the seventh century, but it was only through the "Areopagitica" written in 836 by Hilduin, Abbot of Saint-Denis, at the request of Louis the Pious, that this serious error took deep root. The investigations of Launoy first threw doubt on the story and the Bollandist de Bye entirely rejected it. Hilduin was probably deceived by the same apocryphal Latin and Greek fictions. The possession of the Areopagitic writings (since 827 in Saint-Denis) strengthened his conviction of this truth. Historiographers of the present day do not dispute the point. All the attempts of Darras, Vidieu, C. Schneider, and others to throw some light on the subject have proved fruitless.

JOS. STIGLMAYR.

DENIS, JOHANN NEPOMUK COSMAS MICHAEL, bibliographer and poet, b. at Scharding, Bavaria, 27 Sep-

tember, 1729; d. at Vienna 29 Sept., 1800. He received his early training in the gymnasium of Passau, conducted by the Jesuits, and became a member of the Society of Jesus at Vienna in 1747. For some years he taught Latin and rhetoric, first at Graz, then at Klagenfurt. After four more years devoted to the study of theology at Graz he was ordained priest in 1757, and began preaching in Pressburg. In 1759 he was made professor of belles-lettres at the famous Theresian Academy in Vienna where he remained until 1773, when the Society of Jesus was suppressed. Denis now became assistant librarian of the Garelli Library, connected with the Theresianum, and when the academy ceased to exist in 1784, he was appointed assistant librarian of the imperial court library and in 1791 was advanced to be chief librarian, receiving at the same time the title of privy councillor. He is specially known as a poet, as he was one of the chief members of the group of so-called bards whose aim was to revive German patriotism by treating subjects connected with Germanic antiquity. Confusing Germanic and Celtic materials they conceived themselves as bards, in the belief that these were ancient German poets, and adopted fanciful bardic names. Thus Denis called himself "the bard Sined", the anagram of his name. They were all admirers of Klopstock and of Ossian, whose poems had only a few years before been made known by the Scotchman Macpherson, and which had been translated into German in 1764. Ossian was really the inspiration of the bardic movement. Denis's first poems appeared in 1760 under the title "Poetische Bilder der meisten kriegerischen Vorgänge in Europa seit dem Jahre 1756". They are poems celebrating the events of the Seven Years War, and, as the German poems of a Jesuit, created quite a stir. His German translation of Ossian appeared in three volumes (1768-1769). A second collection of poems, "Die Lieder Sineds des Barden", followed in 1772. A new edition, including his version of Ossian, was published at Vienna in five volumes under the title "Ossian und Sineds Lieder" (Vienna, 1784-85). Besides the purely bardic poems these collections contain many poems composed for special occasions, for Denis was held in high esteem by the Court. A number of religious poems had been published separately as "Geistliche Lieder" in 1774. The quality of these poetical efforts is not high, but Denis certainly deserves praise for his efforts to bring the literature of Austria into contact with that of northern Germany. For both Klopstock and Gellert he felt great enthusiasm, and largely helped to make them known in Austria.

As a bibliographer he compiled a number of important works, notably: "Einleitung in die Bücherkunde", part I, bibliography (1777); part II, "Literaturgeschichte", (1778); "Die Merkwürdigkeiten der Garellischen Bibliothek" (Vienna, 1780); and "Wiens Buchdruckergeschichte bis MDLX" (Vienna, 1782-83). His posthumous works were published by his pupil J. F. de Retzer, "Nachlese zu Sineds Liedern" (Vienna, 1802).

ARTHUR F. J. REMY.

Denis, JOSEPH (baptized JACQUES), b. 6 November, 1657, at Three Rivers, Canada; d. 25 January, 1736. He was the first Canadian to join the Recollects of the Friars Minor. His father, Pierre Denis de la Ronde and his mother Catherine Leneuf de la Poterie, were natives of Normandy. In 1669 he entered the seminary at Quebec and on 9 May, 1677, joined the Recollects in the same city, taking in religion the name of Joseph. When professed he went to France to study theology. After being ordained he returned to Canada in 1682,

where in 1685 he completed the installation of the Recollects at Ile Percée. He founded the house of the order at Plaisance in 1689 and that at Montreal in 1692. After holding the office of provincial commissary, superior of the convent of Quebec, and master of novices, he was named, in 1709, superior of the Recollects and parish priest of Three Rivers, where he rebuilt in stone the old church. In 1719 he carried to France, to be forwarded to Rome, the Acts of Brother Didace (Les actes du très-religieux Frère Didace), a Canadian Recollect whose confessor he was for many years. He died shortly after his return to New France.

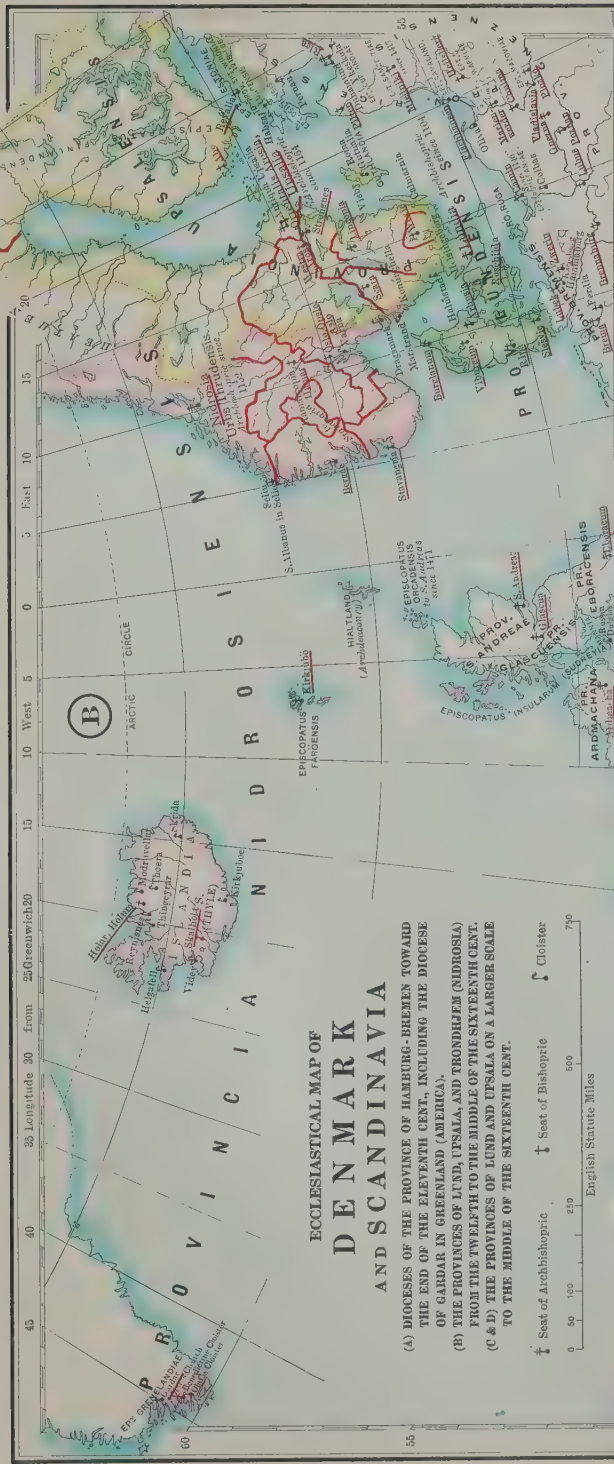

ODORIC-M. JOUVE.

Denman, WILLIAM, publisher, b. in Edinburgh, Scotland, 17 March, 1784; d. in Brooklyn, New York, U. S. A., 12 September, 1870. His father was a German, his mother an Alsatian, and he claimed to have been in the English army before he emigrated to New York in 1824. He was an associate of William E. Andrews, the London publisher, and after settling down in New York, he began, in conjunction with George Pardow, on 2 April, 1825, the publication of "The Truth Teller", the first Catholic paper issued there. It was a weekly, and for a time enjoyed considerable local influence which gave Denman political prominence. Tainted, however, with the prevailing error of trusteeism, it lost the support of the local ecclesiastical authorities, rival publications were started and its prestige waned until he sold the paper 31 March, 1855, to the proprietors of "The Irish American", who merged it in that journal a short time after. Three of his sons were in the United States service: Adjutant Frederick J. Denman, of the Artillery, killed by accident in Texas in 1854; Ensign Joseph A. Denman, of the Navy, died 1862; Colonel Charles L. Denman, who served in the Mexican War and as consul in South America, died 17 March, 1893. The youngest son, William, was for some years editor of the New York "Tablet".

U. S. CATH. HIST. SOC., *Hist. Records and Studies* (New York, Jan., 1903), III, part I.

THOMAS F. MEEHAN.

Denmark (Lat. *Dania*).—This kingdom had formerly a much larger extent than at present. It once included the southern provinces of Sweden: Skåne, Halland, Blekinge, Bohuslän (till 1658); the Duchies of Schleswig (Sönderjylland) and Holstein (till 1864); the Kingdom of Norway (from 1537 till 1814). The present kingdom comprises 16,000 square miles (between lat. 54° 33' and 57° 45' N.; long. 8° 4' and 15° 10' E.). It now includes the northern part of Jutland (anciently the Cimbric Chersonese) between the North Sea, Skager Rack, and Cattegat, whose southern part borders on the German Empire; the islands which lie between the Baltic and Cattegat (partly also in the latter)—Zealand (Sjælland), Falster, Møen, Laaland, Fünen (Fyan), Årø, Samso, Anholt, Læsø—together with a few smaller isles (Amager, Saltholm, Seierø, etc.) and Bornholm, which lies far towards the east in the Baltic. To this must be added the group of the Faroe Islands (q. v.), situated in the Atlantic Ocean, 180 miles north-west of the Shetland Islands and 410 miles west from Bergen, and finally Iceland (q. v.), whose northern coast is washed by the Arctic Ocean, and which, though very extensive (40,000 square miles), is but thinly inhabited (80,000 souls). Iceland is very loosely connected with Denmark, is independent in its laws and government, and since 1874 has its own constitution. Other Danish possessions are Greenland (q. v.), which in size is almost a continent, but is very sparsely settled (only 12,000 souls), and the three islands in the West Indies, St. Croix, St. John, and St. Thomas, with a total area of 120 square miles and a population of 30,000.

The physical character of Denmark, which geologically is a continuation of the plain of Central Europe, shows only moderate contrasts. The Baltic Islands, surrounded by arms of the sea that are nowhere deeper than 200 feet and contain little salt, are partly monotonous flats, partly rolling ground. Only a few points, as Gyldenløveshøj on Zealand, Aborrebjerg on Møen and Frøbjerg on Fünen, rise to a height of 400 feet and more. Similar conditions prevail in Jutland. The high plateau that crosses it in a northerly direction slopes abruptly down towards the east. Here are elevations of 486 to 573 feet (Himmelsbjerg, Ejers Bavnehøj), lines of low, wooded hills, deep-cut valleys, fertile fields and meadows, bubbling rivulets, and beautiful lakes. On the other hand the dune-bound west coast of Jutland from Blaa vandshuk to Skagen presents nothing to the eye but heath and moor. Bornholm resembles in its structural character the neighbouring Sweden. The northern and eastern coasts rise abruptly out of the sea, and the southern shore and the interior are monotonous, although the hill of Rytterknægten reaches a height of 543 feet. There are no large rivers in Denmark, but with its numerous islands and peninsulas—its coast-line aggregating a length of 3100 miles—there is no lack of deep brooks, and the River Gudenaa, in Jutland, is over 100 miles long. The lakes are numerous, but small and shallow, only that known as the Furusee having a depth of 300 feet. The climate is comparatively mild, hardly differing from that of South Germany, but somewhat more severe in Jutland than on the islands. Only one-seventh of the soil is woodland. In the last few decades, however, successful measures have been taken to husband the forests. Beech and birch trees, ash and alder, some oaks, linden, and pines are found. Three-fourths of the total area of the islands and of the east coast of Jutland is tilled land; the cultivation of grain, potatoes, and beets yields a large return. Walnuts and mulberries ripen in due season, and in some places juicy grapes ripen on trellises. The flora of Denmark, with its 1500 species of wild-growing plants, is quite extensive but the same cannot be said of its fauna. The larger beasts of prey are extinct, even the red deer and wild boar have almost disappeared. Foxes, martens, roes, and hares are still numerous, and along the shores seals may be seen. Its birds, amphibia, and fishes resemble those of Germany. In the Little Belt, between Jutland and Fünen, the pilot whale (*grindhval*) is sometimes found. The domestic animals are those of Central Europe. As the soil is for the most part made up of marl—though there are also other strata on Bornholm—the country is not rich in minerals. It yields common clay, kaolin, chalk, and some lignite. The absence of metals and still more of good anthracite coal is greatly felt. Luckily, extensive turf-bogs provide the necessary fuel.

Denmark is inhabited by 2,600,000 people, most of them natives. Together with the Swedes and Norwegians, the Danes belong to the Germanic stock (North Germans, Scandinavians), and in body as well as character differ but little from the North Germans. Their written language has much in common with Low German. The language of the common people is divided into a number of strikingly divergent dialects. Nearly all of the population (98½ per cent) belong officially to the Evangelical Lutheran Church, which, as the Established Church, enjoys Government support. In 1849 complete freedom of religious belief was legally guaranteed. Since then many have joined the Baptists, Irvingites, the Reformed Church, and other sects. Particularly gratifying is the modern revival of Catholicism, which had disappeared from Denmark for three centuries (see below under RELIGIOUS HISTORY).

With regard to general education, Denmark compares well with other States. Education is compulsory. The primary schools are kept up by the munic-

ipalities. Latin schools and modern high schools provide the necessary preparation for the university in the capital, the polytechnic institute, and the agricultural college. Very useful institutions are the "people's high schools", private continuation schools for the rural population. There is no lack of libraries, art collections, and collections of antiquities, nor of literary and artistic societies with ideal aims. Many Danish scholars and poets, sculptors and musicians have acquired fame that has spread far beyond the narrow limits of their country. We need mention only the names of Oersted, Woorsaae, Madvig, Oehlschläger, Thorvaldsen, Gade. The relatively small number of Danish-speaking people forces many writers to compose their works in one of the four better-known languages, German, English, French, Spanish, or at least to translate them into one of these.

Denmark is a constitutional monarchy with strong democratic tendencies. By the national constitution of 1849, revised in 1866, *Landsting* and *Folkething* share the government with the king, who has a civil list of a little more than 1,000,000 kroner (\$268,000). The national colours are red, white, red; the flag shows the *Danebrog*, i. e. an upright white cross on a red field. Justice is administered by irremovable judges who are subject to the supreme court in Copenhagen (Hoeiesteret), and who conduct trials orally and in public. The executive power is vested in the king alone. For the sake of political administration the country is divided into eighteen districts, presided over by district judges. The larger cities have self-government and their own police. A general supervision is exercised by the head of the Copenhagen police.

The established Evangelical Church is divided into seven dioceses: Zealand, Fünen-Ærø, Laaland-Falster, Aalborg, Viborg, Aarhus, and Ribe. At the head of each diocese is a superintendent who is called "bishop", a name that has been preserved from Catholic times. The Bishop of Zealand is *primus inter pares*. The dioceses are made up of provostships and parishes. The provost exercises his office under the supervision of the bishop.

Since 1892 the Catholics of Denmark, who (including about 7000 Polish labourers) number 57,000, are under a vicar Apostolic (Johannes von Euch, Titular Bishop of Anastasiopolis). Of these 3000 live in Copenhagen, and they are found in other important towns. Communities of good size are found in Fredericksborg (1500), Aarhus, Odense, Horsens, Fredericia, Ørdrup, Sundby (400). Besides these, missions have been established in Aalborg, Esbjerg, Glorup, Grenaa, Elsinore, Kolding, Køge, Ledreborg, Næstved, Randers, Ringsted, Røskilde, Silkeborg, Slagelse, Struer, Svendborg, Thisted, Vejle and Viborg, also in Bornholm and Iceland. These are equipped with churches or chapels, some of them handsome, in which secular or regular clergy act as pastors. Among the cities Copenhagen (q. v.) far surpasses all others in importance. Its population, including that of the suburbs, was in 1906 over half a million. It is the residence of the king, the seat of the ministries of public affairs and of the state university; it is the centre of industry and commerce, of science and the arts. Formerly unprotected, it was a few years ago strongly fortified. Besides Copenhagen, only few places claim particular attention: Randers in Jutland, for its domestic trade; Aarhus, for its commerce and cathedral; Aalborg, for its ancient buildings; Horsens for its manufactures; Odense for its cathedral and commerce; Svendborg on Fünen for its manufactures. The ancient towns of Ribe, Viborg, and Røskilde bask in the glory of the past; their stately churches, built in the time of Catholicism, are yet reminders of their former splendour.

Bimetallism prevails in Denmark. The standard coin is the krone (\$0.268). In weights and measures the country has not yet adapted itself to the

decimal system of Southern and Central Europe. The Government finances are in a good condition; the national debt small. The principal means of livelihood is agriculture. Its products (oats, barley, rye, wheat) represent a value of 400 million kroner (\$107,200,000). Of late, a change is going on in favour of cattle-raising and of dairy industry (domestic animals, 1903: horses 490,000; bees 1,900,000; hogs 1,600,000; sheep 900,000; goats 40,000; chickens 12,000,000). In 1903, 300 million pounds of pork and butter alone were exported. Eggs to the value of 24 million kroner were shipped to foreign countries. The fishing industry is less prominent than might be expected; still, the total income from this branch amounts to 10 million kroner. Manufactures give occupation to about one-fourth of the population and are rapidly increasing. However, only the smaller part of the products is exported; by far the greater part is used to supply the home demand. In some branches of manufacture Denmark excels, and the royal porcelain factory of Copenhagen rivals successfully those of the best establishments in France and Germany.

The high standing of Denmark as a commercial country may be inferred from the one fact that its yearly business transactions are almost one-half of those of Italy, which is thirteen times as large. In 1903 the merchant marine could boast a total of 430,000 tons, and it increases from year to year. To safeguard navigation, which is exposed to many dangers, especially along the coasts of Jutland, there are 350 lighthouses, 15 lightships, and 50 life-saving stations. Being shallow, most of its harbours admit only small vessels. For the same reason the canals are of small importance, but 2000 miles of railways, telegraph connexions, etc. amply supply the country with the conveniences of modern traffic.

Beside the gigantic armies and fleets of Germany and England, Denmark's fighting strength appears insignificant. Military service is compulsory. The period of service is, however, considerably shorter than in other states. The peace footing is 800 officers and 9000 men; the war strength is given as 1500 officers, 60,000 rank and file. The naval strength aggregates 50,000 tons, about 80,000 horse power, and 400 guns. Army and navy combined entail an outlay of 20 million kroner.

The Royal House belongs to the dynasty of Schleswig-Holstein-Sonderburg-Glücksburg and is, consequently, of German origin. At present (1908), Frederick VIII (born 3 June, 1843) wears the crown, having succeeded his father, Christian IX, 29 January, 1906. His consort, Louise, is a princess of Sweden; his son Charles governs the Kingdom of Norway under the name of Haakon VII. His brother William has occupied the throne of Greece as King George since 6 June, 1863. A second brother of the sovereign, Prince Waldemar, is married to the Catholic Princess Marie of Orléans Bourbon; their sons are, according to the constitution, brought up in the Protestant faith, while their daughter Margaret follows the religion of her mother.

TRAP, *Beskrivelse af Kongeriget Danmark* (1898—); LÖFFLER, *Omrids af Geographien* (Denmark, 1893-98); ID., *Danmarks Natur und Volk* (Copenhagen, 1905, with literary notes on the Faroe Islands and Iceland, 111-114).

RELIGIOUS HISTORY.—The first attempts to win the rough Danish warriors over to the mild yoke of Christ are said to have been made by the Frisian Bishop Willibrord, who died in 739. But for this there is no reliable evidence. A missionary journey which Archbishop Ebbo of Reims undertook to Jutland, in 823, proved a failure. But when, a few years later, the Danish chief Harold (Klakk) went to Ingelheim to ask aid from Louis the Pious, he was baptized with his whole retinue, and on his return took the Frankish monk Ansgar (Anshar, q. v.) as missionary. Interior disturbances made it impossible for the apostle to work

successfully. In 831 the zealous priest was nominated Bishop of Hamburg and thereby recognized as Apostolic delegate to the Scandinavian nations. In 849 he was also appointed to the See of Bremen. From this place he laboured untiringly for the extension of the Faith and was able to consecrate a church in Schleswig (Hedeby). Owing to the expulsion of Erik (854), who had favoured his cause, heathenism regained its ground for a while, and many of the faithful lost their lives and property. Two years later affairs took a turn for the better. The church in Schleswig was reopened, and a new one was built in Ribe. When the saintly man died, in 865, he beheld a flourishing band of Christians around him. So far, Christianity had gained no entrance to the islands, and when Gorm the Old, a fanatical worshipper of Odin, succeeded in extending his power over Jutland, he raged with fire and sword against the Christians. He met his master in Henry I of Germany, who conquered him, in 934, in a bloody battle, and forced him to at least tolerate Christianity. Gorm himself died a heathen. Under his son Harold (Blutetooth), who was compelled to acknowledge the supremacy of Otto I, it became possible to erect the dioceses of Schleswig, Ribe, and Aarhus. During the reign of Canute the Great (1014-35) Christianity gradually spread all over the country. The new dioceses of Viborg and Børglum were formed in Jutland, and to these were added Odense in Fünen and Røskilde in Zealand. At this time also the first monasteries arose. When, under Sven Estridson, the Diocese of Lund was founded, the whole kingdom had been won for the Faith. Under Canute II (the Saint) the bishops became powerful feudal lords, ecclesiastical dignitaries, and commanders of armies. Absorbed by their secular occupations, they not seldom lost sight of their spiritual duties. Some, like Bishop Absalon (Axel) of Lund and Odense, who died at Sorøe, 1201, largely contributed to the extension and influence of the State by their shrewdness and energy. Others, however, became involved in conflicts with the king himself, in which cases the Roman See often imposed the severest spiritual punishments. At the same time the number of monasteries increased almost too rapidly, so that towards the end of the Middle Ages there were 134 belonging to different orders.

The external constitution of the Church in Denmark was settled definitely in 1104, when the country was separated from the metropolitan See of Hamburg-Bremen, and its seven bishops were subordinated to the Archbishop of Lund as primate. About the religious life of the clergy and laity we are not sufficiently informed, much historical material having been lost during the later changes in the ecclesiastical government. The conditions were, however, hardly satisfactory. The higher ecclesiastics, supported by the lower clergy and the people, led a sumptuous life and did little to cultivate the minds and morals of their flocks. We must not forget, however, that, previous to the invention of the printing press, education, as we understand it at present, was not possible. Only thus can we explain the fact that the earlier zeal of the Danish people, proved by the erection of many splendid churches, rich donations, and countless foundations for the benefit of the poor, was swept away, as it were, in a few years by the hurricane of the Reformation. Christian II was the first who tried to overthrow the power of the princely hierarchy, and for this purpose invited (1520) a German, Martin Reinhard, to preach in Copenhagen in the spirit of Luther, but as the people did not understand him, he remained in the country only a short time. His successor, the notorious Karlstadt, met with the same fate. After the deposition of King Christian, his uncle Frederick I ascended the throne. Contrary to his sworn promise at the election, he at once allowed the Lutheran preachers to spread the new creed. Prominent among them was a disciple of Luther, Hans Tausen, who seems

to have found a worthy and effective adversary in only one man, the learned Carmelite Paulus Eliæ (Helgesen), the first historian of Denmark. Soon (1526) the king openly professed the Lutheran heresy, and after he had secured its triumph in the duchies of Schleswig and Holstein, he proclaimed at the Diet of Odense (1527) religious freedom for Denmark proper, but, as a matter of fact, systematically undermined the Church. Three years later the adherents of the new doctrine accepted the *Confessio Hafnica* as their symbol. It was Frederick's son, Christian III, who after the overthrow of his political enemies made Lutheranism the established religion. On the same day he caused all bishops to be imprisoned and to be deprived of their possessions; the monks and nuns were permitted to leave the monasteries; if they preferred to remain, they were forced to admit Lutheran preachers and to suffer all possible persecution. The church property, when not appropriated by the nobility, was confiscated and added to the royal treasury. In 1539 John Bugenhagen came to Denmark with the avowed purpose of establishing a new liturgy and to consecrate Lutheran bishops. A Danish translation of the Bible, done in the spirit of the prophet of Wit-

PRO-CATHEDRAL OF ST. ANSGAR, COPENHAGEN
(Built in 1843 under Austrian Government Protection)

tenberg, was begun and completed in 1550. (For an earlier Danish translation see below.) With the exception of Bishop Joachim Rønnow of Røskilde, all the prelates yielded to force; one of them even became a Protestant. Many religious fell away and married, but most of them went into exile. A shining example of loyalty to their faith was set by the nuns of St. Bridget at Maribo on Laaland. Also several priests and monks, like Iversen, a canon of Lund, the Carmelite prior Kristinsen, the Franciscan Ludolf Naaman, of Flensburg, the parish priest Anders Jepsen, and numerous laymen clung to the true Church in spite of all persecutions.

The Catholic customs and usages never died out completely. Thus the Protestant historian Vedel (d. 1616) held himself bound by the commandment of fasting. To some extent the rural population even yet believe in the assistance of the saints; the Lutheran names for religious persons and ceremonies have never been in common use; as in former times, the people speak of bishops and priests, of saying mass, etc. The ministers wear vestments similar to those used in the Catholic Church, and the altars are decorated with lighted candles. For a long time the elevation of the Host, auricular confession, and the ancient hymns were retained. All this was calculated to confirm the people in the belief that nothing essential had been changed in their religion.

Though, towards the end of the sixteenth century, Catholicism may in general be considered as suppressed in the Danish kingdom, it still counted some

adherents in the higher circles, whose sons occasionally frequented the Jesuit college of Braunsberg, and there were strengthened in their faith or led back to it. At the beginning of the seventeenth century therefore, an attempt was made by the Propaganda to provide in a regular way for the spiritual welfare of the scattered faithful, and several mission stations were established. We are not sufficiently informed about these missions, but they seem to have been by no means insignificant. The royal rescript of 10 June, 1613, which forbade Catholic priests to perform any religious functions, under penalty of death, and the *Danske Lov* of Christian V (1683), which threatened converts with the confiscation of their property and with banishment, were evidently intended to prevent conversions. While the Catholic religion was thus excluded for a time from Denmark proper, it could never be wholly extirpated in Holstein, then a Danish province, but within the German Empire. As early as 1597 a small Catholic community was formed at Altona, followed, in 1625, by a second at Friedrichstadt. To these was added, in 1661, a church on Nordsrand; in 1662 a chapel at Glückstadt. As to Denmark proper, French diplomacy succeeded (1630) in obtaining permission to erect at Copenhagen a chapel for the French embassy; Catholic services were allowed at Fredericia in 1682.

After the Treaty of Westphalia (1648), which abolished the jurisdiction of bishops over the North-German Protestant territory, an Apostolic vicariate was erected to govern these scattered parishes and those in Scandinavia. Valerius Maccioni, Titular Bishop of Morocco, was the first vicar; his successor was the famous Danish scholar and convert Niels Steno. The duties of this office were subsequently discharged by the Bishop of Hildesheim (1686) and by the Bishop of Osnabrück; in 1761 the vicariate was entrusted to Joseph Gondola, Bishop of Paderborn. When Dr. Lüpke, coadjutor of Osnabrück, was chosen Pro-vicar Apostolic of the North German missions (1841), he was allowed to exercise his authority only under severe restrictions. The number of Catholics amounted at that time to 865, of whom 550 lived in Copenhagen and 58 on Fredericia; the rest were scattered in the cities and over the country. So far conditions had been deplorable; they underwent, however, an unforeseen change when, by the new Danish constitution (*Danmarks Riges Grundlov*) of 5 June, 1849, complete religious freedom was granted, and political and ecclesiastical equality was guaranteed to all dissenters. Even before the enactment of this law the Catholics had succeeded in building at Copenhagen (1843) a church in honour of St. Ansgar. New religious life began to spring up under the pastors Zurstrassen and Grüder; in 1853 the latter, for the first time since the Reformation, preached a Catholic sermon in Danish. The number of the faithful now grew visibly. Several societies and fraternities sprang into life. A Catholic paper (now the "*Nordisk Ugeblad*") endeavoured to unite the Catholics more closely and at the same time to enlighten Protestants. The beginnings of a Catholic literature appeared (translations of the Scriptures, catechisms, polemics). In the summer of 1859 the Bishop of Osnabrück (later cardinal), Melchers, made his first visit as pro-vicar Apostolic, and on several occasions officiated clad in his episcopal robes. A mission held by the Jesuits in 1862 bore rich fruit.

Conditions in Schleswig-Holstein, where the Danish constitution was not in force, improved only after its annexation by Prussia in 1866 (see Kleffner-Woker, "*Der Bonifatiusverein*", Paderborn, 1899). Progress was rapid in Denmark itself. As early as 1867 the station of Odense was founded, in 1870 Randers; 1872 saw Horsens added; 1873, Aarhus; and several missions quickly followed. Pius IX raised the mission (1869) to a prefecture (first prefect, Hermann Grüder, d. 1883). Leo XIII made it (1892) a vicari-

ate, and nominated the prefect, Johannes von Euch, Bishop of Anastasiopolis and vicar Apostolic. Thereby were secured the necessary conditions for a solid growth of the Church. Since then the number of Catholics has considerably increased. To-day it is estimated at over 8000, to which number we must add 7000 Polish workmen. There are in Copenhagen three parishes and four chapels with connected institutions. In the Stenosgade the Jesuits have established a high school and, close to the city, the fine college of St. Andrew at Ordrupshøj, both institutions numerously attended by pupils of every denomination. For a complete list of the present stations see above. Among the secular clergy there are several native Danes and converts. The regular clergy are represented by foundations of the Society of Jesus, Redemptorists, Marists, Lazarists, Premonstratensians, Camillans, etc. Hundreds of sisters are engaged in teaching and in nursing the sick in the hospitals. Among the converts are prominent Count Holstein-Ledeburg and family, Count Moltke Hvitefeld, and the gifted author and poet John Jørgensen.

How little the religion of Luther has penetrated the hearts of the Danish people, is witnessed by the Protestant Bishop Pontoppidan almost 200 years after the establishment of heresy. This bishop expressly admits in a pastoral (translated into German by Schonfeldt, Rostock, 1756) that an "almost pagan blindness" prevailed throughout the country. This is easily understood when we bear in mind that at the end of the seventeenth century the mass of the country population were unable to read and write, catechetical instruction was lacking, and the sermons, mostly of a polemical nature, were not understood by the people. On the other hand this state of affairs had prevented the formation of sects. For a time all spiritual life appeared to have died among the clergy, completely subject to the will of the royal "Sumepiskopus". Towards the end of the eighteenth century, rigid Lutheran orthodoxy gave way quite generally to a rationalistic tendency. Bishop Balle of Zealand (1783-1808) and his successor Jacob Peter Münster tried in vain to stem this current. Grundtvig (d. 1872) was the first who earnestly endeavoured to restore to their former position of honour the *Libri Symbolici*, or ecclesiastical creeds. Afterwards he changed his views and came so near the Catholic doctrine that he found himself forced to renounce entirely the Protestant view of the Bible. His contemporary, Søren Kierkegaard (d. 1875), at first an opponent of both Rationalism and the orthodox theology, then an enemy of the State Church and of official, or rather of all positive, Christianity, did more than Grundtvig to shatter to its very foundations the Danish Church as reconstructed by the kings of the Reformation period. As mentioned above, the legislation of 1849 and 1852 granted complete religious liberty. Thereby the Evangelical-Lutheran church ceased to be the "established church". Since, however, the greater part of the nation exteriorly still adheres to it, the State guaranteed to it a subsidy as being the People's Church; this leaves the Church subordinate to the civil authority; its ministers may be nominated and deposed by the Government. It exercises no influence over its own legislation. Its laws are made by the majority in the Reichstag, which has already enacted many that threaten an internal dissolution. Attendance in the city churches is slender, and the frequentation of the Lord's Supper is not large. The people incline strongly to infidelity and Socialism, or find a substitute for religion in secret societies. Of the Protestant sects the following may be mentioned: Baptists, Mormons, Methodists, and Irvingites. A few thousand Jews are scattered over the land.

The Protestant clergy is divided, generally speaking, into three parties: the infidel-rationalistic school, no longer very numerous; the conservative majority,

holding fast to the "symbolic books", or creeds, of the sixteenth century; lastly, the Grundtvigites, who recognize the necessity of an ecclesiastical tradition in addition to the Bible, and in this way come closer to the Catholic Church. The revival of Catholicism not unnaturally called forth protests. The first to raise his voice was Bishop Martensen, who published divers little pamphlets and in particular a small work translated into German (Gütersloh, 1874). The feud was also taken up by the Copenhagen preacher Schepelern, more particularly by Professor, now Bishop, Nielsen, the author of various polemical works and essays (cf. Hermens-Kohlschmidt, "Protest. Taschenbuch", col. 508). In conclusion it may be mentioned that, at the request of Frederick IV, the first Protestant mission was opened (1705) at Trankebar (East India) and another followed (1730) in Greenland.

POLITICAL HISTORY.—Many thousands of years ago the northern countries were covered with slowly moving masses of ice and snow, just as inland ice occupies the greater part of Greenland even to-day. Only after these masses had melted could the land be settled. At the end of the Glacial Period, the Baltic was at first one immense landlocked sea, for South Sweden was still joined to Denmark and Germany. The ocean later forced its way through and separated the Danish islands by the Sound and the two Belts. Frequent risings and subsidences of the ground gave it its present appearance. Denmark was settled very early. In Maglemoor near Mullerup, on Zealand, a habitation was discovered which was built during the Stone Age, and numerous are the Kjekkenmøddinger (piles of refuse) from that age, which contain not only remnants of meals—e. g. clams, shells, bones of fishes and other animals—but also implements of flint, kaolin, and horn. The so-called Later Stone Age must be placed between 5000 and 2000 B. C. That forestry, fishing, and agriculture were then flourishing, is shown by axes, sickles of flint, nets, and similar finds. The attention paid to the repose of the dead and the sacrifices at the graves indicate that a life after death was recognized. At some period between 2000 B. C. and 500 B. C. stone was superseded by bronze, which was thenceforth used for vessels, tools, weapons, and ornaments. The dead were commonly buried in oaken coffins. Chairs, bowls, boxes, and similar articles were constructed of wood. The art of weaving clothes from wool and of making caps was not unknown, as excavations at Trindhøj and Borum-Eshøj, in Jutland, have shown. Scandinavian bronze objects, the raw material for which was imported, were always cast. The Iron Age lasted from 500 B. C. to about A. D. 1100, and is divided into four periods: the ante-Roman, the Roman, the time of the migrations, the Viking epoch. At first the use of bronze prevailed. In the course of time, however, iron became

more general. As early as in the fourth century B. C. vessels were built of wood, like those which are in use nowadays.

It seems that the Germanic North began hostilities with the civilized nations of Europe at a comparatively late date. A serious conflict arose for the first time when Charlemagne, after the overthrow of the Saxons, set his face against the Danes who, as allies of the Saxons, had inflicted great damage on him (see CHARLEMAGNE). After their warlike king Gottfried had been assassinated, the war was ended (811). It was decided that in future the Eider River should be the boundary between the two kingdoms. Quarrels shortly arose in the interior; one of the pretenders (Harold) sought the protection of Louis the Pious and was baptized. At his request, Ansgar, a monk of Corbie (q. v.), preached for the first time, though with small success, the Christian Faith among the heathen nations of the North. Even before his arrival, some of them had begun the so-called viking expeditions, predatory incursions under their chiefs, which were directed as well against the Slavic kingdoms in the East as against the German and Roman peoples in the West and South. The Danish freebooters infested especially the coasts of England and of France. In time they gained a footing in both countries and founded new States which gradually coalesced with the native, civilized population into one powerful whole. This cut off the possibility of predatory expeditions for their fellow-tribesmen who had remained at home.

Meanwhile the German Empire had acquired new strength, and King Henry I endeavoured, no less from conviction than from political prudence, to persuade his northern neighbour to embrace the Christian religion. Gorm the Old, under whom the famous Danawerk was built as a protection against the Germans, was the last pagan King of Denmark. Under his successors, Christianity became firmly established and outwardly well organized (see above). After the treacherous murder of Canute Lavard, son of King Erik Ejgod (1131), bloody civil wars broke out, which ravaged the country for more than twenty-eight years and greatly weakened its strength. It was not until Waldemar the Great ascended the throne (1157) that better times dawned, especially through the co-operation of Archbishop Absalon of Lund (q. v.), who was equally prominent as prince of the Church, statesman, and warrior. The fleets of Wendish sea-robbers were destroyed, the Wends themselves were attacked in their own land, and the island of Rügen subdued. At the same time, the power of the ecclesiastical dignitaries and nobles increased, a fact which on the one hand ensured better order, but on the other also provoked the hatred of the oppressed classes. Waldemar's son, Canute VI, added to his possessions Pomerania and Mecklenburg, and assumed the title of King of the Slavs. This childless prince was succeeded by his brother, Waldemar II (1202), who extended his sway along the Baltic especially by means of a crusade against Esthonia, for which feat he became known as *Sejr* (Conqueror). This apparently splendid power was, however, of short duration. One of the German vassals, Count Henry of Schwerin, raised the standard of revolt and made prisoner his Danish lord (1223), whereupon the subjugated nations cast off the yoke. Later on Waldemar sought revenge, but lost the battle of Bornhöved in Holstein (1227). Most of his conquests eventually melted away, and the Eider became once more the southern boundary. This noble king, who deserves great praise for his improvement of the laws of Denmark, died in 1241. His sons Erik, Abel, and Christopher waged war with one another, and all died a violent death. Murder and arson were of daily occurrence, and the land groaned under the wickedness of its rulers, who brought it to the brink of ruin.

Erik Glipping, Christopher's successor, died at the hands of an assassin (1286). His heir apparent, Erik Menved, succeeded in restoring order for a time. Meanwhile important parts of the kingdom were pledged to German nobles, whose power was steadily on the increase. His brother, Christopher II, was compelled to swear to a capitulation, at his election, and, since he did not abide by it, was expelled by the magnates under Count Gert of Holstein, who obtained the election of his sister's son, Duke Waldemar, as the third king of that name. The legitimate prince indeed soon recovered his dominions, but held only the shadow of sovereignty. The real power lay in the hands of the nobles. New civil wars ended with the victory of the Danish element, which chose again, in Christopher's youngest son, Waldemar IV, a national ruler. By diplomacy and force he regained the pledged districts and added Gotaland to his kingdom; thereby, however, he became involved in a war with the Hanseatic League, Sweden, and the Count of Holstein. Hard conditions were imposed on him in the

CASTLE OF FREDERICKSBORG, COPENHAGEN

Treaty of Stralsund (1370). Waldemar IV died in 1375.

Meanwhile Danish affairs had undergone a great change. King Hakon of Norway and Sweden had married (1362) Waldemar's daughter, Margaret, a child of eleven, and thus the three Scandinavian kingdoms had become united. In 1389 this able woman caused her relative, Duke Erik of Pomerania, who was only seven years old, to be acknowledged as King of Norway. Seven years later the Swedes and Danes also paid him homage. At Calmar (1397) representatives of the three kingdoms swore allegiance to him. But Margaret's attempt to perpetuate the Union of Calmar proved unsuccessful. She succeeded, however, by reclaiming fiefs, in strengthening the power of the Crown, and in compelling the adhesion of both ecclesiastical and secular magnates. Erik's imprudence thwarted her plans and sapped the promising structure. As early as 1410 new conflicts arose with the Counts of Holstein, which, after Margaret's death (1412), led to a sanguinary war, lasting twenty-five years; at its close the Counts of Holstein retained their Schleswig possessions, and the Hanseatic cities their ancient privileges. While Erik's rule was thus unfortunate abroad, his avarice and harshness alienated the hearts of his subjects. The Swedes were the first to fall away; then an insurrection broke out in Norway, and the Danes themselves assumed such a threatening attitude that he thought it best to leave the kingdom. Abjuring their allegiance, the vassals now besought his sister's son, Duke Christopher of Bavaria (of the house of Wittelsbach) to take up the reins of government. The Swedish crown also fell to his lot, but under conditions that greatly limited his power. With the help of the nobility he checked the uprising in Jutland. It was Christopher, also, who

in 1443 removed the residence of the Danish kings from Rös-kilde to Copenhagen. Though a German by birth, he tried to check the power of the Hanseatic League, but did not succeed. He met with an untimely end in 1448.

Immediately the weak bond which had united Sweden and Denmark was rent. In the former kingdom Charles Knutsson was raised to the throne; in Denmark and in Norway Count Christian of Oldenburg, the husband of Christopher's widow, and with him the house of Oldenburg, succeeded to the sovereignty. A feud sprang up between the countries. In 1452 the Swedes ravaged Skåne; the following year the Danes sought revenge, but in vain. A conspiracy among his nobles drove Knutsson from Sweden, which was subdued by Christian. During the latter's reign the union between Holstein and Schleswig, which was later to have such disastrous consequences for Denmark, became an acknowledged fact. Christian's rule over Sweden was only nominal. Internal troubles made it illusory, and after the battle of Brunkeberg, near Stockholm, he was obliged to evacuate the kingdom. Even in his own State he was hated for his extravagance. He deserves credit, however, for founding the University of Copenhagen (1479). His son Hans succeeded him in Denmark, while Frederick remained Duke of Holstein. The former was also acknowledged King of Sweden and Norway (1483), but with notable restrictions. Thus, in Sweden, the regent Sten Sture was the actual ruler until an unlucky campaign against the Russians drew on him the contempt of the people. King Hans thereupon recovered his authority, but maintained it only for a short time, as Bishop Hemmingstad of Linköping succeeded in arousing his countrymen against the foreigner. King Hans died before he was able to overpower the rebels. His son Christian II relied on the middle class, tried to break the power of the nobles, and in repeated expeditions against the Swedes, succeeded in crushing their resistance (1521). But his excessive cruelty towards the Swedish leaders caused the Swedes to rise unanimously against him. Gustavus I (Gustavus Vasa) not only drove the Danes out of the Swedish provinces, but moreover invaded their country. Christian's efforts in favour of the peasantry led to a conspiracy among the nobles. With their aid his uncle Frederick seized the reins of government, and even forced his nephew to flee to a foreign country (1523). After the former's death the Hanseatic League made an attempt to restore Christian to the throne. He conquered, indeed, the greater part of his country, but the activity of Gustavus Vasa, on the one hand, and the combined action of the nobility on the other, soon changed the condition of affairs. In spite of this, Christian III, son of the deceased Frederick, could take Copenhagen only after a siege of twelve months (1536).

Under King Frederick, the teachings of Luther had already struck root in Denmark, but they did not entirely prevail either here or in Norway until the reign of his son. Immediately after the capture of Copenhagen the bishops were imprisoned, the churches confiscated, the monks and nuns expelled, and a new form of worship introduced (see above). Instead of the relatively mild rule of the bishops, the country now suffered under the galling tyranny of the nobles, who kept the lion's share of the ecclesiastical property and reduced the peasantry to helpless helots. Despite these facts, partial Protestant writers still laud Christian III as the benefactor of his people, as a noble and godly man; Scandinavian historians blame him only for introducing too many Germans and for sharing Schleswig-Holstein with his brothers. He died in 1559. His successor, Frederick II, was a very warlike character. His four-years' war with Sweden, in which the countries on the Baltic took part, ended in the barren Treaty of Stettin (1570). Christian IV, his

son, and recognized as the heir apparent during the lifetime of his father, succeeded him, though a minor (1588), but did not enter upon the government till 1596. During his long life (he died in 1648) he left nothing undone to perfect the administration of the country and to increase its power. He advanced trade and industry, founded colonies in India and supplied them with missionaries. He established higher institutions of learning, and did everything in his power to improve the condition of the peasantry. Hostile complications with Sweden began anew. They ended with the Peace of Knärd, which proved favourable to Denmark. As Duke of Holstein the king belonged to the Estates of the lower Saxon circle. These relations to North Germany obliged Christian to take an active part in the Thirty Years' War. His hesitation was his bane. When, in spite of the repeated warnings of Tilly, the general of the Catholic League, he did not discontinue his military preparations, Tilly crossed the Weser with his troops (June, 1625). After some minor engagements and long manœuvres, a decisive battle was fought near Lutter (27 Aug., 1626), which ended in the total defeat of Christian. Wallenstein, Tilly's successor, changed the defensive into an offensive war. He fought his way into Holstein, stormed Rendsburg, Flensburg, and subdued the whole of Jutland. Nothing remained to the king but to retreat to the islands, and he was forced to conclude the relatively favourable Treaty of Lübeck. The subsequent thirteen years of peace so restored Denmark's military strength that in 1643 it could resist honourably, if not successfully, the unjust attack of its Swedish neighbour. The peace of Brömsebro nevertheless demanded fresh sacrifices from the unhappy kingdom (1645). Hardly ten years had elapsed, when the Swedes fell again upon Christian's successor, Frederick III, without any previous declaration of war. King Charles X (Gustavus) marched 8,000 picked Swedish troops into Jutland and, profiting by an unusually hard frost, which had covered the straits between the Danish islands with a thick crust of ice, crossed over to Zealand. He forced the capital to surrender and the king to accept the peace of Rös-kilde (1658), by which Denmark forever lost the provinces of Skåne, Halland, Blekinge, Bohuslän. Not content with these successes, Charles immediately regretted his leniency towards King Frederick, embarked at Kiel, and landed again on Zealand. Too weak to storm the capital at once, he was compelled to wait and in the meantime behold his adversary's active measures of defence. A Dutch fleet also approached, forced its way through the Sound, brought troops and provisions to the defenders, and obliged the Swedes to erect a fortified camp. Meanwhile an auxiliary army, consisting of Poles, Austrians, and Brandenburgers, drove the Swedish garrisons out of Jutland. Moreover, the population of the newly acquired provinces assumed a menacing attitude; on Bornholm all the Swedes were slain in one night. Nevertheless Charles Gustavus did not give up the siege of Copenhagen, and in February, 1659, undertook a night attack which was repelled by the heroism of the besieged. Soon after, the allies crossed over to Fünen and captured the Swedish garrison. The early death of the Swedish king (13 Feb., 1660) preserved Denmark from impending ruin; the guardians of the Swedish heir apparent, then only five years of age, were content that the Peace of Copenhagen (1660) guaranteed them the possession of the newly acquired territory with the exception of Bornholm and a few Norwegian districts. These disastrous years had one good effect on the Danish people: the clergy, middle classes, and peasants upheld their king; his crown was declared hereditary, and with their help he annihilated the power of the nobility and secured for himself absolute authority. The government was altered to meet the needs of the times; the tax system was regulated, and the

growing revenue made it possible to increase the nation's military strength. At the same time the pitiful condition of the peasants remained unchanged. Christian V (1670-1699) adopted the French regime as far as possible, invited German nobles into his country, and granted them extensive privileges. Naturally, the youthful sovereign attempted to bring back to Denmark its former greatness; in 1675 he began war with Sweden. His fleet destroyed that of the enemy off Oeland (1676). He himself crossed over to Skåne, and his Norwegian troops made an inroad into West-götland. The loss of the battle of Lund (8 Dec., 1676) forced him to make peace in that city. Sweden kept its possessions, and Denmark received only a small indemnity (1679). King Christian survived these events twenty peaceful years. His son, Frederick IV (1690-1730), had to take an active part in the Northern War; but no great battles took place, nor was Denmark subject to grievous devastation. Eventually (1720) the Gottorp section of Schleswig was retained by Denmark. Frederick was succeeded by the pietistic Christian VI, under whose rule hardly any changes took place. His consort induced him, however, to erect extravagant structures, which proved a heavy burden on the finances. Under Frederick V (1746-1766) commerce and industry, sciences and arts thrived, though the economic situation was very unsatisfactory. His son, Christian VII, ruined himself by his debaucheries. The infidel German physician Strünse, in whom the queen reposed her entire confidence, gained a great, and partly baleful, influence over the administration. He fell a victim to a conspiracy, whereupon the queen had to leave Denmark. The crown prince, who had been actual ruler during the lifetime of his father, reigned fifty-five years as Frederick VI. In concert with his excellent minister Bernstorff, he devoted himself to the welfare of his people, abolished serfdom (1788), and advanced, as far as lay in him, the happiness of his subjects. In 1801, however, he was involved in a conflict with Great Britain, which resented Denmark's resolution to remain neutral in the conflict between Great Britain and France. An indecisive naval engagement took place before Copenhagen. After the Treaty of Tilsit, England sought to paralyze Denmark, then under the influence of Russia and France, and disembarking 30,000 men near Copenhagen, forced the Danes to surrender their splendid fleet. The ensuing war with Great Britain ruined Denmark financially. Moreover, it was forced to cede Norway to Sweden by the treaty of Kiel (1814). The modern tendency towards the increase of civil liberty prevailed also in Denmark. In 1835 the monarch granted a constitution which remained in force under King Christian VIII (1838-48). In the latter reign occurred the first friction of the Danes with the German element in Schleswig, where the latter constituted a strong majority. Still, an open rupture was avoided during the king's life. The contest began in earnest when Frederick VII ascended the throne. The Germans desired that the two duchies of Schleswig and Holstein should be made one State, which should belong to the German Confederation and be connected with Denmark only by a personal union. The Government sought to counteract this movement by various measures, partly of an odious character. Representatives of the German party at last (23-24 March, 1848) proclaimed the independence of the duchies and appointed a provisional government whose head was Prince Frederick of Sonderburg-Augustenburg. The garrisons at Kiel, Eckernförde, and Glückstadt went over to him, and the fortress of Rendsburg fell into his hands without a blow. Volunteers from all sides rallied round his standard. As the King of Denmark did not yield to the wishes of the rebels, war began. The army of Schleswig-Holstein was at first worsted (at Bau and Flensburg), but when Prussian reinforcements under

Wrangel arrived, the Danes were forced to retreat. The intervention of King Oscar of Sweden brought about the truce of Malmö, but its negotiations proved fruitless. Hostilities began again in the spring of 1849, and were continued with varying success (defeat of the Danes at Eckernförde, Düppel, Kolding, their victory of Fredericia). The diplomatic intrigues of the Great Powers compelled Prussia to make peace with Denmark (2 July, 1850) and to withdraw her soldiers. Unassisted, the small army of the duchies now opposed the Danes, but was completely routed in the battle of Idstedt (29 July, 1850). On 27 August of the same year the European Powers signed a declaration at London by which the unity of the Danish monarchy was guaranteed. An Austrian contingent occupied Holstein, restored Danish rule, and dissolved the army of the duchies.

During the truce of Malmö (1848) the first Danish Parliament was assembled by the king. After long and excited debates, a really liberal constitution was accepted 5 June, 1849, according to which the administrative power is substantially divided between the king and the representatives of the people (Folkething and Landsting). All efforts to regulate the

CASTLE OF ROSENBERG, COPENHAGEN

relations with the duchies were fruitless. In the autumn of 1863, therefore, the Government proposed a bill according to which Denmark and Schleswig should receive a common constitution, while Holstein-Lauenburg, as a member of the German Confederacy, was not included. This so-called "November Law", which was to go into effect the first day of January, 1864, was accepted by an overwhelming majority. After the death of Frederick VII, King Christian IX, in spite of many warnings, approved of this new law. For this reason complications arose with the German Confederacy and later with its principal members, Prussia and Austria. Saxon and Hanoverian troops now occupied Holstein. An army consisting of Prussians and Austrians crossed the Eider (6 Feb., 1864) and, within three months, occupied the whole of Schleswig and Jutland as far as Lymfjord. A conference in London produced no results, and the war started anew. Düppel soon fell, Alsen was occupied, and even the island of Fünen was threatened. At this juncture the Treaty of Vienna was signed, by which the duchies were ceded to Austria and Prussia. By its victorious war of 1866 Prussia became finally the sole possessor of these Danish territories.

The loss of Schleswig having made useless the November law, the Constitution of 1849 was modified 26 July, 1866, and it is this revised and more liberal constitution which is still in force. Years of internal discord now followed, as the Radicals strove constantly to diminish the rights of the king, and as he was compelled to adopt extraordinary measures owing to his non-acceptance of the proposed budget. Not till the resignation of the conservative ministry of Estrup (1894) was there a temporary cessation of strife.

Party rivalries and the steadily increasing propaganda of Socialism kept the country in a state of turmoil, and caused no little difficulty both to Christian IX and to Frederick VIII, who succeeded to the throne on the death of his aged father (29 January, 1906).

LITERARY HISTORY.—It is manifest that no literature proper could exist in Denmark in pre-Christian times. There exist, however, some 200 rune-stones, some of whose inscriptions possess historical value. The exploits of the vikings were first recorded by Saxon and some Icelandic chroniclers. These records are not always original, but are partly influenced by foreign myths. The principal subject is piratical exploits. With the adoption of Christianity the influence and use of the Latin tongue becomes predominant. The first products (twelfth century) here, as everywhere else, were lives of saints, followed in Lund and Rös-kilde by annalistic necrologies. The energetic Archbishop Absalon (q. v.), a man of much intellectual power, fostered greatly the growth of historical literature. To his initiative we owe two important works: the "Compendiosa historia regum Danicæ", by Svend Ageson, and the voluminous "Gesta Danorum", by Saxo Grammaticus, the latter part of which chronicles events of his own personal experience or such as were related to him by eyewitnesses, while its introductory chapters often rest on pure tradition. Among the poetical creations of the earliest times must be mentioned the didactic poem "Hexameron", by Anders Suneson (b. 1165), who also composed a poem, now lost, on the seven sacraments, and various hymns. The first attempts to put the ancient "folk-law" into writing were made in the thirteenth century. The "Jydske Lov", also accepted in Schleswig, was reduced to writing by order of Waldemar the Victorious (1241). Simultaneously the ancient laws of Skåne and Zealand were written down. The ecclesiastical law also was soon a subject for literary treatment. The thirteenth century, moreover, saw the appearance of popular treatises on herbs and stones, cookery-books, and a kind of encyclopedia, the "Lucidarius", whose pages contain not only catechetical instruction, but also information as to geography and nature. Fanciful descriptions of voyages and translations of French romances of knightly adventures gained a wide circle of readers. The "Rhymed Chronicle" (supposed to be written by a monk of Sorø) sought to kindle in the hearts of its readers love for their country.

From Peter Laale's "Collection of Proverbs" we obtain a fairly definite picture of the contemporary civilization of Denmark.

Religious literature owes much to the Brigittines (see BRIDGET OF SWEDEN). Apart from the "Revelations" of their foundress, they produced homilies, prayer-books, lives of the saints, hymns to the Blessed Virgin; a translation of the Bible was also undertaken (1480). The most important religious poet of the Danish Middle Ages was Michael Nicolai, parish priest of St. Alban's at Odense. There is still extant a large work by him entitled "Rosary of the Most Bl. Virgin" (1496), not entirely original, however. He also composed short poems. Some of his writings, printed at Copenhagen (1514), were incorporated with changes in the Lutheran hymn-book.

In literature, Denmark, for easily intelligible reasons, has accomplished less than the great nations of Europe. Folk-songs of varied character, however, were always abundant. These compositions were not written down till late, and even now they are a rich mine for Danish poets. When the religious upheaval carried Denmark away from the Catholic Church, the Scandinavians had reached a comparatively low degree of

ROYAL EXCHANGE, COPENHAGEN

culture. Since 1497 there had been a university at Copenhagen, but this was scarcely more than an enlarged cathedral-school, and was even discontinued for a time (1531). The Reformation did little to raise the plane of general culture. After the property of the Church had been confiscated, literature and science were no longer maintained, and there arose a universal complaint of the encroachment of barbarism. Few were willing to send their children to school; still smaller was the number of those who matriculated at the university. More than half of the forty professors whom Christian III appointed at its reopening were Germans. The king and his court never used the Danish language. Students of theology were forced to frequent Wittenberg or Rostock. A denationalized civilization and an exaggerated interest in theology were the natural consequences. For literature it was a poor and barren epoch, and in it, apart from Bible-translations, church hymns, and polemical essays, there appeared only lifeless academic dramas and spiritless, imperfect poetry.

Towards the middle of the seventeenth century theology lost its sway over men's minds. Other fields, especially the exact sciences, began to absorb the attention of scholars. During this period Denmark produced men like Steno and his relative Minslöv (both of whom became Catholics), Tycho Brahe, and others, all of whom may be regarded as pioneers in their respective branches. At the same time, a keen interest was displayed in antiquarian research, and called forth the first editions of Icelandic sagas. By contact with other countries, secular poetry, uncultivated during the Reformation period, began to

awake. However, the poets of the seventeenth century were unable to rise above the purely formal conception of poetry; they slavishly followed German writers and were satisfied with translations and adaptations. Even the hymn-writer Ringo was not free from foreign influence. At last the conflict between English utilitarianism and the rapidly growing pietism under Christian IV prepared the way for genuine national poetry. The first Danish poet, in the proper sense of the word, is Holberg (1684-1754). His comedies and epistles faithfully mirror the conceptions of the Danish provincial townsman. The sensualism of Bellman and other Swedish poets did not find a favourable soil in Denmark. Neither did the French illuministic literature at first strike deep roots. It was not till the end of the French Revolution that the new tendencies found an enthusiastic champion in Heiberg, who created a stir as a satirist and composer of political poems. Then, also, was inaugurated the necessary reaction against the undue intellectual sway of Germany. Though the dramatist John Ewald (1743-1781) was unable to throw off the yoke of German influence, he succeeded in eliciting purely national strains from his lyre. The same is true of Hens Baggesen (b. 1764), whose tales show clearly the influence of Wieland. Married to a German lady, and on friendly terms with the prominent German poets of his time, he produced almost as many and as good lyrics in that language as in his mother tongue. Both in success and popularity he was surpassed by the greatest poetical genius of Denmark, Adam Gottlob Oehlenschläger (1779-1850), the son of a German father. Oehlenschläger first became famous as a lyric poet, then treated myths in an epic form, and later cultivated the drama. It was his purpose, no less than his merit, to breathe new life into the heroic tales of olden times. But even he did not use Danish exclusively. Rich in honour and glory, he died in 1850, at Copenhagen. J. G. Hauch (1790-1872) a writer of mystical drama succeeded him. Ad. Will. Schack of Stafeld (1764-1826), whose ancestors were German, won renown as a lyric poet. While these men may be regarded as fathers and representatives of romanticism in Denmark, Nik. Fred. Sev. Grundtvig (1783-1872) was more "Old Scandinavian" than Oehlenschläger, and of course occasionally blundered. Far superior to his dramatic works are his religious and secular songs. (For his relation to Christianity and theology, see above.)

The path pointed out by Oehlenschläger was pursued by many younger writers. Among them Ingemann (1789-1862), by his elegant dramas and popular historical romances, was the acknowledged favourite of large circles, especially of ladies. Some became famous outside of their country. Bredahl (1784-1860), an imitator of Shakespeare; Blicher (1782-1842); and the poet of sensual love, Winther (1796-1876), whose novels strikingly reproduce the peculiar charms of the Danish landscape. A world-wide fame rewarded the renowned author of fairy-tales, Hans Christian Andersen (1805-1875). In opposition to the poetry of the Romanticists, Louis Heiberg (1791-1860) wrote his satires and theatrical pieces. Frederick Paludan Müller (1809-1876) showed traces of the influence of Byron. The vigorous, highly original Soeren Kirkegaard (1815-65) showed how poor a substitute for religion is aesthetics. Molbech, Boegh, Rumohr, Etlar, finally the Danish Jew Meir Goldschmidt and William Bergsøe must be considered as the heralds and pioneers of that Anglo-Gallic realism which under the favour of the Jewish critic George Brandes (b. 1842) found its way to the North, and has ever since influenced the literature of Denmark in every direction. Its controlling power is seen in the novels of the pessimist Jacobsen, whose "Marie Grubbe" and "Niels Lyhne" created a new school. Among other representatives of this school of litera-

ture (*Gyennembruds* literature) may be mentioned the lately deceased marine painter and poet Holger Drachmann, Sophus Schandorf, Erik Gram, Hermann Bang. Drachmann (b. 1846) was in his youth influenced by Socialism, but later changed his views and wrote lyrics and prose successfully. Great popularity was attained by his patriotic work "Derovre fra Gransen" and his collections of poems "Sange ved Havet", "Ranker och Roser", "Gamle Guder og nye". Schandorf's power lies in his vivid portrayal of peasants and the lower middle class. Erik Gram, in his novel "Gertrude Colbjørnsen", follows in the footsteps of Jacobson, while a warm patriotism breathes in his book "Hinsides Grensen". Hermann Bang's writings have force, but his style is at times obscure. He has shown his many-sidedness as a dramatist, journalist, critic, actor, and lecturer.

Among the many modern Danish authors may be mentioned Pontoppidan, Topsoe, Mariager, Bauditz, Nielsen, and Amalie Skram (novels); von der Recke, Magdalene Thoresen (lyrics and dramas), Budde (juvenile works), Lange (translations). Within the last two decades have appeared numerous works of more or less value in different fields. We mention here only two Catholics: John Jørgensen and John Frederiksen; the former is now reckoned among the most fertile writers of his nation, while the delicate "Digte" (poems) of the latter are worthy of wider recognition.

For the extensive historical literature of the past century, as far as it concerns Catholics, see PERGER, in *Kirchenlex.*, III, 1319 sqq., where is also given the specifically Catholic literature which developed from 1849 to 1884. Since then it has grown in a gratifying way, both in volume and depth; see FORTEGENSELSE, *Dansk Katholsk Litteratur som faas igennem* (Copenhagen, 1894); MIKKELSEN, *Dansk Sproglaere* (Copenhagen, 1894); WIMMER, *De danske Runemindsmæker* (Copenhagen, 1895-1904), I-III; VOLDMAR, *Heltetiv* (Copenhagen, 1904); GRUNDTVIG, *Danmarks gamle Folkeviser* (Copenhagen, 1843-1904), I-VIII; PALUDAN, *Renaissance-bevægelsen i Danske Litteraturen* (Copenhagen, 1887); BERNARDINI, *La littérature scandinave* (Paris, 1894); M. AND W. HOWITT, *The Literature and Romance of Northern Europe* (London, 1852); HANSEN, *Illustr. Dansk Litteratur-Historie* (Copenhagen, 1902); W. OETERGAARD, *Illustr. Dansk Litt. Historie* (Copenhagen, 1907); SCHWEIZER, *Geschichte der skandinavischen Literatur* (Leipzig, 1885)—detailed account of the literature, with characteristics of the authors and extracts from their writings in German version, but superficial and full of Protestant prejudices; SCHUCK, *Sveriges Litteraturhistoria* (Stockholm, 1890); ID., *Die Anfänge der neuskandinavischen Literatur in Internat. Wochenschr. f. Wissensch. und Technik*, I, Nos. 12-13 (short but very clear sketch).

THE FINE ARTS.—a. *Architecture*.—As mentioned above, the first Christian temple on Danish soil was the church at Hedeby (Schleswig). According to Adam of Bremen (d. 1075), Denmark possessed in his time 300 churches in Skåne, 250 in Zealand, 100 on Fünen; probably all were constructed of wood. Even the cathedral of Røskilde was originally of this material. The same holds good for the churches *ad S. Mariam* and *ad S. Albanum* at Odense, in which Saint Canute met his death and which was not torn down till after the Reformation. The wooden cathedral of St. Olaf at Aarhus fell down in 1548. Wooden churches remained long in use in South Jutland (Schleswig). But in North Jutland and on the islands, as early as the middle of the twelfth century, other material was used, according as the quarries were close at hand or easily accessible, e. g. granite, sandstone, limestone, or chalk-stone; sometimes tufa from the Rhine was employed. Frequently only the exterior of the walls was constructed of stronger material, the intervals were filled up with a mixture. The use of burned brick was soon adopted everywhere. Waldemar I (d. 1182) substituted for the wooden palisades of the *Danaverk* (see above) a wall of brick. After him most of the new buildings were exclusively constructed of this material, e. g. the churches at Aarhus, Randers, Elsinore, Røskilde, Ringsted, Næstved, Maribo, etc. Often free-stone was used for the foundations (up to a certain height), while walls and arches were built of brick. In some places (e. g. in Kjøge) layers of different stone alternate. The variations of

style (basilica, round arches, pointed arches) succeeded each other as in the rest of Europe, though they were partly influenced by Cistercian and Brigittine forms. Alongside of churches with parallel naves are others with transepts, and even round churches. Church steeples seem to have occasionally served as means of defence. After the religious schism, people confined themselves in the main to preserving the existing buildings. The beautiful temples now used in Protestant worship were all built in Catholic times. On the other hand, the Evangelical kings spent large amounts in erecting and furnishing splendid castles, among which we may mention Kronborg (sixteenth) and Frederiksborg (seventeenth century). Only Copenhagen exhibits important edifices of modern times, e. g. St. Mary's church, the Thorwaldsen Museum, the city hall, and other buildings. Prominent architects of the eighteenth and nineteenth centuries were Bindesbøll, who erected the Thorwaldsen museum; Peter Fenger, who won fame as a designer of churches and as an author; Chr. Fr. Hansen, builder of churches and public buildings; Theophilus Hansen, an eminent master whose works embellish Austria and Greece; Henry Hansen, whose influence on artistic handicrafts in Denmark can hardly be over-estimated; finally, Harsdorf, Melbye, and Uldall; the last deserves special credit as the historian of bell-casting.

b. *Sculpture*.—That the art of carving and chiselling was practised diligently and with some success ever since the introduction of Christianity, is proved by altars, crucifixes, choir stalls, etc. still found in churches or museums. The names of the masters can, however, rarely be ascertained with any degree of certainty. We know, e. g., that a certain Liutger is the maker of a very fine crucifix carved from a walrus-tooth. This cross now adorns the Danish National Museum and bears the inscription: "Qui in Christum crucifixum credunt, Liutgeri memoriam orando faciant". The sixteenth century seems to have been barren of skilful sculptors. We only know that a certain Berg, a German born in Lübeck, carved beautiful ivory ornaments and also distinguished himself as a painter. Many artists from various countries worked either permanently or temporarily in Denmark (Germans—as Rössler, Preisler, Reinhardt, Schwabe; Englishmen—as Stanley; Frenchmen—as Villars, Boudan, Prieur; Italians—as Gianelli, Miani, Guioni; Spaniards—as Molinedo, de Corte; Dutchmen—as Vermehren, van Egen; Jews—as Levi, Levisohn, Saly, Salomon). Among the native sculptors, Bissen, Jerichau, Peters, and Wiedewelt deserve mention, and above all the famous Thorwaldsen (1770–1844); the engravers Clemms and Lund; the engravers Adzer and Christiansen.

c. *Painting*.—There was never a lack of painters in Denmark. This is proved by the great number of beautiful frescoes in the cathedrals at Aarhus, Ribe, Røskilde, Viborg, etc., whitewashed in the sixteenth century, but re-discovered of late and restored at great cost. Abildgaard (1743–1809), himself a notable artist (historical painter), must be considered as the father of the Danish school of painting in modern times, which has produced excellent works of art along various lines. Among the historical painters are Eckersberg, C. C. C. Hansen, Christ, Höyer, Marstrand, Müller, Paulsen, Simonsen, and Albert Küchler (died a Catholic and a Franciscan lay-brother at Rome 1886). The pictures of his youth exhibit a joyous mood; the creations of his later life show a deep earnestness. Skilful portrait-painters are Bache, Bendz, Baerentzen, Copmann, H. Hansen, Juel, Roed; genre painters are Exner, Hammer, Sønne; Ottesen was distinguished as a flower-painter; miniature-painters: Höyer as a miniaturist. Especial preference is given to landscapes, marine and animal canvases. Excellent landscape painters were (or are) Aegard, Krøyer, Lundbye, Hens Möller, Skovgaard;

marine painters: Larsen, Melbye, Neumann; beautiful reproductions of animal life are to be credited to Gebauer and Lundbye.

DEHIO-BEZOLD, *Die kirchliche Baukunst des Abendlands*, p. 397.—its introductory chapters contain a detailed literature, e. g. monographs on Ribe (HELMS), *Røskilde* (LÖFFLER, LANGE, KERNERUP), Odense (MOMME, LAURITSEN); LÖFFLER, *Udsigt over Danmarks Kirkebygninger fra den tidligere Middelalder* (Copenhagen, 1883); DIETRICHSSON, *De Norske Stavekirker* (Christiania, 1892); WRANGEL, *Tegelarkitektur i nord Europa* (Antiqu. Tidsskr. for Sverige); STEFFEN, *Romanska smakirker i Oestersjöländerna* (Bidrag till var odlings häfder, Stockholm, 1901); WEILBACH, *Nyt Dansk Kunstnerlexikon* (Copenhagen, 1896–97).

P. WITTMAN.

Denonville, JACQUES-RENÉ DE BRISAY, SEIGNEUR AND MARQUIS DE, b. in 1638 at Denonville in the department of Eure-et-Loir, France; d. 1710. Nothing is known of him prior to his arrival in Canada, except that he was colonel of a regiment of dragoons and in 1668 had married Catherine Courtin, daughter of Germain Courtin, Seigneur de Tanqueux, Beauval, Moncel, etc., and of Catherine Laffemas. Appointed governor of New France, Denonville, accompanied by his wife and two young daughters, left La Rochelle early in June, 1685, and arrived at Quebec 1 August. His special mission was to win the sympathies of the Indians, establish peace with them, and make war upon the Tsonnontouans, a branch of the Iroquois who were even more to be feared than the Agniers. Denonville soon realized that he did not have troops enough at his disposal, and asked assistance from France. Moreover, a powerful enemy confronted him in the person of Thomas Dongan, Governor of New York, who was constantly urging the Iroquois against the French. During the winter of 1686–87 preparations were under way for a campaign in the following summer; forts were put in a state of defence, and the savage allies of the French, such as the Miami, the Illinois, and the Ottawas, were asked to send warriors to Niagara there to join the main body in the early part of July. In the spring of 1687, 800 naval recruits reached Quebec under the command of the Chevalier de Vaudreuil, and on 11 June about 2000 men, under Denonville, repaired to Cataroony, thence to invade the country of the Tsonnontouans. Had he been less humane Denonville could have completely subjected the Tsonnontouans, but he erred by allowing them too much liberty. The position of the colony was consequently still insecure, and the other Iroquois tribes, affected but little or not at all by the routing of the Tsonnontouans, continued their attacks and depredations. Denonville believed that the Iroquois would come of their own accord and propose peace. But Sir Edmund Andros, Governor of New England, still less tractable than Governor Dongan, had agitated the question of boundaries between the possessions of the King of England and those of France, the climax to his claims being his seizure of Fort Saint-Castin (1688). New peace negotiations took place between the French and the Iroquois, but the diplomacy of a Huron chief Tionnontate, called *Kondiaronk*, or the "Rat", upset everything. By the autumn of 1688 the colony was in a lamentable state, sickness had decimated its troops, 1400 of the 12,000 who formed the entire population of New France had fallen victims to the destructive scourge, and the forts were abandoned.

The winter of 1688–89 was one of wild alarms, especially in the vicinity of Montreal, which was easiest of access to the Iroquois, and during the summer these merciless barbarians, to the number of 1400, invaded the island of Montreal and slew the inhabitants of Lachine. This onslaught caused the utmost consternation among the colonists. Great joy prevailed when it was announced that the Comte de Frontenac, who had already governed the colony for ten years (1672–82), would replace the Marquis de Denonville.

When Denonville left the country he was looked upon as lacking in ability to deal with the savages, besides being too much inclined to follow every one's advice; nevertheless, he was a fine soldier, a good Christian, and a governor admirably disposed towards the colony, which he was most eager to rescue from the clutches of the Iroquois. On his return to France the king gave him further proof of his confidence by appointing him assistant tutor to the children of the royal household.

N. E. DIONNE.

Dens, PETER, theologian, b. at Boom, near Antwerp, Belgium, 12 September, 1690; d. at Mechlin, 15 February, 1775. He completed his earlier studies under the direction of the Fathers of the Oratory at Mechlin, and in 1711 became a master of arts of the University of Louvain, where he afterwards devoted himself to the study of theology. He lectured on this subject to the religious of the Affligem Abbey (1717-1723), and after receiving the licentiate in theology at the University of Louvain (5 October, 1723), he was successively professor of theology at the seminary of Mechlin (until 1729), pastor of the metropolitan church there (1729-1737), president of the seminary (1735-1775), canon and *Scholasticus* (1737), then penitentiary (1751), and finally archpriest of the chapter (1754-1775). The work which he had undertaken of enlarging the seminary compelled him to relinquish the chair of theology which he had again occupied from 1741-1747. He was always distinguished by his simplicity, solid piety, and love for the poor, and above all by his zeal for the moral and scientific training of the clergy. The organization of the concursus for the collation of the cures and the reform of theological instruction in the Diocese of Mechlin were in great measure his work. He is not the author of the complete course of theological lectures entitled "*Theologia ad usum seminariorum*" which was published under his name in 1777, and is still published, though greatly modified, by the professors of the seminary of Mechlin (*Theologia ad usum seminarii Mechliniensis*, olim sub nomine P. Dens edita); but he published a treatise on penance and on the virtue of religion (*Supplementum theologiæ* Laur. Neesen. *De virtute religionis*; *Dictata de sacramento Penitentiae*. Mechlin, 1758), and several tracts against the Recollet John Tomson, in favour of the custom existing in some parishes of the Diocese of Mechlin, of asking and inscribing in a register the names of those who went to confession (*Responsio P. Dens ad dissertationem et apologiam Joannis Tomson. Mechlin, 1759*), and against the Augustinian monk Maugis, professor at the University of Louvain (*Collectio scriptorum quæ separatim in lucem edita sunt circa questionem theologicam an sacerdos vel beneficiarius recitans horas canonicas in affectu peccati mortalis satisfaciatur præcepto seu obligationi recitandi horas canonicas*. Louvain, 1765).

Biographical notice in the first volume of the oldest editions of the *Theologia ad usum seminariorum*; *Journal historique et littéraire* (Liège, 1839), VI, 243; DEWALQUE in *Biographie nationale* (Brussels, 1876), V, 599; HURTER, *Nomenclator literarius*, III, 41; BAETEN, *Naamrollen betrekkelijk de kerkelijke geschiedenis van het aartsbisdom van Mechelen* (Mechlin, 1881), I, 308. A. VAN HOVE.

Denunciation (Lat. *denunciare*) is making known the crime of another to one who is his superior. The employment of denunciation has its origin in the Scriptures. Christ ordains (Matt., xviii, 15-17), "If thy brother shall offend against thee, go, and rebuke him between thee and him alone. If he shall hear thee thou shalt gain thy brother. And if he will not hear thee, take with thee one or two more: that in the

mouth of two or three witnesses every word may stand. And if he will not hear them: tell the church. And if he will not hear the church, let him be to thee as the heathen and publican". As the object of this denunciation was the bettering of one's neighbour, by admonition, not vindictive punishment, it has received the name of charitable or evangelical denunciation. The term paternal correction is also applied to it.

After the Church had obtained an official status before the world, it built up a process of criminal law, and judicial denunciation took the place of evangelical. The difference consists in this, that the judicial declaration is made not merely for the reformation, but also for the punishment of the guilty person. By ordinary process of law, it is an accuser who evokes the dormant power of the judge. If the charge be false, such accuser is obliged to sustain the punishment that would have been inflicted on the guilty party. In modern ecclesiastical law proceedings, however, this law of reprisals has gone into desuetude, and in diocesan courts the promotor fiscalis takes the place of the accuser. The difference between the accuser and denouncer is that the latter does not assume the obligation of proving the charge which he brings, and so is not amenable to the law of reprisals or retaliation. To avoid, however, the multiplication of unfounded charges, a denouncer whose accusation can not be proved, is ordinarily suspended from his benefice and dignities until it is made manifest that his denunciation did not proceed from malice. If the person denounced be declared judicially innocent of the crime laid to him, then the denouncer must make oath that he acted in good faith in bringing the charges. It is allowed to the denouncer to appear also as a witness in the trial. The person denounced is, by that very fact, considered to have suffered in his good name and as a consequence he becomes incapable for a year of receiving any sacred order or benefice, unless he be found innocent. It is to be remarked that denunciation is not supposed to take place until private admonitions have been tried fruitlessly. Denunciation in the strict sense of the law has practically gone into desuetude, and its place is taken by a simple statement to a superior who has the right of proceeding canonically against delinquents, without subjecting the informer to the obligations incumbent on denouncers.

There is a special obligation imposed by a decree of the Holy Office to denounce heretics, magicians, those who have abused the Sacrament of Penance (see *SOLICITATION*) and others guilty of similar crimes to the Inquisition (see *INQUISITION*). Where Catholics, however, live in places where they are mixed with heretics, they are not bound to denounce the latter. The term denunciation is also applied to matters connected with the Sacrament of Matrimony (see *BANNS*). Finally, as to the obligation of denouncing transgressors, every person is bound to do so, when he can fulfil the duty without grave detriment to himself and with corresponding utility to society or individuals. In certain cases only, is denunciation strictly prescribed, as in those relating to matrimonial impediments, to abuse of the confessional, and to the names of leaders of secret societies.

WILLIAM H. W. FANNING.

Denver, DIOCESE OF (DENVERIENSIS), a suffragan of the Archdiocese of Santa Fé, erected in 1887 and comprising the entire State of Colorado, an area of 103,645 square miles. The first permanent civilized settlement within its borders was made in 1852, when a Spanish colony from New Mexico settled in what is now the southern part of Colorado on the Conejos River, where they built the first church in 1858.

Similar settlements followed during the fifties, their spiritual needs being provided for by priests sent by Bishop Lamy of Santa Fé, whose diocese then extended as far north as the Arkansas River, the boundary of the Mexican cession. The discovery of gold,

BENEDICTINE COLLEGE, PUEBLO

in 1858, near the site of the present city of Denver, soon brought a great increase of population from the Eastern States. Mining camps and towns sprang up in great numbers throughout the whole Pike's Peak region. This territory was then a part of the vicariate of Bishop Miège of Leavenworth, and that prelate visited Denver in 1860. Finding it practically impossible to attend these distant missions, Bishop Miège secured their transfer to the jurisdiction of the Bishop of Santa Fé. Bishop Lamy sent his vicar-general, the Very Rev. Joseph P. Machebeuf, and a young priest, Rev. John B. Raverdy, to care for the mining regions and the new settlements. Father Machebeuf had spent eleven years in the missions of Northern Ohio, and ten years in similar work in New Mexico and Arizona, and was thus admirably adapted for the work before him. The two missionaries arrived at Denver in October, 1860, and for over seven years they laboured, almost unaided, visiting the immense territory confided to them, building churches wherever the prospects warranted such an undertaking.

The increase of population was so great during those early years, and the prospects of permanency became

COLLEGE OF THE SACRED HEART, DENVER

so favourable that the Fathers of the Second Plenary Council of Baltimore recommended to the Holy See the creation of the Vicariate Apostolic of Colorado and Utah. Consequently Father Machebeuf was nominated to that office and was consecrated titular Bishop of Epiphania at Cincinnati by Archbishop Purcell, 16 August, 1868. The new prelate was born 11 August, 1812, at Riom, Puy-de-Dôme, France. He was ordained priest 21 December, 1836, at Clermont-Ferrand, the see

of his native diocese. When he took charge as vicar Apostolic he had but three priests within his jurisdiction, but he returned to the field of his work and redoubled his own efforts, visiting every portion of his vast vicariate, doing the work of priest and bishop and endeavouring at the same time to secure priests for the rapidly increasing population. His zeal for religion was shown also by his many efforts to secure locations for future churches, charitable and educational institutions, several of which were built in his own time—notably, the Loretto Academy at Denver, in 1864, and later St. Joseph's Hospital, the House of the Good Shepherd, and the College of the Sacred Heart. In 1871 his burdens were somewhat lightened by the transfer of the Territory of Utah to the jurisdiction of the Archbishop of San Francisco. By Brief of 16 August, 1887, the Vicariate of Colorado was made a diocese with the episcopal see at Denver; and the Rev. Nicholas C. Matz appointed coadjutor with right of succession (19 August, 1887). He was consecrated titular Bishop of Telmessia, at Denver, by Archbishop Salpointe of Santa Fé, 28 October, 1887. Bishop Machebeuf nevertheless relaxed but little of his missionary work after this, and retained the administration of the diocese until his death, on 10 July, 1889, leaving in the diocese 34 secular and 30 regular priests, 112 churches and chapels, 1 college, 9 academies, 9 hospitals, 2 asylums, and over 3000 children in Catholic schools.

Bishop Matz, who was born 6 April, 1850, at Münster, Lorraine, France, and ordained priest at Denver, 31 May, 1874, continued the good work of his predecessor. The diocese contains (1908) 62 secular priests, 71 priests of religious orders: Jesuits, Benedictines, Franciscans, Dominicans, Redemptorists, Servites, and Theatines, engaged in parish and educational work, 2 colleges for young men with 261 students, 531 religious women of 15 different institutes: the Sisters of Loretto, Charity (Mt. St. Joseph, Ohio), Charity (Leavenworth, Kansas), St. Joseph, Mercy, the Good Shepherd, Third Order of St. Dominic, St. Francis, St. Benedict (Chicago, Illinois), Charity B. V. M. (Dubuque, Iowa), St. Francis of the Perpetual Adoration, Missionary Sisters of the Sacred Heart, St. Benedict (Erie, Pennsylvania), St. Joseph (Wichita, Kansas), St. Francis of Assisi. There are 4 orphan asylums with 588 children; an industrial and reform school with 225 inmates, a home, 15 hospitals with 11,300 patients annually, 10 academies with 900 pupils and 25 parish schools with 6600 children. The theological students number 10. There are 60 churches, 91 chapels, 140 stations, and a Catholic population of 99,485. The Sacred Heart Orphanage at Pueblo, sheltering 150 children, owes its existence and partial endowment to the generosity of Captain John J. Lambert of Pueblo, an exemplary Catholic prominent in works of charity and zeal. The English language is generally used, but in many of the mining districts and industrial centres there is a necessity for the Italian and Slav languages, while Spanish is usually spoken in the southern parishes. There is no diocesan debt, and the individual churches and institutions are solvent and prosperous.

W. J. HOWLETT.

Denys the Carthusian (DENYS VAN LEEUWEN, also LEUW or LIEUWE), b. in 1402 in that part of the Belgian province of Limburg which was formerly comprised in the county of Hesbaye; d. 12 March, 1471. His birthplace was Ryckel, a small village a few miles from Saint-Trond, whence ancient writers have often surnamed him Ryckel or à Ryckel. His parents, historians say, were of noble rank; he himself says, however, that when a child he kept his father's sheep. His remarkable aptitude for intellectual pursuits and

his eagerness to learn induced his parents to give him a liberal education, and they sent him to a school at Saint-Trond. In 1415 he went to another school at Zwolle (Overijssel), which was then of great repute and attracted many students from various parts of Germany. He there entered upon the study of philosophy and became acquainted with the principles and practice of religious life, which the rector, John Cele, a very holy man, himself taught. Shortly after the rector's death (1417) he returned home, having learnt all that the masters of the school could teach him. His feverish quest for human science and the success his uncommon intellectual powers had rapidly obtained seem, according to his own account, to have rather dulled his piety. Nevertheless a supernatural leaning to cloistral life, which had taken root in his mind from the early age of ten and had grown stronger during his stay at Zwolle, finally triumphed over worldly ambition and the instincts of nature, and at the age of eighteen he determined to acquire the "science of saints" in St. Bruno's order.

Having applied for admittance at the Carthusian monastery at Roermond (Dutch Limburg), he was refused because he had not reached the age (twenty years) required by the statutes of the order; but the prior gave him hopes that he would be received later on, and advised him to continue meanwhile his ecclesiastical studies. So he went forthwith to the then celebrated University of Cologne, where he remained three years, studying philosophy, theology, the Holy Scriptures, etc. After taking his degree of Master of Arts, he returned to the monastery at Roermond and this time was admitted (1423). In his cell Denys gave himself up heart and soul to the duties of Carthusian life, performing all with his characteristic earnestness and strength of will, and letting his zeal carry him even far beyond what the rule demanded. Thus, over and above the time—about eight hours—every Carthusian spends daily in hearing and saying Mass, reciting Divine Office, and in other devotional exercises, he was wont to say the whole Psalter—his favourite prayer book—or at least a great part of it, and he passed long hours in meditation and contemplation; nor did material occupations usually hinder him from praying. Reading and writing took up the rest of his time. The list he drew up, about two years before his death, of some of the books he had read while a monk bears the names of all the principal ecclesiastical writers down to his time. He had read, he says, every summa and every chronicle, many commentaries on the Bible, and the works of a great number of Greek, and especially Arab, philosophers, and he had studied the whole of canon as well as civil law. His favourite author was Dionysius the Areopagite. His quick intellect seized the author's meaning at first reading and his wonderful memory retained without much effort all that he had once read.

It seems marvellous that, spending so much time in prayer, he should have been able to peruse so vast a number of books; but what passes all comprehension is that he found time to write, and to write so much that his works might make up twenty-five folio volumes. No other pen, whose productions have come down to us, has been so prolific. It is true that he took not more than three hours' sleep a night, and that he was known to spend sometimes whole nights in prayer and study. There is evidence, too, that his pen was a swift one. Nevertheless the mystery still remains insolvable, and all the more so that, besides the occupations already mentioned, he had, at least for some time, others which will be presently noted, and which alone would have been enough to absorb the attention of any ordinary man. He began (1434) by commenting the Psalms and then went on to comment the whole of the Old and the New Testament. He commented also the works of Boethius, Peter Lombard, John Climacus, as well as those of, or attributed

to, Dionysius the Areopagite, and translated Cassian into easier Latin. It was after seeing one of his commentaries that Pope Eugene IV exclaimed: "Let Mother Church rejoice to have such a son!" He wrote theological treatises, such as his "Summa Fidei Orthodoxæ", "Compendium Theologicum", "De Luminine Christianæ Theconie", "De Laudibus B. V. Mariæ", and "De Præconio B. V. Mariæ" (in both of which treatises he upholds the doctrine of the Immaculate Conception), "De quatuor Novissimis", etc.; philosophical treatises, such as his "Compendium philosophicum", "De venustate mundi et pulchritudine Dei" (a most remarkable æsthetic dissertation), "De ente et essentiâ", etc.; a great many treatises relating to morals, asceticism, church discipline, liturgy, etc.; sermons and homilies for all the Sundays and festivals of the year, etc. His writings, taken as a whole, show him to be a compiler rather than an original thinker; they contain more unction and piety than deep speculation. He was no innovator, no builder of systems, and especially no quibbler. Indeed he had a decided dislike for metaphysical subtleties of no positive use, for he was of far too practical a turn of mind to waste time in idle dialectic niceties, and sought only to do immediate good to souls and tend their spiritual needs, drawing them away from sin and guiding and urging them on in the path to heaven.

As an expounder of Scripture, he generally does no more than reproduce or recapitulate what other commentators had said before him. If his commentaries bring no light to modern exegesis they are at least an abundant mine of pious reflections. As a theologian and a philosopher he is a servile follower of no one master and belongs to no particular school. Although an admirer of Aristotle and Aquinas, he is neither an Aristotelian nor a Thomist in the usual sense of the words, but seems inclined rather to the Christian Platonism of Dionysius the Areopagite, St. Augustine, and St. Bonaventure. As a mystical writer he is akin to Hugh and Richard of St. Victor, St. Bonaventure, and the writers of the Wildesheim School, and in his treatises may be found summed up the doctrine of the Fathers of the Church, especially of Dionysius the Areopagite, and of Eckart, Suso, Ruysbroeck, and other writers of the German and Flemish Schools. He has been called the last of the Schoolmen, and he is so in the sense that he is the last important Scholastic writer, and that his works may be considered to form a vast encyclopedia, a complete summary of the Scholastic teaching of the Middle Ages; this is their primary characteristic and their chief merit.

His renown for learning, and especially for saintliness, drew upon him considerable intercourse with the outer world. He was consulted as an oracle by men of different social standing, from bishops and princes downwards; they flocked to his cell, and numberless letters came to him from all parts of the Netherlands and Germany. The topic of such correspondence was often the grievous state of the Church in Europe, i. e. the evils ensuing from relaxed morals and discipline and from the invasion of Islam. Deploping those evils he exerted himself to the utmost, like all pious Catholics of that day, to counteract them. For that purpose, soon after the fall of Constantinople (1453), impressed by revelations God made to him concerning the terrific woes threatening Christendom, he wrote a letter to all the princes of Europe, urging them to amend their lives, to cease their dissensions, and to join in war against their common enemy, the Turks. A general council being in his eyes the only means of procuring serious reform, he exhorted all prelates and others to unite their efforts to bring it about. He wrote also a series of treatises, laying down rules of Christian living for churchmen and for laymen of every rank and profession. "De doctrinâ et regulis vitæ Christianæ", the most important of these treatises, was written at the request, and for the use, of the

famous Franciscan preacher John Brugman. These and others which he wrote of a similar import, inveighing against the vices and abuses of the time, insisting on the need of a general reform, and showing how it was to be effected, give a curious insight into the customs, the state of society, and ecclesiastical life of that period. To refute Mohammedanism he wrote two treatises: "Contra perfidiam Mahometi", at the request of Cardinal Nicholas of Cusa. The latter, named papal legate by Nicholas V to reform the Church in Germany and to preach a crusade against the Turks, took Denys with him during a part, if not the whole, of his progress (Jan., 1451-March, 1452), and received from his tongue and his pen valuable assistance, especially in the work of reforming monasteries and of rooting out magical and superstitious practices. This mission was not the only charge which drew Denys from his much-loved cell. He was for some time (about 1459) procurator of his monastery, and in July, 1466, was appointed to superintend the building of a monastery at Bois-le-Duc. A three-years' struggle against the inextricable difficulties of the new foundation broke down his health, already impaired by a long life of ceaseless work and privations, and he was obliged to return to Roermond in 1469. His treatise "De Meditatione" bears the date of the same year and was the last he wrote.

The immense literary activity of Denys had never been detrimental to his spirit of prayer. On the contrary he always found in study a powerful help to contemplation; the more he knew, the more he loved. While still a novice he had ecstasies which lasted two or three hours, and later on they lasted sometimes seven hours and more. Indeed, towards the end of his life he could not hear the singing of "Veni Sancte Spiritus" or some verses of the Psalms, nor converse on certain devotional subjects without being lifted off the ground in a rapture of Divine love. Hence posterity has surnamed him "Doctor ecstaticus". During his ecstasies many things were revealed to him which he made known only when it could profit others, and the same may be said of what he learnt from the souls in purgatory, who appeared to him very frequently, seeking relief through his powerful intercession. Loving souls as he did, it is no wonder that he should have become odious to the great hater of souls. His humility responded to his learning, and his mortification, especially with regard to food and sleep, far excelled what the generality of men can attain to. It is true that in point of physical austerities, virtue was assisted by a strong constitution, for he was a man of athletic build and had, as he said, "an iron head and a brazen stomach".

During the last two years of his life he suffered intensely and with heroic patience from paralysis, stone, and other infirmities. He had been a monk for forty-eight years when he died at the age of sixty-nine. Upon his remains being disinterred one hundred and thirty-seven years after, day for day (12 March, 1608), his skull emitted a sweet perfume and the fingers he had most used in writing, i. e. the thumb and forefinger of the right hand, were found in a perfect state of preservation. Although the cause of his beatification has never yet been introduced, St. Francis de Sales, St. Alphonsus Liguori, and other writers of note style him "Blessed"; his life is in the "Acta Sanctorum" of the Bollandists (12 March), and his name is to be found in many martyrologies. An accurate edition of all his works still extant, which will comprise forty-one quarto volumes, is now being issued by the Carthusian Press at Tournai, Belgium.

EDMUND GURDON.

Denza, FRANCESCO, Italian meteorologist and astronomer, b. at Naples, 7 June, 1834; d. at Rome, 14 December, 1894. He joined the Barnabites at the age of sixteen, and during his theological course at Rome studied at the same time meteorology and astronomy under Father Secchi. From 1856 until 1890 he was attached to the Barnabite college at Moncalieri where he became widely known for his work in meteorology, a science which he greatly advanced not merely by his personal observations and studies but also by the interest which he roused in it throughout Italy. In 1859 Denza founded the "Bullettino mensile di Meteorologia", which was continued until 1894, and established a meteorological observatory at Moncalieri; it was largely through his influence that similar observatories, more than 200 in number, were gradually built in various parts of Italy. The success which attended his efforts gave him a national reputation, and in 1866 Senator Matteucci and Signor Berti, minister of public instruction, urged him to take charge of the department of meteorology at Florence. Denza did not accept the post, but in the following year, at Berti's invitation, he read a paper on meteors at the "Istituto Superiore" in Florence. In 1872 he began a series of researches on terrestrial magnetism with special reference to magnetic declination, which illness, however, prevented him from completing. In 1881 he founded the Italian Meteorological Society of which he was president for many years. In 1883 the Duke of Aosta invited him to take charge of the scientific education of his three sons. In the same year he was director of the literary and scientific section of the National Exposition at Turin and chairman of its jury of awards. He represented Leo XIII in 1884 at the Congress of Scientific Societies of France, presiding over the meteorological section. He visited England and Holland on this occasion, where he was received with much honour. He likewise represented the pope at the Paris Astronomical Congress of 1887, when the plan was formulated of making a photographic map of all the stars in the heavens down to the fourteenth magnitude; through his influence the Vatican observatory was one of the eighteen chosen to carry out this important project. Denza was appointed director of the Vatican Observatory in September, 1890, and thenceforth lived at the Vatican. Here he inaugurated the work of this observatory in stellar photography. At the time of his death, which was due to apoplexy, he was President of the Accademia dei Nuovi Lincei. In character Denza was a man of simple piety and humility.

Among his published works may be mentioned: "Meteorae cosmiche" in "Scienza di popolo" (Milan, 1869); "Stelle cadente del periodo di Agosto 1868" (ibid.); "Le aurore pol. d. 1869 ed i fenom. cosmiche che accompagnarono" (1869); "Distribuzione di pioggia in Italia" (1871-72); "Valeurs de l'électricité et l'ozone à Moncalieri à l'époque du choléra" in "Comptes Rendus" (1868) LXVI; "Le armonie dei cieli, Nozioni di astron." (1881); "Amplitudes d'oscillations diurn. magnet. à Moncalieri 1880-81"; "Osserv. di declin. magnet. ad Aosta, Moncalieri e Firenze in occas. d'eclissi sol 26/5 1873" in "Proc. Acc. dei Nuov. Lincei".

HENRY M. BROCK.

Denzinger, HEINRICH JOSEPH DOMINICUS, one of the leading theologians of the modern Catholic German school and author of the "Enchiridion" universally used, b. 10 Oct., 1819, at Liège; d. 19 June,

1883, at Würzburg. In 1831 his father, who was a professor at the Liège University, took him to Würzburg, the original home of the family. Here he attended the gymnasium and studied philosophy at the university, where he received the Ph. D. degree. In 1838 he entered the Würzburg seminary, went to the German College at Rome in 1841, was ordained priest in 1844, and the following year took a degree in theology. On his return home he was first curate at Hassfurt-on-the-Main, became professor extraordinary of dogmatic theology at Würzburg in 1848, and ordinary professor in 1854. He continued to occupy this position, in spite of ill-health, till his death. Denzinger was one of the pioneers of positive theology and historical dogmatic (*Dogmengeschichte*) in Catholic Germany. In the generation after Johann Adam Möhler (d. 1838) and Döllinger (1799-1890) he carried on their methods and helped to establish what is the special character of the German school, exact investigation of the historical development of theology, rather than philosophical speculation about the corollaries of dogma. Nearly all his important works are in the nature of historic theology. The best-known and most useful is his "Enchiridion Symbolorum et Definitionum" (first ed., Würzburg, 1854), a handbook containing a collection of the chief decrees and definitions of councils, list of condemned propositions, etc., beginning with the oldest forms of the Apostles' Creed. It has often been republished, with considerable additions, of which the most important are part of the Bull defining the Immaculate Conception (*Ineffabilis Deus*, 1854), the Syllabus of 1864, and the Vatican decrees. After Denzinger's death Professor Ignatius Stahl continued the work of re-editing the "Enchiridion" with additional decrees of Leo XIII. A revised and enlarged edition (10th ed., Freiburg, 1908), prepared by Clemens Bannwart, S. J., includes decrees of Pius X. Other works are "Ritus Orientalium, Coptorum, Syrorum et Armenorum" (2 vols., Würzburg, 1863-1864), a long treatise on Eastern rites; "Vier Bücher von der religiösen Erkenntnis" (2 vols., Würzburg, 1856-1857), "Ueber die Aechtheit des bisherigen Textes der Ignatianischen Briefe" (Würzburg, 1849), "Die spekulative Theologie Günthers" (Würzburg, 1853). He also wrote a number of shorter treatises, on Philo Judæus (1840, his first work), on the Immaculate Conception (1855), and papal infallibility (1870). At the time of his death he was preparing a complete compendium of dogmatic theology. He edited a number of medieval theological works: Habert, "Theologia Græcorum Patrum vindicata circa materiam gratiæ" (1853); De Rubéis, "De peccato originali" (1857); P. Marani, "Divinitas D. N. Jesu Christi" (1859). He was appointed a consultant of Propaganda for Eastern rites in 1866.

Deogratias, SAINT. See FELIX OF CANTALICE, SAINT.

Deo Gratias (Thanks be to God), an old liturgical formula of the Latin Church to give thanks to God for graces received. It is found in Scripture, I Cor., xv, 57, and II Cor., ii, 14.

I. Deo Gratias occurs in the Mass: (a) as an answer of the server to the Epistle or Prophecies; in High-Mass this answer should not be sung by the choir. In the Mozarabic and Old Gallican Liturgy the Deo Gratias follows the title of the Epistle or the Prophecy; at its end the Amen is said. The Greek and its daughter churches do not use this formula in connexion with the Epistle. In the Latin Church the Deo Gratias is not said on Ember Saturday after the fifth lesson, which is followed by the canticle of the

Three Young Men in the furnace, in order not to interrupt the sense; neither is it said after the lessons on Good Friday or after the Prophecies on Holy Saturday and the eve of Pentecost; (b) in answer to the *Ite Missa est* and the *Benedicamus Domino*, in thanksgiving for the graces received at Mass; (c) after the last Gospel; after the first Gospel the server answers *Laus tibi Christe*. Quarti (Rubr. Miss. Rom. Comment. illustr., 2, 12, ad 4) says, that the first Gospel signifies the preaching of Christ, wherefore we praise Christ by saying: *Laus tibi Christe*; the second Gospel signifies the preaching of the Apostles, wherefore only Deo Gratias is answered, but such interpretations are artificial and arbitrary; (d) in the Breviary the Deo Gratias is used more frequently; in Matins (except the last three days of Holy Week and the office of the Dead) after every lesson answering to the invocation: *Tu autem Domine miserere nobis*; also after the capitula, the short lesson in Prime and Compline; and in answer to the *Benedicamus Domino* at the close of every Hour. The Mozarabic Breviary puts the Deo Gratias after the title of the lesson, the Amen to the end.

II. The formula Deo Gratias was used in extra-liturgical prayers and customs by the Christians of all ages. The rule of St. Benedict prescribes that the doorkeeper shall say Deo Gratias, as often as a stranger knocks at the door or a beggar asks for assistance. When St. Augustine announced to the people the election of his coadjutor and successor Evodius, they called out Deo Gratias thirty-six times (St. Aug., Ep. cxxiii al. cx, De Actis Eracli). In Africa it was the salutation used by the Catholics to distinguish themselves from the Donatists who said: *Deo laudes* (St. Aug., In Ps. cxxxii). Therefore in Africa Deo Gratias occurs as a Catholic name, e. g. St. Deogratias, Bishop of Carthage (453-456). The name of the deacon for whom St. Augustine wrote his treatise "De catechizandis rudibus", was Deogratias. St. Felix of Cantalizio (1515-87) used this interjection so often, that the people called him Brother Deogratias.

Deposito Martirum. See MARTYRS.

Deposition, an ecclesiastical vindictive penalty by which a cleric is forever deprived of his office or benefice and of the right of exercising the functions of his orders. Of its own nature this punishment is perpetual and irremissible in the sense that those on whom it is inflicted, even after having done full penance, have no right to be released from it, though the superior may, if he wishes, reinstate them if truly amended. Deposition can be inflicted only on ecclesiastics, secular or regular; it may be either total or partial, according as it deprives them of all powers of orders and jurisdiction or of only a portion of them. It differs from simple privation because in addition to the deprivation of benefices and offices it disqualifies an ecclesiastic from obtaining them in future; from suspension because it is always a perpetual vindictive penalty, not a mere suspension of the use of the powers of orders and jurisdiction, but an entire and perpetual withdrawal of them; from actual degradation in as much as it never deprives of the privileges of the ecclesiastical state.

This punishment can be traced to the early centuries of the Church when ecclesiastics guilty of heinous crimes were expelled from their rank and removed to lay communion. Although preserving the character of their orders, they were then considered, for all purposes and in the eyes of the law, as ordinary laymen, and were bound to appear with the ordinary faithful when receiving Holy Communion. The word *deposition*, it is alleged, was first used in the Synod of Agde (506, can. xxxv) to indicate such a penalty. Down

to the twelfth century the expressions *deposition* and *degradation* meant one and the same canonical punishment. We know, for instance, that Paul, Patriarch of Alexandria (541), and Ignatius, Patriarch of Constantinople (861), met with the same kind of punishment; yet in the first case it is styled deposition and in the second degradation. Moreover, deposition always deprived ecclesiastics of the office they held by the ordinary title of ordination, and it was nearly always coupled with the ceremony of divesting delinquents of the garments used in the functions of their sacred ministry. In process of time, when, first by custom and subsequently by decree of Alexander III (c. At si clericis, IV, De judiciis), bishops were allowed to dispense from that penalty in crimes of lesser gravity than adultery, the solemn stripping of the sacred vestments was discontinued, to save the trouble of restoring their use in case of reinstatement. The new practice created uncertainty and variety in the execution of deposition, hence Boniface VIII (c. ii. De penis, in VI^o) at the request of the Bishop of Béziers decreed that the formal removal of vestments, which now means and effects total exclusion from the ecclesiastical state, was to take place only in cases of actual degradation.

As stated above, total deposition prohibits the exercise of powers conferred by ordination, and effects a complete and perpetual deprivation of ecclesiastical offices, benefices, and dignities. It also disqualifies from obtaining them in future, while public disgrace or infamy and irregularity are inflicted on those who disregard this punishment. The character impressed by ordination being indelible, deposition from orders can only deprive a person of the right of exercising them. Deposition from office always effects the loss of the benefice annexed to it, as benefices are given on account of the spiritual office. On the other hand, deposition from benefice never renders an ecclesiastic incapable of licitly exercising his ministry; it is maintained, however, that it deprives him even of the right to a share of the temporal emoluments for his decent support. According to the present discipline of the Church deposition is inflicted only for enormous crimes, such as cause public scandal and do great harm to religion or morals, e. g. murder, public concubinage, blasphemy, a sinful and incorrigible tenor of life, etc. It is largely left, however, to the prudent judgment of the superior to determine in each case the gravity of the crime which deserves this punishment. In fact, deposition is now rarely inflicted; simple dismissal, together with perpetual suspension, usually takes its place. (See LAY COMMUNION.)

Deprés, JOSQUIN (diminutive of Joseph), latinized JOSQUINUS PRATENSIS, b. probably c. 1450 at Condé, Hainaut, Belgium; d. there 27 August, 1521. He was the most gifted and most learned contrapuntist and composer before Palestrina and was the head of the Second Netherland School. At an early age he became choir boy in the collegiate church of Saint-Quentin in his native town. After his voice changed he studied counterpoint under Okeghem (1430-1494). In 1471 he was at the court of the Sforza in Milan and, in 1480, in the service of Lorenzo the Magnificent in Florence. From 1486 to 1494 (except the year 1487-1488, which he spent in Ferrara), Josquin was a member of the papal choir under Pope Innocent VIII. He then entered the service of King Louis XII of France. The opinion that, towards the end of his career, he was

identified with the musical personnel of the court of the Emperor Maximilian I lacks confirmation. Deprés dominated the musical world of his time, not only on account of his learning and skill but particularly because of his originality. His vivid conception of the meaning and dramatic possibilities of the sacred texts, as well as his great inventiveness, enabled Josquin to free himself more than any other composer before Palestrina from the conventions of his time. In consequence, most of the works of Deprés show the storm and stress of a transition period, in contrast to the productions of his successor, Palestrina, which breathe serenity and repose. Josquin's fame was overshadowed by Palestrina and his school, and the subsequent change in taste caused his works to be neglected and finally forgotten. The present age, however, is doing justice to those early masters in music who laid the foundation for that which is greatest in sacred polyphony. Josquin wrote thirty-two masses, seventeen of which were printed by Petrucci (1466-1539) in Fossombrone and Venice. Others were preserved in MS. in the archives of the papal choir in Rome and in the libraries of Munich, Vienna, Basle, Berlin, the Ratisbon cathedral, and Cambrai. Motets by Deprés were published by Petrucci, Pierre Attaignant (1533), Tylman Susato (1544), and by Le Roy and Ballard (1555). Numerous fragments and shorter works are reproduced in the historical works of Forkel, Burney, Hawkins, Busby, and in Choron's collection.

JOSEPH OTTEN.

De Profundis (Out of the depths), first words of Psalm cxxix. The author of this Psalm is unknown; it was composed probably during the Babylonian Exile, or perhaps for the day of penance prescribed by Esdras (I Esd., ix, 5-10). The hard school of suffering during the Exile had brought the people to the confession of their guilt and had kindled in their hearts faith and hope in the Redeemer and confidence in the mercy of God. The *De profundis* is one of the fifteen Gradual Psalms, which were sung by the Jewish pilgrims on their way to Jerusalem, and which are still contained in the Roman breviary. It is also one of the seven Penitential Psalms which, in the East and West, were already used as such by the early Christians. In the Divine Office the *De profundis* is sung every Wednesday at Vespers, also at the second Vespers of Christmas, the words *Apud Dominum misericordia et copiosa apud eum redemptio*, reminding us of the mercy of the Father Who sent His Son for the redemption of mankind. It is also used in the ferial prayers of Lauds and in the Office of the Dead at Vespers. The Church recites this psalm principally in her prayers for the dead; it is the psalm of the holy souls in purgatory, the words of the Psalmist applying well to the longing and sighing of the souls exiled from heaven. It is recited at funerals by the priest, before the corpse is taken out of the house to the church.

F. G. HOLLWECK.

Derbe, a titular see of Lycaonia, Asia Minor. This city was the fortress of a famous leader of banditti, when it was captured by Amyntas, the last King of Galatia (Strabo, XII, i, 4; vi, 3; Dio Cassius, XLIX, xxxii). In Roman times it struck its own coins. It was successfully evangelized by St. Paul and St. Barnabas (Acts, xiv, 6, 20, 21), and again visited by St. Paul (Acts, xvi, 1). Derbe became a suffragan see of Iconium; it is not mentioned by later "Notitiæ Episcopatum", and we know but four bishops, from 381 to 672 (Lequien, *Oriens Christ.*, I, 1081). The site of the city has not yet been surely identified; the discus-

sions are based on the above-mentioned texts of Strabo and Dio Cassius. It has been placed at Bin Bir Kilissé, at Divlé, south of Ak Göl (the White Lake), between Bossola and Zosta, and at Güdelissin in the vilayet of Konia, which seems more probable.

S. PÉTRIDÈS.

Dereser, ANTON (known as THADDAEUS a S. ADAMO), b. at Fahr in Franconia, 3 February, 1757; d. at Breslau, 15 or 16 June, 1827. He was a Discalced Carmelite, professed at Cologne 18 Oct., 1777. During his studies at Heidelberg, where he graduated, acquired such renown that contrary to the custom of the order he was allowed to accept a professorship in hermeneutics and oriental languages, first at his own alma mater, then at Bonn (1783-1791). In the last-named year he was sent to Strasburg where he also filled the posts of preacher and of rector at the episcopal seminary. Having refused the Constitutional oath he was imprisoned and sentenced to death, but the capital punishment was commuted into one of deportation. It is not quite clear whether this was put into execution; certain it is that with the fall of Robespierre he regained his liberty and returned with shattered health to the convent at Heidelberg (1796). The Margrave of Baden withholding his consent to Dereser's acceptance of the office of coadjutor to the Bishop of Strasburg, he was transferred with the whole university to Freiburg (1807), but having given offence by a funeral sermon (1810) had to leave suddenly for Constance. Thence he went to Lucerne as professor and rector of the seminary, but was expelled on account of his rationalistic teaching, and turned, on invitation, to Breslau as canon and professor (1815).

Dereser's combative character got him into trouble everywhere, and, though believing himself a good Catholic, he was imbued with a distinctly German-rationalistic, anti-Roman spirit, and with the shallow Rationalism of his time, explaining away everything supernatural in Scripture and religion. All his writings are thus tainted, though only one, and that without the name of the author, has been placed on the Index, "*Commentatio biblica in . . . Tu es Petrus*" (Bonn, 1789). His principal work, the continuation of Dominic de Brentano's German Bible (Frankfort, 1815-1828, 16 vols.) received permanent value only through the revision by J. M. A. Scholz (1828-1837, 17 vols.). Other works, chiefly Latin, were on the "Necessity of the Knowledge of Oriental Languages for the Study of Scripture" (Cologne, 1783); "Hermeneutics of the Old and New Testament" (1784 and 1786); Dissertations on the "Destruction of Sodom" (1784); on "St. John Baptist" (1785); on the "Power and Duties of the Pope according to St. Bernard" (1787); on a number of books and portions of the Old Testament, with translations (partly metrical) and annotations; on the "Temptation of Christ" (1789); on "His Divinity and on Pharisaism" (Strasburg, 1791); on the "Foundation of the University of Bonn" (1786); a "German Breviary" (Augsburg, 1793, several times reprinted) and a "German Prayer Book" (Rottenburg, 1808). He also edited A. Frenzels "Treatise on Matrimony" (Breslau, 1818), in which the indissolubility is denied; the author afterwards retracted it.

B. ZIMMERMAN.

Derogation (Lat. *derogatio*), the partial revocation of a law, as opposed to abrogation or the total abolition of a law. This definition of derogation first

introduced by the Roman juriconsult Modestinus (XVI, 102, De verb. significatione) was soon adopted in the canonical legislation. Even yet, however, derogation in a loose sense means also abrogation, hence the common saying: *Lex posterior derogat priori*, i.e. a subsequent law imports the abolition of a previous one. Dispensation differs from derogation principally in the fact that the latter affects the law itself which is thereby partially revoked, while the former affects the persons bound by the law, from whose obligation some of them are in particular cases totally or partially released. Derogation may be made either by written law or by custom. In the first instance legislative competency is alone required for its validity; in the second case there are requisite all conditions needed for the introduction of a custom. Again, derogation may be express or direct if made by explicit words; tacit or indirect if effected by a law partially incompatible with the existing one. When done without just motive and by the superior himself it is simply illicit; it is also invalid when done by his delegate. Derogation is often accomplished by special clauses inserted in papal documents, e. g. *Non obstantibus* etc. (see RESCRIPTS). The absence of such derogatory clauses as are always employed in papal rescripts makes them defective in form. The following rules are helpful for the interpretation of derogations: (1) Apart from special cases, derogations are to be strictly interpreted, any correction of the law being regularly of an "odious" nature. (2) A simple derogation, that imposes no obligation contrary to that of the existing law, does not require a formal promulgation. (3) No clause expressly derogatory of the existing law is requisite in making derogations from any kind of general ecclesiastical laws; exception is made only when it is proposed to derogate from the rules of the Apostolic Chancery. (4) Derogations couched in general terms are not upheld; they must be made in specific and formal terms. (5) The rule of law that a special enactment is derogatory of the previous general one (*Generi derogatur per speciem*; Reg. 34 in VI) means that a particular law which is a derogation of a general one must always produce its derogatory effect, it being immaterial whether it was issued before the general law or after it. In the latter case the special law is maintained as it was intentionally made by the competent superior; nor in the former instance does it lose its value, because the superior had no intention of abolishing it by a subsequent general law, it being a presumption that superiors are not cognizant of particular laws or customs (see CUSTOM; LAW).

S. LUZIO.

De Rossi, GIOVANNI BATTISTA, a distinguished Christian archaeologist, best known for his work in connexion with the Roman catacombs, b. at Rome, 23 February, 1822; d. at Castel Gandolfo on Lake Albano, 20 September, 1894. De Rossi, the modern founder of the science of Christian archaeology, was well-skilled in secular archaeology, a master of epigraphy, an authority on the ancient and medieval topography of Rome, an excellent historian, and a very productive and many-sided author. In addition to his professional acquaintance with archaeology De Rossi had a thorough knowledge of law, philology, and theology. He was the son of Commendatore Camillo Luigi De Rossi and Marianna Marchesa Bruti, his wife, who had two sons, Giovanni and Michele Stefano. Two days after birth Giovanni was baptized in the parish church of Santa Maria sopra Minerva and, according to Roman custom, was confirmed while still very young, by Cardinal Franzoni, Prefect of the Propaganda. Up to 1838 De Rossi attended the prepara-

tory department of the well-known Jesuit institution, the Collegio Romano, and through his entire course ranked as its foremost pupil. From 1838 to 1840 he studied philosophy there, and jurisprudence (1840-44) at the Roman University (Sapienza), where he was a disciple of the celebrated professors Villani and Capalti. At the close of his university studies he received, after a severe examination, the degree of *doctor utriusque juris ad honorem*.

De Rossi showed so strong an interest in Christian antiquity that on his eleventh birthday his father wished to give him the great work of Antonio Bosio, "La Roma Sotterranea". In 1843, before he received the doctor's degree, he matured a plan for a systematic and critical collection of all Christian inscriptions. In 1841, notwithstanding the protests of his anxious father, he visited, for the first time, under the guidance of the Jesuit Father Marchi, one of the then much neglected catacombs. After this De Rossi and Marchi pursued their archaeological studies together, so that they were known as "the inseparable friends", though the difference in years was great. As soon as he had finished his studies De Rossi was appointed *scriptor* at the Vatican Library and bore this modest but honourable title, in which he took especial pride, all his life. Great credit is due him for his careful cataloguing of hundreds of Vatican manuscripts. The free use of the treasures of the Vatican Library and archives was a rich source of development for his intellectual powers, especially in the sense of breadth and catholicity of interest. His official duties were not heavy, and he was able to carry on his private studies without hindrance. In 1838, in company with his parents, he went on his first journey and visited Tuscany, where the innumerable treasures of art completely absorbed his attention. During the summers of 1844-50 he visited the territory of the ancient Hernici in Latium and also Naples; in this way the knowledge he attained of the period of the Roman Republic was not purely theoretical. In 1853 he travelled for the first time by himself and went again to Tuscany, also to the Romagna, Lombardy, and Venice. In 1856 he visited Liguria, Piedmont, Switzerland, France, and Belgium; in 1858 he went again to Piedmont, visited the western part of Switzerland, and the district of the Rhine as far as Cologne; from Cologne he went by way of Aachen, Trier, and Frankfurt to Bavaria and Austria, and back to Rome by way of Venice and the Romagna. On a second trip to France in 1862 he visited the northern part of that country, and after going for a short time to London returned by way of Paris and Switzerland to Rome. In 1864 he went to Naples for a second time, and in 1865 was in France for the third time, visiting particularly the southern French cities. In 1868 he was again in France, and in 1869 and 1870 he went to Tuscany and Umbria; in 1872-75 he explored the vicinity of Rome; in 1876 and 1879 he investigated the treasures of Naples and the surrounding country, and in 1878 he made a trip again to Venice and Lombardy.

These journeys of De Rossi are of much importance for the proper appreciation of his scientific labours. Such long and fatiguing expeditions were undertaken solely in order to inspect museums, libraries, galleries, archives, and other institutions of learning and art, to form personal relations with the scholars of the countries visited, and to increase the range of his mental outlook, always fixed on a subject as a whole. De Rossi's extraordinary knowledge of the most obscure monuments of the civilized countries of Europe, and his thorough familiarity with manuscript sources, made it possible for him, as undisputed leader and master, to guide the science of Christian archaeology, not unjustly called his science, during several decades, into new paths. These journeys help to explain De Rossi's remarkable literary productiveness, especially when considered in connexion with his

minute investigation of all the monuments, both on the surface and underground, of the city of Rome and the Roman Campagna. These investigations covered the ancient pagan life of Rome, the early Christian period, also the Middle Ages.

De Rossi's personal relations with the leading scholars of Italy and other countries began in his early youth. When he was fourteen the famous Cardinal Mai, Librarian of the Holy Roman Church, found him copying Greek inscriptions in the inscription gallery of the Vatican and became greatly interested in the lad; the acquaintance later ripened into a warm friendship. In 1847 began his connexion as a scholar with the famous epigraphist, Bartolommeo Borghesi of San Marino; at a later date Borghesi's works were issued at the expense of Napoleon III under De Rossi's direction. A few years after forming the acquaintance of Borghesi a correspondence was begun between De Rossi and the Benedictine Dom Pitra, of Solesmes, later Cardinal, and Librarian of the Holy Roman Church, which ended in a warm friendship with Pitra. This, however, led to an estrangement between Leo XIII and De Rossi. Father Bruzza, the learned Barnabite, was also an intimate friend of De Rossi. Wilhelm Henzen, long director of the German archaeological institute at Rome, lived in friendship and daily communication with De Rossi for forty years. When the Berlin Academy of Sciences, urged by Theodor Mommsen, undertook its monumental publication, the "Corpus Inscriptionum Latinarum", it sent a flattering letter to De Rossi to request his co-operation. This led to an intimate friendship with Mommsen. The latter's numerous collaborators on the "Corpus", among them Edwin Bormann, the noted authority on epigraphy, found De Rossi ever ready to assist and guide them. Martigny, the editor of the French edition of the "Bullettino" (see below), as well as Paul Allard, editor of the French edition of "Roma Sotterranea", and Desbassyns de Richemont, were all closely united to De Rossi by the interests of their common work. To these must be added Louis Duchesne, the brilliant director of the Ecole de Rome, and collaborator with De Rossi on the recent edition (1894) of the "Martyrologium Hieronymianum". Léopold Delisle, the celebrated savant, palæographer, and historian, for many years the head of the Bibliothèque Nationale at Paris, was a man of the same learned tastes as De Rossi; their meeting led to a very active scientific correspondence, and later to a strong attachment, based on their scholarly interests. When, about 1850, Edouard Le Blant formed the acquaintance of De Rossi, he was totally ignorant of archaeology, but an accidental remark of De Rossi led him to take up this science; eventually he became a distinguished archæologist and the director of the Ecole de Rome.

Among German Catholics De Rossi's closest friendship as a scholar was with Franz Xaver Kraus. The cool reception he had from Döllinger, whom he once met at Munich, prevented the forming of any lasting relations. From 1884 Joseph Wilpert came into closer relations with De Rossi, who, up to his death, gave this scholar all possible aid and showed the younger man the greatest friendship. The same may be said of Johann Peter Kirsch, archæologist, patrologist, and historian. De Rossi also encouraged the labours of Anton de Waal, the founder and editor of the "Römische Quartalschrift", and was a helpful friend to numerous other German scholars. For many years De Rossi's relations were especially intimate with Giuseppe Gatti, his assistant in various kinds of learned work. Gatti's fine scholarship enabled De Rossi to carry on daily confidential discussions of learned questions which, after the death of Henzen, had apparently come to an end. Gatti continues De Rossi's labours in the province of ancient inscriptions. Henry Stevenson, who died too soon,

Mariano Armellini, an enthusiast in archæology, Luigi Scagliosi, the numismatist, Orazio Marucchi, a popularizer of Christian archæology, Cosimo Stornaiolo, the "Grecian", besides many other Italians, among whom Gennaro Aspreno Galante of Naples deserves to be named, found in De Rossi a fatherly friend and counsellor. Among his English disciples and friends were especially J. Spencer Northcote and W. R. Brownlow who made known to the English-speaking world the results of De Rossi's scholarly investigations and publications. For years Northcote and Brownlow, and Lewis at Oxford, were in constant correspondence with De Rossi.

Stress is thus laid on the important personal acquaintance and friendships of De Rossi, in order to emphasize with what skill he stimulated interest in Christian archæology in all directions. Equally important, perhaps, were the relations established by him in the years 1850-70 during which he conducted many strangers, often of high rank, through the catacombs, or acted as their guide among the monumental ruins of Rome. The friendships thus made often secured for him the loan of monuments and documents which otherwise would never have been sent, even temporarily, to a foreign country, but which were brought to him at Rome by the diplomatic couriers of all countries, not excepting Russia, thus giving him opportunity to examine these objects at his leisure. The immediate superiors of De Rossi in the Vatican Archives treated him always as a friend and an equal, and allowed him entire freedom in all his studies. Pius IX honoured him with a fatherly affection, striking evidence of which was given on more than one occasion. Though the science of Christian archæology was rather foreign to the mental temper of Leo XIII that pope often showed that, on the proper occasion, he could do justice to De Rossi's great reputation. In Rome De Rossi was exceedingly popular; nearly all the educated citizens, as well as the foreign residents, knew and honoured him. Without some knowledge of these facts De Rossi's learned labours and extraordinary success would be only superficially understood.

By his peculiar training, therefore, De Rossi was well fitted to understand sympathetically the early Christian literature, as well as the rise and development of the Roman State as shown in the monuments it has left. In regard to the Roman State, he never held the somewhat mechanical and no longer undisputed theory of Mommsen. He penetrated also with marvellous insight the growth of the primitive Christian hierarchy. Amid his books and papers De Rossi pondered over the ruins of the temples and palaces of antiquity; reviewed his own subterranean explorations; followed the early Christians in their thoughts, wishes, hopes, and ideals; contemplated the triumph of the Church, liberated by Constantine the Great and entering triumphantly the basilicas; and gathered from yellowed manuscripts the traditions that a learned

multitude of pious and painstaking monks had written concerning the Christian past, and in addition the accounts they have left us of their own times. In this way De Rossi was soon universally acknowledged, even in his lifetime, as the prince of Christian archæologists.

Owing to his extraordinary literary productivity, which was the natural result of the conditions outlined above, a distinction must be drawn between his minor and his greater works. The list of his minor writings (monographs) begins in 1849 with the memoir: "Iscrizione onoraria di Nicomaco Flaviano", which appeared in the "Annali dell' Istituto di corrispondenza archeologica" (pp. 283-363). These archaeological and ecclesiastico-historical papers number 203, not including the so-called literary letters in which De Rossi answered the questions addressed

him by various scholars. Most of these letters were given publicity in books or periodicals by those to whom they were sent. Nor does this total include an almost countless series of Latin inscriptions, expressions of literary homage, congratulatory epigrams, etc. Most of the monographs, often quite lengthy, appeared in "Bullettino dell' Istituto di corrispondenza archeologica"; "Bullettino archeologico Napolitano"; "Revue archéologique"; "Bullettino della commissione archeologica comunale di Roma"; "Bibliothèque de l'école des chartes"; "Ephemeris epigraphica"; "Studi e documenti di storia e diritto"; "Dissertazioni dell' accademia romana pontificia di archeologia"; "Mélanges d'archéologie et d'histoire de l'école française de Rome"; "Römische Quartalschrift", and in other Italian and foreign periodicals and reviews. A few of

GIOVANNI BATTISTA DE ROSSI

these papers appeared as separate volumes or as learned tributes on anniversary occasions. They vary in length from one to one hundred and thirty-two printed pages.

The titles of his larger and monumental works are as follows: (1) "Inscriptiones christianæ Urbis Romæ septimo sæculo antiquiores" (vol. I, Rome, 1861; part I of vol. II, Rome, 1888); Giuseppe Gatti is completing this work (cf. "Archivio della R. Società Romana di storia patria", 1887, 696 sqq.; also the same society's "Conferenze pel corso di metodologia della storia", part III, Rome, 1888). (2) "La Roma Sotterranea Cristiana" (vol. I with an atlas of forty plates, Rome, 1864; vol. II with an atlas of sixty-two and A, B, C, D plates, Rome, 1867; vol. III with an atlas of fifty-two plates, Rome, 1877). The plates for the fourth volume were already printed in part when De Rossi died (see "Bullettino di archeologia cristiana", 1864, I, 1864, 63-64; 1867, II, 89-90; 1876, III, 155-57). (3) "Bullettino di archeologia cristiana"; the first series, in quarto, appeared in monthly numbers (1863-69), with illustrations in the text and coloured plates; it consisted of one hundred and twenty-six monographs and communications. The second series, in octavo, appeared quarterly (1870-75), with twelve lithographic plates in each volume, and contained al-

together fifty-three papers. The third series, also in octavo, appeared (1876-81), in quarterly numbers, each volume having twelve lithographic plates; the papers numbered altogether fifty-one. The fourth series, in octavo, appeared in yearly volumes (1882-89), each volume having twelve lithographic plates; the six volumes contain altogether forty-three papers. The fifth series, in octavo, appeared annually (1889-94), with zincotype plates and illustrations in the text; the last number was issued in 1894 by Giuseppe Gatti. The final volume of each series contained a full index which De Rossi prepared with the greatest care. (4) "Musaici delle chiese di Roma anteriori al secolo XV" (Rome, 1872), an imperial folio consisting of chromolithographic plates with a text in French and Italian. The work closed with the twenty-fifth number, issued after De Rossi's death. (5) "Codicum latinorum bibliothecæ Vaticanæ", vol. X, Pt. I, Nos. 7245-8066, Pt. II, Nos. 8067-8471; vol. XI, Nos. 8472-9019; vol. XII, Nos. 9020-9445; vol. XIII, Nos. 9446-9849. The indexes to vols. XI, XII, XIII, "Codicum lat. Vat." are: Pt. I, index of authors; Pt. II, index of places, things, and persons. These manuscript indexes are used as reference books in the Vatican Library. (6) "Inscriptiones Urbis Romæ latinæ. Collegerunt Gulielmus Henzen et Johannes Baptistæ de Rossi. Ediderunt Eugenius Bormann et Gulielmus Henzen" (Berlin, 1876-). This constitutes the sixth volume of the "Corpus Inscriptionum Latinarum consilio et auctoritate academici litterarum regie Borussiae editum" (Berlin). The invitation to De Rossi to act as one of the leading editors was given 22 January, 1854. (7) The five annual reports (1854-58), concerning the preparatory work for the above-mentioned "Corpus Inscriptionum", which appeared in the monthly bulletins of the Royal Academy of Science of Berlin. The other annual reports have not been published; this is also the case with De Rossi's synopses of the epigraphical manuscripts in the libraries of Italy, France, Germany, Switzerland, and Austria. The last named summaries are of the greatest importance. (8) "Œuvres complètes de Bartolommeo Borghesi" (9 vols., Paris, 1862-84). Napoleon III entrusted the task of collecting and editing the works and letters of the celebrated Borghesi to a committee of French, German, and Italian scholars, among whom De Rossi may be said to have been the most important and assiduous. (9) "Martyrologium Hieronymianum", prepared and edited in collaboration with Louis Duchesne in vol. I, November, of the Acta SS. (Brussels, 1894). This edition is a masterpiece and most of the objections raised against it by German scholars are of little importance.

The works briefly described above give some conception of the learned labours De Rossi carried on during his life. They are proofs of the genius with which he grasped a subject, of his extraordinary industry, his learned mastery of the most varied subjects, and the unwavering determination with which he unearthed obscure points; they also show the triumphs with which his toils were so richly crowned. The estimation in which his work was held is proved by the two international celebrations in 1882 and 1892 upon his sixtieth and seventieth birthdays.

De Rossi's father died in 1850, and his mother in 1861. In the latter year he married Costanza, daughter of Count Pietro Bruno di San Giorgio Tornafort of Piedmont, by whom he had two daughters; Marianna, the elder, died in 1864. The second, Natalia, born in 1866, married the Marchese Filippo Ferraioli. De Rossi's brother Michele Stefano was his zealous assistant in the exploration of the catacombs; the geological questions connected with these subterranean places of burial and all kindred subjects are treated by Michele in separate papers in "Roma Sotterranea". He also prepared the very accurate plans of the catacombs. De Rossi was a portly man of fine

appearance, somewhat over the middle height. The full, well-proportioned face was surrounded by a grayish beard which left the chin free. The clear, calm eyes lost much of their strength, so that he could not always supervise properly the work of his painters and draughtsmen in the catacombs. This explains the numerous inaccurate illustrations in his works which Wilpert has corrected. The smoothly brushed hair gave greater prominence to the high domed forehead. In walking De Rossi bent slightly forward, which mannerism gave to his gait an appearance of much deliberateness. On the street he was generally busy with a book or pamphlet. De Rossi heard Mass every day and went to Communion nearly every week. Generous, unobtrusive charity was a second nature with him. Every evening he gathered all the members of his household about him for the recitation of the rosary. Although he very often received tempting offers to desert the cause of the Holy See and join the party of United Italy, he rejected all such proposals, even when they came from the highest authorities. On this point he was absolutely immovable. A few months after the international celebration of his seventieth birthday in 1892, De Rossi had an attack of apoplexy from which he never entirely recovered. Unable after this to use his right hand he continued to write with the left for the "Bullettino" and in making the corrections to the "Martyrologium". But his days were numbered. In the summer of 1894 Leo XIII offered him the use of an apartment in the papal palace at Castel Gandolfo, where he peacefully passed away, a true son of the Church. He was buried in the Agro Verano (general cemetery) at Rome.

BAUMGARTEN, Giovanni Battista De Rossi, jubilee monograph (Cologne, 1892), enlarged Ital. trans. by BONAVENIA (Rome, 1892); MARUCCHI, Giovanni Battista De Rossi: *Cenni biografici* (Rome, 1903); *Konversationslex.* (St. Louis, Missouri, 1905), II, 1163; KRAUS, *Essays* (Stuttgart, 1896), I; BAUMGARTEN, *Nekrolog*, in *Kölnische Volkszeitung* (No. 639, 28 Oct., 1894); CAPPELLATO, *Necrologia* in the *Atti della Pontificia Accademia Romana di Archeologia*, printed in supplement to No. 273 of the *Osservatore Romano* (29 Nov., 1894); SHAHAN, *John Baptist De Rossi in Am. Cath. Quart. Review* (Philadelphia, 1895); cf. *Dissertationi della Pont. Accad. Romana di Archeol.* (Rome, 1895), Ser. II, Vol. VI, Fasc. iv, 1-25; GROSSI-GONDI AND ANGELINI, *A Giovanni Battista De Rossi*, address at the dedication of the cenotaph in the parish church of Castel Gandolfo, 17 Oct., 1897, in *La Settimana Religiosa* (Rome, 1897). Information concerning his writings and the festival celebrations of 1882 and 1892 are contained in: *Albo dei sottoscrittori per la medaglia d'oro in onore del Commendatore Gio. Batt. De Rossi e relazione della solennità nel presentarla in Laterano il 11 Dicembre 1882* (Rome, 1882); *Albo dei sottoscrittori per il busto marmoreo del Comm. G. B. De Rossi e relazione dell'inaugurazione fattane nel dì 30 e 31 Aprile 1892 sopra il cimitero di Callisto per festeggiare il settantesimo anno del principe della sacra archeologia* (Rome, 1892). The two last-named publications printed privately give the best account of De Rossi's literary work, and of his important position in the international world of letters. COZZA-LUZI, *La dedica del busto di Giovanni Battista De Rossi nella Pont. Accademia Rom. di Archeologia il 18 Nov., 1897*, in *Dissertationi della Pont. Acc.* (Rome, 1897), Ser. II, Vol. VI. De Rossi's library came, by inheritance, to the family of his brother which eventually offered it for sale; the first catalogue of it was: *Ricca biblioteca appartenuta al Comm. G. B. De Rossi* (Rome, 1899); Bär (a second-hand bookseller) of Frankfurt bought it and issued a scientifically arranged catalogue. Accounts of De Rossi are to be found in all general encyclopedias; the writers of the obituaries which appeared after his death were seldom versed in Christian archaeology.

PAUL MARIA BAUMGARTEN.

Derry (DERIA), DIOCESE OF (DERRIENSIS), includes nearly all the County Derry, part of Donegal, and a large portion of Tyrone, Ireland; it is a suffragan of Armagh. The diocese owes its origin to the monastic establishment founded there by St. Columba between 546 and 562. But there does not seem to have been a bishop resident at Derry before Gervase O'Cervallen (c. 1230). The entry in the "Annals" by which O'Brolchain is represented as Bishop of Derry is due to a mistranslation. He was merely the superior of the Columban monastic houses, and was accorded the honour of a seat in the assembly of the bishops. The present Diocese of Derry was formed by a union of the old Sees of Rathlure and Ardstraw founded by St. Eu-

gene, at what time cannot be accurately determined, and it was fully defined about the middle of the thirteenth century. The ancient monastery of Derry was one of the most important in Ireland, and eventually the chief house of the Columban monks. Gilla Mac-Leag (Gelasius) who succeeded St. Malachy as Archbishop of Armagh (1136) had been abbot of the monastery.

After the formation of the diocese in the thirteenth century the succession of bishops was uninterrupted till the Reformation period. Redmond O'Gallagher, appointed bishop in 1569, was one of the leading ecclesiastics in the province of Armagh at that period. He was appointed Administrator of Armagh during the absence of the primate in 1575, and according to a State paper (1592) he seems to have been the most active upholder of the Catholic Church in Ulster. He was killed by a body of soldiers in 1601. From 1601 till

THE CATHEDRAL, DERRY

1683 the Diocese of Derry was administered by vicars. From the appointment of Bernard O'Cahan in 1683, the line of bishops in Derry has been continued without interruption.

The population of Derry according to the census of 1901 was 222,505, 127,387 of whom were Catholics. It is divided into thirty-nine parishes, two of these being mensal parishes; the remainder are held by parish priests. The number of priests in the diocese is about 108. There is no chapter (1908), nor is there any house of the regular clergy in the diocese. The seat of the bishop is in the city of Derry where are also situated the new cathedral and St. Columb's College which serves at the same time the purpose of a seminary and a general intermediate school, and is one of the most successful educational establishments in Ireland. There is also a flourishing intermediate school at Omagh conducted by the Irish Christian Brothers. The Sisters of Mercy have convents in Derry, Moville, Strabane, and Carndonagh; the Loretto Community have a house at Omagh, while the Sisters of Nazareth conduct a home for the aged of both sexes and one for children in Derry. The primary schools are conducted according to the rules of the Board of National Education, while the Model Schools in Derry

have been completely boycotted by the Catholic population.

Derry, SCHOOL OF.—This was the first foundation of St. Columba, the great Apostle of Scotland, and one of the three patron saints of Ireland. When a terrible plague, known as the *Buidhe Connail* or the Yellow Plague, dispersed the monks of the monastery of Glasnevin in the year 544, Columba instinctively turned his footsteps towards his native territory, and, full of the spirit of monasticism, bethought himself of founding his first monastery there, amongst his own kith and kin. An excellent site of 200 acres was offered to him by his princely cousin, Aedh, son of Ainmire, and the necessary permission of his master, St. Mobhi Clarainech, given with his dying breath, was immediately forthcoming. And so, a few miles from Ailech, "the stone-hill fortress of the Hy-Neill", and close beside a beautiful oak grove which gave the place its name—Doire Colgaigh, or the oak wood of Colgagh—Columba built his church and several cells for his first monks and disciples. This, according to the "Annals of Ulster", was in the year 545 (correctly, 546). Students both clerical and lay flocked hither from all sides attracted by the immediate fame of the new school, and the character of its founder. For several years Columba himself guided its destinies, and then, in pursuance of his apostolic vocation, he left to establish and govern the second of his great schools amid the oak woods of Durrow in the King's County. But whether in Derry or away from it, in Durrow or Kells, or in distant Iona, the saint's heart was ever with his first foundation, and often in the tenderest poetry he poured out his love for "My Derry, mine own little grove", with its "crowds of white angels from one end to the other".

For centuries after Columba's death the School of Derry continued to flourish, and in the twelfth century, it was said to be the most important of the Columban foundations in Ireland. To this period, the most glorious of its history, belong the names of several members of the illustrious family of Brolchain—saints, scholars, and builders—as well as that of the illustrious Gelasius, successor of St. Malachy in the primacy of Ireland. Like all similar institutions it suffered severely from the ravages of the Danes. It survived these, to disappear completely, however, in the general devastation of monasteries that took place in Ireland in the sixteenth century. (See COLUMBA, SAINT.)

Desains, PAUL-QUENTIN, physicist, b. at St-Quentin, France, 12 July, 1817; d. at Paris, 3 May, 1885. He made his literary studies at the Collège des Bons-Enfants in his native town and then entered the Lycée Louis-le-Grand in Paris. Here he distinguished himself, taking the first prize in physics. In 1835 he entered the science section of the Ecole Normale where his brother Edouard had preceded him. He made the acquaintance there of La Provostaye who was at the time a *surveillant* and who became his lifelong friend and his associate in his researches. After completing his course, he accepted a professorship in 1839 at Caen, and in 1841 returned to Paris where he received similar appointments, first at the Lycée St-Louis and later at the Lycée Condorcet, where he succeeded La Provostaye who was forced to retire on account of ill-health. His growing reputa-

tion won for him in 1853 the chair of physics at the Sorbonne which he held for thirty-two years. His lectures were characterized by great clearness and precision and many of his experimental illustrations were devised or improved by him.

Between 1858 and 1861 he made many observations in connexion with terrestrial magnetism. His most important contributions to physics, however, were his researches on radiant heat made in conjunction with La Provostaye. With rare experimental skill the two physicists proved that radiant heat, like light, is a disturbance set up in the ether and propagated in all directions by transverse waves. They showed in a series of "Mémoires" published in the "Annales de Chimie et de Physique" that it manifests the characteristic phenomena of reflection, refraction, and polarization, as well as of emission and absorption. They also made a study of the latent heat of fusion of ice, and a careful investigation of the range of applicability of the formula of Dulong and Petit representing the law of cooling. Of no less importance, however, was Desains' work in connexion with the establishment and development of laboratory instruction in physics. When the "Ecole pratique des hautes études" was founded in 1869 he was commissioned to organize the physical laboratory. He made it a model of its kind both in completeness and in convenience of detail. During the siege of Paris in 1870, he succeeded after many difficulties in establishing electrical communication with d'Almeida who was outside the lines. The exposure he underwent brought on a rheumatism which greatly weakened his constitution. Desains published a "Traité de Physique" (Paris, 1855) and numerous articles, chiefly with La Provostaye. Among them are: "Recherches sur la chaleur latente de fusion de la glace" (Ann. de chim. et de phys. [3], VIII, 5); "Notes et mémoires sur les lois du rayonnement de la chaleur" (ibid., XII, 129, XVI, 337, XXII, 358); "Mémoire sur la polarisation de la chaleur" (ibid., XXVII, 109, 232, XXVIII, 252, XXX, 159); "Mémoire sur les anneaux colorés" (ibid., XXVII, 423); "Mémoire sur la reflexion de la chaleur" (ibid., XXX, 276); "Mémoires sur la détermination du pouvoir absorbant des corps pour la chaleur rayonnante" (XXX, 431); etc.

TROOST in *Comptes-Rendus*, ix, 1259; MÉZIÈRES, *ibid.*

H. M. BROCK.

Desault, Pierre-Joseph, surgeon and anatomist, b. at Magny-Vernois a small town of Franche-Comté, France, in 1744; d. 1 June, 1795. His parents were poor and he received his education from the Jesuits. He began his studies for the priesthood but gave this up for the study of medicine. His means not permitting him to go to a regular school of medicine he became an assistant to the barber-surgeon of his native village and then took a similar post at the military hospital of Belfort. His favourite studies were anatomy and mathematics and he applied mathematical principles to his anatomical investigations. Borelli had done this with excellent results and Desault translated Borelli's "De Motu Animalium" with notes and illustrations. He was not yet twenty when he went to Paris where, in 1766, after two years, he opened a school of anatomy. So practical and thorough were his methods of teaching that he soon had three hundred students, many of them older than himself. In order to protect himself from professional jealousy, as he had no degree, he opened his school under the name of a man already privileged to teach but whose name is not now known. Teaching brought him reputation but not much profit, and when in 1776 he was admitted to the Academy of Surgeons, he was allowed to pay his fees by instalments. In 1782 he became chief surgeon to the Charity Hospital and not long after surgeon to the Hôtel-Dieu. He was now looked upon as the most prominent surgeon in Paris

and founded a school of clinical surgery which attracted students from all sides. In 1793 he was imprisoned by the revolutionary authorities but after three days was liberated through the influence of his patients. He died from pneumonia, the result of exposure while attending the Dauphin in the Temple. He wrote a treatise on surgical operations in three volumes; a treatise on fractures and luxations, edited by Xavier Bichat, was published after his death and was translated into English in 1805 going through three American editions. Desault's contributions to surgery are contained in the "Journal de Chirurgie" published by himself and pupils.

JAMES J. WALSH.

Descartes, René (RENATUS CARTESIUS), philosopher and scientist, b. at La Haye, France, 31 March, 1596; d. at Stockholm, Sweden, 11 Feb., 1650. He studied at the Jesuit college of La Flèche, one of the most famous schools of the time. In 1613 he went to Paris, where he formed a lasting friendship with Father Mersenne, O. F. M., and made the acquaintance of the mathematician Mydorge. He afterwards enlisted in the armies of Maurice of Nassau, and of the Duke of Bavaria. On 10 November, 1619, he felt a strong impulse to set aside the prejudices of his childhood and of his environment, and to devote his life to the restoration of human knowledge, which was then in a state of decadence; and for him this mission took on quite a mystical character. He had a dream which he interpreted as a revelation, and he became convinced that "it was the Spirit of Truth that willed to open for him all the treasures of knowledge". After much journeying in Brittany, Poitou, Switzerland, and Italy, he returned to Paris in 1625. There he remained for two years during which it was his fortune to meet Cardinal Bérulle who encouraged him in his scientific vocation. But as Paris offered neither the peace nor the independence his work demanded, he set out in 1629 for Holland, and there in the midst of a commercial people he enjoyed the advantage of living as quietly as in a desert. From this retreat he gave to the world his "Discours de la méthode" (1637), "Méditations" (1641), "Principes" (1644), and "Passions" (1649). "Le Monde" had been completed in 1633, but the condemnation of Galileo frightened Descartes who preferred to avoid all collision with ecclesiastical authority. He deferred the publication of this clever work without, however, losing hope of eventually bringing it out. In 1649, yielding to the entreaties of Queen Christina, he went to Sweden, and died at Stockholm of inflammation of the lungs.

Descartes' work is important rather because of its quality than of its quantity. Let us see first of all wherein his method is new. He observed, as Bacon had already done before him, that there is no question on which men agree. "There is nothing", he says, "so evident or so certain that it may not be controverted. Whence then this widespread and deep-rooted anarchy? From the fact that our inquiries are haphazard" (*Règles pour la direction de l'esprit*, 4^e Règle). The first problem, then, is to discover a scientific method. How is success in this difficult task to be assured? To begin with, we must cease to rely on authority; and for two principal reasons. "In whom can we trust?" when "there is hardly a statement made by one man, of which the opposite is not loudly supported by some other?" And even "if all were agreed, the knowledge of their teaching would not suffice us." "Had we by rote all the arguments of Plato and Aristotle, we should not be any the more philosophers unless we were able to bring to bear on any given question a solid judgment of our own. We should have indeed learned history but not mastered a science" (3^e Règle). Philosophy presupposes the

understanding of problems—and consequently its method cannot be external, it must be essentially immanent. The true method is to seek for reasonable evidence and the norm of such evidence is to be found in the science of mathematics (*Discours de la méthode*, 2^e partie). "It is not that arithmetic and geometry are the only sciences to be learned, but that he who would progress on the road to truth must not delay over any object about which he cannot have a certainty equal to that given by arithmetical and geometrical demonstrations" (2^e Règle).

Is everything, then, capable of being known in this way, and consequently can human knowledge become the complete counterpart of reality? Descartes says so over and over again; it is his controlling idea; and he endeavours to prove it both from the nature of our thought and from the universal connexion of things. The mind is equally intelligent however diverse the objects it considers; and those objects because of their perfect enchainment are always equally intelligible. There is, therefore, no question "so far removed from us as to be beyond our reach or so deeply hidden that we cannot discover it", provided only that we persevere and follow the right method (*Disc. de la méth.* 2^e partie; 4^e Règle). Such is the rationalism of Descartes, surpassing even that of Plato, in which under the name of "the Infinite" three-fourths of reality remains for ever unknowable.

How then is this mathematical evidence to be obtained. Two methods, dangerous at once and sterile, must be avoided. We cannot build on the experience of our senses; "for they are often deceptive", and consequently need a control which they have not in themselves. Bacon was misled on this point (2^e Règle). Neither can we adopt the syllogistic method; for this is not, as was formerly thought, a means of discovery. It is simply a process in which, two terms being given, we find by means of a third that the former two are linked together, i. e. that they have some common characteristic. Now if they have this common characteristic it is useless to search for it with any light other than their own. Let them pass under direct scrutiny; let their natures be studied, and in time the common trait will reveal itself. This is the mind's straight road to discovery, passing on from one idea to another without the aid of a third. The syllogism is of no use until the discovery has been made; it simply serves the purpose of exposition (14^e Règle). There are but two ways leading to mathematical evidence: intuition and deduction (3^e Règle). Intuition "is the conception formed by an attentive mind, so clear and distinct that it admits of no doubt: or, what amounts to the same thing, it is the clear conception of a sound and attentive mind, the product of unaided reason" (3^e Règle). Intuition is not, therefore, perception by the senses—it is an act of the understanding brought to bear on an idea. The senses do not supply the object but merely the occasion. A movement, for instance, awakens in us the idea of motion, and it is that idea we must regard as the object of intuition. In very simple matters intuition acts quickly; thus "everyone can know intuitively that he exists; that a triangle is terminated by three angles, neither more nor less, and that a globe has but one surface" (3^e Règle; 12^e Règle; *Rép. aux deux objections*). In the case of objects more or less complex, intuition proceeds by way of analysis. Since it deals with ideas, and ideas are but one aspect of thought, everything must be reduced to clear and distinct elements, to ultimate or "indecomposable" parts. These ultimate parts must be inspected one after another, until the object is exhausted, "by passing from those that are easily known to those that are less easily known" (6^e Règle). In the long run everything will be spread out in full light.

Deduction is the process in which by a continuous movement of thought we draw from a thing that we

certainly know the conclusions that of necessity flow from it. This procedure may be carried on in two ways. "If, for instance, after various calculations I discover the relation between the quantities A and B, between B and C, between C and D, and lastly between D and E, I do not yet know the relation between A and E"; but I can infer it by retracting the several steps of the series. This is the first form of deduction (7^e Règle). There is a second form in which, the connecting links of the series being too numerous to enter the mental field of vision all at once, we are content to draw conclusions from the general impression we have of the series (7^e Règle). Deduction is an intellectual process, but it differs from intuition by bringing in memory as a factor. And this is noteworthy in view of the important rôle that memory plays in the Cartesian explanation of certitude, and the desperate effort he makes to defend this procedure. From the conspicuous place that reason holds in the Cartesian method, one might infer that there was no room for experience. Nothing could be less true. For Descartes, as for Bacon, the one purpose of science is utility. He also expects from it a continual betterment of the conditions of human life, and his hopes in that direction go very far, as, for instance, when he says of medicine that in the end it would procure us the boon of immortality (*Disc. de la méth.* 6^e partie). And as he who wills the end wills the means also, Descartes accepts in its entirety the experimental part of the Baconian method (letter to Mersenne, 1631), and acts accordingly. He put himself in touch with all the experimental work of his day (letter, April, 1632), urged others to take up research (letter to Mersenne, 1632), and carried on experiments of his own that covered a wide range of subjects: the weight of air (letter, 2 June, 1631), the laws of sound and light (letter, 1633); the essential differences between oils, spirits, eaux-de-vie, common waters, aquafortis, and salts. He dissected the heads of various animals to show the workings of memory and imagination (cf. letters to Mersenne, 1633; April, 1637; 13 November, 1639; 4 January, 1643, ed. Cousin, Paris, 1826). There was hardly a fact that escaped this apologist of Reason nor anything into whose hidden nature he did not inquire; even the "Chasse de Pan" he followed with his accustomed ardour.

But if the mind, moving as it does in the realm of intelligible objects, have a power of intuition sufficient to master them all, why these researches? Are they not a hindrance rather than a help? Let deduction but go on to the end, and it must assuredly attain that exhaustive knowledge which is the goal of investigation, but such is not the case. Experiment helps reasoning in more ways than one. It supplies the fact that calls forth in our intelligence the idea of the problem to be solved. That idea once aroused, the intelligence takes hold of it, and may produce many others, according to the nature of which experience and reason play reciprocal, yet different, rôles. The idea of a problem may be so simple as to allow a mathematical deduction of the properties of the object in question, and nothing more. In this case experiment is called in only by way of illustration, as happens, for instance, in the study of the laws of motion. (Cf. *Principes*, 2^e partie.) But again the idea of a problem may be so complex as to suggest various hypotheses, since principles as a rule are so fruitful that we can draw from them more than we see in the world around us. We must then choose from among the hypotheses presented by the intellect that which corresponds most nearly to the facts: and experiment is our only resource. It acts as a sort of guide to rational deduction. It sets up, so to say, a number of sign-posts which point out, at the cross-roads of logic, the right direction to the world of facts. Finally, we may be confronted with two or more hypotheses

equally applicable to the known facts; observations must then be multiplied until we discover some peculiarity which determines our choice: and thus experiment becomes a real means of verification (Principes, 4^e partie). In every case experiment is, as it were, the matter, while calculation becomes the form. In the physical world there is nothing but motion and extension, nothing but quantity. Everything can be reduced to numerical proportions, and this reduction is the final object of science. To understand means to know in terms of mathematics. When this final stage is reached, intelligence and experience unite in closest bonds: the intellect setting its seal on experience and endowing it with intelligibility.

Such is the method of Descartes. There remains to be seen what use he makes of it. Recourse must be had to provisional doubt as the only means of distinguishing the true from the false in the labyrinth of contradictory opinions which are held in the schools and in the world at large. We must needs imitate those builders who, in order to erect a lofty structure, begin by digging deep, so that the foundations may be laid on the rock and solid ground (Remarques sur les 7^{es} objections, ed. Charpentier, Paris; cf. Disc. de la méthode, 3^e partie). And this provisional doubt goes very deep indeed. We may reject the evidence of the senses for they are deceptive, "and it is but the part of prudence never to trust absolutely what has once deceived us" (1^{re} Méditation). We may even question whether there be "any earth or sky or other extended body"; for, supposing that nothing of the sort exist, I can still have the impression of their existence as I had before; this is plain from the phenomena of madness and dreams. What is more, the very simplest and clearest truths are not free from suspicion. "How do I know that God has not so arranged it that I am deceived each time I add two and three together, or number the sides of a square, or form some judgment still more simple, if indeed anything more simple can be imagined" (3^e Méditation). What then remains intact? One thing only, the fact of my thought itself. But if I think it is because I exist, for from the one to the other of these terms we pass by simple inspection—*Cogito, ergo sum*: Behold the long-sought rock on which the edifice of knowledge must be built (Disc. de la méth., 4^e partie, 2^e Méd.). But how is this to be done? how are we to make our way out of the abyss into which we have descended? By analysing the basic fact, i. e. the content of our thought. I observe that, since my thought gropes amid doubt, I must be imperfect: and this idea calls forth this other, viz. of a being that is not imperfect, and therefore is perfect and infinite (Disc. de la méth., 4^e partie). Let us consider this other idea. It must necessarily include existence, otherwise something would be wanting to it; it would not be perfect or infinite. Therefore, God exists, and "I know no less clearly and distinctly that an actual and eternal existence belongs to His nature than I know that whatever I can demonstrate of any figure or number belongs truly to the nature of that figure or number" (Disc. de la méth., 4^e partie; 5^e Méd.; Rép. aux premières obj.).

God, therefore, is known to us at the outset, the moment we take the trouble to look into the nature of our own minds; and this is enough to eliminate the hypothesis of an evil genius that would take pleasure in deceiving us; it is enough also to secure the validity of all our deductions, whatever be their length, for "I recognize that it is impossible that He should ever deceive me, since in all fraud and deceit there is a certain imperfection" (4^e Méd.). Otherwise how would this idea of God be anything more than an idle fancy? It has immensity; it has infinity, and therefore it must of itself be capable of existing. Spinoza, and after him Hegel, will teach that the possible in-folds, as it were, an essential tendency to existence, and that this

tendency is greater in proportion as the possible is perfect. It is on this principle that they will build their vast synthetic systems. Descartes anticipates them and when closely pressed he replies just as do these later philosophers. (Rép. aux premières objections.) It is a fact worth noting with reference to the genesis of modern systems.

The presence in us of this idea of God must also be explained; and here we find a new ray of light. The objective reality of our ideas must have some cause, and this is readily found when there is question of secondary qualities; these may be illusory or they may result from the imperfection of our nature. The question also can be solved without too much difficulty when it concerns primary qualities. May not these arise perchance from some depth of my own mental being that is beyond the control of my will? But such explanations are of no avail when we try to account for the idea of a being infinite and perfect. I myself am limited, finite; and from the finite, turn it about as we may, we can never derive the infinite; the lesser never gives us the greater (3^e Méd. cf. Princ., 7^e partie). Considered from any and every point of view, the idea of God enlightens us as to His existence. Whatever the manner of our questioning, it gives us always from the depth of its fulness the one reply, *Ego sum qui sum*. Since then the veracity of God Himself guarantees our faculties in their natural exercise, we may go forward in our inquiry; and the first question that meets us concerns the subject in which the process of thought takes place, i. e. the soul. Understanding, conceiving, doubting, affirming, denying, willing, refusing, imagining, feeling, desiring—these are the activities of what I call my soul. Now all these activities have one common quality: they cannot take place without thought or perception, without consciousness or knowledge. Thought then is the essential attribute of the soul. The soul is "a thing that thinks" (2^e Méd.; Princ., 1^{re} partie), and it is nothing else. There is no substratum underlying and supporting its various states; its whole being issues in each of its activities; thought and soul are equivalent (12^e Règle).

Is thought, then, always in some mode of activity? Descartes leans to the belief that it is. "I exist", he says, "but for how long? Just as long as I am thinking; for perhaps if I should wholly cease to think, I should at the same time altogether cease to be" (2^e Méd.). It is only with reluctance and under the pressure of objections that he concedes to the soul a simple *potentia* or power of thinking (5^{es} Obj.); and, as may be easily seen, the concession is quite illogical. Thought, though in itself a unitary process, takes on different forms; it begins with confused ideas or perceptions which require the co-operation of the body; such are the feelings of pleasure and pain, sensations, imagination, and local memory. Then the soul has clear and distinct ideas, which it begets and develops within itself as immanent activities. Under this head come the ideas of substance, duration, number, order, extension, figure, motion, thought, intelligence, and will (6^e Méd.; Princ., I).

These clear and distinct notions constitute of themselves the object of the understanding, and one may say that they are all involved in the idea of perfect being. Whether I understand, or pass judgment, or reason, it is always that idea which I perceive; and my understanding could have no other object, seeing that its sphere of action is always the infinite, the eternal and the necessary. To advance in knowledge is to progress in the knowledge of God Himself. (Rép. aux 2^{es} obj.) But thought has another dominant form, viz. freedom. For Descartes this function of the mind is a fact "of which reason can never convince us", but one which "we experience in ourselves", and this fact is so evident "that it may be considered one of the most generally known ideas" (Rép.

aux 3^{es} obj.; Rép. aux 5^{es} obj.; Princ., 1^{re} partie). Not only is this freedom a primordial and undeniable datum of consciousness: it is, in a way, infinite like God, "since there is no object to which it cannot turn". (4^e Méd.; Princ., 1^{re} partie.) It does not creep round in a sort of semi-ignorance, as St. Thomas Aquinas holds, but it grows as the influencing motives become clearer; indifference is but its lowest stage (letter to Mersenne, 20 May, 1630). The part it plays in our lives is considerable: it enters into each of our judgments, and it is the formal cause of all our errors. It makes itself felt in every part of our organism, and through this it influences the external world. Nevertheless, the sum total of motion in the world is always constant; for while

our wills may change the direction of movement they do not affect its quantity. (Letter to Regius.)

Confronting the soul is the external world: but the soul does not see it as it really is. Heat, odour, taste, light, sound, resistance, weight are qualities which we attribute to bodies but which are really in ourselves, since we only conceive them in relation to ourselves. In reality there is nothing in the physical world but motion and extension. Motion imitates as far as possible the immutability of God who is its first cause; hence its principal laws, viz. that the sum of motion in the world is always constant; that a body will continue in its actual state unless disturbed by some other body outside itself; that "once a body is in motion we have no reason for thinking its present velocity will ever cease provided it impinges on no other body which would slacken or destroy its motion". All movement is

primarily rectilinear (on this point Aristotle was mistaken). When two bodies moving in different directions collide, a change takes place in their directions, but "such change is always the least possible". When two moving bodies impinge on each other, one cannot transmit any motion to the other without losing what it transmits (Princ., 2^e partie). Extension is not infinite in duration but it is infinite in space. "It seems to me that one cannot prove or even conceive that there are limits to the matter of which the world is composed, for I find it is composed of nothing but extension in length, breadth, and depth. So that whatever possesses these three dimensions is a portion of such matter": and however far back in imagination we push the limits of space we still find these three dimensions; they are bounded by no limits (letter to Chanut; letter to Marus). Extension is therefore one block, continuous from end to end; and this proves at the same time that there is no such thing as a vacuum, either in bodies or between them. Moreover, extension is divisible *ad infinitum*, since the divided particles, however small, are still extended. It is everywhere homogeneous, since it is made up of spatial dimensions only, and these of themselves give rise to no qualitative differences. And this brilliant idea suggested to Descartes many hypotheses that

were to prove fruitful. In his view the matter of the earth and of the stars was the same; and spectrum analysis subsequently proved that he was correct. He held that the primordial state of the sun and planets was nebulous, that under the influence of a cooling process the heavenly bodies formed their crusts, and to changes in these crusts is due the variation in brilliance of the stars and the emergence of the continents on our earth. (Cf. *Traité du Monde*; Princ., 3^e and 4^e p.) It does not follow that the world is self-sufficient; but the finality, of which so much is said, leads to nothing. God gave matter a first impulse and the rest followed in the course of nature's laws. "Even if the chaos of the poets be granted, one could always show that, thanks to the laws of nature, this

confusion would eventually work itself out to our present order"; the laws of nature being such that "matter is constrained to pass through all the forms of which it is capable".

The older Descartes grew, the more he busied himself with morals, and his aim was to end up with a treatise on ethics. As a matter of fact, we have his treatise on the passions, and a few brief disquisitions scattered among his letters to Chanut and to the Princess Elizabeth. The passions are perceptions generated and nurtured in the soul "through the medium of the nerves" (Passions, 1^{re} partie, art. 3-22). The nerves are bundles of fine threads: these threads contain the animal spirits which are the subtlest parts of the blood; and they all meet at the pineal gland which is the seat of the soul. By means of this mechanism the thinking subject receives impressions from the world without, perceives them, and trans-

forms them into passions (Pass., 1^{re} p., art. 31). And though our organism thus contains the cause of our passions, it is not their subject either entirely or partially; on this point also Aristotle was mistaken. There are perceptions arising from the body and localizing themselves in one or other portion of it—such as hunger, thirst, pain—but the passions are different. They originate in the body, but belong to the soul alone; they are purely psychological facts (Passions, 1^{re} p., art. 25). There are as many passions as there are ways in which objects capable of affecting our senses may be hurtful or profitable to us. The primary passions to which all others may be reduced are the six following: admiration or surprise, produced by an object as to which we are as yet ignorant whether it is useful or hurtful; love and hate, caused by the impression produced on our organs of sense by objects which are already known to us as beneficial or harmful; desire, which is but the love or the hate we bear an object considered as future; joy and sadness, which result from the presence of an object that is loved or hated (Passions, 2^e partie, art. 52). Perhaps on the whole St. Thomas and Bossuet will be found to have surpassed Descartes, by reducing all the passions to love. In the Cartesian teaching the passions are good in themselves, but they must be kept in subjection to the

RENÉ DESCARTES—FRANZ HALS

law of moral order. What this law is he does not clearly indicate; he gives only some scattered precepts in which one may discern a noble effort to build up a Stoico-Christian system of ethics.

The foregoing account may perhaps give the impression that Descartes was a great savant rather than a great philosopher; but the significance of his scientific work should be properly understood. What remains of value is not so much his theories, but the impetus given by his genius, his method, his discoveries. His quantitative conception of the world is being gradually abandoned, and to-day men's minds are turning to a philosophy of nature wherein quality plays a controlling part (Duhem, *L'évolution de la mécanique*, Paris, 1905, p. 197).

The principal editions of his collected works are: "Opera Omnia" (Amsterdam, 1670-1683 and 1692-1701); "Œuvres Complètes" (Paris, 1724); Victor Cousin's edition (Paris, 1824-1826); and the edition by Adam and Tannery (Paris, 1896). Among the English translations may be mentioned: "Method" and "Meditations", by Veitch (London, 1850-53, New York, 1899); "Meditations", by Lowndes (London, 1878); "Extracts", by Torrey (New York, 1892).

Of the earlier biographies the most important is that by BAILLET, *La Vie de M. Descartes* (Paris, 1891); cf. THOUVENET, in *Annales de Phil. Chrét.* (1899); briefer sketches with summaries of his philosophy are given in BOUILLIER, *Histoire de la philosophie cartésienne* (Paris, 1854; 3rd ed., 1868); FISCHER, *Gesch. d. neuern Phil.* (4th ed., Heidelberg, 1897, I); FOUILLÉE, *Descartes* (Paris, 1893). See also the following essays and monographs: RHODES, *A View of the Philosophy of Descartes*, in *Jour. of Spec. Phil.* (1884), XVII; MAHAFFY, *Descartes* (Edinburgh and London, 1880); GANGULA, *Descartes; an Outline of His Philosophy*, (Bombay, 1900); BALIN, *Meaning of Existence and Descartes' Cogito in Mind* (1877); GIBSON, *The Regula of Descartes* (Mind, 1898); BOWEN, *Descartes in North American Review*, LVI; *Discourse on Method in The Dublin Review*, XXXVIII, 169; *The Philosophy of Descartes in Brownson's Quarterly Review*, XXIII, 338; MERCIER, *La psychologie de Descartes in Rev. CLODIUS PIAT.

Descamps, EUSTACHE, also called MOREL on account of his dark complexion, b. at Vertus in Champagne between 1338 and 1340; d. about 1410. After having finished his classical studies at the episcopal school of Reims, under the poet Guillaume de Machault, who was a canon of Reims, he studied law at the University of Orléans. He then travelled for some time as the king's messenger in various parts of Europe, in Syria, Palestine, and Egypt; in the last country, it is said, he was made a slave. On his return to France he was appointed gentleman-usher by Charles V, and was confirmed in this position by Charles VI, whom he accompanied in that capacity on various campaigns in Flanders. In 1381 King Charles VI made him governor of the town of Fismes, and in 1388 bailiff of Senlis; at a later date he lost the position of bailiff, together with his pension and his office at court. Descamps was a poet of no little merit. His numerous poems, ballads, rondels, lays, and virelays are full of valuable information concerning the political and moral history of his time. He was an honest, religious man, and although a courtier was also a moralist who did not hesitate to condemn the injustice and wrongs that he had seen and experienced. His style is somewhat heavy, but it is vigorous and not lacking in grace.

SARRADIN, *Etude sur Eustache Descamps* (Paris, 1879); PETIT DE JULLEVILLE, *Histoire de la langue et de la littérature françaises* (Paris, 1894), II; DE QUEUX AND RAYNAUD, *Œuvres complètes d'Eustache Descamps* (Paris, 1878-1891).

LOUIS N. DELAMARRE.

Descamps, NICOLAS, polemical writer, born at Villefranche (Rhône), France, 1797; died at Aix-en-Provence, 1872. He entered the Society of Jesus in 1826; taught literature and rhetoric in several colleges and wrote extensively. Apart from a few didactic and devotional books like "Cours élémentaire de littérature" (Avignon, 1860) and "Les fleurs de Marie" (Paris, 1863), his works are largely polemical and bear on all the burning questions of his day, the monopoly of the University of France, the state faculties of theology, the Organic Articles, the liberty of association, Communism, Paganism in education, etc. The most important is undoubtedly "Les Sociétés secrètes" published after the author's death (Avignon, 1874-1876), re-edited and brought up to date by Claudio Janet (Paris, 1880 and 1881). Descamps sees in European Freemasonry, whose origin he traces back to Manichæism, a baneful force working, under the cover of philanthropy, not only against religion but also against the social order, patriotism and even morality. If his conclusions are severe, they are not advanced at random but are supported by numerous facts and grave authorities.

J. F. SOLLIER.

Desecration, the loss of that peculiar quality of sacredness, which inheres in places and things in virtue of the constitutive blessing of the Church. When material objects are destined for purposes of Divine worship they are set aside with a view to this end by the solemn form of consecration or by the simpler formula of a blessing, so that they assume a sacred and inviolable character which renders unlawful their employment for profane uses. Now when they lose this stamp or character of sacredness they are said to become desecrated. As a general principle it may be set down that places and things, which have been either consecrated or blessed, retain their consecration and blessing so long as they remain, morally speaking, the same as they were in the beginning, and consequently, so long as they continue fit to serve the purposes for which they were originally destined. The opinion was formerly held by some that sacred utensils, such as chalices, which are anointed with holy oil should, before being sent to a mechanic for repairs, be deprived of their sacred character by a special ceremony of desecration. This view was condemned by the Congregation of Rites (n. 2620, ed. 1900). Such a ceremony is entirely superfluous. For if a sacred utensil becomes broken and unfit for use it thereby loses its consecration; while if it is still fit for use but requires regilding, no ceremony could desecrate it. In this instance permission, express or implied, should be obtained from the ordinary to hand it over to a mechanic for repairs (cf. Gardellini, *Commentary on Decrees of C. S. R.*, 225). Should consecrated vessels become altogether unfit for altar use, they may be melted down and devoted to profane uses. But vestments, altar cloths and linens must, in similar circumstances, be destroyed, because they retain the form under which they were originally blessed (cf. Gardellini, loc. cit.).

The word desecration is commonly used in regard to churches, altars, chalices, etc. (1) A church loses its consecration or blessing when the building is destroyed either wholly or in greater part, or when an addition is made to it of larger extent than the original edifice. It does not become desecrated: (a) if a portion of the walls and roof falls in, provided the main

portion stands, or (b) if all the interior plastering becomes detached, or (c) if all the crosses disappear, or (d) if all the walls are gradually renewed, provided on each occasion the old part is greater than the new, or (e) if converted for a while to profane uses, provided it is not polluted (cf. Many, *De Locis Sacris*). (2) An altar (fixed) loses its consecration: (a) by a notable fracture of table or its support; as, for instance, if the table were broken into two large pieces, or if an anointed corner were broken off, or if the support were seriously impaired, or if one of the columns were displaced; (b) by removal of the table from its support, so as to disjoin them; (c) by displacing the relics, or cover of the sepulchre (cf. Schulte, *Consecranda*, p. 222). (3) An altar-stone loses its consecration: (a) by removal of the relics; (b) by fracture or removal of the cover of the sepulchre; (c) by a notable fracture of the stone; (d) by breakage of the anointed corner of stone. (4) As to the chalice and paten, see ALTAR, under subtitle *Loss of Consecration*.

Decretalium, III, Tit., xl, xlviii; WERNZ, *Jus Decretalium* (Rome, 1901), Tit., xvii; MANY, *De Locis Sacris* (Paris, 1904); SCHULTE, *Consecranda* (New York, 1907).

PATRICK MORRISROE.

Desert (IN THE BIBLE).—The Hebrew words translated in the Douay Version of the Bible by "desert" or "wilderness", and usually rendered by the Vulgate *desertum*, "solitude", or occasionally *eremus*, have not the same shade of meaning as the English word *desert*. The word *wilderness*, which is more frequently used than *desert* of the region of the Exodus, more nearly approaches the meaning of the Hebrew, though not quite expressing it. When we speak of the desert our thoughts are naturally borne to such places as the Sahara, a great sandy waste, incapable of vegetation, impossible as a dwelling-place for men, and where no human being is found except when hurrying through as quickly as he can. No such ideas are attached to the Hebrew words for desert. Four words are chiefly used in Hebrew to express the idea: (1) מִדְבָּר (*midbār*), the more general word. It is from the root דָּבַר [*dābār*, "to lead" (cattle to pasture); cf. German *Triß* from *treiben*]. Hence *midbār* among its other meanings has that of tracts of pasturage for flocks. So Joel, ii, 22: "The beautiful places of the wilderness are sprung", or literally: "The pastures of the wilderness shoot forth". So, too, the desert was not necessarily uninhabited. Thus (Is., xlii, 11) we read: "Let the desert (*midbār*) and the cities thereof be exalted: Cedar shall dwell in houses", or rather, "the villages that Cedar doth inhabit". Not that there were towns in the desert occupied by a stable population. The inhabitants were mostly nomads. For the desert was not a place regularly cultivated like the fields and gardens of ordinary civilized districts. Rather, it was a region in which was to be found pasturage, not rich, but sufficient for sheep and goats, and more abundant after the rainy season. The desert, too, was looked upon as the abode of wild beasts—lions (Ecclus., xii, 23), wild asses (Job, xxiv, 5), jackals (Mal., i, 3), etc. It was not fertilized by streams of water, but springs were to be found there (Gen., xvi, 7), and in places cisterns to collect the rainfall. *Midbār* is the word generally used in the Pentateuch for the desert of the Exodus; but of the regions of the Exodus various districts are distinguished as the desert of Sin (Ex., xvi, 1), the desert of Sinai (Ex., xix, 1), the desert of Sur (Ex., xv, 22), the desert of Sin (*zin*) (Num., xiii, 22), etc. Moreover, it is used of other districts, as in Western Palestine of the wilderness of Juda (Judges, i, 16), and again in the east of the desert of Moab (Deut., ii, 8).

(2) עֲרֵב (*arābāh*), derived from the root עָרַב, "arāb", "to be arid", is another word for desert, which seems to express more than one of its natural characteristics. The word means a steppe, a desert plain; and it conveys the idea of a stretch of country, arid,

unproductive, and desolate. In poetic passages it is used in parallelism with the word *midbār*. Thus Is., xxxv, 1: "The land that was desolate (*midbār*) and impassable shall be glad, and the wilderness (*arābāh*) shall rejoice"; cf. also Jer., xvii, 6, etc. Although the Septuagint frequently renders the word by ἔρημος, it often uses other translations, as γῆ ὁψώσα and ἔλος. The Vulgate employs the words *solitudo*, *desertum*. Very frequently the word *arābāh* has a mere geographical sense. Thus it refers to the strange depression extending from the base of Mount Hermon, through the Jordan Valley and the Dead Sea, to the Gulf of Akabah. So, too, there are the Arboth Moab (Num., xxii, 1), the Arboth Jericho (Jos., iv, 13), etc., referring to the desolate districts connected with these places.

(3) הָרֵבָה (*horbāh*), derived from the root חָרַב, *hārāb*, "to lie waste", is translated in the Septuagint by the words ἔρημος, ἐρήμωσις, ἐρημία. In the Vulgate are found the renderings *ruinæ*, *solitudo*, *desolatio*. A strange translation occurs in Ps. ci, 7. The word in the Greek is *οικονέδος* and in the Vulgate *domicilium*; and the passage in which the word occurs is rendered in the Douay version: "I am like a night raven in the house". St. Jerome, however, in his translation of the Psalm direct from the Hebrew employs the word *solitudinum*, which seems more correct: "I am like a night raven of the wastes". The lexicon of Gesenius gives as the first meaning of *horbāh*, "dryness"; then as a second meaning, "a desolation", "ruins". A combination of these senses seems to have been the reason why in the poetical books the word is used of the wilderness. The word conveys the idea of ruin or desolation caused by hostile lands, as when God says to Jerusalem (Ez., v, 14): "I will make thee desolate"; or when the Psalmist, referring to the punishment inflicted by Jehovah, says (Ps., ix, 7): "The enemy are consumed, left desolate for ever".

(4) יִשְׁמֹן (*jeshimon*), derived from יָשַׁם, *yāshām*, "to be desolate". It was looked upon as a place without water, thus Is., xlii, 19: "Behold I shall set up streams in the desert [*jeshimon*]". It was a waste, a wilderness. In poetical passages it is used as a parallel to *midbār*, cf. Deut., xxxii, 10; Ps., lxxviii, 40 (Heb.): "How often did ye provoke him in the wilderness [*midbār*], and grieve him in the desert [*jeshimon*]?" Frequently it is used of the wilderness of the Exodus. Besides such uses of the word, it seems when used with the article often to have assumed the force of a proper name. In such cases it refers at times to the wilderness of the Exodus (cf. Ps., lxxviii, 40; cvi, 14—Heb.; etc.). Parts of the waste region about the Dead Sea are called the *jeshimon*; and to the north-east of the same sea there is a place called *Beth-Jeshimoth* (cf. Num., xxxiii, 49), where the Israelites are said to have encamped at the end of the wanderings. These are the principal words used for desert in the Bible. There are, however, others less frequently used, only one or two of which can be mentioned here: such as תֹּהוּ (*tohu*), used in Gen., i, 2: "the earth was void". In Deut., xxxii, 10, it is used in parallelism with *midbār*, and in Ps. cvii, 40 it refers to the desert directly. Such also is צִיָּה (*ciyyāh*), which means, literally, dryness, but refers at times to the desert: so, אֶרֶץ צִיָּה (*āreṣ ciyyāh*), "a land of drought", or "a desert" (Osee, ii, 5).

A word may be said here concerning the chief deserts referred to in the Bible. Perhaps the most interesting is that of Exodus. In the Pentateuch this tract is treated as a whole as "the desert", but, as a rule, special parts of it are referred to, as the desert of Sin, the desert of Sinai, the desert of Cades, the desert of Pharan, etc. Books have been written to discuss the geography of this region. Suffice it to say that it comprises the ground over which the Israelites travelled from their crossing of the Red Sea till their arrival in the Promised Land. We do not enter

into the question raised by modern critics as to whether the geography of the Exodus had different meanings in different parts of the Pentateuch. The desert of Juda, too, plays an important part in the Bible. It lies to the west of the 'arābāh, the Jordan, and the Dead Sea. To it belong the deserts of Engaddi, that of Thecua, and that of Jericho, near the city of the same name. To the east of Palestine are the deserts of Arabia, Moab, and the desert of Idumea, near the Dead Sea. We are told (Ex., iii, 1) that Moses fed the flocks of Jethro, and led them to the interior parts of the desert. This desert was in the land of Madian, close to the Red Sea, and in it was Mount Horeb, which St. Jerome says was the same as Sinai. The desert to which David fled from Saul (cf. I Kings, xxiii, 14) was the desert of Ziph, which lies south of the Dead Sea and Hebron. John the Baptist lived and taught in the desert of Judea, west of the Jordan and the Dead Sea, near Jericho. Finally, the scene of Christ's temptation (Matt., iv, 1-11), of which St. Mark adds (1, 13): "He was with wild beasts", was most likely in the 'arābāh to the west of the Jordan. But this is only speculation.

J. A. HOWLETT.

Desertion, the culpable abandonment of a state, of a stable situation, the obligations of which one had freely accepted. In civil life the word usually designates the offence committed by a soldier who, by flight, forsakes his military obligations. As regards Christian life, desertion may have for its object any state, from the highest to the lowliest, to which Christians may be called. The first kind of desertion is the abandonment of the state and obligations imposed by baptism and is known as apostasy (*apostasia a fide*). A second kind of desertion is when the baptized has been admitted by ordination to the ranks of the clergy and thereafter abandons his clerical state and its obligations (*apostasia ab ordine*). The abandonment of the religious state is still another kind of apostasy (*apostasia a religione*). (See APOSTASY.) But this expression is used only in connexion with those orders which take solemn vows; abandonment of the religious life as followed in congregations under simple vows, is mere desertion, although by some it is incorrectly designated as apostasy. This desertion does not incur the excommunication to which religious apostates are sentenced, though it entails suspension for clerics (Decr. Auctis admodum of the S. C. of Bishops and Regulars, 4 Nov., 1892), and generally terminates in dismissal or expulsion.

The term desertion is also applied to a cleric's abandonment of his benefice, whether it be residential or non-residential. If the benefice be residential, there is occasion to proceed against the culprit according to the Council of Trent (Sess. VI, c. i; Sess. XXIII, c. i; Sess. XXIV, c. xii). The first text applies to bishops and provides that, after six months, the absent prelate be deprived *ipso facto* of a quarter of the annual revenue of his benefice; that if he remain absent for six additional months he be denied another quarter's revenue and finally, that if he fail to return to his charge the metropolitan or the suffragan bishops must denounce him to the pope within three months, and his punishment may even amount to the privation of his benefice. The second text concerns parish priests and other clerics having the care of souls: it deprives the guilty party of the revenue of his benefice in proportion to the length of absence; at the same time the bishop can proceed against the absentee by ecclesiastical censures, and finally deprive him of his benefice if he does not return within six months after receiving a warning or official summons. The third text relates to canons and other clerics who possess even a simple benefice, obliging them to resi-

dence for the choir-office, the celebration of Mass and other analogous charges: the absentee loses *ipso facto* the daily distributions (see BENEFICE); the number of days of absence may not exceed three months in any year; otherwise he forfeits half the revenue of his benefice; if he repeats the offence a second year, he forfeits all the revenue; and if his absence be still prolonged he can be deprived of the benefices by canonical sentence. For the very rare case of non-residential benefice which the beneficiary has totally abandoned, canonists consider that it becomes vacant after ten years, according to the terms of c. viii, De cler. non resid., III, tit. iv.

In judicial matters there is desertion of suit or of appeal when the plaintiff, after instituting a proceeding or lodging an appeal, fails to comply within the required time with the judicial acts demanded by the court. In the first instance, the judge, having established the neglect of the plaintiff, declares the suit abandoned. The judge from whom appeal is taken should appoint a time for the appellant to present his appeal to the new judge (c. xxxiii, and Clem., iv, De appell., II, tit. xxviii). The appeal should be terminated within a year or two (c. v, and Clem., iii, De appell.). However, this system is not strictly observed.

Finally, since the married state supposes that man and wife dwell together, desertion is the unjustified abandonment of the conjugal domicile by one or the other, especially by the wife who is bound to follow her husband to his new domicile. This desertion, which recent civil legislation considers a legitimate cause for separation and even for divorce, is considered by canon law merely a delict that gives the deserted party the right to recall the fugitive through judicial authority, either ecclesiastical or secular (c. xiii, De restit. spol., II, tit. xiii). If the wife separates for a legitimate reason, on account of the adultery or heresy of her husband, because of ill-treatment by him or in order to escape a serious danger that would result from continued dwelling with him, such desertion is not held to be malicious; it is, however, the duty of the proper judge to pass upon it.

For the first case see the canonists, *De clericis non residentibus*, III, tit. iv; for the second, *De appellationibus*, II, tit. xxviii; for the third, SANCHEZ, *De Matrimonio*, I, ix, disp. iv; ESMEIN, *Le mariage en droit canonique* (Paris, 1891), II, 96, 308.

A. BOUDINON.

Deshon, GEORGE, priest of the Congregation (or Institute) of St. Paul the Apostle, b. at New London, Conn., U. S. A., 30 January, 1823; d. in New York, 30 December, 1903. He was a graduate (1843) of the United States Military Academy at West Point, where he was a classmate and roommate of General U. S. Grant. His standing in class was high (second) and he afterwards taught mathematics and ethics at the Academy. Deshon was promoted to the rank of captain, but resigned his commission, was received into the Church in 1851, and soon after became a novice in the Redemptorist Order. He was ordained priest in 1855 and became associated with Fathers Hecker, Walworth, Hewit, and Baker, all regularly employed in missionary work. With them he obtained in 1858 a dispensation from his vows as a Redemptorist, and assisted in the formation of the new Paulist Institute, the first house and church of which were built in New York in 1859. He remained in this house during the rest of his life, being novice-master for several years, and afterwards assistant superior and in charge generally of the temporal interests of the community, which owed much to his business ability. He also superintended throughout the building of the church of St. Paul the Apostle, in which his skill and knowledge as an engineer, acquired at West Point, were of great service.

Father Deshon spent a considerable part of his time on the missions, in which he was specially eminent in

the practical instructions, though his sermons were also most effective. A volume of his parochial sermons was issued in 1901. He published in 1860 a book entitled "Guide for Catholic Young Women", which acquired an abiding popularity. Father Deshon was elected superior general of the Paulist Institute in 1897. At that time houses had been founded in San Francisco, and at Winchester, Tennessee. The last important act of his life was the founding of the Paulist house in Chicago, for which he arranged with Archbishop Quigley in the fall of 1903. Though his life-work was so largely practical, he was noted for his interior spirituality, his favourite saints being the hermits and cenobites of the desert, and his spare time was always devoted to recollection and spiritual reading, in which he had evidently been occupied on the last night of his life, before retiring. He died suddenly of heart failure about midnight, having been just able to ring for assistance, and to receive the last rites of the Church.

GEORGE M. SEARLE.

Desiderius of Cahors, SAINT, Bishop, b. at Obrege (perhaps Antobroges, name of a Gaulish tribe), on the frontier of the Provincia Narbonnensis, of a noble Frankish family from Aquitaine, which possessed large estates in the territory of Albi; d. 15 Nov., 655—though Krusch has called this date in question. In his childhood Desiderius was profoundly impressed by the religious atmosphere of his home. His father Salvius was a pious Christian, and his mother Herchenfreda shows herself a woman of serious religious sentiment in three letters to her son, mentioned in his "Vita". With his two brothers, Rusticus and Syagrius, the boy Desiderius came to the court of the Frankish king Chlotar II (584-629; from 613 sovereign of the whole Frankish Empire), and with other boys of noble family received an excellent education at the Merovingian court-school, whence in the seventh century went forth many capable and holy bishops. Rusticus became a priest and finally Bishop of Cahors; Syagrius became count of the territory of Albi and prefect of the city of Marseilles; Desiderius stayed on at the court where he held the important office of royal treasurer, an office that he retained under the new king, Dagobert (629-639), whose confidant he was. After the death of Syagrius (629), he is said to have obtained also the prefectship of Marseilles, but this is not certain.

Faithful to the admonitions of his pious mother, Desiderius led at court the serious holy life of a monk, and administered his office with great fidelity. In 630 his brother Rusticus, the Bishop of Cahors, was murdered, whereupon the clergy and people of that city requested from the king Desiderius as his successor. By a letter of 8 April, 630, Dagobert made known his consent, and Desiderius was consecrated Bishop of Cahors. His close relations with the Court he used in the interests of his Church. With the most important bishops of his time, many of them educated with him at the royal court, he maintained an active intercourse, as his letters prove. He was a zealous promoter of monastic life and founded a monastery in the vicinity of Cahors, the church of which was dedicated to St. Amantius; later on the convent was called after its founder, St. Gery (i. e. Dierius, from Desiderius). He directed also a convent of women, as we see from a letter written by him to the Abbess Aspasia. Under him and with his support was likewise founded in his diocese the monastery of St. Peter of Moissac, later so celebrated. Desiderius was very zealous for Divine service and the perfection of the religious life; he built three large basilicas in and near Cahors (St. Maria, St. Peter, St. Julian) and an oratory in honour of St. Martin. For the clergy he was a severe disci-

plinarian, but was himself foremost with the example of a holy life. He also promoted the temporal welfare of the inhabitants of Cahors, built an aqueduct, and erected or restored the walls and towers that protected the city. Desiderius persuaded the nobles of his diocese to endow richly the churches and monasteries. By his testament (649-650) he gave all his possessions to the cathedral, the churches, and the monasteries of his episcopal city. While resident on his estates in the district of Albi he fell ill and died at his villa of Wistrilingo, which he had presented to the monastery of St. Amantius. His body was carried to Cahors and interred in the church of St. Amantius. We possess a "Vita" of Desiderius written shortly after his death, a collection of his letters, also of letters addressed to him, and an account of miracles that took place at his tomb. His feast is celebrated on the 15th of November.

Desire, BAPTISM OF. See BAPTISM.

Desmarests de Saint-Sorlin, JEAN, a French dramatist and novelist, b. in Paris, 1595, d. there, 1676. Early in life he held various offices at court, was counsellor of the king, and secretary of the marine in the Levant. He became a member of the salon of the Hôtel Rambouillet, and contributed the well-known verses on the violet for the "Guirlande de Julie". Later he became a member of the French Academy and its first chancellor. Cardinal Richelieu, his protector, induced him to write for the theatre. His first tragedy, "Aspasie", although a work of no great merit, had a brilliant success, 1636, owing to the cardinal's protection. Among the plays that followed we may mention: "Les Visionnaires", "Scipion", "Roxane", "Mirame", and "L'Europe". The plots of the last two had evidently been inspired by the cardinal; "L'Europe" gives a picture of Richelieu's conception of the political situation in Europe. Of his novel, "Ariane", La Fontaine declares that its plot is very good; another novel, "Roxane", was left unfinished.

In 1645 he became a devout Christian, and thereafter he devoted his literary abilities chiefly to pious works. He wrote a metrical version of the Office of the Blessed Virgin, and of the "Imitation of Christ", and other religious poems, e. g. "Marie-Magdeleine" or "Grâce Triomphante".

In his "Clovis ou la France chrétienne", an epic poem in twenty-six cantos, he attempts to describe the Divine origin of the French monarchy. In this, his greatest work, in spite of its many faults, his patriotism and his love of old legends, which pervade the poem, often give it a peculiar charm. Owing to the criticism of Boileau, who opposed the introduction of the miraculous in literature, the poem proved a failure. In its defence Desmarests wrote an essay comparing French prose and poetry with that of the Greeks and Latins, and thus opened the celebrated controversy between the ancients and the moderns which lasted for many years. In this work he maintained that the French language is superior to all others, that modern can surpass ancient literature, and that the miraculous intervention of Providence is to be preferred to the machinery of the pagan poets. Desmarests was a consistent adversary of the Jansenists of Port-Royal.

De Smet, PIERRE-JEAN, missionary among the North American Indians, b. at Termonde (Dendermonde), Belgium, 30 Jan., 1801; d. at St. Louis, Missouri, U. S. A., 23 May, 1873. He emigrated to the United States in 1821 through a desire for missionary labours, and entered the Jesuit novitiate at White-marsh, Maryland. In 1823, however, at the suggestion of the United States Government a new Jesuit establishment was determined on and located at Florissant near St. Louis, Missouri, for work among the Indians. De Smet was among the pioneers and thus became one of the founders of the Missouri Province of the Society of Jesus.

His first missionary tour among the red men was in 1838 when he founded St. Joseph's Mission at Council Bluffs for the Pottawatomies. At this time also he visited the Sioux to arrange a peace between them and the Pottawatomies, the first of his peace missions. What may be called his life work did not begin, however, until 1840

PIERRE-JEAN DE SMET

when he set out for the Flathead country in the Far North-west. As early as 1831, some Rocky Mountain Indians, influenced by Iroquois descendants of converts of one hundred and fifty years before, had made a trip to St. Louis begging for a "black-robe". Their request could not be complied with at the time. Curiously enough, the incident excited Protestant missionary enterprise, owing to the wide dissemination of a mythical speech of one of the delegation expressing the disappointment of the Indians at not finding the Bible in St. Louis. Four Indian delegations in succession were dispatched from the Rocky Mountains to St. Louis to beg for "black-robes" and the last one, in 1839, composed of some Iroquois who dwelt among the Flatheads and Nez Percés, was successful. Father De Smet was assigned to the task and found his life-work.

He set out for the Rocky Mountain country in 1840 and his reception by the Flatheads and Pend d' Oreilles was an augury of the great power over the red men which was to characterize his career. Having imparted instruction, surveyed the field, and promised a permanent mission he returned to St. Louis; he visited the Crows, Gros Ventres, and other tribes on his way back, travelling in all 4814 miles. In the following year he returned to the Flatheads with Father Nicholas Point and established St. Mary's Mission on the Bitter Root river, some thirty miles north of Missoula, visiting also the Cœur-d'Alènes. Realizing the magnitude of the task before him, De Smet went to Europe in 1843 to solicit funds and workers, and in 1844 with new labourers for the missions, among them being six Sisters of Notre-Dame de Namur, he returned, rounding Cape Horn and casting anchor in the mouth of the Columbia River at Astoria. Two days after, De Smet went by canoe to Fort Vancouver to confer with Bishop

Blanchet, and on his return founded St. Ignatius Mission among the Kalispels of the Bay, who dwelt on Clark's Fork of the Columbia river, forty miles above its mouth. Ten years later the mission was transferred to its present site in Missoula County, Montana.

As the Blackfeet were a constant menace to other Indians for whom De Smet was labouring, he determined to influence them personally. This he accomplished in 1846 in the Yellowstone valley, where after a battle with the Crows, the Blackfeet respectfully listened to the "black-robe". He accompanied them to Fort Lewis in their own country where he induced them to conclude peace with the other Indians to whom they were hostile, and he left Father Point to found a mission among this formidable tribe. His return to St. Louis after an absence of three years and six months marks the end of his residence among the Indians, not from his own choice but by the arrangement of his religious superiors who deputed him to other work at St. Louis University. His coadjutors in his mission labours, Fathers Point, Mengarini, Nobili, Ravalli, De Vos, Adrian and Christian Hoecken, Joset and others, made De Smet's foundations permanent by dwelling among the converted tribes.

De Smet was now to enter upon a new phase of his career. Thus far his life might be called a private one, though crowded with stirring dangers from man and beast, from mountain and flood, and marked by the successful establishment of numerous stations over the Rocky Mountain region. But his almost inexplicable and seemingly instantaneous ascendancy over every tribe with which he came in contact, and his writings which had made him famous in both hemispheres, caused the United States Government to look to him for help in its difficulties with the red men, and to invest him with a public character. Henceforth he was to aid the Indians by pleading their cause before European nations and by becoming their intermediary at Washington. In 1851 owing to the influx of whites into California and Oregon, the Indians had grown restless and hostile. A general congress of tribes was determined on, and was held in Horse Creek Valley near Fort Laramie, and the Government requested De Smet's presence as pacificator. He made the long journey and his presence soothed the ten thousand Indians at the council and brought about a satisfactory understanding.

In 1858 he accompanied General Harney as a chaplain in his expedition against the Utah Mormons, at the close of which campaign the Government requested him to accompany the same officer to Oregon and Washington Territories, where, it was feared, an uprising of the Indians would soon take place. Here again his presence had the desired effect, for the Indians loved him and trusted him implicitly. A visit to the Sioux country at the beginning of the Civil War convinced him that a serious situation confronted the Government. The Indians rose in rebellion in August, 1862, and at the request of the government De Smet made a tour of the North-west. When he found that a punitive expedition had been determined on, he refused to lend to it the sanction of his presence. The condition of affairs becoming more critical, the government again appealed to him in 1867 to go to the red men, who were enraged by white men's perfidy and cruelty, and "endeavour to bring them back to peace and submission, and prevent as far as possible the destruction of property and the murder of the whites." Accordingly he set out for the Upper Missouri, interviewing thousands of Indians on his way, and receiving delegations from the most hostile tribes, but before the Peace Commission could deal with them, he was obliged to return to St. Louis, where he was taken seriously ill.

In 1868, however, he again started on what Chittenden calls (Life, Letters and Travels of Pierre Jean De

Smet, p. 92), "the most important mission of his whole career." He travelled with the Peace Commissioners for some time, but later determined to penetrate alone into the very camp of the hostile Sioux. General Stanley says (*ibid.*): "Father De Smet alone of the entire white race could penetrate to these cruel savages and return safe and sound." The missionary crossed the Bad Lands, and reached the main Sioux camp of some five thousand warriors under the leadership of Sitting Bull. He was received with extraordinary enthusiasm. His counsels were at once agreed to, and representatives sent to meet the Peace Commission. A treaty of peace was signed, 2 July, 1868, by all the chiefs. This result has been looked on as the most remarkable event in the history of the Indian wars. Once again, in 1870, he visited the Indians, to arrange for a mission among the Sioux. In such a crowded life allusion can be made only to the principal events. His strange adventures among the red men his conversions and plantings of missions, his explorations and scientific observations may be studied in detail in his writings. On behalf of the Indians he crossed the ocean nineteen times, visiting popes, kings, and presidents, and traversing almost every European land. By actual calculation he travelled 180,000 miles on his errands of charity.

His writings are numerous and vivid in descriptive power, rich in anecdote, and form an important contribution to our knowledge of Indian manners, customs, superstitions, and traditions. The general correctness of their geographical observations is testified to by later explorers, though scientific researches have since modified some minor details. Almost childlike in the cheerful buoyancy of his disposition, he preserved this characteristic to the end, though honoured by statesmen and made Chevalier of the Order of Leopold by the King of the Belgians. That he was not wanting in personal courage is evinced by many events in his wonderful career. Though he had frequent narrow escapes from death in his perilous travels, and often took his life in his hands when penetrating among hostile tribes, he never faltered. But his main title to fame is his extraordinary power over the Indians, a power no other man is said to have equalled. To give a list of the Indian tribes with whom he came in contact, and over whom he acquired an ascendancy, would be to enumerate almost all the tribes west of the Mississippi. Even Protestant writers declare him the sincerest friend the Indians ever had. The effects of his work for them were not permanent to the extent which he had planned, solely because the Indians have been swept away or engulfed by the white settlers of the North-west. If circumstances had allowed it, the reductions of Paraguay would have found a counterpart in North America. The archives of St. Louis University contain all the originals of De Smet's writings known to be extant. Among these is the "Linton Album", containing his itinerary from 1821 to the year of his death, also specimens of various Indian dialects, legends, poems, etc. The principal works of Father De Smet are: "Letters and Sketches, with a Narrative of a Year's Residence among the Indian Tribes of the Rocky Mountains" (Philadelphia, 1843), translated into French, German, Dutch, and Italian; "Oregon Missions and Travels over the Rocky Mountains in 1845-46" (New York, 1847), translated into French and Flemish; "Voyage au grand désert en 1851" (Brussels, 1853); "Western Missions and Missionaries" (New York, 1863), translated into French; "New Indian Sketches" (New York, 1865).

WILLIAM H. W. FANNING.

De Soto, HERNANDO, explorer and conqueror, b. at Villanueva de la Serena, Badajoz, Spain, 1496 or 1500; d. on the banks of the Mississippi the latter part of June, 1542. He was given the rank of captain of a troop of horsemen in 1516 by Pedrarias Dávila (also known as Pedro Arias de Avila), Governor of Darien, who admired his courage, and he took an active part in the conquest of portions of Central America. In 1523 he accompanied Francisco Fernández de Córdoba who, by order of Pedrarias, set out from Panama with an expedition which explored Nicaragua and Honduras, conquering and colonizing the country as they proceeded. In 1532 he joined the expedition of Francisco Pizarro starting from Panama for the conquest of Peru. Recognizing his importance, Pizarro made de Soto second in command, though this caused some opposition from Pizarro's brothers. In 1533 he was sent at the head of a small party to explore the highlands of Peru, and he discovered the great national road which led to the capital. Soon afterwards he was selected by Pizarro as ambassador to visit the Inca Atahualpa, lord of Peru, and he was the first Spaniard who spoke with that chief. After the imprisonment of Atahualpa, de Soto became very friendly with him and visited him often in his confinement. De Soto played a prominent part in the engagements which completed the conquest of Peru, including the battle which resulted in the capture of Cuzco, the capital. Upon his return from an expedition, he learned that Pizarro had treacherously ordered Atahualpa to be put to death in spite of Atahualpa's having paid a large ransom. He was much displeased at the crime, and, becoming disgusted with Pizarro and his brothers, he returned to Spain in 1536, taking back with him about 18,000 ounces of gold which represented his share of the booty taken from the Incas. He settled in Seville, and with the gold he had brought home, he was able to set up an elaborate establishment with ushers, pages, equerry, chamberlain, and other servants required for the household of a gentleman. In 1537 he married Inés de Bobadilla (sometimes called Leonor or Isabel), the daughter of his former patron, Pedrarias Dávila. He had settled down in Seville to enjoy life quietly, when the exaggerated accounts of Cabeza de Vaca concerning the vast region then called Florida fired his ambition to undertake the conquest of this land which he considered no less rich than Peru. He therefore sold all his property, and devoted the proceeds to equipping an expedition for this purpose. He readily obtained from Charles V, to whom he had lent some money, the titles of Adelantado of Florida and Governor of Cuba, and in addition, the title of marquis of a certain portion of the territory he might conquer, said portion to be chosen by himself.

The expedition consisted of 950 fighting men, eight secular priests, two Dominicans, a Franciscan and a Trinitarian, all to be transported in ten ships. To this armada was added one of twenty more ships which was on its way to Vera Cruz, but was to be under the orders of de Soto while the courses of the two fleets lay along the same route. The whole squadron set sail from Sanlúcar, 6 April, 1538. On Easter Sunday morning, fifteen days later, they arrived safely at Gomera, one of the Canary Islands, where they stopped for one week and then continued their way without incident. When near Cuba, the twenty vessels destined for Mexico separated from the others and proceeded on their way. The ten ships of de Soto shortly after arrived in the harbour of Santiago de Cuba where the members of the expedition were well received by the Cubans, whose fêtes in honour of the new-comers lasted several weeks. The new governor visited the towns in the vicinity of Santiago and did every thing in his power to better their condition. At the same time, he gathered as many horses as he could, and, as good ones were plentiful in

Cuba, it was not long before he had a fair number of mounts for the men of the Florida expedition. Just about this time, the city of Havana was sacked and burned by the French, and de Soto, upon learning of it, despatched Captain Aceituno with some men to repair the ruins. As he was contemplating an early departure for his conquest of Florida, he named Gonzalo de Guzmán as lieutenant-governor to administer justice in Santiago and vicinity, while for affairs of state, he gave full powers to his wife. Meanwhile, he continued his preparations for the expedition to Florida. In the latter part of August, 1538, the ships sailed for Havana, while de Soto started by land with 350 horses and the remainder of the expedition. The two parties arrived at Havana within a few days of each other, and de Soto immediately made plans for the rebuilding of the city. He also entrusted to Captain Aceituno the building of a fortress for the protection of the harbour and the city from any possible future attack. At the same time, he ordered Juan de Añasco, a skilled and experienced sailor, to set out in advance to explore the coasts and harbours of Florida so that it would facilitate matters when the main expedition sailed. Añasco returned at the end of a few months and made a satisfactory report.

The expedition was finally made ready, and on 18 May, 1539, de Soto set sail with a fleet of nine vessels. He had with him 1000 men exclusive of the sailors, all well armed and making up what was considered to be the best equipped expedition that had ever set out for conquest in the New World. They proceeded with favourable weather until 25 May, when land was seen and they cast anchor in a bay to which they gave the name of Espiritu Santo (now Tampa Bay). The army landed on Friday, 30 May, two leagues from an Indian village. From this point the Spaniards began their explorations of the wild unknown country to the north and west which lasted for nearly three years. They passed through a region already made hostile by the violence of the invader Narváez, and they were constantly deceived by the Indians, who tried to get them as far away as possible by telling them stories of great wealth which was to be found at remote points. They wandered from place to place, always disappointed in their expectations, but still lured onward by the tales they heard of the vast riches which lay just beyond. They treated the Indians brutally whenever they met them, and they were, as a result, constantly at war with them. Setting out from Espiritu Santo, de Soto, with considerable loss of men, went through the provinces of Acuera, Ocali, Vitachuco, and Osachile (all situated in the western part of the Florida peninsula), with the purpose of finally reaching the territory of Apalache (situated in the north-western part of Florida on the Gulf of Mexico), as he considered the fertility and maritime conditions of that country well suited to his purposes. He finally reached the province, and after some fighting with the Indians, subjugated it. In October, 1539, de Soto sent Juan Añasco with thirty men to Espiritu Santo Bay where he had left his ships and a portion of his expedition, with orders to start from there with the ships and follow the coast until he reached the bay of Aute (St. Marks on Apalachee Bay) in the province of Apalache. Here he was to be joined by Pedro Calderón, who had orders to proceed by land with the remainder of the expedition and the provisions and camp equipment that had been left on the coast. At the same time, Gómez Arias was to sail to Havana to acquaint de Soto's wife with the progress of the expedition. After many hardships, Añasco reached Espiritu Santo Bay, whence he started with the ships to carry out de Soto's orders. He arrived at Aute in safety, and was there joined by Calderón with the land forces according to arrangement. Meanwhile, Gómez Arias had fulfilled his mission to Havana and the triumphs of the Spaniards in Florida were

fitly celebrated in that city. De Soto now ordered Diego Maldonado, a captain of infantry who had served him well, to give up his command, and take two ships with which he was to explore the coast of Florida for a distance of one hundred leagues to the west of Aute, and map out its bays and inlets. Maldonado did his work successfully and upon his return, in February, 1540, was sent to Havana, with orders to inform the Governor's wife and announce to the Cubans as well all that they had seen and done. De Soto gave him further orders to return in October and meet him in the Bay of Achusi which Maldonado had discovered during his exploration. He was to bring back with him as many ships as he could procure, and also munitions of war, provisions, and clothing for the soldiers. But de Soto was destined never to see Maldonado again, nor was he to have the benefit of the supplies for which he was sending him, for though Maldonado was able to carry out his orders to the letter, when he arrived at Achusi in the fall he found neither trace nor tidings of de Soto. He waited for some time and explored the country quite a distance, but without finding him, and was forced to return to Havana. He tried again the next year, and again the following, but always with the same result.

Meanwhile, de Soto had started in March, 1540, from the province of Apalache with the intention of exploring the country to the north. He explored the provinces of Altapaha (or Altamaha), Achalake, Cofa, and Cofaque, all situated in eastern and northern Georgia, meeting with fair success. He then worked his way in a south-westerly direction, intending to reach the coast at Achusi where he had agreed to meet Maldonado with the supply ships. But when he reached the province of Tascaluza in southern Alabama, where he had been told there were immense riches, the Indians in large numbers offered a more stubborn resistance and gave him the worst battle he had yet had. The battle lasted nine hours and was finally won by the Spaniards, though nearly all the officers and men, including de Soto himself, were wounded. According to Garcilasso, there were 70 Spaniards and 11,000 Indians killed in the battle, and in addition the town of Mauvila (now Mobile) was destroyed by a fire which also consumed the provisions of the Spaniards. While in Tascaluza, de Soto heard of some Spanish ships which were on the coast at Achusi. These were the ships which Maldonado had brought back from Havana with the supplies. De Soto thought he would be able to reach them in a short time for he had been informed that he was then but thirty leagues from the coast. But his troops were so exhausted that he was forced to rest for a few days. Worn out by the long marches and the hardships they had undergone, and disappointed at not finding any treasure, some of de Soto's followers secretly plotted to abandon him, make their way to Achusi, and sail to Mexico or Peru. Learning of this, de Soto changed his plans, and, instead of marching toward the coast to join Maldonado, he led his men toward the interior in a westerly direction, knowing that they would not dare to desert him with the ships so far away. He hoped to reach New Spain (Mexico) by land. In a night battle (December, 1540), he lost forty men and fifty horses besides having many wounded, and during the next four months he was attacked almost nightly. In April, 1541, he came upon a fort surrounded with a stockade, and in storming it nearly all his men were wounded and many were killed. It is said that over 2000 Indians were killed in this battle, but so many of the Spaniards were wounded that de Soto was compelled to stop for a few days in order to care for them. Notwithstanding his repeated losses de Soto continued toward the interior, traversing several provinces constituting the present Gulf States, until he reached the Mississippi at a point in the northern part of the present state of Mississippi.

He crossed the river and pushed on to the north-west until he reached the province of Autiamque in the north-western corner of Arkansas, where he passed the winter of 1541-42 on the Cayas River, now the Washita. In the spring of 1542, retracing his steps, he reached the Mississippi in May or June. Here, on 20 June, 1542 (according to some authorities on 21 May), he was stricken with a fever, and prepared for death. He made his will, named Luis de Moscoso de Alvarado as his successor in command of the expedition, and took leave of all. On the fifth day de Soto succumbed without having reached New Spain by land. His companions buried the body in a large hole which the natives had dug near one of their villages to get materials to build their houses. However, as de Soto had given the Indians to understand that the Christians were immortal, they afterwards disinterred the body, fearing the hostile savages might possibly discover it, and, finding him dead, make an attack. They then hollowed out the trunk of a large tree and, placing the body in it, sank it in the Mississippi which they called the Grande. The shattered remnant of the expedition under Moscoso then attempted to work their way eastward, but, driven back by the Indians, they floated down the Mississippi and, after many hardships, finally reached Pánuco in Mexico. This expedition of de Soto, though it ended so disastrously, was one of the most elaborate and persistent efforts made by the Spaniards to explore the interior of North America. It was the first extensive exploration of at least six of the Southern states: South Carolina, Georgia, Florida, Alabama, Mississippi, and Arkansas, and their written history often begins with narratives which tell the story of de Soto's expedition. From these same narratives we also get our first description of the Cherokees, Seminoles, Creeks, Appalachians, Choctaws, and other famous tribes of southern Indians. The story of this expedition also records the discovery of the Mississippi and the first voyage of Europeans upon it. It must be noted that Alonso de Pineda discovered the mouth of the Mississippi in 1519, and that Cabeza de Vaca crossed it near its mouth in 1528.

VENTURA FUENTES.

Despair (Latin *desperare*, to be hopeless) ethically regarded is the voluntary and complete abandonment of all hope of saving one's soul and of having the means required for that end. It is not a passive state of mind: on the contrary it involves a positive act of the will by which a person deliberately gives over any expectation of ever reaching eternal life. There is presupposed an intervention of the intellect in virtue of which one comes to decide definitely that salvation is impossible. This last is motivated by the persuasion either that the individual's sins are too great to be forgiven or that it is too hard for human nature to co-operate with the grace of God or that Almighty God is unwilling to aid the weakness or pardon the offences of his creatures, etc. It is obvious that a mere anxiety, no matter how acute, as to the hereafter is not to be identified with despair. This excessive fear is usually a negative condition of soul and adequately discernible from the positive elements which clearly mark the vice which we call despair. The pusillanimous person has not so much relinquished trust in God as he is unduly terrified at the spectacle of his own shortcomings or incapacity. The sin of despair may sometimes, although not necessarily, contain the added malice of heresy in so far as it implies an assent to a proposition which is against faith, e. g. that God has no mind to supply us with what is needful for salvation. De-

sponding as such and as distinguished from a certain diffidence, sinking of the heart, or overweening dread is always a mortal sin. The reason is that it contravenes with a special directness certain attributes of Almighty God, such as His goodness, mercy, and faith-keeping. To be sure it is not the worst sin conceivable: that evil primacy is held by the direct and explicit hatred of God; neither is it as great as sins against faith like formal heresy or apostasy. Still its power for working harm in the human soul is fundamentally far greater than other sins inasmuch as it cuts off the way of escape and those who fall under its spell are frequently, as a matter of fact, found to surrender themselves unreservedly to all sorts of sinful indulgence.

JOSEPH F. DELANY.

Despretz, CÉSAR-MANSUËTE, chemist and physicist, b. at Lessines, Belgium, 11 May, 1798; d. at Paris, 11 May, 1863. He was appointed early in life master of studies in the lyceum of Bruges, and later went to Paris to complete his studies. Here he attracted the attention of Gay-Lussac, who had him appointed tutor of the chemical course which the former was then giving at the Ecole Polytechnique. In 1824 Despretz was made adjunct and then titular professor of physics at the Collège Henri IV, and in 1837 received the chair of physics at the Sorbonne. He was naturalized as a Frenchman in 1838, and in 1841 was elected to the Academy of Sciences in the division of general physics, being the successor of Savart. The researches of Despretz did much to establish the foundation of modern physics, notably in the domain of heat. In 1818 he investigated latent heat and the elasticity of vapours. In 1821, following the same line, he studied the heat-conductivity of solids, vapour density, and the latent heat of steam at different pressures; his memoir of 1822 on the causes of animal heat was crowned by the Academy. In 1823 the results of his investigation of the compressibility of liquids were published, and in 1827 his researches on the density of gases at different pressures; the latter investigation proved that Mariotte's law was not exactly followed by gases. The titles of some of his leading memoirs and their dates of publication are as follows: "The Heat of Combustion" (1828); "Investigation of the Mercurial Thermometer" (1837); "The Laws of Conductivity of Heat in Liquids" (1838); "The Limit of Appreciable Sound" (1845).

After this he turned his attention to the voltaic cell and voltaic arc. By uniting the heat from a very large burning glass with the heat of the voltaic arc and with the oxy-hydrogen flame, he experimented on the diffusion and volatilization of refractory solids, performing some experiments of remarkable interest in those days when electricity was not so highly developed as at the present time. Under the discharge of the Ruhmkorff coil he approximated the formation of diamonds. Among his books may be cited "Recherches expérimentales sur les causes de la chaleur animale" (Paris, 1824); "Traité élémentaire de physique" (Paris, 1825, and many later editions); "Éléments de chimie théorique et pratique" (Paris, 1828-30); in addition to these some fifty memoirs were published by him between 1817 and 1863, the list of which is given in the "Catalogue of Scientific Papers of the Royal Society" (London, 1868), VII. Despretz was a true Catholic; he constantly resisted assaults upon the Church and the clerical body, was always ready to lead in their defence, and died a devout member of the Church.

T. O'CONOR SLOANE.

Desservants, the name of a class of French parish priests. Under the old regime, a priest who performed the parochial duties in a vacant parish, or where the parish priest was under censure of some kind (Héricourt, *Les lois ecclésiastiques de France*, II, xv, Paris, 1771) was known as a *desservant*; he was the vicar, or *économe-curé*, whom the Council of Trent (Sess. XXIV, c. xviii, De ref.) desired to be appointed in each vacant parish. After the Concordat of 1801, however, the name *desservants* was applied to a second class of parish priests who were named by the bishop without the sanction of the Government, but could also be removed at any time by the bishop. This institution owed its origin to custom rather than any law, though later on it was fully legalized. Article 9 of the new concordat decreed that "the bishops are to make a new circumscription of the parishes in their dioceses, which will only go into effect after the consent of the Government is obtained". Article 10 adds: "Bishops shall make the appointments to parishes; they shall choose only persons approved by the Government." Finally, art. 14 provides "a suitable salary for bishops and parish priests". These clauses applied to only one kind of parish and parish priests; but the Organic Articles, added by the Government to the concordat, established parishes of a second order, succursal parishes (mission churches), whose titulars were not canonically parish priests (*curés*) and received no remuneration from the State. Organic Articles 31, 60, 61, 63 provide that "there shall be at least one parish for every justice of the peace", that "the bishop in conjunction with the prefect shall regulate the number and extent of succursal parishes"; that "the officiating priests in succursal parishes shall be appointed by the bishop"; that they shall also be removable by him; preference nevertheless should be given to ecclesiastics pensioned by the Assemblée Constituante (art. 68). By degrees the succursal parishes increased and equalled in number the municipalities of France; gradually, also, the Government allowed these desservants a small salary. From an ecclesiastical point of view, they were parish priests except for the removability clause.

This condition of affairs, which the concordat had not anticipated, was advantageous to the Church, because it left the bishops free to appoint to most parishes without consulting the State; it was also of advantage to the episcopal administration, which would have been much hampered had all the parish priests been irremovable. It was not formally approved by Rome, however, until May, 1845, under Gregory XVI (reply of the Congregation of the Council to the Bishop of Liège). The pope authorized the continuance of the existing situation until the Holy See decided otherwise. From various quarters, however, arose protests in favour of canonical irremovability of the desservants. In 1839 the Allignol brothers published "*De l'état actuel du clergé de France, et en particulier des curés ruraux, appelés desservants*" (The present condition of the clergy of France, particularly of the rural parish priests, known as desservants). It was the cause of several meetings of the French bishops at Rome and finally of the aforesaid rescript of Gregory XVI. Later on (5 Oct., 1864) the Congregation of Bishops and Regulars reproved a similar work by the Abbé Dagomer, "*Réhabilitation du desservant*". Occasionally, some of the desservants refused to give up their places at the bishop's order, maintaining a common-law right of irremovability; but in this they were always unsuccessful. In this respect the ecclesiastical discipline of France had become fixed and accepted; nor was it modified by the Separation Law of 1905; except that some bishops have ceased to use the terms *succursale* and *desservant*, replacing them by *parish* and *parish priest*, both, however, long since in ordinary ecclesiastical use.

A. BOUDINON.

Desurmont, ACHILLE, ascetical writer, b. at Tourcoing, France, 23 Dec., 1828; d. 23 July, 1898. He attended first the college of the Jesuits at Brugelette, Belgium, and afterwards (1848) the theological college of Cambrai. Drawn to the religious state, he was received into the Congregation of the Most Holy Redeemer in 1850, made his profession the following year, and was ordained priest 24 Sept., 1853. His talent was at once recognized and he was appointed prefect of students and professor of theology, which offices he retained till 1865, when he became superior of the French province. He was a man of surpassing energy and an excellent organizer, his kindness winning him the affection and confidence of his subjects, whom he directed with prudence and fatherly firmness. Under his care subjects and foundations multiplied; the congregation spread into Spain for a second time, and he made foundations in Peru, Ecuador, Chile, and Colombia in South America. Forced to transfer his numerous religious from France to Holland, he so communicated to others his own spirit of faith and confidence that in all their troubles not one of his subjects failed him. On his return to France he soon organized missions and retreats as before. In 1887, he was given the important work of Apostolic visitor to the Little Sisters of the Poor. As a preacher few surpassed him in the retreats he gave to priests and religious all over France. At the age of seventy he was again nominated provincial. Although in poor health, he set to work with his wonted activity, but the result was a complete break-down. He wrote much and well. He was the founder (1875) of the ascetical review, "*La Sainte Famille*", and a constant contributor to it. His works are edited in three series: 1. *Vie Chrétienne*.—"L'Art d'assurer son Salut"; "*Le Credo et la Providence*"; "*Le Monde et l'Evangile*"; "*La Vie vraiment chrétienne*"; "*Dévotions de l'âme chrétienne*"; "*Le Vén. Passarat et les Rédemptoristes*". 2. *Vie Religieuse*.—"Exercices Spirituels" (Retraites).—"Renouvellements spirituels" (Retraites); "*Conversion quotidienne et retour continuel à Dieu*" (Retraites); "*Une Vertu pour chaque mois de l'année*"; "*La Vie vraiment religieuse*"; "*Manuel de méditations quotidiennes*". 3. *Vie Sacerdotale*.—"Dieu et la parole de Dieu"; "*Discours et plans de retraites ecclésiastiques*"; "*L'Esprit Apostolique*"; "*L'art de sauver les âmes*"; "*La charité sacerdotale*" (Paris, Librairie de la "Sainte Famille", 1907-8).

J. MAGNIER.

Determinism is a name employed by recent writers, especially since J. Stuart Mill, to denote the philosophical theory which holds, in opposition to the doctrine of free will, that all man's volitions are invariably determined by pre-existing circumstances. It may take diverse forms, some cruder, some more refined. Biological and materialistic Determinism maintains that each of our voluntary acts finds its sufficient and complete cause in the physiological conditions of the organism. Psychological Determinism ascribes efficiency to the psychical antecedents. In this view each volition or act of choice is determined by the character of the agent plus the motives acting on him at the time. Advocates of this theory, since Mill, usually object to the names, Necessarianism and Fatalism, on the ground that these words seem to imply some form of external compulsion, whilst they affirm only the fact of invariable sequence or uniform causal connectedness between motives and volition. Opposed to this view is the doctrine of Indeterminism, or what perhaps may more accurately be called Antideterminism, which denies that man is thus invariably determined in all his acts of choice. This doctrine has

been stigmatized by some of its opponents as the theory of "causeless volition", or "motiveless choice"; and the name, Indeterminism, is possibly not the best selection to meet the imputation. The objection is, however, not justified. The Anti-determinists, while denying that the act of choice is always merely the resultant of the assemblage of motives playing on the mind, teach positively that the Ego, or Self, is the cause of our volitions; and they describe it as a "free" or "self-determining" cause. The presence of some reason or motive, they ordinarily hold, is a necessary condition for every act of free choice, but they insist that the Ego *can* decide between motives. Choice is not, they maintain, uniformly determined by the pleasantest or the worthiest motive or collection of motives. Nor is it the inevitable consequent of the strongest motive, except in that tautological sense in which the word *strongest* simply signifies that motive which as a matter of fact prevails. Determinism and the denial of free will seem to be a logical consequence of all monistic hypotheses. They are obviously involved in all materialistic theories. For Materialism of every type necessarily holds that every incident in the history of the universe is the inevitable outcome of the mechanical and physical movements and changes which have gone before. But Determinism seems to be an equally necessary consequence of monistic Idealism. Indeed the main argument against all monistic and pantheistic systems will always be the fact of free will. Self-determination implies separateness of individuality and independence in each free agent, and thus entails a pluralistic conception of the universe. (See DUALISM; MONISM.) In spite of the assertions of Determinists, no true logical distinction can be made between their view and that of Fatalism. In both systems each of my volitions is as inexorably fated, or pre-determined, in the past conditions of the universe as the movements of the planets or the tides. The opponents of Determinism usually insist on two lines of argument, the one based on the consciousness of freedom in the act of deliberate choice, the other on the incompatibility of Determinism with our fundamental moral convictions. The notions of responsibility, moral obligation, merit, and the like, as ordinarily understood, would be illusory if Determinism were true. The theory is in fact fatal to ethics, as well as to the notion of sin and the fundamental Christian belief that we can merit both reward and punishment. (See FREE WILL; ETHICS; FATALISM.)

MICHAEL MAHER.

Detraction (from Lat. *detrahere*, to take away) is the unjust damaging of another's good name by the revelation of some fault or crime of which that other is really guilty or at any rate is seriously believed to be guilty by the defamer. An important difference between detraction and calumny is at once apparent. The calumniator says what he knows to be false, whilst the detractor narrates what he at least honestly thinks is true. Detraction in a general sense is a mortal sin, as being a violation of the virtue not only of charity but also of justice. It is obvious, however, that the subject-matter of the accusation may be so inconspicuous or, everything considered, so little capable of doing serious hurt that the guilt is not assumed to be more than venial. The same judgment is to be given when, as not unfrequently happens, there has been little or no advertence to the harm that is being done.

The determination of the degree of sinfulness of detraction is in general to be gathered from the consideration of the amount of harm the defamatory utter-

ance is calculated to work. In order to adequately measure the seriousness of the damage wrought, due regard must be had not only to the imputation itself but also to the character of the person by whom and against whom the charge is made. That is, we must take into account not only the greater or lesser criminality of the thing alleged but also the more or less distinguished reputation of the detractor for trustworthiness, as well as the more or less notable dignity or estimation of the person whose good name has been assailed. Thus it is conceivable that a relatively small defect alleged against a person of eminent station, such as a bishop, might seriously tarnish his good name and be a mortal sin, whilst an offence of considerable magnitude attributed to an individual of a class in which such things frequently happen might constitute only a venial sin, such as, for instance, to say that a common sailor had been drunk. It is worthy of note that the manifestation of even inculpable defects may be a real defamation, such as to charge a person with gross ignorance, etc. When this is done in such circumstances as to bring upon the person so disparaged a more than ordinary measure of disgrace, or perhaps seriously prejudice him, the sin may even be a grievous one.

There are times, nevertheless, when one may lawfully make known the offence of another even though as a consequence the trust hitherto reposed in him be rudely shaken or shattered. If a person's misdoing is public in the sense that sentence has been passed by the competent legal tribunal or that it is already notorious, for instance, in a city, then in the first case it may licitly be referred to in any place; in the second, within the limits of the town, or even elsewhere, unless in either instance the offender in the lapse of time should have entirely reformed or his delinquency been quite forgotten. When, however, knowledge of the happening is possessed only by the members of a particular community or society, such as a college or monastery and the like, it would not be lawful to publish the fact to others than those belonging to such a body. Finally, even when the sin is in no sense public, it may still be divulged without contravening the virtues of justice or charity whenever such a course is for the common weal or is esteemed to make for the good of the narrator, of his listeners, or even of the culprit. The right which the latter has to an assumed good name is extinguished in the presence of the benefit which may be conferred in this way.

The employment of this teaching, however, is limited by a twofold restriction. (1) The damage which one may soberly apprehend as emerging from the failure to reveal another's sin or vicious propensity must be a notable one as contrasted with the evil of defamation. (2) No more in the way of exposure should be done than is required, and even a fraternal admonition ought rather to be substituted if it can be discerned to adequately meet the needs of the situation. Journalists are entirely within their rights in inveighing against the official shortcomings of public men. Likewise, they may lawfully present whatever information about the life or character of a candidate for public office is necessary to show his unfitness for the station he seeks. Historians have a still greater latitude in the performance of their task. This is not of course because the dead have lost their claim to have their good name respected. History must be something more than a mere calendar of dates and incidents; the causes and connexion of events are a proper part of its province. This consideration, as well as that of the general utility in elevating and strengthening the public conscience, may justify the historian in telling many things hitherto unknown which are to the disgrace of those of whom they are related.

Those who abet another's defamation in a matter of moment by directly or indirectly inciting or encour-

aging the principal in the case are guilty of grievous injustice. When, however, one's attitude is simply a passive one, i. e. that of a mere listener, prescinding from any interior satisfaction at the blackening of another's good name, ordinarily the sin is not mortal unless one happens to be a superior. The reason is that private persons are seldom obliged to administer fraternal correction under pain of mortal sin (see CORRECTION, FRATERNAL). The detractor having violated an unimpeachable right of another is bound to restitution. He must do his best to put back the one whom he has thus outraged in possession of the fair fame which the latter hitherto enjoyed. He must likewise make good whatever other loss he in some measure foresaw his victim would sustain as a result of this unfair defamation, such as damage measurable in terms of money. The obligation in either instance is perfectly clear. The method of discharging this plain duty is not so obvious in the first case. In fact, since the thing alleged is assumed to be true, it cannot be formally taken back, and some of the suggestions of theologians as to the style of reparation are more ingenious than satisfactory. Generally the only thing that can be done is to bide one's time until an occasion presents itself for a favourable characterization of the person defamed. The obligation of the detractor to make compensation for pecuniary loss and the like is not only personal but becomes a burden on his heirs as well.

NOLDIN, *Summa Theologiae Moralis* (Innsbruck, 1905); GENICOT, *Theologiae Moralis Institutiones* (Louvain, 1898); LEHM-KUHL, *Theologia Moralis* (Freiburg, 1887).

JOSEPH F. DELANY.

Detré, WILLIAM, missionary, b. in France in 1668, d. in South America, at an advanced age, date uncertain. After his admission to the Society of Jesus, he was sent by his superiors to the missions of South America in 1706, and seven years later was appointed superior-general and visitor of all the missions of the Amazon embracing a tract of over 3000 miles. He is credited with translating the catechism into eighteen different languages for the various Indian tribes under his jurisdiction. It was he who sent to Europe the celebrated map of the Amazon drawn by Father Samuel Fritz, S. J., and engraved at Quito in 1707. In 1727 he was appointed rector of the College of Cuenca, where he continued the zealous exercise of the functions of the ministry. He left an interesting "Relation" dated 1 June, 1731, giving curious details about the uncivilized races of the Amazon. It is inserted in volume XXIII of the "Lettres Edifiantes", original edition.

MICHAUD, *Biog. Univ.* (Paris, 1814); SOMMERVOGEL, *Bibl. de la C. de J.* (Brussels, 1892), s. v. *Samuel Fritz*, III, 1003.

EDWARD P. SPILLANE.

Detroit, DIOCESE OF (DETROITENSIS), established 8 March, 1838, comprises the counties of the lower peninsula of the State of Michigan, U. S. A., south of the Counties of Ottawa, Kent, Montcalm, Gratiot, and Saginaw, and east of the Counties of Saginaw and Bay; an area of 18,558 miles. Suffragan of Cincinnati.

To the martyr Father Isaac Jogues and his fellow-Jesuit Father Charles Raynbaut, belongs the honour of planting the Cross in Michigan when, in 1642, they began their mission to the Chippeways of the Sault Ste. Marie. Father René Menard, also a Jesuit, followed them in 1660, and was martyred the next year by a band of prowling savages. His death did not deter others of his brethren in the Society of Jesus from hastening to this field of labour, and we find Father Claude Allouez, at Chegoimegon, 1 October, 1665, preaching to the Ottawas and Hurons, and with him these other missionaries: Fathers Claude Dablon, Louis André, Gabriel Druilletes, and the famous Jacques Marquette. The last, in 1671, began at Michilimackinaw, his mission of St. Ignatius, where the first chapel for white men in Michigan was estab-

lished. France took formal possession of the West in 1671, but England entering the field to dispute for the mastery, political intrigue followed, to the disaster of the old missions among the Indians. Fort St. Joseph, established at Detroit in 1688, developed into the post established there in 1700 by La Mothe Cadillac, who brought with him a number of Canadian families. This mission was served by the Recollects and under the pastorate of the Rev. Nicholas Benedict Constantin de l'Halle, on 26 July, 1701, the church of St. Anne was dedicated. This is the mother-church of the Northwest, and the parish records are preserved in an unbroken series in the archives of the St. Anne's Church of the present, the building being the sixth of the name in the line of succession. The first entry in this registry is that of the baptism of a child of Cadillac, the founder of the colony. It is asserted that no other parish in the United States can present a similar record. This church was burned by discontented Indians in 1704, and again during an Indian outbreak in 1712. Father de l'Halle was killed by the Indians in 1706.

Other pastors during this period were the Recollect Fathers Bonaventure, Dominic de la Marche, Cherubin Denieau, Hyacinth Pelifresne, and Simplicius Boquet (1752-82) and the Sulpician Fathers Calvarin, Mercier, and Thaumur de la Somme. Detroit remained under English domination until 1796, when with the change of political control the spiritual jurisdiction passed to Bishop Carroll of Baltimore, and the Bishop of Quebec recalled his priests from the Michigan territory. Among those ministering at Detroit during the English occupation were Father Thomas Portier, who died in 1781, and Father John Francis Hubert, who was made Coadjutor Bishop of Quebec in June, 1785.

At the dawn of the nineteenth century Detroit, still a military post, had a population of about 2000, mainly French Catholics. St. Anne's parish then comprised the whole of the present State of Michigan and most of Wisconsin. In 1796 Bishop Carroll sent the Sulpician Father Michael Levadoux to take charge at Detroit. In June of the same year Fathers Gabriel Richard and Dilhet were appointed to assist him, the latter taking up his residence at Raisin River. Father Levadoux was recalled to Baltimore in 1801. Father Richard succeeded him and became not only pastor of St. Anne's, but one of the leading figures in the development of the West. This remarkable priest was born at Saintes, France, 15 October, 1767. His father was a government employee, and his mother Geneviève Bossuet, a scion of the same family as the great Bishop of Meaux. He was ordained as a Sulpician at Paris, in October, 1791. The Revolution drove him from his native land, and with Fathers Maréchal, Ciquard, and Matigonon, he arrived in Baltimore, 24 June, 1792. It was intended that they should be teachers at St. Mary's Seminary, but they were assigned to missionary work instead, as the seminary was not then ready for them. Father Richard was sent to Prairie du Rocher and Kaskaskia, Illinois, where he spent six years of hardship and privation, but fruitful in the results of his zealous ministrations. When he arrived at Detroit in June, 1798, he found religious conditions far from ideal, the town having been for years an Indian trading centre. He began at once to exert a salutary influence for the reformation of existing abuses and devoted himself also to promoting the welfare of the numerous Indian missions in the surrounding country. In the summer of 1801 he had Bishop Dénaut of Quebec visit Detroit on the invitation of Bishop Carroll and confirm 521 persons of ages ranging from thirteen to eighty years. His manuscript list of their names and ages is still kept in St. Anne's archives. In 1804 he started a Young Ladies' Academy and a seminary to foster vocations for the priesthood for young men, but a fire which destroyed

the town 11 June, 1805, swept these away as well as the church and priests' residence. So active were his resourceful methods that within three years another church was provided, the Catholic schools of Detroit were again in operation, and tuition given in six primary schools and two academies for girls. He was one of the founders of the University of Michigan, which began with the act of the legislature passed 26 August, 1817, establishing "the Catholepistemiad or University of Michigan" of which he was vice-president and professor for six of the thirteen departments of which its curriculum was made up. In 1807 the governor and other officials requested him to lecture to them and thus afforded him the opportunity to be the first priest in the United States to deliver a series of religious lectures to non-Catholics. He spoke to them on the general principles of religion and morality at noon every Sunday in the Council House. Explaining this action to Bishop Carroll, he wrote: "As there was no English minister here of any denomination, I thought it might be of some utility to take possession of the ground." The following year he went to Baltimore and brought back type and a printing press which he set up in Detroit. From this, on 31 August, 1809, he issued the "Michigan Essay or Impartial Observer", the first paper published in Michigan and the first Catholic paper in the United States. It had several columns printed in French and the rest in English and had only one advertisement—that of St. Anne's school. Between 1809 and 1812 he printed on this press seven books of a religious and educational character, one, "The Epistles and Gospels for all the Sundays and Feast-days of the Year", being the first publication in the Northwest of a part of the Holy Scriptures.

The war of 1812 with England demoralized conditions in Detroit, which fell into the hands of the British. Father Richard was arrested and kept a prisoner in Canada during the contest. On being released he returned to his parish and was at once busy helping everybody to repair the ravages of the war. In 1823 he was elected a Delegate to Congress from Michigan Territory, the only instance in which a priest has held a seat in the House of Representatives. He had five opponents at the polls, but many non-Catholics voted for him, which outweighed the bitter opposition of a number of members of his parish led by one of the trustees who had long been at enmity with him. He gave his salary for the improvement of the church. Just before he left for Washington he was put in prison by one of his parishioners who had obtained a divorce in a civil court and remarried. Father Richard declared him excommunicated, and the man sued for damages to his reputation and business and got a judgment of \$1,116. This Father Richard refused to pay, and he was imprisoned until three of his friends gave a bond for him. The judgment was eventually reversed. In Congress he worked assiduously for the interests of Michigan, but the only notable speech he made was that advocating the bill for the opening of a post-road from Detroit to Chicago. He sought re-election at the end of his term, but was defeated, mainly through the exertions of his trustee opponents. When Bishop Fenwick was consecrated first Bishop of Cincinnati in 1822 Michigan passed from Bardstown to that jurisdiction. Father Richard prepared for him a statement of the condition of the Territory, in which he then estimated there were about 6000 Catholics with five churches and two priests—himself and his assistant. An epidemic of cholera broke out in Detroit in the summer of 1832, and the venerable missionary, while unstintingly devoting himself to the help of the suffering, fell a victim to the disease, of which he died, 13 September, 1832. Preparations had been under way even then to raise Detroit to a bishopric, of which, had he lived, he would probably have received the mitre.

BISHOPS.—(1) JOHN FREDERIC REZE (the name is also given as Reese in the German ecclesiastical records), who had been a zealous missionary throughout the territory, was appointed the first bishop 25 February, 1833, and was consecrated at Cincinnati 6 October of the same year. He was born 6 February, 1791, at Viennenberg, Hanover, and enjoys the distinction of being the first German-born bishop of the American hierarchy. Drafted into military service in his youth, he served under Blücher as a dragoon at the battle of Waterloo. He was ordained in Rome, in 1822, and emigrated to the American missions in 1825, affiliating himself with Bishop Fenwick in Ohio. In 1827 he was sent to Europe to secure German priests and financial aid for the struggling missions and returned in a year, after success in both efforts. Through his exertions the famous Leopoldine Association that gave so much substantial help to the Church in the United States was founded in Austria in 1829.

When he took charge of the Diocese of Detroit there were eight churches and the Ottawa Indian mission within its limits. Under his auspices the Poor Clares opened a convent in Detroit and a school at Green Bay (1833). Holy Trinity church was built at Detroit, and parishes established at Monroe, Grand River, and Bertrand. A hospital was opened in Detroit in 1834 during an outbreak of cholera, where also St. Philip's College, an orphan asylum, Trinity Academy, and a house of the Ladies of Providence were established, with several parochial schools. The bishop, however, was attacked with softening of the brain and expressed in a letter to the Provincial Council of Baltimore, in 1837, a wish to resign or transfer the administration to a coadjutor. He was suspended from all episcopal jurisdiction and went to Rome, where he remained until the disorders in the city by the revolutionists in 1848, and then retired to his native Diocese of Hildesheim, Germany, where he died at the mother-house of the Sisters of Charity, 30 December, 1871, and was buried in the cathedral of that place.

(2) PETER PAUL LEFEBRE, another active and successful missionary of the Diocese of Cincinnati, was named as the coadjutor and administrator of Detroit, and consecrated titular Bishop of Zella, at Philadelphia, 21 November, 1841. He was born 30 April, 1804, at Roulers, near Ghent, Belgium, and, emigrating to the United States in 1828, was ordained priest at St. Louis, 17 July, 1831. He was in Europe when he was appointed bishop, but returned at once for his consecration. He was a careful and conservative prelate, forecasting the future in his selection of church sites, and devoting himself actively to the expansion of the facilities for the practice of the Faith in his diocese and the spread of sound Catholic education. The Redemptorists and the Religious of the Sacred Heart were established in Detroit, and for the parochial schools the Christian Brothers, the Sisters of Notre Dame, the Sisters of Charity, and the Sisters of the Immaculate Heart of Mary were brought into the diocese. In 1844 the creation of the new See of Milwaukee relieved the Bishop of Detroit of the care of that section and enabled him to devote more attention to his Indian missions, which were developed splendidly. In 1857 the separation of the Diocese of Sault-

GABRIEL RICHARD

Ste-Marie was made at Bishop LeFebvre's suggestion. With Bishop Spalding he was mainly instrumental in founding, in 1857, the American College at Louvain (q. v.). He died, 4 March, 1869.

(3) CASPER H. BORGESS (q. v.) was appointed his successor and consecrated titular Bishop of Calyson and coadjutor and administrator of Detroit, 24 April, 1870. On the death of Bishop Reze, 30 December, 1871, he assumed the title of Detroit. He resigned 16 April, 1888, and died 3 May, 1890.

(4) JOHN SAMUEL FOLEY was named the fourth bishop and consecrated at Baltimore, 4 November, 1888. He was born in that city 5 November, 1833, and ordained priest in Rome 20 December, 1856. His brother was Bishop Thomas Foley, administrator of Chicago (1870-79). The early settlers of Detroit had been French; these were followed, at different intervals, by Belgians, Germans, Poles, Slavs, and Italians. Bishop Foley established a special seminary for the Poles and secured the ministrations of religious of that nationality. A schism among them of several years' duration, and of disastrous results, was healed through his forbearance. In 1907 the priests and laity of the diocese, in honour of the golden jubilee of his priesthood, presented Bishop Foley with St. Francis's Home for Orphan Boys, built at a cost of \$250,000.

The Congregation of the Sisters Servants of the Immaculate Heart of Mary was founded at Monroe, Michigan, 28 Nov., 1845, by the Rev. Louis Gillet, C. SS. R. Three young ladies, two from Baltimore and one from Detroit, formed the new community, whose rule was taken from that of St. Alphonsus, and whose secondary object was the education of youth. In 1859 some of the sisters went to Pennsylvania; there are now three distinct mother-houses, one in the Archdiocese of Philadelphia, one in the Diocese of Scranton, and the original at Monroe, in the Diocese of Detroit. Besides these the sisters have schools in the Dioceses of Harrisburg, Altoona, Boise, Grand Rapids, Cleveland, Seattle, and Oregon.

The following religious orders and congregations have foundations in the diocese.—Communities of men: Fathers of St. Basil, Capuchins, Fathers of the Holy Ghost, Fathers of the Precious Blood, Redemptorists, Jesuits, Franciscans, Brothers of the Christian Schools, Xaverian Brothers. Communities of women: Sisters of Charity (Mt. St. Joseph, Ohio), Sisters of Charity (Emmitsburg, Md.), Sisters of Christian Charity, Sisters of St. Dominic (New York City), Sisters of St. Dominic (Racine, Wis.), School Sisters of St. Francis, Felician Sisters, Sisters of the Good Shepherd, Sisters of the Holy Names of Jesus and Mary, Sisters Servants of the Immaculate Heart of Mary, Sisters of St. Joseph, Religious of the Sacred Heart, Little Sisters of the Poor, School Sisters of Notre Dame, Polish Sisters of St. Joseph, Sisters of St. Dominic of the Perpetual Adoration.

STATISTICS: 1 bishop, 237 priests (193 secular and 44 regular), 146 churches with resident priests, 66 missions with churches, 20 stations, 23 chapels, 1 theological seminary for the secular clergy with 320 students, 40 Polish students, 1 theological seminary for religious; 3 colleges and academies for boys, students 600; 7 academies for girls, students 870; 70 parishes and missions with schools, pupils 23,086; 3 orphan asylums, inmates 600; 1 House of the Good Shepherd, inmates in preservation class 125. Total number of children under Catholic care, 23,811; 4 hospitals; 1 home for aged poor, inmates 250; 1 home for feeble-minded; 1 infant asylum, 1 home for working boys. Estimated Catholic population 256,500 (Catholic families 50,041).

THOMAS F. MEEHAN.

Deusedit (ADEODATUS I), SAINT, POPE, date of birth unknown; consecrated pope, 19 October (13 November), 615; d. 8 November (3 December), 618; distinguished for his charity and zeal. He encouraged and supported the clergy, who were impoverished in consequence of the political troubles of the time; and when his diocese was visited by a violent earthquake and the terrible scourge of leprosy he set an heroic example by his efforts to relieve the suffering. The few decretals ascribed to him are unauthenticated. He is said to have been the first pope to use leaden seals (*bulle*) for pontifical documents. One dating from his reign is still preserved, the obverse of which represents the Good Shepherd in the midst of His sheep, with the letters A and Ω underneath, while the reverse bears the inscription: DEUSEDIT PAPE. His feast occurs 8 November. LEO A. KELLY.

Deusedit, SAINT, a native of Wessex, England, whose Saxon name was Frithona, and of whose early life nothing is known; d. 14 July, 664. He was the sixth Archbishop of Canterbury (655-664), and was the first Anglo-Saxon to hold the primacy. He was consecrated at Canterbury in 655, by Ithamar, the first Saxon Bishop of Rochester, in succession to Honorius, thus commencing the long line of English archbishops, which was broken but once, and that by his immediate successor, Theodore. Little is known of the primacy of Deusedit. Most of the other bishops during his time were of either Celtic or French origin. Of the seven or eight consecrated during the nine years of his primacy only one received consecration from him, viz. Damian, Bishop of Rochester, consecrated in 656, and this is the sole official act of his that is known with absolute certainty. He is said to have hallowed Wulfhere's church at Medehamstede (Peterborough) in Mercia, the charter of which, dated 657, contains his signature, but from the fact that it also contains the names of Ithamar and Tuda a difficulty arises. Haddan and Stubbs, who print the charter (Councils of Great Britain and Ireland), consider the foundation of this monastery to have been not earlier than 664. The archbishop's name is given by Simeon of Durham as the consecrator of the seventy nuns of St. Eormenburga's convent in Thanet, but the statement lacks confirmation. St. Deusedit died on the same day as Erconbert, King of Kent, and was buried in St. Peter's porch at Canterbury.

G. CYPRIAN ALSTON.

Deusedit, CARDINAL, b. at Todi, Italy; d. between 1097 and 1100. He was a friend of St. Gregory VII and defender of his reformation measures. Deusedit joined the Benedictine Order and became a zealous promoter of ecclesiastical reforms in the latter half of the eleventh century. Pope Gregory VII raised him to the cardinalate with the title of S. Pietro in Vincoli. According to the superscription of chapter 420 (former reckoning 161) in the fourth book of his "Collectio canonum", Deusedit had sojourned in Germany; but it is not known, however, when and from what motive he did so. In 1078, he took part in a Roman synod, at which he represented the opinions of Berengarius of Tours (Mansi, Conc. Coll., XIX, 762). In the long conflict for the freedom of the ecclesiastical authority from the oppression of the civil power Deusedit sided with Gregory VII, and was one of his chief agents and defenders. At the suggestion evidently of this pope, he undertook the compilation of a collec-

tion of canons which he completed in 1087 and dedicated to Victor III (*Collectio canonum*, ed. Martucci, Venice, 1869; ed. Victor Wolf von Glanfell, Paderborn, 1905). It consists of four books: the first book (327 chapters) treats of the power of the Roman Church; the second (163 chapters) of the Roman clergy; the third (289 chapters) of ecclesiastical matters; the fourth (437 chapters) of the liberty of the Church and her ministers and of the immunities of the clergy. These canons were partly taken from earlier collections, e. g. that of Burchard of Worms, partly from the original documents found in the archives and the library of the Lateran palace. The sources of the collections are to be found in Holy Scripture, the councils, letters of popes, writings of the Fathers, letters of temporal rulers, and civil laws. He meant by this work to defend the rights and liberty of the Church and the authority of the Holy See, in keeping with the measures of Gregory VII and his adherents. At the same time, this collection reveals *Deusdedit* as one of the most important of the pre-Gratian canonists. Under Urban II (1088-1099) he published in the interest of the Gregorian reforms another work: "*Libellus contra invasores et symoniacos et reliquos schismaticos*" (ed. Mai, *Nova Bibliotheca Patrum*, VII, III, 77-114; ed. Sackur, *Mon. Germ. Hist.*, *Libelli de lite*, II, 300-365). This work was first published in a short, then in an enlarged form, the latter completed in 1099. In this work, important for the history of the investitures conflict under Urban II, the author points out that the temporal power has no authority in ecclesiastical matters and particularly no right to exercise ecclesiastical investiture. Sackur (see below) has made it probable that the so-called "*Dictatus Papæ*" (see GREGORY VII) were composed by *Deusdedit*. These are twenty-seven short theses concerning the privileges of the Roman Church and the pope [ed. Jaffé, *Bibl. Rer. Germ.*, (Berlin, 1864—) II, 174]. Until quite recently Gregory VII himself was generally regarded as the author; Löwenfeld (see below) continued to maintain the authorship of Gregory, but Sackur, however, has shown that the "*Indices capitulorum*" in the "*Collectio canonum*" of *Deusdedit* are closely related to the brief theses known as "*Dictatus Papæ*" both in respect of sense and verbal text. Most probably, therefore, the latter are taken from the collection of *Deusdedit*, who put them together from the "*Registrum Epistolarum*" or letter-book of Gregory. Possibly also *Deusdedit* was the editor of this famous and important collection of Gregory's correspondence. In this case, the cardinal appears in a new light as intimate counsellor and intellectual heir of Gregory VII. On 4 April, 1100, a certain Albericus appears as titular priest of S. Pietro in Vincoli; therefore *Deusdedit* was then no longer alive.

J. P. KIRSCH.

Deus in Adjutorium Meum Intende, with the response: "*Domine ad adjuvandum me festina*", first verse of the sixty-ninth Psalm. These words form the introductory prayer to every Hour of the Roman, monastic, and Ambrosian Breviaries, except during the last three days of Holy Week, and in the Office of the Dead. While they are said, or sung, all present sign themselves with the sign of the cross. Tradition says that St. Benedict introduced this custom into the monastic Office and that St. Gregory I extended it to all

the Roman churches; Cassian (*Coll.*, X, 10), however, says that from the earliest Christian times the monks used this introduction very often, probably outside of the liturgical prayers. In placing this supplication at the beginning of every Hour the Church implores the assistance of God against distractions in prayer.

In the Roman Rite the "*Deus in adjutorium*" is preceded in Matins by the "*Domine labia mea aperies*", whilst in the monastic Breviary the order is reversed. In Complin it is always preceded by the "*Convertite nos Deus*". In the Mozarabic Liturgy the Hours commence with the triple Kyrie Eleison. In all the Latin countries north, east, and west of the Alps the introduction to the solemn Vespers of Easter Sunday was formed by the nine Kyrie Eleison and Christe Eleison of the Easter Mass. In the churches which observe the Greek Rite, the Trisagion and other prayers open the Hours. The "*Deus in adjutorium*" is repeated three times during the concluding prayers of Prime. In the monasteries Prime was finished immediately after the prayer: "*Domine Deus omnipotens*"; then the monks went from the choir to the chapter-room, where the Martyrology was read, and the day's work was given out; before dispersing to their several occupations they sang three times the "*Deus in adjutorium*", to emphasize the union of prayer and labour.

FREDERICK G. HOLWECK.

Deuterocanonical Books. See CANON OF THE HOLY SCRIPTURES.

Deuteronomy.—This term occurs in Deut., xvii, 18 and Jos., viii, 32, and is the title of one of the five books of the Pentateuch. In both passages it renders the Latin *Deuteronomium*, the Greek τὸ δευτερονόμιον, the Hebrew משנה, and signifies "copy" or "duplicate" rather than "repetition". The texts themselves appear to demand this meaning; for Deut., xvii, 18 reads: "But after he is raised to the throne of his kingdom, he shall copy out to himself the Deuteronomy of this law in a volume, taking the copy of the priests of the Levitical tribe"; and Jos., viii, 32 relates: "And he wrote upon stones the Deuteronomy of the law of Moses, which he had ordered before the children of Israel." The Targum of the latter passage favours the same meaning. As title of the fifth book of the Pentateuch, *Deuteronomy* corresponds to the Hebrew אלה הדברים. Pseudo-Athanasius maintains that the title signifies "the second law" promulgated by Moses in accordance with the Divine precept. But it is more commonly understood as meaning "explanation" of the law, or "exhortation" inducing to the observance of the law. The introductory questions concerning the Book of Deuteronomy are treated in the article PENTATEUCH.

HAGEN, *Lexicon Biblicum* (Paris, 1905).

A. J. MAAS.

Deutinger, MARTIN, philosopher and religious writer, b. in Langenpreising, Bavaria, 24 March, 1815; d. at Pfäfers, Switzerland, 9 Sept., 1864. He was ordained priest in 1837, and after filling several clerical positions, taught philosophy at Freising (1841), Munich (1846), and Dillingen (1847-52). Like his predecessors, Baader (q. v.) and Anton Günther, he endeavoured to construct a philosophy that should mediate between Catholicism and the idealistic philosophy then prevailing in Germany, and thus conciliate the truths of faith with what he considered the demands of reason. The effort at conciliation, while no more successful than that of his predecessors, involved less sacrifice of the content of Faith and of objective reason. Deutinger's system is based on a scheme of trilogies. He places anthropology at the centre. Starting with universal methodical doubt, he finds in that doubt the

Ego revealed as an independent self-conscious person. Further reflection shows the self to be conditioned by the non-self (nature), while both self and nature suppose a supreme, free cause. Hence the first trilogy—Man, Nature, God. The evolution of the Ego is effected by the interaction of Nature and God, and this results in a triple life. The first element and stage proceeds from nature (the body), the second from God (the spirit), the third, the intermediating ground, is the soul. Hence the second trilogy constituting man's nature and stages of his development—Body, Soul, Spirit. The attributes of the spirit are being, knowing, willing. But the unity of these attributes is merely subjective; personality is only potentially in them. The spirit comes to actual personality through interaction with nature. The vital process, consisting in the interplay of nature (i. e. the necessitated factor) with the personal (i. e. the free) element, unfolds in three stages: as movement inward from without (thought, *Denken*); as outward from within (power, *Können*); and as proceeding from both together (doing, acting, *Tun*). Hence the trilogy of human faculty: Thought, Power, Action; and the departments of the philosophical system: science of thought (*Denklehre*), of art (*Kunstlehre*), and of conduct (moral philosophy). Outside these departments lie psychology and the philosophy of nature, while on the circumference extend jurisprudence and the philosophy of religion. Sensation and imagination are insufficient to explain the genesis of thought, the concept. The representation wherein the external and the internal factors unite is but one basis of conscious knowledge, the concept; the other lies in the free personal element, inward intuition, the idea. Idea, therefore, and representation must interact in order to engender the concept. Hence cognition is the product of the two opposing factors, representation and idea, between which it intermediates as concept. But just as the antinomy between the free personality and the necessitated outer nature urges to conciliation in action, so the antinomy between subject and object presses towards unification in thought. Now all intermediated unity comes of likeness, unlikeness, and the blending unity. Likeness lies in the subject; unlikeness in the object; unity in the interrelation of these two. From the first we get the principle of identity; from the second that of sequence, or reason; from the third that of disjunction, or exclusion. Hence the final trilogy of the laws of thought.

Each of the foregoing "ternalities" is developed with considerable insight, but with much artificiality and still more mistiness, which is felt at once in the distinction he makes between soul and spirit, and in the genesis of personality by the play of the necessitating nature-object on the free spirit. The similarity to the Hegelian idealism, if not the borrowed influence of that elusive system, is at once apparent.

Deutinger possessed a richly-endowed mind, a soaring, though somewhat exuberant, imagination, an ardent love of the beautiful in nature and in art, and a comprehensive, though not always sufficiently critical, intelligence. He failed in his main purpose not because he lacked philosophical power or energy, but chiefly because he broke with philosophical tradition to go his own way. He is said to have boasted that "he had builded a house of his own in philosophy, regardless of the form and material employed by other builders". "This is all very fine", observes Stöckl, "and it may well be that Deutinger wanted to do perfect justice to the faith which he strove to conciliate with a modernised philosophy. But just because he wrought by himself independently of the claims of the Christian philosophical tradition, his system manifests the characteristic of all other modern systems constructed in a like spirit. Subjectivism predominates throughout, and therefore it enjoyed but an ephemeral existence." As a critic, Deutinger was brilliant

and prolific. His style, though somewhat luxuriant, is marked by a sparkling wit and sarcasm that is specially captivating with the young. His works comprise: "Grundlinien der positiven Philosophie" (Ratisbon, 1843-49); "Geschichte der griechischen Philosophie" (Ratisbon, 1852-53); "Bilder des Geistes in Kunst u. Natur" (Augsburg, 1846-49, and Ratisbon, 1851); "Grundriss der Moralphilosophie" (Dillingen, 1847); "Grundriss der Logik" (Dillingen, 1848); "Wallfahrt nach Oberammergau" (Munich, 1851); "Geist der christl. Ueberlieferung" (Augsburg, 1850); "Das Princip der neueren Philosophie und die christl. Wissenschaft" (Ratisbon, 1857); "Ueber das Verhältniss der Poesie zur Religion" (Augsburg, 1861); "Das Reich Gottes nach dem Apostel Joannes" (Freiburg, 1862); "Renan und das Wunder" (Munich, 1864). Among his posthumous works, edited by his pupil Lorenz Kastner, are: "Der gegenwärtige Zustand der deutschen Philosophie"; a third volume of "Das Reich Gottes" (Ratisbon, 1867); and an additional part to the "Bilder des Geistes" (Munich, 1866).

KASTNER, *Deutingers Leben und Schriften* (Munich, 1875); STÖCKL, *Geschichte der neueren Philosophie* (Mainz, 1883); NEUDECKER, *Das Grundproblem der Erkenntnistheorie* (Nordlingen, 1881), favourable to Deutinger; on the opposite side, BECKER, *Die Philosophie Deutingers in ihrem Verhältniss zur Scholastik und Philosophie der Neuzeit in der Katholik* (1886) I, 693; II, 136; SCUMPD in *Kirchenlexikon*, s. v.; SATTEL, *Deutingers Gotteslehre* (Ratisbon, 1905).

F. P. SIEGFRIED.

Devas, CHARLES STANTON, political economist, b. at Woodside, Old Windsor, England, of Protestant parents, 26 August, 1848; d. 6 November, 1906. He was educated at Eton and Balliol College, Oxford, where he took a first class in the honours School of Law and History. Before proceeding to the university he had been received into the Catholic Church and his subsequent career was entirely devoted to the service of religion. By treating political economy, both in books and lectures, from a definitely Catholic standpoint, he was one of the earliest to oppose the current teaching, which declined to consider history or ethics as relevant to the subject.

"The Groundwork of Economics" (1883), the first work published in his own name (for the translation into English of Hergenröther's "Church and State" was anonymous), attracted considerable attention and was translated into German in 1896 by Dr. Walter Kämpfe. The "Manual of Political Economy" (Stonyhurst Philosophical Series), published in 1892 (third edition, 1907), has achieved a more permanent success, and is now a recognized textbook in English-speaking schools and seminaries. In 1886 he published "Studies in Family Life", an historical inquiry into this branch of economics, with a view to justify the contention that Christianity is an essential factor in the problem of social well-being. This book was translated into German in 1887 by Paul Maria Baumgarten. In 1895 he published anonymously in London a poetical version of the story of Sintram.

Besides his books he wrote frequently for "The Dublin Review", "The Month", and other periodicals, both English and American, and read papers before The British Association, The Manchester Statistical Society, The Catholic Truth Society, and other bodies. A considerable number of his later essays and lectures dealing with modern social problems have been issued by The Catholic Truth Society in pamphlet form, and his premature death was a severe loss to English Catholics in the confusion of the controversies raised by Socialism. His last, and perhaps his most important, book, "The Key to the World's Progress", was published in 1906. This, unlike his earlier works, is directly apologetic, being an elaborate defence of the Catholic Church written with a view to meeting the difficulties and questionings of the twentieth century. A popular edition has been issued since his death.

In 1874 he married Eliza Mary Katherine, the

daughter of Francis Ridout Ward. She died in 1889, leaving nine children. Devas was a man of singular piety, a zealous member of the Society of St. Vincent of Paul, and an active friend of the poor; he had no other ambition except to propose the Catholic Faith to the reasonable acceptance of a troubled and sceptical age. He took a leading part in all Catholic enterprises of his time in England—notably in that which enabled Catholics to frequent the universities—and though always unwilling to make himself personally prominent, he exercised considerable influence over the thought and conduct of English Catholics. He was examiner in Political Economy at the Royal University of Ireland from 1889 to 1898.

De Vere, AUBREY THOMAS HUNT, poet, critic, and essayist, b. at Curragh Chase, County Limerick, Ireland, 10 January, 1814; died there, 21 January, 1902. He was the third son of Sir Aubrey de Vere and Mary Spring Rice, sister of the first Lord Montagu. Aubrey Vere, second son of the sixteenth Earl of Oxford, was his direct ancestor. Aubrey de Vere early showed his rare poetic temperament. His young imagination was strongly influenced by his friendship with the astronomer, Sir William Rowan Hamilton, through whom he came to a knowledge and reverent admiration for Wordsworth and Coleridge. In 1832 he entered Trinity College, Dublin, where he devoted himself to the study of metaphysics, reading Kant and Coleridge. Later he visited Oxford, Cambridge, and Rome, and came under the potent influence of Newman. He also visited the Lake Country of England, and he afterwards spoke of the days under Wordsworth's roof as the greatest honour of his life. His veneration for Wordsworth was singularly shown in after life, when he never omitted a yearly pilgrimage to the grave of that poet until advanced age made the journey impossible.

From his study of Coleridge, Aubrey de Vere received his first impulse towards Catholicity, which was developed by events following the conversion of Manning, and he was received into the Church, November, 1857, in the archbishop's chapel at Avignon. His unusual sweetness of character won for him many friends, and this important change in his life did not separate him from them. Among these friends Sara Coleridge and Sir Henry Taylor are pre-eminent, and his long correspondence with them, with Miss Fenwick, with Gladstone, and many others of literary and political fame, is of marked interest. The famine year in Ireland was one of the most important in his earlier life, and he then showed a practical and vigorous interest in politics. In 1848 he had published a book on English misrule and Irish misdeeds, which was criticized as a work of great value, notably by Mill and Carlyle and Lord John Manners. His brother, Sir Stephen de Vere, the translator of some of the Odes and Epodes of Horace, also made heroic efforts at this time to better the condition of Irish emigrants; and the intimate friendship between the brothers led to their almost daily correspondence throughout their long lives.

It is as a poet that Aubrey de Vere is best known. His work is in part historical and in part literary, his aim being to illustrate the supernatural in the form of supernatural truth by recording the conversion to Christianity of Ireland and England. The quality of his verse is strong and vigorous, musical, and remarkably spiritual. A critic in the "Quarterly Review" of 1896 says of his poetry, that next to Browning's it shows the fullest vitality, resumes the largest sphere of ideas, covers the broadest intellectual field since the poetry of Wordsworth. He never strove for ornate effect in his poetry, which is marked by sublime

and serious conviction as he traces the progress of spiritual thought in the development of the nations, notably Ireland, in "The Legend of St. Patrick" (London, 1872), and of Spain in his eloquent portrayal of the Cid. "The Children of Lir" is one of the most exquisite lyrics in the language, and his classic knowledge, his richness of imagination, his combined grace and dignity of thought are revealed in his "Search after Proserpine" (London, 1843). In his "Alexander the Great" (London, 1874) he represents the Greek ideal in remarkable purity, and this historical play, with his "Saint Thomas of Canterbury" (ibid.), reveals him as a dramatist unequalled in his century, except by Sir Henry Taylor, Browning, and his father, the elder de Vere. His memorial sonnets are characterized by strong and deep thought, and his odes show a descriptive power, and a spontaneous lyric charm and grace.

In addition to the above-mentioned works, all published in London, he also wrote: "Legends and Records of the Church and Empire" (1887); "May Carols and Legends of Saxon Saints" (1857); "Mediaeval Records and Sonnets" (1898); "Legends of the Saxon Saints" (1879); "May Carols" (1857); "Saint Peter's Chains" (1888); "Essays Literary and Ethical" (1889); "Essays chiefly on Poetry" (1887); "Picturesque Sketches of Greece and Turkey" (1850).

As a critic, Aubrey de Vere shows discriminating power in the two volumes of "Essays" in which he writes of Sir Henry Taylor, Keats, Landor, and others, and of the power and passion of Wordsworth. He would have been satisfied to be known solely as the interpreter of Wordsworth, whom he considered the greatest poet after Milton. His charm of description is shown in two early volumes of "Sketches of Greece and Turkey". In a volume of "Recollections" (London, 1897) may be found reminiscences of many notable people and events. The personality of Aubrey de Vere was singularly charming. He was of tall and slender physique, thoughtful and grave in character, of exceeding dignity and grace of manner, and retained his vigorous mental powers to a great age. He was undoubtedly one of the most profoundly intellectual poets of his time. As he never married, the name of de Vere at his death became extinct for the second time, and has been assumed by his nephew.

(2) SIR STEPHEN EDWARD DE VERE, poet and philanthropist, born at Curragh Chase, 12 July, 1812, died at Foynes Island, 10 November, 1904, second son of Sir Aubrey Hunt de Vere, and brother of the above. At the death of his eldest brother, Sir Vere de Vere, succeeded as fourth baronet to the title, which became extinct at his death. From his early youth he laboured for the amelioration of the conditions, social and political, of the Irish people. In 1847 he made the voyage to Canada in the steerage of a ship, sharing the privations of the emigrants that an accurate report of their treatment might be given to the public and to Parliament. On his return to England in 1848, his letter describing the sufferings he had witnessed was read in the House of Lords, and the "Passenger Act" was amended. Sir Stephen de Vere became a Catholic from his observation of the peasantry whom he had taught, fed, and nursed in his own house. He had his residence at Foynes Island in the river Shannon, where he made his remarkable translations from Horace. He also built there a charming Gothic church, and died at the great age of ninety years. He was of small and slender physique, and, like his brother, was unmarried. He was Member of Parliament for Limerick, 1854-1859.

HELEN GRACE SMITH.

Devil (Greek *διάβολος*; Lat. *diabolus*).—The name commonly given to the fallen angels, who are also known as demons (see DEMON; DEMONOLOGY). With the article (*ὁ*) it denotes Lucifer, their chief, as in Matthew, xxv, 41, "the Devil and his angels". It may be said of this name, as St. Gregory says of the word *angel*, "*nomen est officii, non naturæ*"—the designation of an office, not of a nature. For the Greek word (from *διαβάλλειν*, "to traduce") means a slanderer, or accuser, and in this sense it is applied to him of whom it is written "the accuser [*ὁ κατηγοροῦς*] of our brethren is cast forth, who accused them before our God day and night" (Apoc., xii, 10). It thus answers to the Hebrew name Satan (*שָׂטָן*) which signifies an adversary, or an accuser.

Mention is made of the Devil in many passages of the Old and New Testaments, but there is no full account given in any one place, and the Scripture teaching on this topic can only be ascertained by combining a number of scattered notices from Genesis to Apocalypse, and reading them in the light of patristic and theological tradition. The authoritative teaching of the Church on this topic is set forth in the decrees of the Fourth Lateran Council (cap. i, "Firmiter credimus"), wherein, after saying that God in the beginning had created together two creatures, the spiritual and the corporeal, that is to say the angelic and the earthly, and lastly man, who was made of both spirit and body, the council continues: "*Diabolus enim et alii dæmones a Deo quidem naturā creati sunt boni, sed ipsi per se facti sunt mali*". Here it is clearly taught that the Devil and the other demons are spiritual or angelic creatures created by God in a state of innocence, and that they became evil by their own act. It is added that man sinned by the suggestion of the Devil, and that in the next world the wicked shall suffer perpetual punishment with the Devil. The doctrine which may thus be set forth in a few words has furnished a fruitful theme for theological speculation for the Fathers and Schoolmen, as well as later theologians, some of whom, Suarez for example, have treated it very fully. On the other hand it has also been the subject of many heretical or erroneous opinions, some of which owe their origin to pre-Christian systems of demonology (see DEMONOLOGY). In later years Rationalist writers have rejected the doctrine altogether, and seek to show that it has been borrowed by Judaism and Christianity from external systems of religion wherein it was a natural development of primitive Animism (q. v.).

As may be gathered from the language of the Lateran definition, the Devil and the other demons are but a part of the angelic creation, and their natural powers do not differ from those of the angels who remained faithful (see ANGEL). Like the other angels, they are pure spiritual beings without any body, and in their original state they are endowed with supernatural grace and placed in a condition of probation. It was only by their fall that they became devils. This was before the sin of our first parents, since this sin itself is ascribed to the instigation of the Devil: "By the envy of the Devil, death came into the world" (Wisdom, ii, 24). Yet it is remarkable that for an account of the fall of the angels we must turn to the last Book of the Bible. For as such we may regard the vision in the Apocalypse, albeit the picture of the past is blended with prophecies of what shall be in the future: "And there was a great battle in heaven, Michael and his angels fought with the dragon, and the dragon fought and his angels: and they prevailed not, neither was their place found any more in heaven. And that great dragon was cast out, that old serpent, who is called the devil and Satan, who seduceth the

whole world; and he was cast unto the earth, and his angels were thrown down with him" (Apocalypse, xii, 7-9). To this may be added the words of St. Jude: "And the angels who kept not their principality, but forsook their own habitation, he hath reserved under darkness in everlasting chains, unto the judgment of the great day" (Jude, i, 6; cf. II Peter, ii, 4). In the Old Testament we have a brief reference to the Fall in Job, iv, 18: "In his angels he found wickedness". But to this must be added the two classic texts in the prophets: "How art thou fallen from heaven, O Lucifer, who didst rise in the morning? how art thou fallen to the earth, that didst wound the nations? And thou saidst in thy heart: I will ascend into heaven, I will exalt my throne above the stars of God; I will sit in the mountain of the covenant, in the sides of the north. I will ascend above the height of the clouds, I will be like the most High. But yet thou shalt be brought down to hell, into the depth of the pit" (Isaiah, xiv, 12-15). This parable of the prophet is expressly directed against the King of Babylon, but both the early Fathers and later Catholic commentators agree in understanding it as applying with deeper significance to the fall of the rebel angel. And the older commentators generally consider that this interpretation is confirmed by the words of Our Lord to His disciples: "I saw Satan like lightning falling from heaven" (Luke, x, 18). For these words were regarded as a rebuke to the disciples, who were thus warned of the danger of pride by being reminded of the fall of Lucifer. But modern commentators take this text in a different sense, and refer it not to the original fall of Satan, but his overthrow by the faith of the disciples, who cast out devils in the name of their Master. And this new interpretation, as Schanz observes, is more in keeping with the context.

The parallel prophetic passage is Ezekiel's lamentation upon the king of Tyre: "Thou wast the seal of resemblance, full of wisdom, and perfect in beauty. Thou wast in the pleasures of the paradise of God; every precious stone was thy covering; the sardius, the topaz, and the jasper, the chrysolite, and the onyx, and the beryl, the sapphire, and the carbuncle, and the emerald; gold the work of thy beauty: and thy pipes were prepared in the day that thou wast created. Thou a cherub stretched out, and protecting, and I set thee in the holy mountain of God, thou hast walked in the midst of the stones of fire. Thou wast perfect in thy ways from the day of creation, until iniquity was found in thee" (Ezekiel, xxviii, 12-15). There is much in the context that can only be understood literally of an earthly king concerning whom the words are professedly spoken, but it is clear that in any case the king is likened to an angel in Paradise who is ruined by his own iniquity.

Even for those who in no wise doubt or dispute it, the doctrine set forth in these texts and patristic interpretations may well suggest a multitude of questions, and theologians have not been loth to ask and answer them. And in the first place, what was the nature of the sin of the rebel angels? In any case this was a point presenting considerable difficulty, especially for theologians, who had formed a high estimate of the powers and possibilities of angelic knowledge, a subject which had a peculiar attraction for many of the great masters of scholastic speculation. For if sin be, as it surely is, the height of folly, the choice of darkness for light, of evil for good, it would seem that it can only be accounted for by some ignorance, or inadvertence, or weakness, or the influence of some overmastering passion. But most of these explanations seem to be precluded by the powers and perfections of the angelic nature. The weakness of the flesh, which accounts for such a mass of human wickedness, was altogether absent from the angels. There could be no place for carnal sin without the *corpus delicti*. And even some sins that are purely spiritual

or intellectual seem to present an almost insuperable difficulty in the case of the angels. This may certainly be said of the sin which by many of the best authorities is regarded as being actually the great offence of Lucifer, to wit, the desire of independence of God and equality with God. It is true that this seems to be asserted in the passage of Isaiah (xiv, 13). And it is naturally suggested by the idea of rebellion against an earthly sovereign, wherein the chief of the rebels very commonly covets the kingly throne. At the same time the high rank which Lucifer is generally supposed to have held in the hierarchy of angels might seem to make this offence more likely in his case, for, as history shows, it is the subject who stands nearest the throne who is most open to temptations of ambition. But this analogy is not a little misleading. For the exaltation of the subject may bring his power so near that of his sovereign that he may well be able to assert his independence or to usurp the throne; and even where this is not actually the case he may at any rate contemplate the possibility of a successful rebellion. Moreover, the powers and dignities of an earthly prince may be compatible with much ignorance and folly. But it is obviously otherwise in the case of the angels. For, whatever gifts and powers may be conferred on the highest of the heavenly princes, he will still be removed by an infinite distance from the plenitude of God's power and majesty, so that a successful rebellion against that power or any equality with that majesty would be an absolute impossibility. And what is more, the highest of the angels, by reason of their greater intellectual illumination, must have the clearest knowledge of this utter impossibility of attaining to equality with God. This difficulty is clearly put by the Disciple in St. Anselm's dialogue "*De Casu Diaboli*" (cap. iv); for the saint felt that the angelic intellect, at any rate, must see the force of the "ontological argument" (see ONTOLOGY). "If", he asks, "God cannot be thought of except as sole, and as of such an essence that nothing can be thought of like to Him [then] how could the Devil have wished for what could not be thought of?—He surely was not so dull of understanding as to be ignorant of the inconceivability of any other entity like to God" (*Si Deus cogitari non potest, nisi illi solus, ut nihil illi simile cogitari possit, quomodo diabolus potuit velle quod non potuit cogitari. Non enim ita obtusæ mentis erat, ut nihil aliud simile Deo cogitari posse nesciret*). The Devil, that is to say, was not so obtuse as not to know that it was impossible to conceive of anything like (i. e. equal) to God. And what he could not think he could not will. St. Anselm's answer is that there need be no question of absolute equality; yet to will anything against the Divine will is to seek to have that independence which belongs to God alone, and in this respect to be equal to God. In the same sense St. Thomas (I, Q. lxiii, a. 3) answers the question, whether the Devil desired to be "as God". If by this we mean equality with God, then the Devil could not desire it, since he knew this to be impossible, and he was not blinded by passion or evil habit so as to choose that which is impossible, as may happen with men. And even if it were possible for a creature to become God, an angel could not desire this, since, by becoming equal with God he would cease to be an angel, and no creature can desire its own destruction or an essential change in its being. These arguments are combated by Scotus (In II lib. Sent., dist. vi, Q. i.), who distinguishes between efficacious volition and the volition of complaisance, and maintains that by the latter act an angel could desire that which is impossible. In the same way he urges that, though a creature cannot directly will its own destruction, it can do this *consequenter*, i. e. it can will something from which this would follow.

Although St. Thomas regards the desire of equality with God as something impossible, he teaches never-

theless (loc. cit.) that Satan sinned by desiring to be "as God"; according to the passage in the prophet (Isaias, xiv), and he understands this to mean likeness, not equality. But here again there is need of a distinction. For men and angels have a certain likeness to God in their natural perfections, which are but a reflection of his surpassing beauty, and yet a further likeness is given them by supernatural grace and glory. Was it either of these likenesses that the devil desired? And if it be so, how could it be a sin? For was not this the end for which men and angels were created? Certainly, as St. Thomas teaches, not every desire of likeness with God would be sinful, since all may rightly desire that manner of likeness which is appointed them by the will of their Creator. There is sin only where the desire is inordinate, as in seeking something contrary to the Divine will, or in seeking the appointed likeness in a wrong way. The sin of Satan in this matter may have consisted in desiring to attain supernatural beatitude by his natural powers or, what may seem yet stranger, in seeking his beatitude in the natural perfections and rejecting the supernatural. In either case, as St. Thomas considers, this first sin of Satan was the sin of pride. Scotus, however (loc. cit., Q. ii), teaches that this sin was not pride properly so called, but should rather be described as a species of spiritual lust.

Although nothing definite can be known as to the precise nature of the probation of the angels and the manner in which many of them fell, many theologians have conjectured, with some show of probability, that the mystery of the Divine Incarnation was revealed to them, that they saw that a nature lower than their own was to be hypostatistically united to the Person of God the Son, and that all the hierarchy of heaven must bow in adoration before the majesty of the Incarnate Word; and this, it is supposed, was the occasion of the pride of Lucifer (cf. Suarez, *De Angelis*, lib. VII, xiii). As might be expected, the advocates of this view seek support in certain passages of Scripture, notably in the words of the Psalmist as they are cited in the Epistle to the Hebrews: "And again, when he bringeth in the first-born into the world, he saith: And let all the angels of God adore Him" (Heb., i, 6; Ps. xcvi, 7). And if the twelfth chapter of the Apocalypse may be taken to refer, at least in a secondary sense, to the original fall of the angels, it may seem somewhat significant that it opens with the vision of the Woman and her Child. But this interpretation is by no means certain, for the text in Hebrews, i, may be referred to the second coming of Christ, and the same may be said of the passage in the Apocalypse.

It would seem that this account of the trial of the angels is more in accordance with what is known as the Scotist doctrine on the motives of the Incarnation than with the Thomist view, that the Incarnation was occasioned by the sin of our first parents. For since the sin itself was committed at the instigation of Satan, it presupposes the fall of the angels. How, then, could Satan's probation consist in the foreknowledge of that which would, *ex hypothesi*, only come to pass in the event of his fall? In the same way it would seem that the aforesaid theory is incompatible with another opinion held by some old theologians, to wit, that men were created to fill up the gaps in the ranks of the angels. For this again supposes that if no angels had sinned no men would have been made, and in consequence there would have been no union of the Divine Person with a nature lower than the angels.

As might be expected from the attention they had bestowed on the question of the intellectual powers of the angels, the medieval theologians had much to say on the time of their probation. The angelic mind was conceived of as acting instantaneously, not, like the mind of man, passing by discursive reasoning from premises to conclusions. It was pure intelligence as distinguished from reason. Hence it would seem that

there was no need of any extended trial. And in fact we find St. Thomas and Scotus discussing the question whether the whole course might not have been accomplished in the first instant in which the angels were created. The Angelic Doctor argues that the Fall could not have taken place in the first instant. And it certainly seems that if the creature came into being in the very act of sinning the sin itself might be said to come from the Creator. But this argument, together with many others, is answered with his accustomed acuteness by Scotus, who maintains the abstract possibility of sin in the first instant. But whether possible or not, it is agreed that this is not what actually happened. For the authority of the passages in Isaiah and Ezekiel, which were generally accepted as referring to the fall of Lucifer, might well suffice to show that for at least one instant he had existed in a state of innocence and brightness. To modern readers the notion that the sin was committed in the second instant of creation may seem scarcely less incredible than the possibility of a fall in the very first. But this may be partly due to the fact that we are really thinking of human modes of knowledge, and fail to take into account the Scholastic conception of angelic cognition. For a being who was capable of seeing many things at once, a single instant might be equivalent to the longer period needed by slowly-moving mortals.

This dispute, as to the time taken by the probation and fall of Satan, has a purely speculative interest. But the corresponding question as to the rapidity of the sentence and punishment is in some ways a more important matter. There can indeed be no doubt that Satan and his rebel angels were very speedily punished for their rebellion. This would seem to be sufficiently indicated in some of the texts which are understood to refer to the fall of the angels. It might be inferred, moreover, from the swiftness with which punishment followed on the offence in the case of our first parents, although man's mind moves more slowly than that of the angels, and he had more excuse in his own weakness and in the power of his tempter. It was partly for this reason, indeed, that man found mercy, whereas there was no redemption for the angels. For, as St. Peter says, "God spared not the angels that sinned" (II Pet., ii, 4). This, it may be observed, is asserted universally, indicating that all who fell suffered punishment. For these and other reasons theologians very commonly teach that the doom and punishment followed in the next instant after the offence, and many go so far as to say there was no possibility of repentance. But here it will be well to bear in mind the distinction drawn between revealed doctrine, which comes with authority, and theological speculation, which to a great extent rests on reasoning. No one who is really familiar with the medieval masters, with their wide differences, their independence, their bold speculation, is likely to confuse the two together. But in these days there is some danger that we may lose sight of the distinction. It is true that, when it fulfils certain definite conditions, the agreement of theologians may serve as a sure testimony to revealed doctrine, and some of their thoughts and even their very words have been adopted by the Church in her definitions of dogma. But at the same time these masters of theological thought freely put forward many more or less plausible opinions, which come to us with reasoning rather than authority, and must needs stand or fall with the arguments by which they are supported. In this way we may find that many of them may agree in holding that the angels who sinned had no possibility of repentance. But it may be that it is a matter of argument, that each one holds it for a reason of his own and denies the validity of the arguments adduced by others. Some argue that from the nature of the angelic mind and will there was an intrinsic impossibility of repentance. But it may be

observed that in any case the basis of this argument is not revealed teaching, but philosophical speculation. And it is scarcely surprising to find that its sufficiency is denied by equally orthodox doctors who hold that if the fallen angels could not repent this was either because the doom was instantaneous, and left no space for repentance, or because the needful grace was denied them. Others, again, possibly with better reason, are neither satisfied that sufficient grace and room for repentance were in fact refused, nor can they see any good ground for thinking this likely, or for regarding it as in harmony with all that we know of the Divine mercy and goodness. In the absence of any certain decision on this subject, we may be allowed to hold, with Suarez, that, however brief it may have been, there was enough delay to leave an opportunity for repentance, and that the necessary grace was not wholly withheld. If none actually repented, this may be explained in some measure by saying that their strength of will and fixity of purpose made repentance exceedingly difficult, though not impossible; that the time, though sufficient, was short; and that grace was not given in such abundance as to overcome these difficulties.

The language of the prophets (Isaiah, xiv; Ezekiel, xxviii) would seem to show that Lucifer held a very high rank in the heavenly hierarchy. And, accordingly, we find many theologians maintaining that before his fall he was the foremost of all the angels. Suarez is disposed to admit that he was the highest negatively, i. e. that no one was higher, though many may have been his equals. But here again we are in the region of pious opinions, for some divines maintain that, far from being first of all, he did not belong to one of the highest choirs—Seraphim, Cherubim, and Thrones—but to one of the lower orders of angels. In any case it appears that he holds a certain sovereignty over those who followed him in his rebellion. For we read of "the Devil and his angels" (Matt., xxv, 41), "the dragon and his angels" (Apoc., xii, 7), "Beelzebub, the prince of devils"—which, whatever be the interpretation of the name, clearly refers to Satan, as appears from the context: "And if Satan also be divided against himself, how shall his kingdom stand? Because you say that through Beelzebub I cast out devils" (Luke, xi, 15, 18), and "the prince of the Powers of this air" (Ephes., ii, 2). At first sight it may seem strange that there should be any order or subordination amongst those rebellious spirits, and that those who rose against their Maker should obey one of their own fellows who had led them to destruction. And the analogy of similar movements among men might suggest that the rebellion would be likely to issue in anarchy and division. But it must be remembered that the fall of the angels did not impair their natural powers, that Lucifer still retained the gifts that enabled him to influence his brethren before their fall, and that their superior intelligence would show them that they could achieve more success and do more harm to others by unity and organization than by independence and division.

Besides exercising this authority over those who were called "his angels", Satan has extended his empire over the minds of evil men. Thus, in the passage just cited from St. Paul, we read, "And you, when you were dead in your offences and sins, wherein in times past you walked according to the course of this world, according to the prince of the power of this air, of the spirit that now worketh on the children of unbelief" (Ephes., ii, 1, 2). In the same way Christ in the Gospel calls him "the prince of this world". For when His enemies are coming to take Him, He looks beyond the instruments of evil to the master who moves them, and says: "I will not now speak many things to you, for the prince of this world cometh, and in me he hath not anything" (John, xiv, 30). There is no need to discuss the view of some theologians who

surmise that Lucifer was one of the angels who ruled and administered the heavenly bodies, and that this planet was committed to his care. For in any case the sovereignty with which these texts are primarily concerned is but the rude right of conquest and the power of evil influence. His sway began by his victory over our first parents, who, yielding to his suggestions, were brought under his bondage. All sinners who do his will become in so far his servants. For, as St. Gregory says, he is the head of all the wicked—"Surely the Devil is the head of all the wicked; and of this head all the wicked are members" (*Certe iniquorum omnium caput diabolus est; et hujus capitis membra sunt omnes iniqui.*—Hom. 16, in Evangel.). This headship over the wicked, as St. Thomas is careful to explain, differs widely from Christ's headship over the Church, inasmuch as Satan is only head by outward government and not also, as Christ is, by inward, life-giving influence (Summa, III, Q. viii, a. 7). With the growing wickedness of the world and the spreading of paganism and false religions and magic rites, the rule of Satan was extended and strengthened till his power was broken by the victory of Christ, who for this reason said, on the eve of His Passion: "Now is the judgment of the world: now shall the prince of this world be cast out" (John, xii, 31). By the victory of the Cross Christ delivered men from the bondage of Satan and at the same time paid the debt due to Divine justice by shedding His blood in atonement for our sins. In their endeavours to explain this great mystery, some old theologians, misled by the metaphor of a ransom for captives made in war, came to the strange conclusion that the price of Redemption was paid to Satan. But this error was effectively refuted by St. Anselm, who showed that Satan had no rights over his captives and that the great price wherewith we were bought was paid to God alone (cf. ATONEMENT).

What has been said so far may suffice to show the part played by the Devil in human history, whether in regard to the individual soul or the whole race of Adam. It is indicated, indeed, in his name of *Satan*, the adversary, the opposer, the accuser, as well as by his headship of the wicked ranged under his banner in continual warfare with the kingdom of Christ. The two cities whose struggle is described by St. Augustine are already indicated in the words of the Apostle, "In this the children of God are manifest and the children of the devil: for the devil sinneth from the beginning. For this purpose the Son of God appeared, that He might destroy the works of the devil" (John, iii, 10, 8). Whether or no the foreknowledge of the Incarnation was the occasion of his own fall, his subsequent course has certainly shown him the relentless enemy of mankind and the determined opponent of the Divine economy of redemption. And since he lured our first parents to their fall he has ceased not to tempt their children in order to involve them in his own ruin. There is no reason, indeed, for thinking that all sins and all temptations must needs come directly from the Devil or one of his ministers of evil. For it is certain that if, after the first fall of Adam, or at the time of the coming of Christ, Satan and his angels had been bound so fast that they might tempt no more, the world would still have been filled with evils. For men would have had enough of temptation in the weakness and waywardness of their hearts. But in that case the evil would clearly have been far less than it is now, for the activity of Satan does much more than merely add a further source of temptation to the weakness of the world and the flesh; it means a combination and an intelligent direction of all the elements of evil. The whole Church and each one of her children are beset by dangers, the fire of persecution, the enervation of ease, the dangers of wealth and of poverty, heresies and errors of opposite characters, rationalism and superstition, fanaticism and indiffer-

ence. It would be bad enough if all these forces were acting apart and without any definite purpose, but the perils of the situation are incalculably increased when all may be organized and directed by vigilant and hostile intelligences. It is this that makes the Apostle, though he well knew the perils of the world and the weakness of the flesh, lay special stress on the greater dangers that come from the assaults of those mighty spirits of evil in whom he recognized our real and most formidable foes—"Put you on the armour of God, that you may be able to stand against the deceits of the devil. For our wrestling is not against flesh and blood; but against principalities and powers, against the rulers of the world of this darkness, against the spirits of wickedness in the high places . . . Stand therefore, having your loins girt about with truth, having on the breastplate of justice, and your feet shod with the preparation of the gospel of peace; in all things taking the shield of faith, wherewith you may be able to extinguish all the fiery darts of the most wicked one" (Ephes., vi, 11, 16).

Devil's Advocate. See ADVOCATUS DIABOLI.

Devil-Worshippers.—The meaning of this compound term is sufficiently obvious, for all must be familiar with the significance of its two component parts. But the thing denoted by the name is by no means so easy to understand. For there is such a strange startling incompatibility between the notion of devil and that of an object of worship, that the combination in this case may well present a grave difficulty. And the more we are able to understand about the character and history of the Devil and about the true nature of worship, the more difficult is it to believe that men can have been led, even in the utmost extremity of folly and wickedness, to worship the Devil. Yet, incredible as it may seem, it is unfortunately true that some worship of this kind has prevailed at many times and among widely different races of mankind. The following considerations may help in some degree to lighten the difficulty presented by this singular phenomenon.

In the first place it may be well to recall the analogy between the worship given to a divine being and the tribute paid to a king. Both alike are sensible proofs of service and subjection. In the case of kings, besides the willing service paid to a just and legitimate sovereign, there may be tribute paid to some alien oppressor, or blackmail grudgingly given to some pirate chief or marauder in order to deprecate the evils that may be feared at his hands. And so in the case of religious worship, we may find that in the rude polytheism of barbarous races, where the gods were not only many in number but various in character, besides the willing worship given to good and beneficent beings in the service of love and gratitude, there is a sort of liturgical blackmail offered to the evil and malignant gods or demons in order to placate them and avert their anger. In like manner, when we pass from Polytheism to the philosophic Dualism—where the worlds of light and darkness, good and evil, sharply defined, are constantly warring against each other—over against the good men, who offer worship to the good god, Ahura Mazda, there are the wicked Daëva-worshippers who sacrifice to the Demons and to Ahirman their chief, the principle of evil.

Another source of this strange worship may be found in the fact that in the early days each nation had its own natural gods; hence racial rivalry and hatred sometimes led one nation to regard the protecting divinities of its enemies as evil demons. In this way many who merely worshipped gods whom they

themselves regarded as good beings would be called devil-worshippers by men of other nations. Such may be the case with the Daeva-worshippers in the Avesta. In the same way the Greeks and Romans may have worshipped their divinities, fondly believing them to be good. But the Christian Scriptures declare that all the gods of the Gentiles are demons.

This declaration, it may be added, was not the utterance of a rival race but the teaching of Holy Scripture. For as the Fathers and theologians explain the matter, the fallen angels besides tempting and assailing men in other ways, have, by working on their fears or exciting their cupidity, brought them to give worship to themselves under the guise of idols. If not in all cases, it would seem that much of the heathen idolatrous worship, especially in its worst and most degraded forms, was offered to the devils. This may explain some of the manifestations in the old pagan oracles. And something of the same kind occurs in the demonic manifestations among the modern demonolaters in India (cf. Alexander, *Demonic Possession in the New Testament*, p. 237). Nor has this been confined to heathen nations, for in connexion with magical practices and occultism some forms of devil-worship appear in the heresy history of medieval Europe. Görres, in his great work on Christian Mysticism, gives some curious and repulsive details of their obscene ceremonial. Of late years there seems to have been a recrudescence of this evil superstition in certain countries of Europe. While there is some authentic evidence as to the existence of these evil practices, the truth is overlaid with a mass of legend, many charges of this kind are false or grossly exaggerated, and a number of innocent persons have been cruelly put to death on charges of witchcraft or devil-worship. It is well also to remember St. Augustine's words: "Non uno modo sacrificatur traditoribus angelis"; and possibly calumny and cruelty may be more dangerous forms of devil-worship than all the dark rites of African Medicine men or medieval magicians.

W. H. KENT.

Devolution (Lat. *devolutio* from *devolvere*), the right of an ecclesiastical superior to provide for a benefice, when the ordinary patron or collator has failed to do so, either through negligence or by the nomination of an improper candidate. There is no permanent loss of right in such a case, but only for the time being and for that particular instance. The right of devolution passes to the bishop of the diocese when the chapter or private individuals who have the right of patronage do not present a new and acceptable beneficiary within six months of the vacancy. When the bishop himself is negligent, the right devolves upon the metropolitan. Where, however, the right of appointing belongs to both the bishop and the chapter, if only one of the parties has been found wanting in the exercise of the right, the law declares that the power of nomination remains to the other. When there is a vacancy in an episcopal see, the metropolitan appoints a vicar capitular to rule the vacant diocese, if the cathedral chapter has failed to elect such an official within eight days. In case of negligence on the part of metropolitans or exempt bishops, the right devolves upon the pope of providing for the benefices not conferred within the legal time or when the election was uncanonical. Chapters having power to elect an archbishop, bishop, or abbot must do so within three months, or the appointment devolves upon the Roman pontiff. The same holds for the case where an election was not celebrated according to canonical prescriptions. Custom, however, allows a second election by the chapter when the first has been declared void. In countries where a concordat exists between the Holy See and the civil government, the right of devolution

is often either to be held in abeyance or certain restrictions are placed upon it. In France no right of devolution was recognized by the State. In some ecclesiastical provinces of Germany and of Holland and Belgium, it is expressly stipulated that in the event of an uncanonical election of an archbishop or bishop, the chapters are to be allowed to proceed to another election. In case the right of presentation to archiepiscopal and episcopal sees has been conceded to the civil government, the latter does not lose the right by the nomination of an unacceptable candidate, nor does the election devolve upon the pope when a bishopric has not been filled within the canonical term of three months, unless such has been expressly stipulated in the concordat. When the pope, himself, does not exercise the right of devolution within the canonical term of months, the power of conferring the benefice returns to the ordinary patron. Canonists deduce this conclusion not from any explicit law, but from the common regulations governing the provisions for filling benefices and dignities. In practice this custom is observed by the Holy See. Historically, the law of devolution does not seem to be more ancient than the Third Council of the Lateran (1179) for benefices, and the Fourth Council of the Lateran (1215) for elective prelacies. The object of the law is both to provide through higher authority a remedy for the correction of abuses or negligences on the part of inferiors and also to punish them for the improper use of their powers.

WILLIAM H. W. FANNING.

Devoti, GIOVANNI, canonist, b. at Rome, 11 July, 1744; d. there 18 Sept., 1820. At the age of twenty he occupied a chair of canon law at the Roman University (Sapienza). After twenty-five years service in this position Pius VI appointed him Bishop of Anagni, which see he resigned in 1804, to become titular Archbishop of Carthage. As such he filled several important positions at Rome. He also accompanied Pius VII during his exile in France. His works are: "De notissimis in jure legibus libri duo" (Rome, 1766); "Juris canonici universi publici et privati libri quinque", an unfinished work of which only three volumes appeared (Rome, 1803-1815; new edition, Rome, 1827), containing an introduction to canon law and a commentary on the first and second book of the Decretals; "Institutionum canonicarum libri quatuor" (Rome, 1785; fourth ed., Rome, 1814). This last work is distinguished by its clearness and conciseness, and by its numerous historical notes, attributed, but without any reason, to Cardinal Castiglione, afterwards Pius VIII. In 1817, the King of Spain made obligatory the study of the "Institutiones" of Devoti at the University of Alcalá; in 1836, the University of Louvain accepted it as a classical manual of canon law. The work is now more useful for the history than for the practice of canon law.

Deymann, CLEMENTINE, b. at Klein-Stavern, Oldenburg, Germany, 24 June, 1844; d. at Phoenix, Arizona, U. S. A., 4 December, 1896. He came to America with his parents in 1863, studied at Teutopolis, Illinois, received the habit of St. Francis and the name Clementine at the same place, 8 December, 1867, finished his theological studies, and was ordained priest at St. Louis, Missouri, 19 May, 1872. Father Clementine was stationed as professor at the college of Teu-

topolis until July, 1879, when he was transferred to Joliet, to act as chaplain of the State prison. At Joliet he was also spiritual director of the School Sisters of St. Francis. In August, 1880, he was appointed superior and pastor of the German parish of Joliet, and in July, 1882, he received a like position at Chillicothe, Missouri. In 1885 and in 1891 Father Clementine was elected definitor of the Franciscan province of the Sacred Heart; in 1886 he was made superior of the boys' orphanage at Watsonville, California. He was appointed 22 July, 1896, the first commissary for the newly erected Franciscan commissariat of the Pacific Coast, but died shortly after receiving this office and was buried at Santa Barbara. Father Clementine was a very industrious man, who in his spare time translated a number of useful works, some of which have been published. Among these are: "The Seraphic Octave", or "Retreat" (1883); "Life of St. Francisco Solano"; "Life of Blessed Crescentia Hoess"; "May Devotions" (1884). His original writings are: "Manual for the Sisters of the Third Order" (1884); "St. Francis Manual" (1884). He also wrote for several periodicals, and left in manuscript translations from the Spanish of the lives of Father Junipero Serra and Father Antonio Margil.

ENGLEHARDT, *The Franciscans in California* (1897); *Archives of the Province and Commissariat of the Sacred Heart*.

ZEPHYRIN ENGLEHARDT.

Dhuoda, wife of Bernard, Duke of Septimania. The only source of information on her life is her "Liber Manualis" which was written for the education of her son William. The name Dhuoda which is indicated in the "Manual" is latinized by her as Dodana, Duodana, and Dhudana. Dhuoda was a member of a noble family, and married, 24 June, 824, Bernard, son of St. William of Gellone, godson and favourite of King Louis the Pious, Duke of Septimania, and also, either at that time or a little later, Count of Barcelona. Her first son, William, was born 29 November, 826, and the second, Bernard, 22 March, 841. The "Manual" was begun 30 November, 841, at Uzès (now Department of Gard), and completed 2 February, 843. She was then separated from both her husband and her two sons, William being at the Court of Charles the Bald, and Bernard having been taken away before baptism to his father in Aquitaine. Probably Dhuoda did not live long after completing her work, as she speaks of herself as weak and near death, expresses her sorrow at the thought that she will not see William in his manhood, and writes herself the epitaph which she desires him to engrave on her tomb. Thus she may have been spared the sorrow of knowing her husband's condemnation for rebellion (844), and the death of her two sons who were also killed, William in 850, and Bernard in 872, after wilfully disregarding their mother's good lessons. The "Manual", consisting of seventy-three chapters (not including the introduction, invocation, prologue, etc.), is an important document for general history and especially for the history of education. It was published by Bondurand in 1887 from a manuscript of the seventeenth century in the Bibliothèque Nationale, Paris, and from fragments of a manuscript of the Carolingian epoch, found in the library of Nîmes. Before that date, only a few passages had been published by Mabillon and reproduced in Migne's "Patrology". It is a treatise on Christian virtues, revealing the author's remarkable qualities of heart and mind, her intense affection for her sons and her husband, notwithstanding the latter's intrigues at the Court (see Martin, *Histoire de France*, II, 386sq.). We find numerous quotations from Holy Scripture, allusions to Scriptural facts, and some references to profane writers. The expression is in some instances obscure and even incorrect from the point of view of classical latinity, but the many images, comparisons, and allegories, the use in some chapters of verse and

acrostics, the beauty and nobleness of the thoughts, the earnestness and love of the writer which are manifest throughout the whole work, always keep the reader's interest alive. It was really a "honeyed beverage" which Dhuoda had prepared for her son:—*Istum [libellum] tibi et fratri, ut prosit, quod collegi festinans,*

Velut mellifluum potum, favisque permixtum, In cibum oris, ut degustes semper adhortor.

C. A. DUBRAY.

Diaconicum (Gr. *διακονικόν*), in the Greek Church the liturgical book specifying the functions of the deacon; it is also the name given to the *Orationes pro pace* (*διακονικά*) to be said by him before the people. Primarily, however, the word denoted an annex to the Christian basilica, where necessary supplies for the service of the altar were kept and preparations were made for the Holy Sacrifice. The *diaconicum* is distinct from the *prothesis*, a small room where the offerings of the people were received. In large churches the *diaconicum majus* comprised several rooms: the *salutatorium*, for reception and audiences of the bishop; the *thesaurarium*, where sacred vessels and books were kept; and the *diaconicum* properly so called. Possibly the Greek *παστοφόριον*, where the Holy Eucharist was reserved, was simply the *diaconicum*. *Prothesis* and *diaconicum* are ordinarily on either side of the apse. In Syrian churches, where they are regularly found, they are built on a rectangular plan and have two stories. They also exist in Byzantine churches, in the basilicas of Africa and frequently even in the churches of other regions.

R. MAERE.

Diadochus. See MARCUS DIADOCHUS.

Diakovár (Croatian, *Djakovo*), see of the Bishop of the united Dioceses of Bosnia or Diakovár and Symria (Szerém) (Bosniensis seu Diacovensis et Sirmiensis), a municipality of Slavonia (Austria-Hungary), in the county of Virovititz (Hungarian Verőcze). Diakovár is also the seat of a district court; in 1900 it contained 6824 inhabitants, mostly Catholics, of whom 65 per cent were Serbs and 28 per cent Germans. The fine cathedral, completed in 1883 by Friedrich Schmidt from the plans of Karl Rösner, is a Romanesque-Gothic edifice, 256 feet long and 197 feet wide; it has two towers, each about 276 feet high, and, in addition, a cupola about 203 feet high. The interior is decorated with frescoes by Seitz, father and son, and the organ has 3000 pipes. Among the other important buildings are the episcopal seminary founded by Bishop Mandić in 1807 and altered in 1858 by Bishop Strossmayer, the provincial house of the Sisters of Charity of the Holy Cross, and the episcopal palace. Diakovár is of Roman origin. On the imperial road from Sissek to Sirmium there was a large station named Certissa, which disappeared during the migrations of the fourth and fifth centuries. The site is not again mentioned before the thirteenth century, when Coloman, brother of King Béla IV, gave the "Possessio Diaco" to the Bishop of Bosnia. After the re-establishment of the Diocese of Symria (q. v.) by Gregory IX, 20 January, 1229, the bishop lived at Bosna Seraj in Bosnia, but in 1246 he transferred his see to Diakovár after Gregory IX, on account of the troubles with the Bogomili, withdrew the Diocese of Bosnia from its subjection to the Archdiocese of Ragusa and made it suffragan to the Archdiocese of Kalocsa.

In 1735 the territory of the Diocese of Bosnia became the Vicariate Apostolic of Bosnia and Herzegovina (q. v.), while by a Bull of Clement XIV of 9 July, 1773, the See of Syrmia was united in perpetuity with Diakovár. Since this date the Bishops of Diakovár have borne the title "of Bosnia, or Diakovár and Syrmia". Since 1852 the diocese has been a suffragan of Agram (Zágráb), which was founded in that year.

Among the most important medieval bishops of Diakovár were Blessed Johannes Teutonicus (1233-41) who died in 1253 as fourth Master General of the Dominican Order, and the Franciscan Blessed Peregrinus (1349-56). In the nineteenth century Bishop Joseph Georg Strossmayer (q. v.) exceeded all his predecessors, not only in the length of his episcopate (1849-1905), but also in the fruitful results of his labours for his diocese, especially as a patron of art and learning. After his death the see was administered by the vicar capitular, Dr. Engelbert Voršák. The cathedral chapter, established in 1239, disappeared after the invasion of the Turks in 1453. It was restored in 1773 by Maria Teresa and it consists of 8 regular and 6 honorary canons. Since 1881 the diocese is limited to the Croatian-Slavonian counties of Verovititz (Verőcze), Szerém, and Pozhega, and includes, according to the statistics for 1908: 4 arch-deaconries; 11 vice-archdeaconries; 90 parishes with 376 dependent chapels and stations, and 4 expositures; 174 secular and regular priests; 294,674 Catholics and 6205 Uniat Greeks in a total population of 515,897. The male religious orders in the diocese are: Franciscans, 6 monasteries; Capuchins, 1 monastery in Esseg (Eszék or Osjek) with 6 religious. The female communities include 37 Sisters of Charity of St. Vincent de Paul, and 39 Sisters of Charity of the Holy Cross. Besides the seminary for priests at Diakovár, mentioned above, there is a seminary for boys at Esseg established by Bishop Strossmayer in 1899. The most celebrated place of pilgrimage in the Diocese of Diakovár is Mariaschnee near Peterwarden. The patron saint for Diakovár is St. Elias, for Szerém, St. Demetrius.

GREGOR REINHOLD.

Dialectic [Gr. διαλεκτική (τεχνή or μέθοδος), the dialectic art or method, from διαλέγομαι, I converse, discuss, dispute; as noun also *dialectics*; as adjective, *dialectical*].—(1) In Greek philosophy the word originally signified "investigation by dialogue", instruction by question and answer, as in the heuristic method of Socrates and the dialogues of Plato. The word *dialectics* still retains this meaning in the theory of education. (2) But as the process of reasoning is more fundamental than its oral expression, the term *dialectic* came to denote primarily the art of inference or argument. In this sense it is synonymous with *logic*. It has always, moreover, connoted special aptitude or acuteness in reasoning, "dialectical skill"; and it was because of this characteristic of Zeno's polemic against the reality of motion or change that this philosopher is said to have been styled by Aristotle the master or founder of dialectic. (3) Further, the aim of all argumentation being presumably the acquisition of truth or knowledge about reality, and the process of cognition being inseparably bound up

with its content or object, i. e. with reality, it was natural that the term *dialectic* should be again extended from function to object, from thought to thing; and so, even as early as Plato, it had come to signify the whole science of reality, both as to method and as to content, thus nearly approaching what has been from a somewhat later period universally known as metaphysics. It is, however, not quite synonymous with the latter in the objective sense of the science of real being, abstracting from the thought processes by which this real being is known, but rather in the more subjective sense in which it denotes the study of being in connexion with the mind, the science of knowledge in relation to its object, the critical investigation of the origin and validity of knowledge as pursued in psychology and epistemology. Thus Kant describes as "transcendental dialectic" his criticism of the (to him futile) attempts of speculative human reason to attain to a knowledge of such ultimate realities as the soul, the universe, and the Deity; while the monistic system, in which Hegel identified thought with being and logic with metaphysics, is commonly known as the "Hegelian dialectic".

A. THE DIALECTIC METHOD IN THEOLOGY. [For *dialectic* as equivalent to *logic*, see art. LOGIC, and cf. (2) above. It is in this sense we here speak of dialectic in theology.]—The traditional logic, or dialectic, of Aristotle's "Organon"—the science and art of (mainly deductive) reasoning—found its proper application in exploring the domain of purely natural truth, but in the early Middle Ages it began to be applied by some Catholic theologians to the elucidation of the supernatural truths of the Christian Revelation. The perennial problem of the relation of reason to faith, already ably discussed by St. Augustine in the fifth century, was thus raised again by St. Anselm in the eleventh. During the intervening and earlier centuries, although the writers and Fathers of the Church had always recognized the right and duty of natural reason to establish those truths preparatory to faith, the existence of God and the fact of revelation, those *præambula fidei* which form the motives of credibility of the Christian religion and so make the profession of the Christian Faith a *rationabile obsequium*, a "reasonable service", still their attitude inclined more to the *Crede ut intelligas* (Believe that you may understand) than to the *Intellige ut credas* (understand that you may believe); and their theology was a positive exegesis of the contents of Scripture and tradition. In the eleventh and twelfth centuries, however, rational speculation was applied to theology not merely for the purpose of proving the *præambula fidei*, but also for the purpose of analysing, illustrating, and showing forth the beauty and the suitability of the mysteries of the Christian Faith. This method of applying to the contents of Revelation the logical forms of rational discussion was called "the dialectic method of theology". Its introduction was opposed more or less vigorously by such ascetic and mystic writers as St. Peter Damian, St. Bernard, and Walter of St. Victor; chiefly, indeed, because of the excess to which it was carried by those rationalist and theosophist writers who, like Peter Abelard and Raymond Lully, would fain demonstrate the Christian mysteries, subordinating faith to private judgment. The method was saved from neglect and excess alike by the great Scholastics of the thirteenth century, and was used to advantage in their theology. After five or six centuries of fruitful development, under the influence, mainly, of this deductive dialectic, theology has again been drawing, for a century past, abundant and powerful aid from a renewed and increased attention to the historical and exegetical studies that characterized the earlier centuries of Christianity.

B. DIALECTIC AS FUNDAMENTAL PHILOSOPHY OF

HUMAN KNOWLEDGE [cf. (3), above].—(a) *The Platonic Dialectic*.—From the beginnings of Greek philosophy reflection has revealed a twofold element in the contents of the knowing human mind: an abstract, permanent, immutable element, usually referred to the intellect or reason; and a concrete, changeable, ever-shifting element, usually referred to the imagination and the external senses. Now, can the real world possess such opposite characteristics? Or, if not, which set really represents it? For Heraclitus and the earlier Ionians, stability is a delusion; all reality is change—*πάντα ῥεῖ*. For Parmenides and the Eleatics, change is delusion; reality is one, fixed, and stable. But then, whence the delusion, if such there be, in either alternative? Why does our knowledge speak with such uncertain voice, or which alternative are we to believe? Both, answers Plato, but intellect more than sense. What realities, the latter asks, are revealed by those abstract, universal notions we possess—of being, number, cause, goodness, etc., by the necessary, immutable truths we apprehend and the comparison of those notions? The dialectic of the Platonic "Ideas" is a noble, if unsuccessful, attempt to answer this question. These notions and truths, says Plato, have for objects ideas which constitute the real world, the *mundus intelligibilis*, of which we have thus a direct and immediate intellectual intuition. These beings, which are objects of our intellectual knowledge, these ideas, really exist in the manner in which they are represented by the intellect, i. e. as necessary, universal, immutable, eternal, etc. But where is this *mundus intelligibilis*? It is a world apart (*χωρὶς*), separate from the world of fleeting phenomena revealed to the senses. And is this latter world, then, real or unreal? It is, says Plato, but a shadowy reflex of reality, a dissolving-view of the ideas, about which our conscious sense-impressions can give us mere opinion (*δόξα*), but not that reliable, proper knowledge (*ἐπιστήμη*) which we have of the ideas. This is unsatisfactory. It is an attempt to explain an admitted connexion between the noumenal and the phenomenal elements in knowledge by suppressing the reality of the latter altogether. Nor is Plato any more successful in his endeavour to show how the idea, which for him is a really existing being, can be at the same time one and manifold, or, in other words, how it can be universal, like the mental notion that represents it.

(b) *Aristotelean and Scholastic Dialectic*.—Aristotle taught, in opposition to his master Plato, that these "ideas" or objects of our intellectual notions do not exist apart from, but are embodied in, the concrete, individual data of sense. It is one and the same reality that reveals itself under an abstract, universal, static aspect to the intellect, and under a concrete, manifold, dynamic aspect to the senses. The Christian philosophers of the Middle Ages took up and developed this Aristotelean conception, making it one of the cardinal doctrines of Scholastic philosophy, the doctrine of modern Realism. The object of the abstract, universal notion, they taught, is real being; it constitutes and is identical with the individual data of sense-knowledge; it is numerically multiplied and individualized in them, while it is unified as a class-concept or universal notion (*unum commune pluribus*) by the abstractive power of the intellect which apprehends the element common to the individuals of a class without their differentiating characteristics. The universal notion thus exists as *universal* only in the intellect, but it has a foundation in the individual data of sense, inasmuch as the content of the notion really exists in these sense-data, though the mode of its existence there is other than the mode in which the notion exists in the intellect: *universale est formaliter in mente, fundamentaliter in re*. Nor does the intellect, in thus representing individual phenomena by universal notions, falsify its object or render intel-

lectual knowledge unreliable; it represents the Real inadequately, no doubt, not exhaustively or comprehensively, yet faithfully so far as it goes; it does not misrepresent reality, for it merely asserts of the latter the content of its universal notion, not the mode (or universality) of the latter, as Plato did.

But if we get all our universal notions, necessary judgments, and intuitions of immutable truth through the ever-changing, individual data of sense, how are we to account for the timeless, spaceless, changeless, necessary character of the relations we establish between these objects of abstract, intellectual thought: relations such as "Two and two are four", "Whatever happens has a cause", "Vice is blameworthy"? Not because our own or our ancestors' perceptive faculties have been so accustomed to associate certain elements of consciousness that we are unable to dissociate them (as materialist and evolutionist philosophers would say); nor yet, on the other hand, because in apprehending these necessary relations we have a direct and immediate intuition of the necessary, self-existent, Divine Being (as the Ontologists have said, and as some interpret Plato to have meant); but simply because we are endowed with an intellectual faculty which can apprehend the data of sense in a static condition and establish relations between them abstracting from all change.

By means of such necessary, self-evident truths, applied to the data of sense-knowledge, we can infer that our own minds are beings of a higher (spiritual) order than material things and that the beings of the whole visible universe—ourselves included—are contingent, i. e. essentially and entirely dependent on a necessary, all-perfect Being, who created and conserves them in existence. In opposition to this creationist philosophy of Theism, which arrives at an ultimate plurality of being, may be set down all forms of Monism or Pantheism, the philosophy which terminates in the denial of any real distinction between mind and matter, thought and thing, subject and object of knowledge, and the assertion of the ultimate unity of being.

(c) *The Kantian Dialectic*.—While Scholastic philosophers understand by reality that which is the object directly revealed to, and apprehended by, the knowing mind through certain modifications wrought by the reality in the sensory and intellectual faculties, idealist or phenomenalist philosophers assume that the direct object of our knowledge is the mental state or modification itself, the mental *appearance*, or *phenomenon*, as they call it; and because we cannot clearly understand how the knowing mind can transcend its own revealed, or phenomenal, self or states in the act of cognition, so as to apprehend something other than the immediate, empirical, subjective content of that act, these philosophers are inclined to doubt the validity of the "inferential leap" to reality, and consequently to maintain that the speculative reason is unable to reach beyond subjective, mental appearances to a knowledge of things-in-themselves. Thus, according to Kant, our necessary and universal judgments about sense-data derive their necessity and universality from certain innate, subjective equipments of the mind called categories, or forms of thought, and are therefore validly applicable only to the phenomena or states of sense-consciousness. We are, no doubt, compelled to think of an unperceived real world, underlying the phenomena of external sensation, of an unperceived real *ego*, or mind, or soul, underlying the conscious flow of phenomena which constitute the empirical or phenomenal *ego*, and of an absolute and ultimate underlying, unconditioned Cause of the *ego* and the world alike; but these three ideas of the reason—the soul, the world, and God—are mere natural, necessary products of the mental process of thinking, mere regulative principles of thought, devoid of all real content, and therefore in-

capable of revealing reality to the speculative reason of man. Kant, nevertheless, believed in these realities, deriving a subjective certitude about them from the exigencies of the practical reason, where he considered the speculative reason to have failed.

(d) *The Hegelian Dialectic*.—Post-Kantian philosophers disagreed in interpreting Kant. Fichte, Schelling, and Hegel developed some phases of his teaching in a purely monistic sense. If what Kant called the formal element in knowledge—i. e. the necessary, universal, immutable element—comes exclusively from within the mind, and if, moreover, mind can know only itself, what right have we to assume that there is a material element independent of, and distinct from, mind? Is not the content of knowledge, or in other words the whole sphere of the knowable, a product of the mind or *ego* itself? Or are not individual human minds were self-conscious phases in the evolution of the one ultimate, absolute Being? Here we have the idealistic monism or pantheism of Fichte and Schelling. Hegel's dialectic is characterized especially by its thoroughgoing identification of the speculative thought process with the process of Being. His logic is what is usually known as metaphysics: a philosophy of Being as revealed through abstract thought. His starting-point is the concept of pure, absolute, indeterminate being; this he conceives as a process, as dynamic. His method is to trace the evolution of this dynamic principle through three stages: (1) the stage in which it affirms, or posits, itself as thesis; (2) the stage of negation, limitation, antithesis, which is a necessary corollary of the previous stage; (3) the stage of synthesis, return to itself, union of opposites, which follows necessarily on (1) and (2). Absolute being in the first stage is the idea simply (the subject-matter of logic); in the second stage (of otherness) it becomes nature (philosophy of nature); in the third stage (of return or synthesis) it is spirit (philosophy of spirit—ethics, politics, art, religion, etc.).

Applied to the initial idea of absolute Being, the process works out somewhat like this: All conception involves limitation, and limitation is negation; positing or affirming the notion of Being involves its differentiation from non-being and thus implies the negation of being. This negation, however, does not terminate in mere nothingness; it implies a relation of affirmation which leads by synthesis to a richer positive concept than the original one. Thus: absolutely indeterminate being is no less opposed to, than it is identical with, absolutely indeterminate nothing: or BEING-NOTHING; but in the oscillation from the one notion to the other both are merged in the richer synthetic notion, of BECOMING.

This is merely an illustration of the *a priori* dialectic process by which Hegel seeks to show how all the categories of thought and reality (which he identifies) are evolved from pure, indeterminate, absolute, abstractly-conceived Being. It is not an attempt at making his system intelligible. To do so in a few sentences would be impossible, if only for the reason, that Hegel has read into ordinary philosophical terms meanings that are quite new and often sufficiently remote from the currently accepted ones. To this fact especially is due the difficulty experienced by Catholics in deciding with any degree of certitude whether, or how far, the Hegelian Dialectic—and the same in its measure is true of Kant's critical philosophy also—may be compatible with the profession of the Catholic Faith. That these philosophies have proved dangerous, and have troubled the minds of many, was only to be expected from the novelty of their view-points and the strangeness of their methods of exposition. Whether, in the minds of their leading exponents, they contained much, or little, or anything incompatible with Theism and Christianity, it would be as difficult as it would be perhaps idle to attempt to decide. Be that as it may, the attitude of the

Catholic Church towards philosophies that are new and strange in their methods and terminology must needs be an attitude of alertness and vigilance. Conscious of the meaning traditionally attached by her children to the terms in which she has always expounded those ultimate philosophico-religious truths that lie partly along and partly beyond the confines of natural human knowledge, and realizing the danger of their being led astray by novel systems of thought expressed in ambiguous language, she has ever wisely warned them to "beware lest any man cheat [them] by philosophy, and vain deceit" (Coloss., ii, 8).

For the use of dialectic in the early Christian and medieval schools, see ARTS, THE SEVEN LIBERAL.

Diamantina, DIOCESE OF (ADAMANTINA), in the north of the State of Minas Geraes, Brazil, South America, created under the Brazilian Empire, 10 Aug., 1853, and confirmed by the Holy See, 6 June, 1854. This territory was part of the ancient Diocese of Marianna (now the Archdiocese of Minas Geraes), which had four suffragans: Marianna, Diamantina, Pouso Alegre and Uberaba, in the centre, north, south and far west of the State of Minas Geraes. The present territory comprises twenty municipalities or townships divided in 106 parishes and 173 districts (an area of 33,708 square miles or half the territory of the State of Minas). According to the last official census (31 Dec., 1900) the population of the Diocese of Diamantina was 829,018. There are about 200 churches in as many villages and towns; and 100 priests, belonging to the regular and parochial clergy of the diocese. A seminary and diocesan college (recognized by a decree of the Federal Government, and modeled on the National Gymnasium of Rio de Janeiro) are directed by the Lazarists, and a college for girls, also in Diamantina, and directed by religious, are the principal educational institutions of the diocese. Premonstratensian missionaries in Montes Claros, and Franciscans in Theophilo Ottoni and Itambacury, are engaged in Christianizing the Indian tribes of Botocudos. About 7,000 have been converted along the Mucury River, and in the mountains of Aimorés and forests of Itambacury. In addition to these there are Dutch Redemptorists in Curvello and a few (Spanish and Italian) priests.

Charity hospitals (Diamantina, 2, Curvello, 1, Montes Claros, 1, Serro, 1, Conceição, 1) are attended by the Sisters of St. Vincent de Paul, and of Our Lady of Providence. Catholic leagues, charitable societies and confraternities are organized in the parishes; and there is an institution at Serro for invalid or poor priests. There were formerly two missions, in Poaya (forests of Urupuca River and Suassuhy-Grande) and in Figueira (Dom Manoel Harbour), and Indian *aldeamentos* which prospered under the apostolical zeal of Italian Franciscan missionaries.

Since its erection the Diocese of Diamantina has had three bishops. The first was the Right Rev. Marcos Cardoso de Paiva (a native of Rio de Janeiro). His successor was the Right Rev. João Antonio dos Santos who died in Diamantina, 17 May, 1905, after an episcopacy of forty-one years. Born in the village of Rio Preto, 1819, he served as professor of philosophy in the seminary of Marianna before his appointment as Bishop of Diamantina, 2 May, 1864. During the last years of his episcopacy, the Holy See named

as his coadjutor the Right Rev. J. Silverio de Sousa who succeeded him, having been consecrated titular Bishop of Bagis, 2 Feb., 1902. He was the author of "Sitios e Personagens", "O Lar Católico", "Novenas do Natal e da Immaculada Conceição", "Finezas de Mãe e Pastorais", all well known works published in Brazil. The Catholic press in the diocese is represented by two periodicals "Estrella Polar" (official) of Diamantina, and "A Verdade", of Montes-Claros. The latter is in charge of the Premonstratensian priests.

NELSON DE SENNA.

Diamper, SYNOD OF. See INDIA; SYRO-MALABAR CHURCH.

Diana, ANTONINO, moral theologian, b. of a noble family at Palermo, Sicily, in 1586; d. at Rome, 20 July, 1663. He took his vows as a regular clerk of the Theatine Order in 1630. He became celebrated as a casuist while he was yet a young man, and cases of conscience were sent to him for solution from all parts. His "Resoluciones Morales" met with universal esteem and approbation. The brothers Prost, who brought out the eighth edition of the first three parts of this work at Lyons, in 1635, sent it forth, with a play on the author's name, as the Diana of him who might be hunting for truth in the woods of moral theology, and as the Diana of the cross-ways who would show the right path to anyone in doubt or perplexity. Popes Urban VIII, Innocent X, and Alexander VII, esteemed him for his learning, and he was made a consultant of the Holy Office of the Kingdom of Sicily and an examiner of bishops. Diana himself claimed that as a rule his solutions followed the milder opinion. On the frontispiece of the volume just mentioned round a figure of the Cross runs the legend *Non ferro sed ligno*. According to St. Alphonsus and the common opinion of modern theologians, Diana not infrequently went too far in the direction of laxity. However, his works may still be consulted with profit. Besides several editions of the unabridged works, epitomes and compendiums of them began to appear even in the author's lifetime, in spite of his vigorous protests that his real meaning was being distorted by his too ardent admirers.

T. SLATER.

Diano, DIOCESE OF (DIANENSIS), a small city in the province of Salerno, Italy, the ancient Tegianum and seat of the Tegiani, a tribe of Lucania. Pius IX established this see 29 Sept., 1850, at the instance of King Ferdinand II of Naples, and ordered the Bishop of Capaccio to fix his residence in the town of Diano; thenceforth the see was to be known as Capaccio and Diano. But under the second bishop Domenico Fanello (1858-83), Capaccio was again separated from Diano and united with the Diocese of Vallo, in which town the bishop now resides. In 1882 Diano received the name of Teggiano. The see is a suffragan of Salerno, has 44 parishes, about 250 secular priests, 3 religious houses of men and one of women; the population is about 100,000.

Diario Romano (It. for "Roman Daybook"), a booklet published annually at Rome, with papal authorization, giving the routine of feasts and fasts to be observed in Rome and the ecclesiastical functions to be performed in the city.

The Diario for 1908 gives the days on which the

Roman Congregations—Index, Rites, Propaganda, etc.—hold their sessions. A table is then given for the ringing of the bell for evening Angelus, which varies with the time of sunset, and ranges from 5.15 p. m. to 8.15 p. m. In quoting the time of day at which an exercise is to take place, the Diario uses the regular style for the morning hours, but says, "before" or "after the Angelus", for the afternoon. The Diario notes the phases of the moon, the eclipses, the movable feasts, the ember days, the ecclesiastical cycles, the time for the solemnization of marriage, a list of days on which certain specially honoured images of the Blessed Virgin are exposed for veneration, and a list of saints and blessed honoured on each day of the year and of the churches at which the feast is celebrated. In the body of the work the statement is frequently made that images and relics of Christ and of the saints, ordinarily veiled, are uncovered and put in a prominent place. Such relics are: the table on which Christ instituted the Holy Eucharist; the manger or crib in which Christ is said to have been placed after his birth; the heads of Sts. Peter and Paul; the Chair of St. Peter (*Cathedra Petri*). Next are given the various functions as follows:—

(1) *Ordinary*—(a) Daily.—In all churches where canons or religious communities reside the canonical Hours of the Breviary are recited and conventual Mass is sung. Mass is said in all the churches, the earliest at 5 o'clock, and the latest at 12, the latter at S. Maria della Pace and always a votive Mass in honour of the Holy Trinity in thanksgiving for the favours conferred by the Blessed Virgin. At S. Giuseppe alla Lungara dei Pii Operai a daily foundation Mass with sermon and "Libera" is offered for the souls in purgatory. The Exposition of the Blessed Sacrament takes place daily at S. Gioacchino ai Monti, at S. Claudio dei Borgognoni, at S. Croce of the convent of S. Maria Riparatrice, at S. Brigida, at the church of Corpus Domini, in the chapel of the Daughters of the Sacred Heart. In these churches and chapels special devotions are held during the day and are always well attended. The recitation of the Rosary is a favourite practice of the Romans; it takes place at Mass in twenty-one churches in which Benediction is then given with the pyx; in the afternoon the Rosary, or, in some instances, the beads of the Seven Dolours or of the Precious Blood, is said daily in thirty-seven churches and chapels, in some of which a sermon is added. On feast days Exposition of the Blessed Sacrament is held in the morning in six churches, Rosary and Benediction in the afternoon in eight; in five also a sermon is preached, and in five others the chaplet of the Sacred Heart is added.—(b) Weekly.—In the parish churches high Mass and sermon are held at eight or nine o'clock on Sundays, and in the afternoon Christian doctrine is taught. At St. John Lateran there is a procession before Mass; at S. Gioacchino the Blessed Sacrament is exposed at Mass and prayers of reparation are said, in the afternoon Benediction is given after the Rosary has been recited before the Blessed Sacrament. In nine other churches there is Exposition in the morning, to which, at S. Prassede, prayers for a good death are added. Benediction is given in many churches at various times of the day, together with an explanation of the Holy Scriptures, an instruction, a sermon, Rosary, etc. The Way of the Cross is made in four churches. The Diario notes the following devotions to be held for Monday: Exposition during Mass at Santi XII Apostoli and Ara Coeli, in the evening at four churches, with special prayers to St. Jude Thaddeus at S. Eusebio. Tuesday: Exposition in the morning for four churches and for the same number in the evening, a devotion to St. Anne, and a meditation. Wednesday: for five churches Exposition in the forenoon; for four in the afternoon, Rosary, chaplet of the Immaculate, chaplet of Sorrows and Joys of St. Joseph, prayers to the

Mother of Sorrows. Thursday: Exposition during the whole day at S. Gioacchino in Prati with Rosary and Benediction in the evening, Exposition in five other churches, to which a discourse is added at N. S. di S. Cuore; in S. Andrea at the Quirinal catechetical instruction for boys. Friday: Exposition, chaplet of the Sacred Heart, Holy Hour for the dying, prayers in honour of the Passion, Way of the Cross, Way of the Mater Dolorosa, chaplet of the Seven Dolours. Saturday: Exposition, devotion to the Mother of Mercy against lightning, in honour of the Queen of the Holy Rosary, special prayers for the conversion of England, chaplet of the Immaculate, of the Seven Dolours, sermon, singing of the litany, and Benediction.—(c) Monthly.—For the first Sunday is ordered, in one church or another: Exposition in the form of the Forty Hours, procession, prayers for a good death, Way of the Cross, Corona dei Morti, Communion of the Pages of Honour of St. Aloysius. For the second Sunday: Exposition in the morning and in the evening, procession of the Blessed Sacrament, at S. Maria sopra Minerva procession with the Bambino and prayers for blasphemers. For the third Sunday: Exposition in the morning or in the evening, and procession. For the fourth Sunday the same is prescribed for several churches, also the Way of the Cross. For the last Sunday: Exposition and procession for two churches in the morning, for others in the evening; Way of the Cross at the Campo Santo. Similarly, the Diario makes announcements for the first Tuesday, the first Wednesday, etc. Among the devotions noted for these days special mention may be made of prayers for obstinate sinners said on the first Wednesday at S. Giacomo in Augusta, Mass of reparation for the insults offered to the Blessed Sacrament, Mass in the morning and Benediction in the evening with prayers for the conversion of England, supplications for the reunion of Christendom, English sermon on the first Friday at S. Giorgio e santi Inglesi.

(2) *Extraordinary devotions.*—Sermon two hours before the Angelus on all feasts of Christ and of Our Lady at S. Alfonso on the Esquiline; at S. Andrea delle Fratte Way of the Cross on all Sundays of February, March, November, and December, and on the eight days of Carnival; at S. Agnese Outside the Walls Exposition on all Sundays and Holy Days at two hours before the Angelus, with chaplet of the Five Wounds during Lent; at S. Andrea at the Ponte Milvio a Mass is said on all Sundays and Holy Days for the deceased members, two hours before the Angelus; Office of the Dead, absolution given in the adjoining cemetery, then Benediction in church after the recitation of a litany. On Septuagesima Sunday at S. Filippo on the Via Giulia Exposition all day, closing with litany and Benediction. On the Saturday before Sexagesima some churches perform a pious exercise called *Carnivale santificato*. On the Friday after Sexagesima and on the Fridays of Lent, in nearly all churches, the Way of the Cross is made or the Via Dolorosa. Lenten sermons are preached on Wednesdays and Fridays. The Lenten preachers are received in audience by the pope. For the Apostolic Palace a special preacher is appointed. On Lætare Sunday the Holy Father blesses the Golden Rose, which he then sends to persons of rank, to cities, or corporations as a token of gratitude; on this Sunday also begin the catechetical instructions prescribed by Benedict XIV as a preparation for Easter. The Holy Week exercises are performed in all the parish churches, and additional devotions are held in many, as the washing of the papal altar at St. Peter's on Maundy Thursday, sermons on the Passion, Way of the Cross or of the Desolata, or honouring the Hours of the Agony. The Ruthenian Rite is used for the functions of Holy Week at SS. Sergio e Bacco, the Armenian Rite at S. Nicola da Tolentino on 1 January. At S. Andrea della Valle the Veni Creator is sung after Mass and the

baptismal vows are renewed; at S. Maria in Campitelli the faithful consecrate themselves to the patron chosen for the year; at S. Carlo a Catinari the spiritual testament of St. Charles Borromeo is read on 5 January. At S. Atanasio water is blessed in the Greek Rite and at S. Andrea della Valle and at other churches in the Latin Rite. This water the pious faithful take home to sprinkle the sick, their houses, fields, vineyards, and themselves. The 6th of January is the titular feast of the Propaganda; Mass is celebrated in the Oriental Rites, and sermons are preached in the different languages. On 3 February takes place the blessing of throats with a relic of St. Blaise, and in the churches of the Blessed Virgin the pious custom obtains, throughout the year, of anointing the throats with blessed oil. On 31 December, in nearly all the churches and oratories, the year is closed with Exposition of the Blessed Sacrament and Te Deum. Formerly greater solemnity was imparted to some feasts by the presence of the Holy Father, who would celebrate the Mass or Vespers, or would assist at them pontifically in one of the greater basilicas and impart the Apostolic blessing to the world from the outer loggia. The Diario mentions some twenty days on which such a *cappella papale*, as it was called, used to take place before 1870. For the year 1908 only two are noted: for 20 July, the anniversary of the death of Leo XIII, and for 9 August, the anniversary of the coronation of the reigning pontiff, Pius X.

The special feasts of the churches are ushered in by preparatory triduums, novenas, or devotions of seven or of eight days, on which pious exercises are performed in common and Benediction is given; entire months are dedicated to saints or mysteries—as the month of St. Joseph, the month of Mary, of the Sacred Heart of Jesus, of the Precious Blood, of the Sacred Heart of Mary, of the Seven Dolours, of the Rosary, and of the Dead. Holy Communion for a series of fixed days of the week, together with special prayers, is much in use. We read in the Diario of six Sundays of St. Aloysius, seven of St. Camillus, nine of St. Cajetan, ten of St. Ignatius, fifteen of the Rosary; nine Mondays of the Archangel St. Gabriel; nine Tuesdays of St. Anne, and thirteen of St. Anthony of Padua; seven Wednesdays of Our Lady of Mount Carmel; seven Fridays of the Seven Dolours; seven of St. Juliana Falconieri, nine of the Sacred Heart of Jesus, ten of St. Francis Xavier, thirteen of St. Francis of Paul, thirteen of St. Onuphrius; five Saturdays of the Name of Mary, twelve of the Immaculate Conception, fifteen of the Holy Rosary.

To encourage the faithful in the frequent reception of the sacraments, in visiting the churches, venerating the Blessed Sacrament or the relics of the saints, and in performing other acts of devotion, the Church has opened wide her treasure and granted almost innumerable Indulgences. Of special note is the *toties quoties* Indulgence. The Vatican Basilica has this Indulgence for every day of the year; the church of S. Andrea delle Fratte on the feast of St. Francis of Paul (3 May); the churches of the Trinitarians on Trinity Sunday; SS. Cuore at the Castro Pretorio on the feast of the Sacred Heart; the churches of the Carmelites on 16 July; in several churches the Indulgence of Portiuncula on 2 August; the churches of the Servites on the feast of the Seven Dolours in September; where the Confraternity of the Rosary is canonically established, on Rosary Sunday; in several churches on the feast of the Holy Redeemer; in the Benedictine churches on 2 November. Only lately (20 February, 1908) the Holy Father has granted a *toties quoties* Indulgence to the pious practice of the Scala Santa (Acta S. Sedis, XLI, 294). Spiritual retreats are given for men twice a year at the Caravita, and once for women; for both sexes at the Crociferi, and a special one preparatory to Easter, for both sexes, at SS. Vincenzo e Anastasio.

FRANCIS MERSHMAN.

Diarmaid, SAINT, b. in Ireland, date unknown; d. in 851 or 852. He was made Archbishop of Armagh in 834, but was driven from his see by the usurper Foranun in 835. However, he claimed his rights and collected his cress in Connacht, in 836, as primate. He lived in a stormy age, as the Scandinavian rovers under Turgesius seized Armagh, in 841, and levelled the churches. The "Annals of Ulster" (ed. B. McCarthy, Dublin, 1887, I, 361) describe him as "the wisest of the doctors of Europe". His feast is celebrated 24 April.

SAINT DIARMAID, surnamed the Just, a famous Irish confessor of the mid-sixth century; d. 542. His name is associated with the great monastery of Inis-clothan (Iniscleeraun) on Lough Ree, in the Diocese of Ardagh, which he founded about the year 530. He was of princely origin and a native of Connacht. Wishing to found an oratory far from the haunts of men, he selected the beautiful but lonely island associated with the memory of Queen Meave, now known as Quaker Island. Here his fame soon attracted disciples, and among them St. Claran of Clonmacnoise. He was not only a good teacher, but also a distinguished writer and poet. On the island seven churches are traditionally said to have been erected, and the traces of six are still in evidence, including *Teampul Diarmada*, or the church of St. Diarmaid, the saint's own church—an oratory eight feet by seven. His feast is celebrated 10 January. After his death the monastic school kept up its reputation for fully six centuries, and the island itself was famous for pilgrimages in pre-Reformation days.

W. H. GRATTAN-FLOOD.

Dias, BARTOLOMEU, a famous Portuguese navigator of the fifteenth century, discoverer of the Cape of Good Hope; d. at sea, 29 May, 1500. Several Portuguese historians state that he was a relative or descendant of João Dias who sailed around Cape Bojador in 1434, and of Diniz Dias who is said to have discovered the Cape Verde Islands. As early as 1481 Bartolomeu Dias had accompanied Diogo d'Azambuja on an expedition to the Gold Coast. Dias was a cavalier of the royal court, superintendent of the royal warehouses and sailing-master of the man-of-war "San Christovão", when King John (João) II appointed him on 10 Oct., 1486, as the head of an expedition which was to endeavour to sail around the southern end of Africa. Its chief purpose was to find the country of the Christian African king known as Prester John, concerning whom recent reports had arrived (1486) through João Alfonso d'Aveiro, and with whom the Portuguese wished to enter into friendly relations.

After ten months of preparation Dias left Lisbon the latter part of July or the beginning of August, 1487, with two armed caravels of fifty tons each and one supply-ship. Among his companions were Pero d'Alemquer, who wrote a description of Vasco da Gama's first voyage, Leitão, João Infante, Alvaro Martins, and João Grego. The supply-ship was commanded by Bartolomeu's brother, Pero Dias. There were also two negroes and four negresses on board who were to be set ashore at suitable spots to explain to the natives the purpose of the expedition. Dias sailed first towards the mouth of the Congo, discovered the year before by Cão and Behaim, then following the

African coast, he entered Walfish Bay, and probably erected the first of his stone columns near the present Angra Pequena. From 29° south latitude (Port Nolloth) he lost sight of the coast and was driven by a violent storm, which lasted thirteen days, far beyond the cape to the south. When calm weather returned he sailed again in an easterly direction and, when no land appeared, turned northward, landing in the Bahia dos Vaqueiros (Mossel Bay). Following the coast he reached Algoa Bay, and then the limit of his exploration, the Great Fish River, which he named after the commander of the accompanying vessel, Rio Infante. It was only on his return voyage that he discovered the Cape, to which, according to Barros, he gave the name of Cabo Tormentoso. King John, in view of the success of the expedition, is said to have proposed the name it has since borne, Cape of Good Hope. In December, 1488, Dias returned to Lisbon after an absence of sixteen months and seventeen days. He had shown the way to Vasco da Gama whom in 1497 he accompanied, but in a subordinate position, as far as the Cape Verde Islands.

In 1500 Dias commanded a ship in the expedition of Cabral (q. v.); his vessel, however, was one of those wrecked not far from the Cape of Good Hope, which he had discovered thirteen years before. An official report of the expedition to the cape has not yet been found. Besides the account by Barros there is a note written on the margin of page 13 of a manuscript copy of Cardinal Pierre d'Ailly's "Imago Mundi", which is of importance, as this copy was once the property of Christopher Columbus. Ravenstein has attempted, and not unsuccessfully, by the aid of contemporary charts to reconstruct the entire voyage with the different stopping-points of the route.

OTTO HARTIG.

Diaspora (or DISPERSION) was the name given to the countries (outside of Palestine) through which the Jews were dispersed, and secondarily to the Jews living in those countries. The Greek term, *διασπορά*, corresponds to the Hebrew גלות, "exile" (cf. Jer. xxiv, 5). It occurs in the Greek version of the Old Testament, e. g. Deut., xxviii, 25; xxx, 4, where the dispersion of the Jews among the nations is foretold as the punishment of their apostasy. In John, vii, 35, the word is used implying disdain: "The Jews therefore said among themselves: Whither will he go, that we shall not find him? Will he go unto the dispersed among the Gentiles?" Two of the Catholic Epistles, viz. that of James and I Peter, are addressed to the neophytes of the Diaspora. In Acts, ii, are enumerated the principal countries from which the Jews came who heard the Apostles preach at Pentecost, everyone "in his own tongue". The Diaspora was the result of the various deportations of Jews which invariably followed the invasion or conquest of Palestine. The first deportation took place after the capture of Samaria by Shalmaneser (Salmanassar) and Sargon, when a portion of the Ten Tribes were carried into the regions of the Euphrates and into Media, 721 B. C. (IV Kings, xvii). In 587 B. C. the Kingdom of Juda was transported into Mesopotamia. When, about fifty years later, Cyrus allowed the Jews to return to their country, only the poorer and more fervent availed themselves of the permission. The richer families remained in Babylonia forming the beginning of a numerous and influential community. The conquests of Alexander the Great caused the spreading of Jews throughout Asia and Syria. Seleucus Nicator made the Jews citizens in the cities he built in his dominions, and gave them equal rights with the Greeks and Macedonians. (Josephus, *Antiquities*,

XII, iii, 1.) Shortly after the transportation of Juda into Babylonia a number of Jews who had been left in Palestine voluntarily emigrated into Egypt. (Jer., xlii-xliv.) They formed the nucleus of the famous Alexandrine colony. But the great transportation into Egypt was effected by Ptolemy Soter. "And Ptolemy took many captives both from the mountainous parts of Judea and from the places about Jerusalem and Samaria and led them into Egypt and settled them there" (Antiquities, XII, i, 1). In Rome there was already a community of Jews at the time of Cæsar. It is mentioned in a decree of Cæsar cited by Josephus (Ant., XLV, x, 8). After the destruction of Jerusalem by Titus thousands of Jewish slaves were placed upon the market. They formed the nucleus of settlements in Africa, Italy, Spain, and Gaul. At the time of the Apostles the number of Jews in the Diaspora was exceedingly great. The Jewish author of the Sibylline Oracles (2nd century B. C.) could already say of his countrymen: "Every land and every sea is full of them" (Or. Sib., III, 271). Josephus mentioning the riches of the temple says: "Let no one wonder that there was so much wealth in our temple since all the Jews throughout the habitable earth sent their contributions" (Ant., XIV, vii, 2). The Jews of the Diaspora paid a temple tax, a kind of Peter's-pence; a didrachma being required from every male adult. The sums transmitted to Jerusalem were at times so large as to cause an inconvenient drainage of gold, which more than once induced the Roman government either to stop the transmittance or even to confiscate it.

Though the Diaspora Jews were, on the whole, faithful to their religion, there was a noticeable difference of theological opinion between the Babylonian and Alexandrine Jew. In Mesopotamia the Jews read and studied the Bible in Hebrew. This was comparatively easy to them since Chaldee, their vernacular, was kindred to the Hebrew. The Jews in Egypt and throughout Europe, commonly called Hellenistic Jews, soon forgot Hebrew. A Greek version of the Bible, the Septuagint, was made for them. The consequence was that they were less ardent in the punctilious observance of their Law. Like the Samaritans they showed a schismatic tendency by erecting a rival temple to that in Jerusalem. It was built by the son of Onias the high-priest in Leontopolis in Lower Egypt during the reign of Ptolemy Philometor, 160 B. C., and was destroyed 70 B. C. (Ant., XIII, iii, §§ 2, 3). It is a curious fact that whereas Hellenistic Judaism became the soil in which Christianity took root and waxed strong, the colony in Babylonia remained a stronghold of orthodox Judaism and produced its famous Talmud. The deeply-rooted antagonism between the Jews and Greeks made the amalgamation of the two races impossible. Though some of the Seleucids and Ptolemies, such as Seleucus Nicator and Antiochus the Great, were favourable towards the Jews, there was constant friction between the two elements in Syria and Egypt. Occasional pillage and massacre were the inevitable result. Thus on one occasion the Greeks in Seleucia and Syria massacred some 50,000 Jews (Ant., XVIII, ix, 9). On another occasion the Jews, getting the upper hand in Cyprus, killed the Greek inhabitants of Salamis and were in consequence banished from the island (Dio Cassius, LXVIII, 23). In Alexandria it was found necessary to confine the Jews to a separate quarter, or ghetto. The Roman Empire was on the whole well-disposed towards the Jews of the Diaspora. They had everywhere the right of residence and could not be expelled. The two exceptions were the expulsion of the Jews from Rome under Tiberius (Ant., XVIII, iii, 5) and under Claudius (Acts, xviii, 2). But both these instances were of short duration. Their cult was declared a *religio licita*. All communities had their synagogues, *προσευχαι* or *σαββατεια*, which served

also as libraries and places of assembly. The most famous was that in Antioch (De bell. Jud., VII, iii, 3). They had their cemeteries; in Rome, like the Christians, they buried their dead in catacombs. They were allowed freely to observe their sabbaths, festivals, and dietary laws. They were exempt from the emperor-worship and from military service. Many Jews enjoyed Roman citizenship, e. g. St. Paul (Acts, xvi, 37-39). In many places the Jewish community formed a recognized organization with administrative, judicial, and financial powers. It was ruled by a council called *γερουσία*, composed of elders, *πρεσβύτεροι*, at the head of which was the archon. Another token of the freedom which the Jews enjoyed throughout the empire was their active propagandism (cf. Matt., xxiii, 15). The neophytes were called *φοβούμενοι* or *σεβόμενοι*, i. e. God-fearing (Acts, xiii, 16, 26, 43; Antiquities, XIV, vii, 2). Their number appears to have been very great. St. Paul met them in almost all the cities he visited. Josephus, praising the excellence of the Law, says: "the multitude of mankind itself has had a great inclination to follow our religious observances. There is not a city of the Grecians or Sabarians, where our customs and the prohibition as to our food are not observed" etc. (Contra Apion., II, xl). Many of the converts were distinguished persons, e. g. Aguilæ, the chamberlain of the Queen of Candace (Acts, viii, 26 sq.); Azizus, King of Emesa, and Polemo, King of Cilicia (Ant., xx, vii); the patrician Julia Fulvia (Ant., XVIII, iii, 5).

Díaz, BLESSED FRANCISCO, O. P. See CHINA.

Díaz, PEDRO, missionary, b. at Lupia, Diocese of Toledo, Spain, in 1546; d. in Mexico, 12 Jan., 1618. Though but twenty years of age when he joined the Society of Jesus he had already been a teacher of philosophy for two years. In 1572 he was sent by St. Francis Borgia to Mexico with the first band of Jesuits assigned to that mission, and was the first master of novices of the Province of Mexico. His distinguished merits as a preacher and a superior were enhanced by a great reputation for holiness. As rector of the colleges of Guadalajara and Mexico, superior of the professed house, provincial, and founder of the colleges of Oaxaca and Guadalajara in Mexico, and of Merida in Yucatan, and twice procurator to Rome, he occupies a prominent place in the early history of the Jesuits in Mexico. He was also the first to start the mission work of his brethren among the Indians of New Spain. The only contribution we have from his pen is "Letteras de Missionibus per Indiam Occidentalem a Nostris de Societate Institutis per annos 1590 et 1591." Several biographical encyclopedias confound him with Pedro Dias, a Portuguese Jesuit of the sixteenth century.

EDWARD P. SPILLANE.

Díaz del Castillo, BERNAL (corruption of Bernardo), Spanish historian, one of the chief chroniclers of the conquest of Mexico by the Spaniards, b. at Medina del Campo, Spain, c. 1498; d. after 1568. Born of poor parents, he began his military career as a common soldier. In 1514, he went to America with Pedrarias Dávila who had shortly before been appointed governor of Darien. Thence he betook himself to Cuba and enlisted in the expedition to Yucatan under

Francisco de Córdoba in 1517. He proceeded to Mexico with Grijalva in 1518 and returning to Cuba, set out a third time for Mexico under the banner of Hernando Cortés. He took part, he tells us, in 119 battles, and was present at the surrender of the city of Mexico in 1521. As a reward for distinguished services he received a commission as *regidor* or governor of Santiago de los Caballeros in Guatemala, where he made his home. In 1552, Gómara, secretary and chaplain to Cortés, published at Saragossa his "Crónica de la Conquista de Nueva España" in which Díaz thought he gave undue credit to Cortés. Díaz, therefore, in 1568, undertook to write his "Verdadera Historia de la Conquista de Nueva España", and though despairing of his ability to equal Gómara's literary polish, he determined to write a faithful narrative of the stirring events in which he had taken part, in order to correct the gross inaccuracies of Gómara, who had never even been in America, and to vindicate the valour of himself and others who had been completely overshadowed by the exaggerated reputation of Cortés. The work lay neglected and unpublished until, in 1632, Father Alonso Remón of the Order of Our Lady of Mercy, found it in a private library and had it published at Madrid. The work is crude and devoid of style, and shows the ignorance and vanity of the author, but it will always be read with interest as being the work of an eyewitness and participant in the events described.

In 1689, Francisco de Fuentes, in his history of Guatemala, set forth his claim to be a descendant of Díaz, and gave certain facts concerning him and his work that had been until then unknown. It would seem that, although poor, the family of Díaz was noble and distinguished, for his father was *regidor* of the important town of Medina del Campo. Fuentes also declared that the work was not published as written by Díaz, as it was not printed from the original manuscript but from an unauthorized copy in the library of one Ramírez del Prado which fell into the hands of Father Remón. The original manuscript, he claims, was in his own possession. "La Biblioteca de Autores Españoles" (1848-86) of Rivadeneira contains the entire works of Díaz. A German translation by P. J. de Rehues-Bonn-Marcas was published in 1838.

VENTURA FUENTES.

Díaz de Solís, JUAN, Spanish navigator and explorer, b. about 1470 at Lebrija (Seville), or, according to some accounts, in Asturias; d. in South America in 1516. After some explorations in Central America in 1506 and in Brazil in 1508, he succeeded Amerigo Vespucci as pilot-major, upon the latter's death in 1512. This title had been conferred upon Vespucci by Ferdinand of Spain 22 March, 1509, and carried with it a high salary. Two years after appointment to this office, de Solís prepared an expedition to explore the southern part of the new continent. His ships sailed from Lepe on 8 Oct., 1515, following the eastern coast as far as the mouth of the Río de la Plata. He went up that river for some distance, and, wishing to take possession of the country in the name of the Crown, landed on the eastern bank of the river, somewhere near the junction of the Uruguay and Paraná Rivers, with two officers and seven men. This region was inhabited by wild tribes, and the little party had not proceeded far when they were attacked from ambush, and Díaz de Solís and most of his followers were killed. When he did not come back, those who had remained behind on the ships determined to return to Spain. Francisco de Torres, the brother-in-law of Díaz de Solís, then took charge, and after naming the river Río de Solís, they set sail, arriving in

Spain, 4 Sept., 1516. The news of the disastrous ending of the expedition was communicated to Cardinal Ximenes de Cisneros who was then regent of Spain. Varnhagen, in his "History of Brazil", published in Portuguese (Rio de Janeiro, 1854-58), states that Nuño Manuel visited the La Plata before Díaz de Solís. Manuel Trelles gives the same honor to Diego García in a pamphlet published in Buenos Aires in 1879.

Dibon, a titular see in Palæstina Tertia. Dibôn (Sept., *Daibôn*, *Dēbôn*, or *Debôn*) is mentioned in Num., xxxiii, 45, as a station of the Hebrews on their way to the Promised Land. It was soon after occupied and rebuilt by the tribe of Gad (Num., xxxii, 34). It belonged later to the Rubenites (Jos., xiii, 17). At the time of the Prophets it was in the power of the Moabites. The ruins of the town stand at Dibân, one and a half miles west of 'Arâfir (Arer), ten miles south-east of M'kaûr (Machœrous), in the vilayet of Damascus. The masses of black basalt present a mournful aspect, strangely contrasting with that of the fertile table-land of Moab and the vicinity of the Arnon (Wadi Modjib). There are an acropolis, cisterns, sepulchral grottoes, and a few Roman and Christian fragments. It was here also that Clermont Ganneau found the famous stele of Mesa, King of Moab, now at the Louvre. Mesa calls himself "the Dibonite". Dibon, as far as is known, never was a Greek see, but in the course of time became a Latin titular see.

S. PÉTRIDÈS.

Dicastillo, JUAN DE, theologian, b. of Spanish parents at Naples, 28 December, 1584; d. at Ingolstadt 6 March, 1653. He entered the novitiate of the Society of Jesus in 1600, and was professor of theology for twenty-five years at Toledo, Murcia, and Vienna. In moral questions, Dicastillo followed the principles of the probabilists. His principal works are: "De justitiâ et jure ceterisque virtutibus cardinalibus libri duo" (Antwerp, 1641); "De Sacramentis in genere disputationes scholasticæ et morales" (Antwerp, 1646-52); "Tractatus duo de juramento, perjurio, et adjuratione, necnon de censuris et pœnis ecclesiasticis" (Antwerp, 1662); "Tractatus de incarnatione" (Antwerp, 1642).

HURTER, *Nomenclator*; SOMMERVOGEL, *Bibliothèque de la c. de J.*, III, col. 49; LANGHORST in *Kirchenlex.*, s. v.

Diconson, EDWARD, titular Bishop of Malla, or Mallus, Vicar Apostolic of the English Northern District; b. 30 Nov., 1670; d. 5 May, 1752. He was the son of Hugh Diconson of Wrightington Hall, Lancashire. At the age of thirteen or fourteen he was sent to the English College at Douai, where he completed his course of philosophy in 1691. He returned to Douai about 1698, having resolved to become a priest, and on being ordained in June, 1701, remained at the college many years as procurator and professor, and became vice-president in 1713, while still continuing to teach theology. At Ushaw there is preserved a portion of a diary kept by him at this period, which gives a glimpse of the life he then led at Douai, besides mentioning some other events of interest. In it he has recorded a visit paid by him to Paris in June, 1704, when he and his brother "at St. Germain made the compliments of the College to King and Queen on the King's birthday." The king here referred to was James II's youthful son, who was recognized as king,

both by the exiled English Catholics and by Louis XIV of France, and to whom Diconson's oldest brother William was tutor. The queen was of course his mother, the widowed Mary of Modena, whose kindly interest in Douai College is shown by more than one entry in the diary. He mentions also a week spent by him in May, 1705, at Cambrai, whither himself and the President of Douai conducted three of the young Howards, then students at the college, to meet their brother the Duke of Norfolk. The illustrious Fénelon was then Archbishop of Cambrai, of whose "extremely obliging and respectful" reception of the duke the diary makes particular mention.

After being employed for some time at Paris in connexion with the college funds, Diconson left Douai to work upon the English mission in 1720, and for some years was chaplain to Mr. Giffard of Chillingham in Staffordshire, acting at the same time as vicar-general to Bishop Stonor, Vicar Apostolic of the Midland District. At the time of his own nomination to the Northern Vicariate Diconson had gone to Rome as envoy-extraordinary of the secular clergy. He was consecrated on 19 March, 1741, at Ghent; passing from there to Douai, he confirmed some of the students, besides ordaining others. On reaching his vicariate he fixed his residence at Finch Mill in Lancashire, a place belonging to his family. He had then reached the age of seventy, and in 1750 he had to petition for a coadjutor in the person of Dr. Francis Petre. After an episcopate not marked by any great events he died at Finch Mill and was buried in the family vault beneath the parish church of Standish. In the reports supplied to the Holy See on the several occasions when his name was brought forward for a bishopric, he is described as "a wise man of singular merit, of learning, application to business, and dexterity in managing affairs—though not very successful in the economy of Douai, and with an impediment of tongue, which made preaching difficult." The fact is also noted that in 1714 "he had accepted the Constitution Unigenitus [against Jansenism], and insisted on its acceptance by the students." He collected a large number of controversial works of the seventeenth and eighteenth centuries (now in the Library of Ushaw College), on the fly-leaves of which he wrote valuable biographical and bibliographical comments.

G. E. PHILLIPS.

Diceto, RALPH DE, dean of St. Paul's, London, and chronicler. The name "Dicetum" cannot be correctly connected with any place in England; it is possible therefore that Ralph was born in France. The date of his birth must be placed between 1120 and 1130; he died 22 Nov., 1202. He was twice a student at Paris. His first preferment was the archdeaconry of Middlesex to which he was nominated in 1152. In 1180 he became dean of St. Paul's. He was the friend, during fifty years, of the successive bishops of London, including Gilbert Foliot, the leader of the royalist party among the bishops and the adversary of the Archbishop, St. Thomas. This friendship and his admiration for Henry II drew him towards the royalist side in the Becket controversy, but not altogether; he had something of the wide, cosmopolitan, twelfth-century outlook, and he showed his sympathy with his archbishop at the Council of Northampton in 1164. He was an active dean and took part in the survey of the lands belonging to the chapter which is known as the Domesday of St. Paul's. His writings include two substantial historical works: "Abbreviationes Chronicorum", a compilation from many sources going back to 1147, and "Ymagines Historiarum", a much more important work. It covers the years 1149 to 1202, and in its earlier portion is based on the historical writings of Robert de Monte (or "de Torigny"). It was begun

probably in the closing years of Henry II's reign. Ralph's important position in ecclesiastical circles, his friendship with many prominent men, such as William Longchamp and Walter of Coutances, the help he received from them, the documents he incorporates, and his own moderate temper render his work of capital importance in spite of some chronological vagueness. The best edition of Ralph's historical works is that edited for the "Rolls Series" by Bishop Stubbs in 1876. The prefaces to the two volumes contain an admirable account of the historian, of the society in which he moved, and of the writings themselves.

F. F. URQUHART.

Dichu, SAINT, the son of an Ulster chieftain, was the first convert of St. Patrick in Ireland. Born in the last decade of the fourth century, he succeeded to the petty kingdom of Leale, which included Saul, in the present County Down. On St. Patrick's arrival at Tubber Slain (the estuary of the Slaney near Loch Cuan or Strangford Lough), in 432, Dichu, then a pagan, strongly opposed his landing, and even attacked the saint, but was miraculously touched with Divine grace and embraced the Faith of Christ. Thereupon Dichu, after baptism, presented St. Patrick with the Sabhall (Saul), for a church, and thus Saul became the first Irish foundation of the national apostle, being afterwards known as Sabhall-*Padhraic*. Saul was a particular favourite with St. Patrick, and he frequently sought a resting-place there during his arduous missionary labours. St. Dichu, from the day of his conversion, was a model of sanctity and, from a man of warlike proclivities, became a man of peace. The details of his later career are obscure, but we know that two of his sons, who had been detained as hostages by Laoghaire, King of Ireland, were released at the prayer of St. Patrick. His feast is noted in the "Martyrology of Donegal" as "Diochu of Sabhall", under date of 29 April. As is well known, it was at Saul that St. Patrick died, and this monastery became in afterdays a famous abbey, under the rule of the Regular Canons of St. Augustine.

W. H. GRATTAN-FLOOD.

Dicuil, Irish monk and geographer, b. in the second half of the eighth century; date of death unknown. Of his life nothing is known except that he belonged probably to one of the numerous Irish monasteries of the Frankish Kingdom, became acquainted, by personal observation, with the islands near England and Scotland, and wrote between 814 and 816 an astronomical, and in 825 a geographical, work. The astronomical work is a sort of computus in four books, in prose and verse, preserved only in a manuscript which formerly belonged to the monastery of Saint-Amand, and is now at Valenciennes. More famous is the "De mensurâ Orbis terræ", a summary of geography, giving concise information about various lands. This work was based upon a "Mensuratio orbis" prepared by order of Theodosius II (435), a manuscript copy of which had found its way to the Carolingian court. Godescalc had already made use of this copy (781-83) in the composition of his celebrated "Evangelistarium". Dicuil draws also upon Pliny, Solinus, Orosius, Isidore of Seville, and other authors, and adds the results of his own investigations. In the nine sections he treats in turn of Europe, Asia, Africa, Egypt, and Ethiopia, the area of the earth's surface, the five great rivers, certain islands, the length and breadth of the Tyrrhenian Sea, and the six (highest) mountains. Although mainly a compilation, this work is not without value. Dicuil is our only source for detailed information of the surveys carried out under Theodosius

II; his quotations, generally exact, are of service for the textual criticism of the authors mentioned; of great interest, too, are the few reports which he got from the travellers of his time; as, for instance, from the monk Fidelis who (762?) journeyed along the canal then still existing, between the Nile and the Red Sea; and from clerics who had lived in Iceland six months. The manuscript was known to Welsler, Isaac Vossius, Salmasius, Hardouin, and Schöpplin; it first appeared in print under the title: "*Diculi Liber de mensurâ orbis terræ ex duobus codd. mss. bibliothecæ imperialis nunc primum in lucem editus a Car. Athan. Walckenaer*" (Paris, 1807). The latest and best edition is that of G. Parthey (Berlin, 1870).

An excellent commentary is that by LETRONNE in his *Recherches géographiques et critiques sur le livre De mensura orbis terræ composé . . . par Dicuil* (Paris, 1814). SCHWEDER, *Beiträge zur Kritik der Chorographie des Augustus* (Kiel, 1876), I; DÜMMELER, *Die handschriftliche Ueberlieferung der lateinischen Dichtungen aus der Zeit der Karolinger in Neues Archiv für ältere deutsche Geschichtskunde* (Hanover, 1897), IV, 256-258; ANCKER in *Die, Nat. Biog.*; TARNOW, *Zur Chorographie des Augustus in Sitzungsberichte der philol.—philol.—und histor. Classe der K. B. Akademie der Wissenschaften*, 1891 (Munich, 1892), 406-409.

OTTO HARTIG.

Didache (DOCTRINE OF THE TWELVE APOSTLES), a short treatise which was accounted by some of the Fathers as next to Holy Scripture. It was rediscovered in 1883 by Bryennios, Greek Orthodox metropolitan of Nicomedia, in the codex from which, in 1875, he had published the full text of the Epistles of St. Clement. The title in the MS. is *Διδαχὴ κυρίου διὰ τῶν δώδεκα ἀποστόλων ἔθνεσιν*, but before this it gives the heading *Διδαχὴ τῶν δώδεκα ἀποστόλων*. The old Latin translation of cc. i-v, found by Dr. J. Schlecht in 1900, has the longer title, omitting "twelve", and has a rubric *De doctrinâ Apostolorum*. For convenience the contents may be divided into three parts: the first is the "Two Ways", the Way of Life and the Way of Death; the second part is a *rituale* dealing with baptism, fasting, and Holy Communion; the third speaks of the ministry. Doctrinal teaching is presupposed, and none is imparted.

The Didache is mentioned by Eusebius after the books of Scripture (H. E., III, xxv, 4): "Let there be placed among the spuria the writing of the Acts of Paul, the so-called Shepherd and the Apocalypse of Peter, and besides these the Epistle known as that of Barnabas, and what are called the Teachings of the Apostles, and also . . . the Apocalypse of John, if this be thought fit . . ." St. Athanasius and Rufinus add the "Teaching" to the sapiential and other deuterocanonical books. (Rufinus gives the curious alternative title "Judicium Petri".) It has a similar place in the lists of Nicephorus, Pseudo-Anastasius, and Pseudo-Athanasius (Synopsis). The Pseudo-Cyprianic "Adversus Alectores" quotes it by name. Unacknowledged citations are very common, if less certain. The "Two Ways" appears in Barnabas, cc. xviii-xx, sometimes word for word, sometimes added to, dislocated, or abridged, and Barn., iv, 9 is from Didache, xvi, 2-3, or vice versa. Hermas, Irenæus, Clement of Alexandria, and Origen seem to use the work, and so in the West do Optatus and the "Gesta apud Zenophilum". The Didascalia Apostolorum (q. v.) are founded upon the Didache. The Apostolic church ordinance has used a part, the Apostolic Constitutions have embodied the Didascalia. There are echoes in Justin, Tatian, Theophilus, Cyprian, and Lactantius.

CONTENTS.—*First Part.*—The Way of Life is the love of God and of our neighbour. The latter only is spoken of at length. We first find the Golden Rule in the negative form (cf. the "Western" text of Acts, xv, 19 and 29). Then short extracts from the Sermon on the Mount, together with a curious passage on giving and receiving, which is cited with variations by Hermas (Mand., ii, 4-6). The Latin omits ch. i, 3-6

and ch. ii, 1, and these sections have no parallel in Barnabas; they may therefore be a later addition, and Hermas and the present text of the Didache may have used a common source, or Hermas may be the original. The second chapter contains the Commandments against murder, adultery, theft, coveting, and false witness—in this order—and additional recommendations depending on these. In ch. iii we are told how one vice leads to another: anger to murder, concupiscence to adultery, and so forth. This section shows some close likenesses to the Babylonian Talmud. The whole chapter is passed over in Barnabas. A number of precepts are added in ch. iv, which ends: "This is the Way of Life." The Way of Death is a mere list of vices to be avoided (v). Ch. vi exhorts to the keeping in the Way of this Teaching: "If thou canst bear the whole yoke of the Lord, thou wilt be perfect; but if thou canst not, do what thou canst. But as for food, bear what thou canst; but straitly avoid things offered to idols; for it is a service of dead gods." Many take this to be a recommendation to abstain from flesh, as some explain Rom., xiv, 2. But the "let him eat herbs" of St. Paul is a hyperbolic expression like I Cor., viii, 13: "I will never eat flesh, lest I should scandalize my brother", and gives no support to the notion of vegetarianism in the Early Church. The Didache is referring to Jewish meats. The Latin version substitutes for ch. vi a similar close, omitting all reference to meats and to *idolothyta*, and concluding with *per d. n. J. C. . . in sæcula sæculorum, amen*. This is the end of the translation. We see that the translator lived at a day when idolatry had disappeared, and when the remainder of the Didache was out of date. He had no such reason for omitting ch. i, 3-6, so that this was presumably not in his copy.

Second Part.—This (vii-x) begins with an instruction on baptism, which is to be conferred "in the Name of the Father, and of the Son and of the Holy Ghost" in living water, if it can be had—if not, in cold or even hot water. The baptized and, if possible, the baptizer, and other persons must fast for one or two days previously. If the water is insufficient for immersion, it may be poured thrice on the head. This is said by Bigg to show a late date; but it seems a natural concession for hot and dry countries, when baptism was not as yet celebrated exclusively at Easter and Pentecost and in churches, where a *columbethra* and a supply of water would not be wanting. Fasts are not to be on Monday and Thursday "with the hypocrites" (i. e. the Jews), but on Wednesday and Friday (viii). Nor must Christians pray with the hypocrites, but they shall say the Our Father thrice a day. The text of the prayer is not quite that of St. Matthew, and it is given with the doxology "for Thine is the power and the glory for ever", whereas all but a few MSS. of St. Matthew have this interpolation with "the kingdom and the power" etc.

Ch. ix runs thus: "Concerning the Eucharist, thus shall you give thanks: 'We give Thee thanks, our Father, for the holy Vine of David Thy Child, which Thou hast made known to us through Jesus Thy Child; to Thee be the glory for ever'. And of the broken Bread: 'We give Thee thanks, our Father, for the Life and knowledge which Thou hast made known to us through Jesus Thy Child; to Thee be glory for ever. For as this broken Bread was dispersed over the mountains, and being collected became one, so may Thy Church be gathered together from the ends of the earth into Thy kingdom, for Thine is the glory and the power through Jesus Christ for ever.' And let none eat or drink of your Eucharist but those who have been baptized in the Name of Christ; for of this the Lord said: 'Give not the holy Thing to the dogs'." These are clearly prayers after the Consecration and before Communion. Ch. x gives a thanksgiving after Communion, slightly longer, in which mention is made of the "spiritual food and drink and eternal Life through

Thy Child". After a doxology, as before, come the remarkable exclamations: "Let grace come, and this world pass away! Hosanna to the Son of David! If any is holy, let him come. If any be not, let him repent. Maranatha. Amen". We are not only reminded of the *Hosanna* and *Sancta sanctis* of the liturgies, but also of Apoc., xxii, 17, 20, and I Cor., xvi, 22. In these prayers we find deep reverence, and the effect of the Eucharist for eternal Life, though there is no distinct mention of the Real Presence. The words in thanksgiving for the chalice are echoed by Clement of Alexandria, "Quis div.", 29: "It is He [Christ] Who has poured out the Wine, the Blood of the Vine of David, upon our wounded souls"; and by Origen, "In i Judic.", Hom. vi: "Before we are inebriated with the Blood of the True Vine Which ascends from the root of David." The mention of the chalice before the bread is in accordance with St. Luke, xxii, 17-19, in the "Western" text (which omits verse 20), and is apparently from a Jewish blessing of wine and bread, with which rite the prayers in ch. ix have a close affinity.

The *Third Part* speaks first of teachers or doctors (*διδάσκαλοι*) in general. These are to be received if they teach the above doctrine; and if they add the justice and knowledge of the Lord they are to be received as the Lord. Every Apostle is to be received as the Lord, and he may stay one day or two, but if he stay three, he is a false prophet. On leaving he shall take nothing with him but bread. If he ask for money, he is a false prophet. Similarly with the order of prophets: to judge them when they speak in the spirit is the unpardonable sin; but they must be known by their morals. If they seek gain, they are to be rejected. All travellers who come in the name of the Lord are to be received, but only for two or three days; and they must exercise their trade, if they have one, or at least must not be idle. Anyone who will not work is a *Χριστέμπορος*—one who makes a gain out of the name of Christ. Teachers and prophets are worthy of their food. Firstfruits are to be given to the prophets, "for they are your High Priests; but if you have not a prophet, give the firstfruits to the poor". The breaking of bread and Thanksgiving [Eucharist] is on Sunday, "after you have confessed your transgressions, that your Sacrifice may be pure", and those who are at discord must agree, for this is the clean oblation prophesied by Malachias, i, 11, 14. "Ordain therefore for yourselves bishops and deacons, worthy of the Lord . . . for they also minister to you the ministry of the prophets and teachers". Notice that it is for the sacrifice that bishops and deacons are to be ordained. The last chapter (xvi) exhorts to watching and tells the signs of the end of the world.

SOURCES.—It is held by very many critics that the "Two Ways" is older than the rest of the Didache, and is in origin a Jewish work, intended for the instruction of proselytes. The use of the Sibylline Oracles and other Jewish sources may be probable, and the agreement of ch. ii with the Talmud may be certain; but on the other hand Funk has shown that (apart from the admittedly Christian ch. i, 3-6, and the occasional citations of the N. T.) the O. T. is often not quoted directly, but from the Gospels. Bartlet suggests an oral Jewish catechesis as the source. But the use of such material would surprise us in one whose name for the Jews is "the hypocrites", and in the vehemently anti-Jewish Barnabas still more. The whole base of this theory is destroyed by the fact that the rest of the work, vii-xvi, though wholly Christian in its subject-matter, has an equally remarkable agreement with the Talmud in cc. ix and x. Beyond doubt we must look upon the writer as living at a very early period, when Jewish influence was still important in the Church. He warns Christians not to fast with the Jews or pray with them; yet the two fasts and the three times of prayer are modelled on

Jewish custom. Similarly the prophets stand in the place of the High Priest.

DATE.—There are other signs of early date: the simplicity of the baptismal rite, which is apparently neither preceded by exorcisms nor by formal admission to the catechumenate; the simplicity of the Eucharist, in comparison with the elaborate quasi-Eucharistic prayer in Clem., I Cor., lix-lxi; the permission to prophets to extemporize their Eucharistic thanksgiving; the immediate expectation of the second advent. As we find the Christian Sunday already substituted for the Jewish Sabbath as the day of assembly in Acts, xx, 7 and I Cor., xvi, 2, and called the Lord's day (Apoc., i, 10), there is no difficulty in supposing that the parallel and consequent shifting of the fasts to Wednesday and Friday may have taken place at an equally early date, at least in some places. But the chief point is the ministry. It is twofold: (1) local and (2) itinerant.—(1) The local ministers are bishops and deacons, as in St. Paul (Phil., i, 1) and St. Clement. Presbyters are not mentioned, and the bishops are clearly presbyter-bishops, as in Acts, xx, and in the Pastoral Epistles of St. Paul. But when St. Ignatius wrote in 107, or at the latest 117, the three orders of bishops, priests, and deacons were already considered necessary to the very name of a Church, in Syria, Asia Minor, and Rome. If it is probable that in St. Clement's time there was as yet no "monarchical" bishop at Corinth, yet such a state of things cannot have lasted long in any important Church. On this ground therefore the Didache must be set either in the first century or else in some backwater of church life. The itinerant ministry is obviously yet more archaic. In the second century prophecy was a charisma only and not a ministry, except among the Montanists.—(2) The itinerant ministers are not mentioned by Clement or Ignatius. The three orders are apostles, prophets, and teachers, as in I Cor., xii, 28 sq.: "God hath set some in the Church; first apostles, secondly prophets, thirdly doctors [teachers]; after that miracles, then the graces of healings, helps, governments, kinds of tongues, interpretations of speeches. Are all apostles? Are all prophets? Are all doctors?" The Didache places teachers below apostles and prophets, the two orders which St. Paul makes the foundation of the Church (Eph., ii, 20). The term *apostle* is applied by St. Paul not only to the Twelve, but also to himself, to Barnabas, to his kinsmen, Andronicus and Junias, who had been converted before him, and to a class of preachers of the first rank. But apostles must have "seen the Lord" and have received a special call. There is no instance in Holy Scripture or in early literature of the existence of an order called apostles later than the Apostolic age. We have no right to assume a second-century order of apostles, who had not seen Christ in the flesh, for the sake of bolstering up a preconceived notion of the date of the Didache. Since in that work the visit of an apostle or of a pretended apostle is contemplated as a not improbable event, we cannot place the book later than about 80. The limits would seem to be from 65 to 80. Harnack gives 131-160, holding that Barnabas and the Didache independently employ a Christianized form of the Jewish "Two Ways", while Did., xvi, is citing Barnabas—a somewhat roundabout hypothesis. He places Barnabas in 131, and the Didache later than this. Those who date Barnabas under Vespasian mostly make the Didache the borrower in cc. i-v and xvi. Many, with Funk, place Barnabas under Nerva. The commoner view is that which puts the Didache before 100. Bartlet agrees with Ehrhard that 80-90 is the most probable decade. Sabatier, Minasi, Jacquier, and others have preferred a date even before 70.

As to the place of composition, many suggest Egypt because they think the "Epistle of Barnabas" was written there. The corn upon the mountains does not suit Egypt, though it might be a prayer borrowed

from Palestine. There are really no materials even for a conjecture on the subject.

A Latin fragment of the *Two Ways* was published in 1723 by PEZ in *Thesaurus Anecdotorum*, IV. The first Greek edition is *Ἰδιὰ τῶν δώδεκα ἀποστόλων ἐκ τοῦ ἱεροσολυμιτικοῦ χειρογράφου τῶν πρώτων ἐκδομένων μετὰ προλεγόμενων καὶ σημειώσεων*. . . Ὑπὸ Φιλοθέου Βρυενίου, μητροπολίτου Νικομηδείας. (In *Κωνσταντινουπόλει* (1883). The MS. was reproduced in phototype in the fine edition by HARRIS, *The Teaching of the Apostles, newly edited, with facsimile text and a commentary* (Baltimore and London, 1887). The Latin version was published by SCHLECHT, first in a shilling brochure, then in a larger edition with the Greek and notes (Freiburg in Br., 1900-1901). Of the Greek a very large number of editions have appeared, mostly with translations: DE ROMESTIN (Oxford, 1884); SPENCE (London, 1885); HITCHCOCK and BROWN (New York, 1884-5); FITZGERALD (New York, 1884); ORRIS (New York, 1884); SCHAFF (New York, 1884-9); also by SABATIER (Paris, 1885); JACQUET (Lyons, 1881); MINASI (Rome, 1891). It was included in HILGENFELD, *Nov. Test. extra canonem receptum* (1884), fasc. iv, and in the editions of the *Apostolic Fathers* by LIGHTFOOT-LARKER (with Eng. tr., 1891-3-8); GEBHARDT, HARNACK and ZAHN (Leipzig, 1900), FUNK (Tübingen, 1901), and VIZZINI (Rome, 1902). Special notice is called for by the following: TAYLOR, *The Teaching of the Twelve Apostles, with Illustrations from the Talmud* (Cambridge, 1908); IDEM, *An Essay on the Theology of the Didache* (Cambridge, 1889); IDEM in *Journal of Philol.*, XVIII, XIX, XXI, and in *Journal of Theol. Studies* (Oct., 1906); BARTLET in HASTINGS, *Dict. of Bib.* (extra vol., 1904); HARNACK, *Die Lehre der zwölf Apostel* (larger ed., Leipzig, 1884) and *Die Apostellehre und die jüdischen zwei Wege* (smaller ed., Leipzig, 1886 and 1896); IDEM, *Gesch. der altchr. Litt.*, I, 86 and II (Chronol., I), 428; FUNK, *Doctrina XII Apostolorum* (Tübingen, 1887); and the introduction to his ed. of the *Ap. Fathers*, supra; IDEM, in *Tüb. Theol. Quartalschr.*, LXVI, LXVIII, LXIX, LXXVI, LXXIX (1884-86-87-94-97); much of the matter of these articles is republished by FUNK in his *Kirchengeschichtliche Abhandlungen* (Paderborn, 1899), II. Among other matter also SAVI, *La Dottrina dei XII Ap.*, *ricerche critiche sull'origine del testo* (Rome, 1893); and in *Studi e docum. di storia e diritto* (1892), XIII; HENNECKE, *Die Grundschrift der Didache und ihre Recensionen in Zeitschr. für N.-T. Wiss.* (1901), II; KOCH, *Die Did. bei Cyprian*, *ibid.* (1907), VIII; CHIAPPELLI, *Studi di antica letteratura cristiana* (Turin, 1887); LADEUZE in *Rev. d'hist. eccl.* (Louvain, 1901), II. On the ministry in the *Didache*, see RÉVILLE (Prot.), *Origines de l'Épiscopat* (Paris, 1894); MICHELLE (Cath.), *Origine de l'Épisc.* (Louvain, 1900). On baptism, BIGG in *Jour. of Theol. Studies* (July, 1904), v. Dr. Bigg (*ibid.*, VI, April, 1905) places the *Didache* in the fourth century. On the saying (Did., i, 6), "Let thy alms sweat in thy hands, till thou know to whom to give", see TAYLOR in *Jour. of Philol.*, XIX (as above); TURNER in *Jour. of Theol. Studies* (July, 1906), VII. On the relation of the *Didache* to the *Didascalica Apostolorum* and to the *Ap. Constitutions*, see also FUNK, *Die Ap. Const.* (Rottenburg, 1891) and his *Didasc. of Const. Apost.* (Paderborn, 1900). HOLZHEY, *Die Abhängigkeit der Syr. Didask. von der Didache* (Munich, 1895). This list is but an excerpt from the enormous literature since 1884. Bibliography to 1895 in CHEVALIER, *Topo-bibliographie*; summaries in SCHLECHT, loc. cit., to 1900; in ERHARD, *Altchr. Litt.*, to 1900; in BARDENEWEER, *Gesch. der altchr. Litt.*, to 1902.

JOHN CHAPMAN.

Didacus, SAINT, lay brother of the Order of Friars Minor, date of b. uncertain; d. at Alcalá, Spain, 12 Nov., 1463. He was born of poor parents who placed him under the direction of a hermit living in the neighbourhood of San Nicolás del Puerto, his native town. Feeling himself called to the religious life, he applied for admission to the Franciscan Order at the convent of Arizafa and was received as a lay brother. In 1445 he was chosen guardian of the Franciscan community on the Canary Island of Fortaventura; and though it was an exception to the ordinary rules for a lay brother to be made superior, his great zeal, prudence, and sanctity fully justified his choice by the religious of Castile. He remained superior at Fortaventura until 1449 when he was recalled to Spain, whence he went to Rome to be present at the canonization of St. Bernardine of Siena in 1450. At Rome he fulfilled the humble office of infirmarian in the convent of Ara Cœli; and his biographers record the miraculous cure of many whom he attended, through his pious intercession. He was finally recalled to Spain and was sent by his superiors to Alcalá where he spent the remaining years of his life in penance, solitude, and the delights of contemplation. St. Didacus was canonized by Sixtus V in 1588. His feast is kept in the order on the twelfth of November.

WADDING, *Annales Minorum* (Rome, 1732), XIII, 281-321; LEO, *Lives of the Saints and Blessed of the Three Orders of St. Francis* (Taunton, 1887), IV, 53-60.

STEPHEN M. DONOVAN.

Didascalica Apostolorum, a treatise which pretends to have been written by the Apostles at the time of the Council of Jerusalem (Acts, xv), but is really a composition of the third century. It was first published in 1854, in Syriac. In 1900 a Latin translation, perhaps of the fourth century, was discovered, more than half of which has perished. The original was in Greek, and this can be to some extent restored by a comparison with the Apostolic Constitutions, the first eight books of which are simply a revised and enlarged edition of the *Didascalica*. The attempt at restoration made by Lagarde was a failure, but an excellent guide is now at hand in the new edition (1906) by Funk, in which the Greek of the Apostolic Constitutions is printed side by side with the Latin of the *Didascalica*, a translation from the Syriac supplying the lacunæ of the old Latin version. Everything in the Apostolic Constitutions which is not found in the *Didascalica* is underlined, so that the relations of the two documents, and to a great extent the original Greek of the *Didascalica*, can be seen at a glance.

The full title given in the Syriac is "Didascalica, that is, the Catholic doctrine of the twelve Apostles and the holy disciples of our Lord". The contents are the same as those of the corresponding books of the Apostolic Constitutions. Especially noticeable is the treatment which bishops are ordered to give to penitents. Even great sinners, on repentance, are to be received with kindness. No sins are excepted. The canonical penance is to be of two to seven weeks. This legislation is obviously subsequent to Novatianism; it is not so certainly aimed against Novatianism. The church officials are bishops, deacons, priests, widows (and orphans); deaconesses are also added, in one place lectors, and once subdeacons. These last may have been interpolated. This organization is behind that of Rome under Pope Cornelius in 251; hence Funk in 1891 placed the date of the work in the first half of the third century. But the whole Western system never spread to the East, and the development was uneven. Funk therefore withdrew this opinion in 1901, giving the second half of the century as the true date. The heresies mentioned are those of Simon Magus and Cleobius (this name is given also by Hegesippus), with Gnostics and Ebionites. Against these, Christians must believe in the Trinity, the Scriptures, and the Resurrection. The original Law of Moses is to be observed, but not the Second Law, or *Deuterosis*, which was given to the Jews on account of the hardness of their hearts. The Old Testament is frequently quoted, and often at great length. The Gospel is cited by name, usually that of St. Matthew, the others less often, and that of St. John least of all, as it was traditionally held to have been written at a much later date than that which the *Didascalica* claims for itself. Acts and nearly all the Epistles are freely employed, including Hebrews, but the Apocalypse is not cited. None of these could be named. Harnack has gone quite wrong in arguing that the only place in which the Fourth Gospel is quoted formally as the Gospel is an interpolation, with the inference (at which he naturally expresses his surprise) that the author did not know or did not esteem that Gospel. (A quotation of the *pericope de adulterâ*, John, viii, is important.) Harnack further holds that the gentle treatment of sinners is an interpolation intended against Novatianism, and that the deaconesses as well as the subdeacon are a later addition. He dates the original form in the first half of the third century, and the additions in the last quarter of it; but the reasons given are very weak. Achelis leaves the whole of the century open, but says that the later the work is placed in it, the better he feels he understands it.

The earliest mention of the work is by St. Epiphanius, who believed it to be Apostolic. He found it in

use among the Audiani, Syrian heretics. The few extracts he gives do not quite tally with our present text; but then he is notoriously inexact in his quotations. Next we find the whole work incorporated into the Apostolic Constitutions, at the end of the fourth century, and soon afterwards it is quoted in the Pseudo-Chrysostom's "Opus Imperfectum in Matt." But the work never had a great vogue, and it was superseded by the Apostolic Constitutions. The place of composition was Syria, though what part cannot be determined. The author was apparently a bishop, and presumably a Catholic. His book is badly put together, without logic, but not without some good sense. It never touches upon dogma but concerns itself entirely with practice. It has been called the earliest attempt to compile a *Corpus juris canonici*.

A few specimens of the text in German were published in 1843 by BICKELL in his *Gesch. des Kirchenrechts*; the whole in Syriac by LAGARDE (under his earlier name of BÖTTICHER), *Didascalia Apostolorum Syriace* (Leipzig, 1854). His attempted restoration of the Greek text was published in BUNSEN, *Analecta Anticriana* (London, 1854), with the title *Didascalia purior*, for he gratuitously omitted a good deal as interpolated. Another Syriac ed. from other MSS. by GIBSON, *The Didascalia Ap. in Syriac*, tr. EADEM, *The Didasc. Ap. in English* (both at Cambridge Univ. Press, 1903, as *Horæ Semiticae*, I and II); French tr. by NAU, *Ancienne littérature syriaque (extraît du Canoniste Contemporain)*, Feb., 1901, May, 1902). The Latin version, from a palimpsest at Verona, was published by HAULER, *Didascalia Apostolorum fragmenta Veronensia latina* (Leipzig, 1900). FUNK's writings on the subject include the monograph *Die apostolischen Konstitutionen* (Rottenburg, 1891), *La date de la Didascalie des Apôtres* (Rev. d'hist. eccl., 1891, Oct.), reprinted in German in his *Kirchengesch. Abhandlungen* (Paderborn, 1907), III, 13, articles in the *Theol. Quartalsschrift* (1893, and 1903-4), and the great edition already mentioned, *Didascalia et Constitutiones Apostolorum editi F. X. Funk* (2 vols., Paderborn, 1906). HARNACK's views are found in *Texte und Untersuchungen*, II, 1, 2 (1884) and v (1886), IX, ii, 2 (1893), and in *Gesch. der altchr. Lit.*, I, 515, and II, 2 (i.e. Chronol., II), 488, where a good bibliography will be found; HOLZHEY, *Die Abhängigkeit der Syr. Didasc. v. d. Didache* (*Compendium du lme Congrès sc. internat. des Cath.*, 1898, I), *Die beiden Rezensionen der Ign. Briefe u. die ap. Didasc.* (*Theol. Quartalsschr.*, 1898, 380), and *Dionys v. Alex. und die Didasc.* (*Theol.-pract. Monatsschr.*, 1901, 515—he attempts to distinguish three recensions, the first being known to Dionysius, but he has not convinced Funk or Harnack). ACHELIS and FLEMMING, *Die syrische Didascalia übersetzt und erklärt* (*Texte und Unters.*, XXV, ii, 1904, an important contribution). See also BARDENHEWER, *Gesch. der altchr. Lit.*, II, and EHRHARD, *Altchr. Lit. bis 1900*, for further bibliography. The so-called Arabic *Didascalia* is merely a version of the *Apostolic Constitutions*. Only fragments of it have been published; they will be found in Funk's ed. of the *Apostolic Constitutions*, II (1906), 120, see also p. xxvii, and in his earlier monograph (1901), 207; RIEDEL, *Die Kirchenrechts Quellen des Patriarchats Alex.* (1900). A variety of this version was found lately in the Propaganda library, by BAUMSTARK. He describes it in *Oriens Christianus*, II, 201 (1903). On this discovery see FUNK in *Th. Quartalsschr.* (1904), 233, reprinted in his *Kirchengesch. Abh.* (1907), III, xviii.

JOHN CHAPMAN.

Diderot, DENIS. See ENCYCLOPÉDISTES.

Didon, HENRI, preacher, writer, and educator, b. 17 March, 1840, at Touvet (Isère), France; d. 13 March, 1900, at Toulouse. At the age of eighteen he left the seminary of Grenoble to enter the Dominican Order at Flavigny. Four years later he went to Rome to complete his studies at the Minerva. Returning to France a lector of sacred theology he taught Scripture for a brief time, and began at Paris in 1868 a brilliant career as a preacher. A sincere desire to communicate his faith to others, coupled with accomplished art, enabled him to make the most of the qualities of an orator with which nature had endowed him. He had a majestic carriage, strong features, a massive forehead, black eyes, a vibrating voice which he perfectly controlled, and an ease in emphasizing his words by superb gestures. Frank, straightforward, and sympathetic, he readily won the hearts of his hearers, whom he dominated by his presence and startled by his boldness. He was essentially a man of his time, an advocate of progress; but withal loyal to the Church whose place in modern civilization he strenuously endeavoured to strengthen. He was at his best when preaching on social subjects. He deliv-

ered the funeral oration of Archbishop Darboy, of Paris, who had been shot by the Communists 24 May, 1871. In the following year he preached Lenten and Advent conferences in the principal churches of Paris, many of which he published. In 1879 he was bitterly assailed by the secular press of Paris for the attitude he took in a series of conferences on the burning question of the indissolubility of marriage, which he discontinued at the request of the Archbishop of Paris, but published in book form. A year later he was bitterly attacked by other critics while delivering Lenten conferences on the Church and modern society, and the accusation was made that he was in contradiction with the Syllabus. Although his preaching was orthodox, he was sent by the master general of his order to Corbara in Corsica. There for seven years he laboured at a "Life of Christ", leaving his retreat for an extended visit in Palestine and again for a sojourn at the Universities of Leipzig, Göttingen, and Berlin. In 1887 he returned to France, where, in 1890, he completed his "Life of Christ". It met with a remarkable sale and was soon translated into several languages: two English translations were made in 1891-2.

In January, 1892, Father Didon reappeared in the French pulpit, when he preached at Bordeaux a religious-political sermon in favour of the Republic. He then delivered at the Madeleine in Paris a series of Lenten conferences on Jesus Christ (tr. Belief in the Divinity of Jesus Christ, 1894). Thereafter he gave only occasional sermons and lectures, his time and energies being devoted to the education of youth. At the Dominican colleges in and near Paris, cultivating educational theories but little developed elsewhere in France, he did away with compulsion as much as possible, taught the students that discipline is the way to liberty, fostered in them a spirit of self-reliance together with a loving reverence for authority, and checked the development of a critical spirit. Some of his educational theories may be seen in his work "Les Allemands" (tr. The Germans, 1884), which is a study of the German universities with application to France; others may be found developed at length in his college addresses published in pamphlet form. The deeply religious character of Father Didon is especially manifest in his "Lettres à Mlle Th. V." (Paris, 1900), which quickly went through thirty editions and appeared in English; in his "Lettres à un ami" (Paris, 1902); and "Lettres à Mère Samuel" (Année Dominicaine, 1907-8). Besides the works mentioned above many of his sermons and addresses have been published in French and some have been done into English.

DE COULANGES, *Le Père Didon*, 3d ed. (Paris, 1901); REYNAUD, *Le Père Didon; Sa Vie et son Œuvre* (Paris, 1904); BRISON, *L'Envers de la gloire; Enquête de doc. inéd. sur Didon* (Paris, 1905); CHAPTIN, *Le Père Didon*; ROBIÈRE, *Un Moine Moderne* (Paris, 1904); HEINRICH, *Le Père Didon et l'Allemagne in Le Correspondant*. Cf. THIELE, *Guide Bibliographique de la Littérature Française de 1800-1906* (Paris, 1907) for complete list of books, brochures, and magazine articles on Didon, as well as for an incomplete list of his works.

ARTHUR L. McMAHON.

Didot, name of a family of French printers and publishers.

FRANÇOIS DIDOT, son of Denis Didot, a merchant,

HENRI DIDON

was b. in Paris, 1689, and d. 1757. In 1713 he opened a bookstore on the Quai des Grands-Augustins, the sign of which was "A la Bible d'or". The celebrated Abbé de Bernis served for a time there as a clerk, after leaving the seminary. François Didot was a learned man, and held by his colleagues in so great esteem that he was elected to the dignity of syndic of the Booksellers' Corporation in 1735. He received his printer's charter from the king in 1754. Among the books he published should be mentioned the "Histoire des voyages" (20 vols., quarto), the first seventeen volumes of which are attributed to the Abbé Prévost.

FRANÇOIS-AMBOISE DIDOT, b. 1730; d. 1804, succeeded his father François, and was appointed printer to the clergy in 1788. All the lovers of fine books highly appreciate the editions known as "D'Artois" (Recueil de romans français, 64 vols.) and "du Dauphin", a collection of French classics in 32 vols., edited by order of Louis XVI. He also published a Bible. He invented a new printing-press, improved type-founding, and was the first to print on vellum paper.

PIERRE-FRANÇOIS DIDOT, b. 1732; d. 1795, brother of the preceding, founded the paper factory of Essonne and made improvements in type-founding. The most important of his publications are: "L'imitation de Jésus-Christ" (folio), "Télémaque" (quarto), "Tableau de L'Empire Ottoman" (folio). One of his daughters married Bernardin de Saint-Pierre.

HENRI DIDOT, b. 1765, d. 1852, son of Pierre-François, made a name as engraver, founder, and engine-maker. When sixty-six years old, he engraved the microscopic type which was used for the editions of the "Maximes" of La Rochefoucauld and Horace's works. This type was so small that, to cast it, he had to invent a new mould which he called *polyamatype* (1819), because it founded one hundred letters at a time. He engraved the *assignats*, the paper money used during the French Revolution.

SAINT-LÉGER DIDOT, b. 1767; d. 1829, second son of Pierre-François, devoted his attention to paper-making in the famous factory of Essonne, and, after ten years of patient experiment, invented a machine to make "endless" paper.

EDOUARD DIDOT, b. 1797; d. 1825, son of Saint-Léger, made a good translation of Johnson's "Lives of the Poets", which was printed by Didot.

PIERRE DIDOT, b. 1760; d. 1853, eldest son of François-Ambroise, obtained a gold medal at the exhibition of 1798, for his edition of Virgil. By order of the Government, his presses were established in the Louvre, where they remained during the Consulate. The celebrated Louvre editions are Virgil, Racine, Horace, and La Fontaine. The board of examiners of the 1806 exhibition pronounced the Racine edition "the most perfect typographical production of all ages". Pierre Didot was also a poet and translated in verse the fourth book of Georgics, the first books of Horace's Odes, and also wrote a number of original poems.

JULES DIDOT, b. 1794; d. 1871, son of Pierre, is famous for his invention of round-edged initials, to take the place of the sharp-edged ones. In 1825 he took his printing plant to Brussels and founded the Royal Printing House.

FIRMIN DIDOT, b. 1764; d. 1836, second son of François-Ambroise was the inventor of stereotypography, which entirely changed the book trade, and was the first to engrave slips of so-called "English" and round hand-writing. Among the works which issued from his press were "Les ruines de Pompéi", "Le panthéon égyptien" of Champollion-Figeac, and "Historial du jongleur", printed in Gothic type, with tail-pieces and vignettes, like the editions of the fifteenth century. In 1827, Firmin Didot gave up business to devote himself to politics and literature. He

was a member of the Chamber of Deputies and wrote tragedies ("La Reine de Portugal", "La Mort d'Annibal") and essays on literary topics.

AMBOISE-FIRMIN DIDOT, eldest son of Firmin, b. 1790; d. 1876, followed first a diplomatic career and was for a time attaché of the French Embassy at Constantinople. He took advantage of his position to visit the East and Greece, being the first to discover the location of Pergamum. When his brother retired in 1827, he, together with his brother Hyacinthe, took the management of the publishing business. They published "Bibliothèque des auteurs Grecs", "Bibliothèque des auteurs Latins", and "Bibliothèque des auteurs français", an immense collection of two hundred and fifty volumes. Their greatest work was a new edition of the "Thesaurus Græce Linguae", of Henry Stephens, edited by Boissonade, Dindorf, and Hase (9 vols., 1855-59).

Piton, *Famille Firmin-Didot* (Paris, 1856); WERDET, *Etude biographique sur la famille des Didot* (Paris, 1864); BRUNET, *Firmin Didot et sa famille* (Paris, 1870).

LOUIS N. DELAMARRE.

Didron, ADOLPHE-NAPOLÉON, also called Didron *ainé*, archæologist, together with Viollet-le-Duc and Caumont, one of the principal revivers of Christian art in France; b. 13 March, 1806, at Hautvillers, near Reims, where his father was a collector of taxes; d. at Paris, 13 November, 1867. After completing his early studies at the preparatory seminaries of Meaux and Reims, he went to Paris in 1826, became there a professor of history, and devoted his leisure hours to following courses of law, medicine, etc. The reading of Victor Hugo's "Notre Dame de Paris" gave him a taste for the study of the antiquities of the Middle Ages. Having been admitted to the circle of the poet in 1829, he there formed the plan of a tour in Normandy, a province noted above all others for its historical buildings. His reading of the legends of the saints, his knowledge of Scripture, and certain abstract notions of theology directed the young amateur to the study of iconography. In 1835 Guizot named him secretary to the committee entrusted with the publication of the unedited documents concerning the history of France. Didron published, entirely unaided, the first four volumes of the reports of the committee. In 1839 the portion concerning the iconography of the monumental monographs of the cathedral of Chartres was reserved for him. This work did not appear in complete form. In 1838 he opened a course of iconography at the Royal Library. He published (under the title of "Manuel d'Iconographie") a French version of the famous "Painters' Book of Mount Athos", discovered there by him, and wrote the "Histoire de Dieu", the first part of a more general work. His greatest work is the review known as "Annales archéologiques", in which are to be found accounts of his travels and numerous studies in iconography. For many years Didron published in the "Univers" letters on archæology. He also founded a library of archæological literature, and finally, in 1849, constructed a glass-manufactory, which produced some remarkable pieces of work and continued to exist after his death. He also produced some good examples of work from the goldsmiths' workshop which he had established in 1858, but which was short-lived.

His principal works are: "Bulletin archéologique du comité des arts et monuments" (4 vols., Paris, 1840-1847); "Histoire de Dieu, iconographie des personnes divines" (Paris, 1843); "Manuel d'iconographie chrétienne, grecque et latine" (Paris, 1845); "Annales archéologiques" (Paris, 1844-81). See also "Ann. arch." (1881), XXVIII, 184.

GUILLERMY, *Didron in Ann. arch.* (1868), XXV, 377-395.

R. MAERE.

Didymus. See THOMAS, SAINT, APOSTLE.

Didymus the Blind, of Alexandria, b. about 310 or 313; d. about 395 or 398, at the age of eighty-five. Didymus lost the use of his eyes when four years old, yet he became one of the most learned men of his period. He prayed earnestly in his youth, we are told by Rufinus, not for the sight of his bodily eyes, but for illumination of the heart. He admitted to St. Anthony that the loss of his sight was a grief to him; the saint replied that he wondered how a wise man could regret the loss of that which he had in common with ants and flies and gnats, and not rather rejoice that he possessed a spiritual sight like that of the saints and Apostles. St. Jerome indeed habitually spoke of him not as "the blind" but as "the Seer". Didymus studied with ardour, and his vigils were long and frequent, not for reading but for listening, that he might gain by hearing what others obtain by seeing. When the reader fell asleep from weariness, Didymus did not repose, but as it were chewed the cud (says Rufinus) of what he had heard, until he seemed to have inscribed it on the pages of his mind. Thus in a short time he amassed vast knowledge of grammar, rhetoric, logic, music, arithmetic, and geometry, and a perfect familiarity with Holy Scripture. He was early placed at the head of the famous catechetical school of Alexandria, over which he presided for about half a century. St. Athanasius highly esteemed him. The orator Libanius wrote to an official in Egypt: "You cannot surely be ignorant of Didymus, unless you are ignorant of the great city wherein he has night and day been pouring out his learning for the good of others." He is similarly extolled by his contemporaries and by the historians of the following century. Rufinus was six years his pupil. Palladius visited him four times in ten years (probably 388-398). Jerome came to him for a month, in order to have his doubts resolved with regard to difficult passages of Scripture. Later ages have neglected this remarkable man. He was a follower of Origen, and adopted many of his errors. Consequently, when St. Jerome quarrelled with Rufinus and made war on Origenism, he ceased to boast of being a disciple of Didymus and was ashamed of the praise he had formerly given to the "Seer". When Origen was condemned by Justinian and then by the Fifth General Council, Didymus was not mentioned. But he was anathematized together with Evagrius Ponticus in the edict by which the Patriarch Eutychius of Constantinople gave effect to the decree of the council; and he was (perhaps in consequence of this) included in the condemnation of Origenists by the sixth and seventh councils. But this censure is to be taken as applying to his doctrine and not to his person. It has had the unfortunate effect of causing the loss to us of most of his very numerous writings, which, as the works of a supposed heretic, were not copied in the Middle Ages.

Didymus always remained a layman. The idea that he was married rests on a mistaken identification of him with a Didymus to whom one of the letters of St. Isidore of Pelusium is addressed. He seems on the contrary to have lived the life of an ascetic, although in the city and not in the desert. A curious story was told by him to Palladius. One day, when dwelling on the thought of Julian as a persecutor, and on this account having taken no food, he fell asleep in his chair and saw white horses running in different directions, while their riders cried out: "Tell Didymus, to-day at the seventh hour Julian died; arise and eat, and inform Athanasius, the bishop, that he also may know it." Didymus noted the hour and the month and the week, and it was even so.

Doctrine.—Didymus was one of the principal opponents of Arianism. His Trinitarian and Christological doctrine is perfectly orthodox; one may even say that he is more explicit than St. Athanasius as to the Unity in Trinity and the Divinity of the Holy Ghost. He has combined the theological vocabulary of St.

Athanasius with that of the younger generation, Basil and Gregory Nazianzen. He continually uses the formula *τρεῖς ὑποστάσεις, μία οὐσία*, which St. Athanasius admitted in his later years, and which has become the Catholic watchword. Didymus has been credited with the invention of this formula, and Leipoldt is in favour of the attribution, whereas K. Holl rejects it. Until the fourth century the Greek-speaking Church had no means of expressing the doctrine of the Trinity. The use of *ὑπόστασις* to express the Latin *persona* was in itself a clumsy device, for Didymus agrees with St. Jerome (who rejected the expression) that philosophically *οὐσία* and *ὑπόστασις* are synonyms. Didymus, however, carefully safeguarded his doctrine from any wrong interpretation. His work on the Holy Spirit is preserved only in the Latin translation made by St. Jerome. It is free from the reproach of "economy" which attaches to the more famous work of St. Basil, who avoided (as he himself admits) calling the Holy Ghost "God". A yet more important work is the "De Trinitate", the three books of which are preserved almost entire; it was composed after 379. A treatise against the Manichæans is also nearly complete. Of the exegetical fragments, those on the Psalms are the most important. A commentary on the Catholic Epistles is known to us through the Latin translation made by a certain Epiphanius for Cassiodorus. Didymus comments on II Peter, and elsewhere frequently quotes that Epistle, although in one place he declares it to be spurious (*falsata*—the Greek is lost). In his commentaries Didymus shows himself to be much influenced by Origen, both in his care for the text and the grammar, and in his wide allegorizing, but of Origenistic heresies the traces in extant works are slight. He seems to have held the pre-existence of the soul. The doctrine of the "restitution of all things" is attributed to him by St. Jerome; but he speaks very often of eternal punishment, though he seems to teach that the fallen angels and even Satan himself are saved by Christ. He is fond of explaining that God's punishments are remedial. He deliberately rejects some of Origen's views, and in his Trinitarian and Christological teaching is wholly uninfluenced by his great predecessor. The style of Didymus is poor and careless. He is gentle in controversy. His earnestness and piety sometimes supply the place of the eloquence and energy which he lacks.

Didymi in omnes Epistolas canonicas enarratio (Cologne, 1531); MINGARELLIUS, *Veterum testimonia de Didymo Alex. Cæco* (Rome, 1764), reprinted in *Didymi Alex. libri tres de Trinitate*, first edited by J. A. MINGARELLI, brother of the preceding (Bologna, 1769); LUCKE, *Questiones et vindiciæ Didymianæ*, giving Greek fragments of the *Comm. on Cath. Epp.* by the side of the Latin (Göttingen, 1829-32); the exegetical fragments are found in MAI, *Nova Patrum Bibl.*, IV; in the *Catena* of CORDERIUS and CRAMER; in Wolf's *Anecdota Græca*, IV; in J. A. MINGARELLI's ed. of *De Trinitate* (above); in JUNIUS (PATRICK YOUNG), *Catena Gr. in Job* (London, 1637); and in the *Catena* of NICEPHORUS. The only complete collection of Didymus's works is that of MIGNÉ, *P. G.*, XXXIX, 1863, in which the prefatory matter of the two MINGARELLI is reprinted. There is a good life in TILLEMONT, X. The best account, with full catalogue of writings, extant and lost, is by LEIPOLDT, *Didymus der Blinde in Texte und Unters.*, N. F., XIV, 3, vol. XXVIII, 3, of 1890, whole series (Leipzig, 1905). The materials for a judgment on the theology of Didymus have been industriously collected in this study (more completely than by MINGARELLI), but the decision of the writer is not always quite to be trusted. HOLL in *Zeitschr. für Kirchengeschichte*, XXV, 3 (1904), has shown that the work *Contra Arium et Sabellium*, which goes under the name of GREGORY OF NYSSA, is probably by Didymus. FUNK in *Kirchengesch. Abhandlungen*, II, xv, p. 291 (Faderborn, 1890), ascribes to Didymus the fourth and fifth books of BASIL, *Adv. Eunomium* (which are certainly not by BASIL), and has been followed by KRÜGER, JÜLICHER, and VON SCHUBERT, but HOLL and LEIPOLDT are not convinced. DRÄSKE, *Athanasiana* in his *Gesammelte Patrist. Untersuchungen* (Altona and Leipzig, 1889), reprinted from *Studien und Kritiken*, LXII (1889), attributes to Didymus the former of the two books *De incarnatione d. n. J. C. contra Apollinarium*, the latter being possibly by his scholar AMBROSIUS; against this view STRÜCKLEN, *Athanasiana in Texte und Unters.*, N. F., IV, 4 (1899), and LEIPOLDT, loc. cit. On the authenticity of the *Commentary on the Cath. Epp.* see KLOSTERMANN, *Ueber des Didymus von Alex. in Epp. Canon. enarratio in Texte und Unters.*, N. F., XIII, 2 (1915).

JOHN CHAPMAN.

Diego y Moreno, FRANCISCO GARCIA, first bishop of California, b. 17 Sept., 1785, at Lagos in the state of Jalisco, Mexico; d. 30 April, 1846, at Santa Barbara. In 1801 he received the habit of St. Francis at the missionary college of Guadalupe, Zacatecas, made his vows the following year and was ordained priest at Monterey, Nuevo Leon, 13 Nov., 1808. For the next twenty years Father Diego was mainly occupied in preaching missions, and during this period compiled a small work, "Metodo de Misionar", or "Method for Giving Missions". From 1816 to 1819 he was master of novices, in 1822 he was made director, and in February, 1832, guardian or superior of the missionary college of Guadalupe. At the request of the Mexican Government, which had resolved to expel all Spanish friars from California, the college, whose members were natives, in April, 1832, sent eleven Mexican Franciscans to California, Father Diego going as commissary. They reached Cape San Lucas in September, 1832, and Monterey, the head-quarters, in February, 1833. The Guadalupan friars took charge of the missions from San Antonio to Sonoma, and on 6 March, Father Diego chose Santa Clara for his field of labour. He remained here until the end of 1835, when he visited Mexico to induce the Government to have a bishop appointed, in order to preserve the Church in California. On 19 Sept., 1836, the Mexican Government decided to petition the pope to create California a diocese and congress at the same time decreed to pay the new bishop an annual salary of \$6,000 until the diocese should have a sufficient income. Of the three candidates proposed by the metropolitan chapter on 22 June, 1839, the Mexican Government, 6 April, 1840, recommended Father Francisco Garcia Diego.

On 27 April Pope Gregory XVI withdrew California from the jurisdiction of the Bishop of Sonora, and at the same time appointed Father Diego first Bishop of Upper and Lower California with the see at San Diego. He was consecrated at the Franciscan church of Guadalupe, Zacatecas, on 4 October, 1840, and on 11 Dec., 1841, landed at San Diego. Owing to the poverty and insignificance of the place, he removed his residence to Santa Barbara on 11 Jan., 1842. When he arrived, there were only seventeen Franciscan Fathers, mostly aged and infirm, in charge of the twenty-one secularized Indian missions and six Spanish towns. The bishop began with great plans and a sincere desire to promote the welfare of the Church in his territory. The Mexican Government had encouraged him by giving him a fixed salary, and entrusting to him the management of the famous "Pious Fund", but in February, 1842, President Santa Anna confiscated the Fund. The bishop received no aid whatever, so that he was obliged to depend upon the contributions from the few white settlers in the territory, many of whom refused to pay the tithes which he had found it necessary to impose. Nevertheless he opened the first seminary on the Pacific coast at the former mission of Santa Inez, about fifteen miles from the ocean and forty-five miles from Santa Barbara, made one visitation of all the churches in the diocese, and to some places even went a second time. Worn out by hardships and disheartened at the deplorable conditions which he could not remedy, Bishop Diego after a long illness died, and was buried in his cathedral.

ZEPHYRIN ENGELHARDT.

Diekamp, WILHELM, historian, b. at Geldern, 13 May, 1854; d. at Rome, 25 Dec., 1885. Soon after his birth the parents of Diekamp removed to Münster in Westphalia, where he made his collegiate studies

(1867-72). From 1872 to 1875 he studied theology at Würzburg and at Münster. Feeling uncertain, however, as to his ecclesiastical calling, he abandoned his desire of entering the priesthood, and took up the study of philology. In 1877 he graduated as doctor of philosophy with the dissertation: "Widukind, der Sachsenführer nach Geschichte und Sage" (Münster, 1877). Excessive study led to grave pulmonary disease, in spite of which he did not spare himself. For some time he taught in the public schools of Münster, Arnsberg, and Aachen, developing in the meantime his scientific historical training. An excellent evidence of this was his "Vitæ S. Ludgeri" (Geschichtsquellen des Bistums Münster, IV, Münster, 1881). In 1881 the Westfälischer Verein für Geschichte und Altertumskunde confided to him the continuation of the "Westfälisches Urkundenbuch". Thereupon he returned to Münster and in 1882 he became *Privatdozent* for history at that academy. Previously, however, he spent a year at Vienna for improvement in diplomatics at the "Institut für österreichische Geschichtsforschung" under the direction of Professor Sickel. At Easter, 1883, he began his teaching at Münster, continuing at the same time his historical investigations, specially on Westphalian documents, the history of the papal chancery, and papal diplomatics. In 1885 he published at Münster the first part of the supplement of the "Westfälisches Urkundenbuch". In the autumn of this year he went to Rome, chiefly to collect in the Vatican archives the material for the large works he had in mind. But typhoid fever carried him off in the midst of his labours. He was buried in the German Campo Santo near St. Peter's. Diekamp also published between 1878 and 1885 several important studies in different reviews concerning the history of the Middle Ages and diplomatics or official style of the medieval papal documents.

HÜLSKAMP in Literarischer Handweiser (1886), 1-10; SCHULTE in Historisches Jahrbuch (1886), 266-277; DAHLMANN in Allgemeine deutsche Biographie, Nachträge bis 1893 (Leipzig, 1903), XLVII, 679 sq.

J. P. KIRSCH.

Diemoth, an old German word for the present "Demuth", the English "humility", was the name of a pious recluse at the monastery of Wessobrunn in Upper Bavaria, b. about 1060 of a noble Bavarian or Swabian family; d. 30 March, probably in 1130. At an early age she entered the Benedictine nunnery which was connected with the Benedictine monastery of Wessobrunn. After a long period of severe probation in the nunnery she obtained permission to live the life of a recluse and, following the custom of many recluses of those times, had herself enclosed in a cell adjoining the church, where she spent the remainder of her life in prayer and in transcribing valuable books. On account of her exceptionally beautiful handwriting she was styled the beautiful scribe. She copied about 45 volumes the titles of which are given by Becker in his *Catalogi bibliothecarum antiqui* (Bonn, 1885), 155-136. The most important are: the Bible, the Moralia and other works of St. Gregory the Great, 7 works of St. Augustine, 4 of St. Jerome, 2 of Origen, and about 15 liturgical works. Diemoth was a great friend of the Blessed Herluka with whom she exchanged numerous letters while the latter was a recluse at the neighbouring monastery of Epfach. The letters were long preserved at the monastery of Bernried where Herluka spent the last years of her life, but they unhappily fell a prey to the ravages of the Swedes during the Thirty Years War. A few of Diemoth's manuscripts are still preserved at the Staatsbibliothek in Munich, whither they were transferred after the secularization of Wessobrunn in 1803. Diemoth was buried in the basilica of Our Lady at Wessobrunn, aside of the bodies of Abbot Thiento and his six companions, who suffered martyrdom at the hands of the Hungarians in 955. In 1709 her remains were trans-

ferred to the Abbey Church of St. Peter. Some hagiologists style her "Blessed," though she has never received public veneration and was never formally beatified.

HEFNER, *Ueber die Nonne Diemud von Wessobrunn und ihr literarisches Wirken*, with a facsimile of her handwriting, in *Oberbayerisches Archiv* (Munich, 1839), I, 355-373; LEUTNER, *Historia Monasterii Wessofontani* (Augsburg and Freiburg, 1753), 166-175; STEELE, *Anchoresses of the West* (London and St. Louis, 1903), 165 sq.; BRAUNMUELLER in *Kirchenlex.*

MICHAEL OTT.

Diepenbeeck, ABRAHAM VAN, an erudite and accomplished painter of the Flemish School, b. at Boisdue in the Netherlands, 1599; d. at Antwerp, 1675. After having received a classical education he became one of Ruben's best pupils and assistants. He handled mythological and historical subjects, as well as portraits, with great skill and vigour and was a good, sound colourist. He went to Antwerp about 1629 and made his first successes in painting on glass, among his productions being windows in the cathedral there representing the "Acts of Mercy". Similar work at the church of the Dominicans shows scenes from the "Life of Saint Paul". Van Diepenbeeck was admitted to the guild of painters in 1638, and became director of the academy in 1641. It was after a visit to Italy that the artist began to paint chiefly in oil and to illustrate. Among his illustrations are fifty-eight designs engraved by Cornelis Bloemaert for the Abbé de Marolles' "Tableaux du Temple des Muses". During the reign of Charles I, van Diepenbeeck was in England where, besides painting portraits of the Duke of Newcastle and his family, the artist illustrated that nobleman's book on "Horsemanship".

At the church of the Carmelites in Antwerp is one of the painter's masterworks, "The Virgin in the Clouds with Saint Ely". In the cathedral is his "St. Norbert", while the saint appears with the first Abbot of St. Michel in a church at Deurne. In the galleries are: Louvre, "The Flight of Clœlia" and "Portraits of a Man and a Woman"; Vienna, a "Descent from the Cross" and "Allegory of Mortality"; Munich, "Abraham and the Angels" and "Feeding the Poor"; Dresden, "Neptune and Amphitrite"; Berlin, "The Marriage of St. Catherine" and the "Flight of Clœlia"; Brussels, "St. Francis Adoring the Holy Sacrament"; Antwerp, "The Ecstasy of St. Bonaventure"; Brunswick, "The Entombment" and "Children's Bacchanal"; Frankfurt, "Portraits of a Young Man and a Young Woman"; Bordeaux, "The Rape of Ganymede".

BRVAN, *Dictionary of Painters and Engravers* (London and New York, 1903-05); CHAMPLIN and PERKINS, *Cyclopedia of Painters and Paintings* (New York, 1886).

AUGUSTUS VAN CLEEF.

Diepenbrock, MELCHIOR, BARON (FREIHERR) VON, Cardinal and Prince-Bishop of Breslau, b. 6 January, 1798, at Bocholt in Westphalia; d. at the castle of Johannisberg in Upper Silesia, 20 January, 1853. He attended the military academy at Bonn and took part in the campaign against France in 1815 as an officer of the militia. Upon his return he was much attracted by the personality of Johann Michael Sailer, a friend of the family, at that time professor at the University of Landshut in Bavaria, and studied public finance at that institution. When Sailer was made Bishop of Ratisbon, Diepenbrock followed him thither, took up the study of theology, and was ordained priest 27 December, 1823. In 1835 he was made dean of the cathedral and vicar-general by the successor of Bishop Sailer. His knowledge of modern languages and his administrative ability, together with his profound understanding of the interior life and his ascetical character, paved the way for his elevation to the episcopal See of Breslau, to which he was elected 15 January, 1845. He at first declined

the honour, but finally accepted out of filial obedience to the mandate of Pope Gregory XVI.

From the beginning of his reign he was called to face difficult problems and momentous political events. Sectarian propagandism was especially aggressive in his diocese and was furthered by state officials as well as by the traditional enemies of the Church. The famine in Upper Silesia appealed to his sympathetic and generous nature. The Revolution of 1848 showed him one of the firmest and most loyal supporters of government, law, and order. The pastoral letter which he issued on this occasion was, by order of the king, read in all the Protestant churches of the realm. He devoted his best energies to the training of the clergy, opened a preparatory seminary, and improved the conditions of the higher seminary. He was a watchful guardian of ecclesiastical discipline and, when necessary, employed severe measures to enforce it. He reintroduced, with great success, retreats for the priests and missions for the people.

In 1849 he was appointed Apostolic delegate for the Prussian army and relieved, to a great extent, the sore needs of the Catholic soldiers. He was created cardinal in the consistory of 20 September, 1850, and received the purple 4 November. This event gave occasion to one of the most magnificent public demonstrations ever witnessed in Germany. It was soon followed by another demonstration, equally striking, but sorrowful in character, on the occasion of the cardinal's death from a disease which had long afflicted him. His will bequeathed his estate to his diocese. Cardinal Diepenbrock's episcopate was fruitful in blessings for Upper Silesia, he was a champion of Catholicity for the whole of Germany and an ornament to the entire Church. In personal appearance he was of dignified presence, but pleasant and affable to all. The cardinal was a noted preacher and poet, and his writings bear evidence to his talents. His principal publications are: "Spiritual Bouquet, Gathered in Spanish and German Gardens of Poesy" (Sulzbach, 1826); "Life and Writings of Heinrich Suso" (Ratisbon, 1829); "Sermons" (Ratisbon, 1841); "Pastoral Letters" (Münster, 1853); "Personal Letters" (Frankfurt, 1860).

CHOWANETZ, *Life of Cardinal von Diepenbrock* (Osnabruck, 1853); FÖRSTER, *Life of Cardinal von Diepenbrock* (Ratisbon, 1859); *Cardinal von Diepenbrock* (Bonn, 1878); KARKER in *Kirchenlex.*, s. v.

B. LUEBBERMANN.

Dieringer, FRANZ XAVER, Catholic theologian, b. 22 August, 1811, at Rangeningen (Hohenzollern-Hechingen); d. 8 September, 1876, at Veringendorf. He studied theology at Tübingen, was ordained at Freiburg, 19 Sept., 1835, and appointed instructor at the archiepiscopal seminary there. In the autumn of 1840 he became professor of dogma at the ecclesiastical seminary of Speier, and at Easter, 1841, was also made professor of philosophy in the lyceum of the same city. In the spring of 1843 he was appointed professor in ordinary of dogma and homiletics at the University of Bonn, and provisional inspector of the preparatory seminary. When at his instance a homiletic-catechetical seminary was established in 1844, he took charge of the homiletic section. The prestige of the faculty of Bonn had suffered sadly because of the inroads of Hermesianism, and this learned theologian, who was eminently qualified for the work of academic teaching, set about to restore its fallen glory. His brilliant and zealous activity, especially during the first two decades of his office, placed him in the first rank among the shining lights of the university. Besides performing the duties of his professorship, he published the "Katholische Zeitschrift für Wissenschaft und Kunst," a periodical devoted to science and church interests, which he had founded in 1844 in opposition to the periodical of the Hermesians, and conducted in a truly Catholic spirit. From 1847 to 1849 it appeared

as the "Katholische Vierteljahresschrift". Dieringer took a prominent part in the founding of the Society of St. Charles Borromeo in 1845, of which he was at first secretary and then president from 1846-1871. In 1853, though retaining his professorship and residing at Bonn, he was made canon of Cologne and ecclesiastical councillor. In 1848 he represented the district of Neuss in the parliament at Frankfurt.

His name was among those proposed in 1856 for the vacant See of Paderborn and in 1864 for that of Trier, but it was removed by the Prussian Government. Though his earlier teaching, especially in his "Laien-katechismus", had been in accordance with the doctrine of papal infallibility, he yielded, at the time of the Vatican Council, to personal motives and to the influence of his colleagues at Bonn and joined the opposition. He had no thought, however, of leaving the Church, and, after negotiations of some length, he yielded to the demand of Archbishop Melchers and made his submission. In order to escape from the strained relations which existed among the divided faculty, Dieringer resigned his offices and dignities during the spring of 1871 and took charge of the parish of Veringendorf in Hohenzollern. In 1874 he was among those recommended for the archiepiscopal See of Freiburg, but he could not accede to the demands of the Baden Government. After 1874 he was constantly in failing health.

Dieringer's principal publications are: "System der göttlichen Thaten des Christenthums, oder, Selbstbegründung des Christenthums, vollzogen durch seine göttlichen Thaten" (Mainz, 1841; 2nd ed., 1857), a work which clearly shows the influence of Staudenmaier, especially in its first edition; and the "Lehrbuch der katholischen Dogmatik" (Mainz, 1847; 5th ed., 1865), a book of great merit and formerly much used. An excellent work on theology in popular form is his "Laien-katechismus über Religion, Offenbarung und Kirche" (Mainz, 1865; 2nd ed., 1868). Another book also in popular style, "Der heil. Karl Borromäus und die Kirchenverbesserung seiner Zeit" (Cologne, 1846), appeared as the first publication of the Society of St. Charles Borromeo and had a wide circulation. Besides these publications there remain to be mentioned the two homiletic works: "Kanzelvorträge an gebildete Katholiken auf alle Sonn- und Festtage des Kirchenjahres" (Mainz, 1844) and "Das Epistelbuch der katholischen Kirche, theologisch erklärt" (Mainz, 1863); the polemical writings: "Offenes Sendschreiben über die kirchlichen Zustände der Gegenwart an Dr. J. B. von Hirscher" (Mainz, 1849; against Hirscher's publication under the same title); "Dogmatische Erörterungen mit einem Güntherianer" (Mainz, 1852); "Die Theologie der Vor- und Jetztzeit, ein Beitrag zur Verständigung" (Bonn, 1868; 2nd ed., 1869; against Kleutgen's "Theologie der Vorzeit"), which appeared first in the "Theologisches Literaturblatt" of Bonn (1868); and: "Expositio doctrinæ Tertulliani de republica et de officiis ac iuribus civium christianorum" (University Program; Bonn, 1850).

FRIEDRICH LAUCHERT.

Dies Iræ, the name by which the sequence in requiem Masses is commonly known. They are the opening words of the first verse: *Dies iræ, dies illa*. The rubrics of the Roman Missal prescribe the recitation of the sequence by the celebrant on the following occasions: (1) in the Mass of All Souls' Day (*In commemoratione Omnium Fidelium Defunctorum*); (2) in funeral Masses (*In die obitus seu depositonis defuncti*); and (3) whensoever, in requiem Masses, only one ora-

tio, or collect, is to be said, namely in the anniversary Mass, and when Mass is solemnly celebrated on the third, the seventh, or the thirtieth (month's mind) day after death or burial. Its recitation in other requiem Masses (*In Missis quotidianis defunctorum*) is optional with the celebrant. It should be noted here that the decree of the Congregation of Sacred Rites (12 August, 1854) permitting the choir to omit such stanzas as do not contain a prayer is not included in the new edition of the "Decreta Authentica S. R. C." (Rome, 1898-1900). From this fact may be inferred that the more ancient rule is now in force and that the whole sequence must either be sung by the choir or be "recited" in a high and clear voice with organ accompaniment (cf. *American Ecclesiastical Review*, August, 1907, p. 201).

As found in the Roman Missal, the *Dies Iræ* is a Latin poem of fifty-seven lines in accentual (non-quantitative), rhymed, trochaic metre. It comprises nineteen stanzas, of which the first seventeen follow the type of the first stanza:—

1. Dies iræ, dies illa,
Solvat sæculum in favillâ:
Teste David cum Sibyllâ.

The remaining stanzas discard the scheme of triple rhymes in favour of rhymed couplets, while the last two lines use assonance instead of rhyme and are, moreover, catalectic:—

18. Lacrimosa dies illa,
Quæ resurget ex favillâ,
Judicandus homo reus.
19. Huius ergo parce Deus:
Pie Jesu Domine,
Dona eis requiem. Amen.

Thus the last two stanzas are printed in the typical (1900) edition of the Missal, and in the Ratisbon edition of the plain-chant setting. The Vatican edition (1907) of the plain-chant melody, however, apparently takes account of the fact that the last six lines did not, in all probability, originally belong to the sequence, and divides them into three couplets.

This Missal text of the sequence is found, with slight verbal variations, in a thirteenth-century manuscript in the Biblioteca Nazionale at Naples (cf. Haberl, *Magister Choralis*, Ratisbon, 1900, pp. 237-238). Father Eusebius Clop, O.F.M., in the "Revue du Chant Grégorien" (November-December, 1907, p. 49) argues a date between 1253-1255 for the MS.—a Franciscan Missal whose calendar does not contain the name of St. Clare, who was canonized in 1255, and whose name would have been inserted if the MS. were of later date. The same writer would assign (pp. 48, 49) a still earlier date (1250) to a copy of the *Dies Iræ* inserted at the end of a so-called "Breviary of St. Clare" dating about 1228. Into his arguments it is not necessary to enter here; but it is important to notice that these dates are much anterior to the dates of the MSS. which, until recently, hymnologists had cognizance of when they attempted to fix the probable authorship of the sequence. Thus Moe found none anterior to the fifteenth century; Chevalier mentions only a Magdeburg Missal of 1480 and a MS. Franciscan Missal of 1477; the first edition of Julian's "Dictionary of Hymnology" (1892) declared the "oldest form known to the present time" to be found in a Dominican Missal "written at the end of the fourteenth century and apparently for use at Pisa"; Warren, in his "Dies Iræ" (London, 1902, p. 5), knows no earlier MS. The second edition of Julian (1907) mentions the Naples MS. in its supplement (p. 1629), but not the "Breviary of St. Clare". Father Clop describes also a third contemporary MS. (p. 49), Italian, like the others: "Toutes trois enfin appartenant également à la liturgie des Frères Mineurs". All this renders very

probable the conjecture generally entertained by hymnologists, that the *Dies Iræ* was composed by a Franciscan in the thirteenth century.

Its authorship has been most generally ascribed to Thomas of Celano, the friend, fellow-friar, and biographer of St. Francis. Reasons for this particularity of ascription are given by Keyser (*Beiträge zur Geschichte und Erklärung der alten Kirchenhymnen*, Paderborn und Münster, 1886, II 194-196 and 230-235); also by Duffield (*Latin Hymn Writers and Their Hymns*, New York, 1889, 245-247), an ardent champion of the ascription to Thomas; also in "The Dolphin" (Nov., 1904, 514-516), which corrects a fundamental error in one of Duffield's main arguments. Ten other names have been suggested by various writers as the probable author of the *Dies Iræ*: (1) St. Gregory the Great (d. 604); (2) St. Bernard of Clairvaux (d. 1153); (3) St. Bonaventure (d. 1274); (4) Cardinal Matthew d'Acquasparta (d. 1302); (5) Innocent III (d. 1216); (6) Thurstan, Archbishop of York (d. 1140); (7) Cardinal Latino Orsini, or Frangipani, a Dominican (d. 1296); (8) Humbert, a general of the Dominicans (d. 1277); (9) Agostino Biella, an Augustinian (d. 1491); (10) Felix Haemmerlein, a priest of Zurich (d. 1457). The ascription to Haemmerlein was due to the discovery, after his death, of a variant text of the sequence among his papers. Its eighteenth and nineteenth stanzas are:—

18. Lacrimosa dies illa,
Cum resurget ex favilla
Tanquam ignis ex scintilla,
19. Judicandus homo reus:
Huic ergo parce, Deus;
Esto semper adiutor meus.

To these are added five stanzas of the same form. This Haemmerlein text is given by Keyser (op. cit., 211), Warren (op. cit., 11), and by others. Still another text, known as the "Mantuan Marble" text (first printed in 1594), prefaces the *Dies Iræ* with four similar stanzas, and replaces stanzas 17-19 with the single stanza:—

Ut consors beatitatis
Vivam cum justificatis
In ævum æternitatis.

Daniel gives both texts in his "Thesaurus Hymnologicus" (II, 103-105), except the two concluding stanzas of the Haemmerlein text. Coles (*Dies Iræ* in *Thirteen Original Versions*, New York, 1868) gives (xv-xxi) both texts together with versified English translation.

All of these additional stanzas rather detract from the vigorous beauty of the original hymn, whose oldest known form is, with slight verbal changes, that which is found in the Roman Missal. It appears most likely that this text originally ended with the seventeenth stanza, the first four of the concluding six lines having been found among a series of verses on the responsory "Liberam me, Domine" in a MS. of the end of the twelfth or the beginning of the thirteenth century (cf. Mone, *Lateinische Hymnen des Mittelalters*, Freiburg im Br., 1863, I, 406). It is quite probable that the sequence was first intended for private devotion and that subsequently the six lines were added to it in order to adapt it to liturgical use. The composer found his Biblical text in Soph. (i. 15, 16): "*Dies iræ dies illa . . . dies tubæ et clangoris*"; and it may be that he obtained a suggestion for his wonderful rhythm (cf. Trench, *Sacred Latin Poetry*, 3rd ed., London, 1874, p. 302, foot-note) from a tenth-century judgment hymn (given in two forms by Dreves, *Analecta Hymnica*, Leipzig, 1896, XXIII, pp. 53, 54) containing this rhythmized text of Sophonias:—

Dies iræ, dies illa,
Dies nebulae et turbinis,
Dies tubæ et clangoris,

Dies nebulosa valde,
Quando tenebrarum pondus
Cadet super peccatores.

The sequence has been translated many times into various tongues, the largest recorded number (234) being English renderings. Among the names of those who have given complete or fragmentary translations are those of Crashaw (1646); Dryden (1696); Scott (1805); Macaulay (1819); Father Caswall (1849). Amongst American translators we find Dr. Abraham Coles, a physician of Newark, credited with eighteen versions; W. W. Nevins, with nine; and Rev. Dr. Samuel W. Duffield, with six. Space will not permit here an analysis of the *Dies Iræ* or any quotation of the wealth of eulogy passed upon it by hymnologists of every shade of religious conviction, save fragments from the appreciations of Daniel: "*Sacræ poesoes summum decus et Ecclesiæ Latine keimelion est pretiosissimum*" (It is the chief glory of sacred poetry and the most precious treasure of the Latin Church); of Orby Shipley, in the "Dublin Review" of Jan., 1883, who, after enumerating some hymns "which are only not inspired, or which, more truly, are in their degree inspired", says: "But beyond them all, and before them all, and above them all may, perhaps, be placed *Dies iræ*, by Thomas of Celano"; of Coles: "Among gems it is the diamond. It is solitary in its excellence"; of Dr. Schaff: "This marvellous hymn is the acknowledged masterpiece of Latin poetry, and the most sublime of all uninspired hymns"; of Dr. Neale: ". . . the *dies iræ* in its unapproached glory".

JULIAN, *Dictionary of Hymnology* (Revised ed., London, 1907), 295-301, 1551, 1629, gives very serviceable references, but strangely omits WARREN, *Dies Iræ* (London, 1902), who devotes 170 pages to his theme, prefacing it with references under the heading of *Literature of the Dies Iræ*. To their lists should be added: SHIPLEY, *Annus Sanctus* (London, 1884); ANON., *The Seven Great Hymns of the Medieval Church* (New York, 1868); HENRY in *The Amer. Ecclesiastical Review* (April, 1890), 247-261; IDEM in *The Dolphin* (November, 1904, to May, 1905), an extensive series of articles (144 pages) on the history, literary uses, and translations of the *Dies iræ*; CLOP in *Revue du Chant Grégorien* (Nov.-Dec., 1907), 46-53, who discusses the authorship and the plain-song melody of the sequence; JOHNER, *A New School of Gregorian Chant* (New York, 1906), 116.

H. T. HENRY.

Dietenberger, JOHANN, theologian, b. about 1475 at Frankfurt-on-the-Main; d. 4 Sept., 1537, at Mainz. He was educated in his native city, joined the Dominican Order, and soon distinguished himself by his attainments, both religious and intellectual. On 3 June, 1511, he registered at Cologne as a theological student; three years later, 23 September, 1514, he was admitted to the licentiate, and the next year, after some time spent at Heidelberg and Mainz, received the doctor's degree. Towards the end of 1517 Dietenberger was appointed *Regens studiorum* and interpreter of St. Thomas at Trier, where he opened his lectures 27 January, 1518. In the meantime he had been elected (1516) prior of his convent at Frankfurt, and he retained this office until 1526, when he became prior at Coblenz. In 1530 Dietenberger attended the Diet of Augsburg and was chosen a member of the committee of twenty Catholic theologians selected at the meeting of 27 June and presided over by Eck, to draw up a refutation of the Protestant Confession. About the same time he received the appointment of general inquisitor for the Dioceses of Mainz and Cologne. His last years, from 1532, were devoted to teaching theology and exegesis in the Academy of Mainz.

Foremost among Dietenberger's works stands his catechism: "Evangelischer Bericht und Christliche Unterweisung der fürnehmlichsten Stück des waren heyligen Christlichen Glaubens", published first at Mainz in 1537 and often re-edited, lastly by Moufang (*Die Mainzer Katechismen*). Next should be mentioned Dietenberger's German Bible: "*Biblia beider Allt und Newen Testamenten, new verdeutscht*",

published at Mainz in 1534. This work, repeatedly corrected, especially by Caspar Ulenberg (Cologne, 1630) and the Jesuit theologians of Mainz (1661), was destined to become for the German people "Die Katholische Bibel", a title bespeaking its excellence. Dietenberger has been frequently charged with having purloined Luther's version. True, he used freely the New Testament of Emser (1527), of whom Luther was wont to say that "he had ploughed with his heifers"; he used likewise other translations compiled in pre-Reformation times, and so did Luther. These facts may account for many similarities; moreover, he was well acquainted with the versions of Luther and of Leo of Juda, and confessedly profited by them to improve his own. Besides these two important works, Dietenberger composed fifteen polemical tracts, treating various subjects then much mooted: Mass, confession, vows, faith, etc.

CHARLES L. SOUVAY.

Diether of Isenburg, Archbishop and Elector of Mainz, b. about 1412; d. 7 May, 1482, at Aschaffenburg. He studied at the University of Erfurt, of which he became Rector in 1434. At the age of sixteen he was already canon at the cathedral of Mainz and, somewhat later, held prebends in the cathedrals of Cologne and Trier. In 1442 he became provost in the collegiate churches of St. Victor and St. John in Mainz, and in 1453 custos of the cathedral chapter in the same city. In 1456, Diether aspired to the vacant See of Trier, probably attempting to gain votes through simony; but the majority of the voters decided in favour of John of Baden. But after the death of Dietrich of Erbach, the Archbishop and Elector of Mainz (d. 6 May, 1459), Diether's ambitious aspirations were realized. Probably through simony he was elected to this see on 18 June, 1459, and entered upon his office without awaiting the approval either of pope or emperor. Pope Pius II was then holding a congress at Mantua with the object of influencing the princes of Europe to undertake a crusade against the Turks, and was greatly disappointed at the small number of princes that appeared at the congress. Upon hearing that Diether did not intend to come to Mantua, but had sent envoys to obtain the papal confirmation, he sent word to him that, if he desired the Bull of confirmation and the pallium, he would have to come to Mantua in person. By pleading sickness and lack of funds, Diether finally prevailed upon Pius II to send the Bull of confirmation and the pallium, but only after promising under oath to appear personally before the papal court within a year and to pay the annates, which amounted to 20,550 Rhenish florins. When Diether kept neither of these promises, the Curia punished him with minor excommunication. Angered at this act, he convened a diet at Nuremberg in February, 1461, at which he made a formal appeal to a future general council, despite the fact that Pius II in his Bull "Exsecrabilis" (18 Jan., 1460) had condemned such appeals as heretical. When all the efforts of the pope to bring about an amicable settlement were frustrated by the rebellious archbishop, the pope excommunicated and deposed Diether in a Bull dated 21 August, 1461, and appointed Adolf of Nassau in his place. Diether tried to retain his see by arms, but was compelled to yield to the superior forces of Adolf of Nassau in October, 1463. After submitting to the new archbishop and apologizing to the papal plenipotentiary, Pietro Ferri, he was absolved from the sentence of excommunication. Upon the death of Adolf of Nassau, on 6 Sept., 1475, Diether was again elected archbishop of Mainz and received both papal and imperial approbation. His past misfortune had

made him a better man. He enforced strict ecclesiastical discipline among the clergy, watched carefully over the integrity of faith, and worked strenuously for the advancement of commerce and education. At the northern end of Mainz he erected the Martinsburg as an archiepiscopal residence, and in 1477 founded the University of Mainz, which continued to exist until 1798.

MICHAEL OTT.

Dietrich von Nieheim (NIEM), b. in the Diocese of Paderborn, between 1338 and 1340; d. at Maas-tricht, 22 March, 1418, a medieval German historian, best known for his contributions to the history of the Western Schism. He took his surname from the little town of Nieheim (in the Prussian district of Minden). Nothing is known about his family, and but little about his life previous to his entry into the service of the papal Curia. He spent some time in Italy in the study of law, but never obtained the degree of Doctor. Under Urban V (1362-70) he came to Avignon, and obtained in the papal chancery the office of notary (*notarius s. palatii*), to keep which he had to take orders, if he had not already taken them. When Gregory XI returned to Rome (1377) Dietrich accompanied him. Urban VI conferred on him the lucrative and important office of *abbreviator et scriptor* in the papal chancery (see ABBREVIATORS); this post he retained under succeeding popes. Boniface IX made him Bishop of Verden (July, 1395), but he never obtained possession of this German bishopric; probably, as Eubel suggests (*Hierarchia catholica medii ævi*, I, 553), because Dietrich did not expedite with due promptness the documents of his nomination. In August, 1399, another Bishop of Verden was nominated, Konrad von Soltau; Dietrich remained as before a papal abbreviator. In his writings Dietrich is silent about this Verden incident; in a manuscript of the archives of St. Peter at Rome Dr. Goller has discovered twenty-six letters of the years 1398-99 which refer to Dietrich; when published they will probably cast more light on this period of his life (cf. *Römische Quartalschrift*, 1905, 82-83). About Easter, 1401, Dietrich was at Erfurt in Germany, where he matriculated at the university; in 1403 we find him again active at Rome as abbreviator. Towards the end of the fourteenth century Johann Peters of Dordrecht had founded at Rome a hospital for German pilgrims, known as Santa Maria dell' Anima, still in existence and united with the German national church at Rome (see ANIMA, SANTA MARIA DELL'). Dietrich was an energetic promoter of the new foundation, to such an extent that after Peters he deserves to be considered its chief founder.

Meanwhile the Western Schism (q. v.), begun in 1378, was still dividing the Catholic world. As a member of the papal Curia, Dietrich was thoroughly informed concerning the origin and development of this unhappy division, and was very active in an effort to close the schism. Dissatisfied with the proceedings of the two popes, Gregory XII (1406-15) at Rome, and Benedict XIII (1394-1417) at Avignon, he adhered to the Council of Pisa convoked (1409) by the cardinals. He took no part in the council itself, being then in Germany, but he worked for the party of the council, recognized as legitimate the Pisan pope, Alexander V (1409-10), also his successor, John XXIII (1410-15), and entered their service. During these years his pen was ever active in the interest of ecclesiastical unity. He is certainly the author of the work known as "Nemus Unionis", in which he describes the various ways (*viae*) for putting an end to the

schism, and gives important letters and acts (the work was finished 25 July, 1408; ed. Schard, Basle, 1566). He also wrote "De scismate libri tres", his most important work, finished in May, 1410 (ed. Erler, Leipzig, 1890), in which he delineates the origin and the history of the schism up to the coronation of John XXIII; the abundance of its materials makes this work one of the most important authorities for the last stages of the schism. His judgments, however, concerning persons and facts must be taken with caution, Dietrich being strongly partisan. To John XXIII himself he addressed (perhaps in 1410) a letter about the proper administration of his office ("Epistola ad dominum Johannem XXIII transmissa de bono Romani pontificis regimine", ed. Rattinger, in "Historisches Jahrbuch", 1884, 163-78). This was preceded by a letter of admonition to the cardinals who were to elect John XXIII: ("Informacio facta cardinalibus in conclavi ante electionem Papæ Johannis XXIII moderni", written in 1410; ed. Erler, "Dietrich von Nieheim", Documents, XXX-XLI). Of other works ascribed to him mention shall be made later.

Towards the end of 1414 was opened the Council of Constance, destined, if not to remedy all the evils of the time, at least to put an end to the schism. From March, 1415, Dietrich was present at Constance and exerted his best efforts for the restoration of ecclesiastical unity. He was dissatisfied with the attitude of John XXIII, and when the latter fled from Constance (20 March, 1415) Dietrich renounced him. Later, in continuation of his aforesaid work on the schism, Dietrich wrote a history of John XXIII to June, 1416 ("Historia de Vitâ Johannis XXIII", first printed at Frankfurt, 1620). This work is at the same time a history of the Council of Constance to the middle of 1416; it is to be noted, however, that the author's judgment is seriously affected by his passionate opposition to John XXIII. Another violent lampoon against this pope, the "Invectiva in diffidentem e Constantiensi concilio Johannem XXIII" (ed. von der Hardt, "Const. Conc.", III, XIV, 296-330) is attributed to Dietrich; it is not certain, however, that he is the author of this fierce pamphlet; Finke rejects quite positively the authorship of Dietrich (Römische Quartalschrift für christl. Altertumskunde und für Kirchengesch., 1887, 48 sqq.). During the council Dietrich kept a diary, as he himself mentions in his "Vita Johannis XXIII"; some fragments of it, according to Finke, are still recognizable (op. cit., 1887, 46-58).

Any final judgment on the attitude and influence of Dietrich at Constance must depend on the authorship of three publications often attributed to him, and dealing particularly with the schism and the efforts at reunion. These are: (1) "De necessitate reformationis Ecclesiæ in capite et in membris"; also entitled "Avisamenta pulcherrima de unione et reformatione membrorum et capitis fienda" (written 1414; ed. von der Hardt, in "Constant. Concil.", I, VII, 277-309; the latter part of it ed. by Finke in "Forschungen zur Geschichte der Konstanzer Konzils", Paderborn, 1890, 267-268); (2) "De modis uniendi ac reformandi ecclesiam in concilio universali" (written 1410, ed. von der Hardt, op. cit., I, V, 68-142); (3) "De difficultate reformationis Ecclesiæ in concilio universali" (written August, 1410; ed. von der Hardt, op. cit., I, VI, 255-69). Von der Hardt attributed the treatise "De modis uniendi" to Johannes Gerson, the two others to Pierre d'Ailly, but was of the opinion that perhaps Dietrich von Nieheim might be the author of the "De necessitate reformationis". Schwab has shown (Johannes Gerson, Würzburg, 1858) that neither Gerson nor d'Ailly can be regarded as the author of these works; he ascribed "De modis uniendi" to the Spanish Benedictine abbot and professor at Bologna, Andreas of Randuf. The other two treatises, he

believed, were composed by Dietrich von Nieheim. Sägmüller also saw in the aforesaid Abbot Andreas the author of "De modis uniendi" (Historisches Jahrbuch, 1893, 562-82). Lenz, however, attributes to Dietrich all three works (see below), and his opinion has been accepted by most later historians; Finke, especially, has confirmed it by numerous arguments. Erler, however, to whom we owe a detailed life of Dietrich (see below), does not admit his authorship of the works in question, while Haller agrees with him in respect to the treatise "De modis uniendi". Mulder has examined (1907) fully (see below) the attitude of Dietrich towards the theological theories prevalent at the council and the contemporary plans for extinction of the schism. He concludes that Dietrich certainly wrote the "De necessitate reformationis" but not the other two treatises. In these three works there is developed a detailed programme of ecclesiastical reform: all three popes are to be removed and the election of the new pope is to be committed to a special electoral assembly. The new pope must execute, during the council, the desired reforms in the administration of the Roman Curia, and the particular practical measures are specified. Erler, as has been seen, denies Dietrich's authorship of these treatises, and therefore sees in him only a very clever papal functionary, who had no higher aims than the extinction of the schism and a reform of the papal chancery. Finke on the contrary, accepting the authorship of Dietrich, thinks that with time his views grew broader, and that, in spite of his weakness as a historian, his bold and influential ideas on ecclesiastical reforms made him eventually one of the most important figures of the early fifteenth century. He calls him the greatest publicist of the later Middle Ages.

After the council we find Dietrich at Maastricht, where he possessed a canonicate; there he fell ill, and on 15 March, 1418, made his testament, by which he bequeathed his property on the German side of the Alps to the hospital newly built by him at Hamelin, and his Italian possessions to the German hospital of Santa Maria dell' Anima at Rome. He died in the same month, probably, as stated above, 22 March. Besides the works already mentioned Dietrich composed several others, among them an historical work entitled "Privilegia aut jura imperii circa investturas episcopatum et abbatiarum" etc. (ed. Schard, Sylloge de jurisdictione imp., Basle, 1566, 785-859), chiefly an account of the Holy Roman Empire. Of the "Chronicon" composed by him only fragments are extant, discovered and published by Sauerland (Mitteilungen des Instituts für oesterr. Gesch., 1885, 589-614; also separately at Frankfurt, 1885) and by Mulder (see below). A chronicle of the popes, part of the Liber Pontificalis (Vitæ pontificum Romanorum a Nicolao IV usque ad Urbanum V) formerly ascribed to Dietrich, it is now known, was not written by him. Probably, also, he is not the author of a pamphlet against Cardinal Johannes Dominici ("Epistola Luciferi seu Satanae ad Johannem Dominici, ord. Præd. presb. card. S. Sixti", ed. in "Nemus unionis"). A geographical work entitled "De regionibus orbis et qualitatibus habitantium in eisdem" written in 1407-1408, is lost. In 1411 he composed a treatise against the heresies of Wyclif: "Tractatus contra dampnatos Wielivitas Pragæ" (ed. Erler in "Zeitschrift für vaterländische Gesch. und Altertumskunde", Münster, 1885, I, 178-98). For the functionaries of the papal chancery he compiled the guide known as "Liber cancellariæ apostolicæ". He also compiled a short guide to the regular praxis of curial administration, "Stilus palatii abbreviatus" (both edited by Erler, "Der Liber cancellariæ apostolicæ vom Jahre 1380 und der Stilus palatii abbreviatus vom Dietrich von Nieheim", Leipzig, 1888).

J. P. KIRSCH.

Digby, GEORGE, second Earl of Bristol, b. at Madrid, Spain, where his father, the first earl, was ambassador, 1612; d. at Chelsea, England, 1677. As a boy of twelve he presented a petition at the bar of the House of Commons on behalf of his father who had been committed to the Tower by the Duke of Buckingham. He was educated at Magdalen College, Oxford, where he became M. A., 31 Aug., 1636. Shortly afterwards he entered into a correspondence with his kinsman, Sir Kenelm Digby, in which he attacked the Catholic Church. In the struggle between king and Parliament he was at first on the side of the Parliament. He was elected member for Dorset in 1640 and was shortly afterwards made a member of the committee which undertook to impeach Strafford. When the impeachment was abandoned for process of attainder, however, he vigorously opposed it and thus incurred unpopularity with his own party. In 1641 he took his seat in the House of Lords as Baron Digby and joined the king's party. His advice to the king upon the retreat of the five members to the city, that they should be seized by force, was rejected by Charles, but, becoming known, added greatly to his unpopularity. Shortly afterwards, being summoned before the House of Lords to answer for his conduct, he fled to Holland. Returning during the Civil War, he fought at Edgehill and Lichfield, but resigned his command by reason of a quarrel with Prince Rupert. In Sept., 1643, he was made secretary of state and privy councillor, in which offices he was not successful.

In 1645 Digby replaced Rupert as lieutenant-general of the king's forces north of the Trent, but was defeated at Carlisle Sands and fled to the Isle of Man. He next took service under the King of France, and he became a lieutenant-general in the French army in 1651. On 6 Jan., 1653, he succeeded his father as Earl of Bristol and was made Knight of the Garter. Owing to an unsuccessful intrigue against Mazarin he was ordered to leave France, and he proceeded to the Netherlands, where he visited Charles II then in exile. In 1657 he was reappointed secretary of state but again lost office on his conversion to the Catholic Faith. On the Restoration he returned to England, becoming a political opponent of Clarendon. This displeased the king, and Digby spent two years in concealment, till Clarendon's fall. Though a Catholic he spoke in favour of the Test Act, drawing a distinction

between a "Catholic of the Church of Rome" and a "Catholic of the Court of Rome". He was High Steward of Oxford University 1643-46 and again 1660-1663. He published "The Lord George Digbie's Apology for Himself" (1642) and "Elvira, a Comedy" (1667). Many of his speeches and letters were also published.

EDWIN BURTON.

Digby, KENELM HENRY, miscellaneous writer, b. in Ireland, 1800; d. at Kensington, Middlesex, England, 22 March, 1880. He came of an ancient English stock branching, in Elizabeth's reign, into Ireland, by the marriage of Sir Robert Digby, of Coleshill, Co. Warwick, with Lettice FitzGerald, only daughter and heir of Gerald, Lord Offaly, eldest son of the eleventh Earl of Kildare. The eldest son of this Robert and Lettice became the first Lord Digby. Their second son, Essex Digby, Bishop of Dromore, was father of Simon Digby, Bishop successively of Limerick and Elphin, whose son John Digby, of Landenstown, Co. Kildare, was father of William Digby, Dean of Clonfert. Kenelm Henry Digby was this latter's youngest son. Thus his early surroundings and associations were strongly Protestant. His father died in 1812, when his eldest brother, William, was already Archdeacon of Elphin. Unlike these, who had graduated in Dublin University, Kenelm Henry matriculated at the University of Cambridge, entering at Trinity College there. His B. A. degree he took in 1819, but he never proceeded M. A. Amid the many venerable and suggestive monuments of Catholic antiquity which Cambridge shows, he gradually gave his mind more and more to those "Ages of Faith" which he had been taught to despise and afterwards to the scholastic system of theology. The result of his deep study of these lofty subjects was his conversion, in youth, to the Catholic Faith. His first book, "The Broadstone of Honour", he published anonymously in 1822, while still nominally a Protestant, and an enlarged edition, again anonymously, the year following. After his conversion he rewrote the work, dividing it into four volumes, which appeared, each with a separate subtitle, in 1826-7. Two other editions followed, and lastly an édition de luxe, in five volumes, published by Quaritch, in 1876-7. According to its various secondary titles, this masterpiece treats of "the Origin, Spirit, and Institutions of Christian Chivalry", or "the True Sense and Practice of Chivalry". Archdeacon Hare, in his "Guesses at Truth", says that in this work the author "identifies himself as few have ever done with the good and great and heroic and holy in former times, and ever rejoices in passing out of himself into them".

Digby's second literary performance, entitled "Mores Catholici, or Ages of Faith", came out in 1831-40 in eleven volumes, in a later edition reduced to three. In this work he collected, mostly from the original sources, a vast mass of information concerning the religious, social, and artistic life of the mediæval peoples of Europe. It is, indeed, a kind of encyclopedia of the mediæval life, from the viewpoint of an ardently Catholic soul. It has been well said that in it he collected like a truly pious pilgrim the fragrance of ancient times. Various other publications, some in prose, some in verse, dropped from his prolific pen from time to time down to 1876; but these, in comparison with his "Broadstone of Honour" and "Mores Catholici", are but minor performances. The most important of them is a work entitled "Comptum, or the Meeting of Ways at the Catholic Church". The complete list of his published works may be seen in

Gillow's "Dictionary". His long, studious, and retired life closed at Shaftesbury House, Kensington, in his eighty-first year, after a very short illness. His wife was Jane Mary, daughter of Thomas Dillon, of Mount Dillon, Co. Dublin, who bore him a son and four daughters.

C. T. BOOTHMAN.

Digby, Sir Everard, b. 16 May, 1578; d. 30 Jan., 1606. Everard Digby, whose father bore the same Christian name, succeeded in his fourteenth year to large properties in the Counties of Lincoln, Leicester, and Rutland. Arrived at man's estate, he was distinguished for his great stature and bodily strength, as well as for his accomplished horsemanship and skill in field sports generally, to which he was much devoted. For some time he frequented the court of Queen Elizabeth. In 1596 he married Mary, only daughter and heiress of William Mulsho of Goathurst, Buckinghamshire, with whom he obtained a large accession of fortune, and by whom he had two sons, Kenelm, born in 1603, and John, in 1605. About 1599 Digby, who, although his parents seem to have been Catholics, had been brought up a Protestant, made the acquaintance of the Jesuit Father, John Gerard, with the result that both he and his wife were converted to the Catholic Faith, and he formed with Gerard so close a friendship that they were accustomed to speak of each other as "brothers". In 1603 he was one of those who assembled at Belvoir Castle to welcome James I on his progress towards London, and he was knighted by the new king on the 23rd of April in that year.

In spite of what might have appeared so auspicious a commencement, there soon followed the fatal Powder Plot, which brought Sir Everard's career to an ignominious close by a traitor's death, while yet only in his twenty-eighth year. It is for his share in this, almost exclusively, that he is now remembered. In the "Dictionary of National Biography" he is commendably described as "Conspirator", and one of his descendants has recently published his biography under the title "Life of a Conspirator". In truth, however, of all who had a share in the criminal folly of that deplorable enterprise, there is none to whom the title can less properly be applied, for he had no part either in the conception of the plot, or in the preparation for its accomplishment, and was not even aware of its existence till the eleventh hour. His initiation in the secret was due to the lack of funds. Owing to the delay occasioned by an unexpected prorogation of Parliament, Catesby, the ringleader of the whole design, finding his own treasury exhausted, sought to enlist as associates some men of substance. One of these was Digby, who was inducted and sworn in "about a week after Michaelmas", 1605, or just a month before the fatal 5th of November.

When the time of action approached, Digby was assigned the part of preparing for the rising which was to follow the explosion in London, and to put the conduct of affairs into the hands of the conspirators once the blow was struck. For this purpose he rented Coughton Hall, the seat of the Throckmortons, near Alcester, and arranged for a great "hunting match" upon Dunsmoor Heath, near Rugby, to which many Catholic gentlemen were to be gathered, and which was fixed for the 5th of November itself. When the news of the catastrophe at Westminster should arrive, it was hoped that the party so assembled, when they heard what had happened, would form the nucleus of a force by means of which the further designs of the conspirators might be carried out.

When, on the evening of the 5th, Catesby and others arrived with tidings of the discovery of their design

and the arrest of Faukes, Digby joined them in their desperate attempt to raise a rebellion, and was captured with the survivors of the party at Holbeche on the 8th. At their trial on the 27th of January, Digby, who alone pleaded guilty, was arraigned separately from the rest, but received the same sentence of death, with all the ghastly barbarities usual in cases of treason. Three days later, 30 January, with three of his accomplices, Robert Winter, Grant, and Bates, he suffered in St. Paul's churchyard, being the first to mount the scaffold, where he confessed his guilt, expressed shame for his infatuation, and solemnly protested that his friend, Father Gerard, had no knowledge of the plot, in or out of confession, adding, "I never durst tell him of it, for fear he would have drawn me out of it." It is a remarkable circumstance, lending some colour to the belief that in later days the king did not believe in the genuine character of the danger he was said to have escaped, that Sir Everard's son, Kenelm, was knighted by James in October, 1623, when he had not completed his twenty-first year. His description of the behaviour of James on that occasion has been borrowed by Sir Walter Scott in the "Fortunes of Nigel", for the knighting of Richard Moniplies. The younger son, John, was knighted by Charles I, in 1635, and fell in the Civil War as a major-general in the royal army.

JOHN GERARD.

Digby, Sir Kenelm, physicist, naval commander, and diplomatist, b. at Gayhurst (Goathurst), Buckinghamshire, England, 11 July, 1603; d. in Covent Garden, Westminster, 11 June, 1665. He was the eldest son of Sir Everard Digby, Kt., of Drystoke, Rutland, by Mary, daughter and coheir of William Mulshaw (Mulsho) of Gayhurst. His father was drawn into the Gunpowder Plot and was executed; nevertheless, after litigation, young Kenelm inherited unconfiscated lands worth \$15,000 a year. In 1618 he entered Gloucester Hall, now Worcester College, Oxford. Here he was under the care of Thomas Allen, the mathematician and occultist, under whose congenial teaching he made wonderful progress in physical science. Allen eventually bequeathed to his brilliant pupil his books and MSS., which Sir Kenelm gave to the Bodleian Library. In 1620, Digby left Oxford without a degree. By this time he was deeply in love with Venitia, the beautiful daughter of Sir Edward Stanley, Kt., of Tonge Castle, Shropshire. His mother opposing the match, he withdrew to the Continent, visiting France and Italy and finally Spain. In March, 1623, shortly after his arrival at Madrid, the Prince of Wales (afterwards King Charles I) reached that city upon his well-known matrimonial project, and Digby became one of his household, accompanying the prince back to England upon that project's failure. Digby was now dubbed a knight by King James I. The next momentous event in his career was his marriage with Venitia, which took place privily in 1625. Though the lady's ante-nuptial reputation was not spotless, yet their conjugal life was happy, and she bore him four sons and a daughter. In 1627 Digby undertook a privateering expedition against the French ships anchored in the Venetian haven of Iskanderun or Alexandretta. Having got King Charles's leave and taken out letters of marque, he sailed from Deal with two well-equipped ships about Christmas, and after various adventures on the voyage, he reached Iskanderun 10 June, 1628. On the morrow he gave battle to the French and Venetian galleys there found in the bay, coming off victorious and returning leisurely to England, where he landed in the following February.

Digby's fame was now great, and in 1632 there was even talk of his becoming a secretary of state, but misfortune was nigh. On May Day, 1633, his beloved wife, whose marriage with him had for some years been made public, died suddenly. Various poets, Ben Jonson and William Habington among them, put forth rapturous poems in her praise. Digby withdrew into Gresham College, where he spent two years, leading in strange mourning garb a life of study and seclusion. By this time he had forsaken the Catholic Church, to which, however, he was reconciled in 1636, apparently in France. In 1639 he was back in England, where the times were daily growing worse and worse. His intimacy as a Catholic with the king and queen roused the ire of the Long Parliament, who

summoned him to their Bar in 1641, and next year imprisoned him. He was discharged, however, after a while, on condition of his immediate departure for France. His property they afterwards proceeded to confiscate. Digby accordingly transferred his abode to Paris, where in 1644 he brought out his two great philosophical treatises of the "Nature of Bodies" and the

SIR KENELM DIGBY—VAN DYCK
(Windsor Castle)

"Immortality of Reasonable Souls". In 1645 he was sent by the English Catholic Committee at Paris upon a diplomatic mission to Rome, whither he went again in 1647, but failed to accomplish anything to the purpose. After another journey to England in 1649 and another banishment, he got leave to return and came back in 1654. He now became intimate with Cromwell, who employed him abroad upon various diplomatic affairs. He returned to England for good at the Restoration. Upon the incorporation of the Royal Society in 1663, Sir Kenelm was appointed one of the council. He died of stone on the anniversary of his sea-fight off Iskanderun, and was buried beside his wife in Christ Church, Newgate. Van Dyck painted several (extant) portraits of Sir Kenelm and Lady Digby, and Cornelius Janssen one of the latter.

C. T. BOOTHMAN.

Digest of Justinian. See LAW.

Digne (DINIA), DIOCESE OF (DINIENSIS), comprises the entire department of the Basses-Alpes and is suffragan to the Archbishopric of Aix. By the Concordat of 1801, this diocese was made to include the two departments of the Hautes- and Basses-Alpes, i. e. in addition to the former Diocese of Digne, the Archdiocese of Embrun, the Dioceses of Gap, Sisteron, and Senez, a very considerable part of the Dioceses of Glandèves and Riez, and fourteen parishes in the Archdiocese of Aix and the Diocese of Apt. In 1822 Gap was made an episcopal see and, thus divested of the department of the Hautes-Alpes, the present Diocese of Digne covers the territory formerly included in the Dioceses of Digne, Senez, Glandèves, Riez, and Sisteron.

Former Diocese of Digne.—This diocese was evangelized by Sts. Dominus and Vincentius who came from Africa in the second half of the fourth century

with St. Marcellinus, the Apostle of Embrun. It is not certain that they were bishops. The first historically known bishop was Pentadius who attended the Council of Agde in 506. Among the incumbents of the See of Digne may be mentioned: Elzéar de Villedeneuve (1334-41), author of a celebrated form of oath to be taken by Jews; Pierre III de Vercel (1432-39), who represented the clergy and the Count of Provence at the Council of Basle; Guillaume V d'Estouteville (1439-55), closely connected with the history of the Pragmatic Sanction (q. v.) and later Archbishop of Rouen; Antoine III Héroutet (1552-68), poet and translator of Plato; Forbin-Janson (1664-68), afterwards a cardinal and ambassador to Poland; Miollis (1805-38), whose kindness was proverbial, and who was the original of "Mgr. Myriel" in Victor Hugo's "Les Misérables"; and Sibour (1839-48), who died Archbishop of Paris.

Diocese of Senez.—Marcellus I, the first known Bishop of the Diocese of Senez, attended the Council of Agde in 506; nevertheless, Senez must have been an episcopal city as early as 439. Jean IV Soanen, the Oratorian, noted for his opposition to the Bull "Unigenitus", was Bishop of Senez from 1696 until the time of his deposition in 1727.

Diocese of Glandèves.—Claudius, the first known bishop of the diocese, ascended the episcopal throne in 541, but Glandèves was probably a see as early as 439. Among its bishops were Symphorien Bullioud (1508-20), also ambassador from Francis I to Julius II and chaplain to Francis I; François I Faure (1651-53), the pulpit orator, later Bishop of Amiens, and de Belloy (1752-55), who died a centenarian in 1808, as Archbishop of Paris.

Diocese of Sisteron.—Johannes, the first known Bishop of Sisteron, appears early in the sixth century. Owing to the ungracious reception accorded Bishop Gérard by the Chapter of Sisteron, the bishops of that see remained at Forcalquier from 1061 to 1169 and, until the time of the Revolution, the church at Forcalquier bore the title of cathedral. Laffittau, the Jesuit, who was agent of Cardinal Dubois, and also an historian, occupied the See of Sisteron from 1719 to 1764.

Diocese of Riez.—According to an unsupported tradition, the establishment of the Church in this diocese is attributed to the first century and to Eusebius or Eudochius, companion of St. Lazarus. A certain St. Prosper of Reggio in Emilia (at the beginning of the fifth century) figures in the history of Riez and was perhaps its bishop; however, the first certainly known bishop is St. Maximus (433-60), who succeeded St. Honoratus as Abbot of Lérins and who, in 439, held a council at Riez with a view to improving the deplorable condition of the churches of Southern Gaul. His successor, St. Faustus (461-93), also Abbot of Lérins, was noted for his writings against Predestinationists; it was to him that Sidonius Apollinaris dedicated his "Carmen Eucharisticum" in gratitude for hospitality received at Riez. Robert Ceneau, the pulpit orator (1630-32), afterwards Bishop of Avranche and Gui Bentivoglio (1622-25), who was nuncio in France and defender of French interests at Rome and who played an important rôle under Louis XIII, are also mentioned among the bishops of Riez.

The Diocese of Digne numbers the following saints: St. Thyrsus of Sisteron and St. Promatius of Forcalquier, both perhaps of the third century; the abbots St. Marius and St. Donatus (fifth, sixth centuries), natives of Orléans and founders of monasteries near Forcalquier and Sisteron; St. Mayeul (or Majolus) (910-94), born at Valensole and noted as Abbot of Cluny and a friend of Emperor Otto II; St. Bevon (tenth century), born at Noyers, helped to deliver Provence from the Saracens; Blessed Gérard, founder of the Hospitalers of Jerusalem, who died in 1120, his relics being preserved at Manosque; St. John of Matha (1160-1213), born at Faucon and founder of the

Trinitarians; Blessed Hugh, a great Franciscan preacher who was attached to the doctrines of Joachim of Floris and died in 1255; his sister St. Douceline, who was born at Digne, founded the Beguines of Hyères and died in 1274; St. Elzéar of Sabran who died in 1332, and his wife St. Delphina of Sabran (1284-1360); and the Venerable Jacques Chastan (1803-38), born at Marcoux and martyred in Korea. During the Middle Ages the Franciscan convent in Digne produced François de Meyrannes, conspicuous at the Sorbonne and known as the "enlightened doctor", and Gassendi, the philosopher who, from 1634 to 1655, was provost of the Church of Digne, on which he wrote a learned work. The principal places of pilgrimage are:

Notre-Dame des Anges at Lure, frequented annually by over 10,000 of the faithful, a shrine founded in the fourth century by a recluse from Orléans; Notre-Dame de Romigier at Manosque, dating back to the fifth century; Notre-Dame du Roc at Castellane, established in the eighth century; and Notre-Dame de Beauvoir at Moustiers Ste-Marie. This last-named shrine was visited in the time of Sidonius Apollinaris. Two rocks overhang the chapel of Our Lady and are held together by an iron chain, from which is suspended a golden

DOORWAY OF NOTRE-DAME, FORMER CATHEDRAL OF DIGNE

star presented by a Knight of Rhodes who, having been taken prisoner, invoked Our Lady of Moustiers and was delivered.

Prior to the enforcement of the law of 1905 there were in the diocese, Benedictines, the Missionaries of Ste-Garde, the Brothers of Christian Schools and Brothers of Christian Instruction of St. Gabriel. Local orders of women especially worthy of mention are: the Congregation of Our Lady of the Presentation, a teaching order at Manosque, and that of the Sisters of Christian Doctrine of the Holy Childhood, whose mother-house is at Digne, and who devote themselves alike to teaching and hospital work. In 1899 the following institutions in the diocese were under the care of religious: 12 infant schools, 2 orphanages for boys and girls, 13 hospitals and hospices, 1 house of retreat and 4 houses for religious nurses. In 1905 (the last year of the Concordatory period) the Diocese of Digne had a population of 115,021, 35 pastorates, 314 succursal parishes (mission churches), and 13 curacies subvented by the State.

Gallia Christiana (Nova) (1715), I, 388-417, 474-507, 513-515, *Instrumenta*, 81-82, 89-92; *Nova* (1726), III, 1108-44, 1236-49, 1250-66, *Instrumenta*, 187-90, 195-96, 209-10, and 233-38; ALBANES, *Gallia Christiana (Novissima)*, I, 556, 791 (Montbéliard, 1899); GASSENDI, *Notitia Ecclesiarum Divinensis* (Paris, 1654), Fr. tr. GUYCHARD (Digne, 1845); FISQUET, *France pontificale, Digne et Riez* (Paris, 1869); CHEVILLIER AND ANDRIEU, *Histoire religieuse et topographique du Diocèse de Digne* (Aix, 1893); CHEVALIER, *Rép. hist. : Topo-bibl.*, 801, 1307, 2554-55, 2969.

GEORGES GOYAU.

Dignitary, ECCLESIASTICAL, a member of a chapter, cathedral or collegiate, possessed not only of a foremost place, but also of a certain jurisdiction. These *dignitates*, as they are called, are usually the provost and the dean (see those articles), sometimes also the *custos* and the *scholasticus*. Their nomination and canonical institution, to a great extent reserved to the pope, are governed partly by common ecclesiastical law, partly by special legislation (e. g. concordats) and custom. The *dignitates* of a chapter differ from the *personatus*, inasmuch as the latter officers have merely a fixed right of precedence, and again from the *officia* (e. g. canon theologian, canon penitentiary), inasmuch as these places imply only an administrative charge or duty (see PERSON, ECCLESIASTICAL; CANON; CHAPTER).

WERNZ, *Jus Decretalium*, II, n. 780 sqq.; LAURENTIUS, *Inst. Juris Eccl.* (Freiburg, 1903), p. 255; SÄGMÜLLER, *Kirchenrecht* (Freiburg, 1902), s. v. *Dignitas*; HILGENREINER, in BUCHBERGER, *Kirchl. Handlexikon* (Munich, 1907), s. v. *Domkapitel*.
THOMAS J. SHAHAN.

Dijon, DIOCESE OF, comprises the entire department of Côte-d'Or and is a suffragan of Lyons. According to the Concordat of 1801 it also included the department of Haute-Marne, which, however, it was called upon to relinquish in 1821, owing to the re-establishment of the Diocese of Langres.

Between the years 506 and 540 it was revealed to St. Gregory, Bishop of Langres, and an ancestor of St. Gregory of Tours, that a tomb which the piety of the peasants led them to visit contained the remains of St. Benignus. He had a large basilica erected over it, and soon travellers from Italy brought him the acts of this saint's martyrdom. These acts are part of a collection of documents according to which Burgundy was evangelized in the second century by St. Benignus, an Asiatic priest and the disciple of St. Polycarp, assisted by two ecclesiastics, Andochius and Thyrsus. The good work is said to have prospered at Autun, where it received valuable support from the youthful Symphorianus; at Saulieu where Andochius and Thyrsus had established themselves; at Langres where the three brothers, Speusippus, Eleusippus, and Meleusippus, were baptized, and finally at Dijon. In the meantime the persecution of Marcus Aurelius broke out, and St. Benignus and his companions were put to death. The doubts first raised by Boulliau and Tillemont in the seventeenth century concerning the authenticity of these acts seem justified by the conclusions of Père Van Hooft and M. de la Chesne, according to which the Acts of St. Benignus and the martyrdom of the three brothers of Langres, on which the aforesaid traditions are based, are apocryphal and copied from Cappadocian legends. This controversy, however, does not alter the fact that before the fifth century a saint named Benignus was venerated by the Christians of Dijon; nor does it dim the splendour of the saint's miracles, as related by Gregory of Tours and by the "Book of the Miracles of St. Benignus". During the last generation no question has given rise to more animated polemics among the Catholic scholars of France than the apostolate of St. Benignus.

Under the Merovingians and Carolingians most of the bishops of Langres resided at Dijon, e. g. St. Urbanus (fifth century), St. Gregory, and St. Tetricus (sixth century), who were buried there. When, in 1016, Lambert, Bishop of Langres, ceded the seignior and county of Dijon to King Robert, the Bishops of Langres made Langres their place of residence. In 1731, Clement XII made Dijon a bishopric. The Abbey of Saint-Etienne of Dijon (fifth century) long had a regular chapter that observed the Rule of St. Augustine; it was given over to secular canons by Paul V in 1611, and Clement XI made its church the cathedral of Dijon; during the Revolution it was transformed into a forage storehouse. The abbatial

CATHEDRAL OF SAINT-BÉNIGNE, DIJON

church of Saint-Bénigne became the cathedral of Dijon early in the nineteenth century. Cardinal Lecot, later Archbishop of Bordeaux, was Bishop of Dijon from 1886 to 1890. Pope Pius X's request in 1904 for the resignation of Monseigneur Le Nordez, Bishop of Dijon since 1899, was one of the incidents which led to the rupture of relations between France and the Holy See.

Romanesque architecture was very popular in Burgundy; its masterpiece is the Cathedral of Saint-Bénigne of Dijon, consecrated by Paschal II in 1106 and completed in 1288. The Gothic style, although less used, characterizes the churches of Notre-Dame de Dijon (1252-1334), Notre-Dame de Semur, and l'Abbaye Saint-Seine; it was also the style of the Sainte-Chapelle of Dijon, which is no longer in existence. Under the dukes of Burgundy, at the close of the fourteenth and beginning of the fifteenth century, Burgundian art flourished in a surprising degree. The Chartreuse of Champmol, on which Philip the Bold had Claus Sluter, the sculptor, at work from 1389 to 1406, and which was the acme of artistic excellence, was almost totally destroyed during the Revolution; however, two superb traces of it may still be seen, namely the *Puits des prophètes* and the portal of the church. The Beaune hospital (1443) is a fine specimen of the Gothic style, and the church of Saint-Michel in Dijon (1497) has sixteenth- and seventeenth-century porches covered with fantastic bas-reliefs. The Abbays of Cîteaux, Fontenay, and Flavigny (where in the nineteenth century Père Lacordaire installed a Dominican novitiate) were all within the territory of the present Diocese of Dijon. (See CISTERCIANS and CÎTEAUX.)

The following saints are specially honoured: Saint Sequanus (Seine), b. at Magny, d. 580, founder of the monastery of Réomains around which sprang up the little town of Saint-Seine; St. William (961-1031), a native of Novara, Abbot of Saint-Bénigne at Dijon in 990, and reformer of the Benedictine Order in the eleventh century; St. Robert of Molesme, joint founder with Sts. Alberic and Stephen Harding of the monastery of Cîteaux in 1098; St. Stephen Harding, who died in 1134, third Abbot of Cîteaux, under whose administration the monasteries of La Ferté, Pontigny, Clairvaux, and Morimond were established; St. Bernard (1090-1153); St. Jane Frances de Chantal (1572-1641), b. at Dijon, who, having heard St. Francis de Sales' Lenten discourses at Dijon in 1604, conceived a holy friendship for him; the Venerable Bénigne Joly, canon of Saint-Etienne de Dijon (seventeenth century); and the Venerable Sister Marguerite of the Blessed Sacrament (1619-48), surnamed the "little saint of Beaune", noted for the apparitions of the Infant Jesus with which she was favoured, in consequence of which the pious association known as the Family of the Holy Child Jesus was organized and later raised by Pius IX to the dignity of an archconfraternity. Among the famous persons of the diocese the Seneschal Philippe Pot (1428-94) is remembered for his exploits against the Turks in 1452 and his miraculous deliverance from his captors. The illustrious Bossuet was a native of Dijon. Hubert Lanquet, the Protestant publicist (1518-81), was born at Vitteaux.

The chief places of pilgrimage are: Notre-Dame de Beaune, at Beaune (antedating 1120); Notre-Dame du Bon-Espoir at Dijon, dedicated in 1334; Notre-Dame du Chemin, near Serrigny (twelfth or thirteenth century); Notre-Dame de Cîteaux (end of the eleventh century), visited by many famous rulers of Europe and the East; Notre-Dame d'Etang at Vélars (fifteenth century), visited by St. Jane Frances de Chantal, St. Francis de Sales, Louis XIV, and Bossuet; and Notre-Dame de Lée (tenth or eleventh century) visited by St. Benedict Labre. The room in which St. Bernard was born was transformed into

a chapel at Fontaine-les-Dijon and visited by Louis XIV, Anne of Austria, Condé, St. Jane Frances de Chantal, St. Francis de Sales, and M. Olier. St. Regina (Reine), who was martyred at Alise in the third century and whose body was transported to Flavigny in 864, is honoured by pilgrims; formerly it was customary to hold a theatrical procession in which the saint and her persecutors were represented.

In 1905, prior to the enforcement of the law against congregations, there were in the diocese Trappists, Jesuits, Dominicans, Sulpicians, and diocesan missionaries, also the following local congregations of women: Sisters of the Good Shepherd, founded at Dijon in the seventeenth century by Venerable Bénigne Joly; Sisters of the Perpetual Adoration of the Blessed Sacrament; Sisters of Providence, whose mother-house is at Vitteaux, and who conduct a great many schools; the Ursulines, with mother-house at Dijon; the Sisters of St. Martha, devoted alike to hospital work and teaching (founded in 1628) at Dijon. In 1899 the following institutions were conducted by religious: 32 infant schools; 3 orphanages, with agricultural training; 9 orphanages for girls, 5 industrial schools; 1 institution for penitent women; 1 servants' guild; 18 hospitals or hospices; 25 houses for nursing sisters; 3 houses of retreat; and 1 insane asylum. In 1905 (end of the Concordatory period) the Diocese of Dijon had a population of 361,626; 38 parishes (*cures*), 447 succursal parishes (mission churches), and 13 curacies subvented by the State.

GEORGES GOYAU.

Dillingen, UNIVERSITY OF, in Swabia, a district of Bavaria. Its founder was Cardinal Otto Truchsess von Waldburg, Prince-Bishop of Augsburg (1543-1573). He first established it under the title, "College of St. Jerome", and endowed it with the revenues of several monasteries which had been suppressed at the Reformation. His aim was to provide for the education of the clergy and the protection of the Catholic Faith in an institution which, by the virtue and diligence of its students, should counterbalance the laxity of morals and insubordination so prevalent in other universities of Southern Germany. With this end in view, he drew up special rules regarding the practice of religion, application to study, and conduct which each student bound himself by oath to observe. In 1551 Pope Julius III raised the college to the rank of a university and conferred on it the privileges enjoyed by other universities. Emperor Charles V ratified these privileges, and the formal inauguration took place 21 May, 1554. Some of the professors, as Peter Endavianus, the first rector of Dillingen, came from Louvain; others from Spain, among them the well-known Peter de Soto, O. P., afterwards professor at Oxford. In order to secure the existence of this institution which had been founded with great effort and sacrifice, and to strengthen its intellectual and moral influence over the clergy, Bishop Otto in 1563 gave the Jesuits, whose provincial at that time was Peter Canisius, charge of the instruction in the university, and authorized them to follow their own rules in all that pertained to organization and administration. As, however, the cathedral chapter of Augsburg would not admit the legality of this complete transfer, dis-

putes often arose on questions of right, especially in regard to episcopal visitation, the foundation of chairs of civil law, and the appointment of professors. Nevertheless the chapter paid regularly the sums stipulated in the original document of transfer, and finally accepted the transfer as arranged June 14, 1606, by Bishop Henry von Knöringen (1598-1646), who for that reason is called the second founder of the university. From this date the chapter guaranteed a fixed contribution for the university and *convictus* (hall for clerical and some lay students). In 1641 Emperor Ferdinand III ratified the new charter in a special document which recognized the great service rendered by the scientific work of the university and by the preparation which it gave young men for their duties toward Church and State. During the Swedish invasion in the Thirty Years War the revenues of the university became less regular, some of its professors were imprisoned, its students scattered, and the lectures discontinued. But after peace had been concluded the institution gradually recovered, and in 1688 a fine building for university lectures was erected under Bishop John Christopher von Freyberg.

The university's charter guaranteed to all its members freedom from civil and political obligations, separate jurisdictions, and the right of precedence on public occasions. The exemption from taxes and imposts was frequently disputed by the city council and other officials. The Jesuits, in accordance with the rules of their order, renounced jurisdiction in civil and penal matters. This was exercised by the *gubernator*, one of the episcopal counsellors well versed in jurisprudence, while matters relating to discipline were in the hands of the rector. The right of precedence at processions and funerals occasioned several bitter feuds between the officials of the episcopal court and the faculty. In 1610 Bishop Henry von Knöringen granted to the rector and the professors of theology the privilege of censorship; in 1747 this was modified to the effect that books printed in Dillingen needed also the approbation of the episcopal censor at Augsburg. The courses which, from the beginning, were given at the university and which were taken over by the Jesuits were humanities, philosophy, and theology. The humanities were taught in the gymnasium, which was at that time a part of the university, and they served as a preparation for the higher studies. In the beginning of the seventeenth century a faculty of jurisprudence was added with one professor of canon and one of civil law. In 1738 church history was included in the curriculum of theology. A department of medicine and surgery, rather loosely connected with the university, was established about the same time.

The statutes concerning degrees were taken from the University of Ingolstadt. The baccalaureate in theology was conferred for the first time in 1564. Between this date and 1770 the degree of bachelor of arts was conferred on 7704, that of master of arts on 5997, which numbers show the flourishing condition of letters at the university. Although the frequent changing of professors was prejudicial to their literary activity, many of them acquired fame in the fields of moral theology, canon law, philosophy, mathematics, and astronomy. Thus Jakob Illsung, Georg Stengel, and Joseph Monschein were distinguished theologians; Christopher Scheiner, professor of mathematics, invented the pantograph; while Paul Laymann, F. X. Schmalzgrueber, and Joseph Biner were famous jurists. In order to foster a truly religious spirit among the students and to secure the faithful performance of their duties, a large and a small sodality were organized besides one for the religious. It was at Dillingen that the first sodality of the Blessed Virgin was established in Upper Germany; this sodality carried on an active correspondence with the original sodality, the B. V. Annuntiata in Rome, and with various local

organizations. Other associations were formed for special purposes, e. g. for the veneration of the Blessed Sacrament. Some of these sodalities numbered several hundred resident members. In the summer of 1585 a seminary was founded by Pope Gregory XIII to provide for the religious needs of Upper Germany. Its students, 20-25 in number, were young men of brilliant parts, who, after completing the course of humanities and dialectics, pledged themselves to take their degrees at the university. The students promised under oath to enter the ecclesiastical state and not to join any religious order without leave from the pope. Their expenses were defrayed by the Holy See. This seminary existed up to the year 1798 and educated more than 4,000 priests. Through the efforts of Bishop Henry von Knöringen and several members of the secular clergy, a diocesan seminary accommodating twelve students was founded in 1610; its rules were identical with those of the papal seminary. A third seminary under the title of St. Joseph owed its origin to the contributions of Cardinal Otto and other benefactors. It received poor students who could no longer be accommodated in the *convictus* itself; they lived in special lodgings and were not obliged to receive Holy orders. Finally, another seminary for clerics was built as a supplement to the existing papal seminary; but in 1747 it was transferred to Pfaffenhausen under Bishop Joseph. In 1582 the total number of students, including those in the gymnasium, was 600; in 1618 it was 306, and in the year of the suppression of the Society of Jesus, only 210 attended, of whom 116 were studying theology, 25 jurisprudence, 74 philosophy. The gymnasium counted 125 students. The scholars did not belong exclusively to the Diocese of Augsburg; they came from all parts of Germany, and from Poland, Italy, France, and Switzerland.

In 1773 the Society of Jesus was suppressed, and consequently, in the autumn of the same year, the activity of the Jesuits as professors at the University of Dillingen came to an end. Prince-Bishop Clement Wenceslaus ordered that henceforth the university as well as the *convictus* should be directly subject to the bishop. For the new scholastic year other professors, some of whom were ex-Jesuits, were installed; but theology and canon law were taught by secular priests exclusively. The former Jesuit college took the name "Academic House". At first the number of students was nearly the same as formerly, but the institution soon began to labour under severe financial difficulties owing to the confiscation of lands and revenues which had belonged to the Jesuit college. In 1786 a new charter approved by the Holy See was introduced at the university. In conformity with the practice in other universities, deans with a yearly tenure of office were placed at the head of the different faculties. The curriculum and the methods of teaching were adapted to the needs of the time; in theology the difference between primary branches (scholastic theology and philosophy) and secondary branches (canon and civil law and Biblical exegesis) was done away with. The lectures in the three faculties were given partly in Latin as before, partly in German. Rationalism and liberalism were repeatedly checked by episcopal visitations and enactments. Among the best known professors of that period were F. M. Sailer in moral philosophy and pastoral theology, Zimmer in dogmatic theology, and Weber in philosophy and mathematics. A last regulation of the prince-bishop, dated 1799, contained rules regarding attendance at church, discipline, and methods of teaching and studying. The endowments of several institutions and corporations were transferred in 1789 to the "Academic House" in order to relieve its financial difficulties, and its administration was simplified by uniting the St. Joseph's Seminary and the *convictus*. The patronage of the city parish of Dillingen was ceded to the bishop in

favour of the university with which it was incorporated. Nevertheless the expenses of the institutions so far exceeded their revenues that the existence of the university became very precarious. Hence it was several times proposed to transfer the university to a religious order, e. g. the Benedictines or the newly organized Societas de Fide Jesu. During the scholastic year of 1798-1799, the number of students had dwindled to 109, of whom 51 were theologians distributed over three courses, 10 were attending the lectures on law and 48 those on philosophy. In 1802 the cathedral chapter of Augsburg and the university were secularized and became part of Bavaria, whose elector, by rescript of 3 Nov., 1803, abolished the University of Dillingen. In its stead a classical gymnasium and a lyceum for philosophy and theology were founded for the Swabian District, and these institutions are still in existence.

KARL HOEBER.

Dillon, ARTHUR-RICHARD, a French prelate, b. at St-Germain-en-Laye, near Paris, 1721; d. in London, 1806. The fifth son of Arthur Dillon, an Irish officer who, outlawed as a Jacobite, had passed to the service of France, he was educated for the Church, became curé of Elan near Mézières; Vicar-General of Pontoise, 1747; Bishop of Evreux, 1753; Archbishop of Toulouse, 1758; Archbishop of Narbonne and Primate of France, 1763. Dillon was a man of broad sympathies and varied accomplishments. A staunch Catholic, he, nevertheless, publicly applauded the recognition of Protestant marriages in the Assembly of the Clergy of 1788, over which he presided. His appointment to the primal See of Narbonne made him practically Viceroy of Languedoc. He won there great popularity not only as bishop but also as promoter of great public works, such as roads, bridges, canals, harbours, etc. When the French Revolution broke out, Dillon, rather than take the constitutional oath, emigrated to Coblenz with the French nobility, and from Coblenz went to London, where he was at the time the Concordat was signed. Pope Pius VII having requested within ten days the unconditional resignation of all the French bishops, Dillon with thirteen other prelates who, like himself, had sought refuge in England, sent but a wavering and dilatory answer and even signed the "Réclamations canoniques et très-respectueuses adressées à Notre très-Saint Père le Pape" (London, 1803). Such an attitude was prompted not by a spirit of schism, but by an excessive attachment to the old regime and the mistaken Gallican idea that the pope could not take a step of that importance without the deliberation and consent of the French hierarchy. Although Dillon consented to communicate his spiritual jurisdiction to the Concordataire bishop whose territory comprised the suppressed primal See of Narbonne, nevertheless, by placing himself resolutely at the head of the Anticoncordataires, he not only failed in due obedience to the Holy See but also gave countenance to that incongruous movement which resulted in the "Petite-Eglise".

Biog.*, s. v.

J. F. SOLLIER.

Dimissorial Letters (Lat. *litteræ dimissoriales*, from *dimittere*), letters given by an ecclesiastical superior to his subjects to have effect in territory outside his jurisdiction. The term is sometimes extended so as to include testimonial letters, which certify to a priest's freedom from canonical impediments or to the fact that a candidate for a religious order has the requisite qualities, and commendatory letters, which

testify that a travelling ecclesiastic is unexceptionable as to morals and doctrine, and letters of excommunication (see EXCEAT), by which clerics are freed from the jurisdiction of one diocesan bishop (see EXCARDINATION) that they may be affiliated to another diocese. Properly the name "dimissorial letters" refers to those given by a bishop or regular prelate to his subjects in order that they may be ordained by another bishop. The pope alone may concede such dimissorial letters for the whole world, but any bishop can give them to those under his authority, whether they be so by origin, domicile, or benefice. A bishop, as well as cardinals, can likewise grant them to those who for three years have been actually or equivalently members of his household (*familiares*). In the absence of the bishop, his vicar-general is empowered to grant dimissorial letters, but not while the bishop is at home, unless he has received special permission to do so. During the vacancy of the episcopal see, the vicar capitular cannot give these letters, unless a year has elapsed since the diocese became vacant, except to one who is obliged to receive orders owing to his having acquired a benefice. After the lapse of a year, the vicar capitular, independent of the chapter, has the right to grant dimissorial letters for the reception of Holy orders. If the vicar capitular give the letters illegitimately, the person ordained is not entitled to clerical privileges, if he be in minor orders; and if in major orders, he is suspended from the exercise of them until the future bishop free him from the penalty. Abbots, even though exempt, cannot grant dimissorial letters to seculars who are subject to them. When a bishop grants letters directed to other ordinaries, this phrase does not include exempt abbots. Regular prelates can give letters to those religious who live under their obedience, but such letters must be directed to the diocesan bishop, unless there be a special privilege. In case of the absence of the ordinary bishop, or if he does not desire to hold ordinations, religious superiors may send their subjects to any other bishop. When regulars live in a monastery *multius diocesis*, these letters are to be directed to the neighbouring bishop (*vicinior*). Religious orders, which have received such special privilege since the Council of Trent, may send their subjects for ordination to any Catholic bishop whatsoever. As regards the city of Rome, those who dwell in the city for four months cannot be ordained outside the city in virtue of dimissorial letters from their ordinary bishops, but they must present themselves to the Cardinal Vicar of Rome for ordination. The Roman pontiff can ordain anyone without letters from his bishop, and the person so ordained cannot later be promoted to higher orders without papal licence. Although dimissorial letters be required for ordaining the subject of one bishop in another diocese, yet it does seem necessary to obtain them for the purpose of receiving a benefice in the other diocese, though it is considered proper and expedient.

WILLIAM H. W. FANNING

Dingley, SIR THOMAS, VENERABLE, Martyr, prior of the Knights of St. John of Jerusalem, found guilty of high treason 28 April, 1539, and beheaded on Tower Hill, 9 July, together with the Blessed Sir Adrian Fortescue. He was accused, together with Robert Granceter, merchant, of "going to several foreign princes and persuading them to make war with the King". He had no trial, and no proof of treasonable practices was ever brought against him. In the same bill of attainder were included many other innocent victims of Henry's tyranny, including the Blessed Margaret Pole, Countess of Salisbury. There is a discrepancy among the chroniclers as to the date of the

martyrdom. Stow gives 10 July, the Gray Friars' "Chronicle" and Wriothesley, 9 July. For the story of the suppression of the Knights of St. John in England, see Stow, "Chronicle", pp. 579, 580. The gateway tower and the crypt of the church of their great priory at Clerkenwell are still standing.

BEDE CAMM.

Dinooth, SAINT (DINOTHUS, DUNAWD, DUNOD), founder and first Abbot of Bangor Iscoed (Flintshire); flourished between 500 and 542. He was originally a North British chieftain driven by reverses of fortune into Wales. In conjunction with his three sons, Deiniol, Cynwyl, and Gwarthan, and under the patronage of Cyngen, Prince of Powys, he founded the monastery of Bangor on the Dee, which must not be confounded with Bangor in Carnarvonshire, founded by St. Deiniol in 514, and afterwards a cathedral city. The community at Bangor was very numerous, and the *laus perennis* was established there. The Triads say there were 2400 monks, who in turn, 100 each hour, sang the Divine Service day and night. More is known of this famous monastery than of its founder. He is mentioned by Bede (Hist. Eccl., ii. 2) in connexion with the second conference at Augustine's Oak, but no authority is given for the statement, and there are arguments against its correctness. The Conference was probably held in 602 or 603, at which time St. Dinoth would have been far advanced in years, and the journey from North Wales to the Lower Severn would have been a difficult one for an aged man. It is true that delegates from Bangor attended the conference which was convened by St. Augustine to raise the moral and spiritual condition of the British clergy, to wean them from their old method of computing Easter, to which they clung with great tenacity, and to induce them to co-operate with him in converting the Anglo-Saxons. The document purporting to be St. Dinoth's "Answer" (printed in Haddan and Stubbs, Councils of Gt. Britain and Ireland, i. 122) is the sole ground for connecting his name with this conference; but it is extremely doubtful whether the "Answer" has anything to do with this conference at all. St. Augustine's name is not mentioned in it, neither is there any allusion to the evangelization of the English. It contains merely a firm repudiation of papal authority and an assertion of the supremacy of "the Bishop of Caerleon upon Usk" over the British Church. Some time before the supposed date of the document St. David had transferred the primatial See of Wales to Menevia. What is more authentic, however, is the fact that in consequence of the British delegates' refusal to agree to St. Augustine's proposals he prophesied their destruction by the English. In 613, when the monks of Bangor were praying for the success of their countrymen in battle against the army of Ethelfrid of Northumbria, twelve hundred of them were slain, being mistaken for combatants. The monastery itself was probably burnt about sixty years later (Haddan and Stubbs, i. 125), and extensive ruins remained for several centuries, which are described by William of Malmesbury, Camden, and Leland.

REES, *Lives of Cambro-British Saints* (Llandovery, 1853); HOLE in *Dict. of Christ. Biog.*, s. v.

G. CYPRIAN ALSTON.

Diocæsarea (1), a titular see in Palestina Secunda. Diocæsarea is a later name of the town known to the Rabbis as *Seppori*, "the bird", also called Sepphoris (Gr. *Σεφωρίς*). Though not mentioned in the Bible, it was in its time one of the largest towns of Galilee. Gabinius established there (56 B. C.) one of the five provincial sanhedrins (Josephus, Ant. Jud., XIV. v. 4). Herod the Great easily retook it from Antigonus, 39 B. C. (Ant. Jud., XIV. xv. 4). In A. D. 3, it was captured by a rebel, Judas, and his banditti, but was retaken by Aretas, the Arab King of Petra and ally of

the Romans. He destroyed it completely, and sold the inhabitants as slaves. In the following year Herod Antipas, Tetrarch of Galilee, rebuilt the town and dedicated it to the emperor (Ant. Jud., XVIII. ii. 1), at which time it must have been called Diocæsarea. When, in A. D. 66, the great Jewish revolt broke out, the inhabitants would have no share in it, sent away their governor, the celebrated historian Flavius Josephus, and invited Cestius Gallus, Prefect of Syria, to occupy their town with his troops. About 180 the Great Sanhedrin left the neighbouring village of Shefr Amar and resided at Sepphoris till it was removed to Tiberias. When Count Joseph, a converted Jew, built a church at Sepphoris (323-37) it was not yet an episcopal see (St. Epiph., Adversus haeres., in Migne, P. G., XLI. 409). In 353 the Jews rebelled again, and the town was destroyed by Emperor Gallus (Socrates, Hist. eccl., II. xxxiii; Sozomen, Hist. eccl., IV. vii). It was soon rebuilt (Theodoret, Hist. eccl., IV. xxii). It served as a place of exile for many bishops and monks during the persecution of Valens. When Sepphoris became an episcopal see and suffragan of Scythopolis, is unknown. Only two bishops are known, Marcellinus in 518 and Cyriacus in 536 (Lequien, Or. christ., III. 713). During the Crusades Sepphoris played an important rôle, though only the necropolis was occupied by a Frankish garrison. The springs, at half an hour's distance south-west of the town, were naturally the site where the Christian armies awaited the coming of the Saracens from beyond the Jordan; thus King Guy of Lusignan encamped there before the battle of Hattin, which caused the loss of Palestine (July, 1187). There also in April, 1799, Kléber and Junot rested their troops before the battle of Mount Thabor. To-day Sefurieh, as it is now called, is inhabited by 3000 fanatic Mussulmans; there are preserved the ruins of the former acropolis, a high tower, two synagogues, the beautiful church of Sts. Joachim and Anna, who, according to a mediæval tradition, were born at Sepphoris. This church, which has been partly demolished, has three naves and is 115 by 65 feet in dimensions. It belongs to the Franciscans, who say Mass there from time to time. (See Guérin, "Description de la Palestine: Galilée", Paris, 1880, I. 369-79.)

(2) Another Diocæsarea, the native name of which was Prakana, site unknown (Ramsay, Asia Minor, 364 and 454), was situated in Cilicia and a suffragan of Seleucia. Five Greek bishops are known from 381 to 787 (Lequien, II. 1019); for Successus, about 433, see Vailhé, in "Echos d'Orient" (IX, 221). Three Latin titular bishops are known in the fifteenth century (Lequien, III. 1239; Eubel, II. 160).

(3) Finally, in the fourth century, Nazianzus was also called Diocæsarea (Lequien, I. 409).

S. VAILHÉ.

Diocesan Chancery, that branch of administration which handles all written documents used in the official government of a diocese. It is in the diocesan chancery that, under the direction of the bishop or his representative, all documents which concern the diocese are drawn up, copied, forwarded, and a record kept of all official writings expedited or received. The official charged with the execution of these duties is known as the diocesan chancellor. In many dioceses the chancellor exercises some of the faculties which in other dioceses are exclusively reserved to the vicar-general. This happens more frequently in smaller dioceses, administered directly by the bishop himself, and in which the vicar-general (often not resident in the episcopal city) is called on only when the bishop is absent or hindered. In such cases the chancellor is also the confidential secretary of the bishop. A similar system obtains even in many extensive dioceses which are administered by the bishop with the aid of one or more vicars-general and the diocesan chancery.

There are, however, some large dioceses in which all matters personally reserved to the bishop are executed by him with the aid of a secretary or chancellor, usually a priest, while the greater part of the diocesan administration is handed over to a body of officials under the direction of the bishop or his vicar-general. For the correspondence, registration, and care of the archives, such administrative bureaux are provided with a secretariat or chancery. The chancery is a necessary element of administration in every diocese. Some provision for its duties must be made, even in missionary dioceses, in Apostolic prefectures and vicariates. Unless the official correspondence were properly cared for, there would be no tradition in diocesan management, important documents would be lost, and the written evidence necessary in lawsuits and trials would be lacking. The famous Apostolic Chancery (*Cancellaria Apostolica*) developed in time from the chancery of the primitive Bishop of Rome. By reason of the latter's primacy in the Church, his chancery naturally had far wider relations than that of any other Christian diocese.

It is somewhat strange, given the necessity and, generally speaking, the universality of diocesan chanceries, to find that there is nothing in the common ecclesiastical law concerning their creation and equipment. The explanation lies in the very nature of this law, which provides only for what is general and common, and takes no account of local means of administration which it abandons to the proper authority in each diocese, the concrete circumstances offering always great variety and calling for all possible freedom of action. Nor has the Apostolic See ever legislated concerning diocesan chanceries; even the appointment of a vicar-general is not made obligatory by the common law. Although, as above described, the methods of diocesan administration exhibit no little variety, there exists on the other hand a certain uniformity. Each diocese, after all, is bound to observe the common law, has an identical range of freedom, and identical limits to its authority. Each diocese, therefore, is likely, a priori, to develop its administration along similar lines, but does so regularly in harmony with others, particularly neighbouring dioceses. In this way the dioceses of a given country come to have similar official administration. In the course of the last century the diocesan system was generally introduced in many countries whose churches had hitherto been under a more or less provisional government (e. g. United States, England, Scotland, India). Naturally, the bishops of these new dioceses

sought at once to provide for an orderly administration and the establishment of suitable methods for the same. Thus we see that the more recent national and provincial synods lay much stress on the creation of diocesan chanceries. The First Plenary Council of Baltimore (1852) expressed the wish that in every diocese there should be a chancery, to facilitate ecclesiastical administration and establish for its conduct a more or less identical system. The National Synod of Thurles in Ireland (1850) made provision for the establishment and preservation of diocesan archives. Similarly for England the Provincial Synod of Westminster (1852).

In keeping with these recommendations the diocesan chancery consists of a certain number of officials named by the bishop. In the United States, England, and Australia there are usually, besides the vicar-general, a diocesan chancellor and a secretary. In European dioceses the chancery is organized variously, according to the extent of the diocese. There is generally in each diocese a chancellor or secretary with the necessary personnel. In the dioceses of Germany much of the administration is carried on by an official bureau (*Offizialat*) as described above, i. e. the vicariate-general, to which are adjoined a secretariat, a registry office, and a chancery. In the Diocese of Breslau there exists an institution known as the "Secret Chancery" (*Geheimkanzlei*) which expedites only matters decided by the prince-bishop personally or with the advice of this body. The prince-bishop presides over its sessions with the help of the vicar-general. Its members are three priests and one lay counsellor to whom are added a secretary, a chief of the chancery, two private secretaries, a registrar, etc. The ordinary diocesan administration is carried on by two other bureaux, the vicariate-general and the diocesan consistory, mutually independent, but both acting in the name of the prince-bishop. For the office of diocesan chancellor in the United States, see "Acta et Decreta" of the Third Plenary Council of Baltimore, in index, p. 303, and of the Synod of Maynooth (1900), s. v. "Archiva". (See also VICAR-GENERAL; ARCHIVES, ECCLESIASTICAL.)
